culture, forestry, and animal husbandry; 169, or two-tenths of 1 per cent, in extraction of minerals; 18,194, or 16.3 per cent, in manufacturing and mechanical industries; 7781, or 7 per cent, in transportation; 7343, or 6.6 per cent, in trade; 6282, or 5.6 per cent, in public service; 4117, or 3.7 per cent, in professional service; 8466, or 7.6 per cent, in domestic and personal service; and 3286, or 2.9 per cent, in clerical occupations.

Distributed by race, Hawaiians constituted 8203, or 7.3 per cent of the gainful workers in 1920; part Hawaiians, 3899, or 3.5 per cent; Caucasians, 21,325, or 19.1 per cent; Chinese, 11,603, or 10.4 per cent; Japanese, 48,815, or 43.6 per cent; and all other races, 18,037, or 16.1 per cent. In 1910 the distribution of the gainful workers by race was as follows: Hawaiians, 8654, or 8.6 per cent; part Hawaiians, 2760, or 2.7 per cent; Caucasians, 17,957, or 17.7 per cent; Chinese, 14,094, or 13.9 per cent; Japanese, 51,478, or 50.9 per cent; and all other races, 6251, or 6.2 per cent. The marked increase in "all other" races, from 6251, or 6.2 per cent of all gainful workers in 1910, to 18,037, or 16.1 per cent., in

The table on page 318 shows the domestic exports by articles in 1920 and 1921:

TRANSPORTATION. According to the governor's report in 1921 the steam railways had a mileage of 325. In addition, the plantations had their private lines which in the preceding year had a mileage of 628. The gross tonnage of vessels entering the ports during the fiscal year was 6,088,689 as compared with 5,430,976 in 1920.

FINANCE. Valuation of all real and personal property in the territory as rendered by the tax assessors in 1921 was \$286,557,332, a decrease of 1.56 per cent from 1920. The treasury cash balances, all accounts, amounted, June 30, 1921, to \$4,717,811 as compared with \$3,370,648 in the preceding year. The total revenue collected during the fiscal year was \$11,467,895; total disbursements were \$13,243,049. The greater part of the above receipts were from taxation, especially from the taxes on real and personal property and income. The total bonded debt on June 30, 1920, was \$10,894,000. Other issues followed in the course of the year and the outstanding bonded

ndebtedness of the territory on June 30, 1921, was \$12,600,000.

LEGISLATURE. In the general election of November, 1920, there were 26,335 registered voters. Of these only 1904 were of Anglo-Saxon or Latin races. The regular session of the legislature was held during the months of February, March, and April, and 250 acts were passed. Of these may be mentioned: An act raising the limit of outstanding bonded indebtedness to \$17,500,000; a number of acts pertaining to the improvement of sanitation and to the eradication of disease; an act creating a commission on the legends and folk lore of Hawaii; an act relating to the preservation of Hawaiian music; acts creating a court of domestic relations, regulating the hours of child labor, creating an emergency labor commission, etc.

TERRITORIAL OFFICIALS. The leading officials of the territory in 1921 were as follows: Governor, W. R. Farrington; Secretary, C. R. Iaukea; Attorney General, Harry Irwin; Treasurer, Delbert E. Metzger; Commissioner of Public Rates, C. T. Bailey; Supervisor of Public Works, Lyman H. Bigelow; Supervisor of Public Instruction, Vaughan Mac Caughy; Chief Justice Supreme Court, J. L. Coke; Delegate to Congress, J. K. Kalaniana'ole.

Progress was reported in the treatment of leprosy, according to a plan developed by Dr. Arthur L. Dean, President of the University of Hawaii. At the Kalihi Leprosy Station, 94 of the 100 had been paroled in a little over a year on the recommendation of doctors who said that the disease had been arrested and was no longer dangerous in their cases. The American Medical Association published a report on the subject indicating favorable results. This declared that up to the time of the publication of the report no patient on parole after Oct. 1, 1918, had shown a recurrence of the disease. The method of treatment involves the use of the fatty acids of chaulmoogra oil and many thousands of chaulmoogra trees have been set out under the Hawaiian Department of Agriculture.

HAWKER, HARRY. See NECROLOGY.

HAWLEY, ROBERT BRADLEY. Former Congressman, organizer of the Cuban-American Sugar

Company, died in New York City, November 28. He was born at Memphis, Tenn., Oct. 25, 1849, and at the age of twenty-one became a merchant at Galveston, Texas. In 1898 he was elected on the Republican ticket to Congress, where he served in the Fifty-sixth and Fifty-seventh Congresses. In 1916 when he organized the Cuban-American Sugar Company he became its President and remained in that office until his death. He was one of those chosen early in 1921 to serve on the Cuban Sugar Commission created by the President of Cuba.

HAY. Since the close of the European war the international movement of hay has been relatively small, and data regarding production and prices in different countries have not received the attention accorded them during the war period. The production of hay in the United States in 1921 according to estimates by the Department of Agriculture amounted to 96,802,000 tons of which 81,567,000 tons were tame hay and 15,235,000 tons wild hay. The total area was reported at 74,225,000 acres and the average yield per acre at 1.3 tons or 0.13 tons under that of the preceding year.

The area devoted to tame hay was 58,742,000 acres and the average yield per acre 1.39 tons while the average acre-yield of wild hay was only 0.98 ton. The farm value on Dec. 1, 1921, was \$11.27 per ton as compared with \$16.70 and \$19.45 per ton in 1920 and 1919, respectively. The average farm value of wild hay on Dec. 1, 1921, was only \$6.63 per ton. The total value of the hay crop on the basis of \$11.27 per ton was \$1,090,776,000 or only a little over one-half the total value of the crop of 1919. The hay markets of 1921 were characterized by dull trading. Prices had declined to a marked extent from May to December in 1920 and there was practically no recovery in 1921. In April, only a short time before new hay was expected on the markets, about 35 per cent to 40 per cent of the 1921 surplus still remained to be marketed, and during the fall shipping period the market movement was much below normal. High freight rates largely limited shipments.

Canada in 1920 produced 13,339,000 tons of hay, including 584,000 tons of alfalfa hay, on 10,618,000 acres.

HAYDEN, JAMES RAYNOR. Surgeon, died at Woodmere, L. I., October 10, in circumstances indicating suicide. As a genito-urinary specialist he was widely known. He was born in New York City in 1860, and graduated at the College of Physicians and Surgeons in 1884 and taught there as Professor of Urology. He was a member of the various scientific bodies in his field and was genito-urinary surgeon at Bellevue Hospital, New York City, and at St. Joseph's Hospital, Yonkers, N. Y.

HAYS, JOHN. Lawyer and financier, died at Carlisle, November 29. He was born at Carlisle, Pa., Feb. 2, 1837, and graduated at Dickinson College in 1857. He served during the Civil War on the staff of General William Hays and participated in the battles of Antietam, Fredericksburg, and Chancellorsville. He practiced law 1859-98, specializing in corporation law. He was president of the Carlisle Deposit Bank 1874-93 and editor and proprietor of the *Carlisle Herald* 1877-1909.

HAZELTON, GEORGE COCHRANE. See NECROLOGY.

HEALY, A. AUGUSTUS. Leather merchant and patron of art, died in Brooklyn, N. Y., September 28. For twenty-five years he had been president of the board of trustees of the Brooklyn Institute of Arts and Sciences. He was born in Brooklyn, June 28, 1850, and educated at the Polytechnic Institute there. He then entered his father's business as a leather manufacturer, the firm being one of the most important of the time, and for some years he was head of the company. He was also a director of the Central Leather Company and for eight years its vice-president, retiring in 1920. He was especially known as an art connoisseur and benefactor, giving to the Brooklyn Institute several hundred thousand dollars in works of art or in actual money. Under his administration the Institute made extraordinary progress. Although active in politics he held office but once when, during the second Cleveland administration, he was Collector of Internal Revenue. The value of his estate was estimated at nearly \$2,000,000, of which \$120,000 was bequeathed to the Brooklyn Institute and \$100,000 was to be invested and its income devoted to the purchase of works of art for the institution museum.

HEART DISEASE. In 1785 Dr. William Withering of Birmingham, England, published a work on the medicinal properties of the plant known as foxglove which revolutionized our treatment of heart disease, foxglove being the popular name of digitalis. By aid of this drug a patient helpless from dropsy and hardly able to breathe was able after weeks and months of suffering to get up and resume active life as long as he continued the use of the remedy. While numerous other cardiac stimulants have since been introduced into practice they are practically all for temporary use in emergencies. It was hardly thought possible that another drug of the calibre of digitalis would be discovered. Recently, however, such a one has been found in quinidine, one of the cinchona alkaloids hitherto regarded as of no therapeutic value worth mentioning. Its discovery took place in 1833, which is certainly giving it plenty of time to make good. But at a meeting of the New York Academy of Medicine last November, one of the two papers of the evening was given over to the discussion of quinidine in certain serious disorders

of the heart known technically as "flutter" and "fibrillation." The first use of the drug in question was by Frey in 1918, and the experience of three years has resulted in the publication of 200 favorable results, in a number of which the defective condition of the heart was perhaps permanently remedied. Unlike digitalis the drug is hardly to be regarded as poisonous at all, any more than its close relative quinine. Many of the patients who benefited by quinidine were already under control by digitalis, but in other cases there is no mention of the latter and quinidine alone seems to have restored the compensation of the disabled heart and to have put the patients on their feet again. Dr. Lewis A. Conner of New York declared that the restoration to normal rhythm of a heart which had been fibrillating for years was "a most dramatic and astounding event."

HEDGE, CHARLES GORHAM. See NECROLOGY.

HELIGOLAND. An island of the North sea formerly fortified, ceded by England to Germany in 1890; dismantled by Germany under the terms of the Treaty in 1919.

HELIUM USED IN AIRSHIP. See AERONAUTICS.

HELLBUTT, EMIL. See NECROLOGY.

HEMPL, GEORGE. Philologist, died, August 14. After 1906 he was professor of Germanics at Leland Stanford University. He was born at Whitewater, Wis., June 6, 1859; graduated at the University of Michigan in 1879, and at the University of Jena in 1889. After holding principalships of high schools in Michigan and Indiana, he became instructor of German at Johns Hopkins from 1884 to 1886; then studied in German universities; and in 1889, entered the English department of the University of Michigan where he was professor of English from 1893 to 1897, and professor of English philology and general linguistics until 1906, when he received the appointment above mentioned. He served successively as president of the American Dialect Society; the Modern Language Association; the American Philological Association; and the Philological Association of the Pacific Coast. Among his numerous writings may be mentioned: *Old English Phonology* (1892); *Chaucer's Pronunciation* (1893); *German Orthography and Phonology* (1897); *Phonetic Text of Wilhelm Tell* (1900); and many articles in the learned periodicals. After 1906 he applied himself especially to the deciphering of prehistoric Mediterranean tongues.

HENDERSON, SIR DAVID. British army officer; Director-General of the League of Red Cross Societies, died August 18. He was born August 11, 1862, and entered the army in 1883. He served in the Sudan in 1898 and in the South African War 1899-1900. He served with distinction in both wars and was wounded in the second. During the late war he was promoted to the rank of lieutenant-general and was director-general of military aeronautics. He wrote *The Art of Reconnaissance* (1907).

HENRY, EDWARD STEVENS. Former Congressman from Connecticut, died at Rockville, Conn., October 10. He was born at Gill, Mass., Feb. 10, 1836, removed in childhood to Rockville, Conn., and was educated in the public schools. He was prominent in various financial companies and a successful breeder of thoroughbred stock. He was a member of the Connecticut legislature in 1883 and in 1887-88; State treasurer,

1889-93 and a member of Congress from Connecticut 1895-1913.

HEPBURN, ANDREW DOUSA. Educator, died, February 14. He was born at Williamsport, Pa., Nov. 14, 1830; graduated at Jefferson College, Pa., 1851, the University of Virginia, 1854, and Princeton Theological Seminary, 1857. He was ordained to the Presbyterian ministry, 1858, and held a pastorate at New Providence, Va., until 1860 when he was appointed professor of logic, rhetoric, and the English language and literature at the University of North Carolina. He held that position until 1867 when he was appointed to the same chair at Miami University of which he was president from 1871 to 1873. In the following year (1874) he became professor of mental philosophy and English literature at Davidson College, and was president of that institution from 1877 to 1885. He then returned to Miami University as professor of English and held that chair until 1908 when he resigned. He was the author of a manual of English rhetoric.

HERBERT, Sir ARTHUR (JAMES). British diplomat, died in England, August 31. He was born August 22, 1855, and educated at Christ Church, Oxford. After 1879 he was in the diplomatic service and held posts in Russia, Persia, South America, etc. In 1884-85 he was a member of the mission for determining the Afghan frontier. In 1902 he was Consul General at Budapest and in 1905-10 Minister to Norway. Early in his career he had served as a Secretary of Legation at Washington.

HEREDITY. See **ZOOLOGY**.

HERNANDEZ, JOSE MANUEL. Military officer and political leader in Venezuela, died in New York City, August 25. He was born in 1853. He had been a leader in several revolutions, his last revolutionary attempt having occurred in 1914. It was unsuccessful, and he lived after that in Havana.

HERT, ALVIN TOBIAS. Manufacturer, died, June 7. In 1916 he was the western manager of the Republican presidential campaign. He was born at Owensburg, Ind., April 8, 1865; and after 1904 was the president of the American Creosoting Company which operated fifteen plants in this country. He was prominent in financial and political circles of Kentucky. From 1916 to 1920 he was a member of the Republican national committee from Kentucky.

HESSE. One of the states of the former German empire in which it was a grand duchy; proclaimed a republic early in November, 1918; situated in the western part of Germany. Capital, Darmstadt. Area, 2968 square miles; population, 1919, 1,291,249. Darmstadt had a population of 82,368. The largest city is Mayence or Mainz with 107,930 (including suburbs). Other large towns with their populations in 1919 were: Offenbach, 75,380; Worms, 44,290; and Giessen, 33,409. In 1920 there were 979 public elementary schools with 4282 teachers and 204,709 pupils. The chief crops are: Rye, potatoes, barley, and wine; and the chief manufactures: Leather, clothing, paper, chemicals, vehicles, machinery, furniture, musical instruments, etc. The budget for 1920 balanced at £12,474,707. After the new republic was proclaimed in November, 1918, work was begun on the constitution, which was adopted, Dec. 20, 1919. Executive power is in a ministry of four members; and legislative

power, in the Landtag or diet of seventy members, elected for three years. At the beginning of 1921 the prime minister was Herr Ulrich (Socialist).

HESTER, WILLIAM. Publisher, died, June 9. He was born at Poughkeepsie, N. Y., Dec. 7, 1835; and received an academic education. He was president of the Brooklyn *Daily Eagle*, and director of the Eagle Warehouse and Storage company.

HEWETT, WATERMAN THOMAS. American university professor, died in London, England, September 13. He was born at Miami, Mo., Jan. 10, 1846; graduated at Amherst College in 1869, studied in Greece and in Germany and in 1870 was appointed assistant-professor of German at Cornell University. He was made professor of German language and literature in 1883 and held that chair until 1910, being at the same time head of the German department. He contributed extensively to periodicals on German subjects and was the editor of MacMillan's "German Classics" after 1895. He wrote *The Frisian Language and Literature* (1879); *Cornell University, a History* (4 vols., 1905); and edited a number of German texts.

HEWITT, PETER COOPER. Scientist and inventor, died, August 25. He was especially known as the inventor of the mercury vapor electric lamp and the mercury vapor rectifier which bear his name. He was born in New York City in 1861, the son of Abram Hewitt, former mayor of New York, and the grandson of Peter Cooper. He early became director of the Copper Hewitt Electric company and of various other corporations; and he was trustee of Copper Union; and a member of numerous philanthropic and scientific bodies. Besides the inventions above mentioned he devised numerous mechanical appliances, and made important contributions to the knowledge of wireless telegraphy.

HEXAMER, CHARLES JOHN. Civil engineer, died at Philadelphia, Pa., October 15. He was born at Philadelphia, May 9, 1862, graduated at the University of Pennsylvania in 1882 and practiced the profession of civil engineering in Philadelphia from 1882 to 1917 when he retired. He wrote *Spontaneous Combustion* (1885); and several volumes on the subject of fire and its prevention; also a volume of *Essays* (1912) and of *Speeches* (1913). He issued 40 volumes of insurance maps of Philadelphia.

HISTORICAL ASSOCIATION, AMERICAN. A national organization for the promotion of historical writing and studies in the United States. It was founded in 1884 by a group of representative scholars, and in 1889 was chartered by Congress. Membership is not limited to those professionally or otherwise actively engaged in histor-

ical work, but includes others interested in history and in the advancement of historical science. Membership in the Association in 1921 numbered 2633. Its annual reports are published by the United States Government through the Secretary of the Smithsonian Institution. The reports of 1917, in one volume, and of 1918, in three volumes, were published in 1921. They are distributed free to all members. The Thirty-Sixth annual meeting of the Association was held at St. Louis, Mo., December 27-30, in conjunction with several other historical societies. Many important papers were read, as well as valuable collections of documents by committees of the Association. For the encouragement of historical research the Association offers two biennial prizes, of \$200 each, for the best printed or manuscript monograph by any writer who has not achieved an established reputation. The Justin Winsor prize, offered in even years, is awarded to an essay in the history of the western hemisphere. In odd years the Herbert Baxter Adams prize is awarded for an essay in the history of the eastern hemisphere. The *American Historical Review* is the official organ of the Association and the recognized organ of the historical profession in the United States. It is published quarterly and presents authoritative articles, critical reviews of important new work on history, etc. It also publishes the *Historical Outlook*, which is devoted to the subject of history teaching. Officers of the Association elected at the December meeting were: President, Charles H. Haskin; First Vice-President, Edward P. Cheyney; Second Vice-President, Woodrow Wilson; Secretary, John S. Bassett; Treasurer, Charles Moore; Editor, Allen R. Boyd. Headquarters of the Association are in the Woodward Building, Washington, D. C. A Pacific coast branch of the Association was organized in 1904 to afford members in the Far West an opportunity to have meetings and an organization of their own.

HOAR, EDWARD WALLACE. See NECROLOGY.

HOCKEY. Ottawa, Canada, repeated its success of the year before in winning the Stanley Cup, emblematic of the world's professional hockey championship. The Vancouver Club was runner-up, losing the deciding competition in a five-game match. The University of Toronto captured the Allen Cup, carrying with it the world's amateur championship, Brandon, another Canadian team, finishing second.

Among the U. S. colleges Harvard once more led the way, scoring easy victories over her two chief rivals, Yale and Princeton, and defeating several smaller colleges as well. Cleveland won the National Hockey League honors after a bitter struggle with the team of Eveleth, Minn. Each contender captured two games, but Cleveland was declared the winner by reason of its greater goal scoring.

HODGSON, HENRY B. English bishop, died at Bury St. Edmunds, England, February 28. After 1914 he was Bishop of St. Edmundsbury, and Ipswich. He was born in Wales, March 10, 1856, and graduated with honors at Queen's College and Christ Church, Oxford. He was ordained priest in 1880 and from 1897 to 1914 was vicar of Berwick-on-Tweed.

HOG CHOLERA. See VETERINARY MEDICINE.

HOGG, WILLIAM STETSON. Naval officer, died, May 28. At the time of his death he held the rank of commodore. He was born at Washington, D. C., Nov. 11, 1856; graduated at the United States Naval Academy in 1876. He retired, June 30, 1909. During the Spanish-American War he was engaged on the *Miantonomah* in blockade duty; and he was executive officer on the *Monocacy* in Chinese waters, and present at the bombardment of the Taku forts during the Boxer Rebellion. He was in command of the supply ship *Glacier*, in its trip around the world in 1908-09.

HOLLIDAY, JOHN HAMPDEN. Publisher, died at Indianapolis, Ind., October 20. He was born at Indianapolis, May 18, 1846, and served in the Indiana Volunteers during the Civil War. He graduated at Hanover College in 1864. He founded the *Indianapolis News* in 1869 and was its editor until 1892, and later he established in coöperation with William J. Richards the *Indianapolis Press* which was consolidated with the *News* in 1901. He was president of the Union Trust Company 1901-16 and director of various other important financial and social institutions.

HOLY CROSS, COLLEGE OF THE. A Roman Catholic institution of the higher learning conducted under the Society of Jesus at Worcester, Mass.; founded in 1843. In the fall of 1921 there were 752 students enrolled and there were 41 members of the faculty. The library had 40,000 volumes. In 1921 a new dormitory building was in process of construction for the accommodation of about 200 students. President, Rev. James J. Carlin, S. J.

HOME DEMONSTRATION. See AGRICULTURAL EXTENSION WORK.

HONDURAS. A republic of Central America. Capital, Tegucigalpa.

AREA, POPULATION, ETC. The area is estimated at 44,275 square miles; and the population in 1920 at 637,114, giving a density of 12.5 inhabitants per square mile. The capital, Tegucigalpa, had 38,950 inhabitants in 1920. Other towns with their populations of 1920 are: La Esperanza, 11,453; Santa Rosa, 10,574; Nacaome, 8152; Choluteca, 8065. The chief ports are: Amapala on the Pacific; and Puerto Cortez and Omoa on the Atlantic. There are several other ports of entry on the Atlantic. The natives are chiefly Indians of mixed Spanish breed, but in the region of the north coast there are a number of negroes. In 1920 there were 867 primary schools with 1107 teachers and 35,912 pupils in attendance. The school census complete in December, 1919, showed that there were in the republic 87,207 children from 7 to 15 years of age, of whom 35,912 were receiving instruction. During the 1920 school year 247 boys and 240 girls were students in the four normal schools of the country. The National Institute of Tegucigalpa, the National School of Secondary Education in Santa Rosa de Copán, La Independencia School in Santa Barbara, León Alvarado School in Comayagua, and La Fraternidad School in Juticalpa are all secondary institutions. In 1920 the total number of teachers in these schools was 71 and of students 259. Graduates from these

schools are given the degree of Bachelor of Arts and Sciences. The University of Tegucigalpa is the only school granting the professional degrees of law, medicine, pharmacy, and civil engineering. Its courses in these subjects are open only to students with the degree given by the secondary schools.

PRODUCTION. The chief product is bananas which are grown mostly on the Atlantic coast. The exports in 1920 amounted to 11,524,149 bunches. Coconuts are also grown profitably, and form an important article of export. An excellent quality of coffee is raised. Other products include: Tobacco, a variety of fruits, beans, rice, wheat, indigo, henequen, and the castor oil plant. Stock-raising is of considerable importance. In 1919 the cattle numbered 103,120. Mineral resources include: Gold, silver, copper, lead, zinc, antimony, and iron.

COMMERCE. The following information in regard to business conditions and foreign trade was supplied by the United States Bureau of Domestic and Foreign Commerce. Business in Honduras suffered during 1921 and practically all firms took severe losses. However, there were no failures. Most of the houses showed foresight in promptly cutting prices heavily immediately after the market began to weaken, thus succeeding in disposing of a large part of their high-priced stock and obtaining cash for purchases at the new level. There was very little complaint on the part of foreign exporters against Honduran concerns for cancellation of contracts, scarcely any goods being refused because of the drop in prices. The buying strength of the country in 1921 can be seen in the increase (during a period of falling prices) in the values of imports from \$12,860,762 in the year 1919-20 to \$16,722,700 in 1920-21. The amount imported in 1919-20 was itself an increase from \$6,931,376 in 1918-19. The greatest amount of imports was consumed in the district supplied by Puerto Cortes, although the ports of La Ceiba and Amapala took only slightly less. The United States supplied 84 per cent of all the goods imported into the Republic. Of the total imports, 44 per cent was admitted free of duty. The liberality of Honduras toward concessions may be seen by the fact that the imports admitted free by concession amounted to \$6,323,589. The principal exports of Honduras are bananas, sugar, silver bullion, coconuts, and hides. While the quantity of the exports of the first two was larger than during the previous year, the fall in prices greatly depreciated their total value. The exports of silver fell off considerably owing to the closing of the Rosario mines in April, and the trade in coconuts and hides was less than in the previous year. Of the total exports the United States took 96 per cent. While the country was suffering from the low price of its exports, the banks followed a conservative policy and merchants limited their purchases to absolute necessities, thus preventing overstocking. Financially the year was a very satisfactory one for the Government.

FINANCE. The net revenue for the economic year of August 1, 1921, to July 31, 1922, was estimated at \$6,674,894.80. The customs revenue was estimated at \$3,480,000; monopolies, \$2,125,000; stamped papers, liquors, and cattle tax, \$395,000; mails, telegraphs, and cables, \$190,000; sundry revenues, \$559,894.80; and special revenues,

\$425,000, giving a gross total of \$7,174,894.80 which after the subtraction of \$500,000 for the expenses of tax collection leaves the net sum above mentioned.

RAILWAYS. The railways in 1920 had a mileage of 463, and included the line from Puerto Cortes to Potrerillos, 60 miles in length, which was acquired by the government in 1912; and four others of which the longest was the Tela railway (about 155 miles). Other lines were being extended in 1921.

ARMY. All citizens between the ages of twenty-one to thirty-five are liable to military service in the regular army, and those between thirty-five and forty, in the reserves. The number of fighting men, July 31, 1918, was placed at 46,106; and the reserves, at 21,505.

GOVERNMENT. The executive power is in a president elected by popular vote for four years; and legislative power, in a congress of deputies of forty-two members, also chosen for four years by popular vote. The president is assisted by a council of five ministers who are the heads of the following departments: Foreign Relations; Government and Justice; War; Treasury and Public Credits; Public Works and Agriculture; Instruction. President, at the beginning of 1921, General Rafael Lopez Gutierrez.

HONGKONG. A British crown colony situated in the mouth of the Canton river off the southwest coast of China about ninety miles south of Canton. It consists of an island, irregular in shape with a breadth of from two to five miles; and a length of about eleven miles, the area being a little over thirty-two square miles; and to it is attached on the mainland the peninsula of Kowloon with an area of about 356 square miles. The total area of the colony is in the neighborhood of 390 square miles. The civil population estimated in the middle of 1919 was 598,100 of whom the Chinese numbered 584,500. Of the white inhabitants, about one-half were British and one-third, Portuguese. The schools are all inspected by the state, but education is not compulsory. In 1920 the total number of pupils in all the schools was 25,786. A university at Hongkong was opened in March, 1912; and in 1919-20 had 230 students, mostly Chinese. Hongkong is one of the chief commercial centres of the Far East. The British Empire has the largest share of the trade. In 1919 the imports from the British Empire were valued at £19,746,010 of which £5,129,784 came from the United Kingdom; £70,905,698 from foreign countries; total, £90,651,708. The exports in 1919 were as follows: To the British Empire, £18,993,145 of which £2,698,813 went to the United Kingdom; to China and Japan, £62,649,784; to other foreign countries, £22,300,005; total, £103,942,934. For further details as to the distribution of the foreign trade in 1919, see preceding YEAR BOOK. The figures for the trade of Hongkong with the United Kingdom in 1920 were as follows: Imports into Great Britain, £2,506,333; exports of British products to Hongkong, £13,112,752; exports of foreign and colonial products, £302,338. The government is under a governor aided by executive and legislative councils. Governor at the beginning of 1921, Sir R. E. Stubbs.

HOOK, WILLIAM CATHER. Judge, died at Sayner, Wis., August 12. He was born at Waynesburg, Pa., Sept. 24, 1857; and after a high school

education, studied law at the St. Louis Law School. He practiced law from 1878 to 1899. From the latter year until 1903 he was United States district judge for Kansas; and in 1903 became circuit judge of the Eighth Judicial Circuit.

HOPS. The world's hop production in 1921 was more than 20 per cent below that of 1920. There was a slight increase in acreage over the area devoted to the crop in 1920, but the yield in all the principal hop-producing countries of Europe, owing mainly to dry weather, was below normal. Provisional estimates published by the International Institute of Agriculture, Rome, placed the 1921 yields of the different countries as follows: Germany, 7,100,000 lbs., Belgium, 4,990,000 lbs., Great Britain, 25,090,000 lbs., and Czechoslovakia, 5,530,000 lbs. These figures show some recovery from the reduction in acreage and yield due to war conditions, but they point out also that hop culture has not as yet regained its prewar status. In 1914 Germany produced 51,227,000 lbs., Belgium in 1913, 7,395,000 lbs., Great Britain in 1914, 56,813,000 lbs., and Czechoslovakia the same year 32,628,000 lbs.

The United States, according to estimates by the Department of Agriculture, in 1921 produced 29,140,000 lbs. of hops on 28,000 acres, the average yield being 1,040.7 lbs. per acre. In 1920 the acreage was the same but the production amounted to 34,280,000 lbs. The farm value of hops on December 1 was 24.4 cts. per lb. as compared with 35.7 cts. and 77.5 cts. per lb. on the corresponding dates in 1920 and 1919 respectively. As usual, the crop was produced in the three Pacific Coast States and New York. The production in New York was approximately 1,000,000 lbs., in Washington, 4,800,000 lbs., in Oregon, 9,000,000 lbs., and in California, 14,400,000 lbs. The average yield per acre was reported provisionally for the different States as follows: New York, 600 lbs., Washington, 1700 lbs., Oregon, 800 lbs., and California, 1230 lbs.

For the year ended June 30, 1921, the consumption of hops in the United States amounted to nearly 6,000,000 lbs. and the exports to over 22,000,000 lbs.

HORLICK, Sir JAMES. See NECROLOGY.

HORNUNG, ERNEST WILLIAM. British writer, celebrated as the creator of the character "Raffles," died in France, March 27. He was born June 7, 1866, and after spending two years in Australia in his youth, began the writing of stories about the year 1887, many of which were based upon his Australian experience. These included, among many others, *A Bride from the Bush* and *The Rogue's Marriage*. His great reputation, however, was based on *The Amateur Cracksmen*, of which the hero was "Raffles" familiar to readers and playgoers throughout the English-speaking world.

HORSES. See LIVE STOCK and VETERINARY MEDICINE.

HORTICULTURE. The outstanding feature of the year was the widespread spring freezes which, associated with a tendency on the part of vegetable and truck growers to reduce acreage due to the depressed markets and high price of labor, greatly curtailed the total production of fruits and vegetables in North America during 1921. In certain favored localities large crops were produced; an unusually large yield of apples was obtained in the Northwestern States, in

British Columbia, and in the extreme northeastern area, embracing Maine and Nova Scotia; the citrus crop of Florida and California and the peach crop of Georgia were exceptionally large. Despite the severe losses to fruit growers in the sections devastated by several freezes, it is probable that the consequent diminished supply contributed largely to stabilizing the market during a most depressing period. The largest citrus crop in the history of California, totaling 60,147 carloads and netting the growers over \$83,000,000, was handled during the year ended October 31. Boxed apples from the Northwest sold rapidly and at unusually high prices. The large Georgia peach crop was profitably and rapidly disposed of, and those Eastern growers that were fortunate enough to have fruit of any kind sold quickly at extremely favorable figures.

Extraordinary droughts obtaining in continental Europe and Great Britain tended to materially reduce the yield of fruits as well as other farm crops. Frosts in February and March affected the almond crop in Sicily. The Italian lemon crop was large and the export trade so small that the outlook for a time was most depressing; however, the situation was saved by by-products manufacturers, who utilized the fruit in the production of citrates. Grape growing in Spain was greatly stimulated by the increased demand for raisins by the United States.

CANNING INDUSTRY. The canning industry suffered severely in 1921 from the necessary readjustment of war prices to a firm, sound business level. This rapid decline caused extensive losses to wholesale and retail dealers who had large stocks on hand, which losses were in turn reflected sharply on the canning establishments, which, in the face of no demand for their products refused to make the usual contracts with the growers. To illustrate the importance of the canning industry, the National Canners' Association estimated that more than 5,000,000,000 cans of human food are preserved each year, requiring the employment of 500,000 workers in 4000 factories, representing a capital investment aggregating \$1,000,000,000. The export trade in canned products, due to the low money exchange, was practically demoralized in the early part of the year. Due to droughts abroad, which stimulated export demand, and devastating freezes in the United States, which stimulated home demand, this situation gradually improved during the summer season.

Of the important commercial vegetables, 346,823,000 bu. of white potatoes were produced in 1921, as compared with 403,296,000 in 1920; sweet potatoes 105,841,000 bu., as compared with 112,368,000; dry beans (six States) 9,332,000 bu., as compared with 9,075,000 bu.; onions 12,652,000 bu., as compared with 23,435,000; cabbage 606,274 tons, as compared with 1,029,662 tons; canned peas 8,207,000 cases, as compared with 12,317,000 in 1920. The total apple crop was 96,881,000 bu. as compared with 223,677,000 bu. in 1920. The commercial apple crop totaled 19,296,000 bbls., as compared with 37,239,000 bbls.; peaches 32,733,000 bu., as compared with 45,620,000 bu.; pears 10,705,000 bu., as compared with 16,805,000 bu.; and oranges 30,700,000 boxes, as compared with 29,700,000 boxes.

In fresh deciduous fruits alone, California shipped over 40,000 cars in 1921, the largest single

item being grapes, aggregating over 28,000 cars. In dried fruits California shipped 277,660 tons, a sharp decrease from previous shipments of 417,250 tons in 1919 and 330,370 tons in 1920. The pineapple pack of Hawaii approximated 5,500,000 cases, a decrease of 500,000 cases from that of the previous year. The California nut crops were below anticipated size, almonds approximating 6000 tons and walnuts 18,000 tons, and were quickly marketed through their respective organizations.

EXPORT AND IMPORT TRADE. Foreign trade in practically all kinds of fruit and vegetable products showed a marked decline during the fiscal year ended June 30, 1921, over that of the preceding period. The United States exported fruits to the value of \$65,338,504, vegetables \$24,899,302; nuts \$1,790,782, or a total of \$92,028,588 as compared with \$154,843,400 for the preceding fiscal year. Imports during the same period were fruits \$40,933,307, vegetables \$22,714,581, and nuts \$34,468,087, a total of \$98,115,975 as compared with \$171,343,048 for the preceding annual period. This sharp decline in values is due in part to decreases in quantity and in part to declines in unit values, the notable exception being raisins and dried grapes, the imports of which show an increase approximating 30,000,000 lbs. Exports of nursery stock during the period amounted to \$397,655, an increase of \$12,746 over 1920; imports of nursery stock \$5,142,912 as compared with \$3,841,161 in 1920.

Among the export items showing a marked variation from the preceding year were fresh apples; 2,665,101 bbls. were shipped in the year ended June 30, 1921, as compared with 1,050,598 bbls. in the preceding year. Over 2,000,000 of these were consigned to ports of the United Kingdom. The value of exported canned fruits decreased from \$41,232,970 to \$13,128,053 for the respective periods. All importations of nuts, including walnuts, almonds, and peanuts, showed marked decreases in total values. Bananas showed a moderate increase.

MARKETING. Of the many important problems confronting the fruit and vegetable growers, marketing received the greatest consideration during 1921. Under authority received at the National Fruit Marketing Conference held in Chicago April 5, the National Farm Bureau Federation appointed a committee of twenty-one representative fruit men to devise better methods of handling the nation's fruit crop. A notable marketing success of the year was the merchandizing of raisins in small inexpensive packets, by which plan the raisin growers of California were able to dispose of a large crop at very satisfactory prices. Another worthy example of organized effort was the continued success of the California Fruit Growers' Exchange, which successfully marketed a large crop of oranges and lemons despite the generally demoralized market situation. The California Cherry Growers' Association was organized during the year on a non-profit basis to assist members in marketing of this fruit. Plans for mutualizing the North American Fruit Exchange were announced in July as a progressive step in the merchandizing of fruit and vegetables.

In consequence of the prevailing high trans-continental freight rates the Board of Directors of the California Fruit Growers' Exchange officially

indorsed the organization of a producers' steamship company for the transportation of citrus fruits from Los Angeles to Atlantic coast ports. Successful steamer shipments were made during the year of northwestern boxed apples to Great Britain and Atlantic ports of the United States via the Panama Canal.

REGULATORY ACTS. The activities of the Federal Horticultural Board were further extended during the year to afford protection to the citrus fruit industry of the country by preventing the entrance of the citrus black fly. A quarantine was promulgated to become effective April 1, 1921, whereby the entry of fruit and vegetables from Cuba, the Bahamas, Jamaica, Canal Zone, Costa Rica, India, Philippine Islands, Ceylon, and Java was permitted only after conformance to certain regulations necessitating thorough freedom from leafage and other plant material likely to contain the black fly. The work of the Board in attempting to control two important date scales threatening the infant date growing industry of the Southwest indicated the possibility of eradicating at least one and perhaps both of the pests provided sufficient moneys are appropriated to conduct operations on a thorough basis. The canker disease of citrus fruit was officially reported as occurring in Australia, a fact which will likely lead to the extension of the quarantine promulgated June 27, 1917.

Certain changes were made during the year to Quarantine No. 37, which concerns the importation of foreign plants and plant products for propagation, whereby all products admitted under Regulation No. 2 must be free from sand, soil, or earth. Under Regulation No. 7, inspection is now required at the time of packing of all nursery stock, and the accompanying certificate must cover washing and removal of soil. An interesting result of Quarantine No. 37 was the stimulus imparted to American nurserymen to propagate evergreens and other plants affected by the Act. Conservative plant dealers prophesy that there will soon be an oversupply of the evergreens, followed by a depressed market.

EXPERIMENTAL WORK. The trend of horticultural research during the past year has been toward the solution of fundamental problems which for years have beset investigators. Notable among recent investigations is that of the Wisconsin Experiment Station in studying the relationship between spur growth and spur performance in the apple. It was found that in the Wealthy and some other varieties under certain conditions spurs of certain length showed the highest percentage of fruit-bud differentiation and that both longer and shorter spurs showed lower percentages. These results were substantiated by work conducted at the Missouri Experiment Station in an attempt to determine the location in the tree of the factors influencing fruit-bud differentiation, in which it was found that, although there is a marked association between length and performance in apple spurs, the other parts of the tree, nevertheless, exert a considerable influence.

The work of the Oregon Station on the bearing of internal chemical factors on fruit-bud formation, in which it was suggested that a proper balance between the carbohydrate and nitrogen content is necessary for the proper development of the tree and its fruiting function, has served to place many

perplexing nutrition problems in a new light, rendering their ultimate solution highly probable.

Pruning investigations with apple reported from New York (Cornell), Massachusetts, New Hampshire, and Ontario Agricultural Experiment Stations gave further evidence that heavy pruning inhibits the growth of young trees and delays fruiting. Similar studies with the olive in California led to the same conclusions. In the light of this new knowledge, pruning practices with fruit-trees are being generally modified.

The work of the East Malling Research Station, Kent, England, with fruit stocks, a report upon which appeared during the year, contributed much to the solution of a puzzling problem—that of obtaining reliable stocks. A practical method of multiplying stocks by layering was described, the use of which practice will enable the nurseryman to rapidly increase desirable stocks and thus do away with the disappointing results which have obtained in the past from the use of mixed types.

The Massachusetts Experiment Station has developed a method of identifying varieties of apples by variations in the leaves which, if thoroughly practical in its application, will prevent the substitution of inferior varieties.

Studies of the comparative value of dusting versus spraying were conducted in many sections of North America, leading to variable conclusions as to the value of dusting. It would seem from the results obtained at the New Jersey Experiment Stations that the success or failure of dusting is closely correlated with the amount and intensity of rainfall.

PROMISING NEW FRUITS AND PLANTS. The Latham red raspberry, originated by the Minnesota Fruit Breeding Station and for a long period known under the name of Minnesota No. 4, received favorable comment during the year on account of its extreme hardiness, combined with good market qualities. The Melba apple, a seedling of McIntosh developed at the Central Experimental Farm, Ottawa, the Oka muskmelon from the Trappist monastery, Oka, Quebec, and the Cortland apple from the New York (Geneva) Experiment Station are recent northern introductions received with favor during the year. A large importation of offshoots of the Saidu date received in late 1920 are to be propagated under strict quarantine regulations and later disseminated among date growers at nominal cost.

In the spring of 1921 a shipment of 1400 offshoots of the Deglet Noor date arrived in the United States. This is a most valuable commercial variety in Northern Africa, and is believed to be adapted to the hot dry valleys of the Southwest. To further insure the caprifig supply, the Department of Agriculture formulated plans to establish plantations in the bay regions near San Francisco, from which to supply the fig insect (*Blastophaga*), when killed out in more exposed areas. A successful method of propagating the Thomasville citrangequat, a hybrid citrus fruit desirable as a stock for the Satsuma orange on account of its total immunity to citrus canker, was perfected in February, 1921, whereby this new stock may be propagated rapidly in any desired quantity. Small twig cuttings about 6 in. in length with terminal leaves attached rooted readily in the greenhouse under the stimulus of bottom heat and relatively high humidity.

The Monukka grape, introduced into California by the U. S. Department of Agriculture, showed merit both as a raisin and early shipping fresh fruit variety. Panariti and Ohanes are two shipping grapes now grown in sufficient quantity to emphasize their future importance to the California grape industry. Coates 1418 prune, originating near Saratoga, Calif., as a bud mutation of Prune d'Agen, promises to add to the value of the prune-producing industry on account of its greater size and yield.

MISCELLANEOUS. Prohibition continued to exert a remarkable stimulating influence on the grape-growing industry throughout the entire United States. The president of the California Grape Growers' Exchange stated that in a brief three years' period the average price per ton had risen from a range of \$10 to \$20 to that of \$75 to \$100. A 20-acre vineyard of Emperor and Thompson varieties near Exeter, Calif., was reported to have sold for \$1750 per acre. An experimental cold storage shipment of grapes from Chile to the United States was reported to have reached its destination in excellent condition. Argentina cherries reached the United States in late December, in time to grace the Christmas table of President Harding and others. The first solid carload of fresh figs from Fresno, Calif., was shipped to Chicago and New York in June in the expectation of creating a market for this product. A total of 923 cars of fresh tomatoes valued at approximately \$600,000, were shipped into the United States from the State of Sinaloa, Mexico, in the spring of 1921.

NECROLOGY. E. J. Glasson, specialist in horticulture and forestry on the Experiment Station *Record* for a long period of years, died Feb. 18, 1921. C. G. Patten of Charles City, Iowa, famous as the originator of Patten Greening apple and other hardy fruits for the North Central States, died November 28.

BIBLIOGRAPHY. Among the important contributions to horticulture literature noted during the year are: A. J. Downing, *Landscape Gardening* (New York and London, 1921, rev. by F. A. Waugh); J. C. Folger and S. N. Thomson, *The Commercial Apple Industry of North America* (New York, 1921); U. P. Hedrick, *Sturtevant's Notes on Edible Plants* (New York, 1919); R. T. Morris, *Nut Growing* (New York, 1921); H. D. House, *Wild Flowers of New York* (New York, 1918, 2 pts.); W. Poponoe, *Manual of Tropical and Subtropical Fruits* (New York, 1920); P. K. Reynolds, *The Story of the Banana* (Boston, 1921); W. Robinson, *The English Flower Garden and Home Grounds* (London, 1921, 13th ed.); Sutton and Son, *The Culture of Vegetables and Flowers from Seeds and Roots* (London, 1921, 16th ed.); A. D. Taylor and G. D. Cooper, *The Complete Garden* (Garden City and Toronto, 1921); G. C. Thomas, Jr., *The Practical Book of Outdoor Rose Growing for the Home Garden* (Philadelphia and London, 1920, 5th ed. rev.); E. H. Wilson, *The Romance of Our Trees* (New York, 1920).

HOSKINS, WILLIAM HORACE. Veterinarian, died in New York City, August 10. At the time of his death he was dean of the New York State Veterinary College. He was born at Rockdale, Pa., July 23, 1860, and graduated at the American Veterinary College in New York in 1881. He was professor of the various departments of veterinary science in the University of Pennsylvania until

1917, and he was successively president of the American Veterinary Medical Association and the Pennsylvania State Veterinary Medical Association. He contributed a large number of articles to the scientific press on veterinary subjects, and he was the editor-in-chief of the journal of *Comparative Medicine and Veterinary Archives*.

HOUSE, ÉMILE. See NECROLOGY.

HOUSING. The housing shortage, in all countries aggravated, if not brought on, by the suspension of building during the war followed by the post-war failure to resume operations on a normal scale owing to the prohibitive costs of construction, continued to be severely felt throughout the world. According to all estimates appearing in *The American Contractor*, based on the building permit statistics for 14 large cities, the United States at the beginning of 1921 faced an accumulated deficit amounting to about 147 per cent of the normal annual building programme, or rather the United States faced a demand equal to the normal output of $2\frac{1}{2}$ years. New York City's needs as revealed in a careful survey made by Health Commissioner Royal S. Copeland, called for the construction of living accommodations for about 100,000 families, exclusive of the normal growth of the city amounting to about 30,000 families annually. The same condition extended throughout the country amounting to a shortage of from a million and a half to two million homes and involving some 4,000,000 people. But the figures for contracts let during 1921 as compared with the preceding five years did not begin to meet the situation. Building materials and labor showed reductions, but the fact that normal building had not been resumed would indicate that the public did not believe that costs had yet reached rock bottom.

Various legislative attempts to stimulate building, as the Tax Exemption laws of New York and New Jersey (see ARCHITECTURE), did meet with success, and there was everything to recommend attempts to facilitate the financing of building operations such as the establishment of coöperative loan banks. But the Massachusetts Special Commission on the Necessaries of Life in its report of January, 1921, seemed to give the kernel of the situation. Increased building will take place, it says, "When rents are sufficiently high to attract investors." Rents will come down after building has sufficiently increased. But in the meantime, "if rents are kept unduly low by law, the supply of dwellings will not increase." In this connection definitions of a reasonable rent are worth considering. In August the Appellate Term of the Supreme Court, meeting at Brooklyn, ruled a reasonable rent to be a return of 10 per cent on the present market value of the property. A booklet on the subject prepared by the American Trust Company of New York declares that a reasonable rent should yield 11.8 per cent net income on fair valuation of real estate. Henry R. Brigham, formerly counsel for the United States Housing Corporation, put the necessary net return at 6 per cent of the valuation of the property, or a gross rental return of from 12-13 per cent. He also maintained that the radical rent legislation enacted by New York in 1920 caused a decrease in house building. Whether or not he was right, the National Industrial Conference Board reported an actual decline of 1 per cent for

rents in many communities, and a check in the contemplated rise of rents in other cities.

The Senate Committee on Reconstruction and Production, commonly known as the Older committee, authorized in April, 1920, to inquire into the building situation, reported in March, 1921. Of the ten recommendations contained in the document those dealing directly with housing are: Two bills concerned with the gathering of data on construction methods, costs, and designs, and the regular publication thereof; two bills concerned with supplying through national and home loan banks long-term money for house building; two bills concerned with tax exemption on real estate profits and loans. Other contemplated legislation is that of California, whereby workmen will be assisted in the building and ownership of their own homes; that of Illinois for a State Land Commission empowered to fix rents; and that of New York, tending to stimulate house construction.

Court convictions, accompanied by prison sentence, during the year include that of Robert Brindell, long head of the Building Trades Council, in New York, and in November those of four business men prominent in the so-called Tile Trust. All convictions were a result of the investigations of the Lockwood Committee.

Coöperative efforts towards the solution of the housing problem were especially successful in Brooklyn, where a small group of Finns joined together, raised \$8000 of the necessary \$45,000, borrowed the remainder and built a 16-family apartment house which they were occupying at the close of the year at a rental of approximately \$25.00 instead of \$75.00 dollars a month.

Chambers of Commerce throughout the country concerned themselves with housing. The report of the Civic Development Department on this subject shows them to be concerned more with the permanent problems than with meeting an acute shortage. They submitted three plans for local inquiry and study: 1. A financing corporation organized to loan to local builders. 2. The erection of houses by the local industries for their employees. 3. Community housing corporation.

The National Housing Association publishes the quarterly magazine, *Housing Betterment*, which gives news of the developments in this field throughout the world. The headquarters of the Association are at 105 E. 22d Street, New York City, and the secretary is Lawrence Veiller. *The Monthly Labor Review*, issued by the United States Department of Labor, also contains figures and reports on the subject.

GREAT BRITAIN. The end of 1920 saw England facing a shortage of from 500,000 to 800,000 dwellings; 60,000 of these had been begun and only 12,000 completed under the housing programme in effect during that year. In addition to this real shortage there was a large number of inhabited houses which had been repeatedly condemned as "unfit for human habitation" and incapable of being rendered fit. The lowest total for such houses in England and Wales was 180,000 and a proportionately higher number for Scotland. In view of these facts the virtual abandonment of the housing programme undertaken by the government in 1920 as announced on July 14, 1921, by Sir A. Mond, the recently appointed minister of health, came as a great disappointment. The new policy of the government in regard to housing allowed for the subsidence of 198,000 houses at a

cost of £10,005,000, and for the improvement of slum areas to the extent of £200,000. The decision to cut down the housing programme was due to a growing feeling against the volume of government expenditures.

Were it not for the success of the Building Guilds in England during the year the outlook seemed unrelievedly black. These 60 local guilds of building workers (organized as self-governing bodies conducted for the public benefit, insuring to each member a fair remuneration, but eliminating profits) were able to supply dwellings of standard material and superior workmanship at a cost lower than that of private contractors. On July 23, 1921, representatives of the various local committees met and formed a national body, which, with the decrease in government contracts, undertook private building contracts in the hope of a like success.

The Scottish Housing and Town Planning Congress held in Edinburgh in April enjoined the Scottish members of Parliament to carry out their pledges to relieve the housing shortage.

NEW ZEALAND. The parliament had previously appropriated \$3,742,900 for the building of working men's homes during 1921.

AUSTRIA. With the cost of building estimated to be eighty times what it was before the war, conditions, in the large cities particularly, continue to be intolerable. Vienna plans to create a loan fund for the promotion of building, by means of taxation.

CZECHO-SLOVAKIA. With conditions still such that in Prague many thousands were without a place to live in, the government in February, 1921, added a more important housing law than that of 1920. Under the new law: 1, Land can be expropriated for building purposes, under certain conditions; 2, specially constituted courts of wage arbitration are created for the settlement of builders disputes; 3, a board is established to fix the price of building materials; 4, the state coöperates with coöperative building associations constructing dwellings for officials and their families, allowing a credit to the extent of 250,000,000 crowns. Other encouragements to building activity are a material decrease in taxation and a 60 to 80 per cent guarantee of credit. In fact the housing shortage was so severe, owing to war and post-war conditions, coupled with the new influx of inhabitants to the large towns, that in some special cases state support equaled 90 per cent of the total outlay and the buildings were freed from taxes for fifty years.

FRANCE. Restoration continued to be the main problem. By February, 1921, 2000 coöperative societies of reconstruction were in operation, all of which were receiving assistance from the government in one form or another. In Paris the authorities in November had 978 workmen's dwellings under construction and were preparing plans for more; the city had made grants for this purpose amounting to \$9,650,000.

GERMANY. With 1,000,000 dwellings desperately needed and conditions unfavorable to building, the Housing Commission requisitioned all unoccupied dwellings. No family might have more than one house, and the general limitation was a room per person with kitchen. In February a national law was passed requiring all the states to spend at least thirty marks per inhabitant on home construction during 1921 and 1922. To reim-

burse the states a tax, payable over a period of twenty years, was laid on all houses built before 1918.

HOLLAND. The demand for houses for workers and the general public obliged Holland to consent, for the first time in its history, to the erection of permanent wooden houses.

ITALY. Drastic rent restriction laws, effective until July, 1922, but not applying to houses built within a certain period, were enacted by the nation in a further attempt to cope with the acute conditions.

JAPAN. Here as elsewhere the housing famine was acute. According to the Tokyo press, salaried men and laborers alike must pay one-third to one-half of their income for rent.

NORWAY. The Norwegian Technical University, with the aid of governmental and municipal grants, was conducting experiments to determine the relative merits of the common types of house construction. The two points, cheapness in erection, and economy in heating, were especially investigated. The results showed a frame house with sheet panel and asphalt pasteboard on each side, intermediate space filled with dry sawdust, to be the most satisfactory in these respects. The full details of this interesting experiment were to appear in book form.

PERU. According to the Bulletin of the Pan-American Union for February, the President of Peru provided for a bond issue amounting to \$1,459,950, the proceeds of which were to be used for the building of workingmen's dwellings in Lima and Callao.

URUGUAY. On June 20, 1921, a law concerning the rents of dwellings in the towns and cities of Uruguay was passed whereby the rent rate of December, 1919, became the legal maximum rate for a period of three years. Revisions in favor of landlord or tenant might be obtained by an appeal to the rent commission of the locality. The law also contained certain tax exemption provisions for new buildings begun and completed during its three-year term of operation.

For additional information, see ARCHITECTURE, and BUILDING.

HOWARD, ROBERT JARED BLISS. See NECROLOGY.

HOWARD, Sir HENRY. See NECROLOGY.

HOWLAND, THOMAS SMITH. Railway official, died, August 8. He was born at North Dartmouth, Mass., Feb. 13, 1844; and graduated at Lawrence Scientific School (Harvard) in 1868. He was an engineer in the service of the Burlington and Missouri River Railroad from 1868 to 1876; and after 1883, was secretary of the Chicago, Burlington, and Quincy Railroad, and after 1902 became its vice-president and treasurer.

HOYLE, ELI DUBOSE. Army official, died, July 27. He was born at Canton, Ga., Jan. 19, 1851; graduated at the United States Military Academy, 1875, and at the Artillery School, 1880. He was raised to the rank of major and chief ordnance officer, United States Volunteers, 1898; colonel in the regular army, March 3, 1911; brigadier-general, Sept. 24, 1913; and retired, Jan. 19, 1915. He was on the staff of General Wilson in the Porto Rican campaign in 1898 and again on his staff as chief ordnance officer and provost marshal; general of the Department of Matanzas, Cuba; president of the field artillery board, 1906-07; commanded the sixth regiment

of field artillery, 1908-13; and held commands in the Philippine Islands, 1913-14; after which he was in command of the eastern department of the United States with headquarters at Governor's Island until Jan. 15, 1918.

HUBERMANN, BRONISLAW. See *MUSIC, Artists, Instrumentalists*.

HUDSON, CHARLES TRACY. Civil War veteran, well known as the commander of the squad that captured Jefferson Davis, died in Brooklyn, N. Y., November 17. He was born at New Berlin, N. Y., in 1851. He served in the Civil War, attaining the rank of colonel. His personal records give an account of the capture of the President of the Confederacy, which occurred May 10, 1865, near Irwinsville, Ga. According to these accounts the information leading to the capture was supplied by a negro. Captain Hudson then procured a detail of 28 cavalry men and followed the trail to the tent in which Jefferson Davis and his wife were living. There follows a circumstantial narrative of the Confederate President's attempt to escape in his wife's clothes and the other incidents of the capture. For forty-five years preceding his death, Colonel Hudson was employed in the New York Custom House, retiring early in 1921.

HUDSON, EDMUND. Editor, died at Hartford, Conn., December 18. He was born in 1848 and from 1894 to 1913 was on the staff of the *Hartford Times*. He founded the *Army and Navy Register* and the *United States Government Advertiser*. He was engaged in newspaper work for nearly fifty years.

HUDSON RIVER BRIDGE. See *BRIDGES*.

HUGHES, Sir SAMUEL. Canadian army officer and cabinet official, died at Lindsay, Ont., August 24. He was born at Darlington, Ont., Jan. 8, 1853; and educated at Toronto University. After teaching at the Toronto Collegiate Institute he purchased and edited until 1897 the *Lindsay Warbler*. He entered the active militia of Canada in his boyhood, and became a prominent officer in various military associations. He was a constant advocate of Canadian military assistance to the empire in time of war, and personally offered to raise forces in Egypt, Sudan, the Afghan frontier war, and the Boer War. He devoted much of his life to promoting the cause of colonial military assistance to the empire, and visited Australia and New Zealand for this purpose. He served with distinction in the South African war, 1899-1900, and in the late war he was successful in raising Canadian contingents. He was six times elected to parliament, and was minister of militia and defense from 1911 to 1916. In politics he was a Conservative.

HULL, GEORGE HUNTINGTON. Iron merchant, died at Los Angeles, Calif., March 12. He was born at Dansville, N. Y., Nov. 22, 1840; received an academic education; and in 1868 became a partner in Addey Hull and company in Cincinnati. He was successively president of coal and freight car storage companies, and after 1888 was president of the American Pig Iron Storage Warrant Company. He was the author of a volume on industrial depressions (1911).

HUMBERT, GENERAL. French soldier died at Strasburg, November 10. At the time of his death he was military governor of that city, commandant of the territory of Alsace and a member of the higher council of war. He was

born at Gazeran, France, April 8, 1862, entered the military school of Saint-Cyr in 1881 and on leaving it joined the infantry. He served in the campaigns of Tongking and Madagascar and became captain in 1889, colonel in 1897, and brigadier-general, March 13, 1912. At the outbreak of the war (1914) he was in Morocco where he took part in the battles on August 28 and September 6-9, his division being cited in the order of the day for bravery and endurance. In October, 1914, he was called to the command of the 32nd group with the rank of general of division and was next placed at the head of the Lorraine forces in March, 1915; of the 3rd Army in July, 1915; and of the 7th Army in October, 1918. On returning to French territory in June, 1918, he was made inspector general and on Oct. 22, 1919, he became military governor of Strasburg. In the Battle of the Marne he showed extraordinary determination and energy. After a German brigade had captured Mondement (Sept. 9, 1914), it had to be retaken at any cost, and he delivered three attacks, finally succeeding in recapturing it. His work drew the attention of General Joffre and General Foch from this time on, and after service in the violently contested region of the Argonne, he was placed in command of the Army of the Lorraine near Nancy, but later was recalled to the Argonne at the head of the Third Army which he commanded until the end of the war. When Ludendorff broke through the British front, March 21, 1918, it was the army of Humbert that threw itself into the breach and checked the advance of the Germans, blocking their way to Paris.

HUMPERDINCK, ENGELBERT. German music composer, died at Neu-Strelitz, September 28. He is perhaps best known as the composer of *Hansel und Gretel*. He was born at Siegburg in the Rhine Provinces, Sept. 1, 1854, and received a thorough musical education. Early in his career he was associated with Richard Wagner, aiding him in preparing the productions of *Parsifal* in 1880-81. He began at that time the composition of *Hansel und Gretel* which when finished (1893) won an extraordinary success. The successful opera, *Die Königskinder*, was written in 1896. Both these operas were familiar to New York audiences. He visited the United States in 1905 and again in 1910. He resorted largely to folk themes which he treated in a masterly manner, and his compositions are marked by exquisite harmonization and orchestration. His other works include *Die sieben Geiseln* (1897); *Dornröschen* (1902); *Die Heirat wider Willen* (1905); *Die Marktelenderin* (1914); and incidental music, ballads, and choruses.

HUNEKER, JAMES GIBBONS. One of the best known American critics of his time, died in Brooklyn, N. Y., February 9. Down to a week before his death he was contributing articles on music criticism to the New York press. He was born in Philadelphia in 1860, the son of John Hunecker, a well-known organist. He devoted his youth to the study of music and spent several years in Paris studying the piano under Georges Mathias. On his return to New York he became a teacher of the piano at the National Conservatory. After ten years of this work he applied himself to musical and dramatic criticism, and was editor of these departments on the *Sun* and other New York papers. From 1891 to the time

of his death he wrote extensively in these fields as well as in that of literary criticism and soon won a reputation throughout the country, both by his articles and by his books. Among the best known of the latter may be mentioned *The Melomaniacs* (1902); *Iconoclasts* (1905); *Egoists* (1909); *Chopin, the Man and his Music* (1901); *The Pathos of Distance* (1913); and *Steeplejack* (1921), published shortly before his death, containing much matter of an autobiographical character.

HUNGARY. A state in eastern Europe formerly a kingdom which along with Austria made up the dual monarchy of Austria-Hungary. Capital, Budapest. The area of the old kingdom was 125,609 square miles and its population, Dec. 31, 1910, was 20,886,487. No definite figures for the area of the new Hungary were available on account of the unsettled state of the boundaries. The population of Budapest, January 1, was given at 184,616. Under the treaty signed at Neuilly, June 5, 1920, and ratified by the Hungarian government Nov. 13, 1920, the boundaries with Austria, Czechoslovakia, Jugo-Slavia and Roumania were indicated, though the last were not definitely fixed being left to the determination of a mixed commission. The boundaries roughly indicated would be as follows: The northern line beginning at Pressburg runs parallel with the Danube river to the Gran, thence north and northeast to Mogoșizet on the Theiss river, thence southwest to Nagylak on the Maros river, thence west to a point on the Drave river, thence along that river as far as Toka and from that point north to Pressburg again. The area of the new state has been roughly estimated at about one-third of the size of the former kingdom of Hungary. The boundaries were still indeterminate in 1921 but the important region of Burgenland was transformed to Austria in accordance with the treaty, the change being accompanied by disturbances which are noted below under *History*. Out of the former kingdom of Hungary the province of Croatia and Slavonia was absorbed in the new state of Jugo-Slavia; Slovakia was assigned to Czechoslovakia and Transylvania to Roumania. See **JUGO-SLAVIA, CZECHO-SLOVAKIA, and ROUMANIA**. The statistics for the new state were not available. Figures of education, production, commerce, etc., for the old kingdom will be found in preceding **YEAR BOOKS**. Education is compulsory for children between the ages of six and twelve. In the old kingdom in 1916-17 there were 15,224 elementary schools and the prevailing language was Hungarian in 12,503 of these. The number of pupils was 1,795,443. There are four universities, all maintained by the state, of which the largest is the University of Budapest with 4589 students in 1920-21. Other universities are situated at Colozsvár, Pressburg, and Debreczen.

PRODUCTION. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce on the basis of reports in the local press: The treaty of Trianon divided the former territory of Hungary in such a manner that out of 325,411 square kilometres only 93,184 square kilometres were left, which, according to 1921 estimates, caused a loss of 87 per cent of Hungary's woods and 90 per cent of its mines. The following mines remained on Hungarian territory: (1) Previous to the partition of Hungary the deposits of the country contained 144,000,000 tons of iron ore, but only one large and

three small mining districts were left to new Hungary, and only the Telekes-Rudabanya, in the county of Borsod, was worth mentioning. The ore was of good quality, and was estimated at 16,000,000 tons. The production of the various other mines was reported to be of an inferior quality, and the total quantity amounted to little more than 1,000,000 tons. However, an iron-ore deposit was recently discovered near Eger (county of Heves), which contained 30 to 40 per cent iron metal. The ore produced could not be smelted by the Hungarian smelting works at present, and in the future only if electric smelting apparatus were furnished. (2) The situation concerning manganese and aluminum ores was reported to be of a most disappointing character. Before the partition Hungary possessed sufficient ores of this description to supply home consumption and ship large amounts to Germany, but at present nothing could be done and the future was not over-encouraging. Manganese ore of the first quality was discovered in 1915 at Urkut, county of Veszprim, and bauxite near Kadarto, in the same county. In 1921 the coal situation was reported to be better than that of the other minerals. Coal is practically all of the brown variety or lignite of which the best quality is found in the district of Pecs. There are a considerable number of brown coal and lignite mines. The coal deposits of Hungary were estimated at about 36 per cent of the deposits in the country before the partition under the treaty of Trianon.

COMMUNICATIONS. An important railway development of the year was the decision of the Hungarian State Railway Administration to electrify 870 miles of line. By such electrification it was estimated that the Hungarian State Railway would save 800,000 tons of coal yearly and reduce the consumption of coal to 1,500,000 tons. Engineers stated that if all the railways were electrified there would be no need for Hungary to import coal, its own deposits sufficing for ordinary needs. In the autumn an agreement was reached with the government of Roumania whereby direct railway communication was provided between the two countries, including the interchange of cars. Down to that time it had been necessary to unload freight at the borders. Traffic on the Danube is under the International Commission on the Danube, which was working toward the adjustment of river transportation to change conditions and aiming to prevent unnecessary delays for customs examinations, etc. Various plans for river and harbor improvement were under consideration.

GOVERNMENT. The republic was proclaimed Nov. 16, 1918, under the title of Hungarian People's Republic, and Count Michael Karolyi became provisional president, but his government fell from power March 22, 1919, and was for a short time succeeded by a Soviet government under Bela Kun which declared the dictatorship of the proletariat. This in turn was soon overthrown by the aid of the Roumanian army and on August 7, 1919, a new government was organized representing the parties of the Right. Elections were held in January and February, 1920, and the new Parliament chose a regent under the title of Protector of the Magyar Republic. The regent in 1921 was Admiral Nicholas von Horthy who was elected March 1, 1920. The government appointed after the cabinet crisis in April, 1921

(see below), was as follows: Prime Minister, Count Bethlen; Foreign Affairs, Count Banffy; Interior, Count Raday; Finance, M. Hegedus; Agriculture, M. Szabo; Commerce, M. Hegyesalmay; Public Instruction, Dr. Vass; Justice, M. Tomcsanyi; National Defense, General Belitska; Social Welfare, M. Bernolah; Food, M. Mayer.

HISTORY

RETURN OF THE EX-EMPEROR. The former Emperor of Austria-Hungary and King of Hungary made two attempts to regain the throne in the course of the year. On March 26, he entered the country where he was favored by the higher clergy and the leading aristocracy. The Regent, Admiral Horthy, refused to relinquish his authority unless ordered to do so by the National Assembly. The latter body on April 2 opposed the restoration of Charles, and advised him to depart immediately. He returned to Switzerland. The Allies protested against this attempt on the part of Charles, the Little Entente, comprising Czecho-Slovakia, Roumania, and Jugo-Slavia, being especially emphatic in its protest. The Prime Minister, meanwhile, had published a manifesto issued by Charles, saying that it was his conviction that peace could be restored only by his return to the throne. The government's course in publishing this manifesto and in introducing it by a reference to "his majesty, king Carl IV" gave offense and led to its overturn, April 10.

On October 22 it was learned that the ex-Emperor Charles after a flight from Switzerland by aeroplane, had landed with the former Empress Zita near Odenburg where troops awaited him, and thence had proceeded to Raab and summoned royalist sympathizers. It was reported that his reception among the people and troops was enthusiastic and that from the first, 12,000 of the latter were ready to accompany him in an advance on the capital. There were many conflicting rumors in respect to the ex-Emperor's success. Starting as he did in the Burgenland region, he rallied around him those nationalists who had opposed the cession of Burgenland to Austria. The Little Entente took measures to protect itself, calling three divisions of troops to the colors to reinforce the army on the Hungarian border. As to the Allies, there was no sign that they would relax their opposition to the return of a Hapsburg to the throne. A year and a half before, Feb. 2, 1920, they had formally declared that no member of the Hapsburg family would be allowed to reign in Hungary again. Nevertheless the ex-Emperor's course arose apparently from the belief that the Allies would acquiesce in his return, just as they had in the return of Constantine to Greece, which also was contrary to their expressed will. He thought that the Little Entente would offer no serious resistance because the Jugo-Slavs were fighting the Albanians, the Roumanians were absorbed in the protection of Bessarabia from the Russian Reds, and the Czecho-Slovaks could not rely upon the support of the Slovaks in the event of a campaign against Hungary. It was announced on October 24, that the forces of the ex-Emperor were defeated in the neighborhood of Torbagy with the loss of 200 killed and 100 wounded, and the ex-Emperor and ex-Empress were arrested by the Regent's troops near Komorn, about forty miles to the northwest of Budapest. According to

the accounts issued by the Hungarian government their forces numbered about 20,000 and those of Charles 10,000. The Hungarian government asked the former Emperor to abdicate (October 26) and to recognize the complete cessation of his rights. He was also ordered to surrender himself to the British authorities. Meanwhile the Little Entente was preparing to use force against the Hungarian government if Charles were not given up and if Hungary did not give guarantees for disarmament and for the payment to the Little Entente of the costs of military preparation. The Hungarian government made it plain that it would persist in the use of force to make the Emperor abdicate, if he did not do so of his own free will. A representative of the government declared that the great majority of Legitimists were in accord with the government in this respect. At the same time it was announced that the Council of Ambassadors had decided that Charles should be interned on board a British gunboat in the Danube until measures should be taken for his removal. He was banished to Funchal in the island of Madeira where he arrived on board a British cruiser, November 19. The proposal was then made to the British government that inasmuch as it had enforced the exile it should pay for the cost of the transfer of the former Emperor. The British government refused, and the Hungarian government thereupon requested Austria and the three other states which had been formed out of the former dual monarchy to contribute to the expenses of the journey.

The attempts of the ex-Emperor to regain the throne brought into prominence the compact agreed to between Italy and Jugo-Slavia in respect to the return of the Hapsburgs. This agreement was part of the treaty of Rapallo signed, Nov. 12, 1920, or rather it was a supplementary agreement signed at the same time. Its terms were not made public until 1921. The principal points in them was an agreement to adopt in common the necessary measures to prevent the restoration of the House of Hapsburg to the throne of Austria and Hungary. Both governments engaged to keep close watch on all activities that were directed against their mutual interests.

THE MONARCHISTS AND THE TREATY. The ruling class was divided into two groups, the Legitimists and the Free Electionists, the former demanding the restoration of the Hapsburgs, the latter declaring that the throne was vacant and should be filled by popular election. A bitter controversy between the two sides was going on in the latter part of the year, the Legitimists accusing the officers of Admiral Horthy of a series of atrocities including massacres, tortures, and the murder of many Jews, etc., while on the other hand these outrages were denied and the charges attributed to a Bolshevik campaign of slander. Some of the Conservative leaders joined in bringing charges of terrorism against the Horthy government apparently with the object of arousing sympathy with the Hapsburg king whom they said would put an end to this rule of terror and punish the guilty parties. The attempt of Charles IV, nicknamed Charles the Sudden, was generally regarded as a complete fiasco and was thought to have put an end forever to his pretensions to the throne. But the exclusion of him and his offspring would not necessarily make the return of a Hapsburg impossible for there were two

other representatives to the dynasty in the field. In the first place there was the Archduke Joseph who had tried to identify himself, first with the Communists, and second with the Liberal element. He had taken the oath of allegiance to Bela Kun in 1918. In August, 1919, when the Hungarian Soviet was overthrown, he tried to seize the regency but without success. The other was the Archduke Albrecht who was backed by one of the greatest fortunes in Central Europe and whose propaganda was financed with money borrowed from an American syndicate on the security of the family estate. He was supported by the violent Nationalists and Anti-Semites as represented by the society known as the Awakening Hungarians. The regent Admiral Horthy was supported by the younger army officers, the lower nobility, and many of the extreme Nationalists. The Legitimists found their strength in the old aristocracy and statesmen and in the generals of the army. After the overthrow of Charles, Horthy was believed by some to be aiming at the throne for himself, having issued a proclamation reminding the troops that they had taken their oath to him in person. Despite these party differences there was complete agreement among the ruling class in respect to the treaty. They all wanted to break down the treaty and regain for Hungary her former boundaries by reannexing the territories she had lost to Roumania, Jugo-Slavia, and Czecho-Slovakia. Both parties were willing to resort to war if necessary to this end and the government had accepted the treaty of Trianon in the hope that they would gain time to raise an army. The Legitimist Count Apponyi declared in public that the treaty having been extorted by force was not morally binding. The main difference between the two groups was that, while the Legitimists wanted to restore the Hungary of 1914, the followers of Horthy wanted to restore the ancient kingdom of Hungary. Militarism was charged against the Horthy government, whose policy had been one of the main causes of the formation of the Little Entente. The Roumanian Minister to the United States declared that the Hungarian situation was especially important in its relation to the Disarmament Conference. It was rumored that in the first six months of 1921, Hungary had at least 200,000 under arms. It was said that she tricked the Allies and that various means were resorted to for maintaining a military service under the disguise of gendarmes, students' organization, customs guards, etc.; and it was pointed out that when the trouble arose in Burgenland, large bodies of Hungarian troops were found immediately available.

BURGENLAND. The treaty of Trianon with Hungary provided that the band of territory on the west, known as the Burgenland should be united with Austria, and the transfer was to be effected in August, 1921. When the time came for the actual transfer, however, Hungarian bodies resisted the Austrian occupation and a crisis resulted, August-September, as noted below. It was not surprising that the Hungarians took offense at the transfer. In the first place this region was the most densely populated of Hungary, having an area of 4399 square kilometres with a population of 346,000. In the second place it was one of the richest and most ancient of the Hungarian provinces. Finally, the sentimental element was strong, for the Hungarians were angry at the

thought that she should suffer dismemberment for the sake of Austria who had been the cause of the war and on whose side Hungary had fought. To be sure the majority of the population was of German origin, but there were mingled with it about 50,000 Magyars and as many Croats. The region has often been compared to Alsace-Lorraine in that it was more loyal to the country with which it had been incorporated than to the state with which the majority of the inhabitants were allied by race. The Burgenland was one of the staunchest supporters of the Hungarian kingdom. It was in the lead in the matter of education having only an illiteracy of 14 per cent and containing about 500 schools. From this part of Hungary had come several of her most distinguished men such as the musicians Haydn and Liszt and the statesman, Count Stephen Szechenyi. From the economic point of view it was the richest of the western counties in industries with the exception of the region of Budapest, about 30 per cent of the inhabitants being engaged in the various manufacturing establishments, of which the most important were sugar refineries, spinning mills, and saw mills. There were ten mines of coal and lignite and important quarries from which stone was obtained for the larger part of the public monuments in the capital. Commercially it was of great importance inasmuch as the port, Sopron, was a centre for the carrying trade of cattle and food-stuffs. Against the claim that it was necessary to Austria on account of the food supply it was pointed out that its agricultural resources were limited, being hardly sufficient for Hungarian consumption. The county of Vas received annually 30,000 quintals of wheat from Alföld and the county of Sopron, 67,000. The city of Sopron alone consumed 72,000. This was a fair example of the inadequate production and in respect to certain food products the output was still more insufficient. Of cereals, for example, the region supplied to Austria only 1.8 per cent of oats, 3.6 per cent of wheat, 2.6 per cent of barley, and 7.5 per cent of rye, all the rest coming from the centre of Hungary. Another aspect of the sentimental attachment of Hungary to the country was the fact that it had always been regarded as the outpost of Magyar civilization against the west and the rampart of Hungary against Germanism. In this region as in Alsace, the non-Germanic race had intrenched itself against German expansion. The whole region bristled with old castles and strongholds, dating from the Middle Ages, which had victoriously resisted the attacks of the Austrians. Among these castles was the famous Frakne belonging to the Esterhazy family since the 17th century, which had been kept in an extraordinary state of preservation and contained many artistic and historical relics, including the most famous collection of arms in the world. Another point of resemblance to Alsace was the fact that the majority of the population, though of German origin and language, were thoroughly anti-German in sentiment and had always identified themselves with the Magyar race in time of danger. Thus in the war of Hungarian independence in 1848, while other nationalities of Hungary made common cause with Austria, these inhabitants of western Hungary fought on Hungary's side. The transfer was the result largely of the efforts of English and American experts who believed that Austria's economic life depended

upon the possession of this province. The above account represents the view of the Hungarians and their French supporters in the press and it should be noted on the other side that the transfer conformed to the principle of racial unity which had been laid down as the foundation of the European settlement.

The press accounts of the crisis following the transfer of Burgenland to Austria may be summarized as follows: Austrian officials sent to take possession of the territory were attacked by Hungarian insurgents, August 29. In Hungary resistance was offered by two separate bands under the respective leadership of former prime minister Friedrich and other officials, and the other under the leadership of the "Awakening Hungarians," the second faction supporting Admiral Horthy—the Regent. The first of these were Legitimists and were intending to make use of the situation to bring back the former Emperor Charles. During the first attacks on the Austrians, however, both factions united. Austria appealed to the Allies for authority to send troops against the Hungarians, but this was refused. In spite of the support given to Austria by the Czecho-Slovak government, which addressed notes to the Allies on Austria's behalf on September 11, the Hungarian government denied official responsibility for the events in Burgenland, attributing them to the action of the former Prime Minister Friedrich. On September 12, the Czecho-Slovak government protested to the Council of Ambassadors at Paris against this violence in Burgenland on the part of the Hungarians. On September 25 the Council of Ambassadors sent an ultimatum to Hungary demanding withdrawal from the territory. There was fighting between the Austrians and Hungarians in the neighborhood of Vienna. Offers of the Czecho-Slovak and Jugo-Slav governments to restore order by force were rejected by the Allies owing to the protest of Italy who feared the results of such a union of the Slav Powers. The Italian government, however, undertook to mediate between the Hungarians and the Austrians, and this attempt was imitated by the Czecho-Slovak government, September 23. On October 4, the Hungarian government agreed to withdraw the rebels, but this promise was not fulfilled and it was reported that Hungarian bands still continued to exercise terrorism. There were many rumors of a sensational nature in circulation, including one to the effect that the Magyar operations were under the direction of an officer on the staff of General Ludendorff. An agreement between Austria and Hungary, however, was announced, October 13, whereby Hungary undertook to clear Burgenland of the disturbers by military force if necessary, and Austria accepted a plebiscite for Oedenburg, Rohans, and several neighboring districts in dispute on the understanding that if the results should favor Hungary, Austria would renounce her financial claims. The plebiscite in Oedenburg held toward the end of the year was favorable to Hungary. On December 30 the Hungarian police occupied the territory and at the end of the year the district was on the point of being formally turned over to Hungary by the military Allied commission. President Hainisch ratified the agreement signed at Venice in October in regard to the dispute between Hungary and Austria over Burgenland.

BARANYA. Another territorial clause of the

treaty of Trianon was to be executed in August, namely, the return to Hungary of the city of Baja and the county of Baranya which since 1918 had been occupied by the Jugo-Slavs. The Magyar inhabitants protested against this transfer and organized an independent government under Jugo-Slav protection saying that while they were eager to join a democratic Hungary they would rather remain under Jugo-Slavia's rule than to suffer from the White Terror of the present Hungarian government. Nevertheless Hungarian troops entered the territory, August 22, and many of the inhabitants fled to Jugo-Slavia.

CABINET CRISES. As noted above the Teleki ministry was overthrown as the result of its indecisive course on the first attempt of the former emperor to regain the throne in March, and was succeeded by a new ministry under Count Stephen Bethlen, April 14 (for personnel, see above under *Government*). The essential points of the new ministry's programme were: Condemnation of anti-Semitism; coöperation among all classes; government maintenance of law and order; democratic legislation; the prompt restoration of freedom of press and assembly; measures for the introduction of electoral reform. The Bethlen cabinet resigned, November 14, in consequence of the contest between the Regent and the Legitimists who wished to restore the Hapsburgs, but Bethlen was recalled by Admiral Horthy and named a new cabinet, December 4. News from Hungary at this time was confused and fragmentary on account of the censorship. It appeared, however, that great disorder prevailed on account of the terrorism of the armed bands in support of the Regent and the counter-attacks of the Legitimists.

TREATY WITH THE UNITED STATES. The separate peace treaty between the United States and Hungary was ratified by the National Assembly, December 12.

HUNTER, MASON. Scottish artist, died at Edinburgh, Scotland, February 1. He was educated at Edinburgh. He was an exhibitor at various international expositions, and also at the Pittsburg exposition, painting especially landscapes and sea scenes. Many of his subjects were taken from the west of Scotland which was his favorite painting ground.

HUTCHINS, JAMES CALHOUN. Lawyer, died, February 28. He was born at Chicago, Ill., Dec. 15, 1857; and graduated in law at the Northwestern University Law School of Chicago in 1879. He practiced in that city after 1880; and was the director of the Illinois Trust and Savings Bank.

HVIEZDOSLAV, PAUL ORSZAGH. See NECROLOGY.

HYDE, AMMI BRADFORD. Educator, died at Denver, Col., March 23. He was born at Oxford, N. Y., March 13, 1824; graduated at Wesleyan University, Conn., in 1846; and was ordained to the Methodist Episcopal ministry in 1850. He was professor of Greek, English, and Hebrew at Allegheny College for twenty years, beginning in 1864, and after 1909 was professor of philology at the University of Denver, Col. He edited the *Rocky Mountain Christian Advocate* from 1888 to 1890; and was the author of the *History of Methodism* (1890); and, besides, contributed regularly for many years to the Methodist publications.

HYNDMAN, HENRY MAYERS. British socialist leader and writer, died in London, November 22. He was born at London, March 7, 1842; and educated at Trinity College, Cambridge. He was correspondent for the *Pall Mall Gazette* from 1863 to 1868; and made the acquaintance in Italy of Mazzini, Garibaldi, and other Italian patriarchs. During the next three years he visited Australia, New Zealand, and America; and during this period he wrote articles for a leading Australian newspaper on behalf of free education, contributing to the ultimate success of that cause. Between 1874 and 1880 he visited America several times. In 1881 he founded the Socialist Democratic Federation which became one of the leading Socialist bodies in Great Britain, and from that time on he was a conspicuous figure in the Socialist world and a constant agitator for social reform. He was a prominent member of various national and international congresses and of reform meet-

ings for numerous causes. He took an active part in establishing the new International at Paris in 1900. Among his many championships were those of Irish freedom, justice to India, the eight-hour law, and the cause of the Boers. Before the war he pronounced many warnings against the danger of German aggression, and during the war he helped to organize the national groups of Socialists against the anti-national elements. He was a member of the Food Consumers Council from 1918 to 1919. He was regarded by many as one of the ablest Socialist writers of his time. His books include: *Socialism and Slavery* (1888); *A Commune for London* (1888); *Commercial Crises of the 19th Century* (1892); *Historical Basis of Socialism* (1883); *Economics of Socialism* (1896); *The Record of an Adventurous Life* (1911); *Further Reminiscences* (1912); *The Future of Democracy* (1915); *The Awakening of Asia* (1919); *Clemenceau; the Man and His Time* (1919).

I

ICELAND. A Danish colony directly under the Danish crown, with an area of 40,456 square miles (according to other authorities, 39,709) and with a population estimated in 1919 at 92,818. In 1919 the total hay crop was about 2,600,000 cwt.; the potato crop, 66,000 cwt.; turnips, 18,000 cwt. Live stock in the spring of 1919 were as follows: Horses, 51,500; cattle, 25,600; sheep, 580,000. The commerce in 1918 was as follows: Imports, 41,027,701 kronur; exports, 36,920,200 kronur. The greatest share of the trade was with Great Britain, the next was with the United States and the next with Denmark. The budget for 1921 was as follows: Revenue, 5,182,300 kronur; expenditure, 4,759,204 kronur. Under the charter of May 18, 1920, the executive power is in the king who acts through a responsible ministry, and legislative power in the king and parliament called the Althing, which consists of two houses, the Upper and Lower. The president of the council in 1921 was Jon Magnusson. There were reports of Bolshevik disturbances toward the close of the year when a prominent Bolshevik came into conflict with the police authorities at Reykjavic, but the Bolshevik movement was said to be of little importance outside that locality.

ICELANDIC LANGUAGE. See **PHILOLOGY**, **MODERN**.

IDAHO. POPULATION. According to the report of the census of 1920, there were 431,866 residents in the State, Jan. 1, 1920, as compared with 325,594 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	47,000	1,598,000	\$ 799,000
	1920	45,000	1,620,000	1,620,000
Oats.....	1921	180,000	7,740,000	2,477,000
	1920	185,000	7,080,000	4,780,000
Barley.....	1921	87,000	2,784,000	1,808,000
	1920	92,000	3,220,000	2,415,000
Wheat.....	1921	1,123,000	27,079,000	19,497,000
	1920	1,100,000	24,600,000	30,750,000
Clover seed.....	1921	18,000	81,000	790,000
	1920	16,000	88,000	990,000
Hay.....	1921	1,160,000	13,180,000	20,875,000
	1920	1,175,000	12,985,000	37,058,000
Potatoes.....	1921	57,000	10,545,000	8,120,000
	1920	45,000	8,100,000	5,508,000

¹ Tons.

IRRIGATION AND DRAINAGE. The table below presents the statistics of irrigation for the State of Idaho, collected at the census of 1920. Statistics of acreage irrigated, of acreage, yield, and value of crops grown on irrigated land, and of cost of operation and maintenance relate to the year 1919; other items relate to the year 1920.

The summary of drainage conditions in 1920 on page 335 was issued by the United States Bureau of the Census:

The total works completed by drainage enterprises to Dec. 31, 1919, comprised 274.5 miles of open ditches, 1.8 miles of tile drains, and 9.5 miles of accessory levees; the additional lengths under construction were 14.7 miles of open ditches and 1.8 miles of tile drains. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the drainage enterprises, nor the works of flood protection or levee districts that had not undertaken the construction of ditches or tile drains.

Item	Census of—		Increase ¹	
	1920	1910	Amount	Per cent
Number of all farms.....	42,108	30,807	11,299	36.7

Additional capital required to complete these enterprises.....	\$120,000	6.7

¹ Less than one-tenth of 1 per cent.

There were four pumping districts in the State, all equipped with six centrifugal pumps. The principal crops grown upon the drained land in drainage enterprises were alfalfa, grain, and hay other than alfalfa.

MINERAL PRODUCTION. The value of the gold, silver, copper, and lead mined in Idaho in 1921, according to the estimate of the United States Geological Survey, Department of the Interior, was about \$15,208,000, a marked decrease from the value in 1920, which was \$31,170,176. As a result of the collapse of the metal market, several of the copper, lead, and zinc mines were closed. Only the high price of silver prevented the closing of the large mines of silver-lead ore. The mine output of gold in Idaho in 1921 was valued at about \$497,000, as compared with \$485,590 in 1920. The largest output of gold was made by the Gold Hill & Iowa property, at Quartsburg.

The mine output of silver decreased from 7,326,794 ounces in 1920 to about 5,720,000 ounces in 1921. The largest silver producers in the State were the Bunker Hill & Sullivan, at Kellogg, the Morning mine of the Federal Mining & Smelting Co., and the Hecla mine, at Burke. The mines in the Cœur d'Alene district produce about 4,800,000 ounces of silver, or about 84 per cent of the total for the State. The mine output of copper decreased from 2,538,396 pounds in 1920 to about 1,436,000 pounds in 1921. The value of the output decreased from \$467,065 to about \$181,000. The mine output of lead decreased from 249,609,976 pounds in 1920 to about 192,000,000 pounds in 1921. The average price of lead was about 4.6 cents a pound, and the value of the output decreased from \$19,968,798 to about \$8,832,000.

The Cœur d'Alene district alone produced about 183,000,000 pounds of lead.

No zinc ore was shipped from Idaho in 1921, though the output of recoverable zinc in 1920 was 27,932,326 pounds.

MANUFACTURES. The United States Bureau of the Census published during the year the final returns from the census of manufactures in 1919. There were in the State in 1920 only two cities having more than 10,000 inhabitants—Boise and Pocatello. These cities, with a combined population of 36,394, formed 8.4 per cent of the total population for Idaho in that year and reported 11.4 per cent of the value of the State's manufactured products in 1919. The increases in wages, cost

of materials, and the value of products, as presented in the following table, were chiefly due to the change in industrial conditions brought about by the World War, and therefore cannot be used to measure the growth of manufactures between the industrial censuses 1914 and 1919. However, a comparison of the number of persons engaged and the horsepower used in 1919 and 1914 shows a large increase in the manufacturing activities of the State. The addition of the Federal income tax since 1914 will account for the exceptional increase in "Rent and taxes."

	1919	1914
Number of establishments.....	922	696
Persons engaged.....	16,268	10,529
Proprietors and firm members.....	851	664
Salaried employees.....	1,500	946
Wage earners (average number).....	13,917	8,919
Primary horsepower.....	73,876	50,336
Capital.....	\$96,061,709	\$44,960,489
Salaries and wages.....	21,249,819	8,731,000
Salaries.....	2,701,547	1,240,288
Wages.....	18,548,272	7,490,712
Paid for contract work.....	1,342,453	562,085
Rent and taxes.....	2,034,470	548,166
Cost of materials.....	43,948,505	14,892,094
Value of products.....	80,510,749	28,453,797
Value added by manufacture.....	36,562,244	13,561,703

EDUCATION. Pupils in the public schools in 1921 numbered 141,966; teachers 4350, of whom 3610 were women. Salaries of teachers varied widely with the school districts, ranging from \$823 a year to about \$1600 a year.

LEGISLATION. Among the initiatory legislation of the 1921 session the following measures were prominent: A measure authorizing school districts to provide for the education of adult residents who are unable to read and write; creation of a Bureau of Budget and Taxation; cooperative marketing act providing for the incorporation of agricultural, non-profit cooperative associations; teachers' retirement fund, by which teachers after the requisite number of years in the public schools may draw a pension; constitutional amendments passed at the election in November, 1920, increased the number of supreme court judges from three to five; and also permitted the appeal of decisions from the public utility commission direct to the supreme court, without entering the district courts.

OFFICERS. Governor, D. W. Davis; Secretary of State, Robt. O. Jones; Attorney-General, Roy L. Black; Treasurer, D. F. Banks; Auditor, E. G. Gallett; Superintendent of Public Instruction, Ethel M. Redfield; Adjutant-General, L. V. Patch.

JUDICIARY. Supreme Court: Chief Justice, John D. Rice; Justices, Alfred Budge, R. N. Dunn, W. A. Lee, C. P. McCarthy.

IDAHO, UNIVERSITY OF. A State institution of the higher education at Moscow, Idaho; founded in 1889. There were 1135 students enrolled for the fall session of 1921, and 196 for the summer session. Of the students in the regular session 576 were in the College of Letters and Sciences; 178 in the College of Agriculture; and 126 in the College of Engineering. Other departments of the university were College of Law, Schools of Mines, Forestry, and Education; special courses and correspondence courses. The faculty numbered 120. The productive funds amounted to \$825,816. There were 48,000 bound volumes and 8500 pamphlets. President, Alfred H. Upham, Ph.D.

IDDINGS, LEWIS MORRIS. Diplomatic agent, died at Rome, Italy, December 26. He was born at Warren, Ohio, April 23, 1850; and graduated at the University of Michigan, and the Columbia University Law School. He was engaged in newspaper work for several years and was for two years city editor of the New York *Evening Post*. In 1897 he became secretary and chargé of the American legation at Rome, and in the following year became diplomatic agent there. He held that position until 1905, and then served as consul-general at Cairo until 1910. He was active in war work in Italy as a representative of the Red Cross during the war and was decorated by the king in 1917 for his war services.

IDE, HENRY CLAY. Public official, died at St. Johnsbury, Vt., June 13. He was born at Barnet, Vt., Sept. 18, 1844; and graduated at Dartmouth College, 1866. He was State's attorney of Vermont from 1876 to 1878; and a member of the Vermont senate from 1882 to 1885. In 1891 he was appointed commissioner to Samoa, and was chief justice of Samoa from 1893 to 1897, being jointly appointed by the governments of the United States, Germany, and England. After serving on the Taft Commission in the Philippines and later in the administration, he was acting-governor from 1905 to 1906, and governor, January, 1906. From 1909 to 1913 he was minister to Spain. He served as the director of several banks and corporations. He wrote: *Code of Procedure in Civil Actions, and Special Proceedings in the Philippine Islands* (1901); *The Land Registration Act* (1903); *The Internal Revenue Law of 1904 of the Philippine Islands*, and various articles in the magazines.

IHMSEN, MAXIMILIAN FREDERICK. Journalist, died at Los Angeles, Calif., May 4. He was born at Pittsburg, Pa., March 14, 1868. He received his education in German schools and at the high school of Pittsburg and the Pittsburg Catholic College. After working for a short time as clerk in the Pittsburg post-office, he became a reporter on the Pittsburg *Leader* in 1888 and in the following year on the Pittsburg *Post*. At the time of the Johnstown flood he was the first reporter to reach the dam whose bursting caused the disaster. He held important positions

on the New York *Herald, Journal*, and *American*, serving in various capacities, including that of political reporter, correspondent, city editor, and political editor, and afterwards became the publisher of the Los Angeles *Examiner*. He was a strong supporter of William Randolph Hearst, and active in the movement to nominate him for president in 1904. He also was manager of the Hearst campaign for mayor in 1905; and organized the Independence League in New York, becoming its chairman.

ILLINOIS. POPULATION. According to the report of the census of 1920, there were 6,485,280 residents in the State, Jan. 1, 1920, as compared with 5,638,591 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	8,999,000	305,966,000	\$116,267,000
	1920	9,079,000	314,133,000	185,338,000
Oats.....	1921	4,594,000	121,741,000	35,305,000

¹ Tons.

² Gallons.

MANUFACTURES. The Bureau of the Census, issued a preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Illinois and the city of Chicago. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system.

The table on page 337 gives a summary for the State and for the city of Chicago for 1919 with corresponding figures for 1914.

FINANCE. Receipts for the fiscal year ending June 30, 1920, were \$60,883,288 and expenditures, \$54,341,562.

TRANSPORTATION. The latest figures available were supplied by the Illinois *Blue Book* of 1921-22 which supplied the following information:

According to the Illinois Public Utilities Commission's report for 1916, the total mileage of steam railroads owned in the State was 21,893, including double tracks and sidings, which was exceeded by no other State. Texas was said to have a greater effective mileage of such roads. Illinois was third among the States in electric railway mileage, which was 3512. The approximate value of all railways property was estimated in 1921 at \$1,438,000,000. The gross annual from all railway operation, in 1915, was \$250,-124,258.

¹ A minus sign (—) denotes decrease.¹ Less than one-tenth of 1 per cent.

age according to the school census for 1920 was 2,585,273, of whom 1,303,211 were males. Total enrollment in the elementary public schools was 999,866; in the high schools, 127,694. Teachers numbered 36,599, at an average annual salary of \$1347 for men and \$1033 for women. On Jan. 1, 1921, the State teachers' pension and retirement fund law had been in operation for five and one-half years. Within that time more than 6500 teachers who were engaged in teaching or who had previously taught in the public schools of Illinois at the time the law went into operation, July 1, 1915, elected or qualified as contributors to the pension fund. Of this number, 1041 had retired; 949 on full annuity, \$400 per year, and 92 on disability, receiving annuity according to the number

of years of service rendered (with fifteen or more years of service), making a total of all retirements, 1041. Of this number, 62 had died.

CHARITIES AND CORRECTIONS. On the first day of March, 1921, there were 27,514 inmates in the institutions under the Department of Public Welfare. Of this number, 17,596 were classified as insane, among them being 290 World War veterans, 4979 prisoners in the penitentiaries, reformatories, and training schools, and 4939 in the other institutions of the State. Of that number, 2034 were feeble-minded, 341 epileptics, 390 deaf, 304 blind, 1764 in the soldiers' institutions, and 106 house patients in the Eye and Ear Infirmary. The following table gives the statistics for State institutions, March 1, 1921:

The Director of the Department of Public Welfare made the following report in respect to recent measures of improvement: "For years, the desperate cry of patients in our State hospitals has been 'Give us something to do.' The patients sat about the wards in idleness spending their time in worrying about their real and imaginary troubles. The State met this demand by the introduction of occupational therapy, with trained occupational therapists in charge, to teach the patients how to do light work, which is helpful both mentally and physically. Occupational centres have been organized, and together with the athletic exercises and outdoor employment on the farms and in the gardens, the system has proved a great success. Another factor in doing away with mechanical restraint is application of modern hydrotherapy. Acute mania cases have been restored to health by the use of continuous baths and the wet pack, and patients who have not slept for days before coming to the hospitals, have had their sleep restored and relieved by this treatment. The slogan in our State hospitals is reeducation of inmates, and this has met with wonderful success. A feature in the treatment is habit training. Those with habits no better than a baby's have been taught to look after themselves, and raving maniacs have been turned into quiet patients, and in this manner the whole service has been greatly improved. The splendid record made by the hospitals for the insane has been paralleled by the showing of other charitable institutions. At the Lincoln State School and Colony, a great showing has been made, particularly in the method of classifying the children by psychologists, in employing inmates in the various departments of the institution and in directing their play activities. The brush factory operated by the feeble-minded turns out products each year amounting in value to thousands of dollars."

LEGISLATION. Among the laws passed by the fifty-second General Assembly in 1921, the following may be mentioned: Repeal of the 1919 zoning law and the substitution of a new act for it, which provided that before enacting zoning ordinances, the city should appoint a zoning commission to prepare the plan; an act authorizing cities, villages, and incorporated towns to provide for the creation of a plan commission, empowered to prepare and recommend the adoption of a comprehensive plan of public improvements, and of specific improvements, and to aid the officials to further the making of such improvements—hereafter no

subdivision presented for record may be recorded unless it conforms to the official plan; various other acts pertaining to cities and villages; bestowal of full equality with men in voting on women 21 years of age and over, and providing for their registration in the same manner as the male voters; an amendment in respect to landlords and tenants, providing that if a tenant holds over after the expiration of his term, the landlord can recover only actual damages; an act providing that compensation for veterans of the World War be paid out of the bond issue of \$55,000,000 subject to approval by the people.

OFFICERS. Governor, Len Small; Lieutenant-Governor Fred E. Sterling; Secretary of State, Louis L. Emmerson; Auditor, Andrew Russel; Treasurer, Edward E. Miller; Superintendent of Public Instruction, Francis J. Blair; Attorney-General, Edward J. Brundage.

JUDICIARY. Supreme Court, Warren M. Duncan; William M. Farmer; Frank K. Dunn; Floyd E. Thompson; Clyde E. Stone; James H. Cartwright; Ralph H. Wilkins.

ILLINOIS, UNIVERSITY OF. A co-educational State institution of the higher learning at Urbana, Ill.; founded in 1867. Its departments of medicine, dentistry, and pharmacy are situated at Chicago. The total enrollment for the university in the fall of 1921 was 9084 and for the summer session 1926. The total number of university officers was 1111, an increase of 207 over the fall of 1920. There were 503,297 bound volumes in the library. The total income for 1921-22 was placed at \$4,881,872. President, David Kinley, Ph.D., LL.D.

ILLITERACY. See EDUCATION IN THE UNITED STATES.

IMMIGRATION. The net immigration for the fiscal year ending June 30, 1921, was 805,228, as compared with 430,001 for the previous year—an increase of 375,227. The emigrant departures were 247,718, a decrease of 40,597 from the previous year. The permanent addition to our alien population was, therefore, 557,510. Nearly all the additional alien arrivals were at the port of New York, the total for all of the other ports (including the Canadian and Mexican borders) having been but 339,450, as compared with 301,102 during the preceding year. There was an actual decrease in the number of such arrivals across the land borders, accounted for on the southern border by more or less depressed industrial conditions which had a tendency to discourage immigration from Mexico, and on the northern by

the high rate of currency exchange, the material advances in railway and sleeping-car rates, economic conditions comparable to our own, and a wage scale not materially lower than that which prevails on this side of the line.

Aliens filing petitions for citizenship during the fiscal year numbered 198,530 and those declaring intention numbered 304,481, an increase of 4375 over the preceding year. Over one-fourth of the aliens admitted during the fiscal year were Italians (222,260). The Jews numbered 119,036. The table on page 338 shows net increase of population, 1908-21.

EFFECT OF ALIEN POPULATION. The following table shows to what extent the various foreign elements in the population were increased or decreased by immigration and emigration during the fiscal year:

of the crews and by avoiding the authorities on the land borders. There was a marked increase in the number of Chinese arrivals seeking the privilege of transit, which privilege was granted under bond to 17,907 of whom 8269 were admitted at San Francisco and 6677 at Montreal, the chief destinations in both cases being Mexico, Cuba, and South American countries. The policy announced by the Mexican government in 1921 of prohibition of further Chinese in transit to that country stopped the transit movement via United States ports and after that the majority of Chinese in transit went to Cuba. The original cause of this heavy travel in Chinese coolie laborers was the demand in war time for their services in the sugar industry. But, although that demand had fallen off, the transit movement during the fiscal year caused the above increase.

ORIENTAL IMMIGRATION. During the fiscal year, the Chinese immigrant aliens admitted numbered 4017 as compared with 2148 in the fiscal year 1920, an increase of 1869. There were besides, 404 Chinese who arrived at ports of entry but were deported after examination. The number of Chinese emigrants departing from the country was 5253, of whom the majority secured certificates entitling them to readmission. A considerable number of Chinese furthermore succeeded in entering the country by deserting from vessels on which they had shipped as members

The number of Japanese aliens admitted to the continent of the United States during the fiscal year 1921 was considerably less than in the preceding year, namely, 10,675 as compared with 12,868. On the other hand, there was a slight increase in the number admitted to Hawaii, namely 3599 as compared with 3306. The so-called "proxy brides,"—that is to say the women of Japanese race admitted to continental ports destined for husbands whom they had married under the proxy or picture system, continued for only a short time within the fiscal year. The

Japanese government had decreed Feb. 29, 1920, as the last day on which passports would be issued to such persons and Sept. 1, 1920, as the last day on which passports already issued would be considered valid. This put a stop to the entry of the proxy brides to the mainland ports of this country. The following tables show details in respect to Japanese and Chinese immigration during the fiscal years 1920 and 1921:

DEPORTATIONS. The deportation of aliens under the immigration law was largely in excess of that for the preceding fiscal year. In the year ending June 30, 1921, 4517 were deported as compared with 2762 in the preceding fiscal year. The number deported by races is shown in the following table:

African (black).....	99
Armenian.....	8
Bohemian.....	17
Bulgarian.....	28
Chinese.....	341
Croatian and Slovenian.....	65
Cuban.....	3
Dalmatian.....	5

of the anarchist and similar classes. Of these, the majority were of Russian nationality. It had been found impossible during the year 1920, after the sailing of the *Buford* (Dec. 21, 1919) to effect any deportations whatever to Russia, but arrangements were finally made for the sending of aliens destined to Russia by way of Latvia and about 350 were afterwards deported to Russia by this route, down to the time when the Russian government closed the borders to all persons deported from the United States (April, 1921). During the fiscal year 1921 the number of aliens arrested under the anarchist provisions of the immigration law and actually deported were 446. Many aliens subject to deportation could not be sent to their destination during the war and for a considerable period thereafter, owing to the lack of means of transport, and consequently accumulated to the number of about 3000, who were mostly insane and confined in the various public institutions of the States, but with the improved transport conditions in 1920 and 1921 these accumulations were in large part cleared off, and of those left in institutions the majority were Russians who could not be deported on account of the close of the Russian border as above noted.

RESTRICTION OF IMMIGRATION. As noted in the last YEAR BOOK, the flood of immigration during the last half of 1920 led to a demand for severe restrictive measures. An emergency measure

was passed by the House of Representatives on Dec. 13, 1920, by vote of 295 to 41. This provided for the temporary suspension of all immigration into the United States with the exception of certain exempt classes. Then Senate amended that measure by the introduction of a per centum limit feature and the compromise measure was passed, but did not receive the executive approval during the session of Congress. It was immediately introduced at the opening of the new Congress and became a law on May 19. The essential provisions of the act were as follows:

SEC. 2. (a) That the number of aliens of any nationality who may be admitted under the immigration laws to the United States in any fiscal year shall be limited to 3 per centum of the number of foreign-born persons of such nationality resident in the United States as determined by the United States census of 1910. This provision shall not apply to the following, and they shall not be counted in reckoning any of the percentage limits provided in this act: (1) Government officials, their families, attendants, servants, and employees; (2) aliens in continuous transit through the United States; (3) aliens lawfully admitted to the United States who later go in transit from one part of the United States to another through foreign contiguous territory; (4) aliens visiting the United States as tourists or temporarily for business or pleasure; (5) aliens from countries immigration from which is regulated in accordance with treaties or agreements relating solely to immigration; (6) aliens from the so-called Asiatic barred zone, as described in section 3 of the immigration act; (7) aliens who have resided continuously for at least one year immediately preceding the time of their admission to the United States in the Dominion of Canada, Newfoundland, the Republic of Cuba, the Republic of Mexico, countries of Central or South America, or adjacent islands; or (8) aliens under the age of eighteen who are children of citizens of the United States.

(b) For the purposes of this act nationality shall be determined by country of birth, treating as separate countries the colonies or dependencies for which separate enumeration was made in the United States census of 1910.

(c) The Secretary of State, the Secretary of Commerce, and the Secretary of Labor, jointly, shall, as soon as feasible after the enactment of this act, prepare a statement showing the number of persons of the various nationalities resident in the United States as determined by the United States census of 1910, which statement shall be the population basis for the purposes of this act. In case of changes in political boundaries in foreign countries occurring subsequent to 1910 and resulting (1) in the creation of new countries, the Governments of which are recognised by the United States, or (2) in the transfer of territory from one country to another, such transfer being recognised by the United States, such officials, jointly, shall estimate the number of persons resident in the United States in 1910 who were born within the area included in such new countries or in such territory so transferred, and revise the population basis as to each country involved in such change of political boundary. For the purpose of such revision and for the purposes of this act generally aliens born in the area included in any such new country shall be considered as having been born in such country, and aliens born in any territory so transferred shall be considered as having been born in the country to which such territory was transferred.

(d) When the maximum number of aliens of any nationality who may be admitted in any fiscal year under this act shall have been admitted all other aliens of such nationality, except as otherwise provided in this act, who may apply for admission during the same fiscal year shall be excluded: *Provided*, That the number of aliens of any nationality who may be admitted in any month shall not exceed 20 per centum of the total number of aliens of such nationality who are admissible in that fiscal year: *Provided further*, That aliens returning from a temporary visit abroad, aliens who are professional actors, artists, lecturers, singers, nurses, ministers of any religious denomination, professors for colleges or seminaries, aliens belonging to any recognised learned profession, or aliens employed as domestic servants, may, if otherwise admissible, be admitted notwithstanding the maximum number of aliens of the same nationality admissible in the same month or fiscal year, as the case may be, shall have entered the United States; but aliens of the classes included in this proviso who enter the United States before such maximum number shall have entered shall (unless excluded by subdivision (a) from being counted) be counted in reckoning the percentage limits provided in this act: *Provided further*, That in the enforcement of this act preference shall be given so far as possible to the wives, parents, brothers, sisters, children under eighteen years of age and fiancées (1) of citizens of the United States, (2) of aliens now in the United States who have applied for citizenship in the manner pro-

vided by law, or (3) of persons eligible to United States citizenship who served in the military or naval forces of the United States at any time between April 6, 1917, and November 11, 1918, both dates inclusive, and have been separated from such forces under honorable conditions.

The following account of the operation of the Act is based on a study published by the commissioner-General of Immigration. The 3 per cent quota applied to the European nations and to certain others, but many exceptions were admitted under the law in order to prevent hardship to individuals. The law did not apply to immigrants from the Asiatic countries, which were all covered by other immigration laws. Nor did it apply to aliens in transit or to aliens under eighteen years of age who are the children of American citizens. The countries outside of Europe to which it applied were Turkey and Asia with its prewar limits, Trans-Caucasia, Persia, Africa, Australasia, the Atlantic islands, and part of the Pacific islands. This included the very countries from which immigration had long been excessive, especially southern and eastern Europe and Asiatic Turkey, and in several of these countries there was a tendency to exceed the legal quota. But there was also a particular difficulty in the case of Spain, for in 1910 there were comparatively few persons of Spanish birth in the United States and Spain's quota was therefore very low, while economic conditions were of the kind to promote emigration from Spain as well as from other countries. The annual quota of immigrants allowed under the law was fixed at 355,825 and the maximum for any one month was 20 per cent of the total, or 71,163. The quotas for some of the countries were as follows: Austria, 7444; Belgium, 1557; Czecho-Slovakia, 14,269; Denmark, 5644; Finland, 3590; France, 5692; Germany, 68,039; Greece, 3286; Hungary, 5639; Italy, 42,021; Jugo-Slavia, 6405; Netherlands, 3602; Poland, 28,019; Norway, 12,116; Portugal, 2269; Roumania, 7414; Russia, 32,247; Sweden, 19,956; Switzerland, 3745; United Kingdom, 77,206; Armenia, 1588; Spain, 663. The excess over the quota owing to the exceptions above mentioned amounted to 11,741 between June 3, when the Act went into effect, and June 30, but many of these were admitted provisionally and on the understanding that they were to remain only until further investigation. For a period of about five and a half months, that is, down to November 23, 155,604 were admitted, an excess of 1284 over the quota. There was wide variation among the different countries, some of which had already exceeded their quotas for the year, but these countries were, for the most part, those for which the quotas were exceptionally low in comparison to their population. Of these countries, Turkey exceeded her annual quota by 41.8 per cent; Palestine by 255 per cent, and certain other parts of Asia by 437 per cent, the number of persons from these regions in the United States in 1910 having been very small. Spain exceeded her quota in four months by 9.5 per cent, and New Zealand's excess for the same period was 10 per cent. Toward the end of the year the only countries that had not sent at least 50 per cent of their quotas in southern and eastern Europe were Austria, Finland, and Russia. Immigration from Russia had, of course, been practically impossible and the depreciation of the Austrian currency had made it difficult for

any intending immigrants from Austria. In general, the southern and eastern countries of Europe showed a tendency to exceed their quota, while the northern and western nations, with the exception of Bulgaria and Luxemburg had not exceeded 50 per cent of the admissible total in the closing months of the year. From the United Kingdom, during the first four months under the new law, immigration had reached only 26.5 per cent of the quota; from Denmark 25.9; from Norway 18.7; from Sweden 18; from Germany 8. The German immigration was undoubtedly affected by the exchange situation, although in the autumn months it showed a steady increase, rising to 2569 in October. In 1913, the last year of normal immigration, the northern and western countries of Europe supplied only 14.91 per cent of the total immigration from Europe, while the southern and eastern countries supplied 84.88 per cent. Down to October first, under the new law the percentages were respectively 33.76 per cent and 95.96 per cent. At the close of the calendar year 1921 the Department of Labor estimated the number of immigrants for the fiscal year ending, June 30, 1922, at about 350,000, as a result of the operation of the restriction act.

IMPORTS. See articles on COUNTRIES.

INCOME TAX. See TAXATION.

INDEPENDENT METHODIST CHURCH.

See METHODISTS, WESLEYAN.

INDIA, BRITISH. The territory comprising the peninsula of Hindustan and regions to the north administered by the British sovereign as emperor of India through the viceroy or governor-general in council. In addition to regions directly governed by British officials it includes the Native States that are under the control of the British government. Capital, Delhi.

AREA AND POPULATION. Area, including Native States and states in political relations with the government, 1,802,629 square miles; population (1911) 315,156,396. The population according to preliminary figures of the census of 1921 was 319,075,132, of whom 164,056,191 were males, and 155,018,941 females.

EDUCATION. The number of persons with a knowledge of the English language according to the latest estimates was about 1,700,000. Educational institutions are classed as public or private according as they are or are not under the Department of Public Instruction. The following table from the *Statesman's Year Book* of 1921 gives the number of institutions and scholars in British India, including British Baluchistan, Ajmer-Merwara, and the civil and military station of Bangalore:

	Institutions for		Scholars	
	Males	Females	Males	Females
Colleges.....	193	16	62,727	1,103
General Education:				
Secondary.....	7,427	722	1,103,234	108,899
Primary.....	129,803	20,468	4,821,811	1,119,871
Special schools.....	3,404	297	110,557	10,661
Private institutions.....	33,169	1,848	525,020	72,894
Total.....	173,996	23,351	6,623,149	1,313,428
Grand Total.....	197,347		7,936,577	

The universities are at Calcutta, Madras, Bombay, Allahabad, Punjab, Patna, Benares, and Mysore, the last three having been founded

since 1916. The largest of these is the University of Calcutta, whose matriculated students in 1919 numbered 15,860 and the next is the University of the Punjab, with 6194 in 1919. There are various special schools for technical education including arts and industries, engineering, law, medicine, etc. Training schools for teachers included 703 for male teachers with 17,600 scholars and 114 for female teachers with 3100 scholars (1918-19). In that year there were throughout India 162,330 public institutions of education with 7,338,663 scholars, and 35,017 private institutions with 597,914 scholars.

PRODUCTION. Agriculture is the chief occupation, and over 226,000,000 people were reported as being directly or indirectly engaged in it. The following table from the *Statesman's Year Book* of 1921 gives the provisional figures for crop per area sown and crop production for 1919-20:

Name of crops	1919-20 Provisional	
	Area sown, acres	Yield, tons
Rice.....	78,394,000	34,199,000
Wheat.....	29,976,000	10,092,000
Cotton.....	23,063,000	Bales 5,845,000
Linseed, pure.....	2,541,000	Tons 328,000
Linseed, mixed.....	580,000	105,000
Rape & Mustard, pure.....	3,586,000	671,300
Rape & Mustard, mixed.....	2,430,000	503,000
Sesamum, pure.....	3,184,000	376,000
Sesamum, mixed.....	675,000	98,000
Groundnut.....	1,570,000	884,000
Jute.....	2,821,600	Bales 8,425,000
Indigo.....	233,800	In cwts. of dye 37,100
Sugarcane.....	2,695,000	Tons 2,989,000
Tea.....	691,800	Lbs. 377,028,500

The state directly controls a large area of forests, divided into reserve forests, protected forests, and unclassified forest land of which the total in 1918-19 was 251,468 square miles. The largest forest area is in Burma. In 1918-19 the irrigated area was as follows: 21,198,000 acres by canals; 7,268,000 acres by tanks; 14,216,000 acres by wells; and 4,510,000 acres irrigated by other means. In that year 25,000,000 acres were under state irrigation. The live stock in 1919-20 was as follows: Oxen, 117,428,000; buffaloes, 28,493,000; sheep, 21,984,000; goats, 24,134,000; horses and ponies, 1,699,000; donkeys, 1,372,000; camels, 408,000; mules, 75,000. Statistics covering 98.6 per cent of the total wheat area of India were as follows: The number of acres cultivated was 25,722,000, a decrease of 14.1 per cent, or 4,227,000 acres, from the year before. Production amounted to 6,709,000 tons, a decrease from the year before of 33.7 per cent, or 3,413,000 tons. The estimate for the remaining area, for which no exact figures could be given, was 432,000 acres and 113,000 tons.

The most difficult material used in iron and steel making is coal, which is the only limiting factor to an indefinite extension of the iron industry in India. The Damuda Valley coal fields, lying to the west of Calcutta, contain large quantities of coal, but with two exceptions—the Raniganj and Jharria—the large coal fields remain practically undeveloped. Indian coals vary in quality to a greater degree than do English coals.

The best Indian coal will average 10 per cent ash, while some coal sold has a 25 per cent ash content. The output of India is 18,000,000 tons, of which probably 7,000,000 tons are coking coal, suitable for iron and steel making. Considerable quantities of coking coal have been discovered in a new field, the Karanpura, lying 50 miles to the west of the Jharria field, and its early development is certain. It seemed possible that the output of coking coal will reach 16,000,000 tons with some development work.

COMMERCE. No later figures for total trade were available than those given in the preceding YEAR BOOK. The following table from the *Statesman's Year Book* of 1921 shows the distribution of trade for merchandise alone for the year ending March 31, 1920:

Countries	Imports into	Exports of
	India from 1919-20	Indian produce to 1919-20
	Rs.	Rs.
United Kingdom.....	1,04,98,32,780	92,90,86,470
France.....	1,76,87,860	15,70,89,930
Germany.....	4,31,757	1,38,58,550
Austria-Hungary.....	12,65,030	35,70,060
Italy.....	1,36,93,810	7,71,19,130
Belgium.....	69,80,510	9,45,54,170

RAILWAYS. The railways of India present an interesting example of a transportation system where the net earnings never have been less than four per cent and only in three instances have they fallen below five per cent. The railways turn in large receipts to the government but the capital expenditures for betterments and extension were small, averaging in the three years 1919-22 but \$72,000,000 and for the three years 1916-19 but \$17,500,000 and for the eight years 1908-16 only about \$50,000,000. The result was that the physical condition of the Indian railways in 1921 was far from satisfactory and there was progressive deterioration, not to mention lack of much needed extension to undeveloped regions and the provision of adequate rolling stock for the volume of freight available and offered.

The Indian railways group themselves into five general classes: (1) State lines worked by the state. (2) State lines worked by guaranteed or independent companies. (3) Company lines worked by companies. (4) Lines belonging to Indian states. (5) Miscellaneous.

The first two classes comprise about two-thirds of the entire mileage in India and as will appear from the table below are mostly in the broad gauge of 5 ft. 6 in. adopted in 1851 for greater stability.

Of lines of all gauges there had been a development from 1910 and at the close of the fiscal year 1919-20 the mileage in operation had increased to 26,735 from 32,099; it was made up as follows:

Gauge	1920 Mileage	Increase in 10 years Per cent
5 ft. 6 in.....	17,990	7.71
5 ft. 3 3/8 in.....	15,181	12.2
2 ft. 6 in.....	2,926	10.4
2 ft.....	638	47.6

At the close of the year the new construction under way as authorized amounted to 1822 miles,

of which there was 665 miles of 5 ft. 6 in. gauge and 805 miles of 3 ft. 3 3/8 in. gauge.

The accompanying statistical and financial summary shows that the Indian railways were in a good financial position. At the end of the financial year in 1920 there was a capital of some \$2,000,000,000 invested in the Indian railways and even in that year the return on that capital was 6.8 per cent.

GOVERNMENT. The present government of India rests on the Government of India Act of 1915 as amended by the acts of 1916 and 1919. The source of both executive and legislative power in India is the Governor-General in Council. The Council consists of eight ordinary members appointed by the Crown for five years, two being natives of India but the number is not fixed. It is provided that at least three of the members of the Council must have had ten years' service in India. The administration of India in England is under a Secretary of State for India assisted by a council appointed by him and at least half of its members must have resided ten years in India and not have left the country more than five years previous to their appointment. Under the act

of 1919 the appointment of a high commissioner of India was authorized, to whom the power of the Secretary of State in respect to contracts might be delegated and other duties assigned. In India there is also a legislature consisting of the Governor-General and two chambers, namely, the Council of State and the Legislative Assembly. The constitution of these bodies was the result of the Montagu-Chelmsford reform programme. The legislature opened, February 9. See below, under *History*. The Council of State had 60 members of whom only 20 could be officials and the Legislative Assembly 144 members of whom 26 were to be official and 103 elected. The term of the Council was to be five years and of the Assembly three years, but dissolution might be ordered sooner or the term might be extended at the wish of the Governor-General. The legislature is empowered, subject to certain restrictions, to make laws throughout British India for all persons whether native or British, for British subjects in the Native States and for British Indian subjects in all parts of the world. Viceroy and Governor-General in 1921, Earl of Reading, appointed, January 6.

HISTORY

THE NEW GOVERNMENT. The new parliament under the reform programme was opened at Delhi by the Duke of Connaught, February 8. It consisted of the two new representative bodies, the Council of State and the Imperial Legislative Assembly, which were to replace the old legislative Council of the Governor-General and, unlike that body, were to be composed largely of members directly elected by the constituencies. The Council of State, which was to serve as a second chamber, had a membership of sixty and the Legislative Assembly of one hundred elected representatives and forty nominated members. The permanent Chamber of Princes was also inaugurated. Its functions concerned the rights and welfare of about one-fifth of the population, but were consultative not executive, consisting of the making of recommendations in respect to treaties, the rights and privileges of the princes and their states, and matters of common concern or imperial interest. The new viceroy, Lord Reading, former Chief Justice of England, appointed in place of Lord Chelmsford in January, arrived at Bombay, April 2.

MALABAR REVOLT. Throughout the year there were frequent reports of riots and other evidences of native discontent. Toward the end of August fighting took place in the streets of Calcutta where nearly 700 insurgents who had been disturbing the southern and southeastern quarters of the city were reported killed by British troops sent to put down the riots, and 70 of the soldiers and 17 of the policemen were reported missing. A few European residents were also killed. According to the press, a large number of Hindus were massacred but no figures were supplied. At this juncture additional troops were hurried to the seat of the disorder. The centre of the unrest was the region of Malabar which was more or less isolated from the other parts of India. The revolutionary spirit in that region was attributed largely to religious fanaticism and to the hatred of the Mohammedans toward both the Europeans and the Hindus. Another cause was the extension

of the native Indian Nationalist propaganda which was reinforced by reports concerning the treaty of Sèvres which was resented as unjust to Turkey.

THE WORKING OF REFORM. According to the British authorities the reforms introduced by Lord Chelmsford, the former Viceroy, and Mr. Montagu, British Secretary for India, were inspiring the greatest confidence among the people and would lead to their having the greatest possible share in their own government. Under the rule of the new Viceroy, Lord Reading, counted as one of the most able jurists of Great Britain, conditions were said by the authorities to be in a fair way toward improvement. The native Indian leader, Mr. Gandhi, under threat of prosecution had been obliged to retract along with his Mohammedan allies certain violent statements made in public addresses. The authorities declared that free speech was not curtailed except so far as it involved dangerous propaganda. They said the population in general was peaceful and that the Malabar revolt in South India in August which had caused so much concern to the public was not really a revolt of native Indians but of a fanatical sect of Mohammedans. In short the political affairs of India were from the government's point of view progressing admirably. This favorable picture was offset by various reports in the press from prominent persons well acquainted with Indian affairs, including the former Lieutenant-Governor of the Punjab, Sir Michael O'Dwyer who had been at the head of the administration in the Punjab at the time of the Amritsar massacre. See article GREAT BRITAIN in the preceding YEAR BOOK. According to him the reform régime was an illusion. Less than 1 per cent of the population were represented by the members of the Provincial Councils and less than 1/10 of 1 per cent were represented by the Central Assembly at Delhi; nor was there any prospect that the great masses of the people would acquire the franchise for many years to come. This exposed them easily to anti-English propaganda. The members of the reform bodies were chosen exclusively from the English-educated lawyer class. Native criticism made much of this fact, maintaining that the main body of the natives was in no wise represented. According to this version of affairs in India there had recently developed among the masses who were formerly courteous and loyal, violent hatred toward the government and a tendency to obstruct and insult officials to such an unprecedented extent and in certain parts of the country Europeans were living in constant fear of attack. The activities of Mr. Gandhi continued during the year and resulted in many anti-British demonstrations. One of these was a popular movement to burn in public all cloth of British manufacture and many of his followers threw into the fire the foreign cloth in their possession. The policy of passive resistance was carried out in respect to refusal of government titles and honors, and nonattendance at government schools, and there was danger of a general refusal to serve in the army or in the police and to pay government taxes. Gandhi's influence among the masses seemed indeed to be increasing in spite of the public disapproval of such eminent Indians as Rabindra Tagore, and wherever he went in public he was received with signs of the greatest respect and affection.

NATIVE DISCONTENT. The committee of the Congress of all India comprising 200 delegates adopted a resolution, November 6, asserting the principle of "civic disobedience," including refusal to pay taxes and to coöperate with the government. The resolution was presented by the Nationalist leader, Mahatma Gandhi, who had for a long time past insisted on the necessity of this method of carrying on a revolution without violence. The Nationalists under Mahatma Gandhi continued their activities throughout the year in spite of the introduction of the reform measures by the government. The British reform programme did not win over the masses of the population, and was supported almost exclusively from among the small minority of the better educated natives. The Nationalists appealed to race and religious sentiment and took advantage of the existing economic discontent resulting from after-war conditions. The various methods employed by agitators against the government included: The social boycott; the setting up of Nationalist courts whose decisions were, if necessary, carried out by force; and the economic boycott of imports of British or other foreign cloths. In general it was reported that among the masses there was a deep hostility toward the government, especially in the large cities and industrial centres, and this took the form of serious riots, of which there were a great number throughout the year. The influence of Gandhi showed no signs of weakening. In addresses to the people, he said that independence was within their reach, and that it was in their power to organize their own government. If the public would refuse to pay the taxes, the government could be compelled to give up its military and police services. He told the people that it rested with them whether they would remain under the flag of Satan or under the flag of God, and he said the time would surely come when the servants and employees of the English would receive instructions to boycott their employers. In the Congress of All India everyone attending it was urged to make no further use of foreign cloths after August 1, 1921. It was further recommended that the subdivisions of the congress should gather together foreign cloths in order to destroy them or send them out of India. Gandhi, to be sure, preached passive resistance and was opposed to all violence, but it was feared that his followers would go beyond his instructions. It was also feared that the Nationalist movement, if left to itself, would turn toward Bolshevism and result in social and economic disorganization. The position of Gandhi and his followers was likened to that of Kerensky in the Russian revolution, and it was feared that his moderate programme would be swept aside. The non-coöperative movement had failed among the educated classes, but found many recruits both among the Hindus and Moslems. Its purpose was to make India completely independent, first industrially and then politically, whereas, Gandhi aimed first at economic independence. There was also the religious movement for the re-establishment of the Caliphate at Constantinople. The Treaty of Sèvres had given to this movement a distinct anti-British and Nationalist character, and it had been stimulated by many false reports, such as the rumor that the holy place of Islam had been desecrated by the British troops and that

Mecca had been destroyed, etc., which developed a fanatical hostility against England among the people. In the autumn the Viceroy assembled a special committee to consider the possibility of repealing the special laws in respect to riots and revolts. It was composed of representatives from the different provinces. The decision of this committee was unanimously in favor of maintaining these laws.

The situation from the point of view of critics of British policy may be summed up as follows: The British government had made a disastrous mistake in passing the so-called Rowlatt Act. (See preceding YEAR BOOKS.) This law passed in 1919 under the title of the Anarchical and Revolutionary Crimes Act was attacked in the British Liberal press as an arbitrary measure which suspended all civil rights and left the natives at the mercy of star chamber government. This was an extreme characterization but the measure undoubtedly did more than any other single thing to anger the intelligent natives. It was aimed, however, only at the exceptional crimes specified in this title and was enacted for a period of only three years. Moreover, it was not in any instance brought into application. Nevertheless, the members of the official class admitted that its passage was a mistake. In 1921 the government of India declared its intention of repealing it. Another contributive cause to the discontent was the supposed scheme on the part of the British government to subdue the Moslem world as illustrated in the treaty of Sévres and the partition of Turkey. This was particularly irritating to the Moslems of India who had aided the British Empire in winning the war. Again, the Indian government was committed to certain promises which had not been carried out owing apparently to the opposition of the home government. It was pointed out by the critics that while Mr. Montagu, Secretary for India, stood for a conciliating policy toward the natives, this was opposed by Lord Curzon and Mr. Churchill of the home government. Then the effects of the Amritsar massacre were still present in the minds of the natives. Although the massacre was known in England for several months after it was committed, in April, 1919, the House of Commons took no notice of it until December of that year and then took no action that seemed to the Indians at all commensurate with the seriousness of the crime. Not only was General Dyer, the author of the massacre, retired on a pension but he received a large sum of money from his grateful fellow countrymen in recognition of his services. It was the failure to secure justice against the persons responsible for this massacre that led Gandhi to declare that coöperation with the British government was a moral degradation to India. Attempts had been made since to placate the native discontent on this account by the Duke of Connaught and the present Viceroy, but simply by means of friendly speeches calling upon the people to forgive and forget. The Punjab atrocities had also had an unfortunate effect on the people. British journals were admitting in 1921 that the British could not stay in India if they were opposed by the great mass of the people. There were many signs in the course of the year that the people were becoming more and more hostile toward the British rule. In so

far as the Indian National Congress was the voice of the people there was no doubt of the unpopularity of the British government. In response to this discontent the British made promises but went ahead with measures of repression such as the arrest of the Mohammedan leaders, the Ali brothers and Dr. Kitchlew and their sentence to two years' imprisonment on November 1. On this occasion Gandhi proceeded to declare that the time had come for refusing finally any coöperation with the government. This involved refusal to pay taxes and to perform military services.

While the Liberal element generally took the side of the natives and attacked the British government, it was pointed out by neutral writers that these attacks seemed not to take into account the embarrassment in which the government found itself. It had after all to pursue its own interest in international politics as other Powers were going. This led it to take the stand that it had taken in respect to Turkey and Greece, for example. Moreover, although the Amritsar and Punjab atrocities were cited against the government the critics were apt to ignore the atrocities of Malegaon and in Malabar where the associates of Gandhi had brought about a riot among the Moplahs which lasted for weeks and resulted in the killing of hundreds of Hindus and some Europeans. Moreover, under the Gandhi programme the people were burning foreign clothing and declaring it sinful to wear it. Nor did the authors of this policy make any provision for the poor who were thus deprived of clothing.

The Montagu-Chelmsford programme of reform was variously described. According to the critics it really amounted to little as a means of native self-government. According to its defenders, however, the measure of Indian participation was considerable. One set of writers referred to the new councils set up under the Montagu legislation as controlled by the British authorities. Others pointed out that they were so far from being controlled that in certain cases they took a distinctly hostile attitude toward the government and that one of the native Indian leaders had expressed in public his regret at not having become a member of the council in order that he might have a better chance to enforce his opposition.

THE VISIT OF THE PRINCE OF WALES. The Prince of Wales arrived at Bombay, November 17. The ceremonies were accompanied by riotings in the native quarters, but where the Prince appeared he was received with apparent enthusiasm by great crowds, reported to be made up of all classes of the population. At the same time Gandhi, leader of the Nationalists, addressed the people and called for a general strike. Rioting occurred during the Prince's procession in the quarter of the city where the Nationalist element was strongest. It was estimated that 20,000 natives took part in the disorders which resulted in the burning of property, assaults on the police, and the killing of some of the constables. This news was received with many expressions of regret by Gandhi at his inability to prevent violence on the part of the masses. The Prince's journey continued with somewhat similar results in other cities, being received magnificently by the official class, but with protests and rioting by the part of the natives in quarters that did not lie directly on his route.

NATIONALIST CONGRESS. The Nationalist congress was in session at the close of the year. Its president was Hakim Apinal Khan, and it was attended by about 12,000 persons. An attempt to carry a resolution, demanding that the movement for complete independence should employ suitable methods instead of "legitimate" and "pacific" methods, was defeated by the opposition of Gandhi (December 28). A leading spokesman declared that the repressive policy of the British government had been an advantage because it strengthened the resolve of the Indian people to persist in the movement for independence. The proposal of Gandhi for a policy of nonviolence was carried at a full session of the Congress with only about 12 dissenting votes. The resolution according to its author was a challenge to an arrogant government which had disregarded the opinion of millions of natives and was attempting to crush out their freedom. The resolution declared that Gandhi was the sole executive authority of the movement and that neither he nor any of his successors if they should be arrested should be authorized to make peace with the government without the previous consent of the Congress. The people were advised to organize public meetings throughout the country without regard to the law forbidding them and were exhorted to join the Khalifat volunteers and to submit quietly if they were arrested. This action on the part of the Congress in recognizing Gandhi as the sole executive was regarded in certain quarters as a definite step toward the declaration of an independent republic of India.

The Ali brothers had been arrested on the charge of treason, and were acquitted on that count, but convicted of making speeches for the inciting of "public mischief." Other arrests of the followers of Gandhi who were carrying out the policy of noncoöperation were made toward

of Agriculture, covering the years of 1920 and 1921:

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Indiana, was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The following table gives a summary for the State in 1919 with corresponding figures for 1914:

	Census		Per cent of increase
	1919	1914	1919-14
Number of establishments.....	7,918	8,022	-1.25
Persons engaged in manufactures.....	329,227	233,270	41.15
Proprietors and firm members.....	5,807	7,229	-19.82
Salaried employees.....	45,803	28,588	60.23
Wage earners (average number).....	277,617	197,508	40.56
Primary horsepower.....	1,094,976	709,708	54.18
Capital.....	\$1,335,851,000	\$668,863,000	98.22
Services.....	402,209,000	155,854,000	158.46
Salaries.....	85,129,000	36,596,000	132.85
Wages.....	317,080,000	119,258,000	164.24
Materials.....	1,174,971,000	423,857,000	177.88
Value of products.....	1,901,846,000	730,795,000	161.73
Value added by manufacture (value of products less cost of materials).....	726,875,000	306,938,000	137.15

¹ A minus sign (—) denotes decrease.

the end of the year. At that time the Moplah war was still going on in the Malabar district. At the end of the year various alarming rumors were circulating in the press, including one to the effect that a movement embracing even the moderate elements in the native population had definitely declared in favor of an independent republic.

INDIANA. POPULATION. According to the report of the census of 1920, there were 2,930,390 residents in the State, Jan. 1, 1920, as compared with 2,700,876 in 1910.

AGRICULTURE. According to the census of 1920, the number of farms was 205,126; and the number of farms in 1910 was 215,485, a loss of 10,359, or 4.8 per cent. The following table is compiled from the estimates of the United States Department

TRANSPORTATION. The total steam railroad mileage of the State in 1920 was as follows: Main track, 7161.22; second main track, 1369.27; third track, 62.74; fourth track, 26.74; and side track, 4547.44. The total mileage in 1921 was as follows: Main track, 7159.25; second main track, 1356.92; third track, 62.75; fourth track, 26.73; and side track, 4603.79. The total mileage of electric railroads in 1920 was as follows: Main track, 1987.90; second main track, 171.18; and side track, 124.58. The total mileage in 1921 was as follows: Main track, 1982.68; second main track, 157.31; and side track, 136.92.

FINANCE. The latest available figures were those for the fiscal year ending Sept. 30, 1921. The balance on hand, Oct. 1, 1920, was \$4,568,397.37.

THREE POLITICAL AGITATORS PROMINENT IN 1921

The receipts for the fiscal ending Sept. 30, 1921, were \$21,604,283.90, the disbursements for the same period, \$23,183,170.36; and the balance on hand, Oct. 1, 1921, was \$2,989,490.91. The aggregate bonded debt of the State on the same date was \$345,615.12.

EDUCATION. The total school revenue in 1920-21 was \$53,768,002.72. In 1920-21, there were 797,537 children enumerated in the State (between 6 and 21 years). The total enrollment in the schools was 577,432. There were 15,584 elementary and 5123 high school teachers.

CHARITIES AND CORRECTIONS. The names of the institutions, the situation, date of founding and number of inmates present on Sept. 30, 1921, were as follows:

Reformatory, Jeffersonville (1821), 791; School for the Deaf, Indianapolis (1844), 297; Central Hospital for the Insane, Indianapolis (1845), 1455; School for the Blind, Indianapolis (1847), 125; Prison, Michigan City (1859), 1352; Boys' School, Plainfield (1867), 514; Soldiers' and Sailors' Orphans' Home, Knightstown (1867), 302; Woman's Prison, Indianapolis (1869), 91; School for Feeble-Minded Youth, Ft. Wayne (1879), 1395; Northern Hospital for Insane, Logansport (1883), 1070; Eastern Hospital for the Insane, Richmond (1883), 914; Southern Hospital for the Insane, Evansville (1883), 798; Soldiers' Home, Lafayette (1896), 592; Girls' School, Clermont (1903), 368; Southeastern Hospital for the Insane, North Madison (1905), 1232; Village for Epileptics, Newcastle (1905), 405; Sanatorium, Rockville (1907), 104; Robert W. Long Hospital, Indianapolis (1911), 104; State Farm, Putnamville (1913), 540; Farm Colony for the Feeble-Minded, Butlerville (1919), 80.

On Sept. 30, 1921, the total population of the several State institutions was 12,529; of the county poor asylums, 3271; of the county jails, 741; and of institutions for dependent children, 1553, making a total of 18,094. Expenses for these purposes in 1920-21 were as follows: State institutions, \$4,446,251.74; county poor asylums, \$1,184,943.23; dependent children, \$511,380.78; county jails, \$299,018.19; and outdoor poor relief, \$417,230.13.

LEGISLATION. The regular biennial session of the legislature met in January, 1921. The only laws of exceptional interest or importance enacted were the following: Pure agricultural seed law; financial support for public health nursing associations; the erection and equipment of a modern reformatory; repeal of the full train crew and full switching crew laws; full guardianship of a mother over her children; uniform warehouse receipts act; providing for the preparation of an executive State budget; creation of a board for the examination and licensing of civil engineers and land surveyors; acceptance of the federal vocational rehabilitation act; authorizing cities to create a city planning and city zoning commission; authorizing cities to establish the commission or the commission-manager form of municipal government; creating the office of State juvenile probation officer; certificate of title for motor vehicles to prevent theft; authorizing the construction and equipment of a hospital for crippled children; and providing for the creation of a commission to make an educational survey of the State.

ELECTIONS. On Sept. 6, 1921, a special election was held for the ratification or rejection of 13

proposed constitutional amendments which had been adopted by the general assemblies of 1919 and 1921. The total number of electors who participated at this election was 218,698. Only one of the thirteen amendments was adopted. The amendment adopted confers full suffrage on women and prohibits aliens from voting until they are fully naturalized. During the year, special elections were held in twelve cities on the question of the adoption of the commission-manager plan of government. The proposal was defeated in eleven municipalities and adopted in Michigan City only. Municipal elections were held throughout the State on November 8. Of the ninety-eight cities, sixty-two elected Democratic mayors, thirty Republican mayors and six Independents.

OFFICERS. Governor, Warren T. McCray; Lieutenant-Governor, Emmett F. Branch; Secretary of State, Ed Jackson; Treasurer of State, Ora Davies; Auditor of State, William G. Oliver; Attorney-General, U. S. Lesh; Clerk of the Supreme Court, Patrick J. Lynch.

JUDICIARY. Supreme Court: David A. Myers, Howard L. Townsend, B. M. Willoughby, Julius C. Travis, Louis B. Ewbank.

INDIANA, UNIVERSITY OF. A co-educational State institution at Bloomington, Ind.; founded in 1820. In the fall session there were 2815 students enrolled of whom 1239 were women. Of this total 1212 were in the arts and sciences; 256 in medicine; 109 in law; and the rest in the Schools of Training of Nurses, Commerce, and Finance, Social Surveys, and the Graduate School. The faculty numbered 219. The library contained 138,352 volumes. The total income including appropriations from the state and federal governments was \$927,970. A plan was made for the construction of a Commerce and Finance building in 1922 and a campaign was going on among the alumni for the raising of \$1,000,000 for the building. President, William Lowe Bryan, Ph.D.

INDIANS. POPULATION. The total population of the Indians of the United States, exclusive of Alaska, June 30, 1921, was 340,838, of whom 101,506 belonged to the Five Civilized Tribes, including freedmen and intermarried whites. Exclusive of the Five Civilized Tribes the figures was 239,332. The Indian population by States was as follows:

Alabama.....	405
Arizona.....	43,519
Arkansas.....	106
California.....	12,725
Colorado.....	785
Connecticut.....	189
Delaware.....	2
District of Columbia.....	37
Florida.....	452
Georgia.....	125

EDUCATION. Of the approximately 86,000 Indian children of school age about 30,000 were enrolled in the government schools and about an equal number in non-government schools. The day and boarding schools under government control offer academic courses from the first grade through intermediate and grammar grades; in a few instances through what is equal to junior high school. Vocational courses of equal grade are offered, with special emphasis put upon agriculture and home economics. In the large non-reservation schools many trade courses are provided. Of not less importance than the academic training is the industrial preparation of Indian boys and girls for independent citizenship. The problem of supervision and of securing competent teachers is difficult. The ultimate aim of the administration is to place all Indian children in the public schools. Many Indian children have been out of school because of lack of school facilities, especially in the Southwest, but in other sections of the country conditions have been changing rapidly and public schools were available for a very large percentage of the Indian children in those sections.

In a majority of the States the Indian administration reported a hearty cooperation on the part of the State authorities in providing for Indians in public schools.

HEALTH. The Indians are subject to the same diseases as white people. They have more trachoma and perhaps more tuberculosis, but there are fewer venereal diseases, less diphtheria and scarlet fever, and, as a rule, pneumonia is not so prevalent among them as it is among the whites. In 1921, according to the Report of the Commissioner of Indian Affairs, several reservations, particularly of those in the Southwest, had visitations of measles, smallpox, chickenpox, mumps, scarlet fever, and influenza in an attenuated form. Some cases of sore throat with infection were also present in a few communities. Several deaths resulted from bronchial pneumonia following measles, but there were no fatal issues from any of the other diseases above mentioned, and the epidemic situation with respect to these diseases was practically clear at the close of the fiscal year. Typhus fever appeared on the San Juan Navajo Reservation about Nov. 20, 1920. The disease was almost exclusively confined to the Indians. The last case was reported, June 13, 1921.

AGRICULTURE. The following information in regard to Indian farming was supplied by the

Commissioner of Indian Affairs: While many of the Indians engage in other industries, by far the greater number must look to agriculture for their support. In the year ending June 30, 1921, 49,962 Indians cultivated 890,700 acres of land, producing crops worth \$11,927,366, as compared with 36,459 Indians who cultivated 762,126 acres the previous year, the value of the crops being \$11,037,589. The comparatively slight increase in the value of the crops was owing to the fall of prices.

Recognizing the benefit of experimentation, Congress makes a small appropriation each year for such purposes on the different reservations. This money is used in conducting experiments with different crops, plants, etc., with the view of developing varieties best suited to the conditions which prevail in a particular locality. The largest and most important farm of this nature is at Sacaton, on the Gila Reservation in Arizona, which is operated jointly by the Indian Service and the Bureau of Plant Industry of the United States Department of Agriculture. The operation of this farm has been very successful and of great benefit not only to the Indians but to the whites as well. The States Relations Service of the United States Department of Agriculture has placed its facilities at the disposal of the Indian service for the benefit of the Indians. The county agents cooperate with the Indian service farmers; representatives of the State agricultural colleges visit reservations and give illustrated lectures on suitable topics appropriate to that particular vicinity, and boys' and girls' clubs have been organized on several reservations. Agricultural fairs are held in the fall of each year on many of the reservations, at which the Indians display farm products and live stock in competition with each other, premiums being given for the best exhibits.

THE QUESTION OF INDIAN COMPETENCY. The inability of the Indian to care for himself and compete under existing conditions with the whites, continued to present a difficult problem to the Indian service. The following conditions and considerations are presented in the Commissioner's report:

Notwithstanding the sincere efforts of officials and competency commissions to reach a safe conclusion as to the ability of an Indian to manage prudently his business and landed interests, experience shows that more than two-thirds of the Indians who have received patents in fee have been unable or unwilling to cope with the business acumen coupled with the selfishness and greed of the more competent whites, and in many instances have lost every acre they had. It is also true that many of the applications received for patents in fee are from those least competent to manage their affairs, while the really competent Indians are in large numbers still holding their lands in trust. It is evident to the careful observer that degree of blood should not be a deciding factor to establish competency, as there are numerous instances of full-bloods who are clearly demonstrating their industrial ability by the actual use made of their land and who are shrewdly content with a restrictive title thereto that exempts them from taxation. At the same time the instances are far too frequent where those of one-half or less Indian blood—often young men who have had excellent educational priv-

leges—secure patents in fee, dispose of their land at a sacrifice, put most of the proceeds in an automobile or some other extravagant investment, and in a few months are “down and out,” as far as any visible possessions are concerned. The situation, therefore, suggests the need of some revision of practice as a check upon the machinations of white schemers who covertly aid the issuance of fee patents in order to cheat the holders out of their realty, and as a restraint upon those who are not so lacking in competency as in the disposition to make the right use of it, and also as a stimulant to the thrifty holder of a trust title to accept the entire management of his estate with the full privileges and obligations that follow.

INDO-CHINA, also known as **FARTHER INDIA**. The southeastern peninsula of Asia including the following divisions: Burma, politically attached to British India; Siam, a self-governing monarchy; French Indo-China, including Annam, Cambodia, Cochinchina, Laos, and Tongking; the Federated Malay states; the Straits Settlements proper; and the Malay states of Johore, Kedah, Kelantan, Perlis, and Trengganu. See the articles **BURMA**; **FRENCH INDO-CHINA**; **SIAM**; and other principal states mentioned above.

INDO-IRANIAN LANGUAGE. See **PHILOLOGY**, **MODERN**.

INDUSTRIAL WORKERS OF THE WORLD.

For a general history of this organization together with an exposition of its principles see the **YEAR BOOK** for 1919. During the year the Industrial Workers of the World attracted little or no attention from the public. The courts of California and most of the western States had previously declared against the economic theory of syndicalism, and the trials of individual Industrial Workers of the World during the year saw a continuation of this attitude. There appeared to be some basis for believing with a certain sympathizer that, “Persecution of the Industrial Workers of the World has weeded the weak, wild, and unsteady from its ranks; the Industrial Workers of the World is rapidly developing into a stable, dignified labor organization.” The habit of thinking of all Industrial Workers of the World as typical “reds,” ferocious and Russian in appearance, was gradually giving way. An examination of the forty syndicalist prisoners in California showed many of them to be of old American stock; two were overseas veterans, one a volunteer, and two of the three foreign-born prisoners were Holland intellectuals. The membership of the Industrial Workers of the World was estimated at approximately 100,000. Secretary, George Hardy.

INFANTILE PARALYSIS. Acute anterior poliomyelitis, the infectious disease responsible for infantile paralysis with its thousands of crippled men and women is now being treated with the serum of horses artificially immunized to the disease. This is obtained by injecting the animals with cultures of the *streptococcus polymorphus*. The good effects of this serum have been known since 1917, both in epidemics and in isolated cases. Dr. Rosenau of the Mayo Foundation has a series of 259 patients all of whom were children between the ages of 5 and 7. In 60 of these there was time to inject the serum before the appearance of the paralysis—that is, during the first 36 hours of the disease. In this series not a single death or paralysis occurred, or in other words there was 100 per cent of complete recovery.

In 61 other patients the injections were not practiced until after the first 48 hours. In this series paralyzes were already present, nevertheless the results were almost equal to those of the above mentioned series, for all recovered and but one was left with a slight paralysis. In the third series of 123 patients treatment was not begun till the 5th or 6th day. Eight children of this series died and 30 were left paralyzed but the remaining 61 made complete recoveries. These results are most remarkable as will be seen by a comparison with the average mortality and other figures under former plans of treatment. The flat death rate is 4 per cent and the incidence of paralysis from 29 to 68 per cent, according to the locality and epidemic. The serum is injected into the muscles or veins and nothing is gained by injection into the spinal cord. *Journal of the American Medical Association*, August 20, 1921.

INGRAM, ELEANOR MARIE. Author, died, March 22. She was born in New York City, Nov. 26, 1886, and educated by private tutors. She wrote *The Game and the Candle* (1911); *The Flying Mercury* (1911); *From the Car Behind* (1912); *Unafraid* (1913); *A Man's Hearth* (1915); *Twice American* (1917).

INSECTS. See **ZOOLOGY**.

INSURANCE. Insurance in 1921 felt the effects of the general deflation and depression, and in practically every branch new problems were to be faced, owing both to commercial conditions generally and those peculiar to the industry, as well as those of a rather fortuitous character prevailing during the year.

FIRE INSURANCE. In addition to purely underwriting activities important outside matters were in evidence during 1921. The State of Mississippi was engaged in a suit against a number of leading insurance companies in the effort to enforce heavy penalties, which was bitterly fought. (See below.) In Arkansas a suit was in progress to prevent the State Insurance Commissioner from enforcing a rate reduction order which was opposed as unjustifiable, while in New York during the sessions of the Lockwood Legislative committee the insurance companies were assailed and much newspaper notoriety given to their alleged practices.

With decreased incomes and profits the fire companies inaugurated reforms in various departments and the business was said to be in better intrinsic condition than in the times of inflated prosperity. There was an estimated decrease in the income from premiums of between 10 and 20 per cent in 1921 from 1920, due of course to the reduced stocks in many businesses and diminished industrial activity. Furthermore, values had shrunk to the process of deflation, reducing premium incomes.

Fire losses in 1921 was excessive, the highest since the year of the San Francisco fire. (See **FIRE PROTECTION**.) According to the Insurance Editor of the *Journal of Commerce* (New York): “There were several reasons for this. In the first place there was a vast amount of insurance in force written in 1920 and previous years. Even normal losses would have been heavy. But losses were more than normal. There was a serious let down from the patriotic spirit which prevailed during the war and caused people to be careful as a duty. A period of wild wastefulness had followed, and with it came carelessness, which always results in fires.”

"Active moral hazard, however, was the most serious factor in the loss situation. It was the natural result of business conditions and manifested itself suddenly and to an alarming extent. There is no question that part of the heavy loss it brought the companies could have been avoided by more careful underwriting, but it would have taken a prophet to detect more than a fraction of it. Up to the autumn of 1920 moral hazard losses had been almost unknown for several years. With prices going up, most property was underinsured and a fire meant a loss to its owner. But when prices began to drop values in many instances became less than insurance, and when sales fell off and money became tight the conditions were ripe for moral hazard losses."

FIRE INSURANCE IN CANADA. It was estimated that the combined fire loss ratio of all companies reporting to the Dominion Insurance Department would run from 15 per cent to 20 per cent over that of 1920 (which was 43.41 per cent on the basis of paid losses to cash received for premiums). This was also accompanied by a reduction in premium income variously estimated at from 10 per cent to 15 per cent, naturally due to the diminishing values of insurable property attending the general deflation. Nevertheless expenses, fixed and otherwise, and taxes for the Canadian companies did not show any perceptible decrease nor even any signs of an improvement so that the year was not one of marked prosperity. A significant feature of the year was the decrease in insurance rates. Along with the decrease in the total average loss ratio in Canada during the years previous to 1921 the average rate charged upon all classes of risks written exhibited a marked reduction, namely, from \$1.36 per \$100 of insurance written in 1910 to \$1.05 in 1920—a decrease of 16 per cent. In Toronto, largely on account of improved fire-fighting equipment and facilities the companies voluntarily reduced the rates upon dwelling houses by approximately 15 per cent.

Estimates of the total value of all property destroyed or damaged by fire during the year 1921 in Canada were made as high as \$31,000,000, as compared with \$28,000,000 for 1920.

THE MISSISSIPPI INSURANCE SITUATION. In 1921 the State of Mississippi was a centre of insurance interest. Late in 1920 suits were brought against a number of insurance companies by the State Revenue Agent, who charged them with violating the anti-trust law in using the advisory rates of the Mississippi Inspection and Advisory Rating Company and sought to collect penalties aggregating several billion dollars. The case in due season came to trial before the Chancellor at Jackson, and most of the companies were found guilty and received the minimum penalty of \$25 for each day each company had used the advisory rates. These penalties aggregated about \$9,000,000. The case then went on appeal to the Supreme Court.

To complicate the situation the funds due the companies in Mississippi from agents and assured at the time was suit was filed were impounded in the hands of receivers appointed by the Chancellor. Then when the Revenue Agent had secured judgment he sought to tie up all money possible on which he could levy in the event that the final outcome would be favorable to him. He garnisheed all funds due the defendant insurance companies from Mississippi corporations and virtually all

important corporations of other States which do business in Mississippi. To forestall this move the insurance companies disposed of large holdings of securities in Mississippi corporations, but amounts due them from other corporations for premiums or otherwise at the end of the years were tied up by garnishment. The situation resulted in nearly all the large companies leaving the State early in 1921.

Later the legislature of Mississippi met in regular session and a number of bills were introduced with a view to relieving the State from the partial insurance famine thus brought about. The outcome of these efforts and of the litigation was not apparent at the end of the year. It was said that the business interests of the State were disposed to favor the enactment of laws under which the fire insurance companies could operate there in peace, but the Governor and a large number of followers were strongly opposed to such a course and desired the laws to remain so that the companies could operate only under destructive competitive conditions.

INSURANCE LEGISLATION. In the legislature of 44 States and territories in session in 1921 a total of 1471 bills affecting the insurance business were introduced and 428 were enacted into law. These bills were fairly well distributed between the different branches and were classified as follows: Life, 212; fire, 279; casualty, including fidelity, surety, and auto, 421; departmental, 256; general and miscellaneous, 303 bills. In this connection it was interesting to note that a number of these bills dealt with State insurance and at least indicated that in some quarters there was still a tendency towards this form of State industrialism. Thirty-five proposals for the establishment of State insurance funds in the life, fire, bonding, and casualty branches of the business were introduced but thirty-two of these proposals were defeated. The three which became law were passed in Missouri, Arizona, and Texas. The Missouri measure (workmen's compensation) was acquiesced in by insurance interests as the best solution of a very complicated situation; the Arizona measure (workmen's compensation) was enacted as the result of legislative strategy; the Texas measure (fire fund) was declared inoperative by Texas State officials.

A study of the legislative tendencies of the year revealed that the State insurance measures received support from the American Association for Labor Legislation, the American Federation of Labor, the Non-partisan League, and from business men who were willing to have the State enter the insurance business but who would be unwilling to have their own business interfered with. There was also support manifested, as heretofore, by many educators and theoretical economists.

MARINE INSURANCE. Naturally in view of the shipping (q. v.) situation marine insurance had an extremely bad year in 1921 and at the close of the year the prospects of immediate improvement were very poor. J. B. Levison, president of the Fireman's Fund Insurance Company and one of the leading marine underwriters in the United States, summarized the situation in an interview published in the *Weekly Underwriters* as follows:

"1. The great depression in shipping and the shrinkage in foreign commerce, which is naturally reflected in the volume of premiums written by the offices.

"2. The excessive number of companies competing for the business, due to the entrance of almost every fire company in America and England into marine underwriting during the war. It is probably within the mark to say that the aggregate volume of marine premiums written in England and the United States in 1921 will be considerably less than 1913 (the year before the war), with many times the number of companies competing.

"3. The advent into marine insurance during the war of a large number of new brokerage firms with no accounts on their books and no knowledge of the business, who are endeavoring to hold their position by practices which must inevitably result disastrously to underwriters.

"3. Unusual and abnormal losses on account of the breakdown in the morale of the peoples of the world at large, lack of proper care in handling of cargoes and a distinct lowering of standards in the upkeep of vessels owing in a large measure to low freight rates.

"5. Operation of laws in the various States which were primarily designed to apply to fire insurance and have been extended to marine, placing marine writing offices at a distinct disadvantage as compared with companies of other countries."

LIFE INSURANCE. During 1921 there was a decrease in the amount of life insurance written as well as a considerable increase of lapse and a remarkable addition to the volume of policy loans. Nevertheless, business was done on a sound basis and at the end of the year underwriters and agents were confident that business was on a firm and all things considered satisfactory basis. Under modern conditions it was realized that life insurance adapted itself to good times, hard times, low mortality, and epidemics, casualties usual and unusual, as no other fiduciary financial institution was able to do. In fact it was stated that when an American institution such as legal reserve life insurance through half a century of experience was able to weather wars, panics, epidemics and their well-known aftermaths without default, deficit, debate, or delay upon a single contract and when through all these vicissitudes it was able to increase in assets, in favor and in the value of its service, that institution might well be entitled to unusual respect and be regarded with pride. Legal reserve life insurance in America is such an institution.

Two very important pieces of constructive legislation in life insurance were notable in 1921: Namely, the Federal revenue method of taxing life insurance and the passage of a standard amortization law in twenty States. These were the result of coöperative effort on the part of the leading life insurance associations and interests.

Life insurance received the attention of the forty-four legislatures in regular session and several special meetings during 1921. Something over 4000 bills affecting the life insurance business were introduced, but as already stated a very small proportion of these became laws. The American Life Convention had established a system of coöperation with local companies in the South and West and thus was able to coöperate in directing these proposed measures to the governors' offices where they were worthy of support and to dispose of them in instances which were hurtful to policy-holders, companies, and the public.

NEW U. S. LIFE TABLES. Life insurance circles were interested towards the close of the year by the announcement of the forthcoming publication by the Bureau of the Census, of the second official publication on life tables, derived from births, deaths, and populations in the United States. These tables show conditions as they existed in 1890, in 1901, and in 1910, thus making it possible to study the changes which have taken place in mortality during two decades. It is shown that mortality at practically all ages is higher among men than among women. In particular it appears that the most favorable mortality in the United States is found among women living in the rural districts. The rural classes, regardless of sex, enjoy a much lower mortality for nearly the entire range of life than those living in the cities. While the expectation of life, both among men and women in most classes has steadily increased, there is no indication of any definite lengthening of the span of life. In other words, while almost all classes of persons are living to an older average age, the limiting age of human life does not seem to have advanced. In 1901 the expectation of life among white females at birth was about three years more than among white males, and in 1910 the excess in favor of the females had increased to almost three and one-half years. There seems to have been a general improvement for all classes for the ages up to about age 40 for men and age 50 for women, except for the Negro population. Above these ages no improvement is shown, and in some cases the mortality at the older ages in 1910 was actually less favorable than it was in 1901.

An examination of the infant mortality tables indicates a decided improvement in the infant mortality rate in most classes of the population between 1901 and 1910. The expectation of life of children born in 1910 also shows a considerable improvement over the expectation of life of children born in 1890 and 1901 in practically all classes of the population. The infant mortality in the rural districts was considerably lower than that in the urban districts both in 1901 and 1910, but the difference in favor of the rural districts was not as great in 1910 as it was in 1901, indicating that the efforts to improve infant mortality conditions in our cities are undoubtedly meeting with success.

COMPARISON WITH FOREIGN COUNTRIES. Life tables are also given by sex for Australia, Denmark, England, France, Germany, Holland, India, Italy, Japan, Norway, Sweden, and Switzerland. They may be used to compare rates of mortality and expectations of life at any age in one country with those of any other country or with those in the United States. A comparison with these countries shows that except for France, India, and Japan, the rates of mortality among men and women are less favorable in the United States than in the countries above mentioned. For example, the lowest annual rate of mortality per thousand at birth is found in Norway to be about 81 for males and 67 for females, while for a similar class in this country, namely, white people, it is about 127 for males and 105 for females. This indicates that there is still much room for improvement in the United States.

The most important mortality tables used by life insurance companies in this country and in

foreign countries are included in this publication.

LIFE ANNUITY AND MONETARY TABLES. Tables of life annuities and other monetary tables at various rates of interest, based on life tables for the United States, were computed for the purposes they serve in legal and business practice. The values of life annuities are frequently required in the settlement of estates, the division of wills, the determination of the measure of damages, and in connection with pension funds. Until the appearance of the United States Life Tables there were available practically no reliable life tables faithfully representing mortality conditions as they now exist in the general population of this country.

The mathematical theory of the construction of life tables is developed in great detail and is illustrated by photographs of the actual numerical calculations made on adding machines in the construction of the life table for males in the State of New York, 1910. This portion of the text will be of great service to all those who desire to acquaint themselves with the theory of life table construction as well as with the actual mathematical processes. All the original statistics on births, deaths, and populations used in the construction of the life tables are given in this publication. An extensive index of twenty pages has been prepared to enable the reader to locate quickly information to be found in the text and tables.

PLATE GLASS INSURANCE. Just prior to the beginning of the year 1921, the price of glass was somewhat reduced and this resulted in a reduction in the net charge for glass replaced, but such reduction did not bring the net charge down to prewar prices by any means. In 1920 the losses paid by the companies were 70 per cent greater than normal on account of the high cost of material, labor, and freight, these last two not showing much improvement in 1921. Lower material costs, however, made it possible for the companies to reduce premium rates where they applied and where larger stocks of glass were carried. See also the article **WORKMEN'S COMPENSATION**.

INTERCHURCH WORLD MOVEMENT. The closing up of the affairs of this organization was nearing completion toward the end of 1921. The Interchurch was no longer a going concern and would cease to exist entirely early in 1922. Headquarters have been maintained at 160 Fifth Avenue, New York City.

INTERCOLLEGIATE LIBERAL LEAGUE. See **UNIVERSITIES AND COLLEGES**.

INTERNAL COMBUSTION ENGINES. In the United States during 1921 there was a fair demand for oil engines, particularly during the latter part of the year, making an estimated total of the year's sales of about 50,000 horsepower. This, in view not only of general conditions but also of the great depression and inactivity in mining and other industries, where the oil engine had achieved an important position among isolated power plant units, was considered a good record. There were not, however, the orders for large Diesel engines for copper mines, and until late in the year for oil-pipe lines, though such developments as the oil fields at Mexia, Texas, were responsible for orders for some 6000 horsepower. At sea for the tankers, especially those built for the Mexican tank trade, it seemed to be the current opinion that steam engines and boilers

fired by Mexican boiler oil were no more expensive to operate than a Diesel engine where a high grade of oil was used. However, there were small vessels using semi-Diesel engines for harbor and coastwise service, on the basis that the lower first cost justified greater expenditure for fuel. Naturally shipbuilding (q. v.) was greatly restricted during the year and few advances in marine engines were scored.

The applicability of the Diesel engine for use at isolated stations was shown during the year in copper mines where four 2000-horsepower two-cycle Diesel engines were installed. Another interesting plant especially on the economic side was the Diesel-engine station of the Chicago Drainage Commission which was completed during the year. Here were installed four 750-horsepower Diesel engines to furnish power to the Chicago Park system. The use of Diesel engines here was especially significant inasmuch as coal was comparatively cheap in Chicago, consequently an unrivalled opportunity was afforded for studying the cost of operation of such a plant compared with the costs of steam plants in the same district.

Mechanical engineers during the year were looking with greater favor on the Diesel engine for use at central-stations where units of not more than 1000 horsepower were required. Of course even greater economy of operation was sought and where there were high coal prices many industrial plants were considering the possibilities of the Diesel engine.

Diesel engines of large capacities both in Europe and America had been developed, but the tendency in 1921 was to regard 2000 horsepower, per unit as the maximum capacity for some years on the existing basis of the industry, and it was believed that the perfecting of designs in the interest of greater efficiency and reliability was of greater importance than increasing the range of powers.

The solid-injection oil engine, referred to in the **YEAR BOOK** for 1920, continued to receive attention and was manufactured by a number of builders. The air-injection Diesel engine in some quarters was recommended for capacities over 300 horsepower, while for units of less power the solid-injection engine was preferred.

In the production of gas engines also, 1921 was a year of reduced activity. Of course in numbers and units of small size the farms were the leading customers, and naturally the farmers in 1921 had a restricted purchasing ability, but at the end of the year an increased demand was apparent. Gas engines of larger size went principally to the oil fields where the normal demand was about 7000 engines averaging 25 horsepower each annually. This amount of business of course was not done in 1921, but greater activity in the oil fields was anticipated. It seemed to be apparent that the gas engine in quite a few fields was losing ground to the liquid-fuel burning engine. And in the development of this last-named type the greatest recent development had unquestionably occurred in the internal combustion engine industry.

INTERNATIONAL COMPOSERS' GUILD. See **MUSIC, General News**.

INTERNATIONAL CO-OPERATION. **INTERNATIONAL CO-OPERATIVE ALLIANCE.** The tenth Congress of the International Coöperative Alliance was held at Basel, Switzerland, on August 22-25. In the absence of Sir William Max-

well the President, Mr. G. J. D. C. Goedhart of The Hague, presided over the meetings. Among the chief features of the session may be mentioned the reading and discussion of the report on Russia. The Executive Committee had decided, July 12, in respect to representation on the part of the Russian coöperative organizations that the only authority which could nominate the Russian representatives was the central authority at Moscow, and that the executive had no alternative but to accept its properly authenticated nominations. Objection was made to this decision and an amendment to the committee's report was proposed to the Central Committee which held a meeting at Basel previous to the assembling of the Congress. This amendment was to the effect that in view of the condition of the Russian coöperative movement the approaching Congress should leave vacant, until the next meeting of the Central Committee, the places to which Russia was entitled on that committee. The amendment was submitted to the Congress and rejected by 733 votes to 474 in favor of the printed report. Another question of importance was that of the attitude of the Alliance toward the Ter-Meulen scheme of International Credit which had been brought into discussion by the League of Nations. It was suggested that the scheme might be of use to coöperative societies because they could use the bonds issued under it as a means of creating credit. It was understood that in Russia the small peasant would not produce more than he wanted for his own consumption on account of the difficulty in exchanging his surplus at reasonable rates. Coöperative organizations could aid these producers. A resolution was adopted expressing satisfaction with the steps already taken to establish international coöperative trade and calling upon the International Committee of the Coöperative Wholesale Societies to make the fullest use of the opportunities afforded by the present breakdown of international trade through capitalized channels for the purpose of establishing international trade through coöperative channels. It recommended that the International Committee of the Coöperative Wholesale Societies take immediate steps to aid each country in applying all its available resources to building up the export trade through coöperative channels, and it urged the International Coöperative Alliance Committee and the International Committee of Wholesale Societies to take all possible measures for removing obstacles resulting from the attitude of governments or other causes. Another resolution was passed providing for a special conference of coöperative banks or banking departments with a view to definitely realizing the scheme for an International Coöperative Bank. In view of a question arising as to the attitude of the Congress toward free trade and protection, a resolution was passed placing the Congress on record against all forms of competition. It declared that the commercial policy down to the present time had been a policy of war, adopting a system of protection as a defense against what was called enemy invasion or a system of free trade by way of an offensive attack if the country was so strong that it had no fear of the imports from other countries. While the coöperatives recognized that the system of free trade had helped the consumer by reducing the cost of living, their own policy was not nationalist, or

protectionist, or a policy of free international competition, but was a policy which aimed at the association of all nations. The Congress supported proposals already made to the League of Nations concerning the establishment of conditions insuring the just distribution of raw materials and food stuffs and concerning the control over national monopolies and trusts. A peace resolution was carried after some debate, urging coöperative societies to use all vigilance in order to prevent any political or economic conflict between peoples, and to spread the idea everywhere of the necessity of reducing military expenses to a minimum; also recommending that a larger place be given in the schools to instruction in coöperation. Other resolutions defined the purposes of the coöperative societies with a special view to removing any misunderstandings with trade unions; approved steps already taken, and urged continuation of effort to secure representation in the International Labor Bureau; appealed to coöperative organizations on behalf of the victims of the Russian famine; protested against political persecution on the part of the reactionary Hungarian government, against Polish persecution in the Ukraine, and against outrages committed by the Fascisti in Italy.

The following account of the coöperative movement in foreign countries in 1921 was given by Mr. H. Rappaport, Secretary of the Coöperative League of America:

GREAT BRITAIN. The coöperative movement continued to grow faster than the population. During the year, 377,292 new members joined coöperative societies, bringing the total past four and a half million heads of families. While the population was growing at the rate of 4.7 per cent during the period of 1911-21, the membership of the consumers' coöperatives grew at the rate of 69.75 per cent. Now, 40 per cent of the population of Great Britain supply their wants through the consumers' coöperatives.

The Coöperative Wholesale Society of England reported a loss of \$12,000,000 during the year, and the trade of the Scottish C. W. S. fell off considerably. This condition is attributed by the Committee which investigated the causes of these losses, principally to "the heavy fall in values of stocks and the decreased purchasing power of the consumers due to economic and industrial conditions." The industrial crisis and the protracted strikes were largely responsible for the decreased purchasing power of the workers.

During the lockout of the miners in the early half of 1921 the coöperatives furnished hundreds of thousands of dollars' worth of foodstuffs to the families of the miners, on credit. They also gave substantial donations in the form of food, fuel, and meals to the miners.

GERMANY. The German genius for organization has shown itself markedly in the coöperative movement. The Consumers' Coöperatives are federated into a Central Union of 1200 societies, having a membership of over four million heads of families. The total number of consumers' societies in 1921 was 2400. Coöperation was growing more rapidly in Germany than in any other country, owing to the hard times incident to the war, and to the intensive educational work of the coöperatives. The membership of the German coöperatives was larger than that of the British coöperatives. One-half the popu-

lation of Saxony were members of coöperatives. Saxony had 160 coöperatives, which conducted 700 stores. Construction of houses by coöperative associations of tenants was proceeding rapidly, while private building was practically at a standstill. The most energetic branch of the Consumers' Coöperative Movement to-day is in Germany. There has been a steady drift towards coöperation, which is being relied upon to work the great social changes which Germany desires.

AUSTRIA. Private business broke down almost completely in 1921, while the coöperatives grew in power. Half the people of Austria during 1921 were fed and clothed through the coöperatives. The largest consumers' coöperative in the world, with a membership of 200,000, is at Vienna. The state distributes the staple foodstuffs over which it exercises a monopoly control, through the coöperative stores.

HUNGARY. During 1921 the coöperatives of the workers were persecuted by the government, their leaders were jailed or exiled, their boards of management were suspended, and government officials were put in control. The coöperatives of the middle class, which are federated into the wholesale society "Hangya" (the Ant), were not molested by the government, and made material progress.

FRANCE. France has 4000 coöperative societies, with a membership of 2,000,000. More than one-third of these societies are exclusively banking societies. There has been a distinct tendency of amalgamation of independent societies, since the war. All the societies of Paris have united. There is a wholesale federation, the Magasin de Gros, consisting of 1500 local societies. This wholesale organization in 1921 did a business of 150,000,000 francs. Over 200 railroad cars are owned by the wholesale, and are used for the purpose of transporting produce to its many warehouses. The coöperative societies are also federated into an educational union, whose district advisers tour all over the country, some of the advisers going as far as Morocco with the message of coöperation.

DENMARK. The financial support for the highly developed coöperative movement of Denmark is furnished by the Danish Coöperative Bank. The most impressive and the largest building in Copenhagen is owned by this bank, which opened in 1921. The coöperative housing societies were very active during the year. The Workers' Coöperative Building Society has already accommodated over 2000 families in buildings which cost 20,000,000 kronen, and has several buildings in process of construction. The Danish Coöperative Wholesale Society, which supplies coöperative stores in the Scandinavian countries, is now the largest wholesale business in the north European countries.

RUSSIA. No figures were available for the number of coöperative societies, though there were about 50,000. During 1921 there was a relaxation of the strict governmental supervision over the coöperatives, which have now regained control of their own funds. The agricultural coöperatives and copartnership factories are unhampered by any governmental interference. Consumers' coöperatives are practically free from control by the government.

FINLAND. The movement in Finland is separated into two factions: The "neutrals" or

middle-class coöperatives, federated into the "S. O. K.," and the working class coöperatives. In the early part of 1921 there were 634 of the former, and 104 of the latter. There are over 2000 coöperative stores and many factories.

INTERNATIONAL LANGUAGE. The supporters of the cause of an international language were displaying great activity on all sides, taking advantage of the interest in international problems. Although the solution of the problem would naturally seem to depend chiefly on linguists by profession, all things seemed to indicate that, with a very few exceptions, they would be the very last to fall into line. Still the efforts of the Washington Committee, to bring the question again and again before the world of scholars, if not before the linguists specially, were promising. It was well said that "the resuscitation of this problem in official and academic circles was due primarily to the initiative of the United States representatives at the meeting of the International Research Council which was held in Brussels in August, 1919." The report of the committee appointed on this occasion to investigate the problem was published in Edinburgh, in 1921: "From the evidence laid before it, the Committee (Professor Ripman dissenting) has come to the conclusion that a language of the type of Esperanto and Ido should be adopted as the International Auxiliary Language; and also that, whatever language be adopted, it should be placed under scientific control" (p. 12). The Washington Committee then had various scientific bodies appoint representatives to study the question. For instance, five men were appointed by the Modern Language Association of America (on request of the American Council on Education; which coöperates in this matter with the Committee on the International Research Council; see *Publ. Mod. Lang. Ass.*, December, 1920, p. LXXV). Again, the Washington committee was instrumental in bringing about a Symposium on the question of an International Auxiliary Language, in connection with the meeting of the A. A. A. S. (American Association for the Advancement of Science, which met at Toronto, Dec. 27-31, 1921.)

The supporters of the cause of the International Language have for the second time, in 1921, succeeded in forcing the attention of the League of Nations, at Geneva. In consequence, Dr. Inago Nitobe, one of the secretaries of the League, was delegated to attend the International Congress of Esperanto, which met at Prague, August 29 to September 6 (with 35 delegates present). A wrong impression has been conveyed that as a result of Dr. Nitobe's Report (which will be communicated to persons interested by the Washington Committee) the League of Nations had appointed a committee to consider the use of *Esperanto* as the International Language. The truth is that a report on "the results obtained in this field (of any auxiliary language)" was asked by a vote of September 15. A few sentences of the long report might well be quoted to show exactly where the question stands: Dr. Nitobe refers to the action of Great Britain, April, 1918, suggesting that "it might be worth while for the government, in concert with our Allies, to appoint a committee to inquire into the potentialities of artificial languages such as Esperanto and its rivals. . . ;" he also refers to Professor Sweet's article in the *Encyclopædia Britannica* on the problem; again he

refers to the appointment of the committee by the International Research Council, in Brussels, in July, 1919. And finally one of the concluding paragraphs reads: "The League should profit by the voice of those individuals or organizations which have had long experience in dealing with international meetings. In September, 1920, at the World Congress of the Union of the International Association, at Brussels, a Resolution was passed unanimously (with the exception of one vote in favor of the French language) recommending to all interested in the progress of the World-Language problem that these should join the Esperanto movement and should postpone all theoretical discussion about linguistic details until the language be officially adopted by inter-governmental decision. If frequent references are made to Esperanto in this Report, where I am treating of an international language in general, it is not because I espouse its cause (for I do not—at least not yet) but because it supplies the best examples." Then, after a motion that Esperanto be introduced as an International Language the League voted to "request the Secretariat to prepare for the next Assembly a report on the results obtained in this field" adding this note: "By international-language is understood a practical auxiliary language, which will in no way prejudice the rights and traditional prestige of the French tongue as the international language of diplomacy."

The situation in diplomatic circles to-day outside of the *League of Nations* was well expressed in the following Summary of Conclusions of the report just mentioned, which was published in Edinburgh, in 1921:

"The view of the Committee may be summarized, very briefly, as follows:—

"(1) Latin is too difficult to serve as an International Auxiliary Language.

"(2) The adoption of any modern national language would confer undue advantages and excite jealousy.

"(3) Therefore an invented language is best. Esperanto and Ido are suitable; but the Committee is not prepared to decide between them."

It will be well also, in order to appreciate the concrete situation to remember what happened shortly before the Conference on Limitation of Armaments met in Washington. A rumor was abroad to the effect that not only would English be the language of the Conference, but that French would be excluded there as a diplomatic language. French public opinion was aroused and some professed to know that the French Academy was going to enter an official protest. As a matter of fact the organizers of the Conference in defining their position, merely stated what circumstances combined with traditions, had naturally brought about: Namely, unless an artificial international language be adopted, English was naturally the language for discussion of international problems dealing with countries of the Pacific, just as French was naturally the language for discussion of international problems dealing with Mediterranean countries. Thus, as French was the diplomatic language at the Versailles Conference with English as second, so would English have to prevail in Washington with French as second—since, as everybody understood it, Washington was to deal above all with problems of the Pacific.

Two books on the theoretical side of the question may be mentioned here: Dr. E. Sapir, Chief Anthropological Division, Victoria Memorial Museum, Ottawa, *Language*, New York, (1921); and A. L. Guérard, Agrégé de l'université, and now of the Rice Institute, Texas, *A Short History of the International Language Movement*, (London).

There are, just now, three International Languages which seem to be specially favored by people who have studied the question, Esperanto, Ido, and Esperantido. The shortcomings of Esperanto had been sharply pointed out by the Idists—who moreover accepted Dr. Zamenhoff's Esperanto as the foundation of the International Language. The Idists were, and are, linguists who tried to introduce scientific discipline into Esperanto, and they gained easily the approval of language experts. The trouble was that they were at times too much inclined to enforce scientific discipline at the expense of the flexibility needed for a "living" language,—and that argument was used against them mercilessly by the adherents of dilettantish Esperanto; still the Idists would have held their ground undoubtedly if it had not been for the loss of the remarkable scholar who was their leader, the mathematician Couturat (killed in an automobile accident in the early days of the war). Thus, the Esperantists had the field again; at least with the masses; but many really valuable supporters of the cause having come to realize too well the shortcomings of Esperanto were inclined to withdraw their interest. In the meanwhile a man had been quietly working on a scheme by which the artificiality of Esperanto was happily brought under control of the natural laws of language, and at the same time whatever better practical results could be obtained in bending principles to efficiency, this was done. R. de Saussure's Esperantido is a remarkable step towards the ultimate goal of a working International Language.

Thus the situation may be summed up as follows: Ido after having achieved its end (which was to impose scientific discipline on Esperanto), ceases to retain attention. Esperanto, after having wisely taken heed, but yet having reformed as little as possible, is provisionally in the saddle again. There is, however, another that runs close behind, and Esperanto may be outdistanced at any time by the Saussure project, or still another better. The unsafe position of Esperanto is well indicated by the fact that its supporters avoid letting the case rest on its own merit. In their abundant publications they always lay stress on the fact that Esperanto is taken up here and there and elsewhere; but one cannot help feeling that in so many cases it was adopted because people wanted a language and took the one they knew—and possibly they did not know the best.

As to Esperantido, R. de Saussure, the Swiss scholar who worked it out, had started in 1920 a very promising little journal. Then, as he knew that the question of the International Language would be taken up at the meeting of the League of Nations in Geneva in 1921, he discontinued his paper generously so as not to give an argument to those people who would fight the International Language on the pretext that the advocate of the cause could not agree among themselves. He published in the meanwhile a leaflet called *La Vojo*, which means the "way" to get Esperanto on a scientific and at the same time a practical basis; he called the language used by him "evol-

vinta Esperanto." When the Geneva Conference was over, he came back to his first project, and in the *Journal Internacia Lingvo Esperantida*, from September to December presented his scheme all worked out. It is reprinted separately under the title *Fundamentan Vortaro kaj Gramatiko de la Lingvo Esperantida*. The office of the Esperantida Akademio is in Bern, Switzerland, President, Dr. E. Guillaume, Secretary, E. Chenevard. From 1922 on the *Journal* will be published in Czechoslovakia, on account of the too great expense of printing in Switzerland. The office will remain, however, in Switzerland. See PHILOLOGY, MODERN.

INTERNATIONAL PEACE AND ARBITRATION. RENEWAL OF THE HAGUE CONFERENCES. The Advisory Committee of Jurists, invited by the Council of the League of Nations to draft a project for a Permanent Court of International Justice, in pursuance of Article 14 of the Covenant, regarded their work imperfect unless it were to be supplemented from time to time by meetings of the nations in conference at stated intervals. The Advisory Committee, therefore, adopted the following resolution:

The Advisory Committee of Jurists, assembled at The Hague to draft a plan for a Permanent Court of International Justice,

Convinced that the security of States and the well-being of peoples urgently require the extension of the empire of law and the development of all international agencies for the administration of justice, recommends:

I. That a new conference of the nations in continuation of the first two conferences at The Hague be held as soon as practicable for the following purposes:

1. To restate the established rules of international law, especially and in the first instance, in the fields affected by the events of the recent war.

2. To formulate and agree upon the amendments and additions, if any, to the rules of international law shown to be necessary or useful by the events of the war and the changes in the conditions of international life and intercourse which have followed the war.

3. To endeavor to reconcile divergent views and secure general agreement upon the rules which have been in dispute heretofore.

4. To consider the subjects not now adequately regulated by international law, but as to which the interests of international justice require that rules of law shall be declared and accepted.

II. That the Institute of International Law, the American Institute of International Law, the Union Juridique Internationale, the International Law Association, and the Iberian Institute of Comparative Law be invited to prepare with such conference or collaboration inter sese as they may deem useful, projects for the work of the Conference to be submitted beforehand to the several Governments and laid before the Conference for its consideration and such action as it may find suitable.

III. That the Conference be named Conference for the Advancement of International Law.

IV. That this Conference be followed by further successive conferences at stated intervals to continue the work left unfinished.

This proposition was proposed by Elihu Root who spoke on behalf of American jurists and secured the adoption of this recommendation, embodying ideas which he had expressed on more than one occasion and which had been laid without effect before the American Commission to Negotiate Peace at the Conference at Paris.

The proposal to establish the Permanent Court of International Justice was made by him when Secretary of State of the United States, in his Instructions to the American Delegates to the Second Hague Peace Conference, whereof the chairman was the late Joseph H. Choate. It was laid before the Conference by Mr. Choate; it was explained and piloted through that body by the then solicitor for the Department of State, and

the project known as the Convention for the Establishment of a Court of International Justice was largely his draft, and this draft convention is, to all intents and purposes, with sundry amendments and additions, the original of the project to which the Assembly of the League of Nations gave its approval on Dec. 13, 1920. The proposal to establish the Court of Arbitral Justice in connection with the Prize Court, which at one time seemed likely to be installed at The Hague, was made by Robert Bacon, then Secretary of State of the United States. Under the Secretaryship of Philander C. Knox, Mr. Bacon's immediate successor, the Solicitor for the Department of State, negotiated, at Mr. Knox's direction, an agreement at Paris in March, 1910, by virtue whereof Germany, France, Great Britain, and the United States agreed to take the necessary measures to secure the establishment of the Court of Arbitral Justice. The Director secured a unanimous recommendation of the Institute of International Law at its session in Christiania in 1912, and the promise of Mr. Loudon, then Minister for Foreign Affairs of The Netherlands, to transmit a plan with the approval of this country for the establishment of the tribunal for at least nine Powers, to be opened to any and all Powers which might be willing to utilize it, upon a footing of equality. This was in January, 1914, but in the summer of that year the aggressive policy of the then Austro-Hungarian Monarchy against Serbia, with the support of the then German empire, plunged the nations into the World War.

By Article 14 of the treaty of peace signed at Versailles on June 28, 1919, in the first section known as the Covenant of the League of Nations, the Council of the League was directed to "formulate and submit to the members of the League for adoption plans for the establishment of a permanent court of international justice." To aid the Council in the performance of this arduous duty, that body invited jurists of the highest repute from twelve countries. The jurists selected from Argentina and Serbia were unable to attend. The jurists from Belgium, Brazil, France, Great Britain, Holland, Italy, Japan, Norway, Spain, and the United States met at The Hague and began their labors on June 16, 1920, and adjourned on July 24, having devised a method of appointing the judges of the proposed court acceptable alike to the so-called great and small Powers, thus assuring the ultimate constitution of the Court.

The seat of the Court, like that of the Permanent Court of Arbitration, is at The Hague. The Members of the Permanent Court of International Justice are elected for nine years, and may be re-elected; and the statute provides something for their physical needs. Traveling expenses incurred in the performance of their duties are refunded to them, and they are allowed fifty Dutch florins a day for living expenses while actually at The Hague. In addition, the Judges, including the President and the Vice-President, who are respectively elected by the Court itself for terms of three years, have an annual salary of 15,000 florins, which, at the normal rate of exchange, is equivalent to \$6030. With the exception of the President, they are also to receive a duty-allowance, based on aggregate days of actual service; but, except in the case of the Vice-President, who may receive duty-allowances up to a maximum of 30,000 florins, the duty-allowances run to a maxi-

num of 20,000 florins in any one year. The President of the Court, as he is required continuously to reside at The Hague, receives, in place of the duty-allowance and the allowance for daily living expenses, a fixed special allowance of 45,000 florins a year. To sum up, the annual compensation of the President is 60,000 Dutch florins, while that of the Vice-President may reach a maximum of 45,000 florins and that of the other Judges a maximum of 35,000 florins. A very substantial reason for these financial provisions will be seen in the fact that the Judges are not permitted to exercise "any political or administrative function," or to "act as agent, counsel or advocate in any case of an international nature." These inhibitions are applicable to deputy-judges only when they are actually sitting and as regards cases in which they sit. Consequently, the deputy-judges are not provided with salaries, but, if called on for service, are to receive, in addition to their traveling expenses and the allowance of fifty florins a day for living expenses at The Hague, a duty-allowance which is limited to a maximum of 30,000 florins in any one year.

The Court must hold in each year at least one session, which, unless the Court itself otherwise provides, must begin on the 15th of June, and must continue until the cases on the list are disposed of. The President, however, may summon an extraordinary session whenever necessary.

Each member of the Court is required, before taking up his duties, to make a solemn declaration in open court that he will exercise his powers impartially and conscientiously. The members, when engaged in the business of the Court, enjoy diplomatic privileges and immunities.

The official languages of the Court are French and English, but the Court may, at the request of the parties, authorize another language to be used. The parties are to be represented by agents and, as in the case of ordinary courts, may have the assistance of counsel or advocates. Proceedings are both written and oral. This applies to the testimony of witnesses. Hearings are to be public, unless the Court shall otherwise decide, or unless the parties demand that the public be not admitted. Minutes must be kept of all hearings.

All questions are to be decided by a majority of the judges present at the hearing, and in the event of an even division, the President or his deputy is to have a casting vote.

Every judgment is required to state the reasons on which it is based and to contain the names of the judges who have taken part in it. If the judgment is not unanimous, dissenting judges are entitled to deliver separate opinions. Judgments must be read in open court, after due notice to the agents of the parties. If the meaning or scope of the judgment is disputed, the Court, on the request of any party, is to construe it. Applications for revision may be made only on the ground of the discovery of some decisive fact which, when the judgment was rendered, was unknown to the Court and also to the party claiming revision. But no application is allowed if the want of knowledge was *lieu* to negligence. The Court frames its own rules of procedure, both regular and summary.

The full Court is required to sit, except where it is expressly provided otherwise. But the statute does so expressly provide in three classes of cases:

1. In cases under the Labor Clauses of the Treaty of Versailles (Part XIII) and of the other Peace Treaties, the Court is required to appoint every three years a special chamber of five judges, by which, instead of by the full Court, the case is, if the parties so demand, to be heard and determined. In all labor cases, whether determined by the full Court or by the special chamber, the judges are to be assisted by four technical assessors, who sit in an advisory capacity but do not vote.

2. In cases relating to transit and communications, particularly under Part XII (Ports, Waterways, and Railways) of the Treaty of Versailles, and the corresponding parts of the other peace treaties, provision is made for the appointment of a similar chamber, working under similar conditions and with similar procedure.

These special chambers may, with the consent of the parties to the dispute, sit elsewhere than at The Hague.

3. The Court is to form annually a chamber of three judges, who may, at the requesting of the disputants, hear and determine cases by summary procedure.

The terms of the Covenant contemplated only the creation of a voluntary jurisdiction, and specified, as among disputes "generally suitable" for arbitration, those concerning (1) the interpretation of a treaty; (2) any question of international law; (3) the existence of any fact which, if established, would constitute a breach of an international obligation, or (4) the nature or extent of the reparation to be made for the breach of an international obligation. Such disputes, it was provided, might be tried by a court agreed on by the parties or stipulated in any convention between them. There was no word of compulsion or of obligation. Nevertheless, the plan prepared by the international committee proposed that the Permanent Court of International Justice should, as between members of the League, have, without any special convention, jurisdiction of cases of a "legal nature" falling within the four categories above enumerated, as well as the interpretation of sentences passed by the Court itself, and, in the event of a dispute as to whether a case came within any of the specified categories, the dispute was to be settled by the decision of the Court.

When this plan was received by the Council, objection was made to the jurisdictional clauses on the ground that it in effect amended the Covenant, in that it substituted the decision of the Permanent Court for the free choice which the Covenant allowed to the parties between laying their dispute before that Court, or before another international tribunal, or before the Council. In the end this objection prevailed; and the Statute, as approved by the Assembly, simply provides that the jurisdiction of the Court "comprises all cases which the parties refer to it and all matters specially provided for in treaties and conventions in force." The advocates, however, of a broader, more definite and more exacting obligation were not wholly defeated; since the statute further provides that any Power may, either when ratifying the statute or at a later moment, declare that it recognizes as obligatory, *ipso facto* and without any special agreement, as regards any other Power accepting the same obligation, the jurisdiction of the Court in all or any of the four legal categories above enumerated; that such declaration may be made

unconditionally, or on condition of reciprocity, or for a certain time; and that any dispute as to whether the Court has jurisdiction shall be determined by the Court itself. Such a declaration had, prior to November last, been signed by eighteen Powers, and they are waiting for some of the Great Powers to follow their example.

INTERPARLIAMENTARY CONFERENCE. The Nineteenth Conference of the Interparliamentary Union was held in Stockholm, Sweden, August 17, 18, and 19, 1921. The members of the American delegation were: Senators William B. McKinley, of Illinois, President of the American Group of the Interparliamentary Union; Joseph T. Robinson, of Arkansas; Thomas J. Walsh, of Montana; Representatives Andrew J. Montague, of Virginia, President of the American Peace Society; Edwin B. Brooks, of Illinois; Allen W. Barkley, of Kentucky; Fred A. Britten, of Illinois, and former Representative James L. Slayden of Texas. Arthur Deerin Call was the Executive Secretary of the American Group. The day before the opening of the Conference, the Executive Committee of the Union met in the morning, the Council convened in the afternoon and the Swedish group had given an evening reception in honor of the visiting delegates. Twelve groups were represented at the Conference by some 120 delegates. His Majesty, King Gustaf, gave a reception Friday afternoon in the royal palace in honor of the delegates, Count Wrangel, Minister of Foreign Affairs, and the Countess Wrangel having given a reception in their palace the night before.

A vice-president from each of the groups outside of Sweden was elected, as follows: Lord Weardale, Great Britain; Senator van Kol, Holland; Representative Nakanishi, Japan; Senator Ferraris, Italy; former Representative Loveland, Norway; Representative Usteri, Switzerland; Representative Schucking, Germany; former Representative Slayden, United States of America; Representative Mantere, Finland; Representative Moltesen, Denmark, and Representative Mataja, Austria. The groups of Canada, Spain, and Estonia had appointed delegates, but they were unable to be present. France and Belgium were not represented.

Lord Weardale's address as President of the Interparliamentary Union was somewhat of the nature of a report. The sessions were opened August 17, with an address by the President of the Conference, M. le Baron Adelsward, which was followed by an address by M. von Sydow, President of the Swedish Council of Ministers. M. van Kol, of Holland, presented the report of the Bureau upon the work accomplished during the war. Among those who addressed the general conferences were: Mr. Slayden, of the United States; Mr. Schucking, of Germany; Mr. Robinson, of the United States; Mr. Sigg, of Switzerland; Mr. Moltesen, of Denmark; Mr. Walsh of the United States; Mr. Branting, of Sweden.

The Secretary General was directed to extend invitations in its name to the members of the national legislatures of the following countries: Argentina, Bolivia, Brazil, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, Guatemala, Haiti, Honduras, Mexico, Nicaragua, Panama, Paraguay, Peru, El Salvador, Uruguay, and Venezuela.

The Conference cordially approved the prin-

ciple of an association of nations with the aim of organizing the world for the maintenance of peace, which the Conference is entitled to consider as an important aspect of the work zealously pursued, by the Union for a long period of years. Such an association must attain an all-embracing character to enable it to exercise that high mission with which it must naturally be intrusted.

The Conference was of the opinion that the Union must increase and strengthen its activities in the field of international coöperation, to the end that the burden of armaments may be reduced and the peace of the world may be attained. It also greeted with satisfaction the creation of an International Labor Bureau; it declared that the results relative to the problem of armament obtained ought to be regarded simply as a minimum and as a first step on the part of the League of Nations for the realization of this ideal, and expressed the hope that the second Assembly, called for the month of September, 1922, will be able to advance further in the way thus opened, and that it will bend every effort to the end that the resolutions of the first Assembly shall be realized, both in letter and in spirit. It noted with satisfaction that the international situation this year is more favorable for such efforts because the disarmament of Germany, according to the demands of the Allied statesmen, is progressing rapidly; because Russia, although menaced with a famine which demands imperative aid of all civilized peoples, is entering again into the world's economic life, and because decided reductions of armaments have been accomplished in several countries, notably in those of Belgium, France, Great Britain, and Italy.

It further called attention to the necessity of organizing an exchange of information relative to armaments, definitely provided for in the Covenant, an exchange which will insure the publicity of such information and consequently the control of public opinion relative to the action of states in this field—a procedure of prime importance for the promotion of right international relations and the maintenance of peace. It expressed its sincere regrets that apparently so few states have yet replied favorably to the recommendation of the Assembly relative to the limitation of military, naval, and air budgets. It hoped that the second assembly will be able to insist more energetically, and this time with unanimity, upon a conclusion of this initial truce in order to counteract any tendency to a return of the competition in armaments before a general plan for the reduction of armaments has been prepared.

While the Society of Nations is becoming strong enough to assume the rôle of the court of last resort in the matter of the reduction of armaments throughout the various States, the Conference recommended as provisional measures: (a) The creation of an "organ of control and verification" for the examination of information furnished to the League relative to armament, this according to the French amendment to article 8 of the Covenant proposed at the conference at Paris. (b) The delegation to the Council of the League of the exclusive right to pass upon the existence of an "exceptional situation" with power to approve a derogation from an engagement of a State not to exceed the military, naval, and air expenditures as set forth in the recommendation of the first Assembly.

In view of the then forthcoming Conference to assemble in Washington, upon the invitation of the President of the United States, to consider the question of the limitation of armaments and related subjects, the members of the Interparliamentary Union were urgently requested to foster, in all ways open to them, in their respective countries a spirit of willingness to make all reasonable concessions necessary to a successful issue of such conference, of any plan it may propose for the limitation of national armaments, being just and equitable and to labor for the acceptance of the same by the governments of their respective countries.

The Conference most earnestly approved the recommendation passed by the financial conference at Brussels in 1920, which reads "that the Council of the League of Nations confer as soon as possible with the different interested governments with the view of obtaining their agreement to a general reduction of the crushing expense which the armaments in their present condition cause to fall upon the impoverished populations of the world, swallowing up their resources and retarding their restoration after the ravages of the war," and the Conference urged all of the groups, before the meeting of the second Assembly, to lead their governments to insist upon this recommendation and to support it with stronger resolutions. It invited them to exercise an unflinching vigilance, to the end that their respective governments may conform to it.

The Conference welcomed with satisfaction the fact that the Covenant of the League of Nations has recognized the principle of compulsory investigation and mediation in all disputes which are not submitted to judicial decision. It also expressed the opinion that the present requirements relative to vising passports ought to be immediately limited to the requirement of the international police, and that all expenses and restrictions with regard to the procuring or exhibiting of passports by travelers should be reduced to the strictest minimum.

THE BUREAU INTERNATIONAL DE LA PAIX, with headquarters at Berne, Switzerland, was before the war an effective clearing house of the peace societies of Europe. In 1902, its executive officer, Dr. Albert Gobat, shared with E. Duncommun the Nobel Peace Prize. In 1910, during his régime as "Director," the International Peace Bureau itself received the Nobel Peace Prize. The International Peace Bureau, which was organized at the third International Peace Congress, at Rome, in the month of November, 1891, became thereafter the moving spirit behind the International Peace Congresses held between the years 1891 and 1913 at Berne, Chicago, Antwerp, Budapest, Hamburg, Paris, Glasgow, Monaco, Rouen, and Havre, Boston, Lucerne, Milan, Munich, London, Stockholm, Geneva, and The Hague, respectively. The twenty-first Universal Peace Conference was held at Luxemburg, August 10-13, 1921. There were less than one hundred delegates in attendance. Evidently little attention had been given to the programme of the Conference, and, aside from a brief address to a limited number by an under-official of the Luxemburg Government, no attention was paid to the gathering on the part of the local officials or of the people of the city. The inescapable impression was that the peace movement had been hard hit. Some of the old

peace workers were present. Besides the President of the Bureau, Senator Henri la Fontaine, of Belgium, there were such men as Dr. L. Quidde, of Munich; Louis Favre, of Geneva; H. von Gerlach, of Berlin; M. Emile Arnaud, of Luxarches; M. Lucien Le Foyer, of Paris; F. E. Pollard, F. Maddison, and Rev. H. Dunnico, of England; Edward de Neufville, of Frankfort, and Henry Golay, the General Secretary of the Bureau, of Berne, Switzerland. During the Conference there were five meetings of the Council, one meeting of the General Assembly, four plenary meetings of the Conference, besides the meetings of the various committees. The permanent committee appointed last year at the meeting of the General Assembly at Basel submitted two reports, one with reference to the activity of the central office at Berne and the other with reference to the financial situation, both of which aroused no little discussion.

The proposal that a branch of the central office be opened at Geneva, and that the General Secretary, Mr. Golay, be authorized to serve in the capacity of corresponding secretary particularly for the purpose of correlating the League of Nations and the newly established office of the Union of the Associations for the League of Nations in Brussels, was disapproved. The final vote upon this matter showed that the majority of the delegation are opposed to uniting the International Peace Bureau with the League of Nations, on the ground that the aims of the two organizations are not identical.

There was no little criticism of the management of the central office, and the matter has been left to a committee, with instructions to report at the next meeting of the Council. But the discussion relative to any amalgamation became somewhat bitter. M. Le Foyer frankly complained that the International Peace Bureau is in a "momentous crisis"; that its officers are without vision, initiative, activity, generosity; that there is no leadership; that the great demand is for a successor to the lamented Gobat; that the Peace Bureau must be reorganized. The "crisis" to which Le Foyer referred he attributed not only to these conditions which he believes exist, but the more especially to the proposal that the General Secretary of the Bureau be made assistant secretary to the International Union of the Associations for the League of Nations, with headquarters in Brussels. He looked upon such a step as a practical amalgamation of the peace societies with the Union of the Association for the League of Nations, and hence in fact, as the abolition of the peace societies. He expressed the view that the fusion of the Berne Bureau with the Brussels Union would, therefore, be a catastrophe for the peace movement—indeed, its extinction.

M. Le Foyer's argument convinced the majority of the delegates and the Berne Bureau will continue its independent existence. The most effective work of the Conference, as is usual in such conferences, took place in the meetings of the various committees and of the Council.

Dr. G. Bovet, president of the Permanent Committee, reported at length with reference to the Bureau's accounts for 1920 and the budget for 1921. The Council voted to direct the Secretary General of the Bureau to organize such relations between the Bureau and the League of Nations, including the International Labor Bureau, as may be necessary to keep the various associations con-

nected with the Bureau informed as to the works of the League of Nations and to cooperate as efficiently as possible in the change and perfection of that organization. The place of meeting for the next Congress was left for decision to the Council. The net results of all the conferences are set forth in the resolutions.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE (2 Jackson Place, Washington, D. C.). Since early in the summer of 1921 the Secretary's Office and the Division of International Law, both located in Washington, have been at the service of the Department of State in the collection of data and the preparation of monographs regarding the questions upon the programme of the Conference on the Limitation of Armament and Pacific Problems.

In the Division of Intercourse and Education donations of \$100,000 for the reconstruction of the library of the University of Louvain, \$100,000 for the reconstruction of the library of the University of Belgrade, and \$200,000 for the reconstruction of the Library at Rheims, were made, and the cornerstones for the buildings were laid in the presence of representatives of the Endowment. Work on reconstruction was actually begun. Collections of books on American history and institutions have been donated to a number of foreign libraries including libraries in Belgrade, Strasbourg, Tokyo, and Prague. This Division has also been very active in the dissemination of authentic information regarding current events particularly relating to the Conference on the Limitation of Armament.

The Division of Economics and History centred its activities largely upon the Economic and Social History of the World War, authorized in 1920. Editorial boards to supervise the collection and preparation of material to be included in the History have been established and are now operating in Great Britain, France, Belgium, Austria, Italy, and the Balkan countries, and editorial arrangements are in course of completion in Czecho-Slovakia, The Netherlands, Hungary and Germany. The History will be composed of a number of separate national series. A great many contracts for volumes have been concluded, quite a few monographs are already in hand and three volumes in the British series have already appeared from the press.

The Division of International Law has, in addition to its services to the State Department in connection with the Conference on the Limitation of Armament and Pacific Problems, completed and published two of the most important sets of books in its programme, namely, the two-volume work entitled *Treaties and Agreements with and concerning China, 1894-1919*, compiled and edited by J. V. A. MacMurray, and the English translation of the Proceedings of the First and Second Hague Peace Conferences of 1899 and 1907 in four large volumes, accompanied by a fifth volume containing consolidated tables of contents and indexes. Other books of less importance have also been issued during the year. During the year the Division of International Law awarded twelve Fellowships in International Law to enable students and teachers to improve their knowledge of the subject.

The Year Book of the Endowment for 1921, number 10 in the series, covered the first ten years of the Endowment's efforts. The spirit of the

organization is expressed in language taken from the report of its secretary:

"The failure of the gentlemen at Paris who undertook to lay down terms of peace to recognize that the world could not be permanently organized on a peaceful basis while blood of millions of their countrymen, victims of the war, was still dripping from the swords of their enemies, was a serious blunder, which has contributed more than anything else to the chaos now existing throughout the world. Before we can look to the future organization of the world for peace, the immediate questions relating to the settlement of the war must be finally disposed of. Any organization or arrangement for preserving the peace of the world which does not contemplate the voluntary coöperation of the former enemies in harmony and in all sincerity must necessarily be, no matter under what high-sounding title it may be called or in what idealistic terms it may be framed, a temporary war measure only and is predestined to the same fate that has befallen all previous alliances of force and balances of power."

In this volume are the annual reports of the Executive Committee, composed of Elihu Root, James Brown-Scott, Nicholas Murray Butler, Austen G. Fox, Andrew J. Montague, Henry S. Pritchett, and Charlemagne Tower. There are also the reports of the Director of the Division of Intercourse and Education, Dr. Nicholas Murray Butler; of the Director of the Division of Economics and History, Prof. John Bates Clark; of the Director of the Division of International Law, Dr. James Brown-Scott. The aspect of the work which has suffered least from the war is its labors in the sphere of international law, due undoubtedly to the fact that practically all who think upon the problems of war and peace realize that there are "but two alternatives for the world to choose between—i. e., disorganization and chaos or order according to law."

There were 70,176 books and pamphlets distributed free during the fourteen months following Jan. 1, 1920, bringing the total free distribution from the date of the organization up to 566,473 copies. There are 723 institutions known as depository libraries, to which are sent all publications as they are issued. Its library contains over 17,000 catalogued volumes and pamphlets. It maintains an Advisory Council in Europe, supports the Institute of International Education in this country, and finances the American Association of International Conciliation. It has an Inter-American Division, under the auspices of which is issued the magazine *Inter-America*. It contributes to the work of the American Peace Society. Under the general editorship of James T. Shotwell, the Endowment is working upon an economic and social history of the World War. The report also devotes considerable space to the labors in behalf of a court of international justice.

AMERICAN PEACE SOCIETY (Colorado Building, Washington D. C.). At the annual meeting of the Board of Directors May 29, 1920, the Society expressed its "cordial approval and warm appreciation" of the plan to appoint a committee of international jurists to submit a project for the organization of a Permanent Court of International Justice. The Secretary, both in his work as Secretary and as Editor of the *Advocate of Peace* did everything in his power to promote

that project. The report of the Society sets forth in detail that the advisory committee of ten jurists met at The Hague from June 16 to July 24. They submitted a draft scheme of sixty-two articles relating to the organization, competence, and procedure of a Permanent Court of International Justice, this court to be in addition to the Court of Arbitration organized by The Hague Conferences of 1899 and 1907, and also in addition to the special tribunals of arbitration to which states are always at liberty to submit their disputes. The draft scheme was submitted by the advisory committee to the Council of the League of Nations at its eighth session, held at San Sebastian, Spain, early in August. The Council sent the project, with an explanatory report, to the members of the League. At the tenth session of the Council, held in Brussels, in October, they approved the project, but eliminated the plan for obligatory jurisdiction, modifying it also in other respects. Later they referred it to the Assembly of the League, meeting at Geneva, in November and December. The Assembly referred the matter to a special commission known as "Commission Three," for consideration and report. December 10, this commission reported back to the Assembly, submitting, with its approval, the project substantially as changed and recommended by the Council. On December 13, the Assembly discussed and adopted the project practically as reported by the Commission.

Thus the net result of the labors of the Advisory Committee of Jurists, the Council, and the Assembly of the League of Nations, is that a plan was submitted to the nations, members of the League of Nations, for the establishment of a new court of arbitration, such as already exists at The Hague, with the additional provision, however, that, if adopted, the court will have a permanent body of judges.

In agreeing upon a plan for the selection of judges the difficulty facing The Hague Conference of 1907 relative to the matter of the court has been met and overcome. This step, albeit a short one, is a movement in an upward direction. The Assembly of the League of Nations refused to approve the recommendation of the Committee of Jurists that another conference of the nations, in continuation of the first two conferences at The Hague, be held as soon as practicable. It refused to examine the plan for a High Court of International Justice competent to try crimes against international public order; or to aid in the promotion of the work of the Academy of International Law founded at The Hague in 1913; or to adopt the project for an International Court of Justice backed by obligatory jurisdiction.

During the year the *Advocate of Peace* has grown in size and influence. For the first time in its history it appears as a magazine of forty pages, eight pages larger than five years ago and twenty pages larger than in 1911.

The *International Peace Year-Book* for 1921 appeared from the offices of the National Peace Council (72 Chambers, Vernon Place, Southampton Road, W. C. I., London), edited by F. F. Pollard, Secretary to the Council. It contains a general directory of the societies engaged especially in the promotion of international peace, and therefore makes any extended statement about the various agencies working for international peace unnecessary for the purposes of this report.

The American Peace Society formally restated its position on May 27 declaring that the voluntary union of states and their coöperation for the attainment of common ideals can only be effective if, and only so far as, "The rules of conduct governing individual relations between citizens or subjects of a civilized State are equally applicable as between enlightened nations"; that the rules of conduct governing individual relations, and which must needs be expressed in terms of international law, relate to "the enjoyment of life and liberty with the means of acquiring and possessing property, and pursuing and obtaining happiness and safety"; and that these concepts, which are the very life and breadth of reason and justice, upon which the Law of Nations is founded, must be a chief concern of nations, inasmuch as "justice" and its administration, "is the great interest of man on earth."

It therefore declared for an international agreement to institute Conferences of Nations, to meet at stated intervals, in continuation of the first two conferences of The Hague; and to restate and amend, reconcile and clarify, extend and advance the rules of international law which are indispensable to the permanent establishment and the successful administration of justice between and among nations.

Also to convoke, as soon as practicable, a conference for the advancement of international law; to provide for its organization outside of the domination of any one nation or any limited group of nations; and to establish an Administrative Council to be composed of the diplomatic representatives accredited to the government of the state in which the conference for the advancement of international law convenes, which representatives shall, in addition to their ordinary functions as diplomatic agents, represent the common interests of the nations during the interval between successive conferences; and to authorize the Administrative Council to appoint, outside its own members, an executive committee or secretary's office to perform such duties as the conference for the advancement of international law, or the nations shall from time to time prescribe; and to provide that this Council employ good offices, mediation, and friendly composition wherever feasible and practicable, in their own disputes, and to urge their employment wherever feasible and practicable, in disputes between other nations; and to create a Council of Conciliation of limited membership, with power on behalf of the nations in dispute to add to its members, to consider and to report upon such questions of a non-justiciable character, the settlement whereof is not otherwise prescribed, which shall from time to time be submitted to the Council of Conciliation, either by the powers in dispute, or by the Administrative Council; and to arbitrate differences of an international character not otherwise provided for, and in the absence of an agreement to the contrary, to submit them to the Permanent Court of Arbitration at The Hague, in order that they may be adjusted upon a basis of respect for law; with the understanding that disputes of a justiciable nature may likewise be referred to the Permanent Court of Arbitration, when the parties in controversy prefer to have their differences settled by judges of their own choice, appointed for the occasion.

This agreement should also provide for the en-

largement from time to time of the obligatory jurisdiction of the Permanent Court of International Justice, by framing rules of law in the conferences for the advancement of international law, to be applied by the court for the decision of questions which fall either beyond its present obligatory jurisdiction, or which nations have not hitherto submitted to judicial decision.

THE WORLD PEACE FOUNDATION (40 Mount Vernon St., Boston) during 1921 concentrated its work on the problems of armament and the League of Nations. About December, 1920, it was decided that the former offered the best contact with the American mind in the general field of international relations. Preparation of material on the subject proceeded and in the spring it seemed to the Foundation authorities that the time was ripe for a public demonstration in favor of the curtailment of armament. A proposal for an Armament Sunday was made to the Church Peace Union and was readily agreed upon. The Foundation shared the necessary expenses with the union, which took charge of securing appeals from the Roman Catholic, Protestant, and Jewish bodies to their constituent clergy. The appeal went to 120,000 congregations from which there was a remarkably general response on June 5. More than 20,000 clergymen joined in a single petition to the President to "call a conference of the leading nations on reduction of armaments at the earliest possible date." The petition was presented to the President on June 22. Congressional action in the same sense had undoubtedly been affected by the expression of public opinion. On July 10, the President announced to the Great Powers that he intended to issue to them a formal invitation to meet in a conference to discuss the limitation of armament and Far Eastern problems.

During the year the Foundation has contributed to the support of the League of Nations News Bureau, which is engaged in supplying the facts concerning the activities of the League to the American press. By a contract with the Secretariat of the League at Geneva the Foundation is the American distributing agent of the League of Nations publications. The Foundation throughout the year continued the publication of its periodical entitled *A League of Nations*, the monograph numbers of which have been on the following subjects: Volume IV, 1921. 1. The First Assembly of the League of Nations (double number). 2. "The Staggering Burden of Armament." Statistical examination of the cost of war; new implements and the horrors they portend; American responsibility; value of battleships in modern warfare; purposes of American naval policy; disarmament of ex-enemy powers; practical solutions. 3. Permanent Court of International Justice. Protocol of Signature, Optional Clause, and Statute. Judges of the Court. 4. "The Staggering Burden of Armament." II. What America Has Spent for War and Peace. Previous Plans for Limitation. 5. Washington Agreement on Capital Ships. Disarmament on the Great Lakes. Unfortified Frontiers. 6. German Reparation.

THE CHURCH PEACE UNION (70 Fifth Avenue, New York) regarded the work it did during 1921 as the most significant in its history and that the organization of the office proved its efficiency. More organizations and groups have looked to it for help than ever before.

It seemed wise to take no action in regard to the League of Nations that could be interpreted as propaganda for or against any particular scheme or existing organization,—the tacit understanding being that the Union having put itself on record as being in favor of the United States joining the League of Nations, accepted Mr. Harding and his advisors' promise that they intended to bring us into some relation with the other nations of the world.

At the annual meeting in 1920, a committee on disarmament was appointed which it is felt had considerable to do with the influencing of public opinion, and bringing about the calling of the Washington Conference.

The Union was represented in a special mission to Mexico by Dr. Francis E. Clark, one of its Trustees, who met with Bishop Thirkfield and other leaders who know the situation. It has not seemed wise up to the present to send a formal commission to Mexico. What is true in regard to Mexico is also true in regard to Haiti. The Secretary of the Union visited Spain and Portugal during the summer, and while there held extensive conferences with various church leaders. He is firmly of the conviction that this whole problem of Mexico, Central, and South America and the adjacent Islands is one of growing importance in any attempt to bring about better international relations and that the Spanish language and Spanish culture is assuming a new significance in the world.

In commenting on the work of religious and racial minorities the Secretary of the Union (the Rev. Henry A. Atkinson) said, "There is a growing responsibility in this field. We have formed relationships with several international groups dealing with the same questions. Inasmuch as the racial and religious problems are so closely related, we are finding means of active coöperation with the International Society for the Protection of Native Races. There is one difficulty in this type of work that we are seeking to obviate, and that is that the problems are so tremendous and appeal so strongly to all that whatever we do must be done in relation to the other tasks we have been handling, for should we undertake to deal with race relationship as such and protection of minorities, racial or religious, in anything like an adequate way it would use up all of our energies and our resources. I feel that it is essential for us to establish some basis of judgment by which we can determine what questions may properly be considered as falling within the province of our organization, and what proportion of our time shall be given to each. We are trying to establish this basis, by asking these questions: Will a solution of the problem involved help to establish international friendship, and does it promote that justice and goodwill upon which friendship must be based? If the answers to these questions are affirmative, then we feel that we are justified in interesting ourselves in the subject."

On the subject of "Liberty" the Secretary said: "This is the last item in our programme. We have made no particular efforts this year to carry out the ideals embodied in this section of the programme. It has seemed to us that in dealing with other problems we have involved the substance of this section. As we have moved away from war many of those restrictions which curtail liberty have been removed, and others have been greatly

ameliorated. We are so closely in touch with organisations and agencies with practical and sane programmes that are interested in developing the ideals of liberty and freedom, that we feel that if a crisis should arise, we could at once assert our influence, and strength in a campaign that would result in great good. It seems to me that fuller liberty is gained by the wise use of that liberty now exercised in common. As we move away from the war with its hate, its misunderstanding, and its propaganda much of which grew out of the need for national preservation, we will find an opportunity for exercising more liberty and in that exercise will develop the newer forms of freedom."

During 1921 two conferences were held in Europe—both at Geneva, Switzerland, one in April and the other in September. The second Conference met September 13 to 16. The meeting was said to be by far the best that has been held by this organization. There were twenty-three nations represented by thirty-eight official delegates of the Alliance. Plans for the future were discussed and important measures decided. Perhaps the greatest achievement was in the formulation of a basis of agreement between the French and German churches. The question of coöperation between these two groups has been a source of difficulty at every meeting. Arrangements were made at this meeting for the holding of an Annual World Conference at Copenhagen, Denmark, in August, 1922, and a plan tentatively adopted for the calling of a World Conference of Religions to be held at The Hague probably in 1927. The World Alliance has continued to grow here in America. There are now over 2000 paying members.

The Interchange Committee was active throughout the year, and was instrumental in finding places for many of the men who attended the World Conference of the Presbyterian and Reformed Churches. For 1922 this Commission proposes an exchange, which has already been arranged between Dr. Jefferson of the Broadway Tabernacle and Dr. Norwood of the City Temple, London.

A new type of coöperation developed between the Church Peace Union and the World Peace Foundation. These two bodies are dealing with people who have the same ideals and very much the same viewpoint. The World Peace Foundation does its principal work through the universities and colleges; the Union through the churches and other religious organizations, so that in many points the same material and the same speakers can be used to advantage.

A large part of the work of the Associate Secretary during 1921 was done in connection with the Committee on Reduction of Armaments, which early in the year voted to call a conference to consider the problem of armaments and preparations commenced immediately for the meeting to be held in conjunction with the Annual Meeting of the World Alliance. On May 17-19 a great congress on Reduction of Armaments was held in Chicago. Over four hundred official delegates were present from twenty States. Twenty denominations were represented, the American Chamber of Commerce, the American Federation of Labor, the League of Women Voters, the Y. M. C. A., the Y. W. C. A., and many clubs sent delegates. There were eight sessions.

During May formal statements were issued by

the Federal Council of Churches of Christ in America, the National Catholic Welfare Council, the Central Conference of American Rabbis, and the United Synagogues of America. Each statement urged the calling of a conference of the leading nations on Reduction of Armaments. These actions of the great religious bodies were conveyed by the Church Peace Union to 120,000 preachers asking them to present the question on Sunday, June 5, to their congregations. Thousands of sermons were preached, some by the most outstanding preachers in America, calling the congregations to action. Resolutions passed by congregations went in large numbers to Washington. In the same envelope with the letters to the clergymen a petition which read as follows was inclosed:—"We, the undersigned clergymen urge the President and the Congress of the United States to call a conference of the leading nations on Reduction of Armaments at the earliest possible date." Only 208 clergymen refused to affix their signatures. Twenty thousand five hundred and three favoring the proposal signed the petition. The names when bound made a volume of 410 pages. On June 22 this petition was presented to President Harding.

The signers of the petition were divided by denominations as follows:

Methodists (Epls.)	4,950
Baptists	3,650
Presbyterians	1,950
Lutherans	1,900
Methodists (South)	1,500
Episcopalians	1,400
Disciples of Christ	1,400
Congregationalists	1,150
Roman Catholics	950
Unitarians	150
Friends	50
Jews	53
Name of Denomination not given	1,400
	20,503

The geographical list of States is as follows:—

New York	1,690
Pennsylvania	1,636

THE POLICY AND PROGRAMME OF THE FEDERAL COUNCIL OF THE CHURCHES OF CHRIST. The Executive Committee of the Council at its annual meetings in Chicago in December, recorded on behalf of the churches their solemn and reverent thanksgiving to God for the Conference on Limitation of Armament. In it they "recognized His answer to the fervent prayers of millions of Christians throughout this and many other lands," and "rejoiced in the splendid achievements of the Conference already secured." They were declared to be, however, but the first steps toward a warless world. With a view to that goal, it made the following

DECLARATION

1. We realize that as churches it is not for us to define in detail the political methods and institutions by which the scourge of war shall be ended and the fear of war shall be banished forever from civilized and Christian nations. The determination of such details must be left to diplomats, jurists and legislators.

2. But we maintain with firm conviction that it is the right and the duty of the church to declare in no doubtful terms the moral principles that are involved in international life, and to insist that our lawmakers, our diplomats, and all those who represent our nation in its international relations, shall observe these principles with utmost care. We insist that the main issue shall not be either evaded or obscured by discussion of details.

3. We hold that the moral principles of international life are the most important of all the so-called "vital interests" of every nation.

4. The "vital interests" are of such importance to the life of churches and nations that every congregation of every church in every land should co-operate for the achievement of a warless world. The world war was won only by international unity of purpose and action. A warless world can be achieved only by like unity of millions of peace-makers.

5. We recognize with deep satisfaction the new spirit of unity and mutual consideration that has sprung up between the nations represented at the conference. This spirit we regard as a greater importance and as giving more hope for the future than any of the specific agreements.

6. The Conference on Limitation of Armament has indeed made a good beginning. We deeply rejoice in the agreements for a radical reduction of navies, for the ten-year naval holiday, for the ten-year four-power agreement to maintain peace in the Pacific, and for the steps taken looking toward a real solution of China's pressing problems.

7. But as a nation we must press on to matters of still greater importance and still more serious difficulty. Capital ships have largely lost their significance. Provision has not yet been made for the general reduction of land armament. Chemical and aeroplane and submarine warfare threatens the world. These new weapons have created new problems for the entire world of the gravest character. How can they be abolished, or even limited, so long as competitive armament and war are recognized as legitimate methods by which civilized peoples may seek to secure objectives? War itself must be outlawed.

8. We believe there is one way and only one way to outlaw war. We must first establish a peace system. To take the place of competitive war preparations and recurring wars, we must create the institutions and the agencies of peace. Methods must be found by which to assure full security, equal justice and fair economic opportunity for all nations and all peoples alike.

9. Mere disarmament by itself alone will not stop war. Only the firm establishment of the institutions of justice and of liberty under law, maintained by effective sanctions at the hands of law-abiding and peace-loving nations can possibly banish war from this war-cursed world. The most urgent need of mankind to-day is the speedy establishment of these international institutions for justice, for security and for fair

opportunity. These are essential prerequisites to permanent peace.

10. We believe that peculiar duties and responsibilities rest upon Christians in this and all other lands for the establishment of these institutions. It is for Christian pastors and preachers everywhere to teach these truths to the people and through the Grace of God to create that heart and that will in each nation, without which disarmament is only a beautiful rainbow in the sky and a warless world is impossible.

11. We believe that the United States has moral obligations to the nations of Europe. Neither France nor any other nation should ever be exposed to the wrong and the tragedy of invasion. We believe that adequate protection can be given to nations only by effective international guarantees.

12. In the light of these considerations, this Federal Council of the Churches of Christ in America adopts for itself and recommends to the churches the following statement of ideals, of policy and of program:

I. INTERNATIONAL IDEALS OF THE CHURCHES OF CHRIST

1. WE BELIEVE that nations no less than individuals are subject to God's immutable moral laws.

2. WE BELIEVE that nations achieve true welfare, greatness and honor only through just dealing and unselfish service.

3. WE BELIEVE that nations that regard themselves as Christian have special international obligations.

4. WE BELIEVE that the spirit of Christian brotherliness can remove every unjust barrier of trade, color, creed and race.

5. WE BELIEVE that CHRISTIAN patriotism demands the practice of goodwill between nations.

6. WE BELIEVE that international policies should secure equal justice for all races.

7. WE BELIEVE that all nations should associate themselves permanently for world peace and goodwill.

8. WE BELIEVE in international law, and in the universal use of international courts of justice and boards of arbitration.

9. WE BELIEVE in a sweeping reduction of armaments by all nations.

10. WE BELIEVE in a warless world and dedicate ourselves to its achievement.

II. THE GENERAL OBLIGATION OF AMERICA TO CO-OPERATE IN THE ESTABLISHMENT OF A WORLD PEACE SYSTEM

1. We believe that the government of the United States should associate itself promptly with the other nations of the world to establish permanent institutions for the formation of international law, for the effective operation of the International Court of Justice and boards of arbitration and conciliation, for the assurance to law-abiding and peace-loving nations of security from attack and spoliation by any lawless and aggressive nation and for the provision of fair treatment and equal economic opportunity to all individual citizens of law-abiding and peace-loving nations.

2. We believe that only by these institutions and agencies will it be possible and practicable to abolish the menace to the entire human race of submarines, of aeroplanes, and of poison gases.

3. We believe, further, that the reconstruction of the shattered institutions of production, of exchange, of trade, and of credit, all so essential to the peace and prosperity of the nations, is possible only when the feverish fears and preparations for possible war are completely abandoned because of the successful functioning of the institutions of an effective world peace system.

4. We take the above stand remembering:

a. That practically every important nation in the world has committed itself to the idea of a permanent organization of the nations for world peace, and many of them have associated themselves in a League of Nations for that purpose.

b. That President Harding has repeatedly committed himself and his administration to a permanent association of the nations for world peace, renewed in his recent address at the opening of the Washington Conference in the memorable words that the United States cooperating with other nations, desires "To do that nobler thing which no nation can do alone."

5. We believe that the time has come for American public opinion to express unmistakably to Congress its emphatic support of President Harding and of the Administration in making adequate pledges and in giving satisfactory guarantees that the United States will take its full share of responsibility in international tasks and obligations.

6. We advocate the foregoing policy, remembering the numerous actions of the Federal Council from its very first organization in 1908 and repeated at practically every annual meeting since, urging the creation of a permanent organization of the nations for world peace, which policy has also been repeatedly expressed in numberless actions of our constituent bodies during the past decade.

7. We reject with indignation a policy of taking all possible economic advantages in all parts of the world while shirking international responsibilities and obligations.

This declaration was adopted at the annual meeting of the Council, Dec. 16, 1921.

AMERICAN SCHOOL CITIZENSHIP LEAGUE (405 Marlborough Street, Boston, Mass.). Teachers who realize the importance of teaching the right kind of citizenship to young people, turn to the League for guidance. The most important piece of work which it accomplished during 1921 was the publishing of *An American Citizenship Course in United States History, with Type Studies*, five volumes, edited by the Secretary and published by Charles Scribner's Sons, New York. This course is the official report of the History Committee of the American School Citizenship League (Wilbur F. Gordy, *Chairman*, Hartford, Conn.; Philander P. Claxton, former U. S. Commissioner of Education; James H. Van Sickle, Superintendent of Schools, Springfield, Mass.; Charles E. Chadsey, Dean, College of Education, University of Illinois; Mr. and Mrs. John W. Hall, University of Nevada; and Mrs. Fannie Fern Andrews, *Secretary*). The outstanding feature of the course is the Type Studies, as it is the first time that such studies in history have been published.

The League issued a fifteen-page pamphlet stating its aims as follows:

I. To define the meaning of American Citizenship.

II. To stimulate the teaching of American citizenship in the schools of the United States.

III. To prepare material for the use of teachers.

IV. To cooperate with educational agencies in foreign countries for the promotion of international understanding.

The League extended its list of officers so that now nearly every leading educator in the country is counted among its Executive Committee, Vice-Presidents, and Counselors.

Its World Essay Contest becomes more far-reaching each year. The 1921 contest closed June 1, and the subjects of the essays were, for seniors in normal schools: "What Education can do to Secure Cooperation as against Competition between Nations"; and for seniors in secondary schools: "The Essential Foundations of a Cooperating World." The prizes—seventy-five, fifty, and twenty-five dollars in each set—were awarded as follows:

Normal School Set

First prize.—Miss Lucile Heath, State Normal School, Towson, Md.

Second prize.—Miss Grace M. Tull, State Normal School, Towson, Md.

Third prize.—Miss Eva B. Weber, State Normal School, Millersville, Pa.

Secondary School Set

First prize.—Miss Margaret R. Martin, Hollywood High School, Hollywood, Calif.

Second prize.—Miss Amy L. Spencer, Cranston High School, Auburn, R. I.

Third prize.—Willis Keys, Tyler County High School, Middlebourne, W. Va.

A new line of cooperation with educational agencies in foreign countries was undertaken. Through cooperation with the British League of Nations Union, the League has placed a large number of normal, secondary, and elementary schools, both public and private, in correspondence with schools of similar standing in Great Britain.

The League held joint meetings or provided one or more speakers on the programme of organizations and departments meeting in Atlantic City with the Department of Superintendence of the National Education Association. A representative of the League attended the summer meeting of the Association in Des Moines, where a definite plan of cooperation was effected through the appointment of a Committee to cooperate with the League. The Committee on Citizenship and Character Education and the Committee on the Teaching of Democracy, both of the National Council of Education, recommended cooperation with the American School Citizenship League. The League held a very successful conference in Boston, in which it had the cooperation of the Governor, the Mayor, the State Commissioner of Education, the Superintendent of Schools, the Chamber of Commerce, and leaders in educational and civic welfare spheres.

The League has cooperated as closely as possible with the Washington Conference on the Limitation of Armaments. It has distributed thirty thousand copies of Katrina Trask's *The Conquering Army* among schools, churches, clubs, etc., to be read during the Washington Conference; it sent out posters, cards, and literature to schools, especially for use in preparing programmes for Armistice Day; and it announced its World Essay Contest for the year 1921-22 during the Washington Conference, as work that would be laying the foundation for that broad outlook which animated the Conference and which we all hope will emanate permanently from the Conference. It is definitely trying to educate the youth of the country to appreciate the spirit which brought this Conference together.

THE WOMEN'S INTERNATIONAL LEAGUE FOR PEACE AND FREEDOM (formerly Woman's Peace Party), through its national membership, worked for the resolution calling for a Conference on Disarmament. It employed the services of Miss Margaret Crook, a graduate of the University of London, England, who toured the Eastern States, speaking to groups of students in colleges and high schools and teachers' organizations. In the interest of the work of the W. I. L., Frau Hertzska of Austria and Mrs. Pethick Lawrence of England came to the United States and spoke in many cities. The League raised \$3048 for Mr. Hoover's fund for the starving children of Central Europe.

In July, 1921, the Biennial Congress of the organization was held in Vienna and was attended by women from twenty-eight countries, in all of which are maintained national centres of the W. I. L. Twenty women from the United States went to this Congress and Jane Addams was again elected International President. The vice-presidents and other officers are as follows: Emily G. Balch, Secretary-Treasurer, U. S. A.; Gabrielle Cuchene, France; Yella Hertzska, Austria; Lida Gustava Heymann, Vice-President, Germany; Martha Larsen, Norway; Catherine Marshall, Great Britain; C. Ramondt-Hirschmann, Assistant Secretary, Holland; H. M. Swanwick, Vice-President, Great Britain; Lucie Dejardin, Belgium.

A summer school was held at Salsburg during the first two weeks of August with an attendance of 300.

The National office was moved from New York to 732 17th Street, N. W., Washington, D. C.,

in November, and Mrs. George Talbot Odell became Acting National Chairman, superseding Miss Mabel Hyde Kittredge, resigned.

On Dec. 10, 1921, a national Conference was held in Washington, attended by women from many States, at which Jane Addams presided and Emily Balch reported on the Vienna Congress and work of the International office at Geneva. This Conference was followed by a large mass meeting, on December 11, which was addressed by Miss Addams, Miss Balch, Mrs. Florence Kelley, and several women from foreign countries.

The League also held meetings during the year for the recognition of Soviet Russia and amnesty for political prisoners.

The League issues bulletins from its International office at Geneva, Switzerland, and from its national headquarters in the United States, France, Great Britain, and other countries.

THE LEAGUE TO ENFORCE PEACE (5 Park Square, Boston, Mass.), did not carry on any general campaign during 1921. It did, however, circulate a good deal of literature and answered many letters. An organization that has carried on such large activities as has the League finds it impossible to shut its doors, even though it does not think it wise for the time being to strike out vigorously. It is quite possible that it may renew its activities during 1922.

THE WORLD'S COURT LEAGUE was, in 1919, merged in the League of Nations Union. For more than a year this Union has been for the most part inactive, on account of poverty. During 1921 the only publication was the *First Year Book of the League of Nations*, by the Union's Secretary, Charles H. Levermore.

LEAGUE OF NATIONS SOCIETY IN CANADA. A number of men in different parts of Canada, feeling the need of some organization to provide information concerning the League of Nations and its work, and generally in reference to international problems as they affect Canadian interests, held a meeting in Ottawa on May 31, 1921, to consider the formation of such a Society. The following joined in signing the invitation to the meeting: General Sir Arthur Currie, K. C. B., McGill University; G. S. Campbell, Halifax, N. S.; Colonel C. W. Peck, V. C., M. P.; Sir Robert Falconer, University of Toronto; Hon. H. S. Beland, M. P., Ottawa; Tom Moore, President, Trades and Labor Congress; Dr. Walter C. Murray, President, University of Saskatchewan; Leonard P. D. Tilley, K. C., St. John, N. B.; Hume Cronyn, M. P., London, Ont.; Isaac Pitblado, K. C., Winnipeg, Man.; Senator C. P. Beaubien, Montreal; Dr. H. M. Tory, President, University of Alberta.

In response to this invitation, about 250 people met and unanimously decided to organize a League of Nations Society in Canada. His Excellency, the Duke of Devonshire, the then Governor-General, presided, and it was unanimously decided to proceed to the organization of a League of Nations Society in Canada with the following objects:

1. To promote international peace; 2. To furnish information about the League of Nations, its principles, organization, and work; 3. To study international problems and Canada's relation thereto as a member of the British Commonwealth and of the League of Nations; 4. To foster mutual understanding, good will, and the habits

of coöperation between the people of Canada and of other countries, in accordance with the spirit of the League of Nations; 5. To promote the establishment of provincial or local associations, clubs, or other bodies having like objects, and to coöperate with any existing organizations for such purposes.

Mr. H. D. Robertson has been appointed General Secretary, and the office of the Society has been opened at 106 McKinnon Building, Toronto.

THE NOBEL PEACE PRIZE AWARD FOR 1921. Hjalmar Branting, the Premier of Sweden, and Christian L. Lange of Norway, the Secretary of the Interparliamentary Union, between whom the Nobel peace prize for 1921 is divided, have been consistent advocates of disarmament. They are the type of men from countries not having rank with the great military powers who have been pioneers in striving to teach Europe to rid itself of top-heavy armaments. Both as a journalist and as a leader of the Socialist Party, Premier Branting has been a power in the politics of Sweden. To his influence in large part was due the success of the peace negotiations through which the severance of Norway was arranged without appeal to arms. His rise to the Premiership came in 1920 as a result of the popular protest against the domination of the Government by a militaristic aristocracy. Late in 1921 the Socialist Party was again returned to power in the Swedish elections. Lange became General Secretary of the Interparliamentary Union in 1900. He has been professor of history in the Nobel Institute of Christiania and represented Norway at the second Hague conference in 1907. Both represent their respective countries in the League of Nations, which is in keeping with their records in the service of peace. Branting as the active political leader in Sweden and Lange as the scholar and writer of Norway, have labored to achieve the same practical end, the immediate reduction of armaments by agreement of the nations.

AMERICAN ASSOCIATION FOR INTERNATIONAL CONCILIATION (Sub-Station 84, New York, N. Y.) continued to print and circulate documents giving information as to the progress of the international movement. These publications continue to be non-partisan; their only aim being to educate public opinion. In addition to this the Association has continued its work among universities and colleges through International Relations Clubs under the direction of the director of the Institute for International Education (q. v.), which also emphasizes the educative feature of the work. Following is a list of the pamphlets published during 1920-21:

155. Notes Exchanged on the Russian-Polish Situation by the United States, France, and Poland. October, 1920.

156. Presentation of the Saint Gaudens Statue of Lincoln to the British people, July 28, 1920. November, 1920.

157. Draft Scheme of Permanent Court of International Justice, with a review by James Brown-Scott. December, 1920.

158. The Communist Party in Russia and Its Relation to the Third International and to the Russian Soviets. Part I. January, 1921.

159. The Communist Party in Russia and Its Relation to the Third International and to the Russian Soviets. Part II. February, 1921.

160. Central European Relief, by Herbert Hoover; Relief for Europe, by Herbert Hoover; Intervention on Behalf of the Children in Countries Affected by the War, by the Swiss Delegation to the Assembly of the League of Nations; The Typhus Epidemic in Central Europe, by the Right Hon. A. J. Balfour; Report of the Special Commission on Typhus in

Poland, to the Assembly of the League of Nations. March, 1921.

161. Disarmament in its Relation to the Naval Policy and the Naval Building Programme of the United States, by Arthur H. Pollen. April, 1921.

162. Addresses on German Reparation by the Rt. Hon. David Lloyd George and Dr. Walter Simons, London, March 3 and 7, 1921. May, 1921.

163. The Fiftieth Anniversary of the French Republic. June, 1921.

164. Convention for the Control of the Trade in Arms and Ammunition, and Protocol, signed at Saint-Germain-En-Laye, September 10, 1919. July, 1921.

165. Addresses at the Fifteenth Annual Meeting of the American Society of International Law, by the Hon. Elihu Root. August, 1921.

166. Constitution of the Permanent Mandates Commission; Terms of the "C" Mandates; Franco-British Convention of Dec. 23, 1920; Correspondence between Great Britain and the United States Respecting Economic Rights in the Mandated Territories; The San Remo Oil Agreement. September, 1921.

167. Present Problems of the Commonwealth of British Nations: Conference of Prime Ministers and Representatives of the United Kingdom, the Dominions and India, held in June, July, and August. October, 1921.

168. Relations between Great Britain and Ireland: Proposals of the British Government, July 20, 1921, and Correspondence between Mr. Lloyd George and Mr. De Valera. November, 1921.

169. Treaties of Peace between the United States and Germany, Austria, and Hungary. December, 1921.

THE INSTITUTE OF INTERNATIONAL EDUCATION (419 West 117th Street, New York). On account of the growth of more intimate educational relations between Italy and the United States, and Spain and the United States, there have been established Spanish and Italian Bureaus. In addition to the representatives already secured in foreign countries, the Institute during its second year of existence has become represented in South Africa, Norway, Australia, and Denmark. It has also entered into active coöperation with other organizations having educational relations with foreign countries, such as the Pan-American Union, the American-Scandinavian Foundation, the Italy-America Society, the Committee on Friendly Relations, and the Council on Foreign Relations. The Institute as a clearing house of information and advice on international educational matters has been able to render these organizations effective service. At the request of the Administrative Board of the Institute, the Carnegie Endowment for International Peace allotted \$12,500 for grants to professors on leave of absence.

Assisting American professors to teach in foreign universities was but one way in which the Institute attempted to stimulate a better understanding between the United States and other countries. It has circulated during the past year a number of foreign professors of distinction among the colleges and universities of the country. Among those who have lectured under the auspices of the Institute in this way are Baron S. A. Korff, formerly Professor of International Law and Diplomacy at the University of Helsingfors, Finland; Professor Victor Andres Belaunde, Professor of International Law and Political Science at the University of San Marcos, Lima, Peru; Professor Raoul Ramirez, Chilean Exchange Professor of Spanish American History from the University of Chile, Santiago, Chile; Professor Jacques Hadamard, Professor de Mécanique Analytique et de Mécanique Celeste au Collège de France, Paris; and Professor Raffaello Piccoli of the University of Padua, Italy. Arrangements have already been made to send during the Spring term to a large number of institutions the distinguished scholar and divine, Bishop Nicholai,

Bishop of Serbia; Professor J. Holland Rose, Professor of History at Cambridge University, England, and Doctor E. A. Horne, Professor of Mathematics, University of Patna, India.

An element of importance in the development of international good-will has been the service that the Institute has been able to render to official visitors and missions coming to this country to study our educational conditions. Among the most important of the missions of the past year that have been welcomed and assisted were the Educational Commission from China, headed by the Honorable Hsi Tao Yuan, Vice-Minister of Education, the Japanese Commercial and Educational Mission under Baron Goto, and the mission of distinguished French and English physicians who came to study our methods of medical education.

A service of similar value has been rendered to those seeking educational advice concerning procedure in foreign countries. Sometimes this has been done by the Institute working through other agencies, as when the Director became Chairman of the Committee on Education of the Italy-America Society, and the Associate Director Monroe became Chairman of an Educational Committee on the Near East, and Miss Newcomb became Executive Secretary of the Committee on International Relations of the Association of Collegiate Alumnae. The Institute arranged with the Right Honorable R. A. L. Fisher, of the English Board of Education, for the hospitality extended to the group of teachers sent to England by the Milwaukee Journal during the summer vacation.

During the past year colleges and universities have resumed a normal, postwar state which has made possible an extension of the activity of the International Relations Clubs established in them. The Institute has continued the policy of organizing the Clubs by preference in the smaller non-urban colleges where a multiplicity of student activities does not exist, and where the need for library material and outside speakers is greatest. The forms of coöperation outlined in that Report continue to be the basis of the Institute's policy; viz., supplying to the clubs books, syllabi, pamphlet and periodical literature bearing upon the subjects studied, and sending distinguished speakers, foreign and American.

The following syllabi were especially prepared for the Clubs during the past year:

I. "Outline of the Covenant of the League of Nations," by Professor Louis K. Manley of the University of Pittsburg.

II. "The Past, Present and Future of the Monroe Doctrine," by Professor A. B. Hall of the University of Wisconsin.

III. "The History of Russia from Earliest Times," by Baron S. A. Korff, University of Helsingfors, Finland.

IV. "The Russian Revolution," by Mr. W. W. Pettit, of the American Peace Mission.

V. "The Question of the Balkans," by Professor Clive Day of Yale University.

VI. "Modern Mexican History," by Professor Herbert I. Priestley of the University of California.

The successive numbers of *The Journal of International Relations and of International Conciliation* have been sent to the Clubs with other periodical and pamphlet material.

On Dec. 28, 1920, the annual conference of faculty advisers was held at Washington in conjunction with the American Historical Association and the American Political Science Association.

Since the last Annual Report, Clubs have been founded in the following institutions:

Agnes Scott College, Decatur, Ga.; Allegheny College, Meadville, Pa.; Bates College, Lewiston, Maine; Central College, Fayette, Mo.; Coe College, Cedar Rapids, Iowa; Colorado College, Colorado Springs, Colo.; Drury College, Springfield, Mo.; Fargo College, Fargo, N. D.; Franklin College, Franklin, Ind.; George Peabody College, Nashville, Tenn.; Guilford College, Guilford, N. C.; Hamline College, St. Paul, Minn.; Kingfisher College, Kingfisher, Okla.; Lawrence College, Appleton, Wis.; Lincoln Memorial University, Harrogate, Tenn.; Lindenwood College, St. Charles, Mo.; Meredith College, Raleigh, N. C.; Mills College, Oakland, Calif.; Milwaukee-Downer College, Milwaukee, Wis.; Mt. Holyoke College, South Hadley, Mass.; North Carolina College for Women, Greensboro, N. C.; Oxford College, Oxford, Ohio; Pacific University, Forest Grove, Ore.; Packer Collegiate Institute, Brooklyn, N. Y.; Pomona College, Claremont, Calif.; Randolph-Macon College for Women, Lynchburg, Va.; Ripon College, Ripon, Wis.; Southern Methodist University, Dallas, Texas; Stephens Junior College, Columbia, Mo.; Teachers College, New York City; Trinity College, Durham, N. Car.; University of Colorado, Boulder, Colo.; University of Denver, University Park, Denver, Colo.; University of Kansas, Lawrence, Kansas; University of Maine, Orono, Maine; University of Michigan, Ann Arbor, Mich.; University of Nebraska, Lincoln, Neb.; University of Redlands, Redlands, Calif.; University of Utah, Salt Lake City, Utah; Wabash College, Crawfordsville, Ind.; Wellesley College, Wellesley, Mass.; Westhampton College, Richmond, Va.; Whitman College, Walla Walla, Wash.

The Institute coöperates with various foundations in making known their scholarships for study in foreign countries to students in American institutions. One of its staff serves on a committee which selects the American girls for the scholarships in lycées offered by the French government, and visits France in the summer to select the French girls who receive scholarships in American colleges. It is from the Institute that the French girls are distributed to their destinations and the American girls leave for Europe. The Institute was glad to coöperate in arranging for an interesting exchange of children's librarians with Belgium. At the request of the Book Committee on Children's Libraries of the Art War Relief, the Director secured free tuition from the New York Public Library and the Pratt Library of Brooklyn, and also a grant of funds from the Commission for Relief in Belgium to aid in defraying the expenses incident to sending an American children's librarian to Brussels and in bringing two Belgium women here next fall to study to become children's librarians. The American Chamber of Commerce of Mexico City has turned over to the Institute for administration the scholarships it established for Mexican students in colleges of the United States. The following is a list, though by no means an exhaustive one, of international scholarships of interest to American students;

Albert Markham Traveling Fellowship (Uni-

versity of Wisconsin); Alice Freeman Palmer Fellowships (Wellesley); American Field Fellowships in French Universities; American-Scandinavian Foundation Fellowships; American School of Classical Studies at Athens; American Academy in Rome.

The Director of the Institute visited a great many of the colleges and universities of the United States during the past year in order better to acquaint their administrative authorities with its aims and activities, and to keep in close touch with the work of the International Relations Clubs. Upon invitation he delivered during the year some twenty-five addresses to various scholarly organizations. Upon the request of Mr. Herbert Hoover and in conjunction with the Director of the American Council on Education and the Secretary of the American University Union in Europe, he formulated and distributed an appeal to the colleges and universities of the country for contributions to aid suffering students and professors in Europe. He sat on committees to report upon the equivalence of degrees between the universities of the United States and those of France and Great Britain respectively. Though his personal influence, he has secured fellowships in various institutions for a number of stranded Russian students. He is serving in an advisory capacity to a considerable number of organizations of an international educational character. He is coöperating with the Italy-America Society in organizing a tour to Italy for American students and instructors next summer. One of the interesting incidents of the tour will be the laying of a bronze memorial wreath on Dante's tomb at Ravenna as a tribute from the institutions of learning in the United States. The Spanish bureau of the Institute is organizing a visit to Madrid of a large group of teachers of Spanish from all over the United States. These teachers will spend next summer in the University of Madrid in perfecting their knowledge of oral Spanish and in the study of Spanish literature and history. A centre for the diffusion of the culture of Spain, Portugal, and the Spanish-American countries, has also been organized under the name of the Instituto de las Espanas.

THE INTERNATIONAL INSTITUTE OF LEGAL AND ECONOMIC INFORMATION is an international enterprise growing out of the public spirit of private citizens in Holland. It was organized in 1918. A number of Dutch jurists, economists, bankers, and business men foresaw the need of an institution capable of supplying at short notice information about the laws and regulations of all countries relating to jurisprudence, to international treaties, and to the existing literature relative to world affairs. They formed a central organization under the name of International Intermediary Institute. Cabinet ministers and other leading men became associated with its management. The aim of the institute developed into an effort to create an international clearing house for scientific, political, legal, economic, and statistical information. Its work is divided into two departments, one dealing with jurisprudence and the other with economics. It publishes quarterly the Bulletin de l'Institut Intermediaire International. The first five numbers of the bulletin, containing about 1000 pages, are in French, but it is intended to issue it also in English. The institute plans to publish the *Conventions of the Hague*

(1902 and 1905) on *International Private Law*. A report of recent international treaties is under way.

AMERICAN UNION AGAINST MILITARISM (Westory Building, Washington, D. C.) confined its efforts during 1921 to working for disarmament. It first urged the backing of Senator Borah in his fight for a conference of the three great naval Powers. Then when this was called, joining with other groups to secure results. While it has coöperated with the groups calling themselves disarmament committees, its primary task, until complete disarmament is attained, is reporting and suggesting means of combating militaristic tendencies. To this end it keeps track of military and naval legislation in Congress. It has from time to time issued pamphlets dealing with various phases of its purposes. Henry R. Mussey is the new Chairman and Belle Rankin is the new Executive Secretary.

THE FELLOWSHIP OF RECONCILIATION (108 Lexington Avenue, New York City), during 1921 has been working along the usual lines, endeavoring to get people to take their Christian principles seriously as a working basis for everyday life, in business, politics, international relations, and in racial relations. Among the special activities might be mentioned a letter which was sent to some 120,000 ministers in this country accompanied by a pamphlet by Dr. C. J. Cadoux of Oxford entitled, *An Appeal to the People of the Christian Church*, it being an argument against war from the point of view of the Gospel. It also issued a paper dealing with the Unemployment Problem prepared by a Fellowship committee, headed by A. J. Muste, head of Brookwood Labor College. Another publication was a pamphlet, *When a Christian Questions Himself—What Shall I Do With My Capital and Income?* by Edward W. Evans.

The Fellowship published and widely distributed a pamphlet by John Nevin Sayre entitled, *Movement Towards a Christian International*, which aims to apply its convictions constructively, and not to spend itself in mere protest. "To overcome evil," it declares, "may require the use of various forces, when these can be employed consistently with the sanctity of personality and the redemptive purpose of Christ. No literalistic theories of non-resistance, no prohibition of the use of force, no merely negative reformations of any kind are sufficient to cure our social diseases or to eradicate war. The fundamental need is a new discovery of God, a fresh return to the sources of life, and a preparation of men's spirits for the inflow of Divine power."

THE YOUNG DEMOCRACY as a National organization exists no longer except in name; the Philadelphia "unit," as it was formerly called, is all there is left of it. The only activity of the national organization which still exists is a certain publicistic work in connection with the magazine called *The World Tomorrow*. The Philadelphia Young Democracy is still active, and is now conducting meetings every Sunday afternoon in the Broad Street Theater. Its Executive Secretary is Mrs. Esther Dunham, Melrose Avenue, East Lansdowne, Pa.

THE FOREIGN POLICY ASSOCIATION originated in a dinner-discussion group of about fifty editors, publicists, and experienced students of international affairs formed in New York City in the

spring of 1918, for the purpose of "exploring and crystallising latent interest in liberal democratic policies for which America stands in the great war and for which there is no organization at home." Early in its career the group reached the conclusion that two things were absolutely requisite to the development of a sound foreign policy for the United States:

FIRST: Careful study of all sides of every important international question affecting the United States.

SECOND: Communication of the results of such study to as large a number of liberal-minded Americans as possible, to the end that there might be a better public understanding of what our foreign problems are and of how they may be dealt with most effectually.

In the pursuit of these general aims, the group, long before the Paris Peace Conference, came out definitely in favor of the establishment of some sort of international organization, some sort of a league of free and self-determining nations, as a substitute for international anarchy and as an ameliorative of international hatred. To realize the second of these aims, the group resolved itself into the League of Free Nations Association, a membership organization, in November, 1918, with the support and coöperation of a large number of enlightened and public-spirited citizens throughout the country. The Association has steadily labored for the formation and adoption of a liberal and constructive American foreign policy; and the better to express its basic purpose, it adopted in March, 1921, its present name—The Foreign Policy Association.

The Association has always been strictly non-partisan or interpartisan. Working on the theory that public opinion is the permanent controlling agency in a democracy and that it can be sound only when it has informed itself, the Association has no interest to serve, no formula it wishes to impose, no postulate of government it wishes adopted. Anxious that the United States should have an attitude in foreign affairs that protects its own interests, it believes that in the long run a selfish, self-regarding policy is sure to be detrimental, and that a generosity of spirit and of act, a willingness to go halfway and to go first, and to put its confidence in whatever associations it forms, are genuinely in the American interest. Its method is, as far as possible, to enlighten by disclosing facts, by promoting debate, by attempting to develop a public interest in order to offset private interests or the narrow aims of a faction.

Since March, 1920, the Association has published a monthly *Bulletin*, containing stenographic reports of its luncheon-discussions, letters of special interest, and informing comment on current foreign politics. During the Washington Conference, the Association published weekly *News Bulletins* of comment on current developments.

Thirty-seven notable and largely attended luncheons have been held in New York City under the auspices of the Association. At each a special phase of American foreign policy was discussed from different viewpoints,—never in the spirit of partisanship, but always with the idea of getting at the facts. These discussions constitute almost a novelty in American public life and are contributing potently to one of the chief purposes of

the Association—the formation of a liberal and enlightened public opinion on international relations. The whole series has been characterized by freedom of viewpoint and fairness of discussion.

The Association in its original statement of principles, issued in November, 1918, expressed its conviction that the basis of our American demands at the Paris Conference should be a liberal, democratic and inclusive league of nations. During the spring of 1919 it urged upon the American plenipotentiaries at Paris the formation of such an international organisation. While recognising that the Treaty of Versailles and the Covenant of the League of Nations did not measure up to its hopes, the Association nevertheless supported the Covenant with all its strength, urging as long as the subject was being discussed in the Senate, such liberal and interpretative amendments as would tend to make the League more universal and more democratic. The defeat of the Covenant in the Senate only stimulated the Association to further efforts to bring the United States wholeheartedly into some form of continuous and close coöperation with the other nations at the earliest possible moment.

On our relations with Latin-America, especially with Mexico and the Caribbean, the Association has a standing committee of experts. In April, 1921, the Association addressed to Secretary Hughes a carefully drawn brief in the matter of the settlement of the existing disputes between the two countries.

On Russian-American relations the Foreign Policy Association has a sub-committee of fifteen experts who are studying the diplomatic and economic relations of the American Government to Russia. Under its auspices there was compiled in the spring of 1920 a volume of the available diplomatic exchanges between the various Russian governments and our State Department from March, 1917, to March, 1920.

The first plank in the revised "programme for immediate action" adopted by the Association in December, 1920, declared that it would "Oppose the new three-year building programme for the navy as economically unwise, and as making renewal of naval rivalry inevitable; support all measures leading to a joint understanding between Japan, Great Britain, and the United States for a naval holiday; work for the progressive disarmament of all nations."

Since then, the Association has thrown all its weight into the fight for reduction of armaments as a first and obvious step towards better international relations. While there was at that time a feeling against competitive naval building, public sentiment was unorganized, uninformed, and inarticulate. In the educational work of arousing the country to a realization of the tremendous issues at stake, the Association has played its part. A national sub-committee on reduction of armament was formed in April, 1921.

First: To urge President Harding to call an international conference to consider the limitation of naval armament by international agreement.

Second: To urge Congress to postpone final action on the pending naval appropriations until the suggested international conference has been held.

After the President had issued his call for the Conference, the Association in August called a meeting in Washington of all the national organizations interested in the success of the Conference, and out of this grew the National Council for Limitation of Armament, with headquarters at 532 Seventeenth Street, N. W., Washington. Miss Merriman, the Secretary of the Association, acted as Chairman of the Clearing House and afterwards as Temporary Chairman of the National Council.

The Association heartily supports the naval limitation proposed by Secretary Hughes. It would, however, go further,—scrap all cruiser submarines and work for the progressive reduction of all navies until they reach the status of police forces.

THE AMERICAN SOCIETY OF INTERNATIONAL LAW regularly issued its quarterly official organ, the *American Journal of International Law*, and held its annual meeting in Washington, April 27-30, 1921, at which the principal topic of discussion was the Reconstruction of International Law. The American Institute of International Law was unable to hold a meeting in 1921.

THE PAN-AMERICAN UNION (Washington, D. C.). The year 1921 was an active one. Although the chaotic conditions prevailing in Europe were reflected throughout Latin-America, resulting in a considerable decline in the import and export trade of those republics with the United States and other countries, interest in the nations to the south has not declined. On the contrary, those countries are attracting more and more attention from all parts of the world. Manufacturers and exporters in general are making a survey of the Latin republics as possible fields of future activity; the increase in the study of Spanish has stimulated interest in the nations which speak this language as well as in the great Portuguese-speaking republic; while the large number of clubs, societies, and other organisations studying Latin-America is further evidence of the attention which those countries command from the people of the United States and other lands.

The Pan-American Union, being the principal source of information on Latin-American countries, has been taxed to the utmost in answering the numerous inquiries addressed to it. Thousands of letters are received each month, not only from people of the United States and Latin-America, but from practically all parts of the world.

The Section of Education continued its campaign in behalf of the study of Spanish, Portuguese, Latin-American history, and development, and in otherwise bringing the Republics of the Americas into closer educational and cultural relationship. Due mainly to the efforts of this division of the Union most of the leading colleges and universities of the United States have granted scholarships to Latin-American students who desire to continue their studies in this country. The Section of Education also laid foundations for the exchange of teachers between the United States and Latin-American countries, collecting a file of detailed information regarding the qualifications of teachers, and carrying on an extensive correspondence with Latin-American officials, which it is hoped will bring results as the economic situation becomes more favorable. There was also a steady and increasing demand for all classes of publications issued by the Union.

In addition to a series of booklets, the Union sent out during the year hundreds of press releases and photographs to Latin-American newspapers on occurrences in the United States, while the press of this country was supplied with releases on important events transpiring in the Latin-American countries. Latest statistical data from official sources on the trade and commerce of the various republics were also compiled and sent to leading libraries, banks, export and import houses, and other interested parties throughout the country.

The Bulletin of the Pan-American Union during 1921 continued to publish material which it was believed would prove of interest to its readers. A slight change, however, was made in the contents of the Spanish and Portuguese editions. Instead of devoting every issue to general matter, it was decided to publish a series of special numbers on some subject of interest and importance to the American republics, these special issues alternating with the more general numbers. It is gratifying to note that these special numbers have received high commendation from officials in every section of the American continent.

The Library of the Union, showed a healthy growth in its several departments. It now contains approximately 50,000 volumes, 180,000 index cards, and a large collection of maps. Each year the Library is becoming better known as a source of original material on the republics of the Union, and a notable feature during 1921 was the special trips made by students and business men from other cities to consult the material here available.

In accordance with the resolution passed at the Sixth International Sanitary Conference, held in Montevideo in December, 1920, recommending the establishment of an International Sanitary Bureau in Washington as provided by a resolution of the Second Conference of American States, the International Sanitary Bureau began to function in and as a part of the Pan-American Union in May last. One of the first activities of the Bureau was the preparation of special Spanish and Portuguese editions of the Pan-American Bulletin on sanitation. The Bureau is now in close correspondence with officials of boards of health, sanitary officers and prominent officials of the different American republics with a view to coöperating with them in such a way as to aid in the improvement of sanitary conditions of their ports and territories and in controlling, in so far as possible, the spread of communicable diseases.

THE AMERICAN MID-EUROPEAN ASSOCIATION activities have been chiefly of an economic rather than social nature. In 1920 the president of the Association (R. J. Caldwell) went to Europe as economic commissioner for the United States, to investigate conditions in Middle Europe, and the Association has devoted its attention largely to making contracts here for Mid-European visitors to this country, so they would be enabled to form the proper connections for their purposes expeditiously. In this way, their financial commissions have met those of American financiers who are willing and inclined to render assistance. They were kept informed of the various activities in banking circles here in the way of new export and import promoting and other financial groups, while their industrial commissioners have been brought in contact with the proper people who best serve their purpose. Also, important Americans and others visiting Middle Europe have received facilities to meet the people of consequence of Middle Europe.

IOWA. POPULATION. According to the report of the census of 1920, there were 2,404,021 residents in the State, Jan. 1, 1920, as compared with 2,224,771 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	10,330,000	444,190,000	\$133,257,000
	1920	10,300,000	473,800,000	222,686,000
Oats.....	1921	5,960,000	154,960,000	35,641,000
	1920	5,894,000	229,866,000	82,752,000
Barley.....	1921	166,000	3,901,000	1,638,000
	1920	180,000	4,950,000	3,118,000
Wheat.....	1921	579,000	10,102,000	8,890,000
	1920	613,000	10,732,000	15,024,000
Clover seed....	1921	125,000	200,000	1,940,000
	1920	142,000	284,000	3,479,000
Rye.....	1921	32,000	515,000	376,000
	1920	32,000	544,000	636,000
Potatoes.....	1921	96,000	4,128,000	5,779,000
	1920	96,000	10,560,000	12,863,000
Sor. syrup.....	1921	8,000	672,000	712,000
	1920	10,000	1,000,000	1,287,000
Hay.....	1921	3,623,000	5,210,000	47,406,000
	1920	3,590,000	5,334,000	84,982,000

DRAINAGE. The United States Bureau of the Census published the accompanying summary of drainage conditions in 1920.

Item	Amount	Per cent of total
DRAINAGE ON FARMS		
Number of all farms in the state.....	213,439	100.0
Farms reporting land having drainage.....	88,885	41.6
Farms reporting land needing drainage.....	56,083	26.3
All land in farms.....	33,474,896	100.0
Improved land in farms.....	28,606,951	85.5
Farm land reported as provided with drainage.....	7,334,404	21.9
Farm land reported as needing drainage.....	2,052,942	6.1
DRAINAGE ENTERPRISES		
Approximate land area of the state.....	35,575,040	100.0
All land in operating drainage enterprises.....	5,224,478	14.7
Improved land.....	4,493,407	12.6
Timber and cut-over land.....	74,852	0.2
Other unimproved land.....	656,419	1.8
Capital invested in and required for completion of operating enterprises.....	\$54,169,878	100.0
Capital invested in these enterprises to Dec. 31, 1919.....	\$49,627,304	91.6
Additional capital required to complete these enterprises.....	\$4,542,574	8.4

The principal crops grown upon the drained land in drainage enterprises are corn and hay. The total works completed by drainage enterprises to Dec. 31, 1919, comprised 3908.0 miles of open ditches, 10,384.9 miles of tile drains, and 45.2 miles of levees; the additional lengths under construction were 81.1 miles of open ditches and 768.6 miles of tile drains. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There were eight pumping districts among the operating drainage enterprises in the State, all equipped with centrifugal pumps.

MANUFACTURES.

increase in "Rent and taxes." After 1914 there was a marked shortening of the working-day in Iowa. In that year 17.4 per cent of the wage earners were included in the group "48 and under," as against 38 per cent in 1919. In 1914 the "sixty" and "over sixty" groups constituted 44 per cent of the total wage earners, as compared with 19.5 per cent in 1919.

TRANSPORTATION. The mileage of single track steam railway in the State at the end of 1921 was 10,198; and of electric interurban line, 521.

EDUCATION. The school population of the State,—that is to say between the ages of five and twenty-one, in 1921 was 690,061; pupils enrolled, 537,886; average daily attendance, 422,416; number of teachers, 26,622. The total expenditures for common schools in 1921 was \$54,980,766.

	Manufacturing industries		Increase or decrease, per cent ¹
	1919	1914	1914-19
Number of establishments.....	5,683	5,614	1.2

Value of products.....	745,472,697	310,749,974	139.9
Value added by manufacture.....	225,231,890	105,298,635	113.9

¹ A minus sign (—) denotes decrease.

In 1920 there were eighteen cities in the State having more than 10,000 inhabitants. The combined population of these cities in that year was 604,150 which formed 25.1 per cent of the total for Iowa. Of the total value of the State's manufactured products, 78.4 per cent was reported from these eighteen cities.

The large increases in salaries and wages, cost

FINANCE. The balance on hand, Jan. 1, 1921, was \$6,198,515; the receipts for the year were \$25,758,916; expenditures, \$28,550,198; balance, December 31, \$3,407,223.

CHARITIES AND CORRECTIONS. The population of each of the institutions under the State Board of Control at the end of the fiscal year June 30, 1920, is shown in the following table:

Institutions	Male	Female	Total
Soldiers' Home, Marshalltown.....	355	243	598
Soldiers' Orphans' Home, Davenport.....	245	148	393
Institution for Feeble-Minded Children, Glenwood.....	748	755	1,503

Women's Reformatory, Rockwell City.....	...	51	51
Totals.....	5,671	3,610	9,281

of materials, and the value of products, were largely due to the changes in industrial conditions brought about by the World War, and, therefore, cannot properly be used to measure the growth of manufactures during the census period 1914 to 1919. The increases shown, however, in number of wage earners and horsepower are indicative of a decided growth in the manufacturing activities of the State. The addition of the Federal income tax after 1914 will account for the exceptional

In addition to the above institutions plans were made for the establishment of a State home for dependent, neglected, delinquent, or destitute children and the site proposed was the small city of Toledo, Iowa. Progress was reported by the authorities in the education of the public in respect to the means of preventing tuberculosis. Other tuberculosis and children's clinics were established under the various county medical societies. As to the industries in the various State

institutions, the sales amounted to more than \$1,250,000 and the net profits and reserves to over \$450,000 during the year 1919. The institution farms during that year earned \$351,325.

LEGISLATION. The thirty-ninth General Assembly did not enact any measures of great public interest. This was, to a large extent, explained by the expectation on the part of the members that many of the important subjects were to be dealt with in connection with code revision and the calling of a constitutional convention. The legislature did not carry out the people's mandate for a constitutional convention and it did not make any provision for it. The code commission bills were not acted upon.

OFFICERS. Governor, N. E. Kendall; Lieutenant-Governor, John Hammill; Secretary of State, Walter C. Ramsay; Treasurer, W. J. Burbank; Auditor, Glenn C. Haynes; Attorney-General, Ben J. Gibson.

JUDICIARY: Supreme Court: Chief Justice, William D. Evans; Associate Justices: Truman S. Stevens, Byron W. Preston, Thomas Arthur, Silas M. Weaver, Lawrence DeGraff, and E. F. Faville.

IOWA, UNIVERSITY OF. A co-educational state institution at Iowa City, Iowa; founded in 1847. In the fall session of 1921 there were 4732 students enrolled of whom 2909 were in the College of Liberal Arts; 393 in Applied Science; 304 in Medicine; 278 in graduate courses; 258 in Dentistry; 204 in Law; the rest distributed in the Schools of Pharmacy, the Correspondence School and the school for the training of nurses. In the summer session there were 1750 students enrolled. The faculty numbered 498. The total income was 3,150,288. The library contained 172,000 volumes. In 1921 the University Armory, the Psychopathic Hospital and the Nurses' Home were completed and a chemistry building was under construction at a cost of \$1,000,000. The organization of an Iowa Memorial Building in memory of service men was going on. President, Walter A. Jessup, Ph.D.

IRAQ. The name of a new kingdom set up under British influence in Mesopotamia under Emir Feisal. See MESOPOTAMIA.

IRELAND. The smaller of the two main British Isles. Capital, Dublin. Area, 32,586 square miles; population (1911), 4,390,219, of whom 2,192,048 were males. The British census of 1921 did not include Ireland on account of the disturbed conditions (see GREAT BRITAIN).

PRODUCTION. The number and size of the holdings in 1918 were according to the *Statesman's Year Book* of 1921 as follows:

approximately 15,000,000 acres capable of utilization for agriculture and husbandry. The table on page 375 shows the acreage of important crops and the production in 1919 and 1920.

In 1920 the herds of Ireland comprised: Cattle, 5,019,837 head; sheep, 3,588,892 head; pigs, 980,078 head; goats, 247,187 head; horses, 631,654 head; mules and asses, 253,444 head.

Among the chief industries are shipbuilding, the woolen industry and the manufacture of agricultural machinery, bags and sacking, biscuits, bottles, carpets, cordage, fertilizers, flour, linens, leather, haberdashery, tobacco products, beer, liquors, etc. The centre of the ship building industry is Belfast where the average annual output before the war was about 150,000 tons. In 1919 it was 222,955. Latterly Dublin has become a more important centre of the industry. The linen manufacturers include, tweeds, underwear, hosiery, etc., and there are about 85 woolen mills in the country.

COMMERCE. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce: "Direct" imports into and exports from Ireland are those which are imported into or exported from Ireland directly without being transhipped from some port elsewhere in Great Britain. Before the war about 23 per cent of Ireland's imports and 2 per cent of its exports were "direct." The total value of all imports into Ireland, both direct and otherwise, in 1919 was £158,715,944, and the value of the exports was £176,031,481. "Direct" imports amounted to £26,341,725 in 1919 and £42,590,409 in 1920. The following table shows the countries of origin of these imports in 1919 and 1920:

Countries of origin	1919 £	1920 £
Belgium.....	274,000	4,184,000

HISTORY

SUMMARY. The following were the chief events in the struggle for independence, and the difficulties which grew out of it during the year: At the beginning of the year seventeen Sinn Fein Members of Parliament were in jail, and there was a spirit of great bitterness prevailing on account of the acts of violence on both sides during the preceding month. The Pope on February 12 condemned both the warring parties in Ireland while expressing sympathy with the people. On February 21 six Sinn Feiners were executed at Cork jail. Meanwhile a truce between the British government and the representatives of the new republic was under discussion, and on March 3 Lloyd George declared that all guilty Sinn Feiners would be excluded from the peace discussion. On March 7 Michael O'Callaghan, former Mayor of Limerick, was shot and killed by masked men. A week later six more Irish prisoners were executed at Mountjoy prison. On March 25 the Irish parliament decreed a boycott on certain British imports to go into effect, March 31. A report was published by the American Committee of One Hundred on March 31, laying the blame for the reign of terror in Ireland on the British authorities. On April 28 four men were executed at Cork barracks on charges of attacking the forces of the Crown. On the week ending May 16, thirty-three persons were reported killed in attacks on the Crown forces. On May 21 the Pope made another appeal to both sides to refrain from violence. This was followed May 25 by the burning of the Dublin customs house, causing the death of 18 people, the wounding of 110, and the loss of about \$10,000,000 worth of property. Meanwhile conversations on the subject of a possible agreement were begun, May 6, between the Irish leader, De Valera, and the leader of the Ulster Unionists, Sir James Craig. Three more Sinn Feiners were executed on June 7. As to the Sinn Fein atrocities the Crown representative, Sir Hamar Greenwood, declared on June 16 that 568 murders had been committed by them. On May 26 a large quantity of ammunition which was said to have come from American sympathizers was seized at Dublin, and on June 15 a cargo of machine guns, said to be destined for Sinn Feiners was seized in New York. The Ulster parliament under the Government of Ireland Act was opened by the King, June 22, who made a plea for the return of peace. At the same time 15,000 additional British troops were landed in Ireland. On June 24 De Valera was arrested near Dublin but soon released. On June 25 it was announced that martial law would be established in Ireland by July 12 unless the

Irish agreed to the truce. On June 30 four prominent Sinn Feiners, including the leader, Arthur Griffith, were released from Mountjoy prison. On July 9 the British Prime Minister invited De Valera and Sir James Craig to a meeting in London, and a truce was agreed upon pending the meeting. The first London conference took place, July 14-21, and De Valera submitted the British proposals to the Irish parliament. On August 10 he rejected the proposals with the exception of certain features after ascertaining the will of the representatives of the revolutionary government. On August 13 Lloyd George declared that loyalty to the British Crown could not be compromised. On August 16 the Irish parliament, known as the Dail Eireann, was formally opened and its leaders professed the principles set forth in the American Declaration of Independence. On September 29 Lloyd George invited delegates of Sinn Fein to a meeting on October 11 in order to consider measures for a reconciliation, and on the following day this invitation was accepted by De Valera. The conference opened, October 11. Efforts of a small party in parliament to condemn the government were unsuccessful, and a resolution to this effect was defeated, October 31, by 439 to 43. Throughout November there was much agitation over the question as to the status of the Catholic population in the North of Ireland. Rioting occurred at Belfast again, November 20-26, when 27 persons were reported killed and 92 wounded. On December 1 new proposals were under discussion, involving the appointment of a commission to settle the boundary between the North and South; the granting of the dominion status to Ireland; and noninterference with Ulster. On December 4, the Sinn Fein delegates objected to the territorial integrity of Ulster. On December 6 the Irish delegates signed a treaty in the name of the Irish Free State, leaving to Ulster the right to determine within a month what her status would be. On December 7 the King summoned Parliament to ratify the treaty. On December 8 De Valera and two members of the Sinn Fein ministry objected to the treaty and asked that the subject be referred to popular vote. Both the British and Irish parliaments began to discuss the treaty on December 14. The treaty was ratified in the British House of Commons by 401 to 58, and in the House of Lords by 166 to 47 (December 16). In the Irish parliament there were sharp attacks on the treaty by De Valera and his supporters and it was vigorously defended by Mr. Arthur Griffith and others. The Irish parliament adjourned until January 3. Thus the question was unsettled at the close of the year, but the signs pointed to a majority in

the Irish parliament in favor of the treaty. Important features of the above record are developed in detail in the following paragraphs together with a review of the discussion to which they gave rise.

ELECTIONS. The elections for parliament were held, May 13. With the exceptions of four imperialist candidates returned for Dublin University, all the other members returned—for southern Ireland, one hundred twenty-four in number, were Sinn Feiners who had refused to take the oath of allegiance to the crown and would thus prevent the new parliament for the South of Ireland under the Government of Ireland Act from coming into existence. Among Sinn Feiners elected were: Mr. de Valera, John MacNeill, Michael Collins, Arthur Griffith. The Nationalist leader, Joseph Devlin, was also elected. Members were elected to the northern parliament on May 24.

ULSTER PARLIAMENT. The new Government of Ireland Act, described in the preceding YEAR BOOK, was passed by the House of Commons in December, 1920. It did not go into effect for the South of Ireland where it was denounced by the Sinn Feiners. It provided, as noted in the preceding YEAR BOOK, for a northern and southern parliament and for a central parliament consisting of representatives from both the North and the South. The northern or Ulster parliament came into existence in 1921, Ulster having accepted the act and held elections as above noted, May 24. Its organization took place at Belfast, June 7, under the presidency of the new viceroy, Viscount Fitzalan, formerly Lord Edmund Talbot. The ministry was as follows: Prime Minister, Sir James Craig; Home Secretary, Sir Dawson Bates; Finance, H. M. Pollock; Education, Marquis of Londonderry; Labor, J. M. Andrews; Agriculture, E. A. Archdale. R. W. A. O'Neill was elected speaker. The session of the northern parliament opened, as noted above June 22. The King in his address to the new body appealed to all Irishmen to forgive and forget and strive for conciliation and peace.

NEGOTIATIONS. Steps were taken from the beginning of the year toward an agreement between the two governments. On January 6 Michael O'Flanagan, vice-president of the Sinn Fein, held a conference with Lloyd George, and attempts to arrange a peace parley continued at intervals throughout the early part of the year. On March 7 the Irish leader, Eamonn de Valera, published a declaration which had been agreed upon at the general meeting of the Irish republican parliament and addressed to the representatives of foreign nations demanding self-determination for Ireland. After the failure of the London conference of July 14-21, noted above, negotiations began again early in August between the British government and the representatives of the so-called "Irish Republic" for the working out of some kind of settlement. The correspondence consisting of long letters from the respective parties was published in the press. It began with a letter from Jan C. Smuts, Prime Minister of South Africa, August 4, in which he said that while it was to the interest of Ulster to be included under the United Ireland Constitution, yet, in view of her opposition he advised the Irish representatives to leave her out for the present. They ought to concentrate their efforts upon securing the independent constitution

for the remaining twenty-six counties, and, when this was accomplished, he believed that Ulster would eventually be drawn into the new state. On August 14 notes were made public showing the attitude of Mr. de Valera and Prime Minister Lloyd George. These showed that the British proposals dated July 28 aimed at putting an end to the present conflicts and for this purpose advocated the immediate assumption by Ireland of the status of a dominion. Along with this degree of self-government Ireland should have charge of its own taxation and finance and should possess its own courts, army for home defense, police, postal service, and organizations concerned with education, agriculture, mine, and forestry labor, etc. The British government made only these conditions: The seas around Ireland should be under the control of the Royal Navy and Irish territorial forces should be raised by Great Britain in the same proportion as the military establishments in other parts of the British Isles; no protective duties were to be adopted and Ireland was to be responsible for her share of the debt of the United Kingdom. The reply of Mr. de Valera, August 10, said that he had already declared his opinion at the London conference that the Irish parliament would not accept these proposals and he was still of this opinion. These proposals included conditions which were inconsistent with the vital principle of Irish independence, namely, absolute separation. Dominion status was an illusion, for the degree of independence enjoyed by the dominions was not the result of their legal status as dominions, but of their distance from Great Britain. As to the independence of Ulster he said that it concerned the Irish alone, but that if the problem could not be solved on that basis, he was willing to submit it to arbitration. Lloyd George replied, August 13, that no British government could compromise on the right of Ireland to secede and no such right could ever be acknowledged by it. As to referring differences to foreign arbitration, that must be squarely rejected. He said in conclusion that the government had made these proposals in a sincere desire for peace but could not go beyond them.

After the proposals in respect to Ulster were made known Sir James Craig, the Ulster Prime Minister, set forth the Ulster position in a letter to Lloyd George. After referring to the sacrifices made by Ulster in agreeing to a parliament for Northern Ireland and saying that the Irishmen of the South had repudiated the Government of Ireland Act and were asking for wider powers, he said that Ulster must decline to interfere in the arrangement between Great Britain and South Ireland. Ulster did not stand in the way of peace, but she could not permit any interference with her parliament and her rights. There could not be any meeting between himself and Mr. de Valera until the latter recognized the direct dependence of Northern Ireland on the King and the Parliament of the United Kingdom.

The Irish republican parliament known as the Dail Eireann was formally opened at Dublin, August 16, many well-known leaders being present. Professor John MacNeill was elected Speaker. Mr. de Valera made an address in which he likened the Irish movement to the American Revolution, renewed Ireland's claim to separation and declared that the cabinet of this Irish parliament was the only government recognized by the Irish people.

The parliament went into secret session August 23 to frame a reply to the proposals of the British government. After these deliberations a letter signed by Mr. de Valera was sent to Lloyd George, August 25. This rejected the British arguments that were based on geographical propinquity, and the British claim that Ireland must subordinate herself to British military necessities, saying that if nations that have been forcibly annexed to an empire lose thereby their title to independence, there can be for them no re-birth of freedom. Ireland had not sought war, but, if war were made upon her, she would defend herself. If the British government insisted upon imposing its will by force, the responsibility for the continuance of the conflict would rest upon it. Peace could be secured on the basis of the principle that government depended on the consent of the governed. Lloyd George replied, August 26, with a denial that the British proposal involved the surrender of Ireland's national tradition. He said on the contrary under these proposals Ireland would have complete control over her own national existence and, in fact, be free in every respect of national activity of development, but Great Britain would refuse any demand for absolute independence. He likened the situation to that of the United States during the Civil War. In conclusion he said he was ready to continue negotiations in the hope of finding a basis of agreement. The Irish parliament replied to this, September 2, that the conditions which Lloyd George tried to impose would divide Ireland into two mutually destructive states. This letter brought the Ulster question into the foreground. At this serious juncture Lloyd George who was on a vacation called a cabinet meeting at Inverness, Scotland, September 2. The reply of the government was ready the same afternoon. It declared that government by consent of the governed was the basis of the British constitution, but a conference could not be based on such an interpretation of this principle as would commit the British government in advance to any demand that the Irish representatives might make. The Irish representatives would attend such a conference with a perfect right to discuss the British proposals on their merits and to raise such questions in respect to guarantees as they saw fit. To decline to discuss such a settlement was merely to repudiate all allegiance to the Crown. If that was what the Irish note meant to convey, further discussions would be of no use. Such was the course of the negotiations down to September 12. In the meanwhile the Ulster parliament maintained its firm attitude, the Speaker of the Ulster parliament saying in a public address that any diminution of the rights and privileges of the new Ulster parliament would lead to civil war. From time to time during these negotiations rioting and other disturbances occurred. For example, there were serious riots, August 21, August 29, and August 31, resulting in the killing of fifteen persons and the wounding of thirty-four. The centre of these disturbances was Belfast.

SITUATION IN SEPTEMBER. Lloyd George in a message to the president of the Trades Union Congress at Cardiff indicated that he would not give way on the principle asserted in his reply of September 2 to the Irish representatives. In the same message he sought to conciliate American opinion by appealing to the authority of Lincoln to the effect that bloodshed is preferable to the

breaking up of a political organism whose unity and strength are essential to the liberty of the world. Critics were not slow to point out the great difference between the two situations and to attribute Lloyd George's interpretation of Lincoln's words as a misreading of history, for obviously there was no parallel between relations of the North to the South on the one hand and of the Irish to the English on the other. As to the opinion on the Continent, it was not won over by his phrases. Foreign critics said that on this principle Lloyd George might soon be making equally forcible arguments on behalf of British policy in Egypt, Mesopotamia, and India. During the first part of September the situation was as follows: The British Government seemed determined to refuse any discussion of an independent and sovereign Irish republic and also to refuse to force Ulster to submit to the government of the south of Ireland. On the other hand, the Sinn Feiners were insisting not only that Ireland must be an independent republic but a united and indivisible state to which Ulster, consisting only of a minority, must submit. In the third place, Ulster in its turn was unwilling to recognise any other authority than the British crown and had established a separate government at Belfast. Even if Ireland seceded from the British Empire Ulster was determined to continue as a part of the United Kingdom. Sir James Craig, Prime Minister of Ulster, declared that it was for Mr. de Valera and the English people to come to an agreement in respect to the territory outside his own jurisdiction. When that agreement had been reached he could promise on the part of the north of Ireland a cordial coöperation on an equal footing with south Ireland. Thus there were three distinct points of view and for the time they seemed irreconcilable. The Ulster problem was difficult and the hands of Lloyd George were tied in large measure by commitments to the Ulster Unionists. In short it was a question how London could satisfy Dublin and Belfast at the same time. The Sinn Feiners fully understood this difficulty but in spite of it they remained firm and Mr. de Valera steadily refused to abandon any of his claims. Lloyd George's letter to Mr. de Valera objecting to the reference to an Irish republic proposed a new conference which should take place September 20. Pressure was brought to bear on the Sinn Feiners by many of their friends and they were urged to accept the prime minister's invitation.

THE ULSTER QUESTION. The Sinn Feiners aimed not only at an independent but a united Ireland, and this meant that Ulster must be included in it. The proceedings at the conference were not published, but it seemed evident that the main question turned on the demand of Sinn Feiners either for the inclusion of Ulster or a greater degree of independence for the rest of Ireland if Ulster were left out. It was inferred in the press that this was the basis of the bargaining between the two parties to the dispute. The main points in the Ulster situation were as follows: Geographically Ulster comprises nine counties, but politically it consists of only six. These six counties under the jurisdiction of the new northern parliament had in 1911 a total population of 1,250,531, of whom the Roman Catholics made up 35.19 per cent or 430,161. In the other three counties the Roman Catholic percentage ranged

from 74 to 81. Now in certain parts of the six counties under the new parliament the Roman Catholic percentage is much greater. In Fermanagh the Roman Catholics numbered 34,740 out of a total of 61,836 or 56.18 per cent, and in Tyrone there were 79,015 out of a total of 142,665 or 55.39 per cent. This was a considerable area and despite its Roman Catholic majority it was handed over to the Ulster government. On the principle of self-determination the Sinn Feiners might claim that this region should be taken from Ulster and turned over to southern Ireland. In the elections to the county councils in January, 1920, Fermanagh gave of its 27 seats, 9 to Sinn Fein, 7 to Nationalists and 11 to Unionists, and Tyrone gave out of a total of 28, 14 to Sinn Fein, 3 to Nationalists and 11 to Unionists. In the rural district councils of Fermanagh and Tyrone the Sinn Feiners and Nationalists also had a majority in almost all of the districts, and the same was true of the Boards of Guardians under the Poor Law. The above is sufficient to indicate the difficulty and complexity of the situation.

In July the Prime Minister of Ulster, Sir James Craig, was invited to London for the purpose of coming to an agreement in respect to Ulster, thus implying that the acceptance by Ulster of the conditions of settlement in advance was necessary to any solution of the problem. In November, however, the situation had so far changed that the basis of settlement appeared to be an agreement between the British government and the Sinn Fein representatives to which Ulster was expected to conform. This was characterized by the Ulster partisans as a betrayal of their cause and it was said in the press that the people of Ulster would never consent to an arrangement that would turn Ireland into a dominion and Ulster into a self-governing province in that dominion. This point of view rested on the fact that Lloyd George himself had established the Ulster parliament and guaranteed its independence and its direct relation to England. He therefore was blamed for undoing his own work and breaking his engagements. The division of Ireland into two zones, however, comprising on the one hand the six counties of the north and on the other the twenty-six counties of the south, was put through by the British government in the belief that it could not actually be worked out unless both the south and the north of Ireland supported it. Moreover, it was held by the opponents of Ulster that this northern zone did not really represent the self-determination of the inhabitants for it included several districts in which Sinn Feiners were in the majority and had been determined merely by a group of politicians. It was held by these Irish sympathizers that Ulster had no just ground for refusing to reopen the matter for discussion. Much was said in favor of a solution by turning over the two counties of Tyrone and Fermanagh, the centre of the Sinn Fein majorities, to the southern section and then arranging a form of separation for the rest of Ulster. The objection to this was that in Belfast there would remain a disaffected minority of Catholics and anti-Unionists and that the causes of friction in the future would be increased. On the one hand there was the extreme view of the Sinn Feiners that the unionism of Ulster was of no political significance and on the other the extreme view of many leading English politicians since the Ulster rebellion of

1913 that Ulster must be protected as the centre of loyalty to the Empire. The Unionists of Ulster maintained that they stood for unionism with the Empire. In answer to this their opponents said that the proposed settlement involved Ireland's inclusion in the Empire and that Ulster was therefore in no danger of exclusion. If the republicans after their savage repression in 1916 were ready to accept a solution that would leave them within the Empire, it seemed unreasonable that Ulster should reject this solution. In November, it appeared that Lloyd George had so advanced in the direction of a possible understanding with the Sinn Feiners that the real obstacle that stood in his way was the irreconcilable attitude of Ulster. The general feeling in Liberal circles in other countries, especially in the United States, was that if Ulster persisted in this course, its narrow and selfish attitude ought not to stand in the way of a settlement and that in general the British government had shown altogether too much consideration for the wishes of this small minority.

AGREEMENT IN A CONFERENCE. The Irish leader wrote, September 15, that while his people were ready to enter the conference, he felt it his duty to repeat that his nation had formally declared its independence and recognized itself as a sovereign state. To this Lloyd George replied that an acceptance on this basis would imply an official recognition by the British government of the separation of Ireland from the Empire and its existence as an independent republic. Therefore a conference on this condition must be refused. Nevertheless he left the door open for further negotiations. De Valera replied next that those whom he represented desired above all to set the conference on such a basis as would make a settlement possible, and to this Lloyd George replied, September 18 that a conference was impossible unless the words employed by De Valera in respect to Irish nationality and independence in his letter of the 12th were withdrawn, but that he was ready to meet the delegates as the representatives of the great majority in southern Ireland to discuss the association of Ireland with the British commonwealth. This brought another note from the Irish leader, September 19, in which he protested against the attitude of Lloyd George, but suggested that a properly arranged treaty would end the dispute between the two nations. Such a treaty could not be negotiated if the British Prime Minister imposed conditions which the Irish must regard as involving the surrender of their whole position. He then asked Lloyd George whether his letter of the 7th was intended to demand such a surrender. After a conference with his ministers, Lloyd George sent a note, September 29, including the following new offer: "We therefore send you herewith a fresh invitation to a conference in London on October 11. Here we can meet your delegates as the spokesmen of the people whom you represent with a view to ascertaining how the association of Ireland with the community of nations, known as the British Empire, may best be reconciled with Irish national aspirations." This was followed by a brief acceptance from Mr. de Valera, September 30. The British representatives as announced, October 7, in addition to the Prime Minister were as follows: Lord Birkenhead, Lord Chancellor; Sir Hamar Greenwood, Chief Secretary for Ireland; Austen Chamberlain, Government Leader in the House; Sir Laming Worthing-

ton Evans, Secretary of War; Winston Spencer Churchill, Colonial Secretary; and as an adviser on constitutional questions, Attorney General Hewart. The Irish leaders were Michael Collins; Arthur Griffith, Minister of Foreign Affairs; R. C. Barton, Minister of Economics; Gavan Duffy, representative of the Sinn Féin interest at Rome; and Commandant E. J. Duggan.

THE WHITEHALL CONFERENCE. The meeting of the Irish and British representatives took place at Whitehall, October 11. A short speech by Lloyd George opened the proceedings and general discussion then began at once. Committees were appointed and conferences between them began. The conference finally agreed on the treaty reproduced below, whose ratification by the Irish parliament was pending at the end of the year. The measure of liberty granted to Ireland did not satisfy Mr. de Valera and a minority in the Irish republican parliament. Mr. de Valera along with one of the ministers in the republican government protested bitterly saying that the terms of the London offer were an absolute contradiction to the wishes of the majority of the Irish nation and refused to recommend their ratification by the Irish parliament. In this he was supported by the extremists in Ireland and elsewhere. In the United States the representative of the Protestant Friends of Ireland, declared that the acceptance of these terms would place the Irish people for the first time in eight hundred years in the attitude of submission to a status of inferiority and even servitude and that it left nothing of the magnificent declaration of independence which had been sealed by the blood of the Irish people. A representative Irish paper in the United States declared that Ireland ought not to accept this defeat and representatives of the Irish in France also repudiated the arrangement saying that it made Ireland into a vassal of England. Violent language was used by the minority opposed to acceptance and it was said that for the first time the Irish would have to take as their national hymn, "God save the King." In December, however, it appeared from all accounts that a considerable majority of the Irish republican party was in favor of acceptance.

THE IRISH TREATY. Article I.—Ireland shall have the same constitutional status in the community of nations known as the British Empire as the Dominion of Canada, the Commonwealth of Australia, the Dominion of New Zealand and the Union of South Africa, with a Parliament having powers to make laws for peace and order and good government in Ireland, and an executive responsible to that Parliament, and shall be styled and known as the Irish Free State.

Article II.—Subject to provisions hereinafter set out, the position of the Irish Free State in relation to the Imperial Parliament, the Government and otherwise shall be that of the Dominion of Canada, and the law, practice and constitutional usage governing the relationship of the Crown or representative of the Crown and the Imperial Parliament to the Dominion of Canada shall govern their relationship to the Irish Free State.

Article III.—A representative of the Crown in Ireland shall be appointed in like manner as the Governor General of Canada and in accordance with the practice observed in making such appointments.

Article IV.—The oath to be taken by the members of the Parliament of the Irish Free State shall be in the following form:

"I do solemnly swear true faith and allegiance to the Constitution of the Irish Free State as by law established, and that I will be faithful to his Majesty King George V., and his heirs and successors by law, in virtue of the common citizenship of Ireland with Great Britain and her adherence to and membership of the group of nations forming the British Commonwealth of Nations."

Article V.—The Irish Free State shall assume liability for service of the public debt of the United Kingdom as existing at the date thereof and toward the payment of war pensions as existing on that date in such proportion as may be fair and

equitable, having regard for any just claims on the part of Ireland by way of set-off or counter-claim, the amount of such sums being determined, in default of agreement, by the arbitration of one or more independent persons being citizens of the British Empire.

Article VI.—Until an arrangement has been made between the British and Irish Governments whereby the Irish Free State undertakes her own coastal defense, defense by sea of Great Britain and Ireland shall be undertaken by his Majesty's imperial forces, but this shall not prevent the construction or maintenance by the Government of the Irish Free State of such vessels as are necessary for the protection of the revenue or the fisheries. The foregoing provisions of this article shall be reviewed at a conference of representatives of the British and Irish Governments to be held at the expiration of five years from the date hereof with a view to the undertaking by Ireland of a share in her own coastal defense.

Article VII.—The Government of the Irish Free State shall afford to his Majesty's imperial force (a) in time of peace such harbor and other facilities as are indicated in the annex hereto, or such other facilities as may from time to time be agreed between the British Government and the Government of the Irish Free State, and (b) in time of war or of strained relations with a foreign power such harbor and other facilities as the British Government may require for the purposes of such defense, as aforesaid.

Article VIII.—With a view to securing observance of the principle of international limitation of armaments, if the Government of the Irish Free State establishes and maintains a military defense force, the establishment thereof shall not exceed in size such proportion of the military establishments maintained in Great Britain as that which the population of Ireland bears to the population of Great Britain.

Article IX.—The ports of Great Britain and the Irish Free State shall be freely open to the ships of the other country on the payment of the customary port and other dues.

Article X.—The Government of the Irish Free State agrees to pay fair compensation, on terms not less favorable than those accorded by the Act of 1920, to Judges, officials, members of the police forces and other public servants who are discharged by it or who retire in consequence of the change of government effected in pursuance of the hereof paragraph.

Provided that this agreement shall not apply to members of the auxiliary police force or persons recruited in Great Britain for the Royal Irish Constabulary during the two years next preceding the date hereof. The British Government will assume responsibility for such compensation or pensions as may be payable to any of these excepted persons.

Article XI.—Until the expiration of one month from the passing of the Act of Parliament for the ratification of this instrument, the powers of the Parliament and Government of the Irish Free State shall not be exercisable as respects Northern Ireland, and the provisions of the Government of Ireland Act of 1920 shall, so far as they relate to Northern Ireland, remain of full force and effect, and no election shall be held for the return of members to serve in the Parliament of the Irish Free State for the constituencies of Northern Ireland unless a resolution is passed by both houses of Parliament of Northern Ireland in favor of holding such elections before the end of said month.

Article XII.—If before the expiration of said month an address is presented to his Majesty by both houses of Parliament of Northern Ireland to that effect, the powers of the Parliament and Government of the Irish Free State shall no longer extend to Northern Ireland, and the provisions of the Government of Ireland Act of 1920 (including those relating to the Council of Ireland) shall, so far as they relate to Northern Ireland, continue to be of full force and effect, and this instrument shall have effect, subject to the necessary modifications;

Provided, that if such an address is so presented, a commission consisting of three persons, one to be appointed by the Government of the Irish Free State, one to be appointed by the Government of Northern Ireland, and one, who shall be Chairman, to be appointed by the British Government, shall determine in accordance with the wishes of the inhabitants, so far as may be compatible with economic and geographic conditions, the boundaries between Northern Ireland and the rest of Ireland, and for the purposes of the Government of Ireland Act of 1920, and of this instrument the boundary of Northern Ireland shall be such as may be determined by such commission.

Article XIII.—For the purpose of the last foregoing article the powers of the Parliament of Southern Ireland under the Government of Ireland Act of 1920, to elect members of the Council of Ireland, shall, after the Parliament of the Irish Free State is constituted, be exercised by that Parliament.

Article XIV.—After the expiration of said month, if no such address as mentioned in Article XII hereof is presented, the Parliament of the Government of Northern Ireland shall continue to exercise as respects Northern Ireland the powers conferred upon them by the Government of Ireland Act of 1920, but the Parliament of the Government of the Irish Free State shall in Northern Ireland have in relation to matters, in respect of which the Parliament of Northern

Ireland has not the power to make laws under that act (including matters which, under said act, are within the jurisdiction of the Council of Ireland), the same powers as in the rest of Ireland, subject to such other provisions as may be agreed to in the manner hereinafter appearing.

Article XV.—At any time after the date hereof the Government of Northern Ireland and the Provisional Government of Southern Ireland, hereinafter constituted, may meet for the purpose of discussing provisions, subject to which the last of the foregoing article is to operate in the event of no such address as is therein mentioned being presented, and those provisions may include: (a) safeguards with regard to the collection of revenue in Northern Ireland; (c) safeguards with regard to import and export duties affecting the trade and industry of Northern Ireland; (d) safeguards for the minorities in Northern Ireland; (e) settlement of financial relations between Northern Ireland and the Irish Free State; (f) establishment and powers of a local militia in Northern Ireland and the relation of the defense forces of the Irish Free State and of Northern Ireland, respectively, and if at any such meeting provisions are agreed to the same shall have effect as if they were included among the provisions subject to which the powers of Parliament and of the Government of the Irish Free State are to be exercisable in Northern Ireland under Article XIV hereof.

Article XVI.—Neither the Parliament of the Irish Free State nor the Parliament of Northern Ireland shall make any law so as either directly or indirectly to endow any religion, or prohibit or restrict the free exercise thereof, or give any preference or impose any disability on the account of religious belief or religious status, or affect prejudicially the right of any child to attend school receiving public money without attending the religious instruction of the school, or make any discrimination as respects State aid between schools under the management of the different religious denominations, or divert from any religious denomination or any educational institution any of its property except for public utility purposes and on the payment of compensation.

Article XVII.—By way of provisional arrangement for the administration of Southern Ireland during the interval which must elapse between the date hereof and the constitution of a Parliament and a Government of the Irish Free State in accordance therewith, steps shall be taken forthwith for summoning a meeting of the members of Parliament elected for the constituencies in Southern Ireland since the passing of the Government of Ireland act in 1920 and for constituting a provisional Government. And the British Government shall take steps necessary to transfer to such Provisional Government the powers and machinery requisite for the discharge of its duties, provided that every member of such Provisional Government shall have signified in writing his or her acceptance of this instrument. But this arrangement shall not continue in force beyond the expiration of twelve months from the date hereof.

Article XVIII.—This instrument shall be submitted forthwith by his Majesty's Government for the approval of Parliament and by the Irish signatories to a meeting summoned for the purpose of members elected to sit in the House of Commons of Southern Ireland, and, if approved, it shall be ratified by the necessary legislation.

ANNEX.

An annex is attached to the treaty. Clause 1 specifies that Admiralty property and rights at the dockyard port of Berehaven are to be retained as at present date and the harbor defenses and facilities for coastal defense by air at Queenstown, Belfast, Lough and Loughswilly to remain under British care, provision also being made for oil, fuel and storage.

Clause 2 provides that a convention shall be made between the two Governments, to give effect to the following conditions: That submarine cables shall not be landed or wireless stations for communication with places outside of Ireland established, except by agreement with the British Government, that existing cable rights and wireless concessions shall not be withdrawn except by agreement with the British Government, and that the British Government shall be

entitled to land additional submarine cables or establish additional wireless stations for communication with places outside of Ireland, that lighthouses, buoys, beacons, &c., shall be maintained by the Irish Government and not be removed or added to except by agreement with the British Government, that war signal stations shall be closed down and left in charge of care and maintenance parties, the Government of the Irish Free State being offered the option of taking them over and working them for commercial purposes, subject to Admiralty inspection, and guaranteeing the upkeep of existing telegraphic communication therewith.

Clause 3 provides that a convention shall be made between the two Governments for the regulation of civil communication by air.

IRISH LANGUAGE. See PHILOLOGY, MODERN.

IRON AND STEEL. For 1921 the U. S. Geological Survey estimated the total amount of iron ore mined in the United States, exclusive of that which contained more than 5.5 per cent of manganese, at 29,547,000 tons, as compared with 67,604,465 tons in 1920. During the year 1921 there were shipped from the mines 27,009,000 tons of iron ore valued at \$39,688,000, a decrease in quantity of 61 per cent and in value of nearly 69 per cent as compared with the shipments in 1920. The average value of the ore per ton at the mines for the whole United States in 1921 was estimated at \$3.32; as against \$4.11 in 1920. The stocks of iron ore at the mines, mainly in Michigan and Minnesota, apparently increased from 11,378,794 tons in 1920 to 13,872,000 tons in 1921, or 22 per cent. The output of iron ore in 1921 was the lowest since 1904, when 27,644,330 tons was mined, and as a matter of fact declined in even great proportion than the consumption.

The Lake Superior district produced about 86 per cent of the iron ore mined and shipped in 1921. Here there was mined 25,394,000 tons while shipments aggregated 23,155,000 tons; decreases of about 56 and 61 per cent, respectively, as compared with the quantities mined and shipped in 1920. The value of the ore shipped in 1921 was estimated at \$81,091,000, a decrease of about 68 per cent. These totals exclude manganiferous ore with more than 5.5 per cent of manganese, being chiefly hematite. The amounts include the ore mined and shipped from the Mayville and the Baraboo mines, in Wisconsin, and ore shipped by rail as well as water from all mines. The stocks of iron ore in the Lake Superior district apparently increased from about 10,366,738 tons in 1920 to about 12,575,000 tons in 1921, or 21 per cent. The average value of the ore at the mines in the Lake Superior district in 1921 per ton was \$3.50; in 1920 it was \$4.25.

After the Lake Superior district come the Southeastern States, which include the Birmingham and Chattanooga districts, where in 1921 there were mined 3,022,000 gross tons of iron ore, a decrease of 55 per cent as compared with 1920. The shipments of ore from these states to blast furnaces in 1921 amounted to 2,946,000 tons, valued at \$6,343,000, a decrease in quantity of 56 per cent and in value of 67 per cent as compared with the previous year. The average value of the ore in these States in 1921 per ton was \$2.15; in 1920 it was \$2.88.

In the group of Northeastern States, made up of New Jersey, New York, and Pennsylvania, in 1921 there was mined 668,000 tons of iron ore, and shipped 444,000 tons, a decrease of 68 per cent from the quantity mined and 79 per cent from the quantity shipped in 1920. The average value of the ore in these States in 1921 per ton was \$2.88; in 1920 it was \$4.90.

The iron-ore producing States in the West, Arizona, California, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Washington, and Wyoming, were estimated to have mined and shipped 429,000 tons of iron ore in 1921, a decrease of 42 per cent as compared with 1920. The average value of the ore in this group in 1921 per ton was \$1.96; in 1920 it was \$1.97.

In the other States including Connecticut, Maryland, Massachusetts, and Missouri, where there are small iron mines that produce chiefly hematite and brown ore, about 34,000 tons were mined in 1921, a decrease of 49 per cent as compared with the quantity mined in 1920. The shipments from mines in these States in 1921 were estimated at 35,000 tons, a decrease of 46 per cent from shipments in 1920. The estimated average value of the ore from these States in 1921 per ton was \$3.91; in 1920 it was \$5.09.

Lake shipments aggregated 22,300,726 gross tons as compared with 21,226,591 tons in 1904, with 64,734,198 in the record year 1916, and some 57,000,000 tons in 1920, a decrease of 62 per cent. Taking the average of the ten years prior to 1921 at slightly over 50,000,000 tons the decline in 1921, may be appreciated. Naturally work at the mines early was reduced in the Lake Superior district, and in some cases mines were entirely shut down. In fact half of the ore cargo capacity of the lake vessels was idle and many ore boats did not leave their docks during the season. At the mines wage reductions were in order, the first important movement amounting to a 15 per cent cut taking place on February 1, and later in May and August came further cuts of 20 per cent and 10 per cent, respectively. Outside of the U. S. Steel Corporation mines uniform wage scales to a large extent vanished, and where even work was resumed it was at a reduced scale, and often solely with the object of giving employment to men who otherwise would have been idle. Alive to such conditions in December, some of the large operating companies directed the resident managers to reopen certain properties on the different ranges, and as a consequent result probably from fifteen to twenty mines on the Mesabi, Cuyuna, Gogebic, Menominee, and Marquette ranges were placed in production again on some basis—either reduced wages, reduced time, or both.

Lower ore rates were sought on shipments by rail and decreased dock handling charges also were demanded. As ore shipments were less than the consumption, at the end of 1921 the amount of ore in the lower lake docks and in furnace yards, amounted on Dec. 1, 1921, to 38,300,000 tons as compared with 41,500,000 tons on Dec. 1, 1920.

The production of iron and steel in 1921 in the United States, was the smallest since 1908, the year after the panic of November, 1907. Pig iron production in 1921 was estimated at 16,400,000 tons or about 44 per cent of the 1920 output, while steel ingot production was placed at the end of the year at 19,250,000 tons, or 38 per cent of the total ingot capacity of 50,500,000 tons. Therefore so far as steel was concerned 1921 was a 38 per cent year. The output of steel ingots and steel castings together was probably not far from 19,850,000 tons. Comparison with the five preceding years is made in the accompanying table taken from the *Iron Age* (New York):

	Pig iron, gross tons	Steel ingots and castings, Gross tons
1916.....	39,434,797	42,773,680
1917.....	38,621,216	45,060,607
1918.....	39,054,644	44,462,432
1919.....	31,015,364	34,671,232
1920.....	36,925,987	42,132,934
1921.....	16,400,000 ¹	19,850,000 ¹

¹ Estimated.

There was a great variation in the production of pig iron during the year as will be seen from the following statement of the number and daily capacity of the furnaces in blast at the beginning of each month:

	No. in blast	Daily capacity, gross tons
January 1.....	201	76,540
February 1.....	183	70,500
March 1.....	153	61,850
April 1.....	102	41,530
May 1.....	96	39,105
June 1.....	90	37,085
July 1.....	76	32,195
August 1.....	69	29,175
September 1.....	70	30,170
October 1.....	82	35,650
November 1.....	96	43,500
December 1.....	120	51,665

July a low record of 864,555 tons of pig iron was made, which was the lowest production for 17½ years. In December, 1903, the United States produced 846,695 tons.

The number of furnaces in blast during 1921 declined until August 1, when the low point of 69 was reached. From this point there was a gradual gain with 70 on September 1, 82 on October 1, 96 on November 1, 120 on December 1, and 125 at the end of the year, six new furnaces being blown in during December and one blown out. The 1921 output best can be appreciated by an examination of the figures for daily average production, beginning with January, 1915, as follows:

DAILY AVERAGE PRODUCTION OF COKE AND ANTHRACITE PIG IRON IN THE UNITED STATES BY MONTHS SINCE JAN. 1, 1915—GROSS TONS FROM THE IRON AGE

	1915	1916	1917	1918	1919	1920	1921

December.....	103,333	102,537	92,997	110,762	84,944	87,222	53,196

The increase in open hearth capacity in 1921 amounted to only 247,500 gross tons and can be compared with earlier years when 675,000 tons were added in 1920 and 625,000 tons were added in 1919. There were 8 open-hearth furnaces completed in 1921 as compared with 20 in 1920 and 9 in 1919. The new open-hearth furnaces completed in 1921 were entirely for independent companies and included at the Bessemer plant one 15-ton converter and a 600-ton mixer of the Steel & Tube Co. of America at Indiana Harbor, Ind.

The additions to open-hearth capacity in 1921 were as follows:

Kansas City Bolt & Nut Co., Kansas City, Mo., 1 50-ton furnace; Follansbee Brothers Co., Toronto, Ohio, 4 40-ton furnaces; National Steel Foundries, Milwaukee, Wis., 2 25-ton furnaces, and Adirondack Steel Foundries, 1 25-ton furnace. The Central Iron & Steel Co., Harrisburg, Pa., enlarged 1 50-ton to a 90-ton furnace last year.

At the end of the year there were six open-hearth furnaces with a total estimated capacity of 217,500 gross tons under construction, as compared with 15 of 430,000 projected in 1921 and with 22 of 875,000 tons in 1920. In 1916 there were 91 furnaces projected but their estimated capacity of 4,265,000 tons per year was less than that of the 72 projected for 1917. This compares with 875,000 tons for 1920 and with 1,130,000 tons for 1919.

New installations contemplated for 1922 were as follows: Mansfield Sheet & Tin Plate Co., Mansfield, Ohio, 4 75-ton furnaces; Kansas City Bolt & Nut Co., 1 50-ton furnace and Ohio Steel Foundry, Lima, Ohio, 1 25-ton furnace. The Central Iron & Steel Co., Harrisburg, Pa., plans to enlarge 1 40-ton to a 90-ton furnace.

The United States Steel Corporation and the various independent steel companies, as well as merchant furnaces producing ferromanganese and spiegeleisen, reported the following totals of steel making iron, month by month, together with ferromanganese and spiegeleisen. These last, while stated separately, are also included in the columns of "total production."

PRODUCTION OF STEEL COMPANIES—GROSS TONS

	Total production			Spiegeleisen and ferromanganese		
	1919	1920	1921	1919	1920	1921

Nov....	1,727,656	2,150,075	1,138,789	19,964	26,944	3,525
Dec....	1,916,249	2,047,167	1,276,381	15,718	28,023	3,900

The production of steel ingots during the year 1921 by the thirty companies reporting to the American Iron and Steel Institute was less than half of the output by the same companies during the preceding year and is significant as the companies include 84.20 per cent of the steel-making capacity of the United States. The output from January to December, 1921, inclusive, was 16,826,946 tons, as compared with 34,432,252

tons in 1920, a decrease of 17,605,306 tons, or close to 52 per cent. On a proportionate basis therefore the total output of steel ingots in the United States for 1921 was roughly estimated at 19,984,250 tons, as compared with 40,893,410 tons during 1920, a shrinkage of 20,909,160 tons.

Of the total reported to the institute for the year 1921, 13,125,578 tons were open hearth steel, 3,679,682 were Bessemer, and all other processes comprised 21,686 tons. During December the output of the thirty companies comprised 1,129,174 tons of open hearth, 296,380 tons of Bessemer, and 1539 of other process steel, making in all 1,427,093 tons, as against 1,660,001 tons during November and 2,340,365 tons during December, 1920. The shrinkage in the production of the several grades of ingots during 1921 were, respectively, 13,072,265 tons of open hearth, 4,433,071 tons of Bessemer, and 99,970 tons of "all other."

The high point of ingot production since 1901 was reached in 1917 with an output of 43,619,200 tons, and the 1921 output was the lowest of any year since 1908, a "panic" year, when the production was down to 13,677,027 tons.

The accompanying table shows the monthly production of steel ingots from January, 1920, to and including December, 1921, as reported by the thirty companies reporting to the American Iron and Steel Institute:

	Gross Tons			
	Open hearth	Bessemer	All other	Total
1920

Nov.....	1,294,371	368,912	1,718	1,660,001
Dec.....	1,129,174	296,380	1,539	1,427,093

The consolidation of a number of independent steel companies was actively discussed during the year, and it was recalled that a similar trend was a consequence of the great industrial depression that began in 1893, and resulted in the amalgamations and consolidations in the latter years of that century and early in the twentieth century in 1921 and at the end of the year there was every indication that unprofitable operation would continue for some time. With full opportunity for plant owners and managers to reflect and consider, it was believed that through consolidation there might be secured a saving in overhead and the benefits of mass production through concentrating operations in a given line of product at a particular plant.

The most important consolidation under development at the end of the year involved the following seven companies: Midvale Steel & Ordnance Co., Lackawanna Steel Co., Youngstown Sheet & Tube Co., Republic Iron & Steel Co., Inland Steel Co., Steel & Tube Co. of America, and Brier Hill Steel Co. It was interesting to note that their combined steel ingot capacity was about 20 per cent of the country's total, while that of the Steel Corporation is 45 per cent.

The merger of the Youngstown Sheet & Tube Co., Inland Steel Co., and Steel & Tube Co. of America was also proposed, while a number of smaller mergers and consolidations were preferred. At the end of the year the American Rolling Mill Co. secured the Ashland Iron & Mining Co., Ashland, Ky., with its two blast furnaces, six open-hearth furnaces, sheet mills, and coal and timber lands.

For excellent and obvious reasons during the year 1921 there were few if any serious labor troubles, although there were many reductions in wages at iron and steel works. Early in 1921 there were cuts of 20 to 25 per cent at independent steel mills, but the Steel Corporation kept up its scale later and made its first wage reduction on May 16, amounting to 20 per cent. This reduced common labor from \$5.06 to \$4.05 per day. Salaries were reduced also. Up to that time the Corporation had adhered to its schedule, announced Feb. 1, 1920, which recorded the ninth advance since Jan. 1, 1916. Further evidence of conditions was that the Steel Corporation abolished overtime on July 16 and on August 29 made another reduction, bringing the wage of common labor to \$3 per day. At some Eastern Pennsylvania plants the wages of common labor went as low as \$2 per 10-hour day, or to the level of 1915. At some Central Western works the rate for common labor declined to 25 cents per hour as against 30 cents at Steel Corporation plants. Unemployment was a conspicuous feature in many steel works communities during the year. See UNEMPLOYMENT.

The United States Steel Corporation on Dec. 31, 1921, had on its books unfilled tonnage amounting to 4,268,414 tons or 17,872 tons in excess of the amount on November 30. On Dec. 31, 1920, the unfilled orders amounted to 8,148,122 tons, showing the depression in the steel industry during 1921. There was an increase of business in December, 1921, which promised greater activity during the ensuing year.

The decline in exports in 1921 was also marked and is indicated in the accompanying table:

EXPORTS OF IRON AND STEEL FROM THE UNITED STATES, GROSS TONS

	1918	1919	1920	1921

ELECTRIC METALLURGICAL IRON AND STEEL. The year 1921 so far as the United States and Canada were concerned, was one of development in the number and use of electric furnaces. In particular there was a larger application to the making of manganese steel castings and to the production of iron castings from electrically melted iron, manganese steel and gray iron castings sharing with plain steel products the newer activity of the year in this field.

From Jan. 1, 1921, when the United States was said to have in operation 356 electric furnaces of all types, and Canada 43, to the end of the year the number had increased to 388 in the United States and 50 in Canada. On July 1, 1913, there were estimated to be only 19 such furnaces in the United States and 3 in Canada. The total number of electric iron and steel furnaces in the world on Jan. 1, 1921, was estimated at 961. A number which by the end of the year had increased above 1000 although figures for Europe and Asia were not available.

The names and types of the different electric steel furnaces in use in the United States and Canada in 1921 are shown in the accompanying table:

TABLE OF THE NUMBER OF ELECTRIC STEEL FURNACES IN THE UNITED STATES AND CANADA, 1921

BRITISH IRON & STEEL INDUSTRY. The acute depression in the Iron and Steel Industry in Great Britain during 1921 was such as to be compared in the memories of the older iron masters and trade historians with that of 1879, which marked the most disastrous period that British iron and steel interests ever had been called upon to face. The transition from prosperity to depression was abrupt and the lowest level of production for many years was reached. Prices collapsed and furthermore with disturbed conditions of exchange foreign customers were unable to take their normal proportion of British exports. To make a bad matter worse, continental iron and steel producers were invading British home markets, France, Belgium, and Germany being able to undersell not only in foreign countries but in home territory. This is emphasized by the statement that while in the year ended Oct. 31, 1920, the exports of

pig iron from the Tees were 470,794 tons, in the next twelve months they declined to 125,730 tons. On the other hand, imports which in the same statistical year in 1920 amounted to but 4668 tons, in 1921 increased to 78,293 and towards the latter part of the year imports were far in excess of both foreign and domestic shipments. The high prices were the first circumstance of the ensuing slump, and then came the coal strike which further added to the number of furnaces going out of blast. The industry was thus prostrated and even after work was resumed in October there was less than half the pig iron produced on the northeast coast that was turned out in March just before the strike. In the Cleveland district toward the end of the year 1921, there were only about 24 furnaces in blast as compared with 72 working at the end of 1920. Prices had fallen, for example No. 3 Cleveland G. M. B. pig iron was quoted at 225 shillings at the beginning of 1921 while by December it had declined to 100 shillings. The wage of blast furnace men and ore miners also fell during the year, employees voluntarily submitting to or suggesting reductions below the previous guaranteed minimum. The following table indicates the price changes in shillings during the year so far as they relate to No. 3 Cleveland G. M. B. which is the standard quality upon which all wage ascertainment are based:

1921	Home	Export
January 1.....	225	247½
January 7.....	215	235
January 25.....	215	220
February 1.....	195	200
March 1.....	180	155
April 5.....	120	125
November 1.....	110	115
November 28.....	100	105

Those of the British steel makers that thought the prevailing high prices at the beginning of 1921 would continue were doomed to disappointment. Continental competition began to make its presence felt with ever increasing force, beginning by under-cutting in the sheet trade and soon many foreign markets were lost. There were small cuts of price but not until towards the end of the year was any radical reduction made, and even then many British plants were forced to close for lack of orders. With reduced prices British makers were able to keep some plants partly employed in the manufacture of semi-finished steel, and in shapes particularly some business was done at no profit. Of course there was little call for steel in shipbuilding during the year. The tinplate industry even with falling prices was more active, America being the only competitor of consequence. Here there was considerable export business and Wales was able to sell more cheaply than other producers in the world's markets.

The following comparisons of prices per ton of leading iron and steel products are quoted from the British correspondence of the *Iron Age*.

	Dec., 1920		Dec., 1921	
	£	s.	£	s.
Steel ship plates.....	25	0	10	10
Steel joists.....	24	0	10	0

GERMAN IRON AND STEEL INDUSTRY. The German iron and steel industry continued into 1921 the prosperity of the preceding year and concluded the month of December with active business and orders ahead, though confessedly many of these were speculative and likely to be canceled with a change of conditions or markets. At the beginning of 1921 mills were working on old orders and while stocks were ample they were being rapidly turned over. With the exception of coke all raw materials were available in plenty. The anticipated cut in the official prices promised for March was deferred, but other conditions, in large measure political, were influential and demand and prices softened until a minimum was reached toward the middle of May, from which for most products there was reaction. Of course with the decline of German exchange prices rose and there was an active demand.

German exports were active during the year, Holland being the largest consumer, taking about 20 per cent of all iron and steel commodities or 190,431 tons out of a total of 935,319 exported in the period May–September, 1921, that being the only time for which the Bureau of Statistics had assembled full figures at the end of the year. Much material was sent to the Far East, pig iron in large amounts to the United States and railroad track supplies to Northern Russia. The Saar district imported 21,578 tons or 27 per cent of the total of pig iron. The United Kingdom was also a good customer in some months. It was a remarkable fact for the German iron and steel industry that in 1921 profits had rather increased than diminished. For some of the principal works profits and dividends were as follows, figures in parentheses denoting 1919–1920 returns: Phoenix 108,285,000 marks (47,687,500) and 25 (20) per cent Gelsenkirchner Gusstahl, 12,297,000 m. (4,950,600) and 16 (10) per cent. Mannesmann Tube Co., 77,354,500 m. (46,616,600) and 30 (20) per cent. Gutehoffnungshütte, 60,106,000 (40,550,000) m. and 24 (16) per cent. Rheinische Stahlwerke, 19,786,600 m. (14,087,200) and 20 (20) per cent. A. E. G., 81,581,000 m. (44,675,000) and 16 (14) per cent. Prices of commodities in Germany in 1921 meant but little depending as they did upon the value of the mark, nevertheless the accompanying monthly tabulation for different steel products is of interest.

PRICES OF STEEL IN MARKS PER METRIC TON, 1921

	June	July	Aug.	Beginning of Sept.	Oct.	Nov.	Dec.
Billets.....	1,420	1,300	1,600	1,900	2,350	3,600	4,800
Bar iron.....	1,800	1,800	2,050	2,700	3,250	4,200	6,600
Sheets, heavy.....	1,850	1,750	1,900	2,200	2,700	4,100	6,200
Sheets, medium.....	1,900	1,800	1,960	2,500	3,100	4,600	7,400
Plates, light.....	2,000	1,850	2,300	3,100	3,900	5,300	14,000
Wire rods.....	1,700	2,000	2,050	2,700	3,000	4,650	7,300

On the other hand, compared with finished iron and steel products, pig iron increases were distinctly behind all the time except in the last two months. Near the end of the year, prices were again raised by an average of 1000 marks per ton, the new prices being shown in the table below:

from Trieste and Carniola to the Adriatic sea; since the war acquired by Italy. Area, 2035 square miles; population, according to the latest available figures, 404,309. In the Austrian province of Istria, according to the census of Dec. 31, 1910, 43.52 per cent of the inhabitants speak

PRICES OF PIG IRON IN MARKS PER METRIC TON

Hematite.....	79.50	314.50	1,718.50	1,816	1,816	2,700	3,891
Foundry, No. 1.....	75.50	250.00	1,324.50	1,560	1,560	2,200	3,326
Foundry, No. 3.....	70.50	249.00	1,323.50	1,484	1,484	2,124	3,250
Steel-making.....	79.00	240.00	977.00	1,535	1,485	1,930	
Spiegeleisen.....	75.00	240.00	1,017.00	1,708	1,733	2,021	

Prices for the last two grades had not been announced at the end of the year on account of the readjustment of Siegerland ironstone prices.

There was no question but that the iron and steel industry in Germany in 1921 was conducted with rare sagacity both financial, and administrative and technical. In the first place integration and consolidation were the order of the day, and with the elimination of waste in every possible manner there were a studied effort at cutting production costs by scientific research. Profits were put away in special reserve and sinking funds, reconstruction, new erections and equipment were the regular procedure, and instead of paper currency or book profits every effort was being made to get them reduced to substantial and material form where they would aid both present activities and future development. See METALLURGY.

IRONS, JAMES ANDERSON. Army officer, died in Italy, July 20. He was born at Philadelphia, Pa., Feb. 21, 1857, graduated at the United States Military Academy in 1879 and had risen to the rank of Major of Engineers in the Volunteer Army, June 13, 1898; was honorably discharged in the following year and entered the regular army in which he became Inspector General, Feb. 28, 1901. He was in the campaign against Santiago, Cuba, in 1898 and in the actions at El Caney, San Juan, and the siege of Santiago and served also in the Philippines. In 1907-10 and 1914-17 he was military attaché to the American embassy in Japan and on the outbreak of the late war was military observer in China during the Japanese campaign against the Germans. He was later in command at Camp Lewis, and Washington, Camp Greene, N. C., and the embarkation camp at Camp Merritt, N. J., in 1918. In the course of the same year he was also at Camp Beauregard, La., Camp McClellan, Ala., and Camp Gordon, Ga. After Feb. 24, 1919, he was General of the recruiting service.

IRRIGATION. See RECLAMATION AND DAMS.

ISRAEL, ROGERS. Bishop, died, January 11. He was born at Baltimore, Md., Sept. 14, 1854, and graduated at Dickinson College, Pa., in 1881. He was ordained priest in the Protestant Episcopal Church in 1886 and was rector for several years at Meadville, Pa., and Scranton, Pa., respectively, till 1911 when he was consecrated bishop of the diocese of Erie, Feb. 24, 1911. He served as a deputy in five general conventions.

ISTRIA. Formerly a crownland of the kingdom of Austria, consisting of a peninsula extending

Croatian; 38.15 per cent, Italian; 3.3 per cent, German. Capital, Capodistria, with a population of about 9000 in 1910.

ITALIAN. See PHILOLOGY.

ITALIAN SOMALILAND. The territory on the east coast of Africa constituting a colony and three protectorates of Italy, extending from British Somaliland to the Juba river. Area, about 139,430 square miles; population, about 650,000. The colony, formerly called Benadir, is now officially termed Southern Italian Somaliland. The three protectorates are: The Sultanate of the Mijertins, extending from the Gulf of Aden to Cape Gabbee on the Indian ocean; the territory of the Nogal, lying between Cape Gabbee and Cape Garad; and the Sultanate of Abbia, extending from the latter point to the northern boundary of the colony. The budget for 1920-21 balanced at 10,977,000 lire. The protectorates are each under an Italian commissioner, resident at its capital; and the colony is under a civil governor, resident at Mogadisho, the capital. Governor at the beginning of 1921, Carlo Riveri.

ITALY. A constitutional monarchy of southern Europe, comprising: Italy, proper, the islands of Sardinia, Sicily, Elba, and about seventy small islands, together with territory on the eastern coast of the Adriatic acquired under the treaty of St. Germain and by arrangement with Jugoslavia in 1920. Area before the war, 110,632 square miles; population, estimated Jan. 1, 1915, 36,120,118. For details relating to Italy before the war, see preceding YEAR BOOKS. The population was estimated in 1920 at 36,099,657. The area acquired by Italy under the treaty of St. Germain was placed at 7350; and the population at 1,408,296. The emigrants in 1919 numbered 243,417 of whom 144,524 went to European or Mediterranean countries and 98,893, to countries overseas. Italians returning to Italy in 1919 numbered 89,081 of whom 9025 were from the United States. Capital, Rome, with a population estimated, Jan. 1, 1915, at 590,960. Other large cities: Naples, 697,917; Milan, 663,059; Turin, 451,994; Palermo, 345,891.

EDUCATION. No later figures for elementary education were available than those given in the preceding YEAR BOOK which placed the public elementary schools in 1916 at 120,196 with 75,993 teachers and 3,792,024 pupils. In 1917-18 the students in the universities numbered 33,798.

AGRICULTURE. The following table shows the acreage and production in hundred-weights of the principal crops for 1919 and 1920:

	Acreage		Produce in cwts.	
	1919	1920	1919	1920
Wheat.....	10,894,000	11,262,000	92,296,000	76,932,000
Barley.....	486,500	500,000	3,626,000	2,556,000
Oats.....	1,142,750	1,172,500	10,080,000	7,032,000
Rye.....	276,500	285,750	2,322,000	2,306,000
Maise.....	3,757,250	3,753,250	43,498,000	45,366,000
Rice.....	329,250	279,750	9,734,000	9,024,000
Beans.....	979,000	1,068,000	5,948,000	5,190,000
Potatoes.....	770,250	725,500	27,726,000	28,446,000
Sugar beetroot.....	107,500	115,000	28,000,000	24,000,000
Vines ¹	10,759,000		726,000	930,468
Olives ¹	5,736,750		352,000	418,000

¹ Produce in thousand gallons.

There was a prolonged drought in 1921 which seriously affected winter wheat and indicated an increase in the imports of foreign grain in the following year. Another effect of the drought was the shortening of working hours owing to the insufficient water supply for hydro-electric purposes.

ECONOMIC CONDITIONS. On August 1 Italian official records showed a total of unemployed in the country of 315,000 men, 98,000 women—a total of 413,000. This included all classes of workers, industrial, agricultural, and office employees. The increase of unemployed was 163,000 since May 1 and 26,000 since July 1. The total was approximately equal to April, 1919. Metal working, textile and building industries were the ones apparently most affected. On November 1 unemployment was placed at 492,000; and it was reported, besides, that 130,000 were working on part time. The number of unemployed, December 1, was 512,000. To relieve the situation the government appropriated 268,000,000 lire, to be expended on bridges, roads, hydraulic works, and other public works. One of the consequences of the drought was the lack of sufficient water supply to continue industrial plants at full running capacity. This reduced the number of working hours considerably in certain industries. There were a number of important strikes during the year, the last being that of the metal workers' union in the Trieste district, which seriously affected the shipyards. An agreement was reached with the manufacturers in December.

COMMERCE. Statistics covering Italy's foreign trade during 1920 indicated considerable progress when compared with those covering the past few years, although it was not yet possible to reach the equilibrium between imports and exports established in prewar years. Imports for 1919 were 16,624,000,000 lire, and for 1920, 15,861,000,000. Exports for 1919 were 6,065,000,000 lire, and for 1920, 7,803,000,000. The increase of nearly 2,000,000,000 lire over 1919 in export values is not to be attributed to any increase in the productive activity of Italian industries, but rather to the high prices caused by the depreciation of the lira, since the rate of exchange favored exports to the same extent that it discouraged imports. On the other hand an appreciable reduction in import values had the effect of reducing the commercial balance deficit for 1920 to a little more than 8,000,000,000 lire, while in 1919 and 1918 the deficit amounted to 10,600,000,000 and 12,700,000,000 lire, respectively.

The United States still continued to lead by a large majority all other nations in the matter of imports, having furnished Italy during the year under review with 30 per cent of total imports,

although her position had considerably weakened when compared with 1919, in which year 44 per cent of total imports came from the United States. France, on the other hand, nearly doubled her imports into Italy, having sent across the frontier goods to the amount of 1,333,000,000 lire as against 710,000,000 lire in 1919. Great Britain showed a gain of 35,000,000 lire over the previous year. The somewhat large decrease in import values from the United States is accounted for not only by the low value of the lira in relation to the dollar but also by the reopening of old markets in ex-enemy countries. In the matter of exports more or less notable gains were made to all countries, with the exception of France and Tripoli, the largest increases being to the Argentine Republic, Switzerland, the United States, Brazil, Egypt, British India, and Spain, in the order named.

In 1913 Italy imported from Germany goods to the value of 612,464,000 lire and exported to Germany goods to the value of 338,338,000 lire. The corresponding figures for 1920 were 821,536,000 and 380,274,000, respectively. In general the trade had resumed its prewar course. From the above figures it appears that the total imports into Italy increased in value 34.2 per cent over those in 1913 while the exports to Germany increased only 12.4 per cent. The difference was chiefly due to the heavy depreciation of the mark in terms of the lira throughout 1920. For commercial treaties, see below under *History*.

FINANCE. According to the estimates of Italian economists in April, the average inhabitant applied about 18.28 of his mean annual income to the payment of taxes or to charges resulting from government monopolies. Of this percentage 7.17 consisted of direct taxes and surtaxes on income and property, and 6.82 consisted of indirect taxes on articles of consumption and state monopoly receipts, the rest being taxes on property transfers and business operations and taxes imposed by provinces and communes. This average was based on a population of 37,000,000 and on estimates indicating that the total national income came to 60,000,000,000 lire.

The budget figures for three years with their deficits are as follows:

Years ending June 30	Total revenue, lire	Total expenditure, lire	Difference, lire
1918-19.....	22,080,185,522	33,470,204,060	— 11,390,018,538
1919-20.....	5,699,765,528	6,259,482,860	— 559,717,332
1920-21 ¹	12,349,018,815	24,988,792,859	— 12,639,774,044

¹ Estimates.

The chief sources of ordinary revenue, according to the budget estimates for the year ending June 30, 1921, were: The tobacco monopoly, income tax, registration tax, excise, stamps, customs, post office, and succession duties. At the close of the year the financial situation was improving but estimates of future needs were doubtful inasmuch as great differences had been shown between the budget estimates for the fiscal year ending June, 30, 1921, and the actual results obtained. To meet the deficit an increase of taxation on farm property was under consideration.

SHIPPING. The merchant marine of Italy

comprised 747 steamships of 624,125 tons (Jan. 1, 1918); and 4464 sailing vessels of 261,769 tons (Jan. 1, 1917). In November, 1920, there were under the control of the Italian government 610 steamships of 2,428,466 gross tons.

RAILWAYS. In December, 1920, the date of the latest available data, the total mileage of the Italian railways was 11,749 miles. In the annexed regions, Venesia Giulia and Venesia Tridentina, there were about 528 miles and 328 miles, respectively, which were owned by the Austrian Railway Company "Sudbahn Gesellschaft" but which were operated by the Italian State Railway Administration. The question of transferring the shares owned by the Austrian capitalists to the Italian State Administration was under discussion during the year. The Italian railways, it will be recalled, were owned and operated by the government, as the State in 1905 took over the railways in Italy and Sicily, with the exception of only very few secondary lines which were still under private ownership. The Sardinian railways were acquired in 1915.

The Italian railways since 1915 had been operated at a loss and it was estimated that for the year 1920-21 the loss would be \$280,000,000, the revenues being about \$600,000,000 and the expenses \$880,000,000. Although in Italy, as elsewhere in Europe, freight and passenger rates were increased with a view of reducing the 1920-21 deficit and eliminating any possibility of a deficit in 1921-22, the result was not increased revenues but a reduction in traffic. During January and February, 1921, the passenger traffic decreased from 23 to 58 per cent as compared to the traffic of November and December, 1920; during the same period freight traffic decreased by about 50 per cent.

In Italy as elsewhere also there was a large increase in the number of railway employees. These had increased in number from approximately 150,000 on June 30, 1914, to 211,000 on March 31, 1921, or an increase of 41 per cent. At the end of 1921 the increase was about 67 per cent. In the year 1913-14 there were 1243 employees per million train-kilometres and in 1921 there were 1878. This matter was so important and vital that at the end of the year a special committee made up from the House of Representatives and the Senate, as well as representatives of the government employees, appointed by the government to reorganize the railway administration with a view to reducing expenses, was endeavoring to make a large reduction in the number of railway employees.

Freight rates were increased by 400 per cent above the rates of 1915 while the passenger fares were increased, for first-class, 350 per cent; second-class, 250 per cent; and third-class, 120 per cent. A law was passed for the reorganization of the freight railway tariff. The old tariff, approved in 1884, had 770 items for the classification of the freight, while the new tariff has only 77. The new schedule followed the Belgian system.

It was the general consensus of opinion that railway rates were too high to serve a useful purpose as commerce was being reduced or being shipped by motor trucks which in many cases handled freight at about one-half the rail rates.

In Italy schemes for electrification were actively under consideration and plans were being dis-

cussed to involve some 3000 miles of line. These plans naturally depended upon the development of hydro-electric stations as Italy of course has no coal of its own. In 1915 there were 329 hydro-electric plants of over 300 horsepower and these produced 935,000 horsepower. In 1920 there were 383 such plants with 1,152,120 horsepower capacity, while in 1921 there were under construction 54 additional plants with a capacity of 359,210 horsepower. Furthermore plans had been made for still further plants with about 950,000 horsepower capacity though this work had been impeded and delayed by the prevailing bad financial conditions, both national and commercial.

There was a notable increase in the mileage of railways under electric operation and where in August, 1920, there were 235 miles of such line, by June, 1921, there had been added 56 miles. It was estimated that by June, 1922, another addition of 213 miles would be made, making a total of 504 miles. On Jan. 1, 1922, work involving 521 miles of line was to be started in northern Italy, connecting Genoa, Pisa, Florence, and Bologna. The electrification of the line between Bologna and Milan (134 miles) was authorized during the year.

The various large electrification schemes which would be in operation by July, 1922, it was estimated, would effect a saving of 1000 tons of coal per day.

There was a diversity of systems installed and under construction. In northern Italy the three-phase at 16 cycles was to be used whereas in central Italy the system was to be three-phase at 46 cycles. In southern Italy, use will be made of continuous current.

One note of the year was the improvement in passenger-train service on the Italian State Railways. The railway administration improved the running time of trains between Rome and other principal cities of Italy, at the same time increasing the number of trains and adopting schedules which would eliminate delay in making connections. On October 26, communications between Rome and Berlin was shortened by six hours, two trains following the Bologna-Brenner route and covering the distance in 40 hours, instead of 46 as heretofore.

To stimulate passenger traffic, various reduced combination, trip, tourist, and commercial tickets were placed on sale.

With the deficiency of rolling stock Italy benefited when the conference of the states of the former Austro-Hungarian Monarchy at Cortorose decided that 2000 Austrian cars were to be transferred to the Italian State Railway Administration.

ARMY. Military service is compulsory and universal, beginning at the age of twenty and lasting for nineteen years. The period of service in the permanent army is two years for all arms and after that the men are transferred to the reserve for eight years and then for four years to the mobile militia, after which they remain for seven years in the territorial militia. Each army corps consists of two divisions, and each division of two brigades of infantry, each having three battalions along with artillery, engineers, and auxiliary services. The strength of the active army, Jan. 1, 1921, was placed at 250,000 men. Considerable Italian forces are stationed in Libya, Eritrea, and Italian Somaliland.

NAVY. The following table from the *Statesman's Year Book* of 1921 shows the classification of vessels at the beginning of 1921:

	Completed at end of		
	1919	1920	1921
Dreadnaughts.....	5	6	5
Pre-Dreadnaughts.....	6	6	4
Armored cruisers.....	5	5	5
Protected cruisers, scouts, and flotilla leaders.....	23	23	20
Torpedo gunboats, etc.....	4	4	2
Destroyers.....	48	50	49
Torpedo boats.....	74	74	86
Submarines.....	73	80	50

GOVERNMENT. Executive power is vested in the king, acting through a responsible ministry; and legislative power, in the king and parliament, the latter body consisting of two chambers, namely, the senate composed of princes of the royal family, 21 years of age or over, and an unlimited number of members, nominated by the king for life; and the chamber of deputies containing 508 members, elected on the basis of universal suffrage, male and female, and proportional representation. The number of enrolled electors in 1919 was 11,415,441. The chamber after the elections of May, 1921, was distributed as follows: Constitutionalists, 275; Socialists, 122; Catholics, 107; Communists, 16; Republicans, 7; Germans, 4; Slavs, 4. The ministry at the beginning of 1921 was constituted as follows:

President of the Council and Minister of the Interior.—Signor Giovanni Giolitti; Foreign Affairs, Signor Carlo Sforza; Colonies, Signor Luigi Rossi; Justice and Ecclesiastical Affairs, Signor Luigi Fera; Treasury, Signor Ivanoe Bonomi; Finance, Signor Francesco Tedesco; War, Signor Rodino; Marine, Signor Giovanni Secchi (Senator); Public Instruction, Signor Benedetto Croce; Public Works, Signor Peano (Liberal); Agriculture, Signor Micheli (Catholic); Industry and Commerce, Signor Giulio Alessio; Labor, Signor Arturo Labriola; Posts and Telegraphs, Signor Pasqualino Vassallo; Minister of the Liberated Provinces, Signor Giovanni Raineri.

HISTORY

CHANGE OF MINISTRY. On April 6 the king dissolved parliament and ordered new elections which were held, May 16, with the following results: Coalition (Giolitti Bloc), including Liberals, Liberal Democrats, and Progressives, 265; Socialists, 134; Popular party (Catholic), 101; Republicans, 10; Nitti Liberals, 15; Slavs, 6; Germans, 4. The Giolitti ministry resigned, June 27, on account of attacks on the policy of the prime minister when he had been foreign minister in his negotiations with Jugo-Slavia, and a new government was formed under Bonomi.

THE FASCISTI. During 1920 as an offset to the Red movements, a scattering, voluntarily organized movement came into existence whose principles were known as the *Fascisti*. They had no definite programme and were in fact of widely differing political views but they were in general animated by a strong national spirit. This spirit was illustrated by the Fiume episode which was the occasion of many patriotic demonstrations. The name *Fascisti* was taken from the Latin *Fasces*, and they took the Roman emblem of an axe in a bundle of rods as the official sign of the

movement. After the Fiume affair the *Fascisti* directed their efforts to counteracting the designs of the extreme Communists and Socialists. (An account of the terrorism exercised by the Red groups will be found in the preceding *YEAR BOOK*.) The provinces that suffered most were Emilia and Romagna, where a dictatorship of the proletariat was set up after the armistice and lasted for two years. In these provinces which were solidly socialistic, landowners and their agents were boycotted and a system characterized as communistic government by blackmail came into existence. The central government was regarded by many as criminally negligent and to supply the necessary vigor of action the *Fascisti* organized a repressive movement in these northern provinces against the abuses of the radicals. Bands of young men seized Socialist headquarters and terrorized in their turn the Socialist population. At the time of the election in May the *Fascisti* were reputed to have organizations in all the towns of northern and central Italy.

INDUSTRIAL DIFFICULTIES. On January 25 a plan of control over the great industries by the workers themselves was published by the prime minister as a means of bringing to an end the conflict between labor and capital. The Communists and the patriotic organization known as the *Fascisti* came into conflict, February 28, in Florence, Palermo, and Spezia. On April 29 the *Fascisti* made an attempt to seize the government of Fiume. Another severe conflict took place between the Communists and the *Fascisti* at Rome, July 28, on the occasion of a general strike. Early in November there was a strike on the railways which resulted in disturbances in Rome. The strike was followed by a declaration of a general strike, and the city for a time was without newspapers, the employees in the newspaper offices having joined the strikers. The movement was largely directed against the *Fascisti*, the trades unions declaring their intention to continue the strike until all the members of the *Fascisti* had left the capital. On November 12 a collision took place in the streets of Rome between the railway workers and the *Fascisti*, resulting in the killing of four persons and the wounding of thirteen. There was a printers' strike at Rome in November which resulted in four days of rioting, in the course of which six persons were reported killed and over one hundred, wounded. It came to an end November 14.

POLITICAL CONDITIONS. In general there was a more conservative spirit in evidence during 1921 and comparative calm in political circles. The Popular or Catholic party condemning the extremists who had wished to unite with the Socialists and the expression of the liberal views on the part of the Vatican tended to support the government. The Communists appeared to be losing ground. Their attempt to develop a military organization which would offset the *Fascisti* proved unsuccessful, being put down by the government police so effectively that the *Fascisti* had no excuse for violence. Parliament began its recess, August 6. One of the members of the Parliamentary group of *Fascisti* issued a statement in which he sought to explain their programme and prevent misunderstandings. Attempts of the Communists to spread their propaganda were offset to some extent by the agitation

of the moderate Socialists, and at Turin where a Communist dictatorship had been set up the Socialists came into conflict with them and got the better of them. On August 20, the Communists issued a manifesto calling a general strike. This was opposed by the Labor Confederation which formerly had been on the side of the radical element. A Socialist Congress was appointed to meet at Milan in October.

Fiume. Gabriele D'Annunzio who in December, 1920, had persisted in resistance against the Italian government left Italy for Paris, Jan. 18, 1921, after the opposition of Fiume was overcome by the Italian troops and the new government set up. A constituent assembly was held in Fiume, April 24 and the Nationalists were completely defeated. The end of the Fiume adventure was marked by the definite withdrawal on September 7 of the soldiers of D'Annunzio, and the Italian authorities took command. The other powers were assumed by a special Italian commissioner who began the work of organising the government of Fiume.

FOREIGN AFFAIRS. Progress was made in removing causes of friction between Italy and Jugo-Slavia through the work of commissions under the treaty of Rapallo. One of these problems, namely, the fishery question which involved Italian fishing rights on the Dalmatian coast was regulated on October 14 by an agreement signed by Italian and Jugo-Slav commissioners. According to this the Italian fishermen were to possess the same rights that they had acquired under the agreement between Italy and Austria in 1906 provided that the catch was taken to Italian markets. Another problem was that of Porto Baros which was turned over to the Fiume government to be adjusted directly with the Jugo-Slav government. During the year there were evidences of a spirit of good-will toward the United States, and it was understood that Italy would support President Harding's programme in the coming Disarmament Conference.

The Italian and French governments drew further apart in their respective policies during the year, and there was evidence of ill-feeling among both populations as well as unfriendliness on the part of official classes. For details, see the articles, **FRANCE**, **WAR OF THE NATIONS**, and **TUNIS**. As to the outbreaks among the people as on the occasion of the French military visit (see **FRANCE**) and similar incidents, they led to no open rupture and were explained away. There were unfriendly demonstrations before the French embassies and consulates at Rome, Turin, Naples, and other cities, November 25-28, which arose from an alleged remark made by M. Briand to the disparagement of the Italian army which was subsequently denied by competent authorities. The tone of press comment both in Italy and in France continued to be bitter to the close of the year.

A treaty with the Russian Soviet government was under consideration in the latter part of the year. Progress on it was retarded by the action

of the executive commission of the Moscow Third International which on November 15 condemned the Socialist Congress in Milan for having failed to proscribe certain Italian Socialists whose course was disapproved by the Russians. After the Chamber opened on November 24 it was learned that a treaty had been concluded with the Angora government of the Turks similar to the one negotiated in London in the spring, but unratified.

At last the commercial agreement between Italy and Soviet Russia was signed, December 26, including the following provisions: Free import and export by both Powers, and the use of the ports; abstinence from propaganda; renewal of trade with the exception of the prohibition of alcoholic liquors in Russia; return of Italian subjects from Russia; freedom of post and telegraphic communication in Russia; termination of all forms of blockade and boycott. Italy entered into a similar agreement with the Ukraine republic.

COMMERCIAL TREATIES. The commercial treaty with Germany went into operation on August 31 with the understanding that it was to endure nine months, after which it was to be renewable unless either of the contracting parties chose to terminate it at a month's notice. Its main object was to facilitate the import and export of food, clothing, and the necessities of manufacture. A trade agreement with Russia was signed on the same day corresponding in general to the agreement between Great Britain and Russia. At the close of the year commercial agreements were concluded with Germany, Czecho-Slovakia, Poland, and Russia. The last named was provisional only and was to go into effect pending negotiations for a new commercial treaty. The commercial treaty with France was denounced by the French government during the year. See **FRANCE**.

THE ROMAN QUESTION. In the autumn there were reports of a definite settlement of the long-standing question of the relations between the Italian government and the Holy See, but the specific terms were not in evidence. There had been a reconciliation under the Nitti Ministry between the papal representatives and the foreign office and it was said that this was satisfactory to the Vatican. There had been cooperation between the Government and the Church in the affairs of the East.

IVORY COAST. A French colony forming a constituent part of the government-general of West Africa, and situated between Liberia and the British Gold Coast. Area, estimated at from 121,976 square miles to 125,000 square miles; population, about 1,407,030 of whom 1030 were Europeans. Capital, Abidjan; formerly, Bingerville. The chief products are: Palm kernels, palm oil, cocoa, rubber, and mahogany. No later figures for foreign trade were available than those given in the preceding Year Book.

J

JACKSON, FREDERICK HUTH. Director of the Bank of England, died in Sussex, England, December 3. He was born April 26, 1863, educated at Harrow and Oxford and became a partner in a large banking house. He was president of the Institute of Bankers 1909-11.

JACKSON, HENRY. British educator, died, September 25. He was well known as a Greek scholar, having been professor of Greek in Cambridge after 1906. He was born at Sheffield, England, in 1839; graduated at Trinity College, Cambridge, in 1862; and was soon afterwards made assistant tutor at Cambridge, and continued at the university throughout his life. He wrote various translations from the Greek, and contributed largely to the classical journals, works of reference, and Transactions of the Cambridge Philological Society.

JACOBY, VICTOR. Hungarian composer of light operas, died in New York, December 10. He was born in Budapest, in 1884. His first opera was *Die Stolze Prinzessin* (Vienna, 1906). In 1913 he came to the United States, where, in the following year, his *Marriage Market* scored a decided success, which was even surpassed by *Sybil* (1916). In collaboration with Fritz Kreisler he wrote *Apple-Blossoms* (1919). Shortly before his death his last work, *The Love Letter*, was produced.

JAMAICA. A British colony comprising the island of Jamaica which is the largest of the British West Indies, and the following dependencies: Turks and Caicos Islands; Cayman Islands, Morant Cays, and Pedro Cays. The area of Jamaica is 4207 square miles; of the dependencies, 224 square miles. Population, estimated Dec. 31, 1919, 893,580. Capital, Kingston, with a population (1911) of 57,369. Public elementary schools in 1919-20 numbered 694 with an average attendance of 60,001. Acreage under cultivation in 1919-20, 1,099,345, distributed as follows: Under tillage, 306,690; pasture, 792,665; sugar cane, 47,568; coffee, 22,894; bananas, 63,168; coconuts, 37,260; cocoa, 17,662; ground provisions, 75,346; guinea grass, 154,922; mixed cultivation, 39,963; commons, 637,733. The exports in 1919-20 were valued at £5,627,328, and the imports at £5,085,615. The chief imports in 1919 were: Flour, cotton goods, and fish; and the chief exports: Bananas, coconuts, logwood, logwood extract, sugar, coffee, rum, and cocoa. Total tonnage entered and cleared in 1919, 2,084,942. Revenue, 1919-20, £1,802,773; expenditure, £1,444,818. Railway mileage, 197¼. Governor at the beginning of 1921, Sir Leslie Probyn. During the year the government of Jamaica authorized the government railway, built with a standard gauge track, to extend its line a distance of nine miles from Chapeltown.

JAMESTOWN, N. Y. See MUNICIPAL GOVERNMENT.

JAPAN. An empire in the Far East. Capital, Tokyo.

AREA. Exclusive of claims pending as the result of the war the empire consists of Japan proper, Korea (Chosen), Formosa (Taiwan), Karafuto, Kwantung, the Pescadores and many other groups of islands. The chief islands of Japan proper are first of all Honshiu or Mainland and next Kuishiu, Shikoku, and Hokkaido or Yezo. The total number of islands composing the empire is placed at nearly 4000, and the total area at 260,738 square miles of which 160,042 are made up by the larger islands and island groups.

POPULATION. The census as announced, March 1, gave the total population of Japan, Korea, Formosa, and Sakhalin as 77,005,112 of which 55,961,140 was the population of Japan proper. The following table supplied by a Japanese authority shows the area and population of the four main islands which constitute Japan proper:

	Area	Population (1900)	Population per sq. mile
Mainland.....	87,426	42,822,773	489.7
Shikoku.....	7,083	3,065,925	432.9
Kuishiu.....	15,703	7,593,245	483.5
Hokkaido.....	30,502	2,379,097	77.9

The average density was 396.2 per square mile, and, counting out Hokkaido, was 485.2, which made it the most densely populated country in the world with the exceptions of Belgium and Holland. The increase by decades since 1870 is shown in the following table:

Year	Number	Decennial increase
1870.....	33,110,796	3,012,954
1880.....	36,358,955	3,248,159
1890.....	40,718,677	3,359,722
1900.....	45,446,369	4,727,692
1910.....	51,753,934	6,307,565
1920.....	55,961,140	4,207,206

The seven largest cities with their populations in 1920 are as follows: Tokyo, 2,173,162; Osaka, 1,252,972; Kobe, 608,628; Kyoto, 591,305; Nagoya, 429,990; Yokohama, 422,942; Nagasaki, 176,554. Down to June 30, 1917, the number of Japanese who had emigrated came to 450,773 and of these 228,178 were living in the United States. The foreigners in Japan, Dec. 31, 1918, numbered 19,500 of whom 12,139 were Chinese, 2404 English and 1837 American.

QUESTION OF SURPLUS POPULATION. The subject of Japan's population in connection with the question of finding her the means of expansion was under constant discussion during 1921 and was involved in many contradictions. There was general agreement in the view that the time was fast approaching, if not already at hand, when the present limits of the empire would not hold her expanding population. Accepting this point of view, writers were constantly asking where the Japanese were to find countries of settlement, for the United States, Canada, Australia, and

New Zealand, which were obviously the countries that could absorb the Japanese surplus, were closed to them. Many pointed to Latin America as a promising field, but here was the danger that the United States would construe the Monroe Doctrine as implying the right to prevent the turning of a Latin into an Oriental civilization in her neighborhood. In general the most practicable solution was believed to be the settlement of the Japanese on the Asiatic mainland and many argued that Manchuria and Eastern Siberia should be opened to her for the purpose, these countries being thinly populated and in many wide stretches not populated at all. Arguments against this were brought to bear by American publicists. The plan seemed to them to be based on the false idea that Japan having the superior civilization had a right to impose it on Russians and Chinese—an idea greatly discredited in view of its working out in latter-day imperialism. It was also argued that in view of Japan's rapid transformation into an industrial state there was far less need than was commonly supposed of additional territory and that she might even be kept approximately within her present limits. Vital statistics of recent years were cited in support of this opinion. For example it was pointed out that the change to industrialism had reduced the birth rate of Prussia to one-sixth and of England by one-fourth from 1880 to 1910.

The population of the empire includes 18,000,000 or 20,000,000 Koreans. The total number of Japanese throughout the world has been placed as low as 56,000,000. The rate of increase generally quoted has been that of the year 1911, when it stood at 15.08 per thousand which was exceeded only by the increase in Germany and in Roumania before the war. The census of 1918, however, showed that the ratio of increase was only 5.84. Assuming that the latter figure is correct, at the present time the surplus population does not offer any such problem as has been implied. If the rate continued to diminish in the same degree the population of Japan would be stationary within four years. The mere increase of population therefore is not the thing that causes the difficulty. The serious point is the change to an industrial and manufacturing country, as noted above. Following the same course that England followed after 1830, agriculture has relatively declined. In 1921 the cultivated area was at a standstill or decreasing. Despite the efforts of the government to encourage the cultivation of land, comparatively few Japanese were induced to go into farming. Among Japanese economists it was predicted that in seventy years the agricultural land under cultivation would be only one-seventh of its present area. Now with the transformation of the country into an industrial power, more than double the population could be supported in it. A vast amount of raw materials and of fuel were needed and the Japanese naturally turned their attention to the Asiatic continent in the hope of securing them. To many Japanese the best chance of doing so lay in the organization and equipment of China. This necessity for raw materials lay behind the aggressive foreign policy under Marquis Okuma and later governments. During the premiership of Okuma in 1915 he declared that it must not be forgotten that the island empire is now a continental power. According to many authorities the pressure of popu-

lation was more than one million annually; according to others about six hundred thousand; and according to official figures available in 1921 about three hundred thousand. As to density the figure commonly given is 350 to the square mile, but this is misleading owing to the fact that over half the area of the country under present conditions is apparently uncultivable and the density of the greater part of the country has been given at about 2000 to the square mile, but even this density is much less than that of the province of Shantung in China where it is given at 3000 to the square mile. Nevertheless, it was repeatedly said that Shantung afforded the natural outlet of Japan's overflow of population. Another point of some significance in respect to Japan's need of territory is the fact that although the government has spent in the last fifty years \$300,000,000 in aiding emigration to the northern island of Hokkaido or Yezo, the population remains only 600,000 showing a density of only about 10 per cent of that for the main island. This comparatively undeveloped region has resources of lumber, fisheries, etc., with a coast line of 1500 miles and an area of 30,000 square miles. The climate is not unlike that of New England and the maritime provinces of Canada. In like manner state-aided emigration to southern Manchuria has failed. On the other hand, the Chinese are found everywhere along the eastern coast of Asia from the Arctic Circle to the equator, and in the island of Java, for example, there is a larger number of prosperous Chinese than of Japanese in all the islands of the South Seas put together. In South Manchuria according to the reports of travelers, the Japanese population was not increasing and there was doubt whether the settlement of Korea was a success. These facts were taken as an indication that the Japanese could not adapt themselves readily to different climates and that the area of permanent settlements available to them was extremely limited.

Among the Japanese themselves there were many who believed that this whole outcry over excess population was unfounded. For example, a leading Japanese newspaper of Tokyo declared that there was no population question of that sort in Japan and that it was wrong to think that there was a surplus population, for while the population was increasing at a healthy rate there was a constant addition to the wealth of the country and it would be reasonable to say that the population really fell short of the needs of the country. In certain parts, indeed, there was actual suffering from the scarcity of farm labor. Signs pointed to the steady decrease of the Japanese population on the mainland and there was evidence that many of the Japanese who had settled there during the last ten years in the hope of bettering themselves, had returned home. Some writers on this subject argued that if there was any necessity for Japanese expansion it should be directed to South America where the Japanese colonies, especially those in Brazil, had been successful. It did not appear from the Japanese accounts that they themselves were confident of solving their problem by discharging their surplus population into Manchuria and Siberia. The following points, for example, were brought out by the Japanese publicist K. K. Kawakami. Being one of the most densely populated countries in the world, and having only a small

percentage of agricultural land, the need of expansion was obvious. Korea, Formosa, and Southern Manchuria did not afford the necessary outlet. This was not because of the unsuitable climate as certain writers have said, but because those countries were already thickly populated, Korea having a density of 203.9 per square mile, Southern Manchuria having about the same, and Formosa, a density of 405.5. A further difficulty was that in Korea and Formosa the Japanese would have to compete with peoples whose standard of living was lower than their own; and the same was true of China. The Japanese would not go either to China or to Korea in large numbers. When they referred to the need of an outlet in

The area under wheat in 1920 was 1,299,149 acres and the production 29,101,624 bushels. Figures published in June, 1921, indicated a falling off of the mineral production of Japan. The following table shows the output in the first six months of 1920 and 1921, respectively, and for the month of June in each of those two years.

JAPANESE MINERAL PRODUCTION

Minerals		June		January-June

Eastern Asia, they did not mean a movement of immigration, but only the access to natural resources in China, Siberia, and Manchuria, whence they might obtain the necessary raw materials for their industrial life. In other words, they sought the means of expansion for their capital rather than for their population, because the country was suffering as much from the lack of raw materials as from overpopulation and the scarcity of land. Japan's future lay in her development as a great industrial and trading nation, but there was a special obstacle in her way in the lack of raw materials, particularly iron, coal, and oil.

Other publicists professed this belief that the demand for territory in which to expand really did not imply the intention to settle permanently but that it meant only that the Japanese desired to exploit these regions and believed that a full control of them was necessary for that purpose. It was argued that the Japanese wished to enter these countries as a directing class and secure the advantage of developing and managing industry. The above summary while indefinite is a fair illustration of the sort of discussion which was carried on throughout the year.

EDUCATION. The elementary schools in 1915-16 numbered 25,578 with 182,992 teachers and 7,454,652 pupils. There are five imperial universities and eleven others. The largest in point of attendance according to the figures for 1919-20 were: The Keio University at Tokyo, with 5810 students; the Tokyo Imperial University, 5233; Waseda University, 4100; Hosei University, 2700; Meiji University, 2600.

PRODUCTION. On January 1, the taxed land owned by individuals and local corporations was 15,286,246 cho (1 cho equals 2.4507 acres) of which 2,922,575 were under rice; 2,501,785 for other cereals; 8,043,889, forests; 1,336,545, plains; 50,966, pasture. The following table from the *Statesman's Year Book* of 1921 shows acreage and production of the principal crops in 1917 and 1918:

ECONOMIC CONDITIONS. The following information was supplied by the U. S. Bureau of Foreign and Domestic Commerce: As rice is the basis of Japanese diet, there was considerable fear that the price might rise to such a point as to cause a repetition of the 1918 rice riots during this winter. High rice prices, by increasing the cost of living, threatened to raise still further the cost of production through demands for higher wages, especially as the labor movement in Japan experienced a remarkable recovery since early spring, when it was apparently in very bad shape owing to the industrial depression. Labor leaders were greatly encouraged by their successes, while the rank and file appeared to grow more belligerent and insistent upon their demands. The central labor union was reorganized and its name changed from "Yuai-kai" (literally translated as "Benevolent," and probably adopted at a time when the authorities frowned and suppressed anything resembling a labor organization) to "Nihon Rodo Sodomei-Kai," frankly, "The Japan Labor Federation." During all the strikes called in the summer a noticeable increased solidarity among the workers was evident. Numerous strikes occurred, affecting many and varied industries, and in the majority of them labor won at least partial victories. All told, there were some 100 strikes in Japan during the summer months, involving over 120,000 workers, while during the first six months of the year there were but 78 strikes, participated in by less than 10,000 employees.

COMMERCE. The table at top of page 392 from the *Statesman's Year Book* of 1921 shows the imports and exports by countries in 1919 and 1920:

In 1921 the imports of articles wholly manufactured during 1921 showed very little reduction from the 1920 values, but the value of exports of articles wholly manufactured had decreased nearly 50 per cent. There was also a marked reduction in the net imports of gold and silver coin and bullion, which amounted to only 137,346,000 yen in 1921

Countries	Imports from		Exports to

U. S. of America.....	766,381,438	873,177,075	828,097,621	565,017,806

as against 400,849,000 yen in 1920. These heavy imports of treasure in the face of a pronounced excess of imports were a marked feature in Japan's foreign commerce the last two years, a feature, however, which was gradually eliminated during the latter half of 1921, since such net imports amounted to only about 26,200,000 yen during this period, December imports being only about 30,000 yen compared with 25,090,000 yen in January, 1921.

Formosa consisted of 2838 steamships of 2,694,804 gross tons; 13,505 sailing vessels, European model, of 930,534 tons and 939 sailing vessels, Japanese model, of 300,067 koku.

RAILWAYS. The total railway mileage in 1919 was given at 8014 of which 6072 was state line. In 1906-07 when the policy of nationalization of the Japanese railways came into effect there were joined to the state-owned nucleus of 1500 mi. 3000 mi. of previously privately-owned and

† Preliminary figures received by cable.

FINANCE. According to figures said to have been submitted to the Finance Department, the budget of Japan for the fiscal year 1922-23 totaled 1,662,000,000 yen, an increase of 81,000,000 yen, or 4.6 per cent, over the estimates for the fiscal year 1921-22, increases being shown in all departments except the Foreign Office, which showed a decrease of 3,000,000 yen, or 11.5 per cent, and the Navy Department, with a decrease of 23,000,000 yen, or about 4.6 per cent. In view of the retrenchment policy, it was expected that this preliminary budget figure would be considerably reduced. On November 8 the deficit for the last fiscal year was reported by the prime minister at 13,000,000 yen.

SHIPPING. The total shipping entered in 1919 was 12,959 vessels of 22,823,476 tons, and the vessels cleared 13,004 of 23,120,301 tons. Of the steamships entered in 1919, 3,566,280 tons were British; 1,206,506, American; and 16,781,321 tons Japanese. The merchant marine exclusive of

operated lines. Later to this combination of 4500 mi., there were added some 1500 mi. of lines, built or purchased, so that in 1921 the nationalized mileage approximated 6000 mi. This, with 2000 mi. remaining in the hands of private owners and operators, constituted the connected lines of the Island Empire.

The state in Japan has always been active in the development of transportation, though the co-operation of private capital and enterprise was encouraged from time to time, chiefly because it was the surest and quickest way for providing promptly the mileage for which urgent demands had rapidly developed. The right of state purchase was reserved in case of any grant of permission for private construction. With such government ownership and control a highly efficient policy of standardization had been developed and the operation of the Japanese railways was made even more systematic and profitable.

The programme for Japan's government rail-

ways, as announced during the year, called for an expenditure of \$278,000,000 for new construction and \$432,500,000 for improvements during the ensuing ten years. During the year 1920 some 200 miles of new line were built and during the fiscal year 1921 it was estimated that an additional 260 miles would be built.

On Jan. 1, 1921, freight rates were increased by 28 per cent. The gross revenue for the fiscal year 1920 totaled some \$102,500,000 from passenger traffic and \$66,000,000 from freight traffic. It was interesting to note that further nationalization of railways in Japan had become somewhat subordinate to those privately owned, for the latter had increased greatly. In June, 1921, 2021 miles were in operation, while the government had granted permits for the construction of some 3000 miles.

During the year 1921 active progress was made with both the general scheme of electrification for the Japanese railways, as well as for special projects. In the Department of Railways a new electric bureau was established and a systematic plan was being developed along revised lines. The first work decided on was to prepare for electrification the entire Tokaido line and then a part of the Central line, the work to be extended in due course to all other lines. The full plan as developed by the Department of Railways was to be completed and presented through the cabinet to the Diet. The selection of the Tokaido line was doubtless due to the fact that here traffic had been increasing greatly each year and adequate accommodation facilities were lacking for the transportation of passengers and freight. Even as an immediate measure to expedite the service, automatic signals had been installed, but it was thought, however, that soon the traffic capacity of the railways would be found inadequate to meet the needs of the increasing business.

The Tokaido line runs from Tokyo to Kobé. The next step in electrification proposed was for a part of the Central line between Iidamachi station in Tokyo and Kofu in the rear of Mount Fuji, where many tunnels make transportation slow. Electric trains were to be used exclusively for passengers, freight trains continuing to be operated by steam.

DEFENSE. According to estimates of the United States War Department in 1920 the total military forces of Japan numbered 1,645,000, of which 273,000 constituted the permanent army. The following list from the *Statesman's Year Book* of 1921 shows the distribution of the vessels in the navy at the beginning of 1921;

GOVERNMENT. The executive power is in the emperor who acts with the advice and assistance of a ministry responsible to and appointed by him; and legislative power is in the emperor and a

legislature or imperial Diet of two houses consisting of a House of Peers and a House of Representatives. The House of Peers with 373 members is composed of members of the imperial family, princes, marquises, counts and other members of the aristocracy, certain persons nominated for eminent services, etc. The House of Representatives has 381 members. The distribution among parties at the last election preceding 1921 was as follows: The Sayukawai or government party, 281; the Kenseikai, 109; the Kokuminto or Popular party, 29; the Koshin Club, 25; Independents, 19. The ministry at the beginning of 1921 was constituted as follows: Prime Minister, Takashi Hara; Interior, Takejirō Tokonami; Foreign Affairs, Count Yasuya Uehida; War, General Giichi Tanaka; Marine, Admiral Tomosaburō Katō; Finance, Baron Korekiyo Takahashi; Justice, Count Ōhki; Agriculture and Commerce, Tatsuo Yamamoto; Education, Tokugorō Nakabashi; Communications, Utarō Noda; Railways, H. Motoda.

HISTORY

FOREIGN RELATIONS. The chief features of Japan's foreign relations, especially with China, are discussed in the article WAR OF THE NATIONS, where also will be found an account of Japan's share in the Disarmament Conference.

THE QUESTION OF SHANTUNG. There was no change during the year in the deadlock between China and Japan over the question of Shantung. Japan through her official authorities repeatedly declared that she was willing to negotiate on the subject with China. The Chinese government refused to negotiate since that would imply the acceptance of certain principles to which it objected. The Japanese foreign minister and the Japanese Ambassador to London renewed the expression of Japan's willingness to negotiate at the beginning of the year. In a statement before the Assembly of the League of Nations on January 2, the latter declared that negotiations were difficult on account of the internal disorders in China and said that trade in Shantung must be opened and that Japan must determine how it should be opened and what guarantees to that end must be obtained. There was prolonged discussion of the Shantung question throughout the year. According to Japanese authorities the situation in Shantung was as follows: The Japanese government aimed only at procuring for Japanese citizens the privilege of making use of the natural resources of Shantung. The proposals of the Japanese in 1921 before the meeting of the Disarmament Conference involved the return to China of the leased territory of Kiaochow, with an area of 200 square miles, the whole to be placed under Chinese administration, Japan not claiming any exclusive or international administration for any portion of it, although she expected that the usual extra-territorial rights would be recognized for foreigners, and she asked in return that China should open the territory to foreign trade. As to the mainland, Japanese desired the Shantung railway, 245 miles long, and the mines pertaining to it to be worked as a joint enterprise by Japanese and Chinese capital, represented on equal terms. Japan abandoned to the International Finance Consortium of which the United States was a prominent member such concessions as Japan had obtained for the following three

lines: Tsinan-Shunteh (160 miles); Kaomi-Shu-chow (220 miles); Weichien-Yentai (150 miles). Japan renounced all special preferences granted to Germany in regard to employment of foreigners and foreign capital in accordance with the Japanese signature to the Treaty. She agreed to withdraw her troops which now were guarding the railway from Tsinan, as soon as China was ready to replace them. She agreed to hand over to China all public property used for administrative purposes within the leased territory. The customs house at Tsingtao was to become a part of the customs system of China. These were the proposals which Japan made to China, Sept. 7, 1921. Although they did not fully meet the Chinese demands, it must be remembered that Japan had not taken this property and these rights from China, but had taken them all from the Germans, whom she had expelled from Shantung at the cost of 2000, killed and wounded, and \$15,000,000, at a time when China, owing to her internal troubles, was unable to dislodge them. The general spirit of Japanese arguments was that her demands in the circumstances were most moderate, in view of her service during the war, and in comparison with what European nations had claimed in the past at Chinese expense, and would probably claim at the present time if they were in the position of Japan.

SIBERIA. Japan's policy in Siberia was attacked in the diet by Viscount Katô, January 24. This followed a declaration early in the month by Viscount Uchida that it was to be hoped that conditions in Siberia would be sufficiently stable to permit Japan to withdraw her troops from Vladivostok and the coast provinces. The prime minister replying to Katô's attack said the occupation of certain districts in Siberia continued to be necessary to Japan's interests. On January 8 an American lieutenant, W. H. Langdon, was shot by a Japanese sentry at Vladivostok. This brought complaint from the United States which was followed by an expression of regret from the Japanese government. See WAR OF THE NATIONS.

NATIONAL DEFENSE. There was a strong current in Japan against undue expenditures on the army and the navy and this showed itself in parliament on February 8 when an opposition member offered a resolution for cutting down military expenditures and naval armament and proposed a disarmament conference with the United States and Great Britain. The proposal for reduction was defeated by 245 to 38, the majority insisting that conditions in China and Siberia made it unsafe to retrench army and navy outlays. A vote of confidence was taken in which the government was supported by 259 to 141.

JAPANESE POLICY IN KOREA. The official view of the government's course in Korea was summarized by Admiral Saito, governor-general of the province in 1921, who was appointed to that office in 1919, the very year when Korean discontent took the form of open revolt and one of the first indications of disaffection was the public protest of students after the funeral of Prince Yi against Japanese annexation. Riots followed in the neighborhood of Seoul but the rioters were for the most part unarmed. As a measure of pacification the government promised a programme of reforms but at the same time took energetic measures to suppress the spirit of revolt which tended more and more to threaten an actual

insurrection. The trouble was increased by Bolshevik influence from Siberia. Gradual and more or less effective revolutionary organization was developed showing the work of expert leadership which was plainly inspired from Siberia. The government discovered the centres of insurrection and on August 17, 1920, captured one of the most important of them at Phyonyang, after a severe battle. The most troublesome regions were along the Manchurian frontier, rebel bands entering the country by way of Antung and Chien-Tao. According to the governor-general the internal riots were not the result of native discontent but were staged by revolutionary committees outside the country. A party of independence was created abroad and was encouraged by the Korean immigrants in the United States and Honolulu. It fell under the influence of the Russian revolutionaries. The situation became critical with the organization of the so-called Provisional Government of Korea at Shanghai. Nevertheless the government did not embark on a policy of indiscriminate repression. It sought to restore peace by measures of reform including one that was opposed by the military party, namely, the substitution for the gendarmes of a body of police designed rather to prevent disorder than to chastise it. This reform, according to the governor-general, had brought excellent results, the people themselves aiding the police in keeping the peace; and he took much credit to the administration for this policy of engaging the natives themselves in the work of pacification. It also created mixed provisional and communal commissions whose Korean members were elected by the population, this measure being regarded as the first step toward self-government. Complete self-government, however, could not be granted until after a long interval. Another feature of the new governor-general's policy was to found schools, in the belief that the more Japanese schools there were in Korea, the better for Japan. In 1921 the average was one school for three villages. Down to that time, it had been necessary to require the police to recruit the pupils, but there were signs that the Koreans were becoming more confident and were beginning to send their children to the Japanese schools of their own accord. As to the material situation, it had greatly improved during the seven years of Japanese occupation. Rice production had risen from 8,000,000 to 15,000,000 koku (one koku equals 180 litres). Means of transport had not kept pace with this development and the sum of 16,000,000 yen was estimated as required for the completion of roads that had been projected, and four years was given as the period within which the railway programme would be carried out. The government was bearing the cost of the principal lines but the branch lines would be delayed because of the economic crisis in the mother country in 1920. In 1921 the budget was placed at 2,000,000,000 yen. The government was taking steps to develop the natural resources, but here again the condition of the mother country's finances retarded progress. As to the tax, the large share was borne by the Japanese residents of Korea. It was estimated that a Japanese family in the colony had to pay from 12 to 23 yen for schools and sanitation, while a Korean family paid only from 12 to 13 yen for the same services.

NEW MINISTRY. The Prime Minister Hara (q. v.) was assassinated. On November 13 a new ministry was formed under Baron Korekiyo Takahashi, who had been Minister of Finance in the Hara cabinet. He continued to hold this portfolio in addition to the office of Prime Minister. The Minister of Foreign Affairs was Viscount Uchida. The choice of the new Premier was taken to indicate the continuance of the peaceful foreign policy of the preceding ministry and its opposition to the militarist groups. The new Premier had taken a decided stand in the latter respect some months before when he criticised the General Staff of the army for concerning itself too much in diplomatic affairs. As to foreign policy he had declared that the opening up to Japan of the great resources of China was imperative but that Japan should renounce the 21 demands and should adopt a constructive economic policy in respect to China.

THE REGENCY. The crown prince, Hirohito, was appointed regent, November 24, by imperial decree, his father, Emperor Yoshihito, having been long incapacitated by illness. The emperor had already in May, 1920, given over some of his functions to the crown prince, and in the spring of 1920 he had sent him on a visit to Europe. On his return the prince was received with great public enthusiasm. He was born in April, 1901, and proclaimed heir apparent in 1912 when his father became emperor, and he was consecrated crown prince in 1916.

ATTITUDE TOWARD THE CONFERENCE. Various reports were published at the close of the year indicating popular ill feeling toward the United States among the extreme element. The decisions of the Washington Conference were denounced at a mass meeting of an anti-American society at Tokyo, December 18 and there were threatened demonstrations against Americans. Several of the papers condemned the naval agreement as imposing a ratio unfair to Japan. The opposition party in Parliament addressed questions to the government implying distrust of the Conference and the belief that the Four-Party treaty would lead to the interference of the United States and other Powers in the Far East. This view was attacked by the government spokesman, who declared the criticism unfounded, and soon afterwards the Prime Minister laid a special emphasis in a public address on the importance of the decisions reached at Washington. He said that the Four-Party treaty was much wider in its bearing than the Anglo-Japan Alliance and removed all chances of war and that the Conference had opened a new epoch on the Pacific and in the world. He believed that as a result the burdens of the Japanese people would be lightened and the position of Japan strengthened in the Far East. It was understood at the close of the year that Japan held fast to her position in respect to property rights in Siberia, including the coal properties in the northern portion of Sakhalin.

JARNEFELT, MAIKKI. See MUSIC, Artists, Vocalists.

JASTROW, MORRIS. Orientalist and university professor, died, June 22. He was born at Warsaw, Poland, in 1861; came to Philadelphia in 1866 and graduated at the University of Pennsylvania in 1881 after which he studied at Leipzig and in Paris. On returning to Philadelphia he was made professor of Semitic languages and librarian

in the University of Pennsylvania. He wrote extensively for the learned periodicals within his field and was a recognized authority on Semitic religions, languages, and literature. Among his works may be mentioned *The Religion of the Babylonians and the Assyrians* (1898); *The Study of Religion* (1902); *Aspects of Religious Belief and Practice in Babylonia and Assyria* (1911); *Hebrew and Babylonian Traditions* (1914); *The Civilization of Babylonia and Assyria* (1915); *During and After the War; The War and the Bagdad Railway* (1917); *The War and the Coming Peace* (1918); *The Gentle Cynic* (1919); *Zionism and the Future of Palestine* (1919). He also edited series of hand books on the history of religion and contributed largely to works of reference. He was the editor of the department of Semitic archaeology to the NEW INTERNATIONAL ENCYCLOPEDIA contributing many of the articles.

JENKINS, JAMES GRAHAM. Judge, died at Milwaukee, Wis., August 6. He was born at Saratoga Springs, N. Y., 1834, and was admitted to the New York bar in 1855. He moved to Wisconsin and practiced law in Milwaukee until 1888. He was circuit judge in Wisconsin 1893-94, and presiding judge of the United States Circuit Court of Appeals 1901-05, when he retired. For several years he was Dean of the College of Law at Marquette University. He attracted public attention by his issue of an injunction on Dec. 8, 1893, forbidding the employees of the Northern Pacific Railway from combining to strike against the reduction of wages. This led to an attempt of the labor leaders to impeach him but it did not succeed.

JERITZA, MARIE. See MUSIC, Opera.

JERNINGHAM, CHARLES EDWARD WYNNE. British journalist, died in London, February 7. Under the pen-name of "Marmaduke" he contributed for twenty-two years a regular letter to the *London Truth*, and for fourteen years a weekly article to the *London Graphic*. He was born, March 26, 1854; and studied at Beaumont and Stonyhurst. He was one of the founders of the Self-Help Immigration Society, and was active in the Commons and Footpaths Protection Society, and the Coal Smoke Prevention Association. He was the founder of the Art Collectors Association. He published *Maxims of Marmaduke* (1910); and *The Bargain Book* (1911). He was made the editor of *Vanity Fair* (London) in 1912.

JERSEY CITY, N. J. See MUNICIPAL GOVERNMENT.

JEWS. POPULATION. The following estimates of the Jewish population of the world by continents based largely on prewar estimates were prepared by the Bureau of Jewish Social Research for the *American Jewish Year Book* for 1921-22:

Continent	Jewish population
North America.....	3,379,668
South America.....	118,667
Europe.....	10,439,191
Asia.....	434,332
Africa.....	380,668
Australia.....	19,415
Total.....	14,771,931

According to another Jewish authority, Mr. Davis Trietsch, the total was somewhat in excess of that, being 15,430,000. Jews in the United States were placed by the Bureau of Jewish Social

Research at 3,390,301, in 1918, an increase of 1,613,116 since 1907. The following table shows distribution by States in each of those years according to the same authority:

States	Estimated 1907	Estimated 1918	Increase
Alabama.....	7,000	11,086	4,086
Alaska.....		500	500
Arizona.....	500	1,013	513
Arkansas.....	3,085	5,012	1,927
California.....	42,000	63,652	21,652
Colorado.....	6,500	14,565	8,065
Connecticut.....	22,000	66,862	44,862
Delaware.....	1,600	3,806	2,206
District of Columbia.....	5,100	10,000	4,900
Florida.....	3,000	6,451	3,451
Georgia.....	9,300	22,414	13,114
Hawaiian Island.....	100	150	50
Idaho.....	300	1,078	778
Illinois.....	110,000	246,637	136,637
Indiana.....	12,000	25,833	13,833
Iowa.....	6,000	15,555	9,555
Kansas.....	1,500	9,450	7,950
Kentucky.....	10,000	13,362	3,362
Louisiana.....	12,000	12,723	723
Maine.....	5,000	7,387	2,387
Maryland.....	41,000	62,652	21,642
Massachusetts.....	90,000	189,671	99,671
Michigan.....	16,000	63,254	47,254
Minnesota.....	13,000	31,462	18,462
Mississippi.....	3,300	3,881	581
Missouri.....	82,000	80,807	28,807
Montana.....	1,500	2,518	1,018
Nebraska.....	6,500	13,547	7,047
Nevada.....	300	503	203
New Hampshire.....	1,000	3,257	2,257
New Jersey.....	70,000	149,476	79,476
New Mexico.....	800	858	58
New York.....	905,000	1,603,923	698,923
North Carolina.....	1,500	4,915	3,415
North Dakota.....	1,000	1,492	492
Ohio.....	85,000	166,361	81,361
Oklahoma.....	1,000	5,186	4,186
Oregon.....	6,000	9,767	3,767
Pennsylvania.....	150,000	322,406	172,406
Philippine Islands.....	100	500	400
Porto Rico.....	100	200	100
Rhode Island.....	12,000	20,502	8,502
South Carolina.....	2,500	4,816	2,316
South Dakota.....	300	1,262	962
Tennessee.....	10,000	14,034	4,034
Texas.....	16,000	30,839	14,839
Utah.....	1,000	3,737	2,737
Vermont.....	1,000	2,221	1,221
Virginia.....	10,000	15,403	5,403
Washington.....	5,500	9,117	3,617
West Virginia.....	1,500	5,129	3,629
Wisconsin.....	15,000	28,531	13,531
Wyoming.....	300	498	198
Total.....	1,777,185	3,390,301	1,613,116

The ten leading cities of the United States according to the *American Jewish Year Book* are as follows:

City	Jewish population estimated 1918	General population estimated as of Jan. 1, 1917	Per cent Jews to total	Per cent of total Jewish population
New York.....	1,500,000	5,670,167	26.45	45.45
Chicago.....	225,000	2,521,822	8.92	6.81
Philadelphia.....	200,000	1,750,000	11.43	6.06
Cleveland.....	100,000	750,000	13.33	3.03
Boston.....	77,500	767,589	10.09	2.34
Baltimore.....	60,000	595,000	10.08	1.81
St. Louis.....	60,000	850,800	7.05	1.81
Pittsburg.....	60,000	590,000	10.16	1.81
Newark.....	55,000	401,000	13.71	1.66
Detroit.....	50,000	825,000	6.06	1.51
Total.....	2,387,500	14,720,578	16.21	72.34

For table of Jewish population by countries, see preceding *YEAR BOOK*. This gave the largest

totals to the following countries: Poland, 4,100,000; the Ukraine, 3,300,000; Germany, 500,000; Hungary, 450,000; Czecho-Slovakia, 349,000; United Kingdom, 275,000; Lithuania, 250,000.

THE ZIONIST CONGRESS. The twelfth Zionist Congress held its session at Carlsbad in September. There was much dissension among the members, but the session ended with a vote of confidence by a considerable majority in the executive committee. The majority of the Congress were somewhat dissatisfied with the present situation. It was admitted, of course, that great progress had been made since the last Congress held eight years before. While at that time Zionism was confined to a small circle of Jews, it was now a definite world movement and an important element in the Eastern question. Nevertheless, the hope of many members had been disappointed. There was, for example, much uncertainty in respect to the status of Palestine. On Nov. 2, 1917, Mr. Balfour in the celebrated address which had so stimulated the hopes of the Zionists, promised to create a national home for the Jews in Palestine. The condition of such an establishment was the migration of large numbers into the region. Now, Sir Herbert Samuel, High Commissioner in Palestine, had recently made a statement, apparently representing the policy of the British Government, in which he spoke only of some Jews who might come to settle in Palestine. This was most unsatisfactory to the majority of the Zionists. Furthermore, they were disturbed by a later decree of the High Commissioner resulting from recent events at Jaffa which reduced immigration to a very narrow limit. There were other causes of discontent. Various riots in Palestine showed that it was hard to maintain order in the country; the British garrison was small and it was not possible to count on the local recruits who were likely at any moment to join the rioters. There was a division in the Congress into two factions, one directed by Dr. Weizmann, and the other by Mr. Louis Brandeis of the United States Supreme Court, and President of the Zionist organization of America. The question had been raised why in view of the disturbances in Syria the executive committee had not secured from Great Britain (the mandatory power) the reestablishment of the Israelite Legion which would easily have maintained order. When that Legion existed in Palestine there were no such troubles. The two factions differed in respect to the methods which should be employed in this emergency and in certain other respects. The party represented by Dr. Weizmann believed that the promises of Mr. Balfour would be realized in the long run in spite of present difficulties—in short, that Great Britain and the other responsible Powers would keep their word. The vote of confidence indicated the approval of the Congress of this more optimistic view of the situation and of the policy of improvement favored by Dr. Weizmann. In accordance with the latter the Congress undertook to work out plans for the development of the Jewish agricultural colonies now in Palestine and for the creation of new ones; also for the irrigation and electrification of the country and the establishment of a land bank, a school of medicine, etc. See PALESTINE.

EASTERN EUROPE. Some figures were issued at the close of the year by an officer of the Relief

Committee of the Ukraine. 'According to these, there were in Bessarabia about 30,000 Jewish refugees without homes. In Poland, 28,951 Jewish orphans were cared for by the Warsaw bureau during the first seven months of 1921. In the region of Rovno, Poland, 6000 orphans whose parents had been massacred were reported. In Poland as a whole, the registered Jewish refugees, according to an officer of the central Relief Committee of Warsaw, numbered 50,000, and those in Roumania 60,000 to 70,000. Reporting on these conditions he declared that villages in which the Jews constituted 80 or 90 per cent of the population had been entirely destroyed. The Jewish population of the Ukraine had suffered indescribable hardships. Persons of all classes, including the wealthiest, were reduced to beggary and it was reported that there was hardly a single Jewish child under seven years of age left in the Ukraine. Probably twice as many Ukrainian Jews had died from exposure or disease as had been massacred. According to the president of the Jewish Relief Committee, November 27, 50 per cent of all houses belonging to Jews in Eastern Europe had been destroyed and about 90 per cent in the regions where they had especially suffered, namely, Eastern Poland, Galicia, Lithuania, Roumania, and southern Russia.

JOHNS HOPKINS UNIVERSITY. A non-sectarian institution of the higher learning for men, bft admitting women to certain courses, at Baltimore, Md.; founded in 1876. In the fall of 1921 there were 3361 students enrolled and in the summer session, 949. The teaching staff numbered 444. The classification of students was as follows: Graduate School of Arts and Sciences, 291; Medicine, 349; Hygiene, 96; College of Arts and Sciences, 393; Engineering, 313; College Courses for Teachers, 1011; Evening Courses: (1) Business Economics, 660; (2) Technical subjects, 248. President, Frank J. Goodnow, LL.D.

JONES, KENNEDY. British journalist and Member of Parliament, died in London, England, October 20. He was well known as the editor of the *Evening News*. It was he who opened the way for Alfred Harmsworth, afterwards Lord Northcliffe, to his journalistic career, obtaining for him an option on the purchase of the *Evening News* when it was in financial difficulty. Harmsworth carried out the plan and after purchasing the paper brought it into great prominence. Shortly before the war Mr. Jones gave up his journalistic work to go into politics and during the war he was engaged in the Ministry of Food and the Ministry of Transport. He was the author of *Fleet Street and Downing Street*.

JONES, MABEL CRONISE (MRS. THOMAS McDOWELL JONES). Author, died in 1921. She was born at Tiffin, Ohio, June 18, 1860, and after a high school education went into newspaper work at Toledo. She was editor of the children's page of Philadelphia and Pittsburg newspapers and legislative correspondent at Harrisburg. She was prominent in the various associations of the State especially the Centre Pennsylvania Suffrage Association of which she was president after 1911. For fifteen years she served as regent of the Daughters of 1812. Among her writings may be mentioned: *Gettysburg* (1902); *Six of Them* (1902); *Dolly's College Experiences* (1909); *Achshah* (1911); *In Days of Old* (1912); *Rome's Fall* (1915).

JONES, WILLIAM AMBROSE. Roman Catholic bishop, died at Philadelphia, Pa., February 17. He had been bishop of Porto Rico after Feb. 24, 1907. He was born at Cambridge, N. Y., July 21, 1865; graduated at Villanova College, Pa., in 1887; and was ordained priest in 1890. After serving as parish priest from 1890 to 1895 at Philadelphia, he became professor of English and mathematics at Villanova College. In 1899 he was placed in charge of the first English-speaking Catholic church in Cuba. He was afterward president of the College of St. Augustine, Havana.

JORDAN, JOHN WOOLF. See NECROLOGY.

JUGO-SLAVIA. A new state with a republican form of government formed after the war out of component parts of the old Austro-Hungarian monarchy, consisting of: Old Serbia; New Serbia Slovenia; Croatia and Slavonia and other parts of Hungary; Bosnia and Herzegovina; and Dalmatia. The estimated area in 1920 was 95,628 square miles, and the estimated population, 11,337,686, including Montenegro, which though its destination was doubtful at first was united with greater Serbia after the death of the former King Nicholas, March 1, 1921. The chief towns with their population in 1919 are: Belgrade, the capital, 120,000; Zagreb or Agram, 80,000; Ljubliana, 60,000; Sarajevo, 50,000; Novi Sad, 40,000; Spert, 30,000; Nich (1910), 24,949.

PRODUCTION AND COMMERCE. Interests are largely agricultural. In 1921 the harvest was poor. According to an official estimate, the 1921 crops in metric tons were as follows: Corn, 1,800,000, wheat, 980,000, barley, 270,000, oats, 300,000, rye, 150,000, and potatoes, 950,000. In every item there was a decline from the 1920 crop totals, the whole averaging about 20 per cent. The cause for this was said to be the long drought, although railway conditions and the risks imposed on the farmers by an unsettled policy respecting exports may have had an adverse effect on sowings. Jugo-Slavia's immense resources of raw materials have been very little exploited because of lack of labor and capital. The wood industry holds first place in the country, one-third of which is covered with forests. The textile industry is still in a primitive condition. It had in 1921 some 60,000 spindles and 2500 looms. The clothing and carpet industry are important in Serbia, but these enterprises were suffering especially from lack of cotton. The iron industry was very little developed and could not meet the needs of the country. The annual output of raw iron is 2,000,000 tons. The deposits of magnesium in Lublja have not yet been exploited, although the annual production was estimated in 1921 at 45,000 wagons. The sugar industry is well developed. The six sugar refineries of the territory obtained from Hungary could practically satisfy the country's needs. The chief imports have been textiles, agricultural produce, chemicals, leather, metals, and machinery; and the chief exports, corn, wheat, oats, cattle, fruit, and timber. Exports during the first six months of 1921 totaled, 1,160,051,982 dinars or about \$33,000,000 and the exports for the first six months of 1920 were only 272,004,068 dinars or about \$14,000,000. The figures for imports were not available but it was believed that they doubled the exports.

FINANCE. The budget of 1922 amounted to 6,000,000,000 dinars (dinar at par equals about

20 cents. The paper in circulation in the autumn of 1921 amounted to about 4,500,000 dinars. The dinar which was worth about \$.027 at the beginning of July fell to a minimum of about \$.011 early in November and has since risen to about \$.016 in December. The issue of paper money which was taking place rapidly during the summer and early fall was temporarily checked but a permanent balancing of the budget depended on further legislation. The government expressed a firm determination to reduce expenditures and increase taxation. An internal loan of 500 million dinars was subscribed to the extent of about three-fifths to the general public and the remainder was to be taken by the local banks which underwrote it. Efforts were being made at the close of the year to place a foreign loan of five hundred million francs, especially for repair and construction of railroads.

RAILWAYS. Railway mileage in 1920 was 5684 of state line with the exception of 509 miles privately owned. It was reported during the year that the kingdom of the Serbs, Croats, and Slovenes was to receive from Germany on account of reparation 50 locomotives and 2500 freight cars. During the year it was announced that the ministry of communications of the Kingdom of the Serbs, Croats, and Slovenes had called for bids for the construction of five short railway lines to link up existing roads in Jugo-Slavia, for which purpose an internal loan of 500,000,000 dinars (roughly, \$2,000,000) had been floated. Three of these projects were for narrow-gauge lines and two for standard gauge. The total length of line was 94 miles.

GOVERNMENT. A constituent assembly was elected on Nov. 28, 1920, composed as follows in respect to political parties: Radicals, 102; Democrats, 94; Communists, 42; Croatian-Agrarians, 51; Serb-Agrarians, 33; Mohammedans, 25; Catholic People's party, 21. This body was the sole source of authority at the beginning of 1921. The ministry appointed Feb. 15, 1921, was as follows: Prime Minister, M. Stoyan Protitch; Vice-President of the Council and Minister of Communications, M. Koroshetz; Interior, M. Trifkovitch; Foreign Affairs, M. Trumbitch; Commerce, M. Stoyan Ribaratz; Finance, M. Velisar Yankovitch; Forests and Mines, M. Kovatchevitch; Agrarian Reform, M. Krsnitch; Food, M. Stanichitch; Public Health, M. Slavko Miletitch; Social Affairs, M. Jouro Chotusmine; Public Instruction, M. Trifunovitch; Religion, M. Jankovitch; War, (vacant); Public Works, M. Jovan Jovanovitch; Agriculture, M. Frano Rochkar; Justice, M. Nintchitch; Posts and Telegraphs, M. Drinkovitch; without Portfolio, M. Spaleciovitch.

HISTORY

FOREIGN RELATIONS. In January the government complained to the Allied Powers in a series of notes that Bulgaria was not observing the treaty of Neuilly in respect to reparations and disarmament. On June 8 a treaty was signed with Roumania for the purpose of insuring the maintenance of the treaties of Trianon and Neuilly on the part of the Hungarian and Bulgarian governments, respectively. There was much dissatisfaction in Jugo-Slavia with the decision of the Council of Ambassadors on the dispute over the Albanian frontier (see ALBANIA). The Jugo-Slavs disclaimed

any imperialistic aims in respect to Albania but desired a strong frontier in order to secure them against invasions and disorders. They hoped that the Allied Powers would reconsider the decision. Jugo-Slavia was in constant alarm over the designs of her neighbors. In addition to the hostility of the Hungarians and the doubtful attitude of Bulgaria, there was trouble with Albania, friction with the Italians, and a certain lack of cordiality with the Greek government of Constantine. To offset this there was the Little Entente, concluded with Roumania and Czecho-Slovakia, which was designed to insure the safety of the countries liberated by the Allies in central Europe and the Balkans. When the treaty of Rapallo was ratified it was expected at Belgrade that friendly relations would be restored with Rome. This did not result and there was much ill-feeling in Jugo-Slavia toward Italy. According to the Jugo-Slavs the policy at Rome had been to stir up strife in the kingdom of the Serbs, Croats, and Slovenes, by every means in its power. Italy had not yet evacuated the third zone of Dalmatia and had placed all the difficulties possible in the way of Jugo-Slavia for the opening of the port of Baros. Italy moreover had favored the Hungarian government in the question of the treaty of Trianon which the Jugo-Slav government had supported. The Italians, according to the Jugo-Slavs, were intriguing behind the Albanian government of Tirana. The Jugo-Slavs also complained that under the pretext of the dread of an epidemic the Italian government had forbidden the entry within the Italian borders of the chief article of Jugo-Slav export, namely, cattle. As to the relations between Jugo-Slavia and Bulgaria they were simply the result of the war. Serbia held the view that the damage done by the occupation must be repaired and all parties in Serbia were agreed in this demand. However, there were certain differences among them in respect to the application of this policy: While some of them endeavored to prevent the restoration of relations of confidence, others looked forward to the possibility of an understanding on the basis of their common interests. The situation was uncertain owing to the difficulty of settling on a plan that was at once acceptable to Belgrade and Zagreb (Agram), and the problem of an understanding with Bulgaria became an internal question in Jugo-Slavia owing to the disagreement between the Serbs and the Croats. Serbia and Greece at the close of the year had officially renewed their relations as allies but in the former country there was still a deep distrust of the Greeks on account of the alleged treason of Constantine during the war and whenever there seemed a prospect of Greek failure in Asia Minor the Belgrade press expressed its satisfaction. The basis of ill-feeling between the two countries, however, was rather economic than political or sentimental. Shup up within their peninsula without access to the coast the Jugo-Slavs and especially the Serbs resented their inability to control a port on a free sea, and a considerable part of the public were insisting for an outlet on the Aegean as a vital necessity for the national interest. Finally there was the great problem of Russia, and at Belgrade it was felt that if a democratic Russia or indeed a Russia under any form of government, had been able to take its seat in the conferences of the Allies, it would have prevented many of the problems affecting the Slav populations from being settled,

as they had been, against the interests of the Slavs. As regards Jugo-Slavia especially, the Powers had pronounced against her, for example, in the questions of Fiume, of Albania, and of Baranya (see HUNGARY) and the point was all the more striking in that in all these, when it was a matter of adverse decisions the Jugo-Slavs had occasioned no difficulty in the way of execution. There had been no D'Annunzio or Zeligowski to take part in a Jugo-Slav adventure, and the wisdom of the Jugo-Slav prime minister, M. Pachitch, and the common sense of the people had prevailed.

THE RACE QUESTION. The leadership of Serbia in the new Jugo-Slav state involved racial and political dissension. It had been opposed by various groups in the Serbian kingdom, itself, namely, many of the Social Democrats, the Moderate Republicans, and the Anti-Monarchists. Outside Serbia it was resented by many of the Croats who in the old Austro-Hungarian Monarchy had enjoyed a certain degree of constitutional liberty and who cherished their own national culture. They desired a free confederation, and at first nothing more than that was aimed at by the Croats, Slovenes, and Serbs who in the declaration of Korfu in 1917 merely asserted the political unity of the three races. The national ambition of Serbia gave deep offense to the other nationalities. The Montenegrins who number about 250,000 had lost their national unity and independence, but the chief opposition in 1921 came from the stronger racial element, the Croats; and Croatia was practically united against the apparent attempt of the government to absorb their people as Serbs. Great resentment followed the declaration of the prime minister, Nicholas Pachitch, that all the southern Slavs were Serbs. The ministries of both Vesnitch and Pachitch pursued a programme of nationalization, and to this end looked to a division of the kingdom into forty-eight regions, irrespective of racial lines. Moreover, the legislation of the country was entirely under the control of Serbia, and the Serbian language was employed to the exclusion of others. When the government was embarrassed by the opposition to this policy, it found a working majority only by making concessions to the Moslems of Bosnia. The voting of the constitution by so large a majority (223 to 35), June 28, 1921, gave a general impression that the country was united, but the peasant party of the Croats who made up one of the chief elements in the Croat community refused to attend the constituent assembly, and even the Croat clericals withdrew from that body. The above account is taken from the report of a French writer who made a special study of the racial conditions in the new state. In regard to the dissensions while the constitution was under consideration he said: "The improvised parliament of 1918 required two years to pass any laws for holding elections to the constitutional convention. The lack of a working majority was not due as is often alleged to plots in Italy, Hungary, or Bulgaria nor to Socialist schemes at home, but to the really profound chasm between Serbian aspirations and the resistance to subjugation on the part of Croats and Slovenes. The former Serbian Premier, M. Protitch, made the first draft for the constitution on Belgian lines, retaining the existing administrative divisions, and granting them a certain autonomy."

MONTENEGRO. The movement for self-government in Montenegro continued during the year,

and in the latter part of December preparation was made for representation before the governments of France, Italy, and Great Britain on behalf of the Montenegrin people, and their right to determine their own destiny.

ACCESSION OF ALEXANDER. Alexander was proclaimed King of Jugo-Slavia, August 17, and in accordance with the constitution should have taken his oath within ten days following the death of his father, King Peter, but he was delayed in Paris. He had been in Paris since early in July and at the time of King Peter's death in August, was reported to be seriously ill. An attempt had been made on his life shortly before he went to Paris and his illness concerning which there were various rumors, was believed by many to have been caused by a wound inflicted by the would-be assassin. He left Paris for Belgrade, October 29, and took his oath before parliament and ascended the throne, November 6.

NEW MINISTRY. The Pachitch ministry lacking support offered its resignation late in November but was requested by the king to remain in power provisionally and to attempt to reconstitute the cabinet. The prime minister was not successful in doing this and M. Davidovich was called to the premiership but he too failed to form a ministry. M. Pachitch at the king's request assumed the premiership and after a crisis of twenty days succeeded in forming a new ministry based on the support of Socialists, Radicals, Moslems, and Slovene peasants.

OTHER EVENTS. The constituent assembly began the debate of the new constitution, March 16. A new law of emigration was passed May 21 which contained some peculiar features, restricting the method of transit. The paragraph provided that no emigrant should leave Jugo-Slav territory without a passport which was valid only for a passage from a Jugo-Slav port to a port in the country of destination; and his return passport was in like manner valid only for passage from a port of the country that he left to a Jugo-Slav port. The emigrant was thus forbidden to cross a foreign country. Another paragraph provided that steamer tickets could be delivered only for those Transatlantic vessels that took and received passengers at Jugo-Slav ports and the tickets were only valid for embarking and debarking at Jugo-Slav ports.

JUILLARD FOUNDATION. See Music, *General News*.

JUVENILE COURTS. At the beginning of 1921 all but two States of the Union had laws providing for juvenile or children's courts, the exceptions being Maine and Wyoming. In 1920 a particular study was made, under the direction of the United States Children's Bureau of the principles and methods of the probation system of the several States. The results were published in 1921 and some of the chief points are summarized in the following paragraphs:

PROBATION METHODS. All of the States, with the single exception of Wyoming, had laws on their statute books providing for the appointment of probation officers to deal with children in the courts, and although children's courts in some of the States had been established in only one or two of the largest cities, the system in the majority of States was designed to reach every child within the State's limits. In the few preceding years development had been rapid, especially in certain

of the southern States. Mississippi, West Virginia, and New Mexico provided, within the five preceding years, for juvenile courts and probation for the first time, and Georgia and North Carolina extended their systems to the entire State. In North Carolina, by the law of 1919, a separate juvenile court, a judge, and a paid probation officer were provided in every county.

The function of the probation officer in most of the children's courts is of a double nature. In the first place he investigates the case with a view to ascertaining the peculiar social circumstances of the child, and in the second place he supervises the case after it is carried into court. It frequently happens that the probation officer decides through investigation whether the case is sufficiently serious to come before the court, and it is often within his power, when a petition is filed, to determine whether the child should be taken to a place of detention or remain in its home pending investigation. The best systems provide for a thorough social investigation by the probation staff in the first instance, and while some of the children's courts still continue to bring the child to trial before making the investigation and to decide the question of its guilt or innocence before receiving the probation officer's report, the more advanced practice reverses the process and expert opinion is opposed to this method; for the principle at the basis of the juvenile court is parental and it should aim to ascertain the underlying facts of the case, its true purpose being not to punish but to remove the cause of the child's unsocial conduct and take measures for its protection and the protection of society. Investigation by probation officers often brings to light social conditions that account completely for the action of the offender, as for example, bad housing, immoral neighborhood, quarrels in the family, lack of discipline, etc. Another coöperative agency which has been established more recently than the probation staff, is a court clinic wherein examinations are made by medical and psychological experts. Owing to the extraordinary advance in the study of psychology during the last ten years, the work of these clinics has become indispensable. It has been established that while not a very large per cent of the children brought before the juvenile courts are defective in a serious sense, many of them are distinctly abnormal, and these are generally the ones who occasion the greatest difficulties. Probation officers are, with a few exceptions, publicly employed and paid and the societies which formerly selected the workers and supplied them to the courts have for the most part ceased to do so, dependence upon volunteer initiative having proved almost a complete failure. The salaries at present are not high, but a movement to increase them has already brought results. In 1921 the sum of \$1500 to \$2000 was frequently paid at the start and increases were made at regular intervals. In a large number of the States the salaries of probation officers were fixed by law, but there was complaint against so doing on the ground of inelasticity. Other States fixed the salaries through the local boards having charge of appropriations. The objection to this has been that it results in the lack of uniformity and often in a mistaken economy. It

has been recommended that the judge should be empowered within certain limits to fix salaries and determine the number of probation officers required.

As to the systems in specific States, that employed in New York has been cited as one of the most successful. It applies to the entire State, and the methods used have been of a nature to bring out good material and prevent unfit appointments. Probation officers are appointed under the civil service system, but the dangers and inefficiency of that system have been offset by the coöperation of the State Probation Commission with the Civil Service Commission in the holding of examinations. In the States of Vermont, Rhode Island, and Utah, the State government retains complete control over the appointment of probation officers, the latter holding their authority from the State board of charities in Vermont and Rhode Island and from the State juvenile court commission in Utah. In North Carolina the chief probation officer of the court is a county superintendent of public welfare for each county. In Texas probation officers in juvenile courts must be appointed by the judges from lists furnished by a committee consisting of the county superintendent of public instruction and two school principals of the district. In Massachusetts, the State Commission of Probation conducts unofficial examinations for probation officers and from the lists of eligible candidates the judges make their selection.

In respect to State supervision over probation and court work, the study above mentioned presents the following conditions: "Effective State supervision of probation and court work generally has not advanced far in this country. In addition to the two States—Massachusetts and New York—having independent probation commissions, three States—Rhode Island, Vermont, and Utah—have State control of the appointment and work of probation officers. In 1919 Alabama established a child-welfare department having among its duties advising with and receiving reports from probation officers and judges of all juvenile courts. The same year Oregon established a State child-welfare commission, one of whose duties is to approve all appointments of probation officers in the Portland Court of Domestic Relations, which has exclusive jurisdiction of children's cases. Connecticut supervises probation work through its prison association, a semi-official body. In addition, nine States require probation officers to report to some State department, usually a State board of charities and corrections."

LEGISLATION. In 1921 Connecticut passed an act relating to probation. In Indiana provision was made for the appointment of a probation officer and an advisory juvenile commission, and the powers and duties were prescribed. South Dakota amended the code in respect to dependent, neglected, or delinquent children, providing for a woman probation officer in case of delinquent girls and for the appointment of a probation officer in any county with a population of 15,000, excluding from the trial and from perusal of the records, and providing that a court decision in a case should not be considered a conviction, or disqualify for public office or stamp the child as a criminal.

K

Kaiser Wilhelmsland. A former German colony situated in the northern part of southeastern New Guinea; lying between 2° 30' and 8° S. latitude and 141° and 148° E. longitude. It was declared a German protectorate in 1884. Area, including the adjacent islands, about 70,000 square miles. It contains high mountain ranges running parallel with the coast plain, which has a width of from 60 to 100 miles, and some of the mountain summits exceed 12,000 feet in height. The interior has been little explored. Population estimates vary from 110,000 to 530,000 and the European population in 1914 was placed at 300, chiefly German. It was under the control of the New Guinea company from 1885 to 1909. At the outbreak of the war it was occupied by the Australian forces and from that time was under Australian administration. See GERMAN NEW GUINEA.

Kalamazoo, MICH. See MUNICIPAL GOVERNMENT.

Kalbeck, Max. German musicologist, died in Vienna, May 4. He was born in Breslau, Jan. 4, 1850, where he began his career as a musical critic. From 1880 he lived in Vienna. His most important work is the great biography of Brahms (8 vols.). He also edited Brahms's correspondence with E. von Herzogenberg. Besides several meritorious libretti (for J. Stauss, Henschel, Poldini, von Fielditz, etc.), he made excellent German translations of many contemporary operas.

Kamerun, CAMEROON or CAMEROONS. Formerly a German protectorate; situated in west central Africa between Nigeria (British) and the French Congo (French Equatorial Africa) and extending north to Lake Chad and east to the Ubangi river. In 1911 a large tract was transferred to it from the French Congo with an estimated area of 107,270 square miles and was known as New Kamerun. During the war (1916) French and British troops overran the territory and it was divided between France and England. The greater part was placed under French administration, the British portion being a strip with an area of about 30,000 square miles which extends from the sea along the Nigerian frontier to Lake Chad. The total area exclusive of the part ceded to Germany in 1911 is estimated at 191,130 square miles and the population at about 2,540,000. Bantu tribes predominate near the coast and Sudan negroes in the interior. The whites in 1913 numbered 1871. The chief town is Duala with a population of about 22,000. Other towns are Buea which was formerly the seat of government; Victoria, Campo, Cribi, and Rio del Rey. The area of the French portion in 1920 was placed at 166,489 square miles. The budget of French Kamerun for 1920 balanced at 7,370,500 francs. The chief products are coffee, palm oil, tobacco, and ivory. The railway mileage was 359. In the British portion the imports in 1919 were £67,000; exports, £235,000. The principal exports were

palm kernels and palm oil, rubber, ivory, and cocoa, and the principal imports, textiles, timber, salt, spirits, iron ware, and colonial products. The railway mileage in 1913 was 149. The French portion is under a commissioner—M. Garde at the beginning of 1921. The British portion is under the governor of Nigeria.

KANE, JAMES JOHNSON. See NECROLOGY.

KANSAS. POPULATION. According to the report of the census of 1920, there were 1,769,257 residents in the State, Jan. 1, 1920, as compared with 1,690,949 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	4,601,000	102,142,000	\$31,664,000
	1920	5,007,000	132,686,000	58,382,000
Oats.....	1921	1,894,000	38,827,000	10,483,000
	1920	2,127,000	65,299,000	25,467,000
Wheat.....	1921	10,554,000	128,695,000	119,687,000
	1920	9,294,000	143,073,000	186,002,000
Rye.....	1921	91,000	1,138,000	774,000
	1920	112,000	1,456,000	1,456,000
Barley.....	1921	660,000	13,200,000	3,828,000
	1920	767,000	19,482,000	8,767,000
Hay.....	1921	2,484,000	3,810,000	27,940,000
	1920	2,765,000	4,624,000	46,968,000
Potatoes.....	1921	65,000	4,160,000	5,816,000
	1920	60,000	5,100,000	7,650,000
Sor. syrup.....	1921	5,000	405,000	373,000
	1920	5,000	430,000	538,000

² Gallons.

IRRIGATION. The United States Bureau of the Census issued during the year the following summary of irrigation conditions in 1920 with the corresponding figures for 1910 for purposes of comparison. (See table on page 402.)

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Abolishing the Industrial Welfare Commission and conferring its powers upon the Court of Industrial Relations, the office of Commissioner of Labor Industry being abolished; creating a State aircraft board; forbidding banks to engage in trade or commerce and providing that any bank may become a member of the Federal Reserve system and also providing that a bank may invest, under certain restrictions, in the stock of one or more banks or corporations; provision for the examination of building and loan associations by the Bank Commissioner; provision for the establishment and maintenance of city planning commissions in cities of the first class having a population of more than 20,000; provisions and regulations in respect to milk, cream, and dairy products and the manufacture and transportation of ice cream; imposition of a penalty for failure or neglect in respect to the exclusive use of the English language in teaching in all elementary schools; prohibition of the transport of explosives through cities and towns; provision in respect to inspec-

tion, sampling, storing, weighing, and grading of grain; provision for the organization, regulation, and taxation of incorporated mutual insurance companies other than life, and imposition of a penalty for violation of the law; regulations of public live stock yards and their operations; promotion of intelligent marketing of agricultural products through cooperation (see Co-operation); provision for the registration of motor vehicles; regulations for the granting of pardons, parole, and commutations; creation of a Public Utilities Commission upon which was conferred all power and duties of the Court of Industrial Relations relating to public utilities; provision for the organization of rural high school districts and for the consolidation of school districts for educational purposes; provision for reference to the people at the General Election in 1922 of the question of compensation for veterans of the World War, the proposal being that bonds be issued not to exceed \$25,000,000 to compensate honorably discharged veterans at the rate of \$1.00 a day for each day's service, such bonds to bear interest of not more than five and a half per cent; provision against water pollution with penalties for violation; authorization of cities of the first class, over 20,000 population, to establish districts or zones regulating and restricting the location of trades and industries and making regulations in respect to the buildings, providing also for City Planning Commissions and authorizing cities to declare violation of the act a misdemeanor.

OFFICERS. Governor, Henry J. Allen; Lieutenant-Governor, Charles S. Huffman; Secretary of State, L. J. Pettijohn; Treasurer, Walter L. Payne; Auditor, Fred W. Knopp; Attorney-General, Richard J. Hopkins; Superintendent of Public Instruction, Miss L. E. Wooster; Superintendent of Insurance, Frank L. Travis.

JUDICIARY. Supreme Court: Chief Justice, William A. Johnston; Justices, Rousseau A. Burch; Henry F. Mason, Silas W. Porter, Judson S. West, John Marshall, John S. Dawson.

KANSAS, UNIVERSITY OF. A co-educational State institution of the higher education at Lawrence, Kansas; founded in 1864. The enrollment for the fall session of 1921 was 3649 of whom 2220 were in the College of Liberal Arts and Sciences; 646 in the Engineering School; 291 in Fine Arts;

169 in Law; 109 in the Graduate School; and the rest distributed among the Schools of Pharmacy, Medicine, Nurses, and Education. The enrollment for the summer session was 1309 and the faculty numbered 303. The number of volumes in the library was 140,110. President, Dr. Ernest H. Lindley.

KANSAS WESLEYAN UNIVERSITY. An institution of the higher learning at Salina, Kansas, founded in 1885. The total enrollment in 1921 was 883 and the faculty numbered 33. The library contained 12,500 volumes. During the year the new physical laboratory was equipped. President, L. B. Bowers, D.D.

KARAFUTO. The Japanese part of the island of Sakhalin comprising all of the island that lies south of the 50th parallel of north latitude. Area 13,048 square miles; population, estimated in 1920 at 105,765. See SAKHALIN.

KENDALL, CALVIN NOTES. Commissioner of education, died September 2. He was born at Augusta, N. Y., Feb. 9, 1858; graduated at Hamilton College in 1882 and taught school in the West. He became superintendent of schools at Jackson, Mich., in 1886 and later at Saginaw and then after engaging in business for three years was appointed successively superintendent of schools at New Haven, Conn., and Indianapolis, Ind. He was commissioner of education of the State of New Jersey after July, 1911. He lectured extensively at the summer schools of the universities and was prominent in the leading educational associations. He edited works on methods of education in collaboration with others.

KENNEDY, Sir JOHN. Canadian railway builder, died at Montreal, Can., October 25. He was born, Sept. 2, 1838; studied at McGill University; and became chief engineer of the Great Western Railway of Canada. He was afterwards harbor commissioner of Montreal, and a member of various canal and other important commissions.

KENTUCKY. POPULATION. According to the report of the census of 1920, there were 2,416,630 residents in the State, Jan. 1, 1920, as compared with 2,289,905 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	3,209,000	82,150,000	\$45,182,000
	1920	3,384,000	101,687,000	83,383,000
Oats.....	1921	293,000	5,567,000	2,672,000
	1920	280,000	6,580,000	4,803,000
Wheat.....	1921	634,000	6,340,000	7,291,000
	1920	588,000	5,998,000	11,456,000
Clover seed....	1921	18,000	34,000	340,000
	1920	25,000	52,000	780,000
Tobacco.....	1921	385,000	1,325,710,000	50,485,000
	1920	560,000	1,476,000,000	71,400,000
Hay.....	1921	1,077,000	1,127,000	17,376,000
	1920	1,174,000	1,284,000	28,087,000
Potatoes.....	1921	58,000	3,770,000	8,220,000
	1920	57,000	5,643,000	8,464,000
Swt. potatoes..	1921	18,000	1,872,000	2,153,000
	1920	18,000	1,890,000	2,835,000
Sor. syrup.....	1921	48,000	4,080,000	2,938,000
	1920	51,000	4,845,000	5,184,000

¹ Pounds.¹ Tons.

DRAINAGE. The following table published by the United States Census Bureau in 1921 summarizes the drainage conditions of the State in 1920:

Item	Amount	Per cent of total
DRAINAGE ON FARMS		
Number of all farms in the state.....	270,626	100.0
Farms reporting land having drainage.....	5,817	2.1
Farms reporting land needing drainage.....	19,592	7.2
All land in farms.....	acres.. 21,612,772	100.0
Improved land in farms.....	acres.. 13,975,746	64.7
Farm land reported as provided with drainage.....	acres.. 225,228	1.0
Farm land reported as needing drainage.....	acres.. 573,299	2.7
DRAINAGE ENTERPRISES		
Approximate land area of the state.....	acres.. 25,715,840	100.0
All land in operating drainage enterprises.....	acres.. 358,480	1.4
Improved land.....	acres.. 245,334	1.0
Timber and cut-over land.....	acres.. 92,495	0.4
Other unimproved land.....	acres.. 20,651	0.1
Total capital invested in and required for completion of operating enterprises.....	\$1,820,996	100.0
Capital invested in these enterprises to Dec. 31, 1919.....	\$1,521,725	83.6
Additional capital required to complete these enterprises.....	\$299,271	16.4

The total works completed by drainage enterprises to Dec. 31, 1919, comprised 664.5 miles of open ditches, 86.2 miles of tile drains, and 0.2 mile of accessory levees; the additional lengths

JUDICIARY. Court of Appeals: Justices Rollin Hurt, Gus Thomas, Ernest Clarke, F. D. Sampson, W. E. Settle, Huston Quin, William Rogers Clay.

	1919	1914	Per cent of increase, 1914-19 ¹

Materials.....	235,716,000	114,829,000	105.3
Value of products.....	395,660,000	230,249,000	71.8
Value added by manufacture (value of products less cost of materials).....	159,944,000	115,420,000	38.6

¹ A minus sign (—) denotes decrease.

under construction were 77.0 miles of open ditches and 1.0 mile of tile drains. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There were no pumping districts for land drainage in Kentucky. Corn was the principal crop raised on land drained in drainage enterprises.

KENTUCKY, UNIVERSITY OF. A co-educational State institution at Lexington, Ky.; founded in 1858. The enrollment for the fall session of 1921 was 1458 of whom 761 were in Arts and Sciences; 359 in Engineering; 242 in Agriculture; and 67 in law. The enrollment for the summer session was 491. The income was \$1,256,000. The library contained 42,921 volumes. During the year a men's dormitory was built, courses were established in public health and hygiene, the Art de-

partment was enlarged and there were notable additions to the live stock of the experiment station. President, [Frank LeRond McVey, Ph.D., LL.D.

KENYA COLONY. See EAST AFRICA PROTECTORATE.

KENYON COLLEGE. A Protestant Episcopal institution of the higher learning at Gambier, Ohio; founded in 1825. In the fall session the enrollment was 233, and the faculty numbered 16. The income was about \$50,000. The library contained 28,000 volumes. During the year a \$600,000 endowment fund was raised. President, W. F. Peirce, D.D.

KERWIN, JAMES CHARLES. See NECROLOGY.

KETCHAM, WILLIAM ALEXANDER. Lawyer, died at Indianapolis, Ind., December 27. At the time of his death he was commander-in-chief of the Grand Army of the Republic. He was born in Indianapolis, Ind., Jan. 2, 1846; and prepared for college in Germany; studied at Wabash College, Ind.; and graduated at Dartmouth College. He enlisted in the Union army as a private in 1864. In 1868 he was admitted to the Indiana bar, and practiced afterwards at Indianapolis. He was attorney-general of Indiana for two terms, 1894-98; and president of the Indiana Bar Association, 1891; and of the Indiana State Bar Association, 1910-11. In politics he was a Republican.

KIAOCHOW. A town, harbor, and district on the east coast of the Chinese province of Shantung, taken by Germany in November, 1897, and acquired in the following year from the Chinese government by a 99-year lease and declared a German protectorate; captured by the Japanese in 1914, and administered by her under a mandate in accordance with the Treaty of Versailles, which, however, was not signed by China. Area, exclusive of the bay, about 200 square miles; population, about 227,000, but including the neutral zone surrounding the bay with an area of about 2500 square miles, the population would be 1,427,000. The chief city and port is Tsingtao. The Japanese residents, exclusive of the military numbered, August 30, 1920, 28,336. In 1919 the imports were 69,557,059 Mexican dollars; and the exports, 69,131,550 dollars. The chief imports were: Cotton goods, metal, cigarettes, petroleum, lumber, and dyes; and the chief exports were: Bean oil, peanuts, wheat, tobacco leaves, etc. The tonnage of steamships, entered and cleared in 1919, was 1,938,895 of which 1,573,634 were Japanese.

KIENER, LEON. Former member of the Alsace-Lorraine legislature died in December. He was born in 1870. He was largely known for his speech at the session of the Alsace-Lorraine Landtag, March 3, 1913, in which he attacked the German government with extreme bitterness saying that the German ministry in the administration of justice merely performed the functions of an executioner.

KIERNAN, WILLIAM. Rector of St. Patrick's Church, Philadelphia, died at Philadelphia, Pa., December 21. He was born at Armagh, Ireland, in 1867, came to this country in childhood and studied at the Theological Seminary at Philadelphia. He studied afterwards at the American College at Rome, where he was ordained in 1869. In 1875 after he had held a pastorate in Philadelphia he was made professor in the Theological Seminary and in 1882 became its rector. On Aug. 15, 1915, he was appointed rector of St. Patrick's Church.

KILBOURNE, JAMES. American manufacturer, died in 1921. He was born at Columbus, Ohio, Oct. 9, 1842, graduated at Kenyon College in 1862 and served in the Civil War in which he was captain of an Ohio regiment and engaged on staff duty under Gen. J. M. Tuttle and Gen. John McArthur. After the war he was admitted to the bar at Columbus, Ohio, and practiced law for a time. He founded and became president of the Kilbourne and Jacobs Manufacturing company and was director and officer in railways and banks and various important philanthropic and social institutions of the State.

KINDIEBERGER, DAVID. Medical officer of the navy, died in New York City, March 25. In 1914 he was in command of the naval hospital at Guam. He was born at Smithville, Ohio, Sept. 2, 1834; graduated at Wittenberg College, Ohio, in 1857; and entered the naval service in 1859. He rose through the successive grades to medical director. He served during the Civil War, taking part in all the battles of Admiral Farragut's squadron, except Vicksburg. He was subsequently fleet surgeon of the Asiatic squadron and of the Southern Pacific squadron; and in 1892-96 was in command of the United States naval hospital at Philadelphia.

KING, OSCAR A. See NECROLOGY.

KING, WILLIAM FLETCHER. See NECROLOGY.

KIRKMAN, MARSHALL MONROE. Author, died at Chicago, Ill., April 18. He was born in central Illinois, July 10, 1842; and was in the service of the Chicago and Northwestern railway for fifty-three years, 1856-1910, being vice-president of the road after 1889. He wrote largely on railway subjects and published in 1909 the *Science of Railways* in seventeen volumes. He also wrote: *Romance of Gilbert Holmes* (1900); *Primitive Carriers*, and *History of Alexander the Great* (1913); *Romances of the Camp and Court of Alexander the Great*.

KLINK, FRIEDA. See MUSIC, Artists, Vocalists.

KNAPP, PHILIP COOMBS. American neurologist, died in 1921. He was born at Lynn, Mass., June 31, 1858; graduated at Harvard in 1878 and became a specialist in nervous and mental diseases at Boston in 1884. He was an instructor at the Harvard Medical School in diseases of the nervous system from 1888 to 1913, and was an officer in many important institutions pertaining to his specialty, including the American Neurological Association, of which he was president in 1895. He wrote: *The Pathological Diagnosis and Treatment of Intra-cranial Growths*; and collaborated with others in the preparation of several important medical texts.

KNOX, PHILANDER CHASE. United States Senator from Pennsylvania, died at Washington, October 12. His death which resulted from a stroke of apoplexy, occurred unexpectedly, his health apparently having been good down to that very day. He was born at Brownsville, Pa., May 6, 1853, the son of a country banker, and graduated at Union College, Ohio, in 1892. Admitted to the bar in 1875, he soon built up an excellent practice, his firm of Knox and Reed being known as the most prosperous in Allegheny County. H. C. Frick who was a friend of his boyhood secured his appointment as attorney for the Carnegie Steel company. In 1901 he was appointed Attorney-General of the United States by President McKinley and held the office under

President Roosevelt until 1904, when he resigned to become United States Senator as successor to the late Senator Quay. His administration of the Department of Justice was notable for its prosecutions of trusts under the Sherman Act and its measures to prevent rebates on the part of the railroads. The outstanding case was that of the Northern Securities company which had been organized to take over the two competing lines, the Northern Pacific and Great Northern. The government won its case against this merger and to prevent the usual delays incident to the appeal to higher courts, the Attorney-General secured the passage of an Act of Congress allowing only sixty days in which to appeal to the United States Supreme Court and providing for the prompt decision of those cases which were of especial public interest. He argued the case personally before the Supreme Court and the decision in favor of the government was handed down March 14, 1904. Credit is given him by his biographers for the more effective laws in regard to the regulation of trusts and railways, the principles of this legislation being laid down by him in a letter addressed to the judiciary committees of the House and Senate, Jan. 3, 1903. On the recommendations of this same letter also was based the Department of Commerce and Labor and its Bureau of Corporations which were subsequently created. Other features of his warfare against monopoly were his fight against the seven beef corporations on the charge of conspiracy in restraint of trade begun in 1902, and his successful proceedings against fourteen railroad corporations. The purchase of the Panama Canal for forty million dollars was greatly aided by his work in establishing the legality of the purchase. After serving as Senator he was appointed Secretary of State in President Taft's cabinet. The State Department under his administration pursued the policy in promoting American trade, which was characterized as "Dollar Diplomacy." Arbitration treaties with France and Great Britain were another feature of his administration. He was prominent in the debate on the Treaty during the last two years and was the author of the celebrated "Knox Resolutions," which were so long before the public in 1920 and which were described in the preceding YEAR BOOK.

KNOX, VESSEY. British lawyer and politician, died in County Down, Ireland, May 15. He was born in 1865, educated at Oxford and called to the bar at the age of twenty-four. In 1890 he was elected to Parliament as a Nationalist and was reelected until 1899 when he retired.

KOCHANSKY, PAUL. See MUSIC, *Artists, Instrumentalists.*

KOGEL, GUSTAV FRIEDRICH. Musical conductor, died at Frankfort-on-Main, November 14. He was born at Leipzig, Germany, in 1849 and received his musical education at first from his father and afterwards at the Leipzig Conservatory. He settled in Alsace as a teacher of music but returned to his native town at the end of the Franco-German war and joined a publishing house for which he edited many operatic scores. He began his work as a musical conductor in 1874 at Nuremberg but was soon called to other cities, and from 1887 to 1891 conducted the Philharmonic Orchestra at Berlin. In the latter year he began the direction of the museum con-

certs at Frankfort which he carried on with great success. He made several successful foreign tours and in 1906 accompanied the Philharmonic Society in New York.

KONDO, BARON R. See NECROLOGY.

KOREA or **CHOSEN.** A country in eastern Asia dependent on Japan after 1906, and formally annexed by Japan by a treaty between Japan and Korea on August 22, 1910. Capital, Seoul. Area, 84,103 square miles; population in 1920, 17,284,207. Seoul and its surrounding districts had a population of 302,686, of whom 50,291 were Japanese. The city of Ping-Yang had a population of 173,273. Of late years Japanese immigration has increased, and the number of Japanese at the end of 1919 was given at 336,872. The interests are mainly agricultural, and the chief crops are: Rice, wheat, beans and other grains, tobacco, and cotton. The rice crop in 1919 was 62,561,761 bushels. Gold mining is pursued with recent prospects of success, and an anthracite coal mine is worked in the north. Copper, iron, graphite, and mica are found in considerable quantities, but the mineral resources have not been developed owing to the lack of means of transport. The foreign trade (merchandise only) at the open ports in 1919 was as follows: Imports, 280,786,318 yen; exports, 219,665,781 yen; an increase of over 75 per cent in each case from the preceding year. The chief imports were: Cotton goods, machinery, kerosene, grass cloth, sugar, paper, coal, and timber; and the principal exports were: Rice, grains, vegetables, hides, and cattle. The larger part of the trade was with Japan. In 1920 the length of the railways was 1159 miles. The budget estimates for 1920-21 were: Revenue, 123,809,943; expenditure, 113,328,334. The Japanese governor-general at the beginning of the year was Baron Saito.

On February 18 a leading Korean, Bingen Shaku, was assassinated after expressing his approval of Japan's policy in Korea. The Korean programme of Japan was further criticised during the year and was even attacked by the opposition in the Diet of Japan itself. See JAPAN, paragraphs on *History*.

KORNGOLD, ERICH. See MUSIC, *Opera.*

KOROLENKO, VLADIMIR. Distinguished Russian novelist, died, December 25. He was born in Little Russia in 1853 of Cossack and Polish ancestry; and studied at the St. Petersburg Technological Institute and at the Moscow Academy of Agriculture. He was exiled for taking part in a student movement, and on his return earned a scanty living by working for a publisher. In 1879 he was exiled to Siberia where he spent six years, an experience that gave him material for many of his Siberian sketches. His chief literary writings began with *Makar's Dream* published in 1885. This was followed by *The Sakhalin Convict*; *In Bad Company*; *Memoirs of a Siberian Tourist*; and *The Murmuring Forest*. But the work on which his reputation mainly rested was his novel entitled *The Blind Musician* (1886), which is regarded as his highest achievement. His novel entitled *Prokhor and the Students* while running as a serial was stopped by the censor in 1887. After this his fiction consisted of short stories, many of which are on a high level and widely known. After 1900 his purely literary work decreased, and he was engaged for the most part in journalism or in the preparation

of volumes on public questions. One of his latest writings was an autobiographical work in two volumes (1911-12). His style of writing has often been compared to Turgenev's for its simplicity and clearness. His works have been translated into English, French, and German.

KOUDELKA, JOSEPH MARIA. Roman Catholic bishop, died at Superior, Wis., June 24. He was born in Bohemia, Dec. 8, 1852; and educated there in his youth, but came to the United States, in 1868 and studied at the St. Francis Seminary at Milwaukee, Wis. He was ordained priest in 1875, and held pastorates at Cleveland, Ohio, down to 1911. Meanwhile in 1908 he was consecrated bishop. In 1911 he was transferred to Milwaukee, and in 1913 became bishop of the Diocese of Superior, Wisconsin. He wrote readers for Bohemian schools and a short history of the church in German for Catholic schools. He also prepared prayer books for children and adults.

KRANBERG, JULIUS. Danish artist, died. October 18.

KROPOTKIN, PRINCE PETER ALEXEIVITCH. Russian social philosopher and agitator, died, toward the latter part of January. For many years he was known as the chief representative of philosophic anarchism. He was born Dec. 9, 1842, and educated for the army. He joined a Cossack regiment on the Amur where he made valuable geographical explorations. Having witnessed the suppression of a revolt of Polish exiles in Siberia, he abandoned his military career, returned to St. Petersburg in 1867, and, entering the university there, applied himself especially to the study of geography. He made an important contribution to the cartography of the Siberian mountains and in 1871 he received the offer of the secretaryship to the Russian Geographical Society. Declining this on account of his increased interest in the problem of poverty, he went to Zurich and entered into relations with the leaders of the International, familiarizing himself with what had been written on the movement. After that he returned to Russia and as a member of the Tchaikovsky Circle devoted himself to propaganda among the workmen. He was arrested and imprisoned in 1873, but in the following year succeeded in escaping through the aid of his friends and a few days later reached the border of Finland. Many years of exile followed. The first part of this period was spent in England where he wrote extensively for the scientific publications. Meanwhile his geographical studies had taken shape in a volume on the *Glacial Period and Orography of Asia* which made him an international reputation. He returned to Switzerland after a short stay in England and joined there the International Workingman's Association. After Alexander II was assassinated he was expelled from Switzerland and settled in Savoy. He was there arrested on the charge of instigating dynamite outrages at Lyons and although there was no basis for the accusation was condemned to five years' imprisonment in 1883. The matter having come up in the French Chamber of Deputies, protests against his imprisonment were raised and he was released in 1886. He thereupon took up his abode in England where he was staying when the war broke out in 1914. He returned to Russia in 1917 and from that time on little was known about him, except that in 1920 a severe criticism by him of the

Bolshevik régime was made public. In this he argued that an attempt to build up a communist republic on the dictatorship of a minority was destined to failure.

KURDISTAN. A region lying to the south-east of Armenia and chiefly within the limits of the former Turkish empire, but partly also within Persia. Area, estimated at 74,000 square miles; population, estimated at 3,000,000, of whom four-fifths were Kurds. In the old Turkish empire the region was included in the vilayet or province of Armenia and Kurdistan.

KUROPATKIN, ALEXEI NIKOLAIEVITCH. Russian general, died, October 18. He was the foremost Russian general in the Russo-Japanese war. He was born in 1848, entered the army at the age of sixteen, served with distinction in Turkestan in 1865-68 and afterwards attracted attention by his services in the Russo-Turkish war, 1877-78. He was made a lieutenant-general and governor of the Transcaspian territories in 1890. He became minister of war in 1898. At the time of the outbreak of the Russo-Japanese war he was placed in supreme command in the east but after the battle of Mukden in March, 1905, he was placed at his own request in command of the first Manchurian army. An account of his connection with the war is given in Story's *Campaign with Kuropatkin* (London, 1904) and also in Kuropatkin's own narrative *The Russian Army and the Japanese War* (New York, 1909).

KURZ, SELMA. See MUSIC, Artists, Vocalists.

KUSTENLAND. See COASTLAND.

KUTZ, GEORGE FINK. Naval officer, died at San Francisco, Calif., August 9. He was born at Wilkes-Barre, Pa., June 14, 1835; and entered the navy as third assistant engineer, June 30, 1856. During the Civil War he took part in the battles of Port Hudson, College Point, Donaldsonville, and Mobile Bay. Before that he had served on the Atlantic cable expedition and on the Paraguay expedition. He was fleet engineer of the Asiatic station, 1876-77, and of the Pacific station, 1881-83. He was three times chief engineer at Mare Island, holding that position at the time of his retirement, June 26, 1896. He was raised to the rank of rear-admiral in 1906 in recognition of his services during the Civil War.

KWANGCHOW-WAN. A small region on the coast of the Chinese province of Kwangtung, leased from China by France in 1898 and administered under the authority of the governor-general of Indo-China. Area, about 190 square miles; population, about 168,000.

KWANGTUNG or KWANTO. A territory in the southern part of the Liaotung Peninsula, leased from China by Japan as a successor to the Russian leasehold after the Russo-Japanese war. Area, 538 square miles; population, Dec. 31, 1919, 600,644, of whom 65,692 were Japanese, exclusive of the army and navy. Imports (1919) 107,186,929 Haikwan taels; exports, 103,733,007 yen. The estimated revenue and expenditure for 1920-21 balanced at 12,246,092 yen. The seat of administration is at Dairen, formerly called Dalmy, which has an excellent harbor, free from ice all the year, and is connected by rail with Port Arthur, Mukden, Harbin, and the eastern Chinese railway systems. The region is under a Japanese governor-general. Kwangtung is also the name of a province of China (q. v.).

L

LABOR. See CHILD LABOR; COOPERATION; INTERNATIONAL COOPERATION; LABOR ARBITRATION AND CONCILIATION; LABOR LEGISLATION; MINIMUM WAGE; OLD AGE PENSIONS; STRIKES AND LOCKOUTS; TRADE UNIONS; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION, and articles on GREAT BRITAIN and other foreign countries.

LABOR, AMERICAN FEDERATION OF. The Federation held its forty-first annual convention at Denver, Col., June 13-25, 1921. There were 509 delegates seated, representing 93 international and national unions, 4 departments, 32 State branches, 113 central bodies, 46 local trade and federal labor unions, and 5 fraternal delegates. Although the convention reflected without exception last year's officers there appeared a distinct opposition to the policies of that administration. Mr. David J. Saposs of the Labor Bureau says: "It would seem from the action of the delegates on the issues before the convention, as contrasted with their choice of officers, that the American labor movement has entered a period of transition. While it no longer hesitates to reject fundamental views of its leaders, it is reluctant to replace them." Undoubtedly the onslaught of open-shop campaigns persuaded many to cling to their ablest and most seasoned leader even though they considered his policies to be lacking in vigor. As last year, the storm centre of the convention was a resolution concerned with government ownership and democratic operation of railways; and, as last year, the vote on the issue was a decisive rout for the administration and victory for government ownership. The Gompers element prevailed, however, despite opposition, in repudiating the Soviet dictatorship of Russia; in opposing affiliation with the International Federation of Trade Unions until such amendments as would guarantee the autonomy and independence of the A. F. of L. should be made; and in substituting a resolution reaffirming recognition of the Irish Republic for one demanding a boycott of England until such recognition should take place. Other resolutions were passed requesting:

- An investigation of the Mingo miners.
- An investigation of the lockout of seamen.
- Cooperation of Textile Workers of America to elevate level of southern cotton mills.
- That the American Federation of Teachers be more substantially assisted by the American Federation of Labor.
- That the executive council back the movement for complete organization of the lumber industry in the Northwest.
- The further organization of office workers.
- The appointment by the president of the American Federation of Labor of a committee to report on unemployment.
- That every effort be made to secure sufficient appropriation for the United States Employment Service.
- State, county, and municipal governments to carry out public works now under consideration.
- The executive council to cooperate with affiliated organizations of civil-service employees to secure legislation giving such employees the right to hearing and appeal upon demotion or discharge.
- The executive council to cooperate with representatives of affiliated organizations to secure legislation liberalising the United States pensions and workmen's compensation acts.

The appointment of a committee on grievances for colored railway freight handlers and station employees.

Legislation forbidding the importation of labor until conditions become stabilized.

The exclusion of Asiatics.

A protest against "the campaign for the destruction of the United States Department of Labor" and recommending that the executive council continue its effort to preserve that department intact.

The increase and broadening of the services of the United States Department of Labor.

That steps be immediately taken to bring about the permanent organization of the nonpartisan political campaign.

The continuation of the Federation's special committee on health insurance.

The executive council "to aid to the utmost the workers in the packing industry.

Legislation to control the meat packers.

That the cooperative bureau of the American Federation of Labor be continued.

An investigation of "self-instituted cooperative societies" not operated in accordance with Rochdale principles.

Legislation in re cooperative banks and credit unions similar to that in Massachusetts.

Indorsement of the Personnel Research Foundation and authorising the continuance of the relation between that organization and the American Federation of Labor.

The continuation of the information and speakers' bureau of the American Federation of Labor.

The establishment of conference boards of organized workers and employers.

That the trades-union be recognised "as the basic unit and not the group as limited by the single shop or establishment."

Protest against compulsory investigation of industrial disputes.

That the law establishing the Kansas Court of Industrial Relations be repealed.

Protest against fixing wages by the cost of living, statement being made that "there are but two avenues to higher standards of living for our people"—the elimination of waste and increased productivity.

Protest against the legal fixing of the wages of adult male workers in private employment.

Protest against retail or general sales tax or any other tax on consumption, and demanding the retention of income and excess-profits taxes until war costs have been met.

The issuance of monthly statement by the United States Department of Labor showing the cost of manufacture of those staple articles which form the basis of calculation in fixing the cost of living.

The continuation of the work of the Federal Trade Commission in securing and publishing information on ownership, production, distribution, sales, and profits in the basic industries.

That central bodies consider the practicability of establishing daily labor papers.

Alertness on the part of organized labor to prevent perversion of the schools.

Approval of the appointment by the executive council of a permanent committee on education.

The amendment to the Volstead law so as to permit the manufacture and sale of beer.

Indorsement of the printing trades-union 44-hour week campaign.

Protest against demanding the 6-hour day and the abolition of overtime.

That international and national organizations which do not now admit women to membership give early consideration to this matter.

The passage of the Sheppard-Towner maternity bill.

The indorsement of proposed legislation for the relief of trade-unionists with reference to the issuance of injunctions and other matters.

Congressional resolution to prevent the courts declaring laws invalid.

That the United States call a conference on disarmament.

The membership in 1920 was 4,078,740; the average membership for the fiscal year 1921 is 3,906,528. This includes 36,247 local unions in 110 national and international unions and 941

local and federal labor unions. The voting strength in 1920 was 41,307, and in 1921, 40,410. Reports from international organizations, which were not complete, however, show that there were 1635 strikes during the past year, involving 191,934 persons. The total expenditure to sustain members on strike was \$3,462,175.09, which includes \$213,474.65 donated by other unions for the assistance of the strikers.

A total of \$3,046,300.62 was paid out in death benefits by affiliated international organizations during the past year, \$1,209,903.49 in sick benefits, and \$903,461.49 in unemployment benefits. These figures did not cover benefits paid by local unions and therefore represented only a part of the total amount paid out by trade-unions in this connection. Officers for 1921-22: President, Samuel Gompers; Secretary, Frank Morrison; Treasurer, Daniel J. Tobin.

LABOR ARBITRATION AND CONCILIATION.

Significant events in the field of arbitration and conciliation in the United States during the year were: (1) The adjustment of the dispute between the packing companies and their employees by conference in Washington of the representatives of employers and employees and the Secretary of Labor. (2) The decision on the part of the executive council of the International Typographical Union to uphold the principle of industrial arbitration in the printing industry of New York City, and to submit their wage controversy with the printing houses to arbitration. (3) The establishment by the Pennsylvania Railroad System on Jan. 1, 1921, of a joint reviewing committee for the "amicable settlement, by joint conference, of all controversial questions affecting the engine and train service men." The plan, "which constitutes probably the most important single step yet taken toward the permanent banishment of the causes of railroad strikes," involved 51,000 employees. In announcing the plan the railroad company remarked: "In reaching this understanding, the employees have accorded full recognition to the principle that all labor differences ought to be, and are, capable of peaceful and rational adjustment. On its part, the management has, for the first time in the history of American railroads, given affirmative recognition to the right of employees to participate, on equal terms with the management, in decisions affecting their welfare and working conditions." Undoubtedly, action on the part of the Pennsylvania Railroad System was made necessary by the dissolution on Dec. 9, 1920, of the three railway boards of adjustment established by Wm. G. McAdoo during Federal control of the railroads. (4) The decisions on June 1 and June 25 of the United States Railroad Labor Board authorizing wage reductions resulting in a saving of practically \$400,000,000 to the one hundred-fifty odd roads involved.

A plan for arbitration and conciliation which seems to be very successful is that in operation in the electrical industry in the United States and Canada. It consists of a council on industrial relations composed of five members from each of the member organizations (i. e., the National Association of Electrical Contractors and Dealers and the International Brotherhood of Electrical Workers) which, on occasion, forms boards of conciliation. The member organizations bind themselves by their election of representatives for service on

such boards to accept their unanimous decisions, or failing this, to accept the unanimous decision of the council. The plan is voluntary, no local union or employer being compelled to refer a case to the council. It had been functioning for about a year when reported in May, 1921, and in that time had settled 90 disputes without the loss of a day's work and with only publicity and public opinion for its weapons.

No new States created boards of arbitration, and California in July repealed the act of 1891 which created a State board of arbitration. Colorado passed a law requiring employers and employees to give each other at least 30 days' notice of intended changes affecting hours or wages, in addition to giving notice to the Industrial Commission as required before; and providing penalties or injunctions against strikes or lockouts declared pending the decision of the Commission on labor disputes submitted thereto.

GREAT BRITAIN. The Industrial Court created by act of Parliament, December, 1919, had by the close of May, 1921, handed down approximately 650 decisions. The carrying out of the awards of the court is voluntary, depending solely upon the honor and civic sense of the disputants, and yet Sir Wm. Mackenzie, president of the court, described the number of awards repudiated by the losing side as "almost negligible." The court is a permanent industrial tribunal. It charges no fees and consists of thirteen persons. Of these, four, including the president, are designated as "independent persons," others as "representing employers," others as "representing workmen," while two are women members. It is not the practice for the whole court to hear any one case. The usual procedure is for each case to be heard by a division of the court, consisting of the president or a chairman as an "independent person" and other members "representing employers" and "representing workmen," respectively. If women are, or are likely to be, affected, a woman member is also usually added. This system is subject to variation with circumstances, and cases are not infrequent where a member of the court will sit alone. The constitution of a division of the court is in the discretion of the president. The minister of labor appoints the members of the court, which, however, is a wholly independent body, subject to neither government control nor influence. London is the chief seat of the court, but sessions are also held from time to time in other industrial centres in England, Wales, Scotland, and Ireland. The court functions in an advisory and consultative capacity as well as judicially. The minister of labor may refer matters to this tribunal for opinion whenever he deems advisable. The president of the court considers industrial arbitration "a plant of tender growth." He believes, however, that the industrial court may reasonably be expected to shape and express the increasing sense of social justice and "to establish a recognized body of principles by which industrial questions can be judged."

COLOMBIA. In October, 1920, additions were made to the strike laws of 1919; these additions prohibit strikes or lockouts until three steps in the settlement of the dispute have been tried and failed, namely, direct settlement, conciliation, and arbitration.

HOLLAND. A bill designed to effect voluntary arbitration of labor disputes was introduced into

the Dutch parliament early in 1921 by the minister of labor.

ROUMANIA. In August, 1920, a bill for the settling of labor disputes, introduced by the minister of labor, became law.

SWEDEN. Announcement was made in October, 1920, of the appointment by the Riksdag of a central arbitration board for the settlement of labor disputes whose object is to render it easier for workmen and their employers to have collective agreements correctly interpreted. Appeals to the board are voluntary, and the decision will be final.

LABOR CONFERENCE, INTERNATIONAL. The third session of the International Labor Conference was held October 25–November 19. The principal international agreements adopted were as follows: The general rule of one day's rest in seven; authorization of the industrial pensions among agricultural workers; non-employment of children under fourteen during compulsory school hours; compensation laws now applying to industrial workers to be extended to agricultural workers; no persons under eighteen years of age to be employed as stokers or trimmers in ships; compulsory regular medical examination of persons under age employed on ships. A resolution was passed requesting international officers to make a special inquiry into the unemployment crisis and the means of combating it. Among the regulations voted by the conference were the following: Women engaged in agriculture to have nine hours' rest; children under fourteen to have ten hours' consecutive rest and persons between fourteen and eighteen, nine hours; maternity protection to be extended to women agricultural workers; measures for the improvement of living conditions among agricultural workers; measures for dealing with agricultural unemployment; extension to agricultural workers of social insurance laws now applying to industrial workers to agricultural workers; development of technical education under government initiative for agricultural workers to the same degree as for others; one day's rest in seven recommended for commercial establishments as a general rule.

LABOR LEGISLATION, AMERICAN ASSOCIATION FOR. This is the American branch of the International Association for Labor Legislation. It collects data on labor legislation, conducts propaganda for the passage of desirable legislation, and issues a quarterly, *The American Labor Legislation Review*. Secretary, John B. Andrews, 131 East 23d St., New York City.

LABOR LEGISLATION. Mr. John B. Andrews, secretary of the American Association for Labor Legislation, summarized the labor legislation of 1921 as follows: Despite the persistence of reaction throughout the year and the consequent paucity of constructive measures in the 1921 output of new labor laws, there were some conspicuous advances in legislation for the protection of the safety and health of the workers. Of particular import was the progress made in Federal-State cooperation for maternity protection and for vocational rehabilitation of industrial cripples. Passage by Congress on November 23 of the Sheppard-Towner bill for maternity and infancy protection, crowning with victory a three-year intensive campaign, found six States prepared for immediate action, having accepted in advance the Federal aid now available. (See MATERNITY PROTECTION.)

Twenty-three additional States in 1921 enacted legislation accepting the new Federal act for vocational rehabilitation, making a total of thirty that had adopted this significant development in workmen's compensation legislation. Acute unemployment continued throughout the year, yet Congress and more than forty States met in legislative session and adjourned with apparent indifference to the immediate need for adopting a constructive programme of legislation for permanently combating the disastrous results of industrial depression. California, alone, took a forward step in enacting a law for long time advance planning of public works by the State to help in preventing unemployment. The Kenyon bill recently introduced in Congress aimed to set the Federal government upon a similar course of distributing public works intelligently. In Wisconsin a bill for unemployment compensation was advanced by a favorable report from the senate judiciary committee—and the nation-wide interest in this legislation, as reflected in the press, gives promise of State action that may open the door to an era of statesmanship in America in dealing with unemployment. World-wide protection of labor was given further impetus by the Third International Labor Conference which met at Geneva, October 25 to November 19, and adopted fifteen draft conventions and recommendations for safeguarding industrial, commercial, and agricultural workers (see LABOR, INTERNATIONAL CONFERENCE OF). See also CHILD LABOR; LABOR ARBITRATION; MINIMUM WAGE; OLD AGE PENSIONS; SOCIAL INSURANCE; UNEMPLOYMENT; WOMEN IN INDUSTRY; WORKMEN'S COMPENSATION.

LABRADOR. The peninsula in British North America between the Atlantic ocean and the Hudson Bay, lying within the province of Quebec except for the small strip along the northeast coast which is dependent on Newfoundland. It is the most eastern portion of the American continent. The part that is dependent on Newfoundland has an area of 120,000 square miles, and its population in 1919 was estimated at only 3647.

LABUAN. A small island off the northwest coast of Borneo under the administration of Singapore since Jan. 1, 1907. Area, 28½ square miles; population, estimated in 1918, 6848, most of whom were Malays from Borneo. Capital, Victoria with a population of about 1500.

LADD, GEORGE TRUMBULL. University professor and authority on philosophy and psychology died, August 8. He was born at Painesville, Ohio, Jan. 19, 1842; graduated at Western Reserve University, 1864, and the Andover Theological Seminary in 1869. He was pastor for several years, first at Edinburg, Ohio., and then at Milwaukee, Wis. In 1879 he became professor of philosophy at Bowdoin College, but in 1881 was appointed to the chair of philosophy at Yale which he held until his retirement in 1905. He was on many occasions invited to lecture before learned bodies in this country and abroad, and delivered courses in Japan, India, Hawaii, and France; and was the recipient of numerous honors both in the United States and abroad. His writings were voluminous. The following is a partial list: *Principles of Church Polity*, 1882; *Doctrine of Sacred Scripture* (2 vols., 1883); *Lotze's Outlines of Philosophy* (transl., 6 vols., 1887); *Elements of Physiological Psychology*; *What is the Bible?*

(1888); *Introduction to Philosophy* (1889); *Outlines of Physiological Psychology* (1890); *Philosophy of Mind* (1891); *Primer of Psychology* (1894); *Psychology, Descriptive and Explanatory* (1893); *Philosophy of Knowledge* (1897); *Outlines of Descriptive Psychology* (1909); *Essays on the Higher Education* (1899); *A Theory of Reality* (1899); *Lectures to Teachers on Educational Psychology* (in Japanese only); *Philosophy of Conduct* (1902); *Philosophy of Religion* (2 vols., 1905); *In Korea with Marquis Ito* (1908); *Knowledge, Life and Reality* (1909, 2nd ed., 1918); *Rare Days in Japan* (1910); *Elements of Physiological Psychology* (revised and rewritten, 1911); *The Teachers' Practical Philosophy* (1911); *What Can I Know?* (1914); *What Ought I to Do?* (1915); *What Should I Believe?* (1915); *What May I Hope?* (1915); *The Secret of Personality* (1918); *Intimate Glimpses of Life in India* (1919).

LAFAYETTE COLLEGE. An institution for the education of men at Easton, Pa.; founded in 1826. There were 832 students enrolled for the fall session of 1921. The faculty numbered 68 including 18 new members. The income for the year was about \$70,000. There were 45,000 volumes in the library. President, John Henry MacCracken, Ph.D., LL.D.

LAMB, ROLAND O. Life insurance official, died at Boston, Mass., November 14. He was born at Beverley, Mass., Dec. 20, 1850; educated in the public schools; and became bookkeeper in a manufacturing house. He afterwards became a bookkeeper in the John Hancock Life Insurance company and rose through the successive grades to the position of vice-president in 1899. After 1909 he was president of the John Hancock Mutual Insurance company, and a director of other important financial institutions.

LAMBS. See LIVE STOCK.

LAMBUTH, WALTER RUSSELL. Methodist Episcopal bishop, died at Yokohama, Japan, September 26. His election as bishop of the Methodist Episcopal Church, South, occurred in 1910. He was born at Shanghai, Nov. 10, 1854. He was sent to the United States to be educated and after graduating at college and at a medical school, he engaged in foreign mission work. Having been appointed in 1881 Superintendent of the China Mission, he founded the Hospital in Suchow where medical students were trained, and afterwards reopened the Methodist Hospital in Peking and organized the medical department of the Methodist University. He worked for five years in the Japanese Mission, having been appointed Superintendent in 1886.

LAND BANKS. See AGRICULTURE.

LANDS, PUBLIC. According to the annual report of the Commissioner of the Land Office, the total area of public and Indian lands originally entered and allowed during the fiscal year ended June 30, 1921, was 15,631,630.96 acres, not including 315,915.71 acres embraced in finals not previously counted as original disposition of land. The latter area was constituted as follows: Public auction, 119,138.82 acres; abandoned military reservations, 8315.63 acres; cash and private sales, individual claimants and small holding claims, 29,133.19 acres; preemption entries, 12,178.38 acres; soldiers' additional homesteads, 5614.76 acres; timber and stone entries, 80,668.55 acres; mineral entries, 57,472.16 acres; coal entries, 3394.02 acres. The area of 15,631,630.96 acres is

a decrease of 805,880.59 acres, as compared with the area originally entered and allowed during the fiscal year 1920. Of the total area originally entered and allowed during the fiscal year 1921, 10,313,732.89 acres were allowed under the stock-raising homestead act of Dec. 29, 1916.

The area patented during the fiscal year was 10,117,809.751 acres, a decrease of 1,732,591.586 acres, as compared with the fiscal year 1920. Of the above area 8,172,802.160 acres were patented under the homestead laws, a decrease of 1,067,101.096 acres, not including as homesteads 8424.16 acres patented as soldiers' additional entries.

The total cash receipts from sales, leases, and other disposition of public lands (including reclamation water-right charges and receipts for copies of records, sales of government property, etc.) for the fiscal year 1921 were \$10,486,314.36; from sales of Indian lands, \$903,371.93; and from leases of naval petroleum reserve lands, \$3,118,511.07, an aggregate of \$14,508,197.36, all of which was deposited in the Treasury.

Of surveys that could be properly measured on a mileage basis, 5420 linear miles were run in the United States proper and Alaska during the fiscal year, approximately the same amount as that of last year and with a slightly decreased cost, due largely to more satisfactory labor conditions and field transportation.

At the beginning of the fiscal year there were pending in homestead entries 6524 cases; during the year 63,816 cases were received as against 86,684 the previous year. At the close of the fiscal year there were pending and unacted upon 9715 cases. On that date 62,401 stock-raising homestead entries had been made since the passage of the act, covering an area of 24,337,816.28 acres; while the Geological Survey had received 92,325 petitions for designation and acted upon 84,882, having designated up to the close of the fiscal year 105,960,264 acres, which includes a considerable area already covered by entries or applications. In 1921, 4299 patents, covering an acreage of 1,249,592.63 acres, were issued, and since the passage of the act 5731 patents, embracing an acreage of 1,630,596.34 acres, had been issued. During the year 111 new applications were received, as against 327 the previous year. Final action was taken during the year on 281 cases, leaving 221 pending.

LANE, FRANKLIN KNIGHT. Former Secretary of the Interior, died at Rochester, Minn., May 18. He was born near Charlottetown, Prince Edward Island, July 15, 1864; removed to California in his youth, and studied at the State university. He became reporter, and later New York correspondent for western papers and editor and part owner of the Tacoma *Daily News*, but after 1889 when he was admitted to the bar he practiced law at San Francisco. He was corporation counsel of the city from 1897 to 1902, gaining a high reputation for his ability and honesty. He was an unsuccessful democratic candidate for governor in the following year and for United States Senator in 1903. From 1905 to 1913 he served on the Interstate Commerce Commission, having been appointed by President Roosevelt, and he was made chairman of that commission in 1913. From this office he was called to the cabinet of President Wilson in the same year. His administration of the Department of the Interior was highly praised for its firm stand in respect

to the conservation of the public resources, especially in the matter of the coal lands. He retired from office, March 1, 1920.

LANGDON, WOODBURY. Financier, died at Portsmouth, N. H., October 24. He was born in 1836 and after a successful business career at Boston, Mass., where he founded an important drug firm he acquired various interests in New York, serving as trustee of the New York Life Insurance company, the New York Trust company and other financial institutions of the city. In 1894 he was on the Committee of Seventy that attacked Tammany.

LANGE, CHRISTIAN L. Leading Norwegian pacifist received the Nobel Peace Prize along with Hjalmar Branting in 1921. He was born in Norway in 1869. He was secretary to the Nobel committee in the Storting or parliament, and professor of history at the Norwegian Nobel Institute. In 1920 he became general secretary of the Interparliamentary Union, and in 1907 he was the Norwegian representative at the second peace conference at The Hague. He was one of

were in operation, with 750 employees and an estimated monthly production of about 684,000 pounds of paper and cardboard. Small establishments manufacturing miscellaneous goods numbered 238, with a total employed force of 1175 workers. The forest resources are extensive.

COMMERCE. The chief exports have been flax and timber. The flax crop available for export in 1920-21 was estimated at 16,000 tons, an increase of over 50 per cent from the previous year, but still far short of the prewar crop, which averaged 35,000 tons. Complete figures for trade were not available but the following information as to the foreign trade at the port of Riga was supplied by the United States Bureau of Foreign and Domestic Commerce.

Imports at the port of Riga, Latvia, in 1920 nearly tripled those of 1919 in weight. Foodstuffs ranked first, followed by raw materials, etc., with manufactured goods coming third. Figures for 1919 and 1920 are given in the following table in which conversions are made on the basis of 62 poods to the long ton:

IMPORTS THROUGH THE PORT OF RIGA, BY WEIGHT, 1919-20

Commodities	1919		1920	
	Poods	Long tons	Poods	Long tons
Foodstuffs.....	4,043,824	65,223	1,891,744	27,286
Raw materials, half-manufactured goods, building material, and fuel.....	1,019,226	16,439	180,738	2,593
Manufactured goods.....	526,062	8,485	71,879	1,159
Animals.....	49,006	790	289	4
Total.....	5,638,118	90,937	1,924,630	31,042

the committee spoken of when the prize was awarded to Woodrow Wilson in 1920. He represented Norway at the League of Nations Assembly, and at the meeting in the autumn of 1921 he drew attention by his severe criticism of the League Council for doing nothing in regard to disarmament. He said that a few great Powers of the League were blocking disarmament despite the wishes of most of the nations of the world. He wrote many volumes and articles for the promotion of the cause of peace.

LAOS. See FRENCH INDO-CHINA.

LARSEN AIRPLANE. See AERONAUTICS.

LATVIA. One of the new Baltic states formed after the war out of territory formerly within the old Russian empire, comprising the former Russian province of Courland together with the four southern districts of Livonia and the three western districts of Vitebsk, but claiming also strips of territory in the former provinces of Grodno and Pskov, and in Eastern Prussia. Total area, exclusive of claims, about 24,440 square miles; population, June 15, 1920, 1,503,193, of whom 87,103 were foreigners. Of the Latvian citizens 80.41 per cent were Letts. The interests are chiefly agricultural, but latterly industrial activity has increased. The number of industrial establishments actually in operation in Latvia in the spring of 1921 was 970, with a total employed force of 11,778. The metal-working establishments numbered 442 and employed a force of 4403 workers. In the textile industry 157 small establishments were occupied with a force of 2800, and had an estimated monthly output of 1,368,000 pounds. Thirty-two chemical works were in operation, employing a total of 900 workers. Mineral-working establishments totalled, 94, with 1750 employees. Seven paper factories

A considerable part of the 1920 imports came from Germany—drugs and chemicals, 20 per cent, roofing felt, 50 per cent, fertilizers, 55 per cent, electric apparatus and supplies, 45 per cent, fayence ware, 100 per cent, tanning materials, 40 per cent, glass, 66 per cent, rubber ware, 18 per cent, hides, 70 per cent, tools, 30 per cent, lamps, 78 per cent, machinery and machine parts, 28 per cent, metals, 35 per cent, metal ware, 61 per cent, salt, 75 per cent, coal, pitch, 100 per cent, wood pulp, 37 per cent, and bricks, 100 per cent. Trade between Latvia and Germany, discontinued in consequence of political differences, was not resumed until the last third of 1920.

Exports at the port of Riga during 1920 consisted chiefly of raw materials and amounted to 7,050,554 poods (113,719 tons). During 1919 only 639,587 poods (10,316 tons) were exported, of which 456,000 poods (7355 tons) were timber and 117,000 poods (1887 tons) were flax.

FINANCE. The figures in the table on page 412 on the financial status of Latvia were supplied by the United States Bureau of Foreign and Domestic Commerce based on a statement issued by the Minister of Finance in the summer:

RAILWAYS. The extent of railway line was approximately 2900 kilometres, all of which with the exception of a short line of 48 kilometres were owned by the government. The lines are of five different gauges, ranging from 1525 millimetres to 600 millimetres. The main lines are those connecting Riga with the ice-free ports, and the lines running from those ports into the interior of Russia; also a line in the south running through Kovno to Berlin.

GOVERNMENT. The free state of Latvia was proclaimed at Riga in November, 1918, and was recognized by the principal Powers with the

exception of the United States, which withheld recognition pursuant to the policy respecting Russia laid down by the Wilson administration. A constituent assembly was elected, April 17-18, 1920, on the basis of universal suffrage for adult citizens of both sexes, and consisting of 152 members, of which the largest group were the Social-Democrats (52 members). It met, May 1, 1920, and its work on the constitution was going on in that year and in 1921. Meanwhile a coalition government was formed, representing all parties with the exception of the Social-Democrats, and responsible to the constituent assembly until that body should be replaced by a regular parliament. This provisional government consisted of a ministry with the following departments: Interior, foreign affairs, finance, national defense, public instruction, justice, agriculture, trade and industry, supplies, and a state controller. The prime minister at the beginning of 1921 was K. Ulmanis.

An economic conference of the Baltic States, Russia, and Finland was in session at Riga, the Latvian capital, until the first week in November. It came to an understanding in respect to future agreements on transport among the states concerned, and it provided for a permanent economic bureau at Riga, representing the countries participating in the conference.

LAURENS, JEAN PAUL. See **NECROLOGY.**

LAW, JAMES. Veterinarian and former dean of Cornell Veterinary College, died, Springfield, Mass., May 10. He was born in Scotland in 1838; and educated in veterinary science at Edinburgh and in France. After serving on the faculties of veterinary colleges in Scotland and England he came to the United States, and became professor of veterinary science at Cornell University, holding that chair until 1896 when he was appointed dean and director of the New York State Veterinary College, established at the university. In 1908 he retired from active work,

becoming dean emeritus. He did important work for the New York Agricultural Society and as field chief of the Bureau of Animal Industry of the United States Department of Agriculture, and was the author of: *General and Descriptive Anatomy of Domestic Animals* (1861-62); *The Farmers' Veterinary Adviser* (1876); and a text-book of veterinary medicine, five volumes (1905-11). It is largely due to his labor that veterinary work in this country became a genuine profession, and at first he stood almost alone in his demand for higher veterinary education. The veterinary college at Cornell University which resulted from his influence and personal efforts was the first state-supported institution of the kind in the United States.

LAWN TENNIS. See **TENNIS.**

LAWS, SAMUEL SPAHR. Educator and inventor, died at Asheville, N. C., January 9. He was born in Ohio County, Va., March 23, 1824; graduated at Miami University in 1848 and at the Princeton Theological Seminary in 1851. He also studied both law and medicine. He was ordained to the Presbyterian ministry in 1851, and was pastor of a church in St. Louis, 1851-53. He was president of the University of Missouri, 1876-89. From 1893 to 1898 he was professor of natural science and Christian apologetics at the Presbyterian Theological Seminary at Columbia, S. C. He invented and introduced a system of market tickers for simultaneous telegraphic reports. Besides a large body of occasional writings which he collected in several volumes, he published: *The Atonement*; and *The Trinity*.

LEAD. The following information in regard to the lead industry in 1921 was supplied by the United States Geological Survey: The mine and smelter output of lead in the United States in 1921 fell off about 20 per cent. The output of soft lead by mines of the Mississippi Valley was about 231,000 short tons, and that of argentiferous lead by mines of the Western States was about 170,000

tons, a total of 401,000 tons. The corresponding figures for 1920 are 251,816 tons from the Mississippi Valley (including the small output of the Eastern States) and 259,070 tons from the Western States, a total of 512,885 tons. The southeastern Missouri district made the largest output and was the only district to make a gain. Its output was 178,000 tons, as compared with 161,258 tons in 1920. The Cœur d'Alene district of Idaho came next, with about 96,000 tons, as against 118,105 tons in 1920. Utah made an output of about 45,000 tons, a decrease from 70,419 tons in 1920. The imports of lead in ore were about 7000 tons, furnished chiefly by Canada, Mexico, and South America, and those of lead in bullion were about 41,000 tons, almost wholly from Mexico, as compared with a total of 62,796 tons in 1920. The lead content of lead ore in bonded warehouses on November 30 was 7648 tons and of base bullion 16,207 tons, as against 16,462 and 34,758 tons respectively in 1920. Part of this lead, however, may have been smelted or refined but not shipped and thus may be included in smelter stocks.

The output of primary domestic desilverized lead in 1921 was about 190,000 short tons, of soft lead about 145,000 tons, and of desilverized soft lead about 55,000 tons, making a total output from domestic ores of about 390,000 tons of refined lead, as compared with 476,849 tons in 1920, which was made up of 220,327 tons of desilverized lead, 189,854 tons of soft lead, and 66,668 tons of desilverized soft lead. The output of lead smelted and refined from foreign ore and bullion was about 50,000 tons, as compared with 52,808 tons in 1920. The total lead smelted or refined in the United States was thus about 440,000 tons, as compared with 529,657 tons in 1920. The output of anti-monial lead was about 8000 tons, as against 12,535 tons in 1920. The exports of lead of foreign origin were about 33,000 tons and of lead of domestic origin about 700 tons, as compared with 23,538 tons and 2730 tons, respectively, in 1920, an increase of about 7000 tons in the total exports. The imports of refined pig lead, which for the years 1916 to 1919, inclusive, had been a little over 5000 tons a year and which had jumped in 1920 to 35,719 tons, maintained that high level in 1921, being about 32,000 tons. These heavy importations were the result of the relations of the New York and European prices and the rates of exchange.

FOREIGN LEAD INDUSTRY. The labor strike at Broken Hill, in May, 1919, compelled the great lead smelter at Port Pirie, Australia, to close in July, 1919, for lack of ore. It started up again after the strike settlement in November, 1920, but the sintering plant was destroyed by fire in January, 1921, compelling the smelter to close again. The reconstructed sintering plant which was completed in August, 1921, has but one-half its former capacity; so that a similar reduction was entailed in smelting capacity, amounting to about 70,000 tons annually. The Burma Corporation discontinued the erection of the new lead smelter with a capacity of 60,000 tons, and planned to extend and improve the existing plant so that it would have a capacity of 45,000 tons annually. Likewise, the plans for a zinc smelter were abandoned for the present. Half of the Risdon (Tasmania) electrolytic zinc plant, which had a rated capacity of approximately 20,000 short tons, was started in December, 1921. It was expected that the other

half would be completed by the end of 1922. As a result of the award of the League of Nations, it was indicated that Poland would make 86 per cent of the production of zinc ore and 77 per cent of the production of lead ore and would have practically all the zinc and lead smelters of Upper Silesia. The output of refined lead in Canada in 1921, estimated from the year's output in British Columbia and 9 months' output in Ontario, was about 30,000 short tons, as compared with 14,360 short tons in 1920. Burma and Rhodesia, as estimated from the output for 9 months of the year, produced about 36,000 and 19,000 short tons respectively, in 1921, as against 26,680 and 16,354 short tons in 1920. The best information available indicates that the world's output of work lead was a little over 800,000 metric tons, of which the United States smelted 40 per cent, as against 900,000 metric tons in 1920, of which the United States smelted nearly 50 per cent.

Lead mining in the United States during 1921 was on a very poor basis as regards production and business generally, while the same conditions prevailed in most of the fields of manufacture. The total output, about 400,000 tons, was 75,000,000 tons less than in 1920 and it was impossible to mine at a profit. The average price for the year, 4.54 cents per pound, to which approximately it had dropped in the last four months of 1920 from 8.90 cents, could be compared with the average price for 25 years of 5 cents f. o. b. cars New York. On one side there was the selling price at or below the prewar level, and on the other there was the vast increase in costs of mining, milling, and smelting, including of course labor which had increased by at least 75 per cent, and especially supplies and transportation. When it was considered that to move a car of pig lead from East St. Louis to New York cost in 1914 \$100 while in 1921 until December 10 the freight charge was slightly in excess of \$330 it can be seen how much of the selling price of the metal went for transportation. It was anticipated that wages could be reduced with the decline in the cost of living while there was a decline in the price of fuel from 1921 figures, and the same was more or less for other supplies. There was a frank demand on the part of the lead interests for increased protection in the forthcoming tariff act so that the United States could take care of its home market by its own lead ores, and metal rather than by the use of supplies from Mexico and Spain.

In 1921 more white lead for paint was made and sold than in any other year and this demand for lead pigments was a promising feature. The storage battery consumption of lead, which was next in importance to the paint demand, declined to about 50 or 60 per cent of the capacity which was attained in the previous year. Lead incased cables were also being made on a reduced basis, possibly 75 per cent of normal capacity, though even with the use of lighter cables and thinner sheathing this field was in a satisfactory position. Plumbing supplies and pipe for building were fairly active during the year, but there was less demand for bearing metal and solder. The foil industry was less than normal while type metals were in about the same demand as usual.

One feature of the American lead industry was the steady increase in the production of secondary lead from year to year. The U. S. Geological Survey estimated a production of 67,168 tons for

1912, but by 1919 it had reached 125,000 tons, and in 1921 it was estimated at almost the same amount. Then in addition there came to the American market a considerable tonnage of shrapnel balls imported under the classification of type metal and paying a 15 per cent ad valorem duty. Imports of this material amounted to some 16,000 tons in 1921.

century prior to the passage of the Dingley Act, June 24, 1897, hides were on the free list as both the political parties were in favor of such action, the Republicans especially wishing to retain hides on the free list as raw material and the Democrats opposing protection in any form. The Payne-Aldrich tariff act of 1909 also put hides on the free list though carrying a duty on leather and

LEAGUE OF NATIONS. See WAR OF THE NATIONS.

LEATHER. In the general process of deflation the leather industry participated actively and its return to normal though painful and expensive was being accomplished satisfactorily. In some lines of manufacturing there was a waiting for lower prices which did not develop, as a turn came in the price of hides during the year and the end of December saw a stronger leather market. The latter part of 1920 and the year 1921 were severe on the tanners, but all things considered the storm and depression were weathered reasonably well. One has but to study the decline in the prices of hides from their peak values in 1919 as shown in the table on page 415 to realize the severity of the process. Then when the prices for the months in 1921 are considered the general improvement in the industry is apparent.

Naturally with the decline in hides there was a fall in the price of leather, so much so in fact that during the year both upper and sole leather sold below its replacement price and stocks were quite exhausted. There was also a decline in the prices of boots and shoes and leather goods generally, and during the year retailers and manufacturers alike were seeking to close out their stocks. See **BOOTS AND SHOES.**

It must be remembered that for a quarter of a

shoes. Consequently when it was proposed to revise the tariff and to change the status of hides and leather products, there was considerable discussion. Naturally, the stockmen, butchers and packers and a certain number of farmers sought a duty on hides and this naturally was opposed by the tanners and most of all by manufacturers of boots and shoes and leather goods generally. These in turn asked for protection on their products and claimed that with free hides that they could enter the export markets of the world. It must be realized that only about 50 per cent of the cowhides and calfskins used in the United States are obtained from the slaughterhouses of the country, while only about 40 per cent of the sheepskins are of domestic production, not to mention the goatskins and other leathers the greater part of which is imported. Not only do American cattle fail to supply the requisite amount of hides, but there was a failure due to many causes to increase the production. During 1921 at the great cattle markets of the west there were slaughtered 5,088,100 cattle and 6,707,600 sheep, as compared with 6,082,500 cattle and 7,415,000 sheep in 1920. But the decline was for more than a single year, and to show that cattle raising except for the forced activity during and immediately after the war was at least stationary if not declining, recourse may be had to the follow-

1920.....	9,709,819	4,227,558
1921 (last 3 months estimated).....	7,200,000	3,950,000

No figures were available for the country kill and that of the small packers not having government inspection, but it was a fair inference

that they would run at least proportionate to the Federal inspected slaughter. (See table, page 416.)

Late in the year it was announced that Mexico had increased its tariff rate on boots and shoes rate of 3 pesos (\$1.50) a pair and the boot and shoe factories in the city of Mexico and elsewhere were looking for increased production. This was the second increase of the tariff on boots and shoes within the year.

In Germany at the end of the year it was reported that the leather industry was in a critical condition. At the auction sales in the different German cities there was a decline in a month of from 20 to 45 per cent. At Frankfurt no buying was reported, while at Berlin prices fell from 20 to 55 per cent. For a time during the year buyers from other European countries were active in German markets, but eventually Holland, Scandinavia, and the Baltic countries became saturated with German leather and leather products.

LEDERLE, ERNST JOSEPH. Chemist, formerly health commissioner of New York City, died at Goshen, N. Y., March 7. He was born on Staten Island, N. Y., in 1865; and graduated at the Columbia School of Mines in 1886. From 1889 to 1902 he was chemist in the New York department of health. He was health commissioner from 1902 to 1904, and afterwards president of the health commission.

LEDYARD, HENRY BROCKHOLST. Railroad manager, died at Detroit, Mich., May 25. He was chairman of the board of the Michigan Central railroad. He was born in Paris, France, Feb. 20, 1844; and graduated at the United States Military Academy in 1865. He served in the artillery until 1870 when he resigned to enter the service of the C., B. & Q. railway of which he became superintendent of the eastern division. He was afterwards general manager of the Michigan Central from 1877 to 1883, and president of that road from 1883 to 1905, after which he was chairman of the board of directors.

LEEWARD ISLANDS. A British island group lying to the north of the Windward Islands and southeast of Porto Rico, comprising Antigua, Dominica, St. Kitts, Nevis, Montserrat, and the British Virgin Islands. Area, 715 square miles; population, 127,193. The largest of the islands is Dominica with an area of 305 square miles and it is also the most populous, having 33,863 in 1911, and 40,315 in 1919. The next in size is Antigua, 108 square miles, which with the two dependent islands of Barbuda and Redonda, had a population

in 1911 of 32,269. The chief town of Dominica is Roseau with a population of 7000; of Antigua, St. John (9262); of St. Kitts, Basseterre, 8159. The British Virgin Islands consists of all the islands of the group which do not belong to the United States. (See VIRGIN ISLANDS.) The budget for 1919-20 was as follows: Revenue, £240,476; expenditure, £220,578. In 1918-19 the imports amounted to £908,401 and the exports to £912,877. The islands are divided into five presidencies and the central government consists of a federal executive council and a federal legislative council. The group is under a governor and a colonial secretary. Governor at the beginning of 1921, Sir E. M. Meredith.

LEGION, AMERICAN. An organization of the American veterans of the World War, defined in its by-laws as non-partisan, non-political, and non-sectarian, and as open to all veterans who served honorably between April 6, 1917, and Nov. 11, 1918, without distinction of rank or discrimination between overseas and American service. The third national convention held at Kansas City, October 31-November 2, was attended by delegates from every State in the Union and from Alaska, Porto Rico, and many foreign countries and by various distinguished guests, including Vice-President Coolidge, General John J. Pershing, Rear-Admiral Hugh J. Rodman, and Marshal Foch of France, Lord Admiral Beatty of England, General Armando Diaz of Italy, and General Jacques of Belgium. The report of National Commander Emery summed up the

record of the year of which the main achievements were as follows:

The greatest achievement was won for disabled veterans. According to the National Commander "the nation and the Legion itself were ignorant of the true conditions of mismanagement and neglect surrounding the administration of affairs of our disabled comrades. This state of affairs was reflected in the inactivity of the Congress and the incompetency of government agencies. In the War Risk Insurance Bureau more than one hundred thousand claims were pending which were more than one year old. The Surgeon-General of the Public Health Service was vainly pleading for money to equip ten thousand additional beds. Dissatisfaction with the work of the Federal Board for Vocational Training had reached a point where it was a subject of Congressional investigation. Disabled veterans were in dire want. Thousands were without medical care or compensation with which to obtain it. Many had taken refuge in insane asylums, almshouses, and even jails." As a result of the Legion's activities the Sweet bill was passed in August, creating the Veterans' Bureau and "displacing the incompetent old régime."

Then began the campaign for adjusted compensation which was going on with great vigor at the close of the year. The National Commander condemned the attitude of the anti-compensation Senators, and predicted the ultimate success of the Legion's efforts for soldiers' compensation, when the public fully understood the situation. In respect to the Legion's means of influence he pointed to the following agencies and activities: "There is the *American Legion Weekly*, our national magazine. The American Legion News Service, our organization for the gathering, writing and distribution of news of Legion activities, regularly is furnishing news of Legion activities to more than 10,000 newspapers which are read by 40,000,000 people. We are expanding the National Speakers' Bureau until within a few months we hope to have at hand a corps of 4000 volunteer Legion orators throughout the country. We have in process of development a Film Service, the object of which is to enable posts to utilize motion pictures as a means of increasing interest and attendance in post meetings and spreading the general aims of the Legion through special films. These four agencies of publicity—the *Weekly*, the News Service, the Speakers' Bureau and the Film Service recently have been grouped under a Director of Publicity to insure synchronization and coordination of effort."

Among the resolutions adopted the following may be mentioned:

That the American Legion recommends that the enemy property held by the United States be used to settle the claims of Americans against Germany, or held as an offset until these claims are paid in full.

That the American Legion reiterates its position in favor of the adjusted compensation for discharged soldiers, and deprecates the request of President Harding to delay passage by Congress of a measure providing for same and the acquiescence of Congress in that request.

That the sentiments expressed by America's Ambassador, Colonel George Harvey, in his Pilgrim Day Speech, setting forth the reasons for America's entry into the World War and the cause

for which America fought, does not represent the true American attitude as interpreted by the American Legion, and let it be known now and for all time that America fought not only for the maintenance of America's rights, but for the freedom of the world, and that a copy be forwarded to the President of the United States.

That the American Legion, in convention assembled, do enter a solemn protest against the mitigation of the sentence of Eugene V. Debs, or of any and all sentences imposed on obstructionists to the conscript laws, on conscientious objectors, and on violators of the laws of the United States to protect its peace and security in time of peril or to assist in the national defense, and we call attention to the impropriety of taking any such action while ex-service men are being held for trivial violations of the Articles of War.

That the American Legion indorse the idea of an international armament limitation agreement.

The Legion lost by death during the year Commander Frederick W. Galbraith, Jr., who had rendered distinguished services especially in the gathering of information in respect to disabled soldiers and the carrying on of the successful campaign on their behalf. The officers elected were as follows: National Commander, Hanford MacNider of Mason City, Iowa; National Vice-Commanders, H. Nelson Jackson, George L. Berry, Raymond O. Brackett, Charles S. Kendrick, John A. McCormick; National Chaplain, Rev. E. A. Blackman; National Adjutant, Lemuel Bolles; National Treasurer, Robert H. Tyndall; National Judge Advocate, Robert Adams; National Historian, Eben Putnam, Wellesley Farms, Mass.

The National Headquarters of the Legion are at Indianapolis, Ind.

The American Legion Auxiliary (women) with a membership in 1920 of about 200,000 held its first national convention at Kansas City, at the same time, November 1, and elected the following officers: President, Mrs. Lowell F. Hobart; Treasurer, Miss M. I. McCoy; Secretary, Miss Pauline Curnick, Indianapolis, Ind. See EDUCATION IN THE UNITED STATES.

LEHIGH UNIVERSITY. A nonsectarian institution for the education of men at Bethlehem, Pa.; founded in 1866. For the fall of 1921 there were 1052 students enrolled; of whom 763 were in the College of Engineering; 163 in Business Administration; 126 Arts and Sciences. The faculty numbered 96. The productive funds were about \$3,000,000 and the income for the year 1920-21, \$550,984. The library contained 150,000 volumes. Acting President, Vice-President, N. M. Emery.

LELAND STANFORD, JR. UNIVERSITY. A nonsectarian co-educational institution of the higher learning at Palo Alto, Calif.; founded in 1891 in memory of Leland Stanford, Jr. The enrollment in 1921 was 2500 and the faculty numbered 280. President, Ray Lyman Wilbur, M.D.

LEPROSY. In recent years the opinion has been formed by the reading public that this affection has passed into the curable class, chiefly through the intensive and systematic use of chaulmoogra oil, or the active principles contained therein. It is true that there are a number of cases on record in which the disease appears to have been permanently arrested. In other words,

it is possible for the individual with the incipient or not too far advanced case to recover relatively if everything is in his favor—that is if he have the best sanitary environment in addition to the use of the drug in question. But this is a very different proposition from curing the disease *en bloc* and emptying the leper houses throughout the world. In a recent report by the United States Public Health Service it is stated that more time must elapse before the alleged cure can be pronounced permanent. The ethyl esters which have supplanted the crude chaulmoogra oil constitute a very valuable remedy especially in young subjects and in those in the first stage of the disease. But in older subjects and older cases this remedy is less valuable. Of cases paroled from the leprosy stations in the Hawaiian Islands only about eight per cent have thus far returned for treatment which fact is very encouraging. However, the report does not state the per cent of those discharged and hence it is impossible to form any definite conclusion as to the value of the remedy.

LEWIS, WILSON SEELEY. Methodist Episcopal bishop, died at Sioux City, Iowa, August 25; He was born at Russells, N. Y., July 17, 1857, graduated at Cornell College, Iowa, in 1889; and was ordained to the Methodist Episcopal ministry. He was principal of the Epworth Seminary, Iowa, from 1888 to 1897; president of Morningside College, Iowa, from 1897 to 1908; and in the latter year was made bishop.

LEXICOGRAPHY. See **PHILOLOGY, MODERN.**

LIBERIA. A negro republic on the western coast of Africa, extending from the British colony of Sierra Leone on the west to the French Ivory Coast on the east, with a coast line of about 350 miles. Area, variously estimated at from 35,000 to 41,000 square miles; population, from 1,500,000 to 2,000,000, all of the African race, but including about 12,000 Americo-Liberians. The civilized negroes for the most part live along the coast, numbering about 50,000. Capital, Monrovia, with an estimated population, including Krutown, of 6000. No later complete figures for trade were available than those given in the preceding YEAR BOOK, but British trade with Liberia in 1920 was as follows: Exports to Great Britain from Liberia, £513,425; imports from Great Britain to Liberia, £271,527. Vessels entering Monrovia in 1919 numbered 244 of 622,844 tons, of which 483,789 were British. President at the beginning of the year, Charles D. B. King.

LIBRARY ASSOCIATION, AMERICAN. An incorporated organization founded in 1876 in Philadelphia, to promote library interest and improve library service. More specifically its working programme is: (1) To give advisory assistance to all who are interested in library establishment, extension, and development; (2) to maintain an employment bureau for librarians and libraries; (3) to attract promising and properly qualified young men and women to library work as a profession; (4) to hold conferences; (5) to raise the professional standards, dignify library service, and improve library salaries; (6) to carry on publication and publicity; (7) to assist in making books a vital, working educational force in American life and in making libraries easily accessible to all the people. Membership is open to any interested person or institution.

The Forty-third Annual Conference was held at Swampscott, Mass., in June, 1921, with an attendance of 1900. Reports showed that while library service is developing rapidly, the demand for books has increased still more rapidly, and the needs are far ahead of facilities for meeting them. The fact that there are 60,000,000 people without library facilities and many possessing them who do not use them, is the basis of the Association's plans for extension and publicity work. The Association's Library War Service has practically closed. Book service for men in the army has been transferred to the United States government, although the Association met a special need for a supply of books for Coblenz after this transfer had been made. Service to Merchant Marine vessels has been taken over by the American Merchant Marine Library Association and the transfer of the hospital service to the government is nearly completed. The American Library in Paris, Inc., to whose endowment fund the Association contributed \$25,000, is functioning independently except that its librarian is nominated and five trustees are appointed by the American Library Association.

During the year 1921 forty-three publications were issued, counting separately the individual numbers of the periodicals. They range in size from four-page leaflets to bound volumes and they include reading lists, programmes, bibliographies, proceedings and pamphlets about various phases of library work for librarians and for the public. The periodicals issued by the Association are the *Bulletin* (bi-monthly), and the *Booklist* (monthly except August and September). The latter lists, classifies, and briefly describes current books for the convenience of librarians and the reading public. Publicity material on libraries and reading, such as posters, placards, picture exhibits, and lantern slides has also been prepared and widely used, in most cases for free distribution by libraries. The total distribution of publications during the year is estimated at 257,000.

Work for the blind continues one of the important interests of the Association. The *Booklist of Revised Braille*, the fifth number of which has been issued, lists 64 books which have been brailled through the instrumentality of the Association. The year was a busy one for the employment and recruiting departments. Children's librarians are in demand at salaries slightly higher than during 1920. Other demands are for people with general training for small libraries. There are constant requests for information from individuals considering library work as a vocation.

The officers of the Association for 1921-22 were: President, Azariah S. Root, Oberlin College Library, Oberlin, Ohio; first vice-president, Samuel H. Ranck, Grand Rapids Public Library; second vice-president, Claribel R. Barnett, U. S. Department of Agriculture Library; treasurer, Edward D. Tweedell, The John Crerar Library, Chicago. The Educative Board includes in addition to the foregoing, Gratia A. Countryman, John Cotton Dana, George S. Godard, Margaret Mann, H. H. B. Meyer, Carl B. Roden, Edith Tobitt, and George B. Utley. The secretary of the association is Carl H. Milam, 78 East Washington Street, Chicago, at which address are maintained the executive offices of the Association.

LIBRARY PROGRESS. The library year 1921 was not one of salient features or remarkable

progress. There was an increasing number of library meetings throughout the country at which the most important questions before the library profession, such as revenue, certification, tariff and copyright provisions, came up for consideration. There has been a serious tendency, especially notable in New York, to curtail library appropriations, particularly book funds, which must result in crippling the facilities of public libraries in face of the constantly increasing public demand. One example was the omission from the new Federal budget of appropriations for continuing welfare work, including library service, for the army in peace times. This was partially remedied through the effort of Secretary Weeks to secure an appropriation of \$60,000 for books and service. The new budget carried satisfactory appropriations for the navy, and the merchant marine is to be cared for by a chartered organization which will be benefited by the large collection of the American Library Association. Thus was the library interest seriously affected by the aftermath of the war.

On the other hand, the year was marked by the opening of several large library buildings. Of these may be mentioned the Detroit Public Library edifice and the new quarters of the John Crerar, in the office building which it has specially constructed for library needs. Philadelphia has laid the foundations of its great public library and Wilmington (Del.) has broken ground for an important edifice. New branches have been opened in several library systems, notably two more of Cleveland's "reading factories," two additional branches for Newark (N. J.), and negro branches at Atlanta and Norfolk. College libraries have made noteworthy progress: Williams with an imposing building well advanced, Boston College, with a \$400,000 building under way, Luther College, Decorah (Iowa) with a library building just completed, and McGill University at Montreal with an important extension. The James J. Hill Reference Library building, which adjoins and supplements the St. Paul Public Library, completes the central library system in that city, and the Grosvenor Reference Library at Buffalo (N. Y.) has broken ground for a new building.

There was more library legislation than usual in 1921, as most of the States held their biennial legislative sessions in this year. The many laws passed regarding the levying of taxes for library support in the various States do not admit of much generalization. They do show, however, a disposition to permit libraries to adjust themselves to changing conditions and to provide more liberally for their support. There is an unusually large amount of Federal legislation pending, which, if enacted will affect libraries and librarians. Of these may be mentioned the Hospital Library Service appropriation bill passed by the last Congress, which includes \$100,000 for library books, magazines, and papers for beneficiaries of the War Risk Insurance and a continuation of the hospital library service inaugurated by the American Library Association; the Navy Appropriation Bill which includes \$589,500 for educational training and libraries for the navy, ashore and afloat; and the Library Information Service bill which creates a Division of Library Service in the Bureau of Education, whose duties will be to increase the efficiency of American libraries by

providing current information concerning government activities, to collect and organize information regarding printed matter issued by the Federal government and provide digests of this material.

Of library gifts there has been little of importance to record, especially as the Carnegie Corporation, after providing for more than 2500 buildings, has maintained the suspension of new library grants upon which it decided at the commencement of the war and has devoted itself in the library field chiefly to rounding up work provided for earlier. It has, however, taken up library work in foreign countries, and the Carnegie Endowment for International Peace has supplied \$200,000 for erecting and equipping a library building in Rheims, France, and \$100,000 also for books for Belgrade University. It has also added to the libraries on American history, civics, and economics in several capitals, similar collections for Strassburg and other places. The work of the American Library Association abroad has technically ceased except through the American Library in Paris, although a special appropriation provided for library service to members of the Army of Occupation, and much work has been done through American channels in the further development of libraries, especially for children in the devastated regions of France. Survey work has also been carried on by this association in the Far East and Latin-America and plans carried out for some of the library schools to give scholarships for librarians in foreign countries desiring American training.

LIBYA. An Italian colony on the north coast of Africa, comprising the two provinces of Tripolitania and Cyrenaica, lying between Tunis on the west and Egypt on the east. Area, estimated at 406,000 square miles; population, according to the census of August 3, 1911, 523,176 natives, but later estimates placed the total population at about 6,000,000. The European population numbered from 10,000 to 12,000, the majority being Maltese and Italians. The language generally spoken is Arabic, and Arabic and Italian are the official languages. The capital of Tripolitania is Tripoli with about 73,000 inhabitants; and the capital of Cyrenaica is Benghazi with about 35,000. The southern frontier is not fixed as the region extends indefinitely into the Sahara Desert. The fertile regions are those along the coast and the hill regions of Meallata, Bondara, Gebel, Tarhuna, and the valleys and oases. Trade is mainly by caravan between Benghazi and Wadai and between Tripoli and Central Sudan. According to a British authority the imports in 1919 amounted to £3,900,000. For the year 1920-21 the budget balanced at 127,196,010 lire. Governor of Tripolitania at the beginning of 1921, L. Mercatelli; of Cyrenaica, G. de Martino.

LIFE INSURANCE. See **INSURANCE.**

LIGHTHOUSES AND AIDS TO NAVIGATION. On June 30, 1921, there were maintained by the United States Lighthouse Service 16,355 aids to navigation, including 5756 lights of all classes and 593 fog signals (not including 152 buoys with whistles and 386 buoys with bells), of which 48 were submarine signals.

During the fiscal year ended on that date, there had been a net increase of only 31 in the total number of aids to navigation maintained by

the Lighthouse Service, this being the smallest increase in a number of years, due to the large number of aids discontinued. There was a decrease of 49 lights and an increase of 47 gas buoys, 5 float lights, and 28 unlighted aids.

The accompanying table gives a summary of the aids to navigation under each class established and discontinued during the fiscal year, and also the net increase and the number in commission at the end of the fiscal years 1920 and 1921:

	Class	Established	1921 Discontinued	Increase	Total, June 30— 1920 *	1921
Lighted aids:						
Lights (other than minor lights).....		36	12	24	1,836	1,860
Minor lights.....		110	† 183	† 73	3,117	3,044
Light-vessel stations.....					49	49
Gas buoys.....		74	27	47	582	629
Float lights.....		10	5	5	169	174
Total.....		230	227	3	5,753	5,756
Unlighted aids:						
Fog signals.....		12	3	9	536	545
Submarine signals.....					48	48
Whistling buoys, unlighted.....		1	3	† 2	78	76
Bell buoys, unlighted.....		10	6	5	243	248
Other buoys.....		273	277	14	7,197	7,193
Day beacons.....		102	† 82	20	2,470	2,490
Total.....		398	370	28	10,572	10,600
Grand total.....		628	597	31	16,325	16,356

* Differences from statistics published in 1920 report are due to minor discrepancies in previous count.

† Includes 98 minor lights and 18 daymarks in Missouri river, which were discontinued in 1918.

‡ Decrease.

The United States Lighthouse Service is the most extensive lighthouse organization in the world, being charged with the lighting and marking of all coasts, lakes, and navigable rivers under the jurisdiction of the United States excepting the Philippine Islands and Panama. Its responsibility covered 49,000 statute miles of coast line and river channels, and beyond the borders of the country extended to the Virgin Islands, Porto Rico, islands in the Caribbean sea, Alaska, the Hawaiian Islands, Guam, and Samoa.

In Alaska 22 additional aids (of which 11 were new lights), were established during the year, making the total there 548, of which 219 are lighted (206 lights and 13 gas buoys), but the great extent of the Alaska coasts in 1921 was quite insufficiently marked.

During the year there was completed at a cost of \$70,492.87 the new light station and buildings at Point Borinquen, the northwesterly extremity of Porto Rico. This light was increasingly important as a landfall light on the opening of the Panama Canal, and its former inefficiency and deterioration from erosion and earthquake necessitated rebuilding on a more suitable site for which Congress in 1917 appropriated \$85,000. The new location was located about 1 mile northeast of the old site on a prominent elevation on the northwest coast of the island, about 233 feet above sea level.

The new light tower was built of reinforced concrete, cylindrical in form, of simple and heavy design, well reinforced to offer maximum resistance to earthquake shocks. The concrete foundation was 25 feet square by 6 feet deep and the main tower walls 15 feet in diameter, 15 inches thick, and 46 feet high, above which was a service room and standard 8-foot helical bar lantern. A cast-iron spiral stairway led from the base to the service room. The illuminating

apparatus consisted of a third-order 12 panel flashing lens on a mercury float and a 55-millimetre type A incandescent oil vapor lamp. This lamp shows a group of four white flashes of 32,000 candlepower every 30 seconds, and is visible 24 miles.

There were also finished, complete new systems of aids to navigation for Keweenaw Waterway, Lake Superior, and for Fighting Island Channel, Detroit river, Mich., while the new plate shop

and coal shed at the general lighthouse depot on Staten Island, N. Y., were completed. Important improvements and construction were in progress at lighthouse depots at Chelsea, Mass., Galveston, Texas; Detroit, Mich., and Ketchikan, Alaska; on aids in the Hudson, St. Johns, Detroit, Mississippi, and St. Marys rivers; the eastern shore of Chesapeake Bay; and at light stations at Point Jiguero, P. R.; the Florida Reefs; Fairport and Conneaut Harbors, Ohio; Indiana Harbor, Ind.; and Point Vincente, Calif.

NEW LIGHTSHIPS. Congress by the act of March 4, 1921, appropriated \$1,000,000 for vessels for the Lighthouse Service, a part of the \$5,000,000 vessel rebuilding programme which was authorized at the previous session for replacing vessels of the Lighthouse Service which were worn out in the service, or which on account of age and deterioration will soon have to be condemned. This provision covered only a small proportion of the need for vessels in the service.

RADIO FOG SIGNAL-STATIONS. Three radio fog-signal stations, the first in the United States, were placed in commission by the Lighthouse Service on May 1, 1921. These were on Ambrose Channel Light Vessel, Fire Island Light Vessel, and at Sea Girt Lighthouse, all in the vicinity of New York Harbor. These stations were the result of experiments carried out during several years by the Bureau of Standards and the Lighthouse Service in cooperation and of the development of a practical radio compass by the former. A demonstration of the working of these stations and of the use in connection therewith of a radio compass mounted on a vessel was given on the lighthouse tender *Tulip* in the vicinity of New York on June 27 and 28, 1921. This system was designed to give to the navigator for the first time a means of taking, in a fog, or at a time of low visibility, accurate bearings of invisible

lighthouses and light vessels, which he may use in locating or steering his vessel, and he should be able to do this independently as he uses his magnetic compass for bearings on visible objects. When developed and its use extended, radio fog signals and the radio compass were believed probably to promise the greatest advance made in a long period in affording protection to vessels in fog and should be the means of avoiding some of the serious marine disasters due to inability to hear or locate a fog signal under unfavorable conditions.

There was a decrease of 80 in the number of officers and employees of the U. S. Lighthouse Service, the number at the end of the year being 5922. Incidental to their regular duties, many opportunities arise for the light keepers rendering aid to those in distress, because of the location of the light stations and vessels; during this year 119 instances of saving of life and property, or rendering valuable aid, were reported, often at great risk to the light keepers and other employees of the Service.

Provision was greatly needed for improved depot facilities in several of the districts, particularly at or near Norfolk, Va.; Key West, Fla.; Honolulu, Hawaii; and Newport, R. I.; and additional funds were needed for the completion of the important depots at Boston, Mass.; Charleston, S. C.; Detroit, Mich.; San Juan, P. R.; and Ketchikan, Alaska.

LIGHTSHIPS. See LIGHTHOUSES.

LIME. About 2,531,000 short tons of lime, valued at \$24,536,000, were sold in the United States, including Hawaii and Porto Rico, in 1921, according to an estimate made by the United States Geological Survey, from reports made by the principal producers. This quantity was less than that sold in any year since the Survey had collected its statistics and was 29 per cent less than that sold in 1920. The average value per ton in 1921 was estimated at \$9.69. In 1920 it was \$10.52, and in 1919 it was \$8.84. Of the 42 States and Territories that produced lime in 1921, 5 increased and 27 decreased their output as compared with 1920. The five States that increased their output in 1921 made only small gains and were affected by local or special conditions, such as contracts made late in 1920. Reports showed that fewer plants were in operation in 1921 than in 1920, and some firms that intended to start work either abandoned their intentions or held them in abeyance. Many small kilns on farms were not operated on account of the high price of coal. Firms that actively operated plants for many years closed them down in 1921, because they could see no profit in the business. A few new plants were put in operation, although many of the old ones were active during only a part of the year. There was less complaint of shortage of labor in 1921 than for several years past. The high price of coal was still a drawback to the industry, but the cost of production was generally reported to be less than in 1920. High freight rates affected the production of lime to a great extent by closing markets to firms whose output could not all be taken in the local market and by raising the gross price so high that the potential consumer could not afford to pay it. The lime market was very poor and irregular until fall, when the demand apparently increased but was still below normal. Prices were unstable during the year, but on the whole decreased throughout the country. In one locality

the average price of quicklime per ton from January to June was \$9.80 and from July through November, \$7.30. The average price of hydrated lime per ton in the same locality was reported at \$12.30 from January to June and \$9.80 from July through November.

LINCOLN, MRS. MARY JOHNSON (BAILEY). Household economist, died at Boston, Mass., December 2. Her cook books and kitchen textbooks are well known. She was born at South Attleboro, Mass., July 8, 1844; graduated at the Wheaton Seminary, Mass., in 1864; and after 1879 was a writer and lecturer on household science. She was the first principal of the Boston Cooking School from 1879 to 1885, and an editor of the *American Kitchen Magazine* from 1890 to 1903; and she lectured on cookery and kindred subjects throughout the United States. She wrote: *Boston Cook Book* (1884); *Peerless Cook Book* (1886); *Carving and Serving* (1886); *The Boston School Kitchen Text Book* (1888); *What to Have For Luncheon* (1904); *School Kitchen Text Book* (1915).

LINDLEY, LORD (NATHANIEL LINDLEY). British jurist, died at Norwich, Eng., December 9. He was born, Nov. 29, 1828, and called to the bar in November, 1850. In 1875 he was made Justice of the Common Pleas; in 1881 Lord Justice; in 1897, Master of the Rolls, and in 1900 Lord of Appeal in Ordinary with a life peerage under the title of Baron Lindley of East Carlton. By many he was ranked among the greatest judges of the Victorian Age. He was one of the few who were ever promoted from the Chancery Bar to the Common Law bench and he was the last of the Sergeants-at-Law. Early in his career he wrote two important legal works, *An Introduction to the Study of Jurisprudence* and a great work on *Partnership*, which passed through many editions.

LIPPMANN, GABRIEL. See NECROLOGY.

LIQUORS. Attorney-General Palmer on February 2 decided that the authority of the commissioner of internal revenue to issue permits for the sale in wholesale quantities of intoxicating liquors was limited to manufacturers and wholesale druggists. On March 3 the Attorney-General decided that the internal revenue bureau had no authority to limit the number of permits for the manufacture and sale of liquors for medicinal purposes, except that it must be confined to reputable druggists. The United States Supreme Court in its decision of June 1 held that the former internal revenue laws were supplanted by the Volstead Act, and that the penalties under those laws could not be applied in addition to the penalties provided in the Volstead Act.

The figures showing the cost and financial results of the enforcement of national prohibition during the fiscal year were published in October, based on the records of Washington. The cost to the country during the fiscal year according to this was \$6,250,095. The assessments imposed involving civil penalties and special taxes amounted to \$53,296,999, and of this \$2,152,387 had been collected. Besides this, property had been seized valued at \$10,906,687, and the court fines imposed would run, according to the estimates, up to several millions. The chief items in the cost of enforcement were salaries and traveling costs. The criminal cases involving violation of the law numbered 29,114 and in these 16,610 of

the accused pleaded guilty; 17,962 were convicted; and 765 were acquitted. The percentage of convictions was much lower in New York City than elsewhere. At the end of the fiscal year 10,365 cases for violation of the law were still pending. On June 30, 1921, there were 39,961,000 gallons of whisky, 399,000 gallons of rum, 885,000 gallons of gin, 2170 gallons of high wines, 640,946 gallons of alcohol, 369,000 gallons of neutral or cologne spirits, making a total of 42,500,000 gallons in the distilleries and general bond warehouses. In the fiscal year 1920, there were about 53,000,000 gallons.

The national prohibition act of Oct. 28, 1919, imposed duties upon the Bureau of Internal Revenue which were new to it, and from the effective date of the act a considerable portion of its energies had to be devoted to the enforcement of a regulatory act instead of to a tax-collecting act. In this work the bureau no doubt made mistakes. The act was in some instances misinterpreted and the means taken to enforce it were not always effective. In the fiscal year ending June 30, 1921, however, there was considerable improvement. Many of the earlier mistakes of the bureau were corrected. The regulations were amended, the act received judicial interpretation in the courts, and many points were cleared up by opinions of the Attorney General. The prohibition field organization was continued under the general scheme of organization planned in 1920. It was composed of two classes of supervisory officers, known as supervising Federal prohibition agents and Federal prohibition directors, each supervisory officer having a force of employees operating under his immediate control. Each supervising agent was in charge of an administrative unit known as a "department," the various departments being composed of from one to five States. The duty of the supervising Federal prohibition agent was to detect and suppress violations of the prohibition law and to prosecute violators. Each supervising agent controlled a mobile force known as Federal prohibition agents. On June 30, 1921, there were 12 regular departments in the United States, and in addition two acting supervising Federal prohibition agents, one for Hawaii and one for Porto Rico. The permissive features of the national prohibition act were administered by Federal prohibition directors, there being one such officer for each State, one for Hawaii, and one for Porto Rico. The subordinate field officers were known as Federal prohibition inspectors.

The prevention of the smuggling of liquors by the Customs Service without adequate force or equipment to cope with the organized bands of liquor smugglers, especially along the south Atlantic seaboard, continued to present a serious problem. Despite the large number of seizures made by customs officers of contraband liquor and of vessels carrying the same, no material decrease in violations of this character was to be expected according to the Customs House authorities until sufficient funds were made available for the maintenance of an effective border and seacoast patrol and for an adequate number of men to make a thorough search of vessels promptly upon their arrival from foreign shores.

In the fiscal year ending June 30, 1920, the classes and value of liquors seized were as follows: Illicit stills, 14,337; distilled spirits, 109,370 gals.;

wine, 44,365 gals.; total value, \$2,390,638. In North and South Carolina, Kentucky, Tennessee, and Virginia, 5328 moonshine arrests were made during the calendar year 1920.

LITERATURE. ENGLISH AND AMERICAN. To grow enthusiastic over the literary output of the year 1921 is difficult. While literary production has not been decreased in quantity, it would seem, with some striking exceptions, to have decreased in quality. In fiction, for instance, a vast number of works have been produced, but most of them are not significant. Certainly, as regards fiction, the output of 1921 cannot compare in quality with that of 1920. Perhaps some of the seeming barrenness of that particular field is due to the absence from it of its long-established chief workers, such men as Wells, Conrad, Bennett, whose attention was this year turned elsewhere. Their would-be successors do not seem to take up the burden. In Poetry and Drama, also, the yield has been thin, lacking distinction.

However, there is cause for rejoicing in the generally successful activity displayed by biographers, essayists, and writers upon political and sociological subjects. It would seem, for the year 1921, that what the English-speaking world has lost in artistry, it has made up in thoughtfulness. To say that this thoughtfulness is a result of the war is to say the usual, and perhaps true, thing. But to say that is a product of the peace would be even truer of the literary activity of the year. Skepticism in essay and biography and a careful logic in the approaches to reconstruction problems in political science and sociology would indicate the nations' disillusionment. The war itself gets a decreasing amount of attention, even in its controversial phases. In Fiction and Poetry, certainly, it has almost disappeared, either as background, or as a *deus ex machina*.

Production in the fields of Philosophy, Religion, the Fine Arts, History, was as in other years. Travel books have been very numerous and very good, generally.

FICTION. The noteworthy and successful fiction for the year is remarkable for the almost complete unanimity with which it has turned to character as the source of inspiration. One author after another has endeavored to make plain and real a man or woman whose quality might otherwise escape us. And the number of times authors have succeeded and found popular favor during 1921 indicates that man's curiosity about man is still unappeased. This effort in the portrayal of character has been made among authors on both sides of the Atlantic. It must be confessed, however, that this year the honors for success cannot be so definitely awarded to Americans as last year. The English supremacy, long-held, is again asserted.

Of course, other themes than the study of character abound. There are the usual number of stories concerned with the relations of the sexes, triangle stories, marriage stories, love stories, and so on. The spiritualistic motif is also present occasionally. The historical novel has practically disappeared. Mystery, adventure, and detective stories hold their large audiences and are published by scores.

Certain novels demand more than mere mention. *If Winter Comes*, by A. S. M. Hutchinson, concerns a character whose charm many will long remember. In *Mr. Waddington of Wyck*, May

ZONA GALE

FOUR AUTHORS PROMINENT IN 1921

Sinclair humorously demolishes a humorless egoist. In *Alice Adams*, Booth Tarkington gives us an honest yet sympathetic story of a girl who finds her soul in the ruins of her family's social position. Sheila Kaye-Smith, in *Green Apple Harvest*, shows a man's life torn in the struggle between religion and romance, an appealing tragedy. Hugh Walpole's *The Young Enchanted* gives us, pleasantly and movingly, the lives of two young people after the war. In *Heloise and Abelard*, George Moore re-tells the old story, with inimitable decorations of his own. *Three Soldiers*, by John Dos Passos, describing the careers of three men in the American army overseas, is probably the book of the year over which the most controversy has raged, and is almost the only important war novel. John Galsworthy continues his campaign against the over-emphasis of the acquisitive instinct, as exemplified by the Forsytes, in *To Let*. Both Dorothy Canfield, in *The Brimming Cup*, and Charles G. Norris, in *Brass*, discuss the problems of marriage, and arrive at quite opposite conclusions. Frank Swinnerton, in *Coquette*, and W. L. George, in *Ursula Trent*, have skillfully portrayed the girl who preys on men. *Madam*, by Ethel Sidgwick, contains some sharp characterization.

Other important novels of the year are: Compton Mackenzie's *Rich Relatives*; H. G. Aikman's *Zell*; Floyd Dell's second story of the Moon-Calf, *The Briary Bush*; Dorothy Richardson's *Deadlock*, more about Miriam Henderson; Ernest Poole's *Beggar's Gold*; Archibald Marshall's *The Hall and the Grange*; William J. Locke's *The Mountebank*; Mr. and Mrs. Haldeman-Julius's *Dust*; Sir Harry Johnston's story of Africa, *The Man Who Did the Right Thing*; James Branch Cabell's *Figures of Earth*; Elsie Singmaster's *Ellen Lewis*; D. H. Lawrence's *Women in Love*; E. F. Benson's *Dodo Wonders and Lovers and Friends*; Fannie Hurst's *Star-Dust*; William Dudley Pelley's *The Fog*; Stephen McKenna's *The Secret Victory* and *The Education of Eric Lane*; J. D. Beresford's *Revolution*; Owen Johnson's *The Wasted Generation*; Rose Macaulay's *Dangerous Ages*; Edna Ferber's *The Girls*; Robert Nathan's *Autumn*; and Samuel Hopkins Adams' *Success*.

Mention must also be made of: the curious *Memoirs of a Midget*, by Walter de la Mare; a thrilling mystery tale, *The Grey Room*, by Eden Phillpotts; *Real Life*, about the movies, by Henry Kitchell Webster; *Mrs. Farrell*, William Dean Howell's last novel; *Blind Mice*, by C. Kay Scott; *The Spirit of the Time*, by Robert Hichens; *The Seeds of Enchantment*, by Gilbert Frankau; *Shepherd's Warning*, by Eric Leadbitter; *Debatable Ground*, by G. B. Stern; H. Rider Haggard's *She and Allan*; Alfred Ollivant's *One Woman*; *The Green Bough*, by E. Temple Thurston; *An Enthusiast*, by E. C. Somerville; *The Pilgrim of a Smile* and *The Guinea Girl*, by Norman Davey; *Three Loving Ladies*, by Mrs. Dowdall; *The Path of the King*, by John Buchan; *Latchkey Ladies*, by M. Grant; *The Bright Messenger*, by Algernon Blackwood; *Adrienne Toner*, by Anne Douglas Sedgwick; *The Seventh Angel*, by Alexander Black; *The Narrow House*, by Evelyn Scott; *Beauty and Mary Blair*, by Ethel M. Kelley; *The Happy Foreigner*, by Enid Bagnold; *World Without End*, by Grant Overton; *Humbug*, by E. M. Delafield; *The Tower of Oblivion*, by Oliver Onions; and *Orphan Dinah*, by Eden Phillpotts.

Almost the only historical novels of the year are:

Rafael Sabatini's story of the French Revolution, *Scaramouche*; Edward Lucas White's *Andrius Hedulio*; Donn Byrne's *Messer Marco Polo*; and Eden Phillpotts' *Eudocia*. Noteworthy adventure stories include: *When Egypt Went Broke*, by Holman Day; *Jacob's Ladder*, by E. Phillips Oppenheim; *Martin Conisby's Vengeance*, by Jeffrey Farnol; and *Satan*, by H. de Vere Stacpoole. Among the mystery stories are: *The Crooked House*, by Brandon Fleming; *The Chestermarke Instinct* and *The Herapath Property*, by J. S. Fletcher; *Beauty*, by Rupert Hughes; and *Crome Yellow*, by Aldous Huxley.

Many have been pleased by *The Journal of Henry Bulver*, by C. Veheyne; *Our Little Life*, by J. G. Sione; *Spring Shall Plant*, by Beatrice Harraden; *Daughter of the Sun*, by Quien Sabe; Gouverneur Morris' burlesque adventure story, *Yellow Men and Gold*; Dana Burnet's *The Lark*; *Antonia*, by Viola Meynell; *Angelica*, by Elizabeth Sanxay Holding, who also publishes *Rosealeen among the Artists*; *The Empty Sack*, by Basil King; *Gold Shod*, by Newton Fuesale; two impressionistically written first novels, *The Beginning of Wisdom*, by Stephen Vincent Benét, and *Erik Dorn*, by Ben Hecht; *The Master of Man*, by Sir Hall Caine; *Sister Sue*, by Eleanor H. Porter; *Vera*, by "Elizabeth"; *Privilege*, by Michael Sadleir; *The Dizons*, by Florence F. Kelley; *Elinor Colhouse*, by Stephen Hudson; *Way of Revelation*, by Wilfrid Ewart; *Gods*, by Shaw Desmond; *Helen of the Old House*, by Harold Bell Wright; *Manslaughter*, by Alice Duer Miller; *Roads Going South*, by Robert T. Duffus; *Harlequin and Colombine*, a novelette by Booth Tarkington; *Torchlight*, by Leonie Aminoff; *March On*, by George Madden Martin; *Enter Jerry*, by Edwin Meade Robinson; *Madame Margot*, by John Bennett; *The Blood of the Conquerors*, by Harvey Fergusson; and *Forward from Babylon*, by Louis Golding.

Among the volumes of short stories are: *The Trembling of a Leaf*, by W. Somerset Maugham; *Wild Justice*, by Lloyd Osborne; *Original Sinners*, by H. W. Nevinson; *Venetian Lovers*, by Sir Philip Gibbs; *The Thirteen Travellers*, by Hugh Walpole; *Carter and Other People*, by Don Marquis; *More Limehouse Nights*, by Thomas Burke; *Tales From a Roll-Top Desk*, by Christopher Morley; *Thirteen All Told*, by Beatrice Harraden; *Winnie O'Wynn and the Wolves*, by Bertram Atkey; *I Have Only Myself to Blame*, by the Princess Bibesco, Margot Asquith's daughter; *The Golden Windmill*, and *Other Stories*, by Stacy Aumonier; *Ghita*, and *Other Romances of Gypsy Blood*, by Konrad Bercovici; *The Triumph of the Egg*, by Sherwood Anderson; *Bliss and Other Stories*, by Katharine Mansfield; Richard Washburn Child's *Velvet Black*, and translations of Pierre Hamp's *People* and Anton Chekhov's *The Schoolmistress and Other Stories*, and *Horse Stealers and Other Stories*.

POETRY. Critics for several years have been saying of contemporary poetry, "There is promise here." And though the promise is still unfulfilled, a survey of the year 1921 shows the promise still there. There is searching for new forms, new material, new thoughts and emotions, which must sometime find its goal, and give us the long-promised new gospel of beauty. Among the significant volumes of the year are: Anne Wickham's most interesting study of woman in her

relations with man, *The Contemplative Quarry*; E. Powys Mathers' second volume of Asiatic love songs, *The Garden of Bright Waters*; Amy Lowell's *Legends*; Edna St. Vincent Millay's *Second April*; Wilfred Owen's *Poems*; the remarkable parody, *Q. Horatii Flacci Carminum Librum Quintum*, by Rudyard Kipling and Charles Graves; Edwin Arlington Robinson's *Avon's Harvest and Collected Poems*; Walter de la Mare's *The Veil*; Conrad Aiken's *Punch, the Immortal Liar*; Leonora Speyer's delicate *The Canopic Jar*; John Masefield's *King Cole*; John Freeman's *Poems New and Old*; Mark Tarbyfil's *The Living Frieze*; Sir William Watson's *Ireland Unfreed*; W. H. Davies' *The Captive Lion*; Alfred Noyes' *Selected Verse*; John Drinkwater's *Seeds of Time*; Robert Louis Stevenson's *Moral Emblems*, collected for the first time by his stepson, Lloyd Osborne; *The Pier Glass*, by Robert Graves, who, with others, edits *Oxford Poetry, 1921*; Percy MacKaye's *Dogtown Common*; J. C. Squire's *Poems, Second Series*; John V. A. Weaver's *In America*; *The Open Sea*, by Edgar Lee Masters; *Hymen*, by H. D.; D. H. Lawrence's *Tortoises*; Stephen Vincent Benét's *Heavens and Earth*; Laura Benét's *Fairy Bread*; Jean Starr Untermeyer's *Dreams out of Darkness*; Keith Preston's *Splinters*; Aline Kilmer's *Vigils*; Lola Ridge's *Sun-up and Other Poems*; Alice Corbin's *Red Earth*; the anonymous *Sonnets of Shakespeare's Ghost*; Hugh MacRae's *Colombine*; Bernard Gilbert's *Old England*; Mary Gilmore's *The Passionate Heart*; Roderick Quinn's *Poems*; Edward Shanks' *The Island of Youth*; James Oppenheim's *The Mystic Warrior*; F. W. H. Myers' *Collected Poems*; Douglas Goldring's *Streets*; Christopher Morley's *Chimneysmoke*; Charlotte Mew's *Saturday Market*; and last but not least, Don Marquis's *Noah an' Jonah an' Cap'n John Smith*.

DRAMA. The vast majority of publications in the field of the drama for the year 1921 are individual plays. Both collections and commentaries are scarce. There is noticeable, however, a new interest in the one-act play, several of which are even published in separate volumes. Noteworthy among the plays of the year are: *Miss Lulu Bell*, by Zona Gale, which won the Pulitzer prize for 1920; *The White-Headed Boy*, by Lennox Robinson; *The Straw, The Emperor Jones, Different*, by Eugene O'Neill; *The Comedies of Harold Chapin*; *Enter Madame*, by Gilda Varese; *Angels and Ministers*, by Lawrence Housman; *The Circle*, by W. Somerset Maugham; *Swords*, by Sidney Howard; *Clair de Lune*, by Michael Strange; *Will Shakespeare*, by Clemence Dane; *The Cockpit*, by Israel Zangwill; *The Harp of Life*, by J. Hartley Manners; *The Story of the Mikado*, by W. S. Gilbert, the light opera in straight form; *The Lamp and the Bell*, by Edna St. Vincent Millay; *Gruach, and Britain's Daughter*, by Gordon Bottomley, who also publishes *King Lear's Wife and Other Plays*; *The Pilgrim Spirit, a Pageant in Celebration of the Tercentenary of the Landing of the Pilgrims*, by George Pierce Baker; *Liliom*, by Franz Molnar, translated by Benjamin F. Glazer; *Wade's Boat*, by E. H. W. Meyerstein; *Oliver Cromwell and Mary Stuart*, by John Drinkwater; and *Caius Gracchus*, by Odin Gregory.

Of significant one-act plays there are *Aria da Capo*, and *Two Slaterns and a King*, by Edna St. Vincent Millay; *Six Short Plays*, by John Galsworthy; *Four Plays for Dancers*, by W. B.

Yeats; *One-Act Plays* by Alice Brown; *Ten One-Act Plays*, by Alice Gerstenburg, and *Four One-Act Plays*, by Lewis Beach. Of collections and commentaries there are: *Chief Contemporary Dramatists, Second Series*, edited by Thomas H. Dickinson; *Representative Plays by American Dramatists*, edited by Montrose J. Moses; *Representative One-Act Plays by British and Irish Authors*, edited by Barrett H. Clark; *A Short History of the English Drama*, by Benjamin Brawley; and *Modern Drama in Europe*, by Storm Jameson.

ESSAYS. Noteworthy among the more important essays of the year are: *Things That Have Interested Me*, by Arnold Bennet; *The Circus and Other Essays*, a posthumous work of Joyce Kilmer; *Urbanities*, by E. V. Lucas; *The Margin of Hesitation*, by Frank Moore Colby; *Impressions and Comments, Second Series*, by Havelock Ellis; *The Book of Life*, by Upton Sinclair; *The Dame School of Experience*, Samuel McChord Crothers; *Plum Pudding*, by Christopher Morley; *From a Gaelic Outpost*, by Aodh de Blácam; *I Have Reason to Believe*, by Stephen Paget; *The Second Person Singular*, by Alice Meynell; *Legends of Smokeover*, by L. P. Jacks; *Small Talk at Weyland*, by Cecil Torr; *Music and Life*, by W. J. Turner; *A Traveller in Little Things*, and *A Shepherd's Life*, by W. H. Hudson; *More About Unknown London*, by W. G. Bell; *The Man in the Street*, by Meredith Nicholson; *Turns About Town*, by Robert Cortes Holliday; *The Tiger in the House*, by Carl van Vechten; *Seeing Things at Night*, by Heywood Broun; *Grain and Chaff from an English Manor*, by Arthur H. Savory. Other significant essays of the year that must be listed are: *More Trivia*, by Pearsall Smith; *A Parody Outline of History*, by Donald Ogden Stewart; *America and the Young Intellectual*, by Harold Stearns; the posthumous *Variations*, by James Gibbons Huneker; *Essays in Freedom and Rebellion*, by H. W. Nevins; *An Ocean Tramp, and Harbors of Memory*, by William McFee; *The Old Soak, and Hail and Farewell* by Don Marquis; *Hints to Pilgrims*, by Charles S. Brooks; *Hail Columbia*, by W. L. George; *Thus to Revise*, by Ford Madox Hueffer; *A Magnificent Farce*, by A. Edward Newton; *Essays and Addresses*, by Gilbert Murray; *Novissima Verba*, by Frederic Harrison; *The Sunny Side*, by A. A. Milne; *Light Articles Only*, by A. P. Herbert; *Tired Radicals and Other Papers*, by Walter Weyl; *The Greek Character*, by A. K. Thompson.

CRITICISM AND THE HISTORY OF LITERATURE. Among the considerable number of the year's works on literary criticism the following are significant: *Notes on Men and Books*, and *Notes on Life and Letters*, by Joseph Conrad; *Notes and Reviews*, by Henry James; *Essays on English*, by Brander Matthews; *Books on the Table*, by Edmund Gosse; *The American Novel*, by Carl Van Doren; *Some Modern French Writers*, by G. Tourquet-Milnes; *Studies in Modern Poetry*, by Frederico Olivero; *More Essays on Books*, by A. Clutton-Brock; *The John Keats Memorial Volume; Euripides and Bernard Shaw*, by Gilbert Norwood; *Essays on Modern Dramatists*, by William Lyon Phelps; *Collected Essays*, by George E. Woodberry; *Life and Letters*, by J. C. Squire; *The Portrait of Mr. W. H.*, a recently discovered manuscript of Oscar Wilde's; *Adventures in the Arts*, by Marsden Hartley; *The Formation of*

Tennyson's Style, by J. F. A. Pyre; *Molière*, by Arthur Tilley; *A New England Group and Others*, by Paul Elmer More; Volumes 3 and 4 of *A Survey of English Literature*, by Oliver Elton.

Other notable books of literary criticism are: *The Invisible Censor*, by Francis Hackett; *The Theatre, the Drama, the Girls*, by George Jean Nathan; *Pastiche and Prejudice*, by A. B. Walkeley; *Reviews and Critical Papers*, by Lionel Johnson; *Literature and Life*, by E. B. Osborn; *Miscellanies, Literary and Historical*, by Lord Rosebery; *The Cambridge History of American Literature*, parts II and III, edited by W. P. Trent and others.

BIOGRAPHY AND AUTOBIOGRAPHY. Among the important biographical contributions of the year are: *Queen Victoria*, by Lytton Strachey; *Portraits of the 'Nineties*, by E. T. Raymond; *From Private to Field Marshal*, by Sir William Robertson; *Forty-odd Years in the Literary Shop*, by James L. Ford; *Silhouettes of my Contemporaries*, by Lyman Abbott; *The Mirrors of Washington*, anon.; *The Truth About Burns*, by D. MacNaught; *Matthew Maris*, by Ernest D. Findlander; *Saint Sæns*, by Arthur Hervey; *Through the Shadows With O. Henry*, by Al Jennings; *Letters and Journals of Thomas Wentworth Higginson*, edited by Mary Thacher Higginson; *A Young Girl's Diary*, with an introduction by Sigmund Freud; *The Life of Robert, Marquis of Salisbury*, by his daughter, Lady Gwendolen Cecil; *News Hunting on Three Continents*, by Julius Chambers; *Other Days*, by J. W. Leigh; *Chapters From Childhood*, by Juliet M. Soekice; *Edwin Austin Abbey, R. A.*, by E. V. Lucas; *Max Beerbohm in Perspective*, by Bohun Lynch; *Life of the First Marquess of Ripon*, by Lucien Wolf; *Pillars of the State*, by Herbert Sidebotham; *Modern Men and Mummies*, by Hesketh Pearson; *The Home Life of Swinburne*, by Mrs. Watts-Dunton; *Memories and Notes*, by Sidney Colvin; *While I Remember*, by Stephen McKenna; *J. Keir Hardie*, by William Stewart; *Princes of the Church*, by W. Robertson Nicoll; *Herman Melville*, by R. M. Weaver; *Letters To Isabel*, by Lord Shaw of Dumferline; *Queen Alexandra*, by W. R. H. Trowbridge; *A Daughter of the Middle Border*, by Hamlin Garland; *Fifty Years a Journalist*, by Melville E. Stone; *Daniel H. Burnham*, by Charles Moore; *Ernest Renan*, by Lewis Freeman Mott; *The Life of Whitelaw Reid*, by Royal Cortissoz; *Hugh Lane's Life and Achievement*, by Lady Gregory; *A Salem Shipmaster*; the autobiography of George Nichols; *Cecil Rhodes*, by Basil Williams; *Marcus Aurelius*, by Henry Dwight Sedgwick; *Recollections of a Foreign Minister*, by Alexander Iswolsky; *The Life of Joseph Hodges Choate*, by Edward S. Martin; *The Men of the 'Nineties*, by Bernard Muddiman; *Victorian Worthies*, by G. H. Blore; *Crowding Memories*, by Mrs. Thomas Bailey Aldrich; *Contemporary Portraits*, by Frank Harris; *David Urquhart*, by Gertrude Robinson; *Mayfair to Moscow*, by Claire Sheridan; *The Whistler Journal*, by E. R. and J. Pennell; *A Gallant of Lorraine*, by H. Noel Williams; *Paul Gauguin, His Life and Art*, by John Gould Fletcher; *Memories of Ismail Kemal Bey*, by Summerville Story; *My Brother, Theodore Roosevelt*, by Corinne Roosevelt Robinson; *My Life Here and There*, by Princess Cantacuzene; *Life and Times of Ambroise Paré*, by Francis R. Packard; *The Big Four and Others of the Peace Conference*, by Robert Lansing; *Asarte, a Fragment of Truth Concerning*

George Gordon Byron, sixth Lord Byron, by his grandson, Earl of Lovelace and Mary, Countess of Lovelace; *Washington Close-up*, by Edward S. Lowry; *Political Profiles from British Public Life*, by H. Sidebotham; *The Intimate Life of Sir Walter Scott*, by Archibald Stalker; *My Years of Exile*, by Edward Bernstein; *Michaelangelo Buonarrotti*, by George Brandes; *Paul Verlaine*, by Harold Nicholson; *Famous Chemists*, by Sir William A. Tilden; *Life of Alfred Newton*, by A. F. R. Wollaston.

THE FINE ARTS. The following are significant among the books on the Fine Arts: G. Baldwin Brown's *The Arts in Early England*; volume 4 of James Ward's *History and Methods of Modern Painting: Masterpieces of Modern Art*; edited by Charles Marriot; *How France Built Her Cathedrals*, by Elizabeth Boyle O'Reilly; *A Survey*, fifty caricatures by Max Beerbohm; *British Water Color Painting of Today*, edited by Geoffrey Holme; Walter Pach's translation of volume 1, *Ancient Art, of History of Art*, by Elie Faure; *Early American Portrait Painters in Miniature*, by Theodore Bolton; *Twenty-Four Portraits*, by William Rothenstein; *Sketches and Designs by Stanford White*, edited by Laurence Grant White; *English Interiors*, by Arthur Stratton; and *The Court Painters of the Grand Moguls*, by Laurence Binyon.

PHILOSOPHY AND RELIGION. In these fields the striking thing has been the concern with practical affairs from the philosophic or religious point of view. A book which has been extensively commented upon, and which would seem to contain ideas of lasting value, is Alfred Korzybski's *The Manhood of Humanity*, translated from the Polish. Other philosophical and religious books are: *A Defence of Philosophic Doubt*, by Arthur James Balfour; *Essays in Critical Realism*, by Durant Drake and others; *A Study in Realism*, by John Laird; Herbert S. Langfeld's *The Aesthetic Attitude*; Stewart Paton's *Human Behaviour in Relation to the Study of Educational, Social, and Ethical Problems*; Bertrand Russell's *The Analysis of Mind*; J. M. Keynes' *Treatise on Probability*; Jay William Hudson's *The Truths we Live By*; J. S. Haldane's *Mechanism, Life, and Personality*; Bernard Bosanquet's *The Meeting of Extremes in Contemporary Philosophy*; Willard L. Sperry's *The Disciplines of Liberty*; Arthur George Heath's *The Moral and Social Significance of the Conception of Personality*; James Harvey Robinson's *The Mind in the Making*; Everett Dean Martin's *The Behavior of Crowds; The Religions of Mankind*, by E. D. Soper; *The Pilgrim*, by T. R. Glover; *Stones of Stumbling*, by A. I. Tillyard; *Hellenism and Christianity*, by Edwym Bevan; *The Philosophy of Mysticism*, by Edward Ingram Watkin; *The Essentials of Mysticism*, by Evelyn Underhill; *The Book of Job*, by Morris Jastrow; *The Power of Prayer*, edited by W. P. Paterson; *The Life, Indeed*, by J. F. Genung.

SOCIOLOGY AND EDUCATION. The following are the most important works that appeared in 1921, dealing with sociology and education: *Our Social Heritage*, by Graham Wallas; *An Introduction to the Psychological Problems of Industry*, by Frank Watts; *Freedom of Speech*, by Zechariah Chaffee; *The Eugenic Prospect*, by C. W. Saleeby; *The Jew and American Ideals*, by John Spargo; *The Voice of Jerusalem*, by Israel Zangwill; *A History of British Socialism*, Volume II, by M. Beer; *Man's Unconscious*

Passion, by Wilfrid Hay; *Old World Traits Transplanted*, by R. E. Park and Herbert A. Miller; *A Stake in the Land*, by Peter A. Speck; *Taboo and Genetics*, by M. M. Knight and others; *National Welfare and National Decay and Is America Safe for Democracy?* by William MacDougall; *The Origin of Man and of His Superstitions*, by Carveth Read; *Revolution and Democracy*, by Frederick C. Howe; *The Evolution of Revolution*, by H. M. Hyndman; *The Backward Peoples and Our Relations with Them*, by Sir Harry Johnston; *Human Engineering*, by Eugene Wera; *Freedom and Liberty*, by William Bennett; *The Glass of Fashion*, by "The Gentleman with a Duster"; *Labour as an International Problem*, edited by E. John Solano; *The Problem of Americanization*, by Peter Roberts; *The Trend of the Race*, by S. J. Holmes. To these must be added as significant in their field: *Man's Descent From the Gods, or, The Complete Case Against Prohibition*, by Anthony M. Ludovici; *The New Horizon in Love and Life*, by Mrs. Havelock Ellis; *The Control of Life*, by Arthur Thompson; *A Social History of the American Negro*, by Benjamin Brawley; *Vice and Health*, by John Clarence Funk; *The Acquisitive Society*, by R. H. Tawney; *The Influence of Puritanism*, by John S. Flynn; *Scholarship and Service*, by Nicholas Murray Butler; *Edward Yeoman's Shackled Youth*; J. A. H. Keith and W. C. Bagley's *The Nation and the Schools*; and Cambridge *Essays on Adult Education*, by R. St. J. Parry.

POLITICAL SCIENCE AND ECONOMICS. The interests of politics to-day lie largely in the field of international relations, which is reflected in the year's publications. Especially noteworthy is the attention paid the East. The more significant of the year's works on the political science and economics are the following: *The Fruits of Victory*, by Norman Angell; *Modern Democracies*, by Viscount Bryce; *The Salvaging of Civilization, and Russia in the Shadows*, by H. G. Wells; *Japan and the California Problem*, by Toyotishi Iyenaga and K. Sato; *What We Want and Where We Are*, by W. A. Appleton; *The Sudan in Evolution*, by Percy F. Martin; *The Hope of Europe*, by Sir Philip Gibbs; *The Struggle for Power in Europe in 1917-1921*, by L. Haden Guest; *Labour, the Giant With Feet of Clay*, by Shaw Desmond; *Great Men and Great Days*, by Stephen Lausanne; *History of the Peace Conference at Paris*, volumes IV and V, edited by H. V. Temperley; *The New World; Problems in Political Geography*, by Isaiah Bowman; *The Defence of Terrorism*, by L. Trotaky; *Europe—Whither Bound?* by Stephen Graham; *The Truth About China and Japan*, by Putnam Weale; *The English Prison System*, by Sir Evelyn Ruggles-Brise; *War and National Finance*, by R. H. Bland; *The New World of Islam*, by Lothrop Stoddard; *The Government and Politics of France*, by Edward McChesney Lait; *America and the Race for World Dominion*, by A. Demangeon; *China, Captive or Free*, by Gilbert Reid; *What Japan Wants*, by Yoshi S. Kuno; *Sea Power in the Pacific*, by H. C. Bywater; *The Foundations of Government*, by H. J. Laski; *The Press and Politics in Japan*, by Kisaburo Kawabe; *While Europe Waits for Peace*, by Pierrepont B. Noyes; *The Economics of Communism*, by Leo Pasvolaky; *The Russian Workers' Republic*, by H. N. Brailsford; *New Masters of the Baltic*, by Arthur Ruhl; *Credit-Power and Democracy*, by C. H. Douglas

and A. R. Orage; *Must We Fight Japan?* by Walter B. Pitkin; *The Crisis in Russia*, by Arthur Ransome; *The Next War*, by Will Irwin; *China, Japan and Korea*, by J. O. P. Bland; *The Case of Korea*, by Henry Chung; *The Irish Labor Movement*, by W. P. Ryan; *Balkanized Europe*, by Paul Scott Mowrer; *The Problem of Foreign Policy*, by Gilbert Murray; *What Shall we Think of Japan?* by George Gleason. The following books of the year on political science are also worthy of mention: *The New Japanese Peril*, by Sidney Osborne; *The Voice of Russia*, by Alexander Schwarz; *The Folly of Nations*, by Frederic Palmer; *Mexico on the Verge*, by E. J. Dillon; *The Foreign Relations of China*, by Ming-Chien Joshua Bau; *Democracy and the Human Equation*, by Alleyen Ireland; *Risk, Uncertainty and Profit*, by Frank H. Knight; *Zionism and World Politics*, by H. M. Kallen.

HISTORY. Among the year's books on general history, the following are noteworthy: *What Really Happened at Paris*, edited by E. M. House and Charles Seymour; *The Truth About the Treaty*, by André Tardieu; *Spain's Declining Power in South America*, by Bernard Moses; *The Peace Negotiations*, by Robert Lansing; *Twenty Years of Balkan Tangle*, by Edith Dunham; *The Russian Bolshevik Revolution*, by Edward A. Ross; *A Constitutional History of England*, by George Burton Adams; *Outlines of Historical Jurisprudence*, Volume I, by Sir Paul Vinogradoff; *The Evolution of Parliament*, by A. I. Pollard; *The Eighteenth Century in London*, by Beresford Chancellor; *The New Stone Age in Northern Europe*, by John M. Tyler; *Thought and Expression in the Sixteenth Century*, by Henry Osborne Taylor; *England in Transition, 1789-1832*, by William Law Mathieson; *The Age of Reformation*, by Preserved Smith; *A Short Fiscal and Financial History of England*, by J. F. Rees; *The Manchester Guardian*, by William Haslam Mills; *The Private Character of Queen Elizabeth*, by Frederick Chamberlin; *Gambetta and the Founding of the Third Republic*, by Harold Stannard; *The Influence of the Sea on the Political History of Japan*, by Admiral G. A. Ballard; *A History of Belgium*, by Emile Cammaerts; *The Economic Development of France and Germany 1815-1914*, by J. H. Clapham; *Mr. Punch's History of Modern England*, edited by C. L. Graves; *Marlborough and the Rise of the British Army*, by C. T. Atkinson; *The History of Mankind*, by Hendrik Willem Van Loon; *The Fall of Mary Stuart*, by Frank Arthur Mumby; *Tudor Ideals*, by Lewis Einstein. Among the year's books dealing with American history the following are important: *Economic Development of the United States*, by Isaac Lippincott; *Since the Civil War*, by C. R. Lingley; *Woodrow Wilson and the World War*, by Charles Seymour; *History of the New York Times, 1851-1921*, by Elmer Davis; *The Chronicles of America*, edited by Allan Johnson; *The Maritime History of Massachusetts*, by Samuel E. Morison; *The Founding of New England*, by J. Truslow Adams.

Among works relating to the War, it is noticeable that more is being published about naval operations than about military. Of important publications there are: *A Journal of the Great War*, by General Charles G. Dawes; *The Crisis of the Naval War*, by Admiral Viscount Jellicoe; *What Happened at Julland*, by Commander C. G. Gill; *The Fighting at Julland*, edited by H. W. Fawcett

and G. W. W. Hooper, a most interesting collection of the experiences of eye-witnesses of the battle; Capt. Peter E. Wright's sensational *At the Supreme War Council*; Filson Young's *The Battle Cruisers*; volume 2 of Sir Julian S. Corbett's *Naval Operations*; Capt. A. F. B. Carpenter's *The Blocking of Zeebrugge*; John Buchan's *A History of the Great War*; Sir Philip Gibbs' *More That Must Be Told*; Reginald Viscount Escher's *The Tragedy of Lord Kitchener*; Benedict Crowell and Capt. R. F. Wilson's *How America Went to War*; E. L. Bogart's *War Costs and Their Financing*; J. A. Salter's *Allied Shipping Control*; Douglas Wilson Johnson's *Battle-Fields of the World War*; General Sir Ian Hamilton's *The Soul and Body of an Army*; Sir Charles Lucas' *The Empire at War*; J. Johnston Abraham's *My Balkan Log*; and *Watching on the Rhine*, by Violet R. Markham.

TRAVEL AND OUT-OF-DOORS. The number and quality of travel books prove their continued popularity. Most of them deal with lands very far distant from the places the books are expected to sell, usually lands about which little is known. Not so many sport books are in evidence as usual. Among the more noteworthy volumes in the field are: The fascinating *Some Experiences of a New Guinea Resident Magistrate*, by C. A. W. Monckton; *Faery Lands of the South Seas*, by James Norman Hall and C. B. Nordhoff; *The Cruise of the Dream Ship*, by Ralph Stock; *The Cruise of the Kavaa*, a burlesque of the South Sea book, by Walter E. Traprock; *Roaming East and Roaming West*, by E. V. Lucas; *The Outer Circle*, by Thomas Ranke; *Working North from Patagonia*, by H. A. Franck; *The Islanders of the Pacific*, by T. R. St. Johnston; *Lawn Tennis Up-to-Date*, by S. P. Blackmore; *South With Scott*, by Captain Edward R. G. R. Evans; *Mount Bryx*, by Henry Festing Jones; *Wanderings of a Naturalist*, by Seton Gordon; *Casual Letters From South America*, by W. S. Parker; *The Sport of Our Ancestors*, by Lord Willoughby de Broke; *Potomac Landings*, by Paul Wiltach; *A Political Pilgrim in Europe*, by Mrs. Philip Snowden; *The Leisure of an Egyptian Official*, by Lord Edward Cecil; *Birds of La Plata*, by W. H. Hudson; *A Naturalist on Lake Victoria*, by G. D. Hale Carpenter; *Mystic Isles of the South Seas*, by Frederick O'Brien; *Across Mongolian Plains*, by Roy Chapman Andrews; *A History of the Adirondacks*, by Alfred I. Donaldson; *The Lands of Silence*, by Sir Clements Markham; *Sea and Sardinia*, by D. H. Lawrence; *Three Travellers in Northern Africa*, by Emily Ward; *Present Day Golf*, by George Duncan; *A Picture of Modern Spain*, by J. B. Trend; *The People of Palestine*, by Elihu Grant; *The Friendly Arctic*, by Vilhjalmur Stefansson; *American Towns and People*, by Harrison Rhodes; *The Rainbow Bridge*, by Reginald Farrer; to which must be added the following interesting travelogues: *The Home of Fadeless Splendor, Palestine of Today*, by George Napier Whittingham; *The Great White South*, by Herbert G. Ponting; *Roumania in Light and Shadow*, by Ethel S. Pontozzi; *Twenty Years in Roumania*, by Maude Parkinson; *Policing the Plains*, by R. G. Macbeth; *Savage Sudan*, by Abel Chapman; *In the Tracks of the Trades*, by Lewis R. Freeman; *The Civilian's South India*, by "Civilian"; *Two Years in Kurdistan*, by Captain W. R. Hay; *West Africa the Elusive*, by Alan Lethbridge; *A Briton in America* by Harold Spender; *Days and Nights of Shikar*, by Mrs. W. W. Baillie.

LITHUANIA. A new state formed out of Russian territory after the late war; limits defined by a treaty with Russia, signed at Moscow, July 12, 1920, as follows: From the Dvina river west from Drujka, along the Drujka river and eastern shore of Lake Driviaty south through Postavy along the eastern shore of Lake Narocs and the Narocs river, and then through the railway junction of Molodecno along the Beresina and Niemen rivers to a point a short distance south of the city of Grodno. According to the claims of the Lithuanian government the country comprised all of the former Russian province of Kovno; all but two districts of the province of Vilna; most of the province of Suvalki; part of the province of Grodno; and part of the province of Courland. The northern frontier with Latvia nearly coincides with the former boundary between the old Russian provinces of Courland and Kovno. The area is placed at 59,633 square miles, based on statistics of 1914, and the population, at 6,699,200. About 70 per cent of the total population were Lithuanians. Capital, Vilna, with a population in 1914 of 214,600. Other large towns with their populations are: Kovno, 90,300; Grodno, 61,600; Memel, 32,000; Suvalki, 31,600.

PRODUCTION. The chief resources are agricultural products and timber. About 45.8 per cent of the total area is arable land; 24.3 per cent, meadow and pasture land; 20.3, forests. In 1920 about 13,000,000 acres were administered by the Lithuanian government, and from it were produced the following crops in hundredweights: Potatoes, 20,000,000; rye, 10,000,000; oats, 5,000,000; barley, 3,000,000; wheat, 1,500,000. Live stock in that year was as follows: Cattle, 865,000; sheep and goats, 730,000; pigs, 1,400,000; horses, 380,000.

COMMERCE. In 1920 the imports were valued at 428,728,541 marks; the exports, at 521,797,163 marks. The imports were chiefly: Foodstuffs, textiles, agriculture machinery, and fertilizers; and the exports: Flax, wood, timber, farm products, hides, and wool.

FINANCE. The following information in respect to the budget was supplied by the United States Bureau of Foreign and Domestic Commerce: The expenses of the government for the budget year of 1921 were estimated at 886,000,000 Ost marks, while receipts were estimated at 673,000,000, leaving a deficit of about 213,000,000 marks for the year. The chief items of income for the year 1921 were 273,000,000 marks indirect taxes, of which 174,000,000 marks were from customs duties; 242,000,000 marks from state properties and capital investment, by far the greater part from state railways; 57,000,000 marks from direct taxes. The principal items of expenditure were 458,000,000 marks for maintenance of the army, or over 50 per cent of the state's total outlay; 197,000,000 marks for transportation and communication, of which 131,000,000 was expended for standard-gauge and 22,000,000 for narrow-gauge lines; 38,000,000 marks for educational and vocational purposes; 138,000,000 marks for purposes of the Foreign Ministry; 25,000,000 marks for the Ministry of Finance, Trade, and Industry; 42,000,000 marks for the Agricultural Ministry; 14,000,000 marks for the Ministry of Justice. The country suffered greatly from the financial troubles of Germany, and it was estimated that between 2,000,000,000 and 3,000,000,000 marks were in circulation.

GOVERNMENT. The government is based on the provisional constitution adopted by the constituent assembly, June 21, 1920. Executive power is vested in the president and a ministry responsible to the constituent assembly. The latter body was the source of authority and was the law-making body until the parliament should be organized. The acting president at the beginning of 1921 was A. Stulginskis, president of the constituent assembly, and the prime minister was Dr. K. Grinius.

HISTORY

THE VILNA QUESTION. As noted in the articles, **WAR OF THE NATIONS** and **POLAND**, the Vilna question which had reached a critical stage in 1920 was still unsettled, despite the efforts of the League of Nations. The latter body had arranged for negotiations between Lithuanian and Polish representatives at Brussels. This broke down on account of the resistance of the Lithuanians that before an agreement could be reached General Zeligowski must resign. The Polish government now attempted to carry through a plan including the resignation of Zeligowski but encountered the vigorous opposition of the annexationist element in the Polish diet. The prime minister of Poland, himself, threatened to resign if the parliament did not accept this proposal. Finally the proposal was accepted although following in the main the lines of the plan proposed at Brussels by M. Paul Hymans, representative of the League of Nations, which plan had been rejected by the Polish negotiators. The Lithuanians, however, continued to oppose it. The Lithuanian prime minister narrowly escaped assassination on November 25. At the end of November General Zeligowski withdrew from Vilna and turned the administration over to a native of the city, reported to be moderate in his views and highly influential in the locality. The plan called for the holding of elections in the disputed area. The elections were fixed for December 11. The population of the district, according to the census of 1919, numbered 732,000.

LITHUANIAN LANGUAGE. See **PHILOLOGY**, **MODERN**.

LITTLE, CHARLES. Clergyman, died at Wabash, Ind., December 28. He was born at Granville, Ohio, Dec. 1, 1845, graduated at Marietta College in 1867, and studied at Lane Theological Seminary. He was ordained to the Presbyterian ministry in 1873, and was pastor at Wabash, Ind., from 1872 until the time of his death. He was Moderator of the 122nd General Assembly of the Presbyterian Church from 1910 to 1912.

LIVE STOCK. The fall of prices paid producers for live stock is by far the most significant happening to the industry during the past year.

It is felt now that the downward trend started in 1919 has halted.

The following tables show the changes in live stock on farms, prices and production which have taken place since the prewar years, 1910 to 1914.

LIVE STOCK ON FARMS, JANUARY 1

	Average 1910-14	Average 1915-19	1920	1921
Beef cattle.....	29,000,000	32,600,000	36,100,000	34,200,000
Dairy cattle.....	29,880,000	31,880,000	32,800,000	32,400,000
Hogs.....	59,300,000	62,040,000	62,000,000	57,600,000
Sheep.....	43,200,000	38,080,000	35,400,000	33,900,000

The numbers of live stock on farms, Jan. 1, 1921 and 1922, shows how falling prices and a lack of adequate credit have diminished the potential meat supply to a new low level per capita.

ANIMALS SLAUGHTERED UNDER FEDERAL INSPECTION

	Average, 1910-14	Average, 1915-19	1920	1921
Cattle.....	7,282,834	9,546,488	8,608,691	7,608,280
Calves.....	2,059,888	2,950,828	4,058,370	3,807,568
Hogs.....	31,986,013	39,680,123	38,018,684	38,982,378
Sheep.....	13,808,507	11,301,824	10,982,180	13,004,906
Goats.....	92,745	148,604	42,477	13,353

As the above table shows, there has been an abnormally high slaughter of calves. This is due to the interwoven effect of the low prices and lack of credit, forcing producers out of business, and high retail prices and lack of employment, forcing consumers to buy the lighter cuts, making such a demand for calves that the men who had to liquidate found calves the most saleable product they had.

This same demand from consumers for cuts from small carcasses had such an influence on the price of light cattle that feeders were influenced to centre their demand on light stuff for fattening. The result is likely to be that a premium will be paid for heavy steers during 1922. The inevitable consequence of the heavy slaughter of calves will be a shortage of beef in case of a return to normal consumption.

MILLIONS OF POUNDS OF MEAT PRODUCED

	Average, 1910-14	Average, 1915-19	1920	1921
Beef.....	6,484	6,566	6,111	5,676
Veal.....	587	641	909	885
Pork.....	9,355	10,948	10,723	10,948
Mutton.....	717	572	649	633
Total.....	17,143	18,727	18,292	18,142

MILLIONS OF POUNDS OF FRESH MEAT AND LARD EXPORTED AND IMPORTED

	Average, 1910-14	Average, 1915-19	1920	1921
	Exports	Imports	Exports	Imports
Beef and veal.....	80	61 ¹	420	63
Pork.....	499	27 ²	1,269	4
Lard.....	514	532	635	—
Mutton and lamb.....	3.8	4.2 ³	3.4	8.6 ⁴
			4	101
				7.5
				25

¹ 265 million pounds imported in 1914 alone.

² Imports for 1914—not classified on account of small amount previous to 1914.

³ 20 million pounds imported in 1914 alone.

⁴ 28 million pounds imported in 1914 and 1915.

TOTAL ANNUAL FARM VALUE OF LIVE STOCK
PRODUCED IN MILLIONS OF DOLLARS

	Average, 1910-14	Average, 1915-19	1920	1921
Beef.....	607	996	979	586
Veal.....	53	97	161	105
Pork.....	882	1,725	1,763	1,114
Mutton.....	76	109	113	80
Wool.....	56	120	120	51
Total.....	1,678	3,046	3,136	1,936

For the five prewar years, the total meat production averaged 9.8 cents per pound on the farm, while in 1921 the average was 10.7 cents.

RELATION OF 1915-19, 1920, and 1921 LIVE STEER,
WHOLESALE BEEF, AND BEEF PRODUCT PRICES¹

	Average, price 1910-14	Per cent of 1910-14 price, 1915-19	1920	1921
Steers, good to choice, price per cut, Chicago.....	7.94	164	182	111
Beef carcasses (fresh) from good native steers, Chicago.....	12.50	142	184	130
Beef, fresh native sides, New York.....	11.60	147	178	128
Beef, salt, extra mess, New York.....	16.39	158	110	90
Hides, green salted packers, heavy native steers, Chicago.....	17.20	177	181	81

The data on meat exported show how that business is shrinking to prewar size. While there has been a considerable increase during the last two years in live animals exported, it does not begin to compensate for the falling off in meats exported. There is no appreciable change in imports which form a very small part of our meat consumption. The Fordney Emergency Tariff failed to stop the importation of a large number of Canadian cattle.

The record-breaking receipts of eggs at the seven leading markets and the prices which were obtained during the year, indicate that the poultry industry is better off than any other live-stock industry.

CASES OF EGGS RECEIVED AT THE SEVEN LEAD-
ING MARKETS IN THE UNITED STATES, 1910-21

	Average
1910-14.....	13,419,846
1915-19.....	14,978,641
1920.....	15,237,352
1921.....	17,362,970 ¹

¹ Approximated on the basis of the principal five figures for the other two not being available for 1921.

The Chicago prices of steers and Chicago and New York prices of beef and hides, given above, show how wholesale prices of live-stock products are either approaching or have gone below prewar prices.

Emergency reduced rates were granted to cattlemen for shipping range cattle from the southwest to northern ranges from April 1 to September 15.

All rates on live stock, excepting horses and mules exceeding 50 cents per hundredweight, were reduced 20 per cent on September 20, effective until Dec. 31, 1921.

On December 3, the Interstate Commerce Commission approved a 10 per cent reduction for a period of 6 months on all agricultural products, excluding rates over 50 cents per hundredweight on live stock, on which the 20 per cent reduction was continued.

In accordance with the Fordney Emergency Tariff Law, passed in May, the following rates were applied to imports of live stock and live stock products which were free of duty under the Underwood Tariff Law.

Cattle, 30 per cent ad valorem. Sheep, less than 1 year, \$1, 1 year and over, \$2. Live stock for breeding, free. Meats: Fresh and frozen, 2 cents per pound; prepared and preserved, 25 per cent ad valorem. Wool: unwashed, 15 cents per pound; washed, 30 cents per pound; scoured, 45 cents per pound; manufactured, 45 cents per pound in addition to previous rates. Butter and butter substitutes, 6 cents per pound. Cheese and cheese substitutes, 23 per cent ad valorem. Milk: Fresh, 2 cents per gallon; cream, 5 cents per gallon; condensed, 2 cents per pound.

In June a plan was formulated by eastern and western bankers to pool \$50,000,000 to be loaned to live stock men in need of an extension of credit. This new organization, known as the Stock Growers' Finance Corporation, helped materially to check the precipitate liquidation of farm live stock.

The War Finance Corporation Act was so amended in August that it provided for the relief of the farm credit situation by empowering the Corporation to advance money to banks, bankers, trust companies, and cooperative associations of producers to the extent of one billion dollars for agricultural purposes, including the breeding, raising, fattening and marketing of live stock; accordingly \$145,082,039.67 was advanced during the remainder of 1921. At present the time limit for such advances is July 1, 1921. In consequence of these activities the Stock Growers' Finance Corporation suspended operations November 30, having loaned \$20,000,000.

The Packers and Stock Yards Act which was passed by Congress after years of controversy and became a law in August, 1921, provides for supervision over the public stock yards, live-stock market agencies and dealers in live stock and live-stock products to prevent false, misleading or unfair practices. At least 66 public stock yards, the commission companies operating at the markets and all packers whose products enter interstate commerce come under the supervision of this law, which is being put into effect by the Packers and Stock Yards Administration, U. S. Department of Agriculture.

The Live Stock Marketing Committee of Fifteen, composed of leaders in the live-stock industry, appointed in January, 1921, to investigate marketing problems, on November 10 recommended the organization of a great National Live Stock Producers' Association, the establishments at public stock yards of producers' live-stock commission companies allied with stocker and feeder companies, the strengthening of cooperative live-stock shipping associations, the working out of a plan of orderly marketing to avoid glutted markets, the establishment of a producers' transportation bureau, the interpretation of live-stock statistics and the carrying on of a campaign to extend the use of meat. In accordance with these recommendations, commission companies have been started at East St. Louis and South St. Paul.

The eradication of Texas fever ticks, begun in 1906 by the U. S. Bureau of Animal Industry, has resulted in the release from quarantine of 523,837 square miles or 72 per cent of the area originally infested. During the year 29,563 square miles were released; 85 per cent of the present infested area is in Texas, Florida, Arkansas, and Louisiana.

As a result of the campaign started in 1917,

under the supervision of the U. S. Bureau of Animal Industry, to eradicate tuberculosis in cattle, there were on Jan. 1, 1922, 11,587 accredited herds of 268,411 cattle, 96,644 herds of 1,051,278 cattle free under the first test; 133,481 herds of 1,871,664 cattle under Federal and State supervision and 27,180 herds of 338,139 cattle on the waiting list.

The exports of live animals for slaughter during 1921 was greater than for any year since 1908. The movement has been chiefly to western Europe and Mexico. As a result of the long warfare, there is a great shortage of live-stock, especially cattle and horses in Mexico.

During 1921, the price of purebred cattle, which reached a peak in 1919, and began to fall in 1920, dropped back over 100 per cent to average price from 1910 to 1914. The number of purebred cattle sold in public sales also dropped 100 per cent from total of 1920.

LIVING, COST OF. See **FOOD AND NUTRITION.**

LIVONIA. One of the Baltic provinces (q. v.) formerly a province of the Russian empire, on the Gulf of Riga between Esthonia and Courland; after the war divided between the two new republics of Latvia and Esthonia. Area, variously estimated at from 16,930 to 18,158 square miles; population, estimated Jan. 1, 1915, at 1,778,500.

LOCKPORT, N. Y. See **MUNICIPAL GOVERNMENT.**

LOCKS. See **CANALS; DAMS.**

LOGAN, LEAVITT CURTIS. Naval officer, died at Washington, D. C. November 23. He was

and a portrait of his father. He struck out from his will before he died the names of his nephews, on the ground of their socialistic and pacifist opinions, one of his nephews being Harry L. Danar, a former professor at Columbia, who had withdrawn from that university on account of his radical views.

LOS ANGELES, CALIF. See **GARBAGE AND REFUSE DISPOSAL.**

LOUISIANA. POPULATION. According to the report of the census of 1920, there were 1,798,509 residents in the State, Jan. 1, 1920, as compared with 1,656,388 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	1,796,000	35,022,000	\$22,764,000
	1920	1,569,000	30,125,000	25,606,000
Oats.....	1921	55,000	1,265,000	886,000
	1920	50,000	1,150,000	943,000
Hay.....	1921	223,000	1,286,000	3,924,000

Average per acre included in enterprises.....	\$16.76	\$11.88	\$4.88	41.1
Average cost of operation and maintenance per acre.....	\$7.01	(²)		

¹ A minus sign (—) denotes decrease.

² Not reported in 1910.

born in Medina County, Ohio, Jan. 30, 1846, graduated at the United States Naval Academy in 1867 and had risen to the rank of commander by May 1, 1898. He commanded the *Armeria* and the *Machias* successively during the Spanish-American War and after 1897 was Commandant at the navy yard of Pensacola, Fla.

LONGFELLOW, ERNEST WADSWORTH. Artist and the son of the poet Henry Wadsworth Longfellow, died at Boston, November 24. He was born at Cambridge, Mass., in 1845 and graduated at Harvard in 1865. After studying in Paris under well-known masters he began his work as a painter which includes among other paintings *Misty Morning; Italian Pifferari; Morning on the Aegean; The Matterhorn; Evening on the Nile; First Love;*

Rice is the only crop grown under irrigation in Louisiana, and small areas of rice are grown without irrigation, although in general the crop is irrigated. For the State the acreage of rice harvested in 1919 was 456,726 acres, the quantity produced was 16,005,936 bushels, and the value \$42,735,849.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Louisiana was issued by the Bureau of the Census, which supplied the table (page 431) giving a comparative summary for 1914 and 1919:

OFFICERS. Governor, John M. Parker; Lieutenant-Governor, Hewith Bouanchaud; Secretary of State, James J. Bailey; Treasurer, Howell

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	2,617	2,211	18.4

Wages.....	94,406,000	39,544,000	138.7
Materials.....	429,404,000	157,886,000	172.0
Value of products.....	676,190,000	255,313,000	164.8
Value added by manufacture (value of products less cost of materials).....	246,786,000	97,427,000	153.3

Morgan; Auditor, Paul Capdevielle; Attorney-General, A. V. Coco.

LOWELL, MASS. See MUNICIPAL GOVERNMENT.

LOWER AUSTRIA. Before the downfall of the Austro-Hungarian empire, a crownland of Austria. Area, 7654 square miles; population, Dec. 31, 1910, 3,531,814, of whom 3,130,536 were German speaking. Capital, Vienna.

LOWNEY, WALTER M. See NECROLOGY.

LOYSON, PAUL HYACINTHE. French author, died in Paris in April. He was born in 1874, the son of the well-known Gallican reformer, Père Hyacinthe, educated in England and in Paris, and became a contributor to political and literary journals. He was a strong partisan of Dreyfus and the subject of his first play, *Wagor* (1899), was the Dreyfus Affair. Other plays of his were, *The Gospel of Blood* (1902); *The Rights of Virgins*, and *Enemy Souls* (1896), and *The Apostle* (1911).

LUKE, JOHN G. Paper manufacturer, died in New York City, October 15. He was born in Springfield, Mass., Oct. 29, 1857, served as superintendent of various paper mills and built a mill in West Virginia which finally attained a daily output of 650 tons of book paper and which assumed the title of the West Virginia Pulp and Paper company.

LUMBERING. See FORESTRY.

LUMINAL. See EPILEPSY.

LUND, TROELS. See TROELS-LUND.

LUNG, GEORGE AUGUSTUS. Medical officer of the navy, died near Newport, R. I., July 26. He was born at Canandaigua, N. Y., Dec. 21, 1862; graduated at the University of Rochester in 1883, and in medicine at the University of Pennsylvania in 1886. He was appointed assistant surgeon in the United States navy, August 18, 1887; and was made surgeon in November, 1900; lieutenant-commander, April 9, 1908; and medical director in June, 1917. During the Spanish-American war he served with Admiral Sampson in Cuban waters, and he was afterwards on board the *Philadelphia* at the time of the Hawaiian and Samoan difficulties. He received special commendation from the Secretary of the Navy for his courageous conduct. In 1900 he took part in the relief expedition in China. He was in command of the United States Naval Hospital in Brooklyn after October, 1916.

LUTHERANS. This denomination in the United States is composed of three main heads: the National Lutheran Council, the Evangelical Lutheran Synodical Conference of North America, and Independent Congregations. The National Lutheran Council is an organization comprising nine Lutheran Synods or General Bodies uniting

for certain definite purposes. The official members of the Council are the United Lutheran Church, the Joint Synod of Ohio, the Buffalo Synod, the Augustana Synod, the Norwegian Lutheran Church, the Lutheran Free Church, the United Danish Church, the Danish Lutheran Church, and the Icelandic Synod. The following bodies have coöperated unofficially with the Council: the Immanuel Synod, the Jehovah Conference, the Eilsen Synod, the Church of the Lutheran Brethren, the Suomi Synod, the Finnish National Church, and the Finnish Apostolic Church. Five synods comprise the Evangelical Lutheran Synodical Conference of North America, as follows: The Evangelical Synod of Missouri, Ohio, and other States, the Evangelical Lutheran Joint Synod of Wisconsin, Minnesota, Michigan, and other States, the Slovak Evangelical Lutheran Synod of America, the Norwegian Synod of the American Evangelical Lutheran Church, and the Negro Mission. Statistics of the denomination in the United States and Canada for 1920, which are the latest available, the fiscal year of many of the branches ending December 30, show the following: 15,068 churches, 9853 ministers, 3,684,294 baptized members, 2,466,645 confirmed members, 9371 Sunday schools with 1,019,076 members, and total receipts of \$33,770,710. It is estimated that the total number of members enrolled and not enrolled in America reaches 15,000,000. Services are conducted in 17 different languages in the United States.

The activities of the National Lutheran Council are carried on at home and in foreign countries. Its energies in 1921 have been concentrated chiefly upon the work of European Relief and Reconstruction. Distribution of \$1,191,416.96 in gifts of money and food was effected in 1921 in 17 European lands as follows: France, Germany, Poland, Austria, Czecho-Slovakia, Latvia, Roumania, Finland, Esthonia, Hungary, Lithuania, Danzig, Jugo-Slavia, Ukraine, Italy, Russia, and Siberia. In addition clothing to the amount of 1,700,000 pounds was also distributed. The Council has appealed to the Lutheran Church in America for \$1,250,000 to be expended in carrying on this work in 1922.

The denomination through its various branches maintains a large number of educational institutions in all parts of the country. In 1919 there were 24 theological seminaries, 39 colleges, 7 ladies' colleges and seminaries, 52 academies, 5 normal schools, and 9 Bible schools. Other institutions consist of 9 deaconess mother houses, 47 hospitals, 13 hospices, 7 homes for defectives, 8 immigrant and seamen's missions, and 11 miscellaneous.

Each of the branches of the denomination does Home Mission Work in America. The larger

branches, such as the United Lutheran Church, maintain Home Missions and Church Extension Boards. There are twelve American societies for missionary work in India, China, Persia, Turkey, Japan, Africa, Madagascar, South America, Australia, New Guinea, Virgin Islands, West Indies, Philippine Islands, and among the American Indians and Esquimaux. There were in 1919 394 missionaries, 2648 native helpers, 123,927 native Christians, 14,214 candidates for baptism, 42,415 pupils in mission schools, and a total income reported by the official agencies of \$696,362. Contributions for benevolences in this country in 1920 were \$10,762,208. There are 36 European Missionary Societies operating in many more fields. In 1919 there were 2355 missionaries, 12,014 native helpers, 964,580 native Christians, 68,190 candidates for baptism, 230,500 pupils in mission schools and a total income of \$3,308,500. The denomination maintains 35 publishing houses in various parts of the country which issued in 1920 312 periodicals, a large number being in foreign languages. Cloth-bound books numbered 200 in 1921. These were of a secular and religious character and were classified as philosophical, Biblical or expository, dogmatical or doctrinal, historical, and practical. For further information on the Lutheran church in general, see the *Lutheran World Almanac and Annual Encyclopedia*; in addition each one of the various branches of the denomination publishes its annual or almanac. Headquarters of the church are at 437 Fifth Avenue, New York.

For the three divisions of the church, the following statistics are furnished for 1920: National Lutheran Council, 6634 ministers in America, 11,037 congregations, 2,459,392 baptized members, 1,651,609 confirmed members, 7090 Sunday schools, 82,894 teachers, and 798,672 scholars; Evangelical Lutheran Synodical Conference of North America, 3415 ministers in America, 3905 congregations, 1,289,213 baptized members, 839,685 confirmed members, 2151 Sunday schools, 11,407 teachers, and 216,358 scholars; Independent Congregations, 12 ministers in America, 13 congregations, 5200 baptized members, 2600 confirmed members, 2 Sunday schools, 39 teachers, and 605 scholars.

LUXEMBURG. A small state of central Europe, bounded by Germany, Belgium, and France; neutralized by the Treaty of London in 1867; occupied by the Germans during the late war, but restored to independence after the armistice in 1918, Capital, Luxembourg. Area, 998 square miles; population, Dec. 1, 1916, 263,824. The population of the city of Luxembourg in 1916 was 20,355. About 36 per cent of the population are engaged in agriculture. Education is compulsory between the ages of six and thirteen; primary schools in 1920 numbered 1027. The revenue, 1920-21 was 126,018,256 francs; and the expenditure, 170,547,229. Luxembourg is a grand duchy, the ruling grand duchess in 1921, being Charlotte Adelgonde, born Jan. 23, 1896, and succeeding to the throne, Jan. 9, 1919. In 1919 the constituent assembly made important changes in the constitution, namely, the vesting of all power in the nation for the abolition of secret treaties, and the introduction of universal suffrage,

pure and simple, with proportional representation. The ministry appointed in April, 1921, was as follows: Prime Minister, Emile Reuter; finance, A. Neyens; commerce, industry and labor, M. Leidenbach; justice and public work, A. Bech; agriculture and social welfare, R. de Waha.

HISTORY. The convention establishing an economic union of Belgium and the Grand Duchy of Luxembourg was signed by the plenipotentiaries of the two countries at Brussels on July 25, subject to ratification by the parliaments of each country. This act concluded a long series of negotiations. It was necessary for the Grand Duchy to conclude a treaty of this nature with either France or Belgium, inasmuch as by article 40 of the Treaty of Versailles she ceased to form a part of the German Zollverein on Jan. 1, 1919. The leading features of the convention were as follows: Both countries to be considered as one territory for the purpose of customs, subject to certain exceptions to be adjusted by a joint commission. In order to enable Luxembourg to redeem the temporary currency issued to retire the German marks that were in circulation, Belgium agreed to float a loan to the government of Luxembourg to the amount of 175,000,000 francs. The operation of the railways of the Grand Duchy to be definitely determined by a future convention. A most important provision states that the interests of Luxembourg in foreign countries will be confided to Belgian consuls wherever there may be no representative of the Government of Luxembourg. Furthermore, Belgium agrees to endeavor to obtain for Luxembourg the benefits of the commercial treaties existing between her and other countries, while all future commercial treaties must be concluded by Belgium in the name of the customs union. The execution of this convention was intrusted to a "Conseil Supérieur" composed of five members, three of whom were Belgians, the Belgian government to designate the president, who should have a controlling voice. The convention is to continue for a period of 50 years from the date of ratification, and unless one of the contracting parties denounces it one year before its expiration, it will remain in force for a further period of 10 years.

LYMAN, HENRY DARIUS. Former president of the American Surety company, died in New York City, February 27. He was born at Parkman, Ohio, April 12, 1852; and was employed in the United States post office after 1878, rising to the position of second assistant postmaster-general in 1884. He was afterwards an officer of the American Surety company, becoming its president in 1899; and the chairman of the board after Jan. 17, 1912.

LYNCHINGS. According to the National Association for the Advancement of Colored People, the lynchings during the year 1921, totaled 64. Of the victims four were publicly burned to death and five were burned after death. The total showed a decrease of two from the preceding year. Fifty-nine of the victims were negroes and the others whites. In seventy-two instances the officers of the law prevented lynchings, eight such rescues having been made in Northern States and sixty-four in Southern States. Armed forces were used to repel lynching expeditions. There were twenty instances of assault or attempted assault.

M

MACAO. A province belonging to Portugal in China, consisting of the island of Macao at the mouth of the Canton River and the small adjacent islands of Taipa and Coloane. Population, Dec. 31, 1910, 74,856, of whom 71,021 were Chinese and 2,171, Portuguese. The city of Macao is divided into two parts, inhabited by Chinese and non-Chinese, respectively, and under separate administrations. The imports in 1919 were valued at 6,943,658 escudos; and the exports, at 6,398,176 escudos.

MCCABE, (WILLIAM) GORDON. Educator, died, in 1921. He was born at Richmond, Va., August 4, 1841; and graduated at the University of Virginia in 1861. He entered the army of Northern Virginia in 1861 and served throughout the Civil War, rising through the ranks to a captaincy of the artillery. He established the University School of Petersburg and Richmond in 1865 and conducted it until 1901. He was vice-rector of the University of Virginia from 1892 to 1896, and an officer in many important societies and educational institutions of the State. He wrote: *Defense of Petersburg* (1876); *Virginia Schools Before and After the Revolution* (1890); *The First University in America* (1911); and prepared various Latin text-books for the use of schools.

MCCARTHY, CHARLES. Librarian and lecturer, died, March 26. He was born at Brockton, Mass., in 1873; graduated at Brown University in 1896; and afterwards studied history at the University of Wisconsin in which State he was appointed legislative librarian in 1901. It was owing to his efforts that the legislative reference departments were established in State libraries. He was the author of *Anti-Masonic Party* (1902); and the *Wisconsin Idea* (1911). He was a member of the United States commission on industrial relations; and during the war aided Mr. Hoover in the food administration department, being sent abroad on the business for that department and the War Labor Board.

MCCOMBS, WILLIAM FRANK. Former chairman of the Democratic National Committee, died at Greenwich, Conn., February 22. He was born in Hamburg, Ark., Dec. 26, 1875; graduated at Princeton in 1898 and at the Harvard Law School in 1901, after which he practiced law in New York City. He was manager of the national campaigns which resulted in the nomination and election of President Wilson in 1912, and was chairman of the Democratic National Committee from that year down to 1916. President Wilson offered him the ambassadorship to France in March, 1913, but he declined it. Both before and after his death there was much discussion in the periodicals in respect to the controversy between him and his friends on the one hand and the supporters of the Wilson administration on the other over the question whether he had been fairly treated in view of the great services that he had rendered Mr. Wilson during the latter's candidacy. The side of Mr. McCombs was presented in a volume published in 1921.

MCDONNELL, CHARLES EDWARD. Roman Catholic bishop, died at Brentwood, L. I., August 8. He was born in New York City, Feb. 1, 1854; educated by the Jesuits of St. Francis Xavier's College and at the American College of Rome. In 1878 he was ordained priest. He was secretary to Cardinal McCloskey and to Archbishop Corrigan and was Chancellor, 1885-92. He was consecrated bishop of Brooklyn, April 25, 1892.

MACDONELL, Sir JOHN. Scotch jurist and writer, died in London, England, March 17. He was born in Aberdeenshire in 1846, and educated at Aberdeen and Edinburgh universities; called to the bar in 1873; secured a good practice in London, and was made Master of the Supreme Court in 1899. From 1901 to 1920 he was professor of comparative law at London University, and he was the first dean of the law faculty in that institution. He became well known all over the world for his writings on jurisprudence, showing an extraordinary range of learning on the subject. He believed in the continuity of the law and its steady evolution and improvement. On many occasions he did good service in bringing to light the exact content of legal terms and phrases currently misused, as for example, so late as in 1917, when in a lecture on "True Freedom of the Seas" he brought out the definite meanings of the terms. Space is lacking here for the long list of juristic writings. Aside from this work he edited the *Journal of British Legislation and International Law*; *Judicial Statistics*; *State Trials*. In 1919 he became Chairman of the Committee appointed to inquire into the responsibility of Germany for crimes during the war. His many lectures were left by him in a form suited to publication and at the time of his death two treatises were nearly ready, namely, *The History of Treaties*, and *Private International Law*. He was a staff contributor to the *London Times*.

MACEDONIA. A region of southeastern Europe, nearly corresponding to the vilayet, Saloniki, in the former Russian empire; after the Balkan wars partitioned among Greece, Serbia, and Bulgaria, Greece receiving the largest share. The departments controlled by Greece are: Saloniki, Drama, Serres, Kozani, and Florina, with a total population in 1913 of 1,194,902.

MCGHIE, JOHN. Scotch orchestral conductor, died in New York, April 29. He was born in Glasgow, in 1869. In 1894 he came to the United States, and soon he was known as one of the best conductors of light opera. He was connected with Hammerstein, Savage, the Shuberts, and the Society of American Singers. See NECROLOGY.

MCGRAW, THEODORE ANDREWS. See NECROLOGY.

MCGREGOR, THOMAS. See NECROLOGY.

MCINTIRE, CHARLES. See NECROLOGY.

MCKENNA, EDWARD WILLIAM. Railroad official, died in 1921. He was born at Pittsburg, Pa., Oct. 24, 1848; and began his railroad career as a telegraph messenger and operator on the Pennsylvania railroad in 1862. He served in the United States military telegraph department

in the last year of the Civil War. He was afterwards clerk in the office of the general superintendent of the P. C. and St. L. railroad; and in 1871 became superintendent of the Indianapolis and Vincennes railroad. After holding various offices on other lines he was made general superintendent of the eastern district of the Great Northern from 1894 to 1895; vice-president of the Chicago, Milwaukee, and St. Paul railroad, in charge of operation and construction after Sept. 23, 1909. He was also president of the McKenna Steel Working company at Joliet, Ill., from 1895 to 1903.

MACKENZIE, ALEXANDER. Army officer, died, February 23. He was born at Potosi, Wis., May 25, 1844; graduated at the United States Military Academy, 1864, in the engineer corps, and by 1901 had risen to the rank of colonel. He was made brigadier-general, chief of engineers, Jan. 23, 1904; and major-general in 1908. During the last year of the Civil War he served as assistant-engineer in the department of Arkansas. He was brevetted for gallant and meritorious service, March 13, 1865. After the Civil War he was engaged in various engineering duties, including harbor improvements in Lake Michigan; river and harbor improvements in the Mississippi, etc. He was a member of the lighthouse board from 1895 to 1904 and of the board of ordnance and fortification after 1904; and retired by operation of law in 1908, but returned to active duty during the late war, 1917-19.

MACKENZIE, CAMERON. Publisher and war correspondent, died at sea, March 18. He was born at Wilkes-Barre, Pa., Sept. 7, 1882; studied at Yale and at the New York Law School; and was on the staff of the New York *Sun* from 1901 to 1906, after which he entered the editorial office of *McClure's Magazine* of which he was the managing editor from 1907 to 1909 and the general manager and publisher from 1909 to 1911. He became owner of that magazine and also acquired the *Ladies' World*. He was special correspondent of the London *Chronicle* on General Pershing's staff during the late war, and after the armistice, special correspondent in Warsaw for the New York *Herald*. He wrote: *Mr. and Mrs. Pierce; The Prussian, and Other Stories*.

McKIM, RANDOLPH HARRISON. Clergyman, died, July 15. He was born at Baltimore, Md., April 15, 1842; and graduated at the University of Virginia in 1861. He served in the Confederate army during the Civil War from 1861 to 1865; and was ordained priest in 1866 in the Protestant Episcopal church. He was rector of parishes at Alexandria, Va., New York City, New Orleans, and after 1889 at Washington, D. C. In 1897 he was elected dean of the Theological Seminary of Virginia. On three occasions he was president of the Virginia house of deputies. He wrote many volumes on behalf of Protestantism and in respect to Christian arguments and aims. Among his later writings may be mentioned: *The Problem of the Pentateuch* (1906); *The Anglican Idea of Catholicism* (1903); *Lee, the Christian Hero* (1907); *A Soldier's Recollections* (1910); *Catholic Principles and the Change of Name* (1913); *Romanism in the Light of History* (1914); *The Soul of Lee* (1918); *For God and Country* (1918).

McQUARRIE, C. K. See NECROLOGY.

MADAGASCAR. A large island off the south-east coast of Africa from which it is separated by Mozambique Channel, the shortest distance from

the continent being 240 miles. The length of the island is 980 miles, and its greatest breadth, 360 miles. Dependent on it are the small islands of Diego-Suarez, Nossi Bé and the Sainte-Marie, Mayotte, and Comoro groups. Capital, Antananarivo. Area, estimated at 228,000 square miles; population, Jan. 1, 1918, 3,545,264, of whom 15,157 were French; 3101, other Europeans; 5272, Hindus. The main body of the inhabitants belong to the Malagasy tribes which are numerous. The first in point of numbers is the Hova, and the next the Betsileo and Betsimisaraka. The Hova language prevails throughout the island. The population of Antananarivo is placed at 63,115. The next largest city is Tamatave (15,000) which is the principal port on the east coast. The chief occupations are cattle breeding and agriculture; and the chief crops are manioc and rice. The yield of manioc in 1918 was estimated at 800,700 tons; and of rice, 701,005 tons. On Dec. 31, 1919, the cattle numbered 7,277,609. Gold is produced in commercial quantities, and copper, lead, iron, silver, zinc, antimony, manganese, nickel, sulphur, graphite, lignite and coal are found. The industries include: Silk and cotton weaving; metal working; and the making of straw hats. Imports (1919), £3,958,909; exports, £7,086,703. The leading imports were: Cottons and clothing; and the leading exports: Hides; raffia fibre; rice and gold dust. By far the greater part of the trade is with France and the French colonies. Next in importance is the trade with Great Britain and the British possessions. The chief sources of local revenue have been: Direct and indirect taxes; customs; colonial lands; etc. Railway mileage, June 30, 1919, 776. In 1918 the tonnage of vessels entered was 630,320, of which 490,563 were French. The colony is under a governor-general who acts by the advice of a consultative council of administration. Governor-general in 1921, Hubert Garbit. During the year it was announced that the governor-general of Madagascar had decided to electrify the railroads of that colony from Tananarive to Tamatave. A hydro-electric power station will be built on the Vohitra river to furnish a maximum power of 30,000 horsepower. The length of the line is 93 miles and the total cost of the installations was to reach \$4,620,000. The governor-general also was reported to be considering the electrification of the projected railroad from Diego-Saures to Joffre Ville, a line about 22 miles in length.

MAHER, JAMES DENIS. See NECROLOGY.

MAIL BY AIRPLANE. See AERONAUTICS.

MAINE. POPULATION. According to the report of the census of 1920, there were 768,014 residents in the State, Jan. 1, 1920, as compared with 742,371 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	30,000	1,500,000	\$ 1,155,000
	1920	29,000	1,305,000	1,670,000
Oats.....	1921	124,000	4,340,000	2,387,000
	1920	119,000	4,974,000	4,228,000
Wheat.....	1921	11,000	187,000	327,000
	1920	13,000	286,000	658,000
Hay.....	1921	1,260,000	1,009,000	20,134,000
	1920	1,234,000	1,173,000	28,791,000
Potatoes.....	1921	129,000	37,152,000	31,579,000
	1920	123,000	21,771,000	27,214,000

¹ Tons.

MANUFACTURES. The census Bureau published the results of the 1919 census of manufactures. As the accompanying summary shows, there was a consistent increase at the census of 1919, as compared with that for 1914, except that the number of establishments and the number of proprietors and firm members decreased. In the order of their importance from a percentage standpoint, the increases for the several items rank as follows: Value added by manufacture, 144.7 per cent; salaries, 141.6 per cent; value of products, 130.2 per cent; cost of materials, 120 per cent; wages, 118.4 per cent; capital, 79.9 per cent; number of salaried employees, 51.6 per cent; primary horsepower, 16.3 per cent; and wage earners, 8.8 per cent. The capital invested, as reported in 1919, shows a gain of \$186,807,000, or 79.9 per cent, over that in 1914. The average capital per establishment was approximately \$140,000 in 1919 and \$69,000 in 1914. The cost of materials used in 1919 shows an increase over that for 1914 of \$141,168,000, or 120 per cent. The average cost of materials per establishment in 1919 was approximately \$36,000, and in 1914 \$35,000. The value of products in 1919 shows an increase over that in 1914 of \$260,965,000, or 130.2 per cent. The average per establishment in 1919 was approximately \$154,000 and in 1914 \$59,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$119,797,000, or 144.7 per cent. The value added by manufacture in 1919 formed 43.9 per cent of the total value of products and in 1914, 41.3 per cent. In 1919, as compared with 1914, the number of salaried employees shows an increase of 2717, or 51.6 per cent, while the average number of wage earners increased 7223, or 8.8 per cent. The comparative summary for the State for 1914 and 1919 follows:

a bonus to Maine soldiers and sailors in the war with Spain; amendment of law relating to the selection and service of jurors and provision that no exemption to jury service be made on account of sex—nurses, however, being added to the exempt class; amendment of law relating to workmen's compensation.

OFFICERS. Governor, Percival P. Baxter; State Treasurer, William L. Bonney; Secretary of State, Frank W. Ball; Attorney-General, Ransford W. Shaw; Adjutant-General, John A. Hadley; Superintendent of Public Schools, A. O. Thomas.

JUDICIARY. Supreme Court: Chief Justice, Leslie C. Cornish; Associate Justices, Albert M. Spear, G. M. Hanson, Warren Philbrook, Charles J. Dunn, John A. Morrill, Scott Wilson, Luere B. Deasy.

MAINE, UNIVERSITY OF. A co-educational State institution at Orono, Maine; founded in 1862. The enrollment for the fall of 1921 was 1232 of whom 605 were in Arts and Sciences; 532 in Technology; 294, Agriculture. For the summer term the enrollment was 228. The faculty numbered 107. The income for the year was \$666,329. The library contained 70,000 volumes. The presidency was vacant and the affairs of the institution were administered by a committee consisting of the Executive Committee of the Board of Trustees and the Committee on Administration of the university faculty.

¹ A minus sign (—) denotes decrease.

LEGISLATION. Among the measures passed at the legislative session of 1921 the following may be mentioned: Regulating the use of aircraft; provision for the perpetuation and increase of the forests; prohibition of public games and amusements on Memorial Day; control of the establishment of sanitariums and hospitals for infectious and contagious diseases of the populous portions of cities and towns; consolidation of the library laws; extension of the jurisdiction of the Public Utilities Commission over certain motor vehicles; amendment of the legislation in respect to teachers' pensions and the bestowal of full pensions on teachers retiring prior to Sept. 30, 1913; amendment of State prohibition law to harmonize with the Federal law; provision for the payment of

MALTA. An island and naval base in the Mediterranean sea, constituting along with the Islands of Gozo and Comino a British crown colony; one of the chief ports of call in the world; celebrated for its fine harbor. It is the headquarters of the British Mediterranean fleet, and strongly fortified and garrisoned. Total area along with Gozo and Comino, 118 square miles; area of Malta, itself, 91½ miles. Civil population, April 2, 1911, 211,864; estimated, April 1, 1920, 224,859. The chief town and port is Valetta. In 1919-20 there were 102 public schools with 22,222 pupils. Other educational institutions included: A university with 6 faculties and 221 students; a lyceum; 2 secondary schools; and 7 technical schools; Acreage under cultivation, 1919-20, 42,860;

chief products, vegetables and fruits. The chief occupation is farming. Imports and exports (1919-20) respectively, amounted to £4,261,745 and £918,925 (including bullion and specie). Over half the imports, 1919-20, came from the United Kingdom. Tonnage entered (1919-20), 1,893,850; cleared, 1,680,602. There are 8 miles of railway, owned and operated by the local government. Governor-General and Commander-in-Chief in 1921, Field-marshal Lord Plumer.

MANCHURIA. The extensive Chinese region between the province of Chihli and the Amur river, reaching from the Hingan Mountains eastward to Korea and the Ussuri river, and comprising the three provinces of Fengtien, Kirin, and Heilung-chiang. Estimated area, 363,610; population variously estimated at from about 6,000,000 to about 29,400,000, but a 1919 estimate placed it at about 19,000,000, of whom 90 per cent were Chinese. Capital and chief town, Mukden, with about 158,132 inhabitants. The chief port is Dairen. Other important towns are: Newchwang, a sea port with a population of about 50,000; Harbin (28,600) which is connected by rail with Vladivostok, Dairen, and Tientsin; Liao-yang, 40,000; Tieling, 28,492; Taonanfu; and Changchun, 80,000.

The following information was supplied by the United States Bureau of Foreign and Domestic Commerce in 1921: The total trade of Manchuria in 1920 amounted to \$429,431,536, which was a decrease of \$61,915,970 from the 1919 trade, which totaled \$490,347,506. However, the total trade in 1913 amounted to only \$137,028,824. The 1920 trade was composed of importations of foreign goods amounting to \$156,990,557, and exportations totaling \$221,517,697, while the balance of \$50,923,282 consisted of native goods imported. Total importations of foreign goods in 1919 amounted to \$209,637,624, while the exportations in the same year were valued at \$224,041,347. In 1913 the importations were valued at \$52,874,882 and the exportations amounted to \$68,658,999.

The South Manchuria Railway, which was owned in Japan, was reported to have prospered during the fiscal year ended March 31, 1921. Net profits were \$13,500,000 and dividends of 10 per cent were authorized. This company operates a main line from Changchun, Manchuria, where it connects with the Chinese Eastern (the eastern end of the Trans-Siberian), southward to Mukden, where the line divides, one branch going southward to Dairen and the other southeastward to Eusan, in Korea. The company also operated steamers between Darien, Shanghai, and Tsingtao. See CHINA and WAR OF THE NATIONS. The leading imports into Manchuria through Dairen are cement, cigarettes, copper, cotton cloth, drills, jeans, prints, sheetings, shirtings, and yarn; electrical materials, flour, gunny bags, kerosene, machinery, matches, pipes and tubes, rails, railway cars and wagons, rice, silk piece goods, and sugar. The net imports in 1919 amounted to \$143,696,813, and the total forwarded to the interior by rail \$100,745,908. In 1920 the net imports amounted to \$96,810,024, with the total forwarded to the interior by rail, \$90,286,304. The chief exports are bean cake, bean meal, bean oil, beans, coal, kaolin, millet, perilla, pig iron, sesame, sheep's wool, sulphate of ammonia, wheat, and wild silk cocoons. In 1919 the exports amounted to \$142,709,768, and in 1920 to \$159,-

382,940. The value of soya-bean oil exported to America in these two years was \$12,216,928 and \$8,000,551, respectively. In 1920 the figures show a decrease of \$46,886,789 in imports from 1919 and an increase of \$16,623,172 in exports.

MANCINELLI, LUIGI. Italian composer and musical conductor, died at Rome, Italy, February 2. He was born in 1848 at Orvieto, studied the piano and the cello but in 1870 entered the orchestra of the opera at Rome where in the course of five years he succeeded the famous director, Terziani. His name became known abroad and he was conductor at the Drury Lane, London, 1886-88, then for five years at Madrid and next from 1893 to 1902 at New York where he was the principal director of the Metropolitan Opera House. After that he conducted at the chief opera houses of Italy. He was especially devoted to the Wagnerian opera. Among his compositions may be mentioned the operas, *Hero and Leander* (1887), *Paolo and Francesca* (1907), the overtures of *Isata* (1887), and *St. Agnes* (1905).

MANCREDE, CHARLES B. G. DE. See NECROLOGY.

MANGANESE. The domestic shipments of high-grade manganese ore—containing 35 per cent or more metallic manganese—amounted to about 13,000 gross tons in 1921, of which more than 10,000 tons were shipped from Montana, according to the United States Geological Survey. The shipments of ore containing 10 to 35 per cent of manganese amounted to about 72,000 tons, most of which was shipped from Minnesota. The shipments of manganiferous and ferruginous manganese ore amounted to about 14,000 tons. The net imports for the first eleven months of the year amounted to 386,405 tons of high-grade ore and oxide, valued at \$3,288,595. Of this Brazil contributed 247,568 tons, valued at \$7.58 per ton, and India 113,730 tons, valued at \$6.46 per ton. The most important event that may affect the future of the domestic industry was a favorable report by the House of Representatives on a proposed tariff on imports of manganese ore of one cent per pound of metallic manganese content of ore or of concentrates containing more than 30 per cent of metallic manganese. The measure has not been reported on by the Senate committee.

MANITOBA. The easternmost of the Prairie Provinces of Canada, east of Saskatchewan and west of Ontario and Hudson Bay, extending from the American border northward to latitude 60°. Area, 251,832 square miles; population (1916), 553,860; (1921), 613,008. Chief cities with population in 1921, Winnipeg, the capital, 178,364; Brandon, 15,359; St. Boniface, 12,816; Portage la Prairie, 6748. It is under a lieutenant-governor and a legislative assembly of forty-eight members elected for five years by male and female suffrage. Women are entitled to sit in Parliament. Lieutenant-governor at the beginning of 1921, W. Pugsley; Prime Minister, W. E. Foster.

MANN, MATTHEW DERBYSHIRE. Specialist in women's diseases, died, March 3. He was born at Utica, N. Y., July 12, 1845; graduated at Yale in 1867 and at the College of Physicians and Surgeons in 1871. After studying in Europe he practiced in New York City from 1873 to 1879 and at Hartford, Conn., from 1879 to 1882. He was a lecturer on gynecology at Yale from 1880 to 1882 and at the University of Buffalo from 1882 to 1910, and was at one time president of the American

Gynecological Society. He wrote: *Manual of Prescription Writing* (1879); and other works; and edited *American System of Gynecology* (1888).

MARCHALL, ANSELME. See NECROLOGY.

MARETZKE, MAX. American pianist, died in Oakland, Calif., January 10. He was born in South Amboy, N. J., in 1859, a son of the famous impressario. Having studied in New York and Germany, he settled in the West, where he was well known as a teacher.

MARIETTA COLLEGE. A non-sectarian co-educational institution at Marietta, Ohio; founded in 1835. For the fall session of 1921 there were 419 students enrolled. In the college proper there were 197 men and 116 women. The faculty numbered 24 and 6 members were added in the course of the year. The endowment was \$1,292,371 and the income \$84,409. The library contained 105,200 volumes. The 85th Anniversary Endowment Campaign was completed in June which resulted in the raising of \$542,000 including \$150,000 from the General Education Board and \$75,000 from the Carnegie Corporation. President, Edward Smith Parsons.

MARINE DISASTERS. See SAFETY AT SEA.

MARINE ENGINES. See INTERNAL COMBUSTION ENGINES, and SHIPBUILDING.

MARINE INSURANCE. See INSURANCE.

MARITIME PROVINCES. The name applied to the Canadian provinces of New Brunswick, Nova Scotia, and Prince Edward Island.

MARQUESS, WILLIAM HOGE. Theologian, died at Yonkers, N. Y., April 10. He was born at Sparta, Tenn., Feb. 22, 1854; graduated at Westminster College, Mo., in 1873 and became president of that college. He was afterwards professor of Hebrew literature and the English Bible at the Theological Seminary of Kentucky and after that professor of the English Bible at the Bible Teachers' Training School, New York City.

MARQUETTE UNIVERSITY. An institution of the higher learning under Roman Catholic direction at Milwaukee, Wis.; founded in 1907. It comprises the following departments, Colleges of Arts and Sciences, Applied Science and Engineering, Dentistry, Law and Economics, the Schools of Journalism and Medicine, the Conservatory of Music and Training School for Nurses. The enrollment for the fall of 1921 was 4050, and for the summer session, 330. The faculty numbered 210. The income for the year was \$1,217,850. A new gymnasium and a new building for the College of Dentistry were in process of construction. President, Rev. Herbert C. Noonan, S. J.

MARSHALL, THOMAS FRANK. Former Congressman from North Dakota, died at Detroit, Mich., August 20. He was born March 7, 1854, and received a normal school education in Wisconsin. He removed to North Dakota and was a member of the senate of that State, 1896-1900. He was a member of Congress, 1901-09 and a member of the Republican National Committee, 1912-16.

MARTIN, LOUIS. See NECROLOGY.

MARTIN, SAMUEL ALBERT. Theologian and college professor, died at Easton, Pa., March 26. He was born at Cannonsburg, Pa., Nov. 1, 1853; graduated at Lafayette College in 1877 and at the Western Theological Seminary. After studying in Scotland he was ordained to the ministry of the Presbyterian church. He held a pastorate at Lebanon, Pa. He was professor of homiletics at Lincoln University from 1855 to 1895; acting-professor of homiletics at Princeton Theological Seminary from 1902 to 1903; president of Wilson College from 1895 to 1902, and of the Pennsylvania College for Women from 1903 to 1906. After 1913 he was professor of philosophy at Lafayette College. He wrote: *The Man of Uz* (1891); *The Oracles of God* (1916); *Philosophy of Conduct* (1917).

MARTINIQUE. An island in the West Indies forming one of the Lesser Antilles, a French colony; area, 385 square miles; population (1916), 193,087. Capital, Fort-de-France, with a population of 26,399. Imports (1919), 74,670,266 francs; exports, 172,705,720 francs, of which 144,564,893 francs were rum, the other chief export being sugar. In 1919 the budget balanced at 10,314,361 francs. Tonnage of vessels entered in 1919, 341,206; cleared, 378,260. There is regular steamship service by French and American lines, and there is cable communication with the continent. The colony is under a governor, a general council, and an elective municipal council; and is represented in the French parliament by a senator and two deputies.

MARYLAND. POPULATION. According to the report of the census of 1920, there were 1,449,661 residents in the State, Jan. 1, 1920, as compared with 1,295,346 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	645,000	25,155,000	\$12,326,000
	1920	650,000	25,025,000	20,270,000

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Maryland was issued by the Bureau of the Census. A comparative summary for the State for 1914 and 1919 is shown on page 438.

FINANCE. Figures for the budget of 1921 were not available. The total funded debt, Sept. 30, 1920, according to the State *Manual* for 1921, was \$28,364,881, as an offset to which the State held a mortgage of the Northern Central Railway Company amounting to \$1,500,000 and stocks, bonds, and cash to the credit of the sinking funds, amounting to \$10,021,004, leaving a net debt of \$18,343,876.

CHARITIES AND CORRECTIONS. The institutions

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Massachusetts was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the factory system. In this census also, as in that for 1914, statistics were not included for establishments having products for the census year valued at less than \$500, except that reports were taken for establishments idle during a portion of the census year, or which began operation during that year, and whose products for such reason were valued at less than \$500. The accompanying summary shows a consistent increase at the census of 1919, as compared with that for 1914, except that the number of establishments and proprietors and firm members decreased. In the order of their importance from a percentage standpoint, the increases for the several items rank as follows: Value added by manufacture, 146.9 per cent; value of products, 144.4 per cent; cost of materials, 142.5 per cent; wages, 142 per cent; salaries, 120 per cent; capital, 91.4 per cent; number of salaried employees, 50.6 per cent; primary horsepower, 23.8 per cent; and number of wage earners, 17.6 per cent. The capital invested, as reported in 1919, shows a gain of \$1,415,478,000, or 91.4 per cent over that in 1914. The average capital per establishment was approximately \$249,000 in 1919 and \$129,000 in 1914. The cost of materials used in 1919 shows an increase over that for 1914 of \$1,326,848,000, or 142.5 per cent. The average cost of materials per establishment in 1919 was approximately \$190,000, and in 1914 \$78,000. The value of products in 1919 shows an increase over that in 1914 of \$2,369,685,000, or 144.4 per cent. The average per establishment in 1919 was approximately \$337,000 and in 1914, \$137,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$1,042,837,000 or 146.9 per cent. The value added by manufacture in 1919 formed 43.7 per cent of the total value of products and in 1914, 43.4 per cent. In 1919, as compared with 1914, the number of salaried employees shows an increase of 29,988, or 50.6 per cent, while the average number of wage earners increased 106,961, or 17.6 per cent. A comparative summary for the State for 1914 and 1919 is shown on page 439.

FINANCE. Cash on hand, Dec. 1, 1920, \$16,300,012; receipts during the year, \$116,411,953; payments, \$115,403,917; cash on hand, Dec. 1, 1921, \$17,308,047. The actual revenue in 1921 was

	Census—		Per cent of increase ¹ 1914-19

¹ A minus sign (—) denotes decrease.

\$51,362,700; payments from revenue receipts, \$41,491,348. Net direct debt, Dec. 1, 1921, \$29,311,797; net contingent debt, \$54,955,119—a decrease of the direct debt during the year of \$5,816,443, and of the contingent debt of \$2,152,834.

EDUCATION. The number of pupils in the schools in the year ending June 30, 1921, was 594,593; average daily attendance, 554,647; number of teachers, 19,150; average annual salaries of teachers in the elementary schools, \$2483 (men) and \$1354 (women); of all teachers including high schools and special courses, \$1498. The proportion of men to women teachers in all public schools, Jan. 1, 1920, was 1 to 9.1. Expenditures for support of public schools for the year ending June 30, 1921, \$45,779,017.

CHARITIES AND CORRECTIONS. The State Institutions are as follows: State Prison, Boston; Massachusetts Reformatory, Concord; Reformatory for Women, Sherborn; Prison Camp and Hospital, Rutland; State Farm, Bridgewater; State Hospitals for the Insane at Worcester, Taunton, Northampton, Danvers, Westborough, and Medfield; Monson State Hospital, Palmer; Gardner State Colony, Gardner; Massachusetts School for Feeble-Minded, Waltham; Wrentham State School, Wrentham; State Hospitals at Boston, Foxborough, and Grafton; Norfolk State Hospital, Pondville; Hospital Cottages for Children, Baldwinville; Boston Psychopathic Hospital, Boston; Lyman School for Boys, Westborough; Industrial School for Boys, Shirley; Industrial School for Girls, Lancaster; Massachusetts Hospital School, Canton; State Infirmary, Tewksbury.

LEGISLATION. Among the measures passed at the session of the legislature in 1921 may be mentioned the following: Extending the law relating to educational certificates of minors employed in bowling alleys, pool and billiard rooms, boot-black stands, barber shops, construction and repair of buildings, and express and transportation companies, such minors not to be employed unless in regular attendance at school; extending the law relating to employment certificates to provide for domestic service and service on farms; providing for the marking and sealing of cans and containers used in the wholesale distribution of milk or cream; relating to the disposition of motor vehicle fees and fines and to appropriations for the State's share of the expense in maintaining boulevards in the metropolitan district; provision for the appointment of a special commission on the necessities of life to study and investigate the circumstances affecting the price of fuel and other essential commodities; authorizing savings banks

to establish and maintain safe deposit vaults and to rent boxes therein; amendment providing for suits by and against certain voluntary unions; elaborate provisions in respect to game protection; providing assistance and relief to neglected, dangerous, or uncontrolled feeble-minded persons.

OFFICERS. Governor, Channing Cox; Lieutenant-Governor, Alvan T. Fuller; Secretary of the Commonwealth, Frederic W. Cook; Treasurer, James Jackson; Attorney-General, J. Weston Allen; Auditor, Alonzo B. Cook.

JUDICIARY. Supreme Court: Chief Justice, Arthur Prentice Rugg; Justices, Henry King Braley, Charles Ambrose De Courcy, John Crawford Crosby, Edward Peter Pierce, James Bernard Carroll, Charles Francis Jenney.

MASSACHUSETTS INSTITUTE OF TECHNOLOGY. A non-sectarian technological institution at Cambridge, Mass.; founded in 1861. There were 3505 students enrolled for the fall session of 1921 and 1487 for the summer session. In the regular course there were about 500 students each in mechanical, electrical, and engineering administration; 400 in chemical engineering; 300 in civil engineering; 100 in mining, architecture, naval architecture, and electro-chemistry; and the remaining 900 were distributed among the following courses: Chemistry, biology, physics, general sciences and general engineering, sanitary engineering, and geology. The total teaching staff numbered 400 and the faculty 172, an increase of 12 professors and 25 instructors over the preceding year. The productive funds were \$14,902,276 and the income \$2,147,068. The library contained 145,750 volumes. During the year a new building for the Pratt School of Naval Architecture was completed and it was ready for occupation by October 1. President, Ernest Fox Nichols, LL.D. (resignation on account of ill health, to become effective in January, 1922). Acting president, Dr. Elihu Thomson.

MASTERSON, WILLIAM BARCLAY (BART MASTERSON). Former sheriff of Dodge City, Kansas, sporting writer, and friend of Theodore Roosevelt, died in New York City, October 25. He was born in Illinois in 1854; went west when a boy, and joined a party of buffalo hunters at Fort Dodge, Kansas. Many stories are told of his fights with cowboys and Indians, and his other adventures. On one occasion, with nine companions, he withstood an attack of three hundred Indians for twenty-one days. He took part in the battle of Red River and other Indian engagements. He was made Chief of Police of the Santa Fe Railroad during its construction, receiving a salary of \$10,000 a month, and owing to his fame

as a fighter he was not obliged to make a single arrest. Afterwards he was City Marshal of Trinidad, Tombstone, and Tucson, and United States Marshal of Denver. During Roosevelt's sojourn in South Dakota as a ranchman, Masterson and he became close friends. In the latter part of his life he was known as a writer on sports and was engaged in this occupation at the time of his death.

MATERNITY INSURANCE. See UNITED STATES.

MATERNITY PROTECTION. On the day before Thanksgiving, President Harding signed the Maternity Bill, providing for Federal coöperation with the States in promoting the welfare of maternity and infancy. After more than three years of struggle, the bill was passed by both houses of Congress by overwhelming votes. To the Children's Bureau of the United States Department of Labor was given the administration of the act, and the Chief of the Children's Bureau was made the executive officer. A Board of Maternity and Infant Hygiene, consisting of the Chief of the Children's Bureau, the Surgeon-General of the United States Public Health Service, and the United States Commissioner of Education, acquired certain powers of review and approval. A total appropriation of \$1,480,000 was authorized for the current fiscal year, and an appropriation of \$1,240,000 for each of five years thereafter. Except for a very small percentage to be used for administrative purposes, the money was to be divided among the States accepting the provisions of the act, to be used, together with State funds, for promoting the welfare and hygiene of maternity and infancy. At least six States in the 1921 sessions of their legislatures passed laws accepting the Act, if it should become a law, and authorizing a State board or division to coöperate with the Federal government. These States include Delaware, Minnesota, New Hampshire, New Mexico, Pennsylvania, and South Dakota. The rest of the States did not have to wait until the next regular session of their legislatures, for the law provided that if the legislature has not acted, the Governor may, in so far as the laws of his State permit, accept the provisions of the Act and authorize a State agency to coöperate with the Children's Bureau until the legislature has had opportunity to act. More than 30 States had child welfare or child hygiene divisions in their State Boards of Health, and in these States the law provided that its administration should be in the hands of these divisions. Any State desiring to benefit from the Act must submit to the Children's Bureau detailed plans for its administration, these plans being subject to approval of the Federal Board of Maternity and Infant Hygiene. The contributions of the Federal government to the States were to be as follows: \$10,000 the first year, and \$5000 a year thereafter to each State indicating its desire to coöperate; an additional \$5,000 to be paid providing the State appropriates \$5,000 of its own for the same purpose. That makes a total of \$15,000 the first year and \$10,000 a year for each year thereafter available from Federal funds to each State regardless of its size. In addition \$710,000 a year was to be distributed among the States on the basis of population, providing the amounts thus apportioned are matched by State appropriations. The act contains specific clauses protecting parents in their right to liberty of action, and providing that the States shall take

the initiative in preparing and carrying out plans.

In 1921 Minnesota and New Hampshire passed acts to promote the public health by providing protection for maternity and infancy; and New York amended the general municipal law by authorizing municipal corporations to appropriate money for prenatal maternity care.

MATRUCHOT, L. See NECROLOGY.

MAUDHUY, L. E. DE. See NECROLOGY.

MAURITANIA. A so-called civilian territory of French West Africa (q. v.), consisting of 8 districts with a total area of 344,967 square miles, and a population of about 258,000, who are for the most part Moorish Mohammedans. The budget in 1920 was 2,984,600 francs. It is under a commissioner of the governor-general of French West Africa.

MAURITIUS. An island colony belonging to Great Britain situated in the Indian Ocean, 500 miles east of Madagascar; constituting along with its dependencies of Rodrigues, Diego, Garcia, and other small islands a crown colony. Area, about 720 square miles; population (1911), 377,083; estimated, Dec. 31, 1919, 364,493. Capital, Port Louis, with a population in 1919 of 40,106 (with suburbs). The greater part of the population is Indian. Total imports (1919), £3,135,802; exports, £8,524,164. Revenue (1918-19), £920,871; expenditure, £980,757. The railway lines have a mileage of 119.65. Tonnage entered in 1919, 321,525, of which 255,558 were British; cleared, 326,833, of which 253,759 were British. Mauritius is under a governor, aided by an executive council and a council of government, which is in part elective. Governor at the beginning of 1921, Sir H. Hesketh Bell.

MAYOTTE AND COMORO ISLANDS. An archipelago belonging to France and administered by the governor-general of Madagascar. Area, 837 square miles; population estimated at 197,900.

MEAT. See LIVE STOCK.

MECKLENBURG-SCHWERIN. Formerly a grand duchy and constituent state of the German Empire. The throne was vacated in November, 1918. For statistics, see YEAR BOOKS preceding 1919.

MECKLENBURG-STRELITZ. Formerly a grand duchy of the German empire; proclaimed a republic in November, 1918. For statistics, see YEAR BOOKS preceding 1919.

MEDICINE, CHEMICAL. The Chemical Foundation sent out at the close of the year 1921 a small brochure which pointed out the future rôle of the chemical sciences in the practice of medicine. Among the conquests in this field the first mentioned is the preparation of synthetic drugs for local anæsthesia, which has in part revolutionized operative surgery. These have been obtained in part by making changes in the molecule of cocaine which eliminate certain undesirable and dangerous properties. In similar manner the alkaloid morphine can be made to yield several less harmful narcotics and the natural substances caffeine and theobromine, which have marked diuretic properties, have paved the way for several synthetics which exceed the natural substances in this respect. The report next mentions the artificial organic arsenics which have revolutionized the treatment of syphilis, atophan, the synthetic specific for gout, the great group of hypnotics which includes

trional and veronal, and the remarkable antiepileptic, luminal. Chemistry also prepared an active principle from the crude chaulmoogra oil which bids fair to conquer leprosy. The standard remedies for hookworm are natural substances and if they or similar bodies could be made synthetically it would mean a more vigorous opposition to that wholesale infestation. The active principle of the suprarenal glands can be made by synthesis and is a most valued heart stimulant, while quite recently Kendall of the Mayo Foundation has isolated an intensely active principle, thyroxin from the thyroid gland. The subjects of vitamins, serums, antitoxins, etc., belong here, but thus far active principles have not been definitely isolated, although certain definite aminoacids which can be prepared artificially have a notable effect on growth and nutrition. Three great scourges, tuberculosis, pneumonia and cancer have thus far proved refractory to chemical medication. The report also includes physical chemistry with especial emphasis on colloid medication. See COLLOIDAL THERAPY.

MEDICINE, PROGRESS OF. The year 1921 was not remarkable for innovations of any kind. There were no wholesale infections, no new diseases, no remarkable discoveries in pathology or treatment. The individual titles in alphabetical order comprise: ALCOHOL AND MEDICAL PRACTICE; ANTHRAX; APPENDICITIS; BUBONIC PLAGUE; CANCER; COLLOIDAL THERAPY; DIABETES; DIPHTHERIA; EPILEPSY; FOOD POISONING; GALL-STONE DISEASES; HEART DISEASE; INFANTILE PARALYSIS; LEPROSY; MEDICINE, CHEMICAL; NEPHRITIS; ORTHOPEDIC SURGERY; PSYCHOANALYSIS; RHEUMATISM; RICKETS; SMALLPOX; SURGERY; TRICHINIASIS; TUBERCULOSIS; TYPHOID FEVER; VITAL STATISTICS; WHOOPING COUGH; WOUNDS, TREATMENT OF, and YELLOW FEVER.

MEIGHEN, ARTHUR. Prime Minister of Canada in 1921. He was born at Perth, Ont., June 16, 1874, and was returned to the House of Commons in 1909 for a Manitoba constituency. From that time on he held his seat in Parliament by increasing majorities, gaining a great reputation as a speaker. In politics he has been a protectionist. His recent policy tended to maintain the war powers of the government in time of peace. As a speaker he differed from others in the careful and precise use of language, having made a close study of the masters of English. See CANADA.

MESOPOTAMIA. The region of the Euphrates and Tigris rivers between Northern Arabia and Persia; formerly a part of the Turkish empire in Asia, comprising the vilayets of Bagdad, Basra, and Mosul; conquered by British and Indian troops during the war; recognized as an independent state by the peace treaty with Turkey, and allotted by the Supreme Council under mandate to Great Britain. Area, 143,250 square miles; population, according to the census of 1920, 2,849,282, distributed as follows: Bagdad, 1,360,304; Basra, 785,600; Mosul, 703,378. According to religion the population was distributed as follows: Shiite Mohammedans, 1,494,015; Sunnite Mohammedans, 1,146,685; Jews, 87,488; Christians, 78,792; other religions,

42,302. The chief seaport is Basra at the head of the Persian Gulf. The country has abundant agricultural resources, and the soil is adapted to the production of wheat, cotton, barley, date palms, and peanuts. It is rich in oil which is its chief production. Petroleum wells are exploited at Mandali, northeast of Bagdad, and at Gasara, near Mosul. For general description of the natural and economic conditions and recent developments, see preceding YEAR BOOK. The commerce in 1919 as given by British authority was as follows: Imports, £11,940,404; exports, £7,150,268. Nearly 50 per cent of the imports were cotton goods, and sugar stood next. The chief imports were carpets and grain. The budget for 1919-20 was as follows: Revenue, £3,437,000; expenditure, £3,692,000. Before the war the only railway was the small section of the Bagdad railway from Bagdad to Samara, built by the Germans; but during the war several lines were built for military purposes, aggregating about 1100 miles, of which after the armistice 937 miles were turned over to the civil administration. After that construction continued, including a line connecting Basra and Bagdad with the Euphrates, and the extension of a line from Telerite to Kalat-Sharkat. In 1920 the government was under a council of state, formed provisionally until a national assembly should form the constitution. For government and history in 1921, see below.

THE NEW KINGDOM OF IRAK. The principal event in Mesopotamia during the year was the setting up of a new government under the Emir Feisal. At the beginning of the year there were reported to be about 250,000 British troops in the country. Against them were the Arab tribes who were supported and instigated, according to press accounts, by Turkish and Russian Soviet agents. Prince Feisal, son of King Hussein of the Hedjaz, had visited London and was endeavoring in January to get the support of the British government in securing the throne of the kingdom of Mesopotamia under British mandate. In these endeavors he was opposed by the French who had balked his efforts to rule over Syria. The British colonial secretary supported his candidacy and tried to meet the objections of the French in an exposition of the affair before the House of Commons, April 14. On August 23 Feisal was crowned king of Irak or Mesopotamia at Bagdad. The kingdom included the Turkish vilayets of Bagdad and Basra, and part of Mosul, with an area of about 140,000 square miles, and a population of about 2,000,000. Upon the coronation of Feisal he called upon the President of the Provincial Council to form a ministry which consisted of the President of the Provincial Council as prime minister with the chiefs of the following departments, imperial defense, finance, justice, commerce, public works, education, and health. On September 20 it was reported that the Turkish Nationalists were gathering their forces and strengthening their positions on the border and that they had sent into that region a body under Nihad Pasha for the purpose of subduing the Kurds and of stirring up a revolution against King Feisal. A little later it was reported that if a revolt should break out against Feisal, the Turks would support a Persian official as King in his place.

MESOTHORIUM. See RADIUM.

METALLURGY. With general depression and lack of activity in the mineral industry as shown by the shutting down of many mines and smelting and refining plants the world over, it was hardly reasonably to expect developments or advances in metallurgy either on the scientific or practical side. Reference to the articles on the various minerals elsewhere in this YEAR Book will amply show this condition and in many cases mine managers, superintendents, engineers, and chemists were more concerned with problems of economy and possible reductions of costs, when operations could be extended than with developing new processes or installing new methods. In fact so many plants were run either at a loss or on a narrow margin, that is, assuming they were run at all, that any steps involving capital expenditures were hardly to be thought of. In other words, the economic situation was such that mine managers were interested rather in whether they could or should operate at all rather than in improved methods of operation save those involving the usual economics.

GOLD. As in 1920 no metallurgical discoveries sufficient to alter in any way the conditions of gold production were recorded in 1921. No methods either of mining or of treatment of low grade ores were brought to light which would warrant the working of gold-bearing ore with a lower content than was being handled at the best organized mines.

SILVER. With lead and other mines where silver was obtained as a by-product closed down there was little opportunity for developments in this field as the leading production of silver in the United States in 1921 came largely from straight silver mining made possible by the operation of the Pitman Act. (See **SILVER.**) Here there was little to record in the way of metallurgical progress.

COPPER. With the copper references of the United States operating at but little more than 35 per cent of their capacity it was of course impossible to look for extensions and improvements in this quarter. Accordingly attention was divided to South America to the developments of the Chile Copper company, and to Africa where the Union Minière du Haut Katanga had extensive works under way. The Chile Copper company planned to increase its capacity so as to treat 27,000 tons of ore daily, or more than 300,000,000 lbs. of copper per annum, and to follow this successively by increases to 40,000 tons and 50,000 tons per day. There was also to be a large plant for the treatment of ores that did not leach readily. The plans and specifications for the second extension were understood to be complete during the year, but active work was held up on account of high costs. This entire plant was to turn out electrolytic copper, and when fully developed would have a capacity of between 500,000,000 and 600,000,000 lbs. a year, which would be available for the European market. The Katanga company had extensive hydro-electric resources which it was engaged in developing, so that it also could refine copper on a very extensive scale. It had commenced the construction of a 4000-ton concentrating plant which would handle ores that could not be leached and were too low grade for direct smelting. At the same time there was being installed a leading plant,

said to be of 110,000,000 tons of copper annual capacity. These developments were reported to be but initial phases of a much larger scheme so that not only could 200,000,000 lbs. of copper be refined for the European market each year, but the output in a short space of time would be increased to some 400,000,000 lbs. per annum. In both these instances the production conditions and costs were most favorable and the work could be handled on a large scale.

In Peru the Cerro de Pasco Copper Corporation in its new plant was introducing some notable features of modern practice. Horizontal Symons crushers were to be employed or the intermediate crushing and rolls for the finer crushing. The recent developments in the way of Cottrell electrostatic treaters for recovering the fine dust in roaster furnaces were also being applied and the new roaster furnaces were being equipped with individual tube type treaters. This plant also was making arrangements for treating by the sintering process ore that carried 2 per cent copper, 12 per cent zinc, and 25 ounces of silver per ton. During the year at several plants, notably the Garfield Smelting Works and the International Smelting Co.'s plant at Miami, Ariz., new methods were in use for receiving, unloading, and sampling the concentrates when delivered to the plant. Improved roaster furnaces were also the order of the day with increased number of hearths and the use of high temperature bonding cements so that with the use of firebrick furnace linings and hearths the interiors were virtually made into a monolithic structure. Here, as elsewhere, more attention was being paid to heat insulation not only in the roaster furnaces but in the containing hoppers and the transfer cars.

The treatment of furnace gases both for the recovery of dust losses and to minimize the fume nuisance made progress during the year. Different types of Cottrell electrostatic treaters were installed at a number of plants, while in the case of sintering furnaces dust collectors and fans were fitted so that the gases would be cooled before entering the fans.

At some of the smelters there was a tendency during the year to reduce the size of the furnace, and naturally at a time of enforced economies care was being taken with fuel, draft control, and charging methods. The same held true for blast furnaces; powdered coal as a substitute for coke giving encouraging results, though where fuel oil was available at a reasonable price as in the Southwest of the United States the reverberatory furnace was considered the more economical. Such instances as the foregoing were typical of the work in the metallurgy of copper during the year, the various plants seeking earnestly to reduce costs and secure more efficient operation without making too radical changes of equipment and method.

LEAD. In 1921 it was only the mines and plants that could produce lead at a low cost that were able to work and in many cases it was stated that only the highest grade deposits were being mined and the ore treated. There was no record of important metallurgical or mechanical developments during the year and the industry was especially indebted to the flotation process which had been introduced into progressive plants just before the war. Without flotation in the mills in many cases there would have been required an even more extensive closing down than prevailed

during the year. Generally speaking lead metallurgists believed that further reductions of cost must come rather from economic services than from any technical developments that the immediate future promises.

NICKEL. With all the Sudbury smelters shut down except for one furnace, and the refineries closed it was hardly possible to look for metallurgical developments in this region from which 85 per cent of the world's supply of nickel is obtained. The Sudbury ores when treated also afford gold and silver and important amounts of platinum and palladium. In 1920 in the refining operations, 8400 ounces of platinum were recovered and 10,200 ounces of palladium, as well as other metals of the platinum group such as ruthenium, rhodium, and iridium. Of course nickel was required for various alloy steels and other purposes and for these metallurgists were still working so as to be able to supply the material and find new applications for it.

IRON AND STEEL. During the year there were in progress interesting experiments on low-grade and other iron ores requiring special treatment. The Mesabi Iron Co. which owned a large tract of low-grade iron ore deposits in the eastern Mesabi district of Minnesota, in the form of magnetic taconite, was at work on a concentrating and sintering plant from which commercial iron already was produced. Here the ore was crushed, concentrated on magnetic concentrators and then sintered, the first unit of the plant having a capacity of 1000 tons a day and being a part of an installation that later was to supply 30,000 tons a day. In Canada interesting experiments were in progress for a new method of smelting titaniferous iron ore in a blast furnace. Here silica was used as a flux instead of limestone and encouraging results were attained. The experiment was not entirely completed but it was distinctly encouraging as promising a method for the effective and economical treatment of titaniferous iron ores, even these with a considerable percentage of silica.

In the new Ford foundry some interesting advances in iron and steel metallurgy were to be noted, especially where the iron from the blast furnace was cast directly. This plant at the end of the year had four cupolas in operation out of the projected twenty-four, which were to form its complement, the plant being designed for a capacity of 2500 tons of castings a day. This was said to be the first foundry where direct metal from the blast furnace was used on a large scale and the iron was found to run by uniform. In fact it was possible to produce castings with 80 per cent direct blast furnace iron and 20 per cent cupola metal, though it was proposed to use on the average about a 50 per cent mixture, ranging perhaps 10 per cent either way. The cupolas were changed mechanically from cars through chutes, each cupola having two, so that iron could be added from either side. The hot metal from the blast furnace was poured into 75-ton ladle cars and brought to the foundry where it was transferred to 20-ton mixer ladles and there combined with the cupola iron to be poured into the regular foundry ladles for running onto the foundry floors.

The use of the electric furnace in the metallurgy of iron and steel furnished an interesting field of development during the year. In a report

of the Electric Furnace Association the conclusion of most of the users of electric furnaces was that voltages up to 140 were satisfactory but those from 160 to 250 were not favorably regarded both on account of the effect of the long arc in the brick work and as was claimed on the metal itself. A notable event of the year was the successful use of two 40-ton Hewett electric furnaces at the Navy Armor Plate Plant at Charleston, W. Va. These were of circular cross sections with a shell 18 ft. in diameter and 8 ft. high being provided with 3 electrodes 24 inches in diameter in the case of those of amorphous carbon and 14 inches in diameter for those of graphite. The furnaces will tilt for pouring in the usual manner and can produce ingots of electric steel up to 80 tons in weight. The plan followed was to use two 75-ton basic open-hearth furnaces to provide the hot metal for the electric furnaces and in the former the metal is partly purified. The two furnaces have proved remarkably successful and ranked among the largest units of the kind. It was believed that 100-ton furnaces of this general type were quite possible. The electric furnace was clearly demonstrating its supremacy in many fields, and one of the largest manufacturers of manganese steel castings in the United States was about to employ it exclusively or at least largely for his output. Another development of the year in the United States was the construction of a two-ton induction furnace for foundry work, this effort being another attempt to place this type on a commercial scale.

The electrolytic deposition of iron on a rotating mandrel to produce iron tubes on a process modified from that used in France, was another matter of interest during the year in the United States. In the French experiments hot ferrous chloride solution was used as an electrolyte, but in the American work the solution was made directly from iron ore. These tubes showed 99.92 to 99.99 per cent iron and when removed from the mandrels they were annealed to remove the brittleness which electrolytic iron has when deposited.

Improvements were announced during the year designed to increase the life and efficiency of open-hearth furnaces. In the Egler furnace improved combustion was secured by mixing the air and producer gas fuel in the port instead of in the hearth. In the McKune furnace and also in the Venturi furnaces improved combustion was also secured. Again improvements were secured in open-hearth furnaces where by-product coke-oven gas was used and also in the use of cupolas to provide hot metal for open-hearth furnaces. In the cupola fuel oil was employed in Germany to replace a part of the coke.

During the year the metallurgical press recorded successful manufacture of carbon and nickel steel castings in the form of cylinders with walls from 0.5 inch to 3.50 inches in thickness made by the centrifugal process. In these castings the only segregation was in a radial direction and by heat treatment different physical properties could be secured which might result in a material comparable to forged steel. Another novelty of the year was a plant designed to make welded steel pipe of from 24 inches to 96 inches in diameter from material $\frac{1}{4}$ to $1\frac{1}{2}$ inches thick. After steel plates had been bent to shape by means of rolls the lap was heated for a section

with gas burners both inside and out, and welded by a power hammer; this was done for successive sections so that a welded pipe of larger size than hitherto made and comparable with rivetted pipe could be turned out. Of course welded pipe had distinct advantages as it would carry more water for the same size than rivetted pipe.

The manufacture of stainless iron which was made in the electric furnace with less than 0.10 per cent of carbon from carbon-free ferrochrome was increasing during the year. It had certain superiorities over stainless steel in that it could be forged, pressed, and stamped more extensively and readily. Another interesting set of alloys were those where nickel and cobalt were being added to cast iron. The addition of cobalt served to reduce the strength and increase hardness so that it did not promise to be of much usefulness, but nickel up to 1 per cent or 1.5 per cent seemed to give greater hardness, resistance to wear, and more especially bending, tensile and compression strength. Nickel in still greater amounts was being added to the iron used in casting the small electric resistance grids.

Alloy steel continued to be studied during the year and papers were published on the advantages of the use of molybdenum in nickel, nickel-chrome and chrome vanadium steel. The addition of molybdenum seemed to increase strength and ductility, while in cast steel physical properties resembling those of forged steel were attained by the addition of molybdenum when specially heated.

METALS. See CHEMISTRY, INDUSTRIAL and METALLURGY.

METEOROLOGY. Among the important events of the year were two international conferences. The seventh meeting of the International Commission for the Investigation of the Upper Air was held at Bergen, Norway, July 25-29. The theory of the "polar front," described in the last YEAR BOOK, occupied a prominent place in the discussions at this meeting. According to this theory, the successive cyclones of the temperate zones are waves on the boundary surface between the cap of polar air and the surrounding warm air masses. The corresponding boundary line at the ground, accordingly traverses the centres of depressions round the pole. The extreme northern ends of the warm waves coincide with the centres of low pressure, and the cold waves of polar air between them constitute the moving wedges of high pressure. The examination of depressions individually, from their formation to their disappearance, shows that young depressions correspond to slight waves with small excursions from the equilibrium state. Later the amplitudes increase simultaneously with a deepening of the depression. The ascending currents starting from the warm wave gradually diminish the area of the warm sector of the cyclone. The tongues of polar air on both sides of it accordingly approach each other and finally close together, so that air of cold origin surrounds the cyclonic centre on all sides. The potential energy of the system of adjacent cold and warm air masses is then lost and the cyclone begins to fill up. Likewise the missing asymmetry of structure makes the cyclone during its last stage slow-moving or stationary. Usually each cyclone follows more southerly a track than the foregoing one, so that the belt of depressions step by step

approaches the subtropics. The northward displacement of the tracks, however, always takes place in one big step. These conditions make it possible to divide the cyclones into families, each family beginning with the cyclone first removing the belt of depressions to higher latitudes. Between the last cyclone of one family and the first one of the next, the polar air has free passage southwards into the trade winds. Each family usually consists of four cyclones (not always), the first and third of which are generally the strongest.

The first meeting for general purposes of the International Meteorological Committee, appointed by the Conference of Directors of Meteorological Institutes and Observatories held in Paris in 1919 in continuation of the committees which have organized international meteorology from the Congress of Vienna in 1873, was held during the week of September 12-17, in London. The chief business of the meeting was to receive reports from the commissions for special departments of meteorological work. The principal recommendations discussed were those (1) inviting observations of the upper air from land and sea, and proposing to resuscitate the practice of preparing and issuing an international publication of the results contributed by the various countries, and to obtain subventions for the purpose of compiling, editing, publishing, and distributing the publications; (2) setting out an agreed code for land stations and two alternative codes for ships at sea, between which a selection should ultimately be made, for weather telegraphy; and (3) proposing suitable coöperation for the collection of oceanographic data. The Polar Commission is to coöperate with Amundsen in his proposed drift across the polar seas. A new commission was set up for the further study of clouds; the *Réseau Mondial* was discussed; and considerable attention was devoted to the application of meteorology to agriculture and to forestry. Owing to the impossibility of direct coöperation between former belligerents, the neutral countries are for the present to act as intermediaries.

A notable extension of the radiographic distribution of forecasts and weather information by the U. S. Weather Bureau was made during the year. On June 1, an extensive bulletin began to be broadcast from Arlington, containing surface 8 a. m. observations taken at 42 regular Weather Bureau stations and 9 aerological stations maintained by the Army, Navy, and the Bureau; and a summary of weather conditions over the United States, forecasts, and storm and hurricane warnings. Another bulletin was begun on June 10, having for its purpose a systematic broadcasting of local weather observations, wind and weather forecasts, storm and hurricane warnings, and advices relating thereto, from 26 naval radio stations on the Atlantic and Gulf coasts, in the Caribbean sea, and on the Great Lakes. These bulletins are broadcast from naval radio stations in coöperation with the Office of Communications of the Navy Department. Extensive plans were under way to systematize radio distribution of forecasts and warnings on land, also, for the benefit of agricultural and commercial interests in every State.

Upper air research continues to hold a central position in modern meteorological work. The interesting correlation coefficients between temperature and pressure at the same level in the free

air, found some years ago by W. H. Dines, have been corrected for the probable errors of observation by Chapman, who has thus raised these coefficients to remarkably high values, finding perfect correlation (direct proportionality) at 8 km. for January–March, and at 4 and 6 km. for April–June. In spite of this evidence, C. K. M. Douglas maintains that the temperature variations in the upper air are largely the result of the passage over the place of observation of different supplies of air, the temperature of which is mostly dependent on the place of origin—the temperature is low if the current originated far to the north, even though it has curved round a depression and arrived from the southwest. His studies strongly support Bjerknes' theories of the structure of cyclones.

A continuation of the researches of Birkeland, Störmer, Vegard, and Krogness on auroras confirms the theory that the aurora represents the passage through the earth's atmosphere of electrical rays, coming, presumably, from the sun; Vegard's latest view is that these rays are streams of beta (negative) particles. There are two levels of maximum frequency of the lower limit of the aurora—100 and 106 km. The results have, incidentally, been utilized in new studies of the density, composition, etc., of the atmosphere at great heights; Chapman concludes that hydrogen is totally absent in the high upper atmosphere. The great sunspot group which appeared in May was for several days accompanied by auroras, and by violent electric and magnetic disturbances on the earth. The magnetic disturbances, of an exceptional character, reached a climax the night of May 14–15. The persistence and size of the short period oscillations, superposed on the changes having a more or less persistent direction for a considerable time, were remarkable, and this characteristic was shared to a quite exceptional extent by the vertical component. The Rev. Cortie concludes that the detailed comparison of the solar outburst and the magnetic disturbances favors the theory of divergent streams of particles from the solar focus of activity, which spread into clouds that are encountered by the earth. Auroras were reported from a number of places in England, northern and central Europe, and westward over the Atlantic, across the United States, and far over the Pacific, reaching as far south as Apia, Samoa. The display of May 14–15 in the United States was exceptionally noteworthy in two particulars: (1) its accompanying earth currents caused the greatest demoralization to telegraphic communication ever recorded; and (2) it was seen in extreme southern latitudes, with all the brilliance usually observed in the north. Radio communication appeared not to be hindered.

An interesting study, by G. C. Simpson, of the southwest monsoon, should serve to clarify ideas concerning this phenomenon. It has been held that the southwest monsoon owes its origin to the great difference of temperature which exists during the summer months between the heated land surface of India and the surrounding oceans, the general idea being that the warm air over the land rises, and damp air from the sea flows into India to take its place, thus giving rise to the strong southwest winds, the rainfall being due to the cooling of the air as it rises over India. Yet the temperature over India is much higher in May before the monsoon sets in than it is during the monsoon itself; and the temperature is higher in

years of bad monsoon than in years of good monsoon; also, the part of India which has the highest temperature and the lowest pressure is a region of practically no rainfall throughout the monsoon. The true explanation can only be obtained by taking a wide view of the weather conditions over large parts of the earth's surface during the summer of the northern hemisphere: the southwest monsoon winds are in reality exceedingly complex phenomena, and are a relatively small part of a general circulation of the atmosphere caused by a region of high pressure over the south Indian ocean and a region of low pressure which extends over the whole of central Asia. The great air streams of this circulation would probably sweep right across India to their goal in central Asia without producing much rainfall if it were not for the unique distribution of mountains around India; these mountains catch the air in a kind of trap, out of which there is no escape except by ascension; the humid air, which begins to form rain as soon as it rises even 500 feet, is forced to rise between 10,000 and 20,000 feet, and heavy rains consequently occur over the greater part of the Indian area.

Applied meteorology continues to flourish. Increased use is being made of various forms of weather insurance; the great value of meteorology to the aeronaut was strikingly illustrated in the national and international balloon races of 1921. Thunderstorms can now be recorded by radio-direction finders, and hence these disturbances easily avoided in air navigation. Attempts by the British Meteorological Office at forecasting for a period of a fortnight have met with encouraging success.

Over large portions of the northern hemisphere, the summer of 1921, as well as the preceding winter, was a period of abnormally warm weather. In the United States and Canada, this period covered the eleven months September, 1920, to July, 1921, and was marked by three distinct periods of maximum warmth, the high temperatures in some cases extending to considerable heights in the atmosphere. The most pronounced disarrangements of normal temperature and precipitation accompanied corresponding variations of the normal pressure systems, and were no doubt due to the latter, but the cause of the abnormal pressure distribution remains a riddle.

An independent Weather Bureau has been created for Brazil, with Dr. J. de Sampaio Ferraz as first director. This "Directoria de Meteorologia" is under the Brazilian Department of Agriculture. At the close of 1920, the "Bureau Central Météorologique de France" was merged with the military meteorological services of that country, the whole becoming the "Office Météorologique National," under the direction of Col. Delcambre. A unified service now exists in Spain, the "Servicio Meteorológico Español;" Señor Juan Cruz Conde is the director. A meteorological station has been established by Norway at Jan Mayen in the Greenland sea.

The American Meteorological Society has continued to prosper, and is now well established. The Scottish Meteorological Society was merged into the Royal Meteorological Society in January.

Necrology.—Wilhelm Trabert, ex-director *Zentralanstalt für Meteorologie und Geodynamik*, Vienna, and professor of cosmical physics at the University of Vienna, February 24; G. St. Murat,

ex-director of the *Meteorological Institute of Roumania*, January 12; Julius von Hann, acknowledged to be the world's leading meteorologist, ex-director *Zentralanstalt für Meteorologie und Geodynamik*, Vienna, author of the standard books on meteorology and climatology, and long editor of the *Meteorologische Zeitschrift*, October 1; Luis Garcia y Carbonell, director of the Cuban meteorological service, October 11; Señor Tomás de Azcarate, for 18 years director of the San Fernando *Instituto y Observatorio de Marina*, January 25.

METHODIST EPISCOPAL CHURCH. The YEAR BOOK for this denomination gives a total full and preparatory membership of 4,471,673 in 1921. Ministers in full connection numbered 19,166, with 1894 on trial and 15,798 local preachers on charges. Effective Bishops number 37. There were 36,137 Sunday schools having an enrollment of 4,626,642 and 397,575 officers and teachers. The value of the 29,461 churches is estimated to be \$274,066,926; parsonages number 15,417 with estimated value of \$53,071,317. These figures include affiliations of the Methodist Episcopal Church in the United States in Denmark, Finland, Korea, China, Norway, Germany, Sweden, Switzerland, Italy, Mexico, Philippine Islands, and several countries in South America. In addition the denomination maintains missions in Austria, Bulgaria, Jugo-Slavia, Africa, Netherlands, Indies, Porto Rico, Rhodesia, South Florida, France, Russia, Alaska, Hungary, Utah, Hawaii, and among the Southern Swedish, Pacific Swedish, Latin-American, Pacific Chinese and Japanese, Baltic and South American peoples.

This denomination with all its branches is the second largest in the United States. The branches are treated separately and statistics will be found under their respective headings. The largest and original denomination is the Methodist Episcopal Church. Statistics of 1920 for its Spring and Fall Conferences and Missions, give a total church membership of 4,409,703, or an increase of 1,479,284 in twenty years. Pastors with charges numbered 15,880, with 29,823 church buildings, and total property valuation of \$257,198,324. There were reported 38,871 Sunday schools in 1920, an increase of 3847 since 1900. The enrollment was 4,417,734 pupils, or an increase of 1,731,634 for the same period.

The Epworth League is the largest society of the denomination and was evolved in May, 1889, by the union of five young people's organizations. In 1919 there was a total enrollment of 504,923 senior members and 207,144 junior members. Membership in the United States alone counted 282,501 senior members and 90,997 junior members. It is reported that 1921 was marked by considerable growth of the organization and that the increase of chapters for the first eleven months passed the 2600 mark.

Missionary work is carried on by the Board of Foreign Missions and the Woman's Foreign Missionary Society of the denomination in Latin-America, Japan, Korea, China, India, Malaysia,

Philippine Islands, and several countries in Africa and Europe. In 1920 missionaries in the field for both organizations totaled 1708, a gain of 159 over the previous year. Of these workers, 494 are stationed in China and 452 in India and Burma. In addition to these the evangelistic staff includes 2759 ordained native preachers and 6288 unordained native preachers and exhorters. A total of 697,436 native Christians make up the Christian community in these mission lands, an increase of 36,153 members and 23,889 baptized children over 1919. Churches number 2752, an increase of 123. The number of Sunday schools is 9833, with 452,047 scholars—both increases over the previous year. The denomination maintains 2827 secular schools of all grades, including 18 colleges and universities, 64 theological and Bible Training Schools, with total enrollment of 116,000.

The name of the Freedmen's Aid Society, which carries on educational work among the negroes, was changed during 1921 to the Board of Education for Negroes. Eighteen institutions are maintained with a staff of 320 professors and instructors, and student enrollment of 6597.

The Board of Education of the church sponsors in an advisory capacity 131 educational institutions. These include 43 colleges and universities, 32 professional and graduate schools, 36 secondary schools for white students, and 19 schools for negroes. Among the more important may be mentioned De Pauw University, Indiana; Northwestern University, Illinois; University of South California; Ohio Wesleyan University; Boston University; Syracuse University; and Wesleyan University. The productive endowment is \$34,374,749 and their annual income \$7,168,316. The combined student body numbered 51,190 and the alumni 119,834. A Student Loan Fund is maintained by the Board from which needy students may obtain financial assistance to complete their courses. During the past year 2176 loans were made, aggregating \$218,306.50. The church also maintains 89 deaconess homes, 24 deaconess hospitals, and 10 deaconess training schools. Besides these there are 51 regular hospitals, 39 children's welfare institutions, and 39 homes for the aged. The Methodist Book Concern is the publication house for the denomination. It issues many foreign as well as English periodicals and magazines during the year. Headquarters are 150 Fifth Avenue, New York, and branches are maintained in Boston, Detroit, Pittsburg, Kansas City, San Francisco, and Portland, Ore.

METHODIST EPISCOPAL CHURCH, SOUTH. Statistics for this branch of the Methodist Episcopal Church show in 1921 2,254,752 members, 7664 traveling preachers, and 4701 local preachers. Sunday schools numbered 16,205, having 145,244 officers and teachers and 1,608,871 scholars. There were 146,113 Epworth League members reported. There were 17,251 churches with valuation of \$90,018,042 and 5754 parsonages with valuation of \$18,741,849. Missions are maintained in Brazil, Mexico, China, Japan, Cuba, Korea, and the Congo. For purposes of administration the denomination is divided into fifty conferences and 330 districts. Sixteen Bishops comprise the College of Bishops which is the executive body of the church. Educational, missionary, and relief work is carried on by committees appointed by the College of Bishops. The principal periodicals are the *Methodist Review*, and the *Christian Advocate*.

METHODISTS, CANADIAN. Five organizations in Canada similar in their beliefs, the Methodist Episcopal Church, the Wesleyan Methodist Church, the Primitive Methodist Church, the Methodist New Connection Church, and the Bible Christian Church, united to form the Methodist Episcopal Church in Canada in 1883. Besides Canada and Newfoundland, the denomination has churches in Bermuda affiliated with it. The organization and administration of the church is effected through 12 conferences which are further subdivided into many districts. The conferences are as follows: Toronto, London, Hamilton, Bay of Quinte, Montreal, Nova Scotia, New Brunswick and Prince Edward Island, Newfoundland, Manitoba, Alberta, Saskatchewan, and British Columbia.

A total membership of 400,789 was reported in 1921. Ministers numbered 2536, of which 2240 were in full connection and 296 on probation. In 1919 there were 3745 churches, 3600 Sunday schools with enrollment of 415,421 pupils and 41,362 officers and teachers. The denomination has supervision over 17 colleges and universities, of which may be mentioned Victoria College, Toronto, Wesleyan Theological College, Montreal, Wesley College, Winnipeg, Alberta College, Edmonton, and Regina College, Regina. There were 6968 students registered in 1921. The missionary work of the church is conducted by the Missionary Society and the Women's Missionary Society. Foreign fields include China and Japan. *The Christian Guardian* and *The Wesleyan* are the chief periodicals of the denomination.

METHODISTS, COLORED. Twenty conferences constitute this branch of the Methodist denomination, which was originally a part of the Methodist Episcopal Church, South. Enrollment in its churches in 1921 was 354,063 members, an increase of 3509 over the previous year. There were 1915 pastors, and 98 district superintendents.

METHODISTS, WESLEYAN. This is the principal branch of the Methodists in Great Britain and Ireland. English Methodism was first introduced with the Wesleyan movement in 1729 at the University of Oxford and in 1739 the first Methodist Society of England was formed. The mother church of all is the Wesleyan Methodist Church, which held its one hundred and seventy-seventh Conference in July. In 1920 there were 862,808 communicants in Great Britain. In 1921 there were 464,945 members; 2520 ordained ministers; 18,409 lay preachers; 8533 churches; 850,871 Sunday school pupils. The publishing house of this branch is at 25 City Road, London, E. C.

The Methodist Church of Ireland in June held the one hundred and fifty-first session of the Conference. Statistics for 1919 give 27,226 members and probationers; 258 ordained ministers; 622 lay preachers; 488 churches; 329 Sunday schools with 21,930 pupils and 2149 officers and teachers. Foreign missions had 204,719 members and probationers; 632 ordained ministers; 8107 lay preachers; 3707 churches, 2351 Sunday schools with 142,403 pupils and 9168 officers and teachers. For the same year, the French Conference reported 1433 members, 31 ministers, and 62 churches. The South African Conference had 143,897 members and probationers; 294 ordained ministers; 4627 lay preachers; 4280 churches; 904 Sunday schools with 42,582 pupils and 3106 officers and teachers.

PRIMITIVE METHODIST CHURCH. This branch, called originally "Camp Meeting Methodists" began in 1810 and since 1824 has made steady progress. According to the latest available statistics there were 206,038 communicants in Great Britain; 1105 ordained ministers; 4663 churches; 419,245 Sunday school pupils.

UNITED METHODIST CHURCH. This branch is composed of the New Connection, the Bible Christians, and the United Methodist Free Churches and was formed in 1907. Latest available figures: 2737 churches; 156,658 members; 609 ministers; 270,553 Sunday school pupils.

WESLEYAN REFORM UNION CHURCH. This branch separated from Wesleyan Methodism in 1850 and was organized as a separate body in 1859. It is one of the smaller branches that has not yet been absorbed. Churches, 197; members, 8317.

INDEPENDENT METHODIST CHURCHES. These began in 1796 and united with other societies in 1806. The one hundred and fifteenth annual meeting was held in June, 1920. Churches, 145; members, 8770.

AUSTRALASIAN METHODIST CHURCH. This denomination dates its beginning from 1812; its first conference was held in 1855. In 1920 there were 179,215 communicants in Australasia. Members and probationers in 1919 totaled 179,215; ordained ministers, 1102; lay preachers, 9074; churches, 4450; Sunday schools, 4000, with 210,000 pupils and 25,578 officers and teachers. It maintains publishing houses in Sydney, Adelaide, Brisbane, and Perth.

NEW ZEALAND METHODIST CHURCH. Statistics for 1920 show 25,180 communicants. In 1919 members and probationers numbered 25,180; ordained ministers, 181; lay preachers, 925; churches, 468; Sunday schools, 422, with 29,035 pupils and 3162 officers and teachers.

JAPAN METHODIST CHURCH. Statistics for 1918 for this denomination give 15,364 members and probationers; 241 ministers; 245 churches; 340 Sunday schools with 28,438 pupils and teachers.

Methodism is also represented in the following countries, the figures being for the latest available membership: Austria-Hungary, 955; Bulgaria, 691; Denmark, 4092; Finland, 1611; France, 507; Italy, 4132; North Germany, 14,760; Norway, 6132; Russia Mission, 452; South Germany, 14,005; Sweden, 16,454; Switzerland, 10,597.

International statistics show that in America Methodist communicants number 8,358,230; in Great Britain and Australasia, 1,473,877, making a grand total of 9,832,107, as against 8,768,616 in 1910, an increase of more than a million during this period. An estimate of the Methodist population in the world shows that in the Western Section, members, probationers, and adherents totaled 24,253,805; in the Eastern Section, 7,369,385, making a grand total for the world of 36,622,190 as against 32,728,547 in 1910, or an increase of 4,000,000 persons. METROPOLITAN OPERA HOUSE. See **MUSIC, Opera**.

METTERNICH, PAULINE. Wife of the Austrian diplomat Prince Richard Metternich, died in Vienna, September 28. She was born in 1837.

Thoroughly convinced of the genius of Wagner, she used her great influence with Napoleon III to bring about the first performances of *Tannhäuser* in Paris (1861). She published a volume of memoirs, *The Days that are no More*, which contain numerous references to Wagner and Liszt.

MEXICO. A federal republic lying between the United States and Central America. Capital, Mexico.

AREA AND POPULATION. The area is estimated at 767,798 square miles or 25.25 per cent of the area of the United States; population, according to the census of 1920, 15,115,612, estimated in 1912, 15,501,684; chief cities with their populations in 1910: Mexico, 571,066; Guadalajara, 119,468; Puebla, 96,121; Monterey, 73,528; San Luis Potosi, 68,022. It is divided for administrative purposes into 28 states, a federal district, and two territories.

PRODUCTION. The agricultural resources are rich and varied, products of temperate, tropical, and semi-tropical zones being often found in a comparatively small area, owing to variation of altitude. The cultivated area has been placed at 13,027,500 acres; pasture lands, 120,444,200; and forests, 43,933,200. The chief products are: Corn, cotton, henequen, wheat, coffee, beans, sugar, molasses, and spirits. The number of productive oil wells in 1919 was 343, and the production in that year was estimated at 1,337,012 barrels a day. In 1919 the oil production amounted to 92,402,055 barrels. Other minerals are: Lead, copper, silver, gold, zinc, antimony, tin, mercury, arsenic, tungsten, molybdenum, manganese, graphite, and coal, the last named has only been produced in the state of Coahuila. The output of the six principal metals during 1920 was as follows: Gold, 23,370 kilos; silver 1,979,872 kilos; copper, 46,056,900 kilos; zinc, 13,363,057 kilos; antimony, 1,572,379 kilos; lead, 121,434,066 kilos.

ECONOMIC CONDITIONS The standards of living were little affected in Mexico by the World War compared with those for certain European countries. Civil disturbances affected standards frequently and widely, sometimes as a direct result of military operations, but more by the economic results of the depreciation of the paper currency from 1914 to 1917 and by the impairment of the morale of the workers. Real wages advanced but little if at all since 1910, as increases were accompanied by increase in the cost of living, particularly for housing, clothing, and tools of workmen. Thus while in 10 years average paid wages, in terms of gold, approximately doubled, living costs increased by 150 to 250 per cent, as shown by the index published by the government. During the year, the normalization of prices was proceeding more slowly and more irregularly than in the United States and local manufacturers were prosperous. Labor was much cheaper in Mexico than in the United States, but readjustment was taking place in most lines. Unemployment was serious. There remained danger of disaster from radical agitation, but it was diminishing. Production costs have not yet been fully adjusted. All trade was dull, pending improvement in world commodity markets and greater confidence in the maintenance of stable government. Industrial unrest was reported toward the close of the year owing chiefly to the failure of the government to

settle the land question which affected the farmers and owing also to the new policy carried out under the constitution in respect to the regulation of the hours, wages, and conditions of labor. According to some authorities the chief cause was the difficulty of readjustment under the new economic policy which the government was seeking to apply. There was an increasing opposition to the strict application of the agrarian law. There was a movement for a policy of federal labor legislation to prevent the bad results of the legislation in certain of the states. Toward the close of the year imports were slowly decreasing and prices were declining. Exports of oil were decreasing.

COMMERCE. The imports and exports for 1918, classified, and the totals for 1919 are shown in the following table from the *Statesman's Year Book of 1921*:

Imports	Mexican dollars
Animal products.....	19,981,871
Vegetable products.....	37,985,996
Mineral products.....	28,808,919
Textile and other manufactures.....	28,853,895
Chemical products.....	10,638,642
Spirituos liquors.....	1,237,233
Paper and accessories.....	3,070,472
Machinery and apparatus.....	11,251,817
Vehicles.....	6,399,459
Arms and explosives.....	2,232,195
Sundries not specified.....	14,019,536
Total (1918).....	194,470,035
Total (1919).....	265,178,706

Exports	Mexican dollars
Animal products.....	19,569,701
Vegetable products.....	126,937,322
Mineral products.....	213,932,342
Manufactured products.....	4,866,086
Total (1918).....	367,305,451
Total (1919).....	424,462,471

The exports consist of: metals, including silver, gold, copper, and lead; cattle; raw materials; and agricultural products. Besides metals, the most important manufactured products are sugar and cotton goods. The chief raw materials exported are: Petroleum, fibres, hides, coffee, vanilla, and chicle. The import trade after the armistice in November, 1918, showed great activity, owing to the necessity of replenishing stocks reduced by war trade conditions. The demands of importers steadily increased in 1920 at which time the greater part of the imports came from the United States, but later European goods began to arrive, especially from Germany. Most of the German products imported came at first from prewar stocks, but latterly there was an increase of electrical equipment, and of stationery, print paper and wall paper in which the Germans offered advantageous prices.

FINANCE. The foreign debt of Mexico, as given by the secretary of the treasury in 1921, amounted to 380,333,625 pesos. The internal debt was 181,850,900 pesos, and the interest on the various state debts, which by special agreement the federal government was to pay, totaled 1,341,992 pesos. The total indebtedness of Mexico, therefore, was stated as 536,523,522 pesos. Details for 1921 were not available, but the classification

according to the statement of the secretary of the treasury, Dec. 31, 1920, was as follows:

	Debits	Amount
Foreign debt:		
Municipal loan, 5 per cent, 1889.....		13,525,815
Consolidated, 5 per cent, 1899.....		97,206,829
4 per cent gold, 1904.....		74,312,801
4 per cent gold, 1910.....		101,898,810
Total.....		286,944,255
Internal debt:		
Consolidated, 3 per cent.....		42,028,800
Redeemable, 5 per cent, series 1 to 5.....		94,318,500
Total.....		136,347,300
State debts:		
Dredging at Vera Cruz.....		831,200
Dredging at Tampico, series 1 and 2.....		1,538,100
Dredging at Masatlan.....		466,700
Dredging at Puerto Mexico, Vera Cruz.....		664,000
Total.....		3,500,000
Grand total.....		426,791,555

The question of restoring Mexican credit was prominently before the public throughout the year. The government wished to reestablish its financial position abroad by paying the arrears of interest on the external bonds. The matter was under discussion among international bankers including Mr. Thomas W. Lamont of J. P. Morgan and Company who made a visit to Mexico, October 4, for the purpose of considering the necessary measures. He was chairman of the International Committee of Bankers on Mexico appointed two years before to represent investors in Mexican bonds, and he also was asked to represent the British, French, Dutch, and Belgian bankers on this committee. The interest on Mexican external bonds had not been paid since 1914 and amounted to \$50,000,000, the total bond issue being about \$190,000,000. Many of the bondholders were residents of France and Germany. Conferences began between Mr. Lamont and Secretary de la Huerta, October 6. One of the points to be settled was whether Mexico would assume the debt incurred by the government of Victoriano Huerta which had been refused by both the preceding governments. The holders of this loan were for the most part French citizens. The definite results of this and other conferences on the subject were not known at the close of the year, but the following summary of financial conditions at that time was supplied by the United States Bureau of Foreign and Domestic Commerce:

(1) A refunding of perhaps \$75,000,000 of defaulted bonds, plus some \$30,000,000 of accrued interest, a funding of foreign damage claims of at least \$50,000,000, and a substantial increase of the net revenues of the government, to provide service on all this, were essential for the near future. The currency system was dangerous in its rigidity, but steps were being taken to reform it.

(2) A practically complete new banking system had to be built, and it was hoped to insert in it desirable features of the American reserve system.

(3) Under existing currency and banking systems the question of foreign exchange entered little into commercial questions.

RAILWAYS. The year 1921 was an important one for the railways of Mexico, and this country

stood almost unique among the nations of the world in active advances and rehabilitation. The situation was handled with energy, so that interchange relations with the United States lines were reestablished and traffic conditions at the border relieved. As early as February, Francisco Perez, then director general of the Mexican railways, borrowed locomotives in the United States, securing ten from the St. Louis Southwestern, nine from the Illinois Central, eight from the Missouri, Kansas, and Texas, three from the Gulf Coast lines and some from the International and Great Northern. At this time there were 581 locomotives in service and 161 awaiting repairs. These borrowed locomotives helped to make a beginning in restoring regular service and traffic, and shortly after they were secured new locomotives were ordered in the United States. These during the year included 35 Mikado, 20 Pacific, 40 consolidation and 20 narrow gauge locomotives ordered from one company, and 20 heavy consolidation and 7 heavy Mikado locomotives, ordered from another. No railway system in North America could rival these orders in amount during the year. The same conditions prevailed in regard to cars as there were but 13,262 in service as compared with 22,000 before the revolution. There were borrowed 200 tank cars and efforts were made to increase rolling stock in this field also. During 1921 the National Railways of Mexico built 102 miles of new first track of which 23.61 miles was from Llano Grande to El Salto, and 17 miles from Los Bancos to Cerro de la Cruz, in the state of Durango, while in the state of Coahuila, 31.67 miles were built from Zaragoza to Santo Tomas, and 30.14 miles from La Vibora to El Oro. Other important work under construction was the building of new lines from El Oro to Sierra Mojada, Coahuila, 9.32 miles; and from Santo Tomas to Villa Acuna, Coahuila, 28 miles. Surveys were being made for a new line from El Salto to Masatlan, 165 miles. At the end of the year a reinforced concrete passenger station at Durango, to cost \$250,000, was 85 per cent completed, while a new station was under way at Saltillo. An important reduction of grade between Saltillo and Carneros, in the line between Mexico City, Mex., and Laredo, Texas, was being made and the changing of the old grade of 2 per cent, to a new grade 1.05 per cent, at a cost of \$860,470, was 35 per cent completed.

The National Railways of Mexico during the year gave a contract for the completion of the short line of that system to extend from Tamos, on the Tampico-San Luis Potosi division, to a connection with the Hidalgo and Northwestern division, near Honey. This Tampico-City of Mexico short line, as it is called, dated back before the revolution and about 50 miles of grade and track were finished before work had to be stopped. From a traffic and development standpoint this short line was considered one of the most important railroad projects to be undertaken in Mexico, as it would result in the reduction of the distance between the port of Tampico and the capital by about two hundred miles. Furthermore the proposed route not only would cross a region very rich in agricultural and mineral resources, but it would lead to a coastal territory with promises of oilfields. It was rumored during this year of railway activity that a contract was to be awarded for building the long proposed line between Tampico and Matamoros, near the mouth of the Rio Grande.

DEFENSE. After 1914 the army was on a war footing, and the nominal strength in 1920 was 119,000, but the actual strength was believed to be hardly more than half that number. The navy has amounted to a little more than a coast defense force, and consists of a few gunboats, five torpedo boats, two armed transports, and some smaller vessels.

GOVERNMENT. For the principal provisions of the new constitution which was promulgated, Feb. 5, 1917, see the 1917 YEAR BOOK. The executive power is vested in a president elected by direct popular vote for four years, and ineligible for reelection; and the legislative power, in a congress, consisting of a house of representatives, elected for two years by universal suffrage, at the rate of 1 member for every 6000 inhabitants, and of a senate, consisting of 58 members, 2 for every state, who are elected in the same manner. President in 1921, Alvaro Obregon, who assumed office, Dec. 1, 1920.

HISTORY

THE OIL QUESTION. The executives of American oil companies with interests in Mexico attended a meeting at Galveston, Texas, March 16, which declaring the intention of American oil interests to oppose recognition so long as Article 27 of the Mexican constitution remained unchanged. Early in the summer the Mexican government levied an export tax on petroleum, and the large American oil companies suspended production in consequence, but on September 3 an agreement was reached between them and the government, and production was resumed, September 5. The main points in this agreement as announced by the American Association of Mexico was as follows: The tax imposed by decree of June 7 of 38 cents a barrel was suspended until December; the ad valorem tax amounting to 12 cents a barrel under the decree of May 24 was allowed to stand, but was to become a tax on production and not on exportation and to be paid on oil in storage sold in Mexico; a tax on exportation at 8 cents a barrel was also agreed upon to last until December 25. The main points in the situation had been as follows: The Mexicans maintained the right to change the constitution and levy the tax. The British companies had recognized the right of Mexico to levy such a tax and paid it. They were exporting oil as before. Representatives of the American companies in these circumstances decided to visit Mexico and confer directly with the Mexican officials. The directing officers of the Standard Oil Company and other corporations left New York for Mexico City, August 24. The American Association of Mexico representing the interests of Americans who had formerly lived there, protested against this mission of the oil men, saying that a settlement of the present controversy over taxes would not be a settlement of the oil question and still less a settlement of the difficulty arising from the attitude of the Mexicans to the property rights and interests of Americans in Mexico. The State Department, however, did not interfere with the visit and the oil men on arriving at the capital began conferences with the Mexican Secretary of the Treasury, Adolfo de la Huerta, and had an interview with President Obregon, August 28-September 3. The difficulties were adjusted and the oil men signed the agreement above mentioned. The trouble had all arisen from

the celebrated Article 27 of the new Mexican constitution. A suit had been brought by the Texas Oil Company in 1919 to test the validity of that article. On August 30, a decision of this case was rendered by the Supreme Court of Mexico, which upheld the contention of the American oil companies that Article 27 could not affect private titles acquired before May 1, 1917. The decision was important as setting a precedent that the constitutional provision was not retroactive. It was believed that the principle thus established would settle many pending controversies.

THE QUESTION OF AMERICAN RECOGNITION. The question of recognition was brought to a definite point by the proposal of Secretary of State Hughes on June 7 of a treaty of amity and commerce whereby Mexico should agree to safeguard property rights that had existed before the constitution of 1917 was adopted. The Mexican government refused to accept such an arrangement, President Obregon insisting that negotiations between the two countries must be conducted on an equal footing. In the Senate opposing views in respect to the policy of the United States in withholding its recognition of President Obregon were expressed from time to time. For example, on August 15, Senator King of Utah denounced the Mexican President, declaring that it was his policy to confiscate the property of Americans and divide it among Mexicans without compensation, and this was answered by a defense of Obregon on the part of Senator Ashhurst of Arizona who said that though his State had suffered more than any other as a result of conditions in Mexico its people were strongly in favor of recognition and had petitioned the United States government to that end. Movements for recognition took place in the State legislatures of Michigan, Illinois, California, Texas, and Oklahoma. On September 1, President Obregon's message to Congress asserted the principle of no special privileges and declared that the signing of the treaty with the United States was not possible, convenient, or necessary. Mexico he said asked for recognition merely on the ground of her government's ability to fulfill its obligations and perform its functions. The questions in dispute were threefold, namely, Article 27, claims for damages, and the foreign debt. As to the damage claims they numbered 1440 and amounted to 221,331,891 pesos of which 93,965,045 were the claims of foreigners. Mexico had invited the countries concerned to form an international commission for the adjustment of damage claims during the revolutionary period of the last ten years and this had been accepted by China, Spain, and Holland. The new Mexican government had been recognized by 24 states. According to the President's message the army had been reduced to 30,000 men and the war department budget by 26,000,000 pesos. As to financial and economic conditions he said that 21 banks which had been closed under his predecessor had been reopened; that 8,000,000 pesos had been spent for the reconstruction of railways, and several more for the improvement of ports; several millions for the purchase of rolling stock and building material for national railways, etc. On August 11 a representative of the United States Department declared that the Harding administration had no intention of recognizing the new Mexican government in advance of the signing of

a treaty. At the same time he gave out a denial that the action of the American government was in any way determined by the oil influences. At the close of the year the United States government still withheld recognition and was criticised on that account by many writers in the United States. It was said that the condition imposed by our government was one that few states would submit to. It required of Mexico the formation of a treaty with the United States in advance engaging Mexico not to rob American citizens by confiscating their property or by discriminating against them in taxation. It was given out by the American State Department that the United States could not admit the argument that the Mexico Central Government could not constrain the separate Mexican states.

THE OBREGON ADMINISTRATION. The first year of the new president's administration ended, November 30. In respect to its achievements it was pointed out that the railways had been reorganized and that the port conditions had greatly improved. As to agriculture a vast area of land had been transferred from the large owners to the peasantry. The army had been reduced to 50,000 men. Among other measures commended as progressive was the plan for the building of cheap homes for workmen and their sale on easy terms. Special efforts had been made for the improvement of education, the interests of which were taking the leading place on the government programme, a new department having been formed under a secretary of education. According to Mr. Thomas W. Lamont, who had arrived in Mexico, September 13, on a mission in respect to Mexico's foreign debt, the attitude of the present Mexican government was satisfactory to American interests, indicating an intention to protect and encourage American interests in Mexico. The misunderstandings between the two republics seemed to him to be in a fair way toward settlement.

OTHER EVENTS. Riots occurred at Tampico, July 10; 2000 troops were sent to the spot, and American warships proceeded there for the protection of American property. Delegates of all interested nations were invited by President Obregon, July 13, to send representatives to constitute a permanent Mexican claims commission. The salaries of military and civil officials were reduced by decision of the president, July 26, to the extent of 10 per cent. On August 8 the Mexican congress met, the main subject before it being the revision of Article 27 which affected the oil interests of foreigners. The representatives of these oil interests were in conference with the president on August 23 in respect to the land titles and Article 27. On September 1 the Mexican president refused to negotiate a treaty with the United States for the settlement of industrial and property disputes until the present Mexican government should have been recognized by the United States. On September 13 Mr. Thomas W. Lamont, representing the interests of American bondholders, arrived in Mexico for the purpose of securing an adjustment in respect to these Mexican bonds on which payment had defaulted. In November it was announced that France, Great Britain, Italy, Spain, and the Netherlands had accepted Mexico's invitation to appoint representatives on the mixed claims com-

mission for the determination of damages due foreigners on account of losses sustained by them in the revolution. It was suggested toward the end of the year that the American oil men should pay their taxes, amounting to about 22,000,000 pesos, in Mexican government bonds purchased in New York. On November 14 a bomb wrecked the shrine of the Virgin of Guadalupe, the patron saint of Mexico, one of the most famous shrines in the country, and a "pilgrimage of atonement" from among the people of Mexico City took place, November 19. At the close of the year, the Social Democratic bloc in the Chamber of Deputies showed a majority over the administration party, the vote being 122 against 118. General Francisco Reyna, the leader of revolutionary movements during several years past, was executed at Nogales, December 26, on the charge of attempting to prepare another revolt. The Vatican, which had not been represented in Mexico after 1910, sent a special delegate to the president, December 21. In certain parts of the country unemployment had reached a severe stage toward the close of the year. In Pueblo union workmen requested the authorities on December 24 to grant them lands on which food might be raised.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Michigan was issued by the Bureau of the Census. A comparative summary for the State, 1919 and 1914, is shown on page 452.

FINANCE. The bonded debt of the State at the close of 1921 was \$53,550,000. The total revenues of the State government for the year ending Dec. 31, 1921, were \$49,901,044.41. The legislative appropriations for the fiscal year beginning July 1, 1921, totaled \$20,441,333.79. There was not a single failure of a National Bank, or a State Incorporated Bank, in Michigan in 1921. A few small private banks, however, failed.

LEGISLATION. The State legislature convened in biennial session, January 3, and one of the first measures it approved was for the submission of a

	Census—		Per cent of

constitutional amendment to authorize a bond issue of \$30,000,000 to pay bonuses to Michigan service men and women of the World War. On election day in April the amendment was ratified by a majority of 285,557. From this bond issue bonuses aggregating about \$25,000,000 had been paid up to the end of the year.

The incoming Governor, Alex. J. Groesbeck, elected in November, 1920, and inaugurated January 1, in his first message to the legislature recommended a comprehensive plan for consolidating and centralizing State governmental authority. The legislature passed bills to carry out his recommendation which consolidated 33 departments, commissions, and bureaus into five departments and created a State Administrative Board composed of himself and six others, the Secretary of State, State Treasurer, Auditor-General, Attorney-General, Superintendent of Public Instruction, and State Highway Commissioner. This board has plenary supervision over the entire State government, meeting weekly, and being in the broad sense the governor's cabinet.

The regular session closed before a law could be enacted providing methods for paying soldiers' bonus claims authorized by the constitutional amendment ratified in April, so a special session was convened for that purpose. Then developed a deficiency in State appropriations which necessitated a second special session at which was enacted a law for an annual license fee ranging from \$50 to \$10,000 on all corporations, and which brought a little over \$5,000,000 into the State treasury.

The legislature at the regular session also approved a constitutional amendment to be submitted to the voters on general election day in November, 1922, to sanction the enactment of a State income tax law.

Also the legislature increased the fractional mill tax for the University of Michigan from which is derived a part of the income for the maintenance of the university, from three-eighths to three-fifths.

ELECTIONS. A general State election was held in April, 1921, for the election of three justices of the Supreme Court, two Regents of the University of Michigan, two members of the Michigan Agricultural College Board, a Superintendent of Public Instruction, a member of the State Board of Education, and a State Highway Commissioner. The Republican candidates were elected by pluralities ranging from 308,111 to 321,763. The candidates elected were: Supreme Court Justices, Joseph B. Moore (full term); Joseph H. Steere, (full term); Howard Weist, (short term). Justice

Howard Weist was elected to fill vacancy caused by the death of Justice Flavius L. Brooke.

Regents, University of Michigan, Victor M. Gore; Walter H. Sawyer. Members, Michigan Agricultural College Board, John A. Doelle, Melville B. McPherson. Superintendent of Public Instruction, Thomas E. Johnson; Member State Board of Education, Frederick E. Jeffers; State Highway Commissioner, Frank E. Rogers. Professor David Friday, of the Department of Economics, University of Michigan, was, in 1921, elected President of the Michigan Agricultural College to succeed Frank L. Kedzie. Professor Friday was to take up his duties as President of the Agricultural College in April, 1922.

OTHER EVENTS. The State Highway Department, in 1921, completed 914 miles of highways, which, added to the roads completed by districts, counties, and townships approximate a total of 9520 miles of highways that have been rebuilt since the State, 15 years ago, began improving highways, or more than one-eighth of the road mileage of the State Roads rebuilt but not yet accepted will bring the total mileage of improved roads up to about 10,000. The total highway construction work for the year including State, district, county, township, and Federal aid represented expenditures of around \$25,000,000. The State Board of Equalization met in August and fixed the assessed valuation of the State at \$5,000,000,000. This valuation does not include railroad companies, telegraph and telephone companies and some other classes of public utilities.

OFFICERS. Governor, Alexander J. Groesbeck; Lieutenant-Governor, Thomas Read; Secretary of State, Charles J. Deland; State Treasurer, Frank E. Gorman; Auditor General, Oramel B. Fuller; Attorney-General, Merlin Wiley; Superintendent of Public Instruction, Thomas E. Johnson; State Highway Commissioner, Frank F. Rogers; Commissioner of Insurance, Leonhard T. Hands; Commissioner of Health, R. M. Olin, M.D.; Commissioner of Banking, Hugh A. McPherson, Harry O. Mohrmann, Deputy; Commissioner of Public Safety, Roy C. Vandercook; Commissioner of Agriculture, H. H. Halladay; Director of Conservation, John Baird; Director of Welfare, Marl T. Murray.

JUDICIARY. Supreme Court: Chief Justice, Joseph H. Steere; Associate Justices, Howard Weist, Grant Fellows, John W. Stone, George M. Clark, John E. Bird, Nelson Sharpe, Joseph N. Moore.

MICHIGAN, UNIVERSITY OF. A co-educational State institution of the higher learning at Ann Arbor, Mich.; founded in 1837. The students

enrolled in 1921 were 10,623 and the faculty numbered 633. President, Marion Leroy Burton, Ph.D., LL.D.

MIDDLEBURY COLLEGE. A nonsectarian co-educational institution of higher learning at Middlebury, Vt.; founded in 1800. In the fall session of 1921 there were 494 students enrolled of whom 246 were men and 248 women. In the summer session there were 388 enrolled. The teaching staff numbered 38. The productive funds were about \$1,500,000 and the income about \$200,000. The library contained 50,000 volumes. President, Paul Dwight Moody.

MIDDLE CONGO. See FRENCH EQUATORIAL AFRICA.

MIFFLIN, GEORGE HARRISON. Publisher, died, April 5. He was born at Boston, Mass., May 1, 1845; graduated at Harvard in 1865; and associated himself with the publishing house of Hurd and Houghton (1867) which afterwards became the firm of Houghton, Mifflin and company. After 1908 he was president of the company, and he was also president of the Riverside Press.

MIFFLIN, LLOYD. Author, died, July 16. He was born at Columbia, Pa.; studied painting at first under his father, J. Houston Mifflin, portrait painter, and afterwards in Germany and Italy. He exhibited paintings in the United States, but having failed in health, ceased to apply himself to painting, and became a verse writer, writing especially sonnets, of which he published nearly five hundred. Among his poems may be mentioned: *At the Gates of Song* (1897); *The Slopes of Helicon and Other Poems* (1898); *Echoes of Greek Idyls* (1900); *Castalian Days* (1903); *The Fleeting Nymph and Other Verse* (1905); *Toward the Uplands* (1908); *Flower and Thorn* (1909); and *As Twilight Falls* (1916). A collection of his sonnets was published in 1905.

MILFORD HAVEN, MARQUIS OF (ADMIRAL LOUIS ALEXANDER MOUNTBATTEN; formerly PRINCE LOUIS OF BATTENBERG). Former British First Sea-Lord of the Admiralty, died, September 11. He was born at Gratz, Austria, May 24, 1854; and was related to the British royal house. He was naturalized as a British subject, and entered the Royal Navy in 1868. He served with honor in the Egyptian war, 1882; became a rear-admiral in 1884; and was commander-in-chief of the Atlantic fleet from 1908 to 1910. At the request of the king he gave up his German titles in 1917, and assumed the surname of Mountbatten as the equivalent of Battenberg. He retired with the rank of admiral in 1919.

MILITARY ACADEMY, UNITED STATES. See UNITED STATES MILITARY ACADEMY.

MILITARY PROGRESS. GENERAL. The outstanding element of the year's military progress was undoubtedly the so-called Disarmament Conference. (NAVAL PROGRESS AND WAR OF THE NATIONS.) For although at the end of the year the deliberation of this Conference had as yet not formally borne upon land armies, yet it was plain that these would be affected as progress was made in other directions, for the obvious reason that to-day more than ever do all the elements of national defense or offense form an interlocking system involving both the sea and the land. It is pertinent, therefore, to take up some aspects of this conference in order to set them over

against certain aspects of future wars. We say future wars advisedly, because no one, not even the Conference, can believe that future war is impossible. Indeed the country has been warned that the purpose of the Conference is not to abolish war, but the altogether more modest purpose of making war difficult, so that as a consequence there will be time to think before actually opening hostilities.

It is a commonplace that no other war had ever made so great a draft upon the mechanical and chemical (see CHEMISTRY, INDUSTRIAL) spirit of its time as the one closed now three years ago made upon our time. And it is natural, if not inevitable, to assume that the next war, if unhappily there should be one, will reveal this mechanical and chemical development carried to a pitch as yet barely dreamt of. In fact, notes of warning were sounded during the year. Of course it is hazardous, if not impossible, to venture upon prophecy but in certain quarters at least, it is believed that aviation (see AERONAUTICS) will play a tremendous part in the next conflict. We must recollect that this branch of human activity is still in its infancy, that during the war itself air-borne bombs increased in weight from two pounds to two thousand pounds, and that this weight has since the war been carried to over four thousand pounds. Suppose, moreover, that these bombs, in land warfare at least, are charged not with high explosive, but with lethal gas, and that they take as their target not merely armies, but large cities in rear of the armies. Whether gas is prohibited or not, the tank has come to stay, and nobody knows as yet what its future will be. It is only by extrapolation, so to say, that we can form any estimate of the development of these two engines of war, the airplane and the tank, but this estimate is so terrible that all civilized peoples are justified in making every effort to reduce the chances of future war to as nearly zero as possible. And these efforts will be efficacious in the exact ratio of the sincerity with which they are made, not by one or by two, but by all nations interested in abating the evil of wars. For it must never be lost from sight that most wars, probably all wars to-day, spring out of selfishness, and that the regulation of the means of making war of itself will not make war impossible. These remarks find their pertinency in the fact that Germany and Russia were not represented in the Disarmament Conference. It is in no wise the part of this article to comment on their absence from the Conference. But it is allowable to point out that they in raw manpower are still stronger than all the rest of Europe, that Russia is a country of vast though undeveloped resources, and that Germany in spite of her defeat still retains her powers and faculties of organization. Suppose she were invited to assist Russia, so that the two might make common cause against all comers?

The arguments and possibilities of the foregoing remarks are mentioned here as being inherent in the subject. On the whole the cause of peace was advanced during the year. To expect everything to be at once completely done would be unreasonable. A significant beginning has been made; in evidence of the need of such a beginning, we may mention the fact that during the year, a state of war, involving 2,500,000 combatants existed in greater or less degree on ten fronts,

and that armed forces were retained on eighteen additional fronts to prevent outbreaks of hostilities.

STRENGTH OF THE PRINCIPAL ARMIES OF THE WORLD; ORGANIZATION

(a) **UNITED STATES:** 1. *Strength.* As the YEAR BOOK has already announced in this annual review, the military forces of the United States consist of the Regular Army, the National Guard, and the Organized Reserves. By way of economy, the first was reduced in strength during the year to 150,000 men. The actual strength of our military forces stood at the end of 1921 as follows:—

	Officers	Men
Regular Army.....	15,000	138,000
National Army.....	6,700	128,500
Organized Reserves.....	64,300	261

The table that follows gives the strength, etc., of the National Guard by States.

NATIONAL GUARD OF THE UNITED STATES, NOV. 30, 1921

	Present line officers	Strength enlisted men	Authorized enlisted strength	Present strength in per cent of authorized
1. Alabama.....	79	1,648	3,744	46
2. Arizona.....	29	562	729	81
3. Arkansas.....	82	1,599	2,041	82
4. California.....	122	2,682	5,776	49
5. Colorado.....	75	1,294	2,591	53
6. Connecticut.....	130	2,869	3,427	88
7. Delaware.....	48	726	1,103	70
8. Dist. of Columbia..	26	406	1,381	31
9. Florida.....	65	1,293	2,489	55
10. Georgia.....	105	2,116	3,546	60

51. Wyoming.....	29	388	895	45
	6,676	128,579	223,114	

Of our regular forces, a considerable portion was still kept in the region of the Rhine Valley, but suffered some reduction in numbers. This reduction was made chiefly to lessen the cost of this occupation borne, under the Treaty of Versailles, by Germany. At the end of the year, this cost has considerably exceeded \$250,000,000. To be exact, on Sept. 30, 1921, it amounted to \$248,244,000 and over, a formidable sum which must be refunded to the United States by Germany.

2. *Organization.* No fundamental or organic changes were made in our organization during the year. In April, the Secretary of War announced the creation of a skeletonised general headquarters whose purpose was to keep constantly prepared for active military activities. These headquarters were to be wholly distinct from the Office of the Chief of Staff, which was to continue, as before, to administer the military establishment.

In the Artillery, interest was still centred on the development of the 14-inch railway artillery, and of suitable mounts for 16-inch guns. The guns removed from certain coast-defenses during the war have not been reemplaced. It would seem that the intention of the War Department was to pass from a harbor-defense, pure and simple, that is, the prewar system, to one of mobile coast defense.

Cavalry. In accordance with the Act of June 4, 1920, the Cavalry had been reorganized as follows:

(a) War strength troop of 5 officers and 126 enlisted men, divided into troop headquarters, three rifle platoons, and one automatic rifle platoon.

(b) Seventeen regiments, each of two squadrons of three troops, a headquarters troop and a service troop.

(c) Six machine gun squadrons of three troops each, and three separate machine gun troops.

(d) Two cavalry divisions of two brigades each.

(e) Fourteen officers and fourteen enlisted men are assigned to the office of the Chief of Cavalry. The Cavalry at Fort Riley received thirty-five officers and four hundred and fifty men.

(f) Each headquarters is organized to be a complete unit in itself.

In consequence of the reduction of the Army to 150,000 men, three regiments of cavalry, the 15th, 16th, and 17th, were, in 1921, reduced to a state of what may be called inactivity. The regiments exist with their *cadres*, but have no men.

Infantry. As a result of thorough and exhaustive study of the war, the functions of the infantry became better defined. It is assured at present that this arm operating in the open will be backed by artillery of all calibres up to 6-inch, machine guns, tanks, gas, motor transport, and aviation. The exact manner in which these elements will be combined with infantry depends entirely on the circumstances of the moment and of the terrain, but we may take it for established, that infantry will be employed mainly in mopping-up, in consolidating new positions, and delivering the home-thrust at the moment when the resistance of the enemy has been destroyed or neutralized by some or all of the aids (machine guns, gas, etc.) just mentioned. This conclusion brings into high

relief the instruction and training now to be given our officers, whether regulars, guardsmen, or reserve.

3. *Military Policy.* Nothing was done during the year looking to the adoption of any settled military policy by the United States. It would have been too much to expect any such step. All other things equal, the mere announcement that a conference was to be held for the purpose of limiting armaments, would have checked any desire to make a pronouncement on this subject. The popular point of view would have been that as we were to limit armaments, that is, to have practically no army and navy, so any military policy other than one of mere negation would have been not only useless but absurd.

Unofficially however a kind of progress may be recorded. General Leonard Wood writing in the *American Legion Weekly* said that our peace-time regular army should never fall below a strength of 175,000. This force, increased by the National Guard would form our first line of defense, and should be so trained as at all times to maintain a high standard of efficiency. Next the Officers' Reserve Corps should be maintained at a minimum of 150,000, and kept in a state of high training. We could thus count in any emergency upon a total of approximately 200,000 officers, by whose efforts the proper training of forces raised in numbers would be reasonably assured.

Whatever may be done in the way of preparedness is conditioned in the United States upon the support and confidence of the public. It is therefore gratifying to record the fact that Citizens' Military Training Camps were held during the summer, one in each Corps Area. The attendance is set out in the accompanying table:

Corps area	Camp	Reported	Completed courses
1.....	Devens	1,300	1,166
2.....	Plattsburg	856	814
3.....	Meade	1,387	1,292
4.....	Jackson	1,083	1,033
5.....	Knox	1,312	1,207
6.....	Grant	1,204	1,143
7.....	Snelling	616	587
	Pike	596	555
8.....	Travis	779	687
	Logan	387	361
	Lewis	457	407
9.....	Presidio of San Francisco	704	662
		10,681	9,914

It is interesting to remark that whereas only 10,681 men actually reported for duty, over 40,000 applied for admission and over 93,000 made inquiries relative to attendance. The number of those actually present at the opening of the camps was reduced during the course, due to various causes, to 9973 of whom 9914 successfully completed the outlined courses of instruction.

In addition, the practice of detaching officers of the regular establishment for duty at schools officially recognized as part of the Reserve Officers' Training Corps system, was continued by the War Department with encouraging results.

The measures briefly indicated are slight in comparison with the tremendous effort we should be compelled to make if called upon to take up arms. The problem before us is to use our might

in every possible and honorable way to maintain and to perpetuate peace. We may be counted on to do this at almost any cost save dishonor. But we should ever recollect that, if it be true that it takes two to fight, so is it equally true that it takes two to keep the peace. And this should point to a system of preparedness in harmony with our destiny.

(b) FRANCE. A bill was introduced into the Chamber of Deputies providing for a peace-time force of 450,000 men with the colors. It will be at once remarked that this strength is markedly below the peace-time strength of 1914, at the outbreak of the war. Under this bill, Army Corps were to be replaced by divisions of which there were to be 34 Infantry and 8 Cavalry, each composed of 3 regiments. In addition there were to be 80 regiments of field artillery, 5 groups of horse artillery, 15 of heavy, and 18 of intermediate calibres. The normal personnel of this army was to consist of 9 marshals, 3 of whom are permanent; 100 generals, and approximately 1,000 other superior commanders, not all of whom, however, would be on service at one and the same time.

It was plain during the whole course of the year that the French still felt insecure in respect of future attack by Germany. Whatever might be said and done by conferences to limit armament, to insure future peace, and to remove so far as humanly possible, causes of future conflicts, the French were convinced that Germany would attack at the first opportunity. No other nation than France would more heartily welcome a trustworthy assurance that Germany would not attack or would be prevented from attack. But France felt that she had received no such assurance, and therefore was resolved to make every effort to protect herself. Hence the unjust reproach to France that she was "militaristic." It was unquestionable that during 1921, France had the best army in the world, and that she was determined to maintain its standards, but nothing could be further from the truth than the assertion that France was converted to "militarism."

(c) JAPAN. Of the Japanese Army no special remark is to be made here. So far as known, no noteworthy changes were made in either its strength or its organization.

(d) GERMANY. The limitations imposed on the size of the German Army by the Treaty of Versailles are well known: she was to have an army of but 100,000 men. Coupled with this reduction she was to surrender war material, and in fact, by the end of the year had surrendered over 37,000 guns (including 6,000 under construction, which were destroyed); over 3,000,000 rifles and carbines; over 75,000 machine guns, 33,000,000 loaded shell, 400,000,000 rounds of small arm ammunition, and 15,000 airplanes. When it is considered, moreover, that Germany has no fleet, has lost her colonies, and that owing to the depreciation of the mark, she has not the means to purchase raw materials abroad, it would seem as though she would be, in a military sense, powerless for many years to come. And by that time she would be perhaps ready to accept the situation. But the French were inclined to argue that Germany's case was not so bad as it looks. They recalled the progress by which Prussia's army, limited to 42,000 men after Jena, nevertheless

had grown to hundreds of thousands at the date of the Battle of Leipsic. And they seem to think that something of the same sort was going on in 1921. For example, the prewar regiment of infantry consisted of 70 officers, 245 noncommissioned officers and 2000 privates. In 1921 there were 81 officers, 400 noncommissioned officers and 2000 men, 16 companies instead of 13 that is, the new German infantry regiment was more richly provided with *cadres* (officers and noncommissioned officers) than it was before the war. Furthermore, in the Reichswehr, as the German army is called, privates' places in the ranks might be filled by additional noncoms. not to exceed 50 per cent of the regulation number. The regiment might thus have as many as 600 noncommissioned officers. In case of mobilization the *cadres* would be sufficient to form three regiments. It was thus plain that the Army of 100,000 men was really an army of *cadres*, that would form more than the backbone of any expansion called for by danger. Moreover, as compulsory military service had been abolished, and only volunteers were accepted for the colors, a rigorous selection had been applied, with the result that the army of potential officers though small, was of excellent quality. What has been said above of the infantry was equally true of the remainder of the army. Behind the Reichswehr stood the mass of old soldiers, and other elements, so that if war were to break out in the next very few years with France, the country would not be entirely helpless. And let it be borne in mind that some French authorities predicted another war between the two countries in five years. If it be argued that even with these masses of trained men, Germany would be helpless because of its lack of guns and airplanes, let it be recollected that the next war would probably be chemical, that airplanes can be furnished in a far shorter time than can guns, that even in time of peace the constituent elements of airplanes can be constructed in different places, and then concealed to be assembled at short notice when needed. And what is true of airplanes is equally true of other kinds of material.

It is significant to take note here of certain industrial developments in Germany in 1921. The day after Mr. Hughes launched his disarmament programme, the Berlin papers announced that certain explosive factories were going to increase their capital stock, the Nobel-Dynamit, for example, by 55,000,000 marks, another Köln-Rottweil, by 100,000,000. What the chemical industry meant during the war is so well known as to need no mention here, but what should be mentioned is that the seven principal chemical enterprises forming the group called *Interessen Gemeinschaft*, increased its capital to 1,073,500,000 marks in 1920. Whether it was further increased in 1921 is unknown, but the first ten months of 1921 were marked by the following developments: foundation of new firms, 156,000,000 marks; increase of capital, 1,077,500,000 marks. Now chemical industry in peace spells gas industry in war.

It is recognized that the surrender of war stores as set forth above is for the time being a guarantee of peace. But as an anonymous writer said in the *Revue des Deux Mondes*, of Jan. 1, 1922, "If Germany's soul fails to

change, if this soul is still thirsting for domination and the desire of gain, this guarantee is only temporary, for the industrial power of Germany, an important part of its war power, remains intact. Her chemical industry would allow her to begin anew, to-morrow, quantity-production of explosives and asphyxiating gases. As soon as the Government of the Reich could furnish the necessary appropriations her metallurgy would rapidly restore guns and rifles, motors for airplanes and trucks. Germany still has 60,000,000 inhabitants, several million old soldiers who served in the war, thousands of professional officers who never cease to regret their ancient trade and long to avenge the defeats they have suffered. . . . It is still the members of the Great Prussian General Staff, concealed by the shadow of a socialist minister, who are directing military affairs. It is not in vain that German propaganda . . . repeats ad nauseam that the German Army was not conquered. It is not in vain that general officers appear before crowds in ceremony after ceremony, to make violent speeches. It is not in vain that throughout Germany regimental societies of old soldiers are forming for the purpose of reviving recollections of the Great War and of the Imperial Army . . . that the official military authorities are supporting this movement by connecting, through names and insignia, the company-units of the Reichswehr with the regiments of the former régime." Without the connivance of the authorities, "how could it have been possible for General Hoefer in the Spring of 1921, to organize in Upper Silesia an army of 50,000 men completely equipped with heavy and light artillery, airplanes, motor trains, minenwefer, flame-projectors, and munitions of all kinds?"

It is these things and the things they connote that the French feared: they knew that hatred of France was increasing, and that the spirit of revenge was abroad in Germany. To repeat, they would welcome any assurance that their fears were groundless, but so far they felt that they were not. They intended to be ready, and they maintained that this was not militarism but self-defense.

STRENGTH OF THE ARMIES OF THE WORLD

According to a statement made public by the War Department, February 15, the strength of the regular armies of the world and their proportions to the respective populations are as follows:

Country	Population	Regular army	Regular army in per cent of population
United States.....	105,709,000	222,900 *	.21
Albania.....	850,000	13,500	1.58
Austria.....	8,400,000	22,000	.33
Belgium.....	7,555,600 *	100,000	1.32
Bulgaria.....	4,430,000	32,000	.72
Czecho-Slovakia.....	13,215,500	216,000	1.64
Denmark.....	2,941,000	27,500	.94
Estonia.....	1,200,000	36,500	3.04
Finland.....	3,325,000	35,000	1.05
France.....	39,601,500 *	735,300	1.85
Germany.....	55,086,000 *	150,000	.27
Great Britain.....	45,516,000 *	425,000 *	.93
Greece.....	7,500,000	240,000	3.20
Hungary.....	7,690,000	36,000	.46
Italy.....	36,740,000	484,000	1.28
Latvia.....	2,605,000	45,000	1.73

Country	Population	Regular army	Regular army in per cent of population
Lithuania.....	2,000,000	40,000	2.00
Netherlands.....	6,724,700 *	20,000	.30
Norway.....	2,391,800 *	30,000	1.25
Poland.....	30,072,000	815,000	2.71
Portugal.....	5,545,600	33,000	.60
Roumania.....	17,393,200	323,600	1.86
Russia (Bolshevist).....	182,182,000 *	1,500,000 *	.82
Serbs, Croats, & Slovenes.....	14,365,500	194,000	1.35
Spain.....	20,695,700 *	216,600	1.05
Sweden.....	5,813,800 *	15,600	.27
Switzerland.....	4,000,000	170,000	4.25
Turkey.....	12,000,000	100,000 †	.83

* 1911. * 1918. * 1910. * 1915. * 1917.
 † Includes 130,000 Indian troops serving outside of India.
 * Nationalist Army.
 * Estimated.

* Estimated strength at end of year, actual strength at end of year less than 150,000 and further reductions contemplated.

The following shows the strength of the American and Asiatic Armies:

Country	Population	Regular army	Regular army in per cent of population
Argentina.....	8,300,000	23,000	.27
Bolivia.....	3,000,000	7,100	.23
Brasil.....	22,000,000	37,000	.16
Chile.....	4,000,000	20,000	.50
China.....	400,000,000	1,369,900	.34
Colombia.....	5,475,000	6,000	.11
Ecuador.....	1,300,000	6,000	.46
Japan.....	58,000,000	273,200	.47
Mexico.....	16,000,000	90,000	.56
Paraguay.....	1,000,000	1,500	.15
Peru.....	3,530,000	7,500	.21
Uruguay.....	1,400,000	9,800	.70
Venezuela.....	2,848,000	9,000	.31

MISCELLANEOUS. (a) *Gas.* The abolition of gas in war was proposed by Mr. Hughes at the Disarmament Conference. It is doubtful, however, if there will be any agreement under this head. Even if abolished by conference, people are skeptical as to whether the agreement would be observed in war. We have already in this article spoken of Germany's absence from the Washington Conference, and of her great chemical industry. Hence even if a certain number of nations were to forego gas among themselves, this estoppel would automatically be void in the presence of an adversary not a part to the agreement. Moreover, there would seem to be no difference in principle at least between filling a man's lungs with deadly gas on the one hand, and, on the other, so shattering him by shrapnel as to make his possession of a pair of lungs a matter of no consequence. A better argument perhaps is, that other things equal, gas is relatively humane. The matter was still under discussion at the end of the year.

(b) *Nitrogen Supply.* The assurance of an adequate supply of nitrogen for war purposes was a matter of concern. Fortunately nitrogen is indispensable to the arts of peace as to those of war. It so happens that the United States have always been dependent on foreign sources for their supply of nitrogen. For example, during the war our nitrate fleet consisted of 103 steamers and 23 sailing vessels. Our chief domestic source of supply is by-product coke-ovens, but these do not give us more than a quarter of what we must have. Consequently, we import sulphate of ammonia from England, calcium cyanide

from Canada and sodium nitrate from Chile. Hence the interest felt in the offer of Mr. Ford, the automobile manufacturer, to take over the Muscle Shoals plant, begun during the war but never finished as a fixation-plant.

(c) *Cost of War.* According to a report made by Senator Spencer of Missouri, the money cost of the war to the Allies amounted to \$177,402,269,225, as of date Jan. 1, 1921.

By countries, this sum was divided as follows:-

United States.....	\$ 44,173,948,225
England.....	51,052,634,000
France.....	54,272,915,000
Italy.....	18,680,847,000
Belgium.....	8,174,731,000
China.....	585,376,000
Japan.....	481,818,000

\$177,402,269,225

Still more staggering was the estimate of the total loss of life due to all causes attributed to the war. This total was placed at 35,000,000, but little less than the total population of France.

MILITARY TERRITORY OF THE NIGER.

A territory under the governor-general of French West Africa (q. v.). Capital, Zinder.

MILITIA. See MILITARY PROGRESS.

MILK. See DAIRYING.

MILK PLANTS. See MUNICIPAL GOVERNMENT.

MILLER, DANIEL LONG. Bishop in the Church of the Brethren, died, June 8. He was born in Maryland, April 5, 1841; and after a common school education, taught school in that State, and was engaged in the grain and grocery business for several years. He went into the publishing business in 1882, studied for a time in Germany, and became the editor of the *Gospel Messenger* in 1885. In 1887 he was ordained to the ministry of the Church of the Brethren, and was made bishop in 1890. He traveled widely and was prominent in geographical societies. He wrote: *Wanderings in Bible Lands* (1892); *Girdling the Globe* (1897); *Eternal Verities* (1920); *The Other Half of the Globe* (1906); *Some Who Lead* (1912), etc.

MINERALOGICAL CHEMISTRY. See CHEMISTRY.

MINERAL RESOURCES. The following information was supplied by the United States Geological Survey in 1921: The year 1920 showed on the whole an improvement over 1919 in the quantity and value of mineral products sold and made a new record in the total value of mineral products (\$6,707,000,000), but the conditions of operation remained unfavorable and the marked increase in value was not so much a result of renewed prosperity as of increased costs of operation. The two years presented a contrast in that 1919 began in a period of depression that closely followed the signing of the armistice and continued until autumn, whereas 1920 began in a period of improved demand, except for metals, which also lasted until autumn, when a period of general stagnation began that continued through the year 1921. The temporary increase in activities which characterized the greater part of 1920 was evidently due in part to the tendency of some to continue the war-time habit of purchasing regardless of price and also to over-optimism on the part of producers, especially those of base metals; but markets had become overstocked with many

Total value of non-metallic products (exclusive of mineral fuels).....		722,200,000 }		4,977,500,000	+53
Total value of mineral fuels.....		2,536,700,000 }			
Total value of "unspecified" (metallic and non-metallic) products (partly estimated).....		3,500,000		\$5,200,000	+49
Grand total approximate value of all mineral products.....		\$4,613,000,000		\$6,707,000,000	+45

¹ Survey not at liberty to publish figures. Value included under last item ("Unspecified").² Figures not yet available.³ Includes in 1920 the value of the following products: Antimony other than content of antimonial lead, bismuth, cadmium sulphide, chalc, chert, cobalt oxide and cobalt hydrate, columbite, flint lining for tube mills, ilmenite, iron ore sold for paint, lithium minerals, magnesite, marls, molybdenum, pebbles for grinding, selenium, silica sand and sandstone (finely ground), sodium salts (sodium carbonate, sodium sulphate, trona, and borax) from natural sources, tellurium, and an estimate of the value of miscellaneous mineral products, statistics which are not collected annually by the Survey.

commodities, and ultimate consumers gradually adopted the policy of postponing the purchase of goods they did not urgently need. As a result, the stagnation that was manifest in a few industries in the summer of 1920 had become general by November. Attempts of labor organizations to have the high wages of war time continued resulted in several strikes and helped to increase costs of operation, with resulting temporary increase in prices. This was especially true in the coal trades, which in turn affected many other industries. The poor conditions of transportation that were characteristic of 1919 continued well into 1920 and increased the uncertainties and consequently the costs of operation. These disturbances, however, gradually spent themselves, prices began falling, and efforts to repeal excessive war-time taxes and lower transportation rates helped to bring industrial conditions back to normal. The preceding table (pages 458-460) gives figures for value and quantity of mineral products in 1919 and 1920.

MINIMUM WAGE. No new States adopted minimum wage laws in 1921, and Texas repealed its existing law, which was created in 1919, leaving minimum wage laws extant in twelve States, the District of Columbia, and Porto Rico, and apply-

forty-first annual convention of the American Federation of Labor called upon Congress to pass the Johnson-Nolan bill at the earliest moment, but up to December, 1921, nothing had been reported.

AUSTRALIA. Minimum wages applying to adult male workers in the state of New South Wales as fixed by the New South Wales Board of Trade, October, 1920, were: £4 5s. (\$20.68, par) a week, 14s. 2d. (\$3.45, par) a day, and 1s. 9 1/4d. (43 cents, par) an hour. This decision does not apply to rural workers nor to woman labor. Recent wage awards for industries in South Australia include: Cardboard box and paper bag making industry; stove, oven, range, and safe making industry; fibrous plaster industry; horseshoeing; biscuit and confectionery industries; painting and decorating; brush manufacturing. The minimum wage for adult females in the metropolitan area was 35s. (\$8.52, par) that for adult males 13s. 3d. (\$3.22, par) per day.

ENGLAND AND WALES. Minimum rates of wages for agricultural labor in England and Wales have recently been revised so far as affects male workers under 21 years of age and women and girls. The following table is taken from the *Labor Gazette* (London) for February, 1921:

MINIMUM RATES OF WAGES FOR MALE AGRICULTURAL WORKERS UNDER 21 YEARS OF AGE IN CERTAIN COUNTIES IN ENGLAND

[1 shilling at par = 24.3 cents; 1 penny = 2.03 cents]

Age	Minimum weekly rates in—				
	Northum- berland, Durham, Glamorgan, and Mon- mouth	Middlesex, Lincoln, and York- shire	Kent, Lan- cashire, Surrey, Cumber- land, and Westmore- land	Other counties	
	s. d.	s. d.	s. d.	s. d.	
20 and under 21 years	46 6	45 6	44 6	43 0	
19 and under 20 years	43 6	42 6	42 0	40 6	
18 and under 19 years	41 0	40 0	39 0	38 6	
17 and under 18 years				30 6	

¹ Except Cheshire, where rates of 40s., 46s. 6d., 44s. 6d., and 35s. 6d. are fixed for the four age groups payable in respect of a week of 54 hours all the year round.

ing only to females and minors. New awards, or revisions, were made during the year by the District of Columbia, Massachusetts, Washington, and Wisconsin. Changes in the existing laws were made by two States: Arkansas passed an amendment changing the permanent administrative body of three persons to one of four; Minnesota abolished its minimum wage commission, transferring the powers, duties, and employees thereof, to the division of women and children of the department of labor and industries. Massachusetts which had heretofore never published the names of employers violating its decrees, as provided in its minimum wage statute, was obliged to do so by certain persistent violators, notably in the paper box industry. Efforts were made in Ohio to secure the enactment of a law establishing a minimum wage; the legislature was authorized by constitutional amendment of 1912 to pass such a law, but at the close of the year this power had not been exercised. In the field of Federal minimum wage legislation there was the Johnson-Nolan bill providing a wage of not less than \$3.00 a day for all Federal employees. By June this bill had been reported favorably to the lower House. The

For women and girls the minimum rates payable in all districts except Yorkshire and Somerset have been increased, the new rates ranging from 3d. an hour for workers under 14 years of age to 8d. an hour for those 18 years and over. A work-day of 8 and 8 1/2 hours is required, while for overtime women 18 years of age and over are paid 10d. an hour on week days and 1s. an hour on Sundays, except in Yorkshire, where the rates for overtime are 1s. 1/2d. and 1s. 3d. an hour, respectively.

SWITZERLAND. After an investigation in 1920 by the arbitration office of the printing trade an increased minimum wage for printers was established amounting to 76 francs (\$14.67, par) for class A, 82 francs (\$15.83, par) for Class B, 91 francs (\$17.56, par) for Class C, and 103 francs (\$19.88, par) for class D.

MINNESOTA. POPULATION. According to the report of the census of 1920, there were 2,387,125 residents in the State, Jan. 1, 1920, as compared with 2,075,708 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	3,427,000	140,507,000	\$43,557,000
	1920	3,238,000	123,300,000	62,883,000

Hay.....	1921	3,859,000	15,869,000	41,038,000
	1920	3,766,000	15,892,000	68,380,000
Potatoes.....	1921	367,000	27,525,000	24,772,000
	1920	319,000	31,581,000	25,265,000

¹ Tons.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Minnesota was issued by the Bureau of the Census. A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent of increase ¹ 1914-19
	1919	1914	
Number of establishments.....	6,225	5,974	4.2
Persons engaged in manufactures.....	147,665	115,690	27.6
Proprietors and firm members.....	5,128	5,233	-2.0
Salaried employees.....	26,914	17,623	52.7
Wage earners (average number).....	115,623	92,834	24.5
Primary horsepower.....	473,090	358,737	31.9
Capital.....	690,058,000	\$354,434,000	94.7
Services.....	172,666,000	80,591,000	114.2
Salaries.....	45,360,000	22,084,000	105.4
Wages.....	127,306,000	58,507,000	117.6
Materials.....	853,090,000	336,849,000	162.2
Value of products.....	\$1,218,130,000	493,354,000	146.9
Value added by manufacture (value of products less cost of materials).....	335,040,000	156,505,000	114.1

¹ A minus sign (—) denotes decrease.

FINANCE. Figures for the year 1921 were not available, but the following information concerning the finances of the State were supplied by the State officials: Minnesota had the largest permanent trust fund of any State in the union in 1921. At the end of the fiscal year June 30, 1920, the total of cash and securities in possession of the State treasurer and belonging to the several State trust funds, amounted to \$31,767,890.19. Various State receipts for that fiscal year included: Royalties on iron ore from State lands, \$994,535.59; interest from invested permanent trust funds, \$1,390,954.28; sales of farm machinery and binding twine manufactured at the State prison, \$4,491,121.63; sales of State timber, \$327,434.13; inheritance taxes, \$1,056,687.24; telephone taxes, \$358,744.47; railroad gross earnings taxes, \$7,801,678.94; incorporation fees, \$159,040, and automobile license fees, \$204,172. The assessed value of all real and personal property in Minnesota subject to ad valorem taxation for 1920, as equalized by the Minnesota Tax Commission, was \$2,553,671,453.

Comparisons of valuation totals follow:

	1910	1915	1920
Real estate.....	\$1,012,449,518	\$1,289,214,531	\$1,751,315,456
Personal property.....	{ 209,986,859 }	233,368,380	364,727,126
Moneys and credits.....		212,134,901	437,626,871
Totals.....	\$1,222,435,377	\$1,734,717,812	\$2,553,671,453

Personal property is assessed annually and real estate only in the even numbered years, except

that new buildings are added. These figures do not include the value of railroad property in the State, nor the property of freight line, sleeping car, express, telephone and trust companies not doing a banking business, all of which are subject to a gross earnings tax. The value of this property had not been officially ascertained.

LEGISLATION. Among the measures passed at the legislative session, the following may be mentioned: Regulation of traffic in aircraft over cities of the first class; proposed amendment to the constitution for the purpose of authorizing the extension of the State's credit for the development of agricultural resources within the State; regulations pertaining to the occupation of barbers creating a board of examiners to license practitioners; regulation of the manufacture of "soft" drinks; regulation of certain occupations of children in streets and public places; provision in respect to the construction, maintenance and inspection of dry cleaning and dry dyeing establishments; empowering the Commissioner of Agri-

culture to assist the different coöperative bodies engaged in buying and selling farm products and providing for the auditing of the books of such corporations under the Commissioner's direction; relating to the storage of milk or cream pending transportation; authorizing cities of over 50,000 to establish and operate public landings, wharves, and docks, etc.; prohibiting the manufacture, preparation, and sale of adulterated or misbranded drugs and authorizing cities of between 10,000 and 20,000 inhabitants to construct and operate municipal electric light and power plants and dispose of electricity to private consumers; creating an Industrial Commission and continuing the Department of Labor and Industries under the control of that commission, the office of Labor Commissioner being abolished; relating to fire insurance policies on motor vehicles; relating to mutual insurance companies; provision for the maintenance of school libraries; relating to live-stock exchanges and their rules and regulations; provision against lynching, fixing indemnity for the dependents of any person lynched and providing for the removal of sheriff and deputy sheriff in charge of the person

lynched; declaring chambers of commerce or exchanges whose members deal in grain, live stock

or other farm products to be public markets and regulating the membership and the rights of members; providing protection for maternity and infancy; amending and codifying the laws relating to the militia, the Minnesota National Guard, and the National Guard armories and bringing organization and discipline into conformity with the regulations of the Federal laws; provision for a tax on persons and companies engaged in mining in the State; creation of a local improvement fund in cities between 20,000 and 50,000, with authority to issue bonds for certain purposes; creation of a State public park to be known as Scenic State Park; provision for the enforcement of the laws in respect to intoxicating liquors; requiring villages and cities of the fourth class to maintain public rest rooms; provision for the prevention of injury to the eyes of workmen in certain occupations by requiring the use of certain protective devices; provision for the relief and support of children of school age required by law to attend school; definition of gambling contracts as applying to sales of wheat, grain, and other farm products; the prohibition of Boards of Trade, etc., from making rules designed to enforce the execution of such gambling contracts; describing the liability of the employer for compensation of workmen for injuries arising from accident or occupational condition; provision for the regulation of workmen's compensation insurance rates and creation of a Workmen's Compensation Insurance Board for the supervision and regulation of such rates.

Of the above the measures respecting labor were especially important. Their principal features were as follows: An industrial commission of three members was established to supervise the administration of all labor laws, including the workmen's compensation act. The members were to be appointed by the governor and senate for six-year terms. According to the workmen's compensation law a period not to exceed twenty-five weeks was fixed for recovery of health and reeducation respectively. During this period the workman was to receive two-thirds of his salary as well as medical care. This was substituted for the specific schedule in the case of permanent disability. The

State, Mike Holm; Auditor, Ray P. Chase; Treasurer, Henry Rines; Attorney-General, Clifford L. Hilton; Commissioner of Education, J. M. McConnell; Superintendent of Banks, F. E. Pearson; Commissioner of Insurance, Gustav Lindquist; Commissioner of Agriculture, N. J. Holmberg.

JUDICIARY. Supreme Court: Chief Justice, Calvin L. Brown; Associate Justices, Homer B. Dibell, Andrew Holt, Oscar Hallam, James H. Quinn.

MINNESOTA, UNIVERSITY OF. A State institution of the higher learning at Minneapolis, Minn.; founded in 1868. The enrollment for the fall of 1921 was 8026, and for the summer session 3238. The faculty numbered 1117. The income was \$5,915,433. The library contained 300,000 volumes. In the course of the year a music building was completed. President, Lotus Delta Koffman.

MISSISSIPPI. POPULATION. According to the report of the census of 1920, there were 1,790,618 residents in the State, Jan. 1, 1920, as compared with 1,797,114 in 1910.

AGRICULTURE. The followtable is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	3,172,000	57,096,000	\$31,974,000
	1920	2,770,000	44,320,000	45,206,000
Oats.....	1921	147,000	2,940,000	1,882,000
	1920	128,000	2,176,000	1,893,000
Hay.....	1921	468,000	1,532,000	7,582,000
	1920	441,000	1,629,000	10,898,000
Potatoes.....	1921	16,000	1,088,000	2,176,000
	1920	16,000	1,392,000	2,784,000
Swt. potatoes.....	1921	107,000	8,560,000	6,334,000

DRAINAGE. The following summary of the drainage conditions of the State in 1920 was issued by the United States Bureau of the Census:

	Amount	Per cent of total
DRAINAGE ON FARMS		
Number of all farms in the state.....	272,101	100.0
Farms reporting land having drainage.....	34,926	12.8
Farms reporting land needing drainage.....	29,872	11.0
All land in farms.....	18,196,979	100.0
Improved land in farms.....	9,325,677	51.2
Farm land reported as provided with drainage.....	825,878	4.5
Farm land reported as needing drainage.....	1,455,534	8.0
DRAINAGE ENTERPRISES		
Approximate land area of the state.....	29,671,680	100.0
All land in operating drainage enterprises.....	1,801,444	5.4
Improved land.....	941,239	3.2
Timber and cut-over land.....	631,964	2.1
Other unimproved land.....	28,241	0.1
Capital invested in and required for completion of operating enterprises.....	\$8,561,264	100.0
Capital invested in these enterprises to Dec. 31, 1919.....	7,076,164	82.7
Additional capital required to complete these enterprises.....	1,485,100	17.3

time limit was abandoned for total permanent injury, but the sum to be paid must not exceed \$10,000. The law included occupational diseases within its scope and provided for dependents in case of fatal accidents. It applied also to farmers.

OFFICERS. Governor, J. A. O. Preuss; Lieutenant-Governor, Louis L. Collins; Secretary of

The total works completed by the drainage enterprises to Dec. 31, 1919, comprised 1815.1 miles of open ditches, 238.8 miles of tile drains, and 6.7 miles of accessory levees; the additional lengths under construction were 223.6 miles of ditches, 54.2 miles of tile drains, and 36.8 miles of levees. These figures do not include drains or

levees installed by individual farm owners supplemental to the works of the enterprises, nor the works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There is one pumping district for land drainage among the enterprises under construction in Mississippi. Part of the drainage water from 44,000 acres is to be removed by two centrifugal pumps of 78,000 gallons per minute capacity, operated by internal-combustion engines capable of developing 250 horsepower. The principal crops grown on the land drained in drainage enterprises were corn and cotton.

MANUFACTURES. The United States Bureau of the Census issued the following comparative figures of the census of the State's manufactures in 1919 and 1914:

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	2,455	2,209	11.1
Persons engaged.....	64,452	52,277	23.3
Proprietors and firm members.....	2,811	2,386	17.8
Salaried employees.....	4,081	3,189	28.0
Wage earners (average number).....	57,560	46,702	23.2
Primary horsepower.....	200,814	186,434	7.7
Capital.....	\$164,117,337	\$81,005,484	90.3
Salaries and wages.....	59,182,535	23,007,760	157.2
Salaries.....	7,926,819	3,831,132	106.9
Wages.....	51,255,716	19,176,627	167.3
Paid for contract work.....	2,684,155	2,075,832	29.3
Rent and taxes.....	4,598,382	1,320,197	248.3
Cost of materials.....	96,677,871	41,340,122	133.9
Value of products.....	197,748,987	79,550,095	148.6
Value added by manufacture.....	101,069,116	38,209,973	164.5

There were in the State in 1920 nine cities having more than 10,000 inhabitants—Biloxi, Columbus, Greenville, Hattiesburg, Jackson, Laurel, Meridian, Natchez, and Vicksburg. These nine cities, whose combined population in that year was 136,201, formed 7.6 per cent of the total population for Mississippi and reported 24.9 per cent of the value of the State's manufactured products in 1919. The large increases in wages, cost of materials, and the value of products, as presented in the table, are largely due to the change in industrial conditions brought about by the World War, and, therefore, cannot properly be used to measure the growth of manufactures during the census period 1914-19. However, the increases in the average number of wage earners and horsepower are significant evidences of the growth of the manufacturing activities of the State. The addition of the Federal income tax since 1914 will account for the exceptional increase in "rent and taxes." The proportion of female wage earners in the State is small, but 5.2 per cent in 1919. Biloxi is the only city in the State showing a larger proportion of female wage earners (59.6 per cent) in 1919 than of males; this is due to the extensive employment of females in the canning industry in that city. A considerable shortening of hours of all wage earners since 1914 was indicated. In that year 7.2 per cent were forty-eight or under as against 18.5 per cent in 1919, while the percentage of sixty or over in 1914 was 75.2 as compared with 67.7 in 1919.

OFFICERS. Governor, Lee M. Russell; Lieutenant-Governor, Homer C. Castell; Secretary of State, Jos. W. Power; State Treasurer, Dr. Wm.

Murrah; State Auditor, J. W. Miller; Attorney-General, Stokes V. Roberson.

MISSISSIPPI, UNIVERSITY OF. A co-educational State institution of the higher learning at University, Miss.; founded in 1848. The enrollment for the fall 1921 was 650. The faculty numbered 36. The State appropriations average about \$150,000 a year. The library contained 32,000 volumes. In the course of the year a new chemistry building was in process of construction at a cost of about \$350,000 and three new dormitories were approaching completion in December. President, Joseph M. Powers.

MISSOURI. POPULATION. According to the report of the census of 1920, there were 3,404,055 residents in the State, Jan. 1, 1920, as compared with 3,293,335 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	6,096,000	182,880,000	\$73,152,000
	1920	6,646,000	212,672,000	136,110,000
Oats.....	1921	2,148,000	42,960,000	12,888,000
	1920	1,918,000	58,499,000	28,665,000

DRAINAGE. The summary of drainage conditions in the State in 1920 shown on page 465 was issued by the United States Bureau of the Census.

The total works completed by the drainage enterprises to Dec. 31, 1919, comprised 3438.7 miles of open ditches, 38.8 miles of tile drains, and 456.9 miles of accessory levees; the additional lengths under construction were 460.4 miles of open ditches, 5.9 miles of tile drains, and 74.9 miles of levees. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises, nor the

Capital invested in these enterprises to Dec. 31, 1919.....	20,723,128	83.7
Additional capital required to complete these enterprises.....	4,026,607	16.3

works of flood-protection or levee districts that had not undertaken the construction of ditches or tile drains. There were 11 pumping districts among the operating drainage enterprises in Missouri, and 4 among the non-operating enterprises. The principal crops grown on the land drained in drainage enterprises were cotton, corn, and wheat.

MANUFACTURES. The general results of the 1920 census of manufactures, covering the year 1919, for the State of Missouri were published by the United States Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. A comparative summary for the State, 1919 and 1914, follows:

second and third classes at the option of the mayor and the common councils; prohibiting the employment of children in certain occupations, providing for issuing labor permits in certain cases and prescribing powers and duties of the Board of Education and State Industrial Inspectors; provision for the regulation, etc., of boarding homes for children; provision for the incorporation of a Commodity Association operated by persons engaged in growing and producing agricultural products; authorizing stock corporations to transact the business of banking or insurance and providing regulations for the same; creating a municipal corporation court in all counties having a population of between 90,000 and 150,000; insuring the freedom of dairy products from germs of tuberculosis and other diseases; provision for competent instruction in the public schools in

¹ A minus sign (—) denotes decrease.

EDUCATION. The total enrollment in the public schools was 907,186, of whom 864,201 were white and 42,985 colored. The average daily attendance in 1920 was 531,221. Teachers in 1920 numbered 21,216 of whom 17,701 were female. The average monthly salaries of teachers in 1921 were \$116 (male) and \$81 female.

LEGISLATION. Among the measures passed in the legislative session of 1921, the following may be mentioned: Creating a State Department of Agriculture; providing for the establishment of branch banks in foreign countries or dependencies of the United States; provision for a State board of barber examiners; prohibition of the bribery of baseball players and employees of baseball groups; provision for pensions for the deserving blind; prescription for the treatment of new-born infants; creation of a State department of the budget; creation of social welfare boards in cities of the

respect to the care and hygiene of the teeth; requiring owners of dogs exposed to rabies to kill or immunize them; providing for the licensing, regulation and supervision of maternity hospitals; creating a State Board of Immigration; defining the terms upon which group insurance may be written; prohibiting the sale of intoxicating liquors by wholesale druggists under any Federal permit or license, except those whose stock meets certain specific requirements defined in the act; provision for the maintenance of free county libraries; requirements in respect to the inspection of cattle before removal from any county of the State; declaring certain places at which cattle are bought and sold to be public markets and prescribing the rules for them; a similar law in respect to the markets for farm products; a resolution for the submission to the voters of an amendment to the constitution requiring the legislature to provide

for the collection of an annual tax or license fee on motor vehicles, etc., to be submitted at the next general election; relating to the limit of indebtedness and the issue of general liability bonds and public utility bonds by cities with a population of 75,000 or more; providing for an optional law for cities of the third class and for the city management form of government; providing for the confinement and treatment of victims of opium, cocaine, etc.; authorizing the establishment of high schools for colored children in all counties with a population of over 100,000; defining and regulating the practice of optometry; establishing a department of penal institutions; resolution to submit to the qualified voters an amendment of a section of the constitution relating to pay of members of the Assembly and expense of committees; resolution to submit to the qualified voters an amendment to the constitution authorizing the contraction of a debt and the issue of bonds not exceeding \$15,000,000 for the payment of a soldiers' bonus to ex-service men of the late war; creation of a State Department of Finance; resolution to submit to the qualified voters an amendment to the constitution which shall enable women to hold any office in the State; provision for a system of workmen's compensation, elective as to railway and private employers, but compulsory on the part of the State, counties, and other public employers, unless rejected by the employees; authorizing cities with a population between 200,000 and 600,000 to apply the zoning principle.

OFFICERS. Governor, Arthur M. Hyde; Lieutenant-Governor, Hiram Lloyd; Secretary of

MOLDAVIA. A northern division of Roumania; area before the war, 14,759 square miles; population (1913), 2,145,465. Chief towns with their populations before the war: Jassy, 76,120; Galatz, 73,512; Botushani, 32,874; Barlad, 25,367; and Focsani, 25,287.

MOLESWORTH, Mrs. British novelist, died in London in the latter part of July. As a popular and voluminous writer for children she was widely known in Great Britain. She was born of a Scotch family in Holland in May, 1839, and married Major Molesworth of the Royal Dragoons in 1861. Among her best known stories for the young were *Four Winds Farm*, *Cuckoo Clock*, and *Carrots*. She also showed great skill in writing for very small children, contributing some very popular stories to the *Child's Pictorial*.

MONACO. A principality on the Mediterranean, surrounded by the French department of Alpes Maritimes except on the coast; celebrated for the gambling resort, Monte Carlo; area, 8 square miles; population (1913), 22,956. The chief towns are: La Condamine, 11,082; Monte Carlo, 9627; Monaco, 2247. Its prince was an absolute ruler until Jan. 7, 1911, when a new constitution was proclaimed, providing for a national council assisted by a council of state which along with the prince exercises the legislative power. The prince in 1920 was Albert, born, Nov. 13, 1848.

MONEY. The following table shows coin and paper circulation of the United States for the fiscal years (ending June 30) 1913 to 1921, inclusive (see also FINANCIAL REVIEW; GOLD; and SILVER):

Year ending June 30	Coin, includ- ing bullion in Treasury	United States notes and bank notes	Total money	Coin, bullion, and paper money in Treasury, as assets	Circulation	Population	Circu- lation per capita
1913.....	2,611,571,094	1,108,498,922	3,720,070,016	356,331,567	3,363,738,449	97,337,000	34.56
1914.....	2,638,496,956	1,099,791,915	3,738,288,871	336,273,444	3,402,015,427	99,027,000	34.35

State, Charles U. Becker; State Auditor, George E. Hackmann; State Treasurer, L. D. Thompson; Attorney-General, Jesse W. Barrett.

MISSOURI, UNIVERSITY OF. A co-educational State institution of higher education at Columbia, Mo.; founded in 1840. The total enrollment for the fall term of 1921 was 5058 of whom 3680 were at the departments at Columbia; 563 at the school of Mines and Metallurgy, situated at Rolla; 815 in the extension and correspondence departments. At Columbia the departments comprised Arts and Sciences (1760), Agriculture (402), Business and Public Administration (125), Education (225), Engineering (467), Graduate work (120), Journalism, (218), Law (119), Medicine (75). At Columbia there were 2515 men and 996 women. The income was \$1,833,356. The libraries contained 230,000 volumes. A gift of \$50,000 was received for a building for Home Economics. Acting President, J. C. Jones.

MITCHELL, CHARLES ANDREWS. See NE-CROLOGY.

MITNITZKY, IZZY. See MUSIC, Artists, Instrumentalists.

MONGOLIA. A large and ill-defined territory dependent on China situated to the west of Manchuria. Area, about 1,367,600 square miles; population about 2,600,000. Russia recognized Mongolia's right to self-government, Nov. 3, 1912, by a convention signed at Urga and undertook to guarantee her immunity from Chinese military occupation or colonization. On Nov. 5, 1913, Russia recognized outer Mongolia in an agreement with Pekin as part of Chinese territory and China recognized its autonomy. After the overthrow of the Czar and the establishment of the Soviet government, the arrangement with Russia was ineffective, and on Nov. 22, 1919, China so declared. On Feb. 25, 1921, the independence of the country was proclaimed and the local ruler known under the title of the Hutuktu was crowned king of Mongolia.

MONOPLANES. See AERONAUTICS.

MONTAGUE, DWIGHT PRESTON. Manufacturer, died at Chattanooga, Tenn., May 25. He was born at Chester, Ohio, July 20, 1853; studied at Cornell University and went into manufacturing at Chattanooga in 1875. He be-

came president of important coal and oil companies and was officer in other financial institutions.

MONTANA. POPULATION. According to the report of the census of 1920, there were 548,889 residents in the State, Jan. 1, 1920, as compared with 376,053 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	200,000	2,560,000	\$ 1,715,000
	1920	184,000	2,226,000	1,781,000
Oats.....	1921	469,000	10,787,000	3,668,000
	1920	533,000	11,726,000	5,980,000
Wheat.....	1921	2,297,000	28,168,000	23,943,000
	1920	2,787,000	28,690,000	36,724,000
Hay.....	1921	1,702,000	12,407,000	20,889,000
	1920	1,757,000	12,608,000	29,439,000

¹ Tons.

IRRIGATION. The following summary of drainage conditions of the State in 1920 with corresponding figures for 1910, was issued by the United States Bureau of the Census:

	Census of—	
	1920	1910
Number of all farms.....	57,677	26,214
Approximate land area of the state..... acres..	93,523,840	93,568,640
All land in farms..... acres..	35,070,656	13,545,603
Improved land in farms..... acres..	11,007,278	3,640,309
Number of farms irrigated.....	10,807	8,970
Area irrigated..... acres..	1,681,729	1,679,084
Area enterprises were capable of irrigating..... acres..	2,753,498	2,205,155
Area included in enterprises..... acres..	4,329,148	3,515,602
Per cent irrigated:		
Number of all farms.....	18.7	34.2
Approximate land area of state.....	1.8	1.8
Land in farms.....	4.8	12.4
Improved land in farms.....	15.3	46.1
Excess of area enterprises were capable of irrigating over area irrigated..... acres..	1,071,769	526,071
Excess of area included in enterprises over area irrigated..... acres..	2,647,419	1,836,518
Area of irrigated land reported as available for settlement..... acres..	207,530	
Capital invested.....	\$52,143,363	22,970,958
Average per acre enterprises were capable of irrigating.....	18.94	\$10.42
Estimated final cost of existing enterprises.....	70,079,028	32,382,077
Average per acre included in enterprises.....	16.19	9.21
Average cost of operation and maintenance per acre.....	1.26	0.89

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc mined in Montana in 1921, according to the estimate of the United States Geological Survey, Department of the Interior, was about \$16,212,000, a decrease from the value of \$65,573,047 in 1920. The value of the output of gold decreased from \$1,851,165 in 1920 to about \$1,360,000 in 1921. The production of gold from copper ores was greatly reduced, and the output from siliceous ores and placers was much less than in 1920. The mine output of silver decreased from 12,579,178 ounces in 1920 to about 6,233,000 ounces in 1921, and the value of the output decreased from \$13,711,304 to about \$6,198,000. In past years most of the silver came from copper ores, but in 1921 many of the copper mines and other large producers of silver were idle the greater part of the year. The output of copper decreased from 177,059,260 pounds in 1920 to about 51,595,000 pounds in 1921. The mine production of lead decreased from 31,253,916 pounds in 1920 to about 21,674,000 pounds in 1921, and the value of the output decreased from \$2,500,313 to about \$997,000. The output of recoverable zinc

in Montana decreased from 184,337,786 pounds in 1920 to about 23,000,000 pounds in 1921. The value of the output decreased from \$14,931,361 to about \$1,155,000.

MANUFACTURES. The United States Bureau of the Census issued the following summary of the census of the State's manufactures in 1919 with corresponding figures for 1914:

	1919	1914
Number of establishments.....	1,290	939
Persons engaged.....	20,692	16,363
Proprietors and firm members..	1,200	832
Salaried employees.....	2,332	1,827
Wage earners (average number)	17,160	13,704
Primary horsepower.....	170,206	91,671
Capital.....	\$137,476,277	\$79,246,396
Salaries and wages.....	29,484,017	15,779,858
Salaries.....	4,741,455	2,778,653
Wages.....	24,742,562	13,001,205
Paid for contract work.....	555,842	789,361
Rent and taxes.....	2,212,765	1,597,778
Cost of materials.....	122,151,924	46,743,986
Value of products.....	166,664,518	84,446,136
Value added by manufacture.....	44,512,594	37,702,150

In 1920 there were six cities in the State—Anaconda, Billings, Butte, Great Falls, Helena, and Missoula—having more than 10,000 inhabitants. The cities, with an aggregate population of 117,205, formed 21.4 per cent of the total population for Montana in that year, and in 1919 reported 15.7 per cent of the value of the State's manufactured products. The large increases in wages, cost of materials, and the value of products, as presented in the table, are principally due to the change in industrial conditions brought about by the World War, and therefore cannot properly be used to measure the growth of manufactures during the census period 1914 to 1919. However, the increases in average number of wage earners and horsepower evidence the growth of the manufacturing activities of the State.

TRANSPORTATION. The total railroad mileage in Montana operated by seven different companies was 7196 miles for 1920. There was no new construction in 1921. The railroads are under the supervision of the State Railroad Commission.

EDUCATION. Educational statistics for 1921 were as follows: Number of children of school age,

161,626; total number of pupils enrolled in public schools, 126,238; average daily attendance, 91,744; number of teachers employed, 6215; average salary of teachers, \$974; total expense for educational purposes, \$12,904,270. The total number of pupils enrolled at the State University at Missoula was 1534; at the Agricultural College at Bozeman, 981; at the State School of Mines at Butte, 143; and at the State Normal School at Dillon, 1097. The number of teachers employed at the State University at Missoula was 74; at the Agricultural College at Bozeman, 81; at the State School of Mines at Butte, 12, and at the State Normal School at Dillon, 39.

FINANCE. The legislature amended the law changing the fiscal year and therefore the latest figures available on State finances were those for the period ending Nov. 30, 1920. Receipts for 1919 and 1920 were \$8,888,649; disbursements, \$9,406,057; balance, Nov. 30, 1920—\$2,418,476. The bonded debt of the State, Feb. 28, 1921, was \$2,852,588.

CHARITIES AND CORRECTIONS. State Prison at Deer Lodge, inmates, Dec. 1, 1921, 327; State Hospital for the Insane at Warm Springs, inmates, Dec. 1, 1921, 1451; State School for the Deaf, Dumb, Blind, and Feeble-minded at Boulder, inmates, April, deaf, 69; blind, 20; feeble-minded, 135; State Industrial School at Miles City, inmates, April 1, 1921, 130; State Orphans' Home at Twin Bridges, inmates, April 1, 1921, 224; State Vocational School for Girls at Helena, inmates, April 1, 1921, 45.

LEGISLATION. Revision of the tax laws and imposition of new taxes upon the production of oil, gas, minerals, etc., and consolidation of some and abolishment of other State laws were among the more important measures of the legislature this year.

OFFICERS. Governor, Joseph M. Dixon; Lieutenant-Governor, Nelson Story, Jr.; Secretary of State, Charles T. Stewart; Attorney-General, Wellington D. Rankin; Treasurer, J. W. Walker; Auditor, Insurance, and Investment Commissioner, George P. Porter; Superintendent Public Instruction, May Trumper.

JUDICIARY. Supreme Court: Chief Justice, Theodore Brantley; Associate Justices: U. L. Holloway, Charles H. Cooper, Albert J. Galen, F. B. Reynolds.

MONTANA, UNIVERSITY OF. A co-educational State institution of higher learning at Missoula, Mont.; founded in 1895. The enrollment for the fall session of 1921 was 687 and for the summer quarter 518. The faculty numbered 76 of whom 9 had been added in the course of the year. The income for the year ending July 1, 1922, was estimated at \$462,000. The library contained 50,000 bound volumes. At the November, 1920, election the voters passed two initiative measures: one providing 1½ mill tax for maintenance for the four institutions of the University of Montana; the other providing for the issue of bonds in the amount of five million dollars for buildings at the State educational and welfare institutions. Of this amount approximately 1¼ million was to be expended at the State University. Buildings were being constructed to cost when completed \$350,000. President, C. H. Clapp.

MONTELIUS, OSCAR. Anthropologist, died at Stockholm, November 4. He was in charge of the Swedish archaeological collection in the

National Historical Museum at Stockholm and an authority in prehistoric archaeology. He was born at Stockholm in 1843 and received the degree of Ph.D. at Upsala in 1869. He was connected with the Academy of Antiquities at Stockholm until 1888 when he was appointed Professor in the National Historical Museum. He was State Antiquarian 1907-13. He traveled widely, lectured in America as well as in Europe, and was a member of many learned bodies. After 1913 he devoted himself to finishing his uncompleted writings. The bibliography of his writings between 1869 and 1913 included 346 titles, and he not only contributed voluminously to the scientific press but he was editor of several periodicals. Aside from his care of the archaeological collections in the Museum and his special interest in the antiquities of the nation, he was a profound student of the prehistoric period in the rest of Europe as well as in the adjacent portions of Asia and Africa. His work was of special importance in placing the chronology of the Neolithic and Metal Ages on a sound basis. He bestowed his valuable personal library on the Academy of Antiquities in Stockholm in 1913. His chief works were as follows: *Sveriges Fornrid* (*Early Times in Sweden*), published in 1872-75; *Läsvet i Sverige under Hednatiden* (1873; English translation by F. H. Woods, 1888, entitled, "*The Civilization of Sweden in Heathen Times*"); *Sveriges Historia från äldsta tid till våra dagar* (1875-77; *Sweden's History from Earliest Times to Our Own Day*); *The Age of Bronze in Egypt* (Ann. Rep. Smithsonian Inst., 1890); *La Civilisation en Italie depuis l'introduction des métaux*, 1895-15; and numerous important papers, especially on such topics as prehistoric chronology, archaeologic methods, typology, etc., etc.

MONTENEGRO. A Balkan state formed after Dec. 1, 1918, a part of Jugo-Slavia; bounded by Serbia on the east, Albania on the south, Dalmatia on the west and Herzegovina on the west and north. Area before the war, 5603 square miles; population, Jan. 1, 1917, 436,789. In 1920 the area of Montenegro as part of the Jugo-Slav state was placed at only 3536 square miles; and the population, at 238,423. Capital, Cetinje, with a population of 5500. Other towns with their estimated populations are: Podgoritzza, 14,000; Ipek or Pets, 14,000; Djakovka or Djakovitzza, 23,000. The demand for the recognition of separate nationality continued during 1921. See JUGO-SLAVIA.

HISTORY. Soon after the armistice the National Council of Montenegro voted to join the new Jugo-Slav state, and dethroned King Nicholas, accusing him of treason during the late war. The charges against Nicholas and the answer to them on the part of his supporters have been noted in preceding YEAR BOOKS. After his death the attempt of his partisans to push the movement for the independence of Montenegro were less in evidence. They were said to have been kept alive for the most part by Italy as a part of her general campaign against Jugo-Slavia. Italy's support, if it were ever really given, ceased after the death of King Peter when she pursued a policy of friendship toward Jugo-Slavia. Down to that time Italy had maintained a Montenegrin Consulate at Rome, paying for that purpose some 20,000,000

lire a year. It was charged that some of this money was spent in propaganda against Jugo-Slavia, and the police after a visit of search, August 23, were said to have secured evidence against the members. Meanwhile an investigation was going on into the charges made by Montegrins that the Jugo-Slavs had been guilty of various atrocities. As a result it was reported that no basis could be found for these charges, and that the Serbians had respected the rights of the Montenegrins and even their interests by retaining Montenegrin officials in their positions and Montenegrin officers at the same rank in the army as they had held in the former army of King Nicholas. Many points were brought out by the Italian investigation favoring the side of the Jugo-Slavs and advancing arguments for the inclusion of Montenegro in the new state.

MONTESQUIOU-FEZENSAC, COUNT ROBERT DE. French poet, died at Mentone, France, December 14. His first successful verses were published in 1892 under the title of *Les Chauves-Souris*. He was born in Paris in 1855, a descendant of the celebrated noble house of Armagnac, and was a close friend of Paul Verlaine. In 1903 he delivered a course of lectures in New York. From his ancestors he inherited two celebrated chateaux and the Pavillon des Muses at Neuilly, built by Louis XVI.

MONTREAL, QUE. See GARBAGE AND REFUSE DISPOSAL.

MONTSERRAT. A presidency of the Leeward Islands (q. v.).

MOON, JOHN AUSTIN. Congressman, died at Chattanooga, Tenn., June 26. He was born in Virginia, April 22, 1855; and educated at King College, Bristol, Tenn. He was judge of the circuit court in Tennessee from 1889 to 1897. He was a delegate to the Democratic National Convention of 1900, and a member of Congress from 1897 to 1921.

MOORE, FRANK A. Judge, died in 1921. He was born at Ellsworth, Maine, Nov. 5, 1844; educated in the public schools and at a normal school; and was superintendent of schools in Hardin County, Iowa, from 1872 to 1876. He was admitted to the bar in 1874 and practiced law in Oregon after 1877, where he was county judge from 1882 to 1886, and a member of the Oregon senate from 1888 to 1892. He was associate-justice of the supreme court of Oregon after 1892.

MORAVIA. Before the downfall of the Austro-Hungarian monarchy, a crownland of Austria; included after 1918 in the new state of Czecho-Slovakia (q. v.); bounded by Russia, Austria, Silesia, and Hungary. Area before the war, 8584 square miles; population, estimated in 1913 at 2,666,613. According to the census of 1910, 1,868,971 or 71¼ per cent spoke Bohemian. Capital, Brunn, with a population in 1910 of 126,737.

MORAVIANS. A denomination founded in Bohemia in 1457 and which began work in this country in Georgia in 1735 as a missionary enterprise. It is composed of three branches: the Moravian Church (Unitas Fratrum), Bohemian and Moravian Brethren (Evangelical Union), and Independent Moravian Churches. The Unitas Fratrum, or the Moravian Church is the largest of the denomination. Statistics for this branch in 1921 showed 26,373 members, 155 ministers, 117

churches, and total valuation of church property of \$1,368,220. Mission provinces number 11, including Labrador, Alaska, California Indians, Jamaica, West Indies, Nicaragua, Demerara, Surinam, South Africa, and West Himalaya, and converts in 1921 totaled 105,189. There are 7 educational institutions of the denomination, of which may be mentioned the Moravian College and Theological Seminary of Bethlehem, Pa., as the most prominent. In 1921 the Evangelical Union of Bohemian and Moravian Brethren had 1714 members, 13 church edifices, and 4 ordained ministers. Statistics for the Independent Moravian Churches showed 320 members in 3 churches. The official journal of the Northern Province of the Moravian Church in America is the *Moravian*, and for the Southern Province *The Wachovia Moravian*. Statistics for the International Moravian Church, which includes the Continental Province, Czecho-Slovakian Province, British Province, and North and South American Provinces, give a total membership of 53,819 on Jan. 1, 1921, 197 congregations, and 35,669 communicants. Foreign Missions and Affiliated Societies in Europe totaled 323 congregations, 35,040 communicants, and total membership of 175,189 persons.

MORF, HEINRICH. See NECROLOGY.

MORINI, ERIKA. See MUSIC, Artists, Instrumentalists.

MOROCCO. The largest of the Barbary states situated in the northwestern part of Africa on the eastern shore of the Atlantic ocean between 27° and 36° north latitude and 1° and 11° 40' west longitude and bounded on the north by the North sea and south by the Mediterranean sea, Algeria, and the desert of Sahara. It comprises the kingdom of Fez and Morocco north of the Atlas mountains and the territories of Sūs, Brā, Wadi Taflet, Tuat, and other regions in the south, which are subdivided into 33 districts each under a "kaid." In 1912 it became a French protectorate with the exception of the Spanish zone extending 207 miles along the Mediterranean sea from the Atlantic sea to the Mulawia river, which is administered by Spain; and the port of Tangier with its hinterland of about 140 square miles which is under international control. The area of the French protectorate is given at 160,711 square miles by some authorities, and the Spanish zone at 8740 square miles. Other estimates, however, place it higher, namely, at about 231,500 square miles of which Spain claims about 10,000 in the north zone and 960 in the region of Ifni on the west coast. In 1921 the area effectively occupied and controlled by the French was placed at 92,664 square miles. The estimates for population vary, but a recent one places it at 7,023,000 of which 1,075,250 were in the Spanish zone. The average density was on the basis of these figures 41 persons to the square mile. In the French zone in 1920 there were in the schools a total of 793 teachers and 24,059 pupils. In the Spanish zone the total number of pupils in that year was placed at 2180.

PRODUCTION. The only important occupation is agriculture. Only about 10 per cent of the population live in the ports and cities, the great majority living in the country districts and supporting themselves by food production and cattle-raising. The arable lands practically all

within the limits of the French zone, which, however, for the most part is mountainous leaving only the northeastern part and the great plains for agriculture. The total area available for cultivation is placed at 36,700 square miles and the area actually cultivated at only about 8500 square miles. The wheat grown is mainly of the hard variety and the soft wheat was formerly unknown but under official encouragement a considerable acreage has been planted with it. Barley, oats, corn, and sorghum are also raised. In 1920 considerable progress was made in the matter of agricultural coöperation. Groups in the farming communities were subsidized by the French government and showed a readiness to adopt modern methods. Measures for the organization of agricultural credit had also been taken and since 1917 the government has done much to promote land settlement. The production in 1919 totaled 48,384,882 bushels, a considerable falling off from each of the last four years. Barley and wheat make up the larger part of the production. In 1920 the estimates of these two crops were: Barley, 33,825,000 bushels; wheat 18,623,000 bushels. Comparatively few Europeans have been engaged in agriculture although the area in their possession has been estimated at 444,780 acres of which 370,650 were in the hands of Frenchmen. Among the landholders were several companies engaged in the exploitation of large tracts. After 1907 a considerable number of European settlers entered the country from Algeria. The agricultural resources though rich have not been adequately developed but improvements were under consideration in 1920 and new methods of cultivation had already been introduced along with the teaching of agriculture. Agricultural education made considerable progress in 1921. The teachings of the agricultural normal school were put into practice on farms in the neighborhood of Fes and Casa-blanca and promised excellent results. The colony has been the favorite destination of French emigrants who settle there at the rate of thousands a month. Manufactures have rapidly developed. The total French capital in industry rose from 36,240,000 francs in 1918 to 56,438,000 francs. Their industries, however, are still far below their capacity, with the workmen employed numbering only about 3155.

COMMERCE. Morocco was no exception to the rule that the war turned the attention of France to the great resources of her colonies. The riches of the country were in fact not appreciated until the war. These included not only vast mineral resources, but great agricultural possibilities. As to her trade, the external commerce in the French zone amounted in 1917 to 319,579,618 francs; in 1919, to 574,391,672; and in 1920, to 1,058,289,333. The value of the imports rose from 215,370,537 francs in 1917 to 812,908,482 in 1920. The exports during the same period rose from 207,579,581 to 245,980,851. The above figures do not give a clear idea of the quantity on account of the fluctuations of price, and the tonnage had not increased in proportion to the increase in value. Imports in 1920 showed a tonnage of 388,201, as compared with 246,301 in 1919; exports showed a decrease, being 164,674 in 1920 against 203,249 in 1919. The

mother country had the advantage in imports but England followed closely behind. The trade of the United States showed a great increase from the time of the war, mounting from about 6,000,000 francs in 1916 to 25,500,000 in 1920. The principal products imported from the United States were, in order of their value in 1920: Petrol, coke, petroleum, iron products, sugar, motors, coffee. Meanwhile the imports from Spain showed a corresponding diminution. Before 1914 exports from Morocco varied between 58,000,000 francs and 20,000,000 francs according to the nature of the agricultural season. Over 75 per cent of the Moroccan exports went to France, other Powers receiving comparatively small portions. Among the principal products exported may be mentioned: Wheat, barley, corn, almonds, grain, linseed, dry peas, various spices, eggs, etc.

RAILWAYS. The section of narrow-gauge military railroad which had been under construction for some time between the cities of Fes and Taza was officially opened to traffic on July 31, 1921, thus linking up the Algerian and Moroccan railway systems. As these military lines were available for the transportation of merchandise, the completion of the Fes-Taza section facilitated overland commercial relations between Morocco and Algeria.

FINANCE. The total debt of French Morocco amounted to \$78,200,000, including the loans of 1904, 1910, and 1914, which amounted, respectively, to \$12,000,000, \$19,500,000, and \$32,800,000. The loan of 1914 was increased in 1916 to \$46,700,000 and guaranteed by France. Under the 1914 loan, 4 per cent bonds were issued in that year to the amount of \$13,500,000, and 5 per cent bonds were issued in March, 1918, for the remaining \$33,200,000. From the proceeds of the 1914 loan were paid the debts of the Moorish government; the expenses of the creation of the port of Casablanca; the establishment of a road system; the construction of hospitals, schools, and colleges; the installation of telegraph and telephone lines; the building of municipal public works; and the protection of forests. Inasmuch as the amounts of the above loans were exhausted and the ordinary funds available were inadequate to allow the intensive development of natural resources, the French government authorized the protectorate administration, on August 19, 1920, to contract a public loan of \$143,629,343, to be used approximately as follows:

Construction of administration buildings	\$ 8,494,308
Construction of harbor works	54,054,054
Extension of road system	11,583,011
Development of hydraulic resources	17,374,517
First capital of phosphate monopoly	6,949,806
Posts, telegraphs, and telephones	13,706,563
Health service	8,301,158
Public instruction	7,722,007
Forestry	2,895,753
Conservation of Government property	3,505,312
Agriculture	5,791,505
All other purposes	3,251,451
Total	\$143,629,344

DEFENSE. In the French zone on March 1, 1920, the army was placed at 72,297 of whom 14,129 were of Moroccan auxiliary troops. The army is under the supreme command of the French resident-general, and is divided into five commands, corresponding to

the respective areas of Rabat, Fes, Casablanca, Meknes and Marrakesh, and Taza.

GOVERNMENT. The French zone is under a protectorate at the head of which is the French resident-general. The sultan, theoretically an absolute monarch, governs in accordance with the advice of the resident-general. Foreign affairs are under direct French control, and the officer in command of French troops is also minister of war. Sultan in 1921, Mulai Yusef who succeeded, August 18, 1912; French resident-general, General Lyautey. The rights of France and Spain over their respective zones in Morocco were determined by negotiations, termed in the Franco-Spanish Treaty of Madrid, signed, Nov. 27, 1912. The Spanish zone is administered under the direction of the Spanish higher commissioner and by a calipha, appointed by the sultan from two candidates presented by the Spanish government. Spanish high commissioner in 1921, General Damaso Berenguer, appointed Jan. 25, 1919. Calipha, Mulai el-Mehdi, appointed, April 19, 1913.

HISTORY

WAR IN SPANISH MOROCCO. On July 15 serious revolts among the Riff tribes in the Spanish zone of Morocco were reported. On August 5, the Spanish forces lost Nador and Zeluan, and the Spanish general Silvestre was reported to have committed suicide. On August 11 the Spanish post at Mount Arruit and the Spanish general Navarro were captured by the rebels. By August 28 the revolt in Morocco had spread to El Araish and 400 Spanish casualties were reported. Meanwhile on August 16 a body under General Sanjurjo captured Sidi Amaran which commanded the approach to the peninsula on which Melilla is situated; on August 20-27 Spanish warships bombarded the Moors on the coast between Cape Tres Forcas and Alhucemas; and on September 4 the Spaniards raised the siege of Mezquita. Nevertheless, some reverses had occurred during the same period. For example, the Moors captured Sheshuan in the western part of the Spanish zone, and Peñon de Vales, an island lying to the east of Ceuta; and soon afterwards the town of Tefer, also fell into their hands.

It was plain that the entire Spanish zone had risen against the mother country. This was attributed by critics of Spanish colonial policy to the bad management of Spanish officials. It was remarked that while Spain might be famous as a conquering nation, she was unable to administer the colonies she acquired. There had been many rash acts committed by the Spanish commanders in Morocco and a number of serious disasters involving heavy losses of life had occurred in consequence. General Sylvester, a veteran of the Cuban war, renowned for bravery, showed little skill in dealing with the natives and morally offended the leader of the insurrection, Abdel Kerim. This occurred at a time when the natives generally were exasperated against Spanish rule, and as a result all the tribes of the Melilla region revolted and immediately afterwards the entire population of the Riff followed suit. The Spanish authorities seemed not to have contemplated this possibility and at any rate they were unprepared for it. They met the emergency, however, with great courage

and heavy reinforcements were rapidly dispatched to the front.

Spain began to retrieve her defeats in September. A Spanish offensive was carried out under the High Commissioner, General Berenguer, with 60,000 effective troops, September 10. In the first place after a succession of spirited charges the Spanish troops captured the enemy's position on Mount Gurugu which had for a long time past been bombarding the southern outskirts of Melilla and blocking the attempt to recover the railway line running to the south of that city. Then, on September 17, the town of Nador along with its suburb was taken and a Spanish column was blocking the ravines leading down from Mount Gurugu. At the same time light batteries on the coast and guns from the fleet were shelling the sides of the mountain, and the cavalry had gained a position from which it could sweep the plains in the neighborhood of Zeluan and gain access to that position. Strong posts were captured by the Spanish columns on October 2, and by October 14 the high peaks of the Gurugu range were taken. On October 14 came the news that Zeluan had been captured. Between September and this latter date all the immediate objectives of the campaign had been achieved; and on October 16 it was announced that the Spanish government had obtained the consent of the Sultan to an arrangement that would include the line of the heights of the Gurugu in the Spanish military zone of Melilla. According to the English press reports, this region would protect against possible attacks from the tribes the city of Melilla which had been constantly threatened in recent engagements. At this time Spain was negotiating with the rebel leader from whom she demanded the punishment of the authors of the recent massacres and the cession of Alhercemas in order that a military post might be established there. A complicated situation arose in respect to the relations with the native chiefs and in connection with the treaty with France. The famous Riff chief Raisuli, was a fugitive from French territory and along with other chiefs sent messages announcing loyalty to Spain. But these chiefs were not loyal to the Sultan of Morocco, under whose authority Spain according to the Franco-Spanish treaty was ruling her zone as a mandatar. If Spain accepted the terms offered by the leaders of the Riff Berber insurgents, she would be disloyal to the sultan and to the French. Therefore the problem before the Spanish Prime Minister, Maura, was a difficult one, and many believed that the only solution was to crush the rebel leader Abd-el-Krim by force of arms; and yet the latter's peace terms were favorable to Spain and her only objection was from the point of view above mentioned. He asked for the setting up of a Spanish protectorate over the Spanish zone without regard to the rule of the sultan, and promised to turn over to Spain the native chiefs who had been responsible for cruelties to prisoners. In the closing months of the year there were frequent reports of difficulties in the army administration, arising from the military juntas at Madrid. The officers in the field in Morocco objected to the appointment of members of these juntas to positions on the new general staff, and the juntas retaliated by

establishing a committee of defense. In Morocco General Sanjurjo occupied the last refuge of the enemy in the Melilla zone, namely, the position of Rasmedura, November 22. In December the Moors were continuing the release of the Spanish prisoners captured in July.

THE QUESTION OF TANGIER. The government of Tangier rested upon a provisional arrangement determined after the diplomatic agreements of 1904 in respect to Spanish and French zones in Morocco. The British government in accordance with its policy of opposing the control of a single power over both shores of the Strait of Gibraltar demanded that Tangier should be placed under a special administration and that its military should be neutralized. This resulted in the government of Tangier and its surrounding territory by a number of commissions under the control of the diplomatic corps. For some years the question of status was raised by both France and Spain, but especially the former. The sovereignty of the sultan was recognized over the district. The French authorities were unwilling to consent to any conditions that would either compromise the rights of the sultan or injure the dominant French interest at Tangier, including various public institutions of which the French government had assumed the direction, and the diverse French business establishments and properties. France was insisting that in the long run the unity of Morocco required a change in the present situation, which change would extend the influence of France to point out that it had been a mistake to cut the Empire of Morocco into three parts, for the country presented a racial and religious unity. See **EXPLORATION**.

MORRIS, GEORGE PERRY. Author and journalist, died, June 15. He was born at Montclair, N. J., Feb. 18, 1864; graduated at Rutgers College in 1888; and pursued studies in economics and history at Johns Hopkins. He was on the staff successively of the *Mail and Express*, New York; *The Congregationalist*, Boston; and *The Christian Science Monitor*, Boston. After 1918 he was editor of the *Advocate of Peace*. He wrote: *The Norwegian Company System* (1894); and *Historic Towns of New England* (1898); and contributed largely to the periodical press.

MORRISON, HENRY C. Methodist Episcopal bishop, died at Leesburg, Fla., December 21. He was born in Montgomery County, Tenn., May 30, 1842. He was pastor at Atlanta, Ga., in 1886; missionary secretary, 1890-98, and bishop after 1898. He was a leader in the mission work of his church.

MORRISSEY, ANDREW. Clergyman, died in Paris, France, May 28. He was born in Ireland, in January, 1860; came to this country and graduated at the University of Notre Dame. He became professor of mathematics in the Sacred Heart College, Watertown, Wis., in 1880; and was director of studies of Notre Dame from 1885 to 1892, and president from 1893 to 1905. After which he was president of its board of trustees. He was known as a lecturer on education and other subjects.

MORRISSEY, ANDREW MARCUS. Lawyer, died in 1921. He was born at Livonia, N. Y., Dec. 27, 1871; educated at the public schools; admitted to the bar in Nebraska in 1896, and practiced law in that State. He was appointed

chief justice of the supreme court of Nebraska in January, 1915, and elected for the term ending Jan. 6, 1921.

MORSE, CHARLES HOMER. Manufacturer, died, May 5. He was born at St. Johnsbury, Vt., Sept. 23, 1833; and educated at the academy there. He became a clerk in Fairbanks and Company, the great scale manufacturers, and rose to be a member of the firm and chairman of the board of directors. He was also director of other important enterprises.

MORSE, ROBERT MCNEIL. See **NECROLOGY**.

MOTOR BOATING. See **YACHTING**.

MOTOR FUEL. See **CHEMISTRY, INDUSTRIAL**.

MOULE, CHARLES WALTER. British educator, died in May. He was a fellow of Corpus Christi College, Cambridge, and became Senior Fellow and President. He was born, Feb. 9, 1834, entered Cambridge in 1854, and graduated in the Classical Tripos in 1857. From 1879 to 1892 he was tutor of Corpus Christi and was later lecturer. He resigned in 1908 to take charge of the college library.

MOULTON, JOHN FLETCHER, LORD. British lawyer, died in London, England, March 9. Latterly he was well known for his public services as chief of the explosive supplies division during the war. He was born, Nov. 18, 1844, and educated at Cambridge where he was Senior Wrangler, and after taking his degree, remained as a fellow and lecturer for about three years. Having studied law he was called to the bar in 1874 and after 1885 secured an extraordinary large practice, being especially known in connection with patent suits. He was appointed Lord Justice in 1906 and in 1912 Lord of Appeal in Ordinary. Meanwhile he was elected to Parliament and took an active part in the patent legislation of 1900-05. During the war as chief of the explosive supplies division of the ministry of munitions he showed great energy and succeeded in carrying through policies that facilitated the production of explosives.

MOUNT EVEREST. See **EXPLORATION**.

MOUNT HOLYOKE COLLEGE. An institution of the higher learning for women at South Hadley, Mass.; founded in 1837. The enrollment for the fall of 1921 was 795. The faculty numbered 95 and there were besides 34 assistants, readers, curators, etc. The productive funds were \$2,220,879 and the income was \$108,333. The library contained 77,163 volumes and pamphlets. The college was completing an additional endowment fund of \$2,000,000 and raising \$1,000,000 for building purposes. It was expected that a new dormitory and a new science building for Botany, Zoology, Physiology, and Geology would be erected in the near future. President, Mary Emma Wooley, Litt.D., L.H.D.

MOUNT STEPHEN, LORD. See **GEORGE STEPHEN**.

MOVING PICTURES. In spite of the business depression prevailing in 1921, there was a fair measure of success in the moving picture industry. While complaints of diminished receipts were not uncommon, the industry had begun to feel the effect of the public's lessened purchasing power during the latter half of 1920 and the stronger distributing companies and well-established theatres were more than able to hold their own. Many new photoplays were brought out,

but none of them stood out for any especially new idea, nor in the method of treatment of their themes. As an art, the photoplay did not make any appreciable headway in 1921; and the competition of European films, while not yet to be reckoned with, was nevertheless a possibility of the near future. German and Italian producers exhibited, through American agencies, a number of excellently conceived and artistically staged plays and it was reported that the coming year would witness many more from the same sources, owing to the popularity of these first ventures. The opinion of many critics was decidedly favorable to the foreign films on account of their artistic portrayal of historical events, a more careful attention to detail and at least as good photography as the American product. The "talking moving picture," referred to in the 1920 YEAR BOOK (q. v.), seems to have made no headway in public appreciation during the year; and while several skilled investigators were making extended researches in the realm of colored moving pictures, nothing of note was brought to light. Audiences were much the same, both in make-up and appreciative powers. The former idea that moving picture competition was a serious menace to the success of legitimate theatres died a natural death. Both forms of entertainment had developed in their own individual way and each now has its followers. Many are patrons of both, according as their taste or mood decides for them; frequently, also, as the pocketbook determines.

Censorship, as usual, was a live topic. The State of New York created a Moving Picture Commission, which began its organized activities on August 1. Two men and one woman constituted its membership, which was empowered to examine and license all films submitted for exhibition within the State. Their report stated that they had examined, up to the end of the year, 1330 films that had not been shown previously, of which they approved 1170 without any eliminations. In 160 of the number, scenes or titles were ordered eliminated and 5 were unconditionally rejected. They asked for an additional force of inspectors in order to determine whether any unlicensed films were being exhibited. As in the past, there was considerable confusion and lack of uniformity in censorship laws in the different states and no measure covering the matter had made any perceptible headway in Congress.

In several instances, popular attention was centred for a time upon certain persons, who having figured prominently in some phase of scandal or crime, sought to increase their popularity through the medium of films made expressly to feature them as a hero or heroine. Due to the power of discrimination of the public taste, these ventures were usually unsuccessful in attracting the better class of patrons and the verdict of the latter soon determined the length of run of such productions. Some ingenious devices making use of moving pictures should be mentioned. A French inventor brought out a small camera, only 4×5×6½ inches in size, provided with a clockwork motor for operating a film, of which 20 feet could be placed in the box and enabling the operator to make twenty pictures. If desired, single exposures could be made as with an ordinary camera. In Germany,

a moving picture camera was developed for showing the progress of a surgical operation, which, while not new, had certain novel features. The camera was mounted on a long arm suspended from the ceiling directly over the operating table. It could be focussed by the surgeon by means of a sight arranged like a periscope, placed within easy reach. The camera was motor-driven, with necessary control switches conveniently placed.

MOZAMBIQUE. See PORTUGUESE EAST AFRICA.

MULHOLLAND, ROSA (LADY GILBERT). Author, died at Dublin, Ireland, April 26. She was born at Belfast, Ireland, and married in 1891 Sir John T. Gilbert. She wrote a long series of novels pertaining to Irish life, including: *A Fair Emigrant*; *Banshee Castle*; *Helty Gray*; *The Walking Trees*; *Cynthia's Shock*; *Terry*; *The Squire's Granddaughters*; *The Tragedy of Chris*; *Father Tim*; *Twin Sisters*; *Narcissa's Ring* (1915), etc., and volumes of verse including, *Vagrant Verses* and *Spirit and Dust*.

MULRY, JOSEPH ALOYSIUS. University president, died at Philadelphia, Pa., August 31. See *Who's Who*, volume 10.

MUNICIPAL GOVERNMENT. Accessions to the already long list of cities which have adopted the commission-manager form of city government continued through the year. By far the most notable addition to the list was Cleveland, Ohio, with its population of 797,000. This makes six cities with populations of more than 100,000 that have adopted the manager plan, but at Cleveland the new plan will not go into effect until Jan. 1, 1924. The other five cities in order of population are: Akron, Ohio, 208,000; Dayton, Ohio, 153,000; Grand Rapids, Mich., 138,000; Nashville, Tenn., 118,000; Norfolk, Va., 116,000. (For list of nearly two hundred cities which have adopted the standard form of city-manager plan, as recognized by the National Municipal League, see the accompanying table, including its footnote. At least three State legislatures authorized the adoption of the city-manager plan during the year. In both Indiana and Wyoming the authorization extends to any city, and in Missouri it applies only to third-class cities. The legislature of New Jersey again defeated a permissive city-manager bill. The strong and persistent opposition to the mere granting of permission to the municipalities of New Jersey to adopt the manager plan is said to come from the commissioners and their friends in the many cities and towns which have adopted the plain commission plan. The new Cleveland charter is notable not only for the size of the city but also because it provides for the election of the members of the commission or council by proportional representation, and for a considerably larger number of councilmen than usual, the number heretofore having been restricted generally to five and in a very few cases to seven or nine regardless of the size of the city. The twenty-five councilmen at Cleveland will be chosen from four districts, the proportional representation plan applying in each district. The unusually large council and the division of the city into districts are designed to meet objections that have been urged to the commission plan for large cities. The district representation principle is acknowledged without going to the extent of the common plan of ward representation, while

within each district the proportional representation plan is designed to give any large political group a voice in the city legislative body. The city manager at Cleveland will be appointed by the City Council and responsible to it as in other commission-manager cities. The new Cleveland charter was framed by a representative committee of citizens and in both the framing of the charter and in the campaign for its adoption co-operation was given by the National Municipal League through A. R. Hatton, field agent of the League. In Connecticut the city of New London adopted the commission-manager plan by a good majority, while New Haven voted it down by some 19,000 to 8000 votes out of a possible 46,000. The New London Council consists of seven councilmen at large at salaries of \$300 a year each. The manager is paid \$5000 a year. The city was previously governed by a Mayor and Council, and the town of New London by three selectmen. The latter sat with the Council, making a total membership of eighteen. *Lockport, N. Y.*, on Nov. 8, rejected the commission-manager plan by a small majority, this being the third adverse vote on the plan in that city—an interesting incident in view of the fact that in 1910 the Lockport Board of Trade formed a city-manager charter which became known as "The Lockport Plan." This charter failed of authorization by the state legislature. Since then a statute has been enacted which permits New York municipalities to adopt one of several plans of government. *Kalamazoo, Mich.*, voted down a proposal to abandon the commission-manager plan after it had been in use for some three years. At Dayton, Ohio, the first large city to adopt the commission-manager plan, an attempt was made to secure a popular vote on abandoning the plan, but the attempt failed. At *Buffalo, N. Y.*, which has the plain commission plan of government the Mayor vetoed a bill that had been passed by the New York Legislature that was designed to substitute for the commission of five members a council of fifteen members and a mayor with large powers, the councilmen to be elected six at large and nine from "council zones." At the hearings on this bill before the Mayor no one came forward to sponsor it, and the bill was characterized as being of "mysterious" origin. Another defeat of a change back from the plain commission to the mayor-and-council plan of city government proposal to occurred at *St. Paul, Minn.*, late in the year where there was a popular vote of over 16,000 for the change and nearly 22,000 against it. The proposed new charter for St. Paul provided for the federal plan with complete separation of the legislative from the executive branches of the city government. Had the proposal carried, there would have been a mayor with broad executive powers elected at large and a council of fifteen members of which twelve would have been chosen, one each from twelve wards, and three, one each from three districts composed of four wards each. In October, *Lowell, Mass.*, voted to change back from the commission plan to the mayor-and-council plan. The council will consist of fifteen members, one each elected by nine wards and six at large. The mayor, who will appoint nearly all the administrative officers of the city, subject to confirmation by the council, will be paid \$5000 a year and councilmen only \$300 a year. There is a board of public service of three members, which

will appoint a city engineer, a superintendent of streets, and a superintendent of water-works. There is a board of health, park commission, a budget and auditing commission, and several other boards. It is a notable fact that in practically all of the new charters, adopted or rejected, whether of the commission, the commission-manager, or the old mayor-and-council type, provision is made for a small or at least relatively small council, the somewhat larger councils being proposed for larger cities. A *New York City* charter revision commission was appointed near the close of the year by Governor Miller under an act of the legislature. The commission consists of fifteen members, of whom eleven are citizens, this number including Francis M. Scott, chairman, and of the Mayor, the Comptroller, a borough president, and a member of the Board of Aldermen of New York City. It was expected that the commission would conduct hearings throughout the early part of the year, frame a charter and submit it to a special session of the legislature. A proposed charter designed to consolidate the county and the various city and other minor civil division government of *Alameda County, Calif.*, including Berkeley and Alameda and other cities and towns, was defeated toward the end of the year. Provision was made for borough governments within the county, but powers of these boroughs were considered by some to be weak and unsatisfactory. Montreal, Quebec, after a considerable period of being governed largely by an administrative commission created by the Provincial Legislature, voted on May 16 on alternative charters. By a majority of some 17,000 in a vote of 68,000 out of a possible 147,000 votes a mayor-and-council charter was adopted and a council-manager charter was defeated. The adopted charter, which went into effect on November 1, provides for a mayor and for a council of thirty-five members elected by plurality votes, one from each of thirty-five wards. There will be an executive committee of five councilmen, chosen by the council itself, and a director of municipal services, also appointed by the council, the latter to have such duties as may be assigned to him by the council from time to time. The mayor will be paid \$10,000 a year and the councilmen \$1500, with an additional \$1500 for the chairman of the executive committee and \$1000 extra for the other four members of the executive committee. The rejected alternative charter provided for a council of fifteen members chosen by proportional representation, five from each of three districts, and a general manager to be appointed by the council. The alternative plans were outlined in detail in the *Canadian Municipal Journal* for April, 1921. A description of the government of *Greater Berlin, Germany*, by C. A. Bratter of the editorial staff of the *Vossische Zeitung*, Berlin, appeared in the *New York Post*, Sept. 16, 1921. The new city has a population of about 3,800,000 and includes the eight cities, fifty-nine rural towns, and twenty-six large agricultural districts within a radius of about 20 kilometres from the former Royal Palace. It will be governed by a central council having 225 members and a "magistracy, the chief governing body," of thirty members. The greater city will be divided into twenty "Bezirks" or districts, each provided with an assembly of fifteen to forty-five members and an executive body, the "Bezirksant," com-

posed generally of seven members with a mayor at the head. The district government will be under the direction of the government of Greater Berlin.

ENGINEERS IN MUNICIPAL GOVERNMENT. A growing recognition of the value of engineers in municipal government is apparent in some quarters. At *Memphis, Tenn.*, on the city commission of five members there were two engineer members in 1921, besides which the city clerk, the chairman of the water board, the superintendent of water-works, and the city sanitary engineer were engineers. At *Miami Beach, Fla.*, there were two practicing civil engineers and one retired mechanical engineer on the City Council of seven members, while, besides the city engineer, the superintendent of water-works was an engineer and the city clerk was formerly an engineering draftsman and office manager. At *Cranford, N. J.*, a suburb of New York City with 6000 population, a number of the engineers residing in the town, supported by other citizens, urged the Town Council to conserve the town funds and increase the efficiency of municipal work by appointing a competent professional man as town engineer and paying him amply for his services. As a result, the council engaged an engineer at a salary of \$6000 a year or \$1 per capita of population. A considerable percentage of the city managers of the country are civil engineers and of these a number are paid salaries of from \$5000 to \$10,000, the latter by Norfolk, Va. See YEAR BOOK, CITY MANAGER'S ASSOCIATION.

MUNICIPAL BOND SALES AND FINANCIAL PROBLEMS. War and post-war conditions have increased the financial problems of cities. Construction costs and operating costs have been high, increasing the pressure for heavy bond issues with high interest rates, crowding the bonded debt limit of cities, and also pushing up tax rates, which latter are in many instances limited by state legislation. A large volume of much needed public-works construction was deferred in 1918 and later years and many, if not most, cities are still behind in this respect. During the latter part of the year, owing both to the pressure of deferred construction and to the more favorable bond market, municipal bond issues—which had already been running higher than in recent years—were put out in large volume. For the entire year 1921 a total of some billion and a quarter of municipal bonds were sold, these including, however, all state, country, school, irrigation, drainage and other district bond issues. Owing to the high cost of construction, the buying power of these bond issues was cut in half. Some details of these municipal bond issues, with their buying power, as determined by the *Engineering News-Record* construction cost index (based on cost of structural steel, cement, lumber, and labor prices) were published in the journal named for Jan. 5, 1922. Summaries of municipal bond issues for the year 1921, by cities, States, and groups of States by purposes for which the bonds were issued and by rate of interest, with some of the figures summarized and compared with earlier years, may be found in the *New York Commercial and Financial Chronicle* for June 26 and Dec. 29, 1921, with comparisons for earlier years, and a tabular summary for the past ten years may be found in the *New York Bond Buyer* for Jan. 7, 1922. See also CITY PLANNING, GARBAGE,

MUNICIPAL OWNERSHIP, SEWERAGE, WATER WORKS.

CITY-MANAGER MUNICIPALITIES CORRECTED TO JAN. 1, 1922

From *The Story of the City Manager Plan* compiled and published as a small pamphlet by the National Municipal League, 261 Broadway, New York City.

There are, in addition, about eighty towns, mostly in States where city manager charters are not yet legalized, which employ so-called city managers by ordinance and under various make-shift conditions. Only the towns which have adopted the plan by charter are listed above.

MUNICIPAL LEAGUE, NATIONAL. See NATIONAL MUNICIPAL LEAGUE.

MUNICIPAL OWNERSHIP. A large majority of votes was cast against city purchase of the privately-owned gas works at Lowell, Mass., while Jersey City, N. J., voted about six to one in favor of municipal gas works. Immediately after the Jersey City election it was announced that the Public Service Gas Co., which supplies gas in Jersey City, Newark, and much additional territory, would fight the proposed city gas works in the courts. A year earlier, Newark, N. J., voted for a municipal light and power plant, but no funds for the purpose were provided. No progress has been made on the proposed municipal milk plant for Jamestown, N. Y., noted in the last previous YEAR BOOK. The banker whose bid for \$150,000 bonds for the proposed plant was accepted refused to take the bonds after they were printed in April, alleging that the city lacks authority to go into the milk business. With the purchase of the privately-owned garbage reduction plant by New Bedford, Mass., the list of cities which have bought or built such plants was increased to eleven, as follows: New Bedford, Rochester, Syracuse, and Schenectady, N. Y.; Philadelphia; Washington, D. C.; Akron, Cleveland, and Columbus, Ohio; Indianapolis, Ind.; Chicago. Under street railways it may be noted that the annual report on the municipal railways of San Francisco shows that on June 30, 1921, the city owned 67.12 miles of single track. The annual report of the Transit Commission of New York City for the year 1921 contains an outline of a tentative plan to readjust the entire local transportation system of the city, with provision municipal ownership of all the lines, with private operation under public control. At Toronto, Ont., the Toronto Transportation Commission took over the entire property of the Toronto Railway Co., at the expiration of the company's 30-year franchise on September 1. The city already owned and was operating 20½ miles of single track. It is stated that an agreement has been reached under which the commission will take over the various radial or suburban lines that enter the city, giving the city possession of 163 miles of single track.

MURAT, G. St. Ex-director of the Meteorological Institute of Roumania, died January 12.

MURPHY, JOHN FRANCIS. American landscape painter, died January 30. He was born at Oswego, N. Y., Dec. 11, 1853; and first ex-

hibited at the National Academy of Design in 1876. His work has been admired greatly for its refinement and poetic sentiment, its marked simplicity of style and appreciation of the quiet aspects of nature. Among his paintings the following representatives of his work may be mentioned: "October"; "The Path to the Village"; "Indian Summer"; "The Old Barn"; "The Hilltop"; "Afternoon Lights on the Hills"; "Neglected Land." He received numerous prizes, including the Webb prize of the Society of American Artists in 1887, and the Inness medal in 1910.

MURPHY, STARR JOCELYN. Lawyer, died, April 4. He was born at Avon, Conn., June 17, 1860; graduated at Amherst College in 1881, and at the Columbia Law School in 1883. After 1904 he was personal counsel and representative of John D. Rockefeller in his philanthropic work, and was an officer in the various Rockefeller benevolent institutions.

MURRAY, THOMAS. See NECROLOGY.

MUSCLE SHOALS. One of the great industrial projects of the war was the proposed nitrate and water-power development which was planned to be built at Muscle Shoals on the Tennessee river, Alabama. Here the great Wilson Dam was started and power and electrochemical works laid out on a stupendous scale and at vast cost. The termination of the war of course removed the military necessity for such a development and as it involved considerable outlay its necessity in times of peace was seriously questioned. As a result of action in Congress on the Appropriation Bills of 1921 further funds were denied and in April construction work was shut down. Then the question arose as how best to utilize what had been done already and what would be the best policy for the future.

It will be recalled that the plan adopted and on which work was begun provided for the construction on the Tennessee river of two locks, a dam, and a power house, 2.7 miles above the railroad bridge at Florence, Ala. This dam would secure a least depth of $9\frac{1}{2}$ feet at extreme low water for a distance of 14.7 miles, and for the generation of electric power for the production of nitrates or other products needed for munitions of war, and in the manufacture of fertilizers and other useful products. The length of the entire section provided for in the improvement was 36.6 miles, its lower end being 265.5 miles above the mouth of the Tennessee river.

On the basis of the appropriation made during the war and immediately thereafter work was pushed vigorously until Congress in the spring of 1921 decided to make no further appropriation for its prosecution. In 1921 the Chief of Engineers of the U. S. Army, who had the construction in charge reported that all preparatory work in the nature of camps, roads, railroads, plants, shops, etc., had been completed. Earth excavation for the lock was 90 per cent completed and rock excavation 18 per cent. About 66 per cent of the excavation and foundations for the dam were completed and about 35 per cent, of the concrete placed. About 48 per cent of the excavation for the power house section was completed and approximately 4.6 per cent of the concrete placed. Then came the suspension of construction so that the government property had to be collected and stored, rented floating

property returned and construction equipment placed in condition for indefinite storage or lay-up. This interruption of construction also led to the navigation of the river being completely blocked.

The Chief of Engineers also announced that a net total of \$15,278,828 had been expended on the project, which, in 1921 was about one-third completed, the percentages of completion for the various units being: Wilson Dam, 45 per cent; power house, 11 per cent, and locks 10 per cent. The sum expended in the fiscal year ended June 30, 1921, was \$7,840,781, the principal items listed being:

Dam construction, \$3,108,800; power house construction, \$1,017,000; main line railroads, construction, maintenance, and operation, \$495,500; general plant, purchase construction, operation, and maintenance, \$1,391,200; camp construction, maintenance, and operation, \$728,500; general expenses, including flood losses, labor recruiting, and office expenses, \$731,300, and lock construction, \$143,800.

On July 1, 1921, the balance available out of funds appropriated was \$398,921 which would be exhausted by August, 1922, as the expenses of guarding and maintaining the property average \$30,000 a month.

In case the government decided to go on with the work the natural sequence proposed by the army engineers was construction of cofferdam No. 2 and work therein; continuation of excavation for lock; continuation of concrete work in dam and continuation of excavation and concrete construction for power house. The amounts expended for each would depend upon the date and amount of the appropriation. The rate of expenditure would be approximately \$625,000 per month.

However, the government looked rather for some means of making the project remunerative as soon as possible and sought some interest that would either take on the work or agree to operate it when finished. Of course it was a proposition of vast magnitude and with existing financial conditions there were few interests willing or able to undertake its promotion. However, in July Henry Ford, the Detroit automobile manufacturer, offered to purchase the Muscle Shoals plant which included the completed nitrate-producing units, the partially completed dam across the river and a partially developed water power in the condition just referred to. Mr. Ford's offer was essentially as follows:

(1) He will take a 100-year lease upon the Wilson Dam and No. 3 Dam and electric installation when completed. For this he proposes to pay interest at the rate of 6 per cent on the sum of \$28,000,000, which is the estimate for the total cost, and to amortize not only this sum but the entire cost of both dams over a period of 100 years. (2) He offers to purchase all the nitrate plant and equipment, lands, steam plant, etc., for \$5,000,000. (3) He offers to convert and operate the large nitrate plant for the production of fertilizer compounds and as a standby for government explosives in case of war. (4) He agrees to limit the profits of the fertilizer plant to 8 per cent, an independent board embodying representatives of the American Farm Bureau and the National Grange and the Farmers' Union to certify to this maximum.

In announcing this offer Secretary Hoover said: "The acceptance of the offer is entirely for decision by Congress, and that body no doubt will be greatly guided by Secretary Weeks' views in the matter. Mr. Ford has made a genuine proposal. It shows courage to agree to pay out \$5,000,000; to spend further sums upon large works, and besides to take an annual obligation for about \$1,500,000 for 100 years, and to agree to maintain a nitrate plant in reserve for the government for that period. Whatever may be the result, Mr. Ford's offer does prove what the public associations have contended—that the completion of this project has a commercial value."

Mr. Ford and his engineers made personal and extended examination of the site and the development, and his offer and the various collateral questions were thoroughly discussed. Mr. Ford announced various schemes for a vast industrial and civic development, while water power, fertilizer, farming, and other interests were all interested in the proposition as presented. Other persons discussed in a tentative way the matter of taking on the property, but not on so large and responsible a scale as Mr. Ford. At the end of the year there was no definite conclusion or settlement reached in the matter but there had been conferences between the Secretary of War and Mr. Ford and his representatives.

MUSEUMS. See PAINTING AND SCULPTURE.

MUSIC. GENERAL NEWS. The National Association of Harpists (founded in August, 1919) held their first annual convention at the Hotel Pennsylvania in New York, on March 30. The most striking feature of this gathering was the opening concert at Carnegie Hall, rendered by a novel orchestra of ninety harps under the direction of Maud Morgan.—In April the Society of Friends of Music was established in Baltimore for the purpose of extending the scope of the Symphony Orchestra. The number of concerts, both at home and on tour, is to be more than doubled. Besides, a choral society is to be organized, which is to coöperate with the orchestra in the production of larger works (Mahler's symphonies, etc.).—In June the Canadian Parliament passed a new copyright-law, prohibiting the reproduction, performance, or publication of any copyrighted literary or musical works (the latter to include phonograph records and music-rolls), except upon payment of stipulated royalties. The term of copyright is for the life of the author and for fifty years after his death; in the case of records or rolls, for fifty years after the making of the original plate. It is estimated that the authors, composers, and publishers of the United States will be benefited by this law to the extent of \$175,000 annually.—Under the leadership of Edgar Varese the International Composers' Guild was organized in New York (July) for the purpose of introducing new works of members. Four concerts are to be given annually. The prospectus makes it clear that only works of extreme futuristic tendencies are to be included, since "the standard symphony orchestras present only the most timid and anemic of contemporary productions, leaving absolutely unheard the composers who represent the true spirit of our time."—Through the will of Dr. Victor Bayer, organist of Trinity Church, New York, Columbia University received \$20,000 to endow a fellowship for research in ecclesiastical

music.—During the summer the Pasadena Music and Art Association was founded and a "Composers' Fellowship" established. The recipient, who must be a composer of merit, receives \$2000 a year, on condition that he devote one-half of his time to composition. Arthur Farwell was named as the first holder of the fellowship.—In order to attract American students, the French Ministry of Fine Arts established at Fontainebleau a conservatory, where during the summer months American students may come into closer contact with eminent French musicians. The entire cost for board and tuition was fixed at \$100 a month. François Casadesus was appointed first director.—The American Academy in Rome, established by the Juillard Foundation (see YEAR BOOK for 1919), announced the endowment of a fellowship in composition which entitles the winner to a three years' residence in Rome (with privilege of travel) and an annual allowance of \$2000. Every year a composition of a certain prescribed form is to be submitted to the committee. The competition is restricted to native Americans who are unmarried. The judges of the first competition were Walter Damrosch, Albert Spalding, Richard Aldrich, John A. Carpenter, William J. Henderson, and Owen Wister. Out of fourteen scores submitted the prize was awarded to one by Howard H. Hanson of the College of the Pacific Conservatory of Music of San José, Calif. A special fellowship for two years was awarded to Leo Sowerby of Chicago.—On November 30 there was formed in New York the Caruso American Memorial Foundation, with Paul D. Cravath as president. Its object is to raise \$1,000,000, the income of which is to be divided equally between scholarships for talented students and the promotion of popular interest in music.—After having been vacant for four years since the resignation of O. G. Sonneck, the important position of Chief of the Music Division of the Library of Congress was filled by the appointment of Carl Engel of Boston.

COMMUNITY MUSIC. The keen interest shown in the observance of the first Music Week held in New York (see YEAR BOOK for 1920) led to a repetition of the event on a vastly more elaborate scale during the past year (April 17-24); 500 churches observed the opening Sunday with special musical services, 2000 local organizations took part, and about 200,000 musical performances, ranging from pupils' recitals to symphony concerts and representations of Grand Opera by the Metropolitan Opera Company, were crowded into that single week. Following the example set by the metropolis, other cities, as far away as San Francisco, Berkeley, and Seattle, had their Music Week. In Syracuse the local Opera Association gave a highly creditable performance of *The Mikado* (in March), without any assistance of outsiders even in the principal parts. The Philadelphia Operatic Society, which is recruited entirely from the ranks of amateurs (excepting a part of the orchestra), scored a pronounced success with its most ambitious undertaking, a complete performance of *Tannhäuser*, under the direction of Vassili Leps, at the Academy of Music, in November. The second summer-season of municipal opera in St. Louis yielded a profit of \$21,000, as against \$3000 of the preceding year.

ARTISTS. INSTRUMENTALISTS. Among the host of distinguished foreign visitors Richard Strauss attracted the most widespread attention and

general interest. As a composer he has been for two decades the dominating figure in the world of music, while as a conductor he ranks second to none. His great tone-poems, an indispensable part of the repertory of all our symphony orchestras, have long been familiar to American audiences. Even his latest work, a symphonic suite from *Der Bürger als Edelmann*, had its American première, months before the arrival of the composer, by the Boston Symphony Orchestra (Feb. 12). If as creative artist Strauss disclosed no new phase of his art, his consummate mastery in handling large orchestral forces was revealed fully only during this last visit. On the occasion of his former, and first, visit (Feb.-April, 1904) he had at his disposal a heterogeneous mass of players, whereas on this tour he was provided with the finest permanent orchestras of the country. From his first concert with the Philadelphia Orchestra (New York, October 31) to the last with the New York Philharmonic Orchestra (New York, Jan. 1, 1922) his appearances were an uninterrupted succession of triumphs. Within that period he conducted the Philadelphia Orchestra four times in New York and three times in Philadelphia, the New York Philharmonic Orchestra three times in New York, the Chicago and the Detroit Orchestra once, each in its home city. With the single exception of Theodore Thomas, Strauss is the least demonstrative and spectacular of the great orchestral leaders heard in this country, but it is the magnetism of a powerful personality that impresses both performers and listeners. His interpretation is distinguished not only for passionate sweep, superb climaxes, and a wealth of subtle nuances, but also for the clear outline of the architectonic structure and unusual clarity, without undue preponderance, of the inner voices. Aside from his appearances as conductor, he was heard as pianist in his own songs and chamber-music in New York, Philadelphia, Chicago, Detroit, Pittsburg, Boston, Washington, Baltimore, Hartford, St. Louis, Kansas City, Indianapolis, Milwaukee, Cincinnati, Cleveland, Madison, Wheeling, and Reading. Considering the enormous demands upon his time by his activities as composer and conductor, it is not at all surprising that his pianistic performances gave unmistakable evidence of lack of systematic practice. As assisting artists in these recitals he had Elizabeth Schumann (18 times), Claire Dux (3), Elena Gerhardt and George Meader (each 1), the violinists Bronislaw Hubermann (5), Mishel Piastro (4), Emil Heermann and Paul Kochansky (each 1), the violincellists Willem Willeke and Michael Penha (each 1) and the pianist Elly Ney (1). Altogether Strauss appeared in 42 concerts within two months.—One of the foremost Finnish composers, Selim Palmgren, whose works have figured prominently in recent years on the programmes of the great pianists in this country, introduced himself as interpreter of his own works (début, New York, October 4). The keen interest manifested was due to his merit as composer, rather than as pianist, in which latter capacity he did not excel. At his American début, with the Philadelphia Orchestra (Philadelphia, Oct. 28), Alfredo Casella, one of the leaders of futurism in Italy, presented himself in the triple capacity of composer, conductor, and pianist. Before his advent some of his compositions had been heard, and politely declined, by the audiences of several

of our great orchestras. The composer's presence failed to produce any change of attitude on the part of his listeners. But when he played Mozart's Concerto in D minor, he revealed pianistic and interpretative gifts of the highest order. He met with the same reception at subsequent concerts in New York and other cities. How so excellent an exponent of the works of classical and romantic composers, an artist possessed of such refined sensibilities, can identify himself with a movement like futurism will probably remain an unfathomable mystery for the average music-lover.—Christian Sinding, the eminent Norwegian composer, made no public appearances on his first visit to America, but devoted himself to his duties as special professor of composition at the Eastman School of Music in Rochester. The Ithaca Conservatory was responsible for the first American visit of the great Bohemian master of the violin, Otakar Sevcik, who spent the year in charge of the master-class at that institution.—An important début was that of Marcel Dupré, the famous organist of Notre-Dame, Paris, who at the same time inaugurated the magnificent new organ installed in the Wanamaker Auditorium (New York, Nov. 18). The finished execution of the first part of the programme, devoted to Bach, Franck, and Widor, gave ample evidence of the fact that he has no superior among living organists, while his masterly improvisation of a symphony in four movements in classical style, on themes handed to him by six eminent organists, recalled the stupendous feats of improvisation by the late Alexandre Guilmant.—Of the host of new pianists only a few of surpassing excellence can be mentioned. Ignaz Friedman, of whom European and South American critics had written only in superlatives, proved in his very first recital (New York, Jan. 7) that such praise was not exaggerated. A wonderful tone, endless variety of nuances and dynamic gradation, enormous speed, dazzling brilliance and almost superhuman endurance, combined with a fascinating personality, roused his audiences to demonstrations of unusual enthusiasm. A similar impression was produced by the appearances of the German pianist Elly Ney (début, New York, Oct. 15), whose masculine vigor and penetration entitle her to rank with the giants of the keyboard, irrespective of sex. In the same class is the Austrian, Artur Schnabel, whose début (New York, Dec. 25) justified his European reputation. Juan Reyes, a native of Chile, made his début (New York, Jan. 27) under unfavorable conditions, having barely recovered from a severe illness. Later appearances proved him an artist of unusual excellence. Among the innumerable aspirants to fame a young Cuban girl of eighteen, Margot de Blanck (début, New York, Nov. 4), attracted more than ordinary attention by a tone of ravishing beauty. But also in other respects her art can be measured only by the highest standards.—After periods of more or less protracted absence several established favorites revisited the scenes of their former triumphs. Antoinette Szumowska reappeared in Boston (Jan. 13), and showed that her art has not deteriorated, although she devoted herself during the period of the war to various activities in behalf of her native Poland. In the same city, after an absence of twenty years, the eminent Hungarian Ernst Dohnányi began another most successful tour of the United States (Feb. 17). Wilhelm

Bachaus, well remembered for his prodigious technic and fiery temperament, began his third tour in Chicago (Oct. 28). Ernest Schelling reappeared after four years (New York, Nov. 29), a finer artist than ever. A notable achievement by Olga Samarov was her masterly playing of all Beethoven's sonatas for piano in eight recitals (in New York). Other prominent artists who contributed to the year's pianistic offerings were Josef Hofmann, Harold Bauer, Josef Lhevinne, Mischa Levitzki, Sergei Rachmaninov, Arthur Shattuck, Alfred Cortot, Rudolf Ganz, Ernest Hutcheson, Robert Schmits, John Powell, Benno Moiseivitch, Cyril Scott, Ossip Gabrilowitsch, Leo Ornstein, Percy Grainger, Fannie Bloomfield Zeisler, Yolanda Merö, Guiomar Novaes, Margaret Volavay, Winifred Byrd, Germaine Schnitzer, Augusta Cottlow.—Slowly, but surely, the recital for two pianos has come to attract wider attention. The pioneers in this field, the sisters Rose and Ottilie Sutro, gave their usual series, as well as the two Boston artists, Guy Maier and Lee Pattison. Besides these, two artists of the first rank, Josef Lhevinne and his wife, Rosina, appeared with emphatic success in joint recitals.—A unique recital, unparalleled in the history of piano playing, was given in New York (Dec. 21) when fourteen pianists (Schelling, Stojowsky, Lambert, Grainger, Friedmann, Bauer, Ornstein, Gabrilowitsch, Lhevinne, Casella, Hutcheson, Bachaus, Ney, Schnitzer) appeared in one concert, each at his own instrument. In the final numbers, Schumann's *Davidsbündlerltanze* (last movement) and Schubert's *Marche Militaire*, all directed by Walter Damrosch, united in a sonorous and spirited rendition. This unusual concert had been arranged as a benefit for Moriz Moszkowski, sick and in want in Paris. The proceeds forwarded to the composer amounted to \$15,000.

Of new violinists the Russian, Alexander Schmuller (New York, January 13; Tchaikovsky concerto), proved the sensation of the year. A man of striking personal appearance, strongly resembling the pictures of Paganini, his playing also exerted upon his audience some such demonic influence as was universally attributed to the great Italian. His tone is large and sensuously beautiful, his technic prodigious, his intonation infallible, his interpretation penetrating and grandiose. When the last note died away, a riotous demonstration broke loose. His countryman, Izzy Mitnitsky (New York, Jan. 17), showed that he need not fear comparison with the younger Russian violinists that have won favor in the last few years. Erika Morini, a sixteen-year old girl of Austro-Italian descent, made a distinctly favorable impression at her début (New York, Jan. 26). She has a large, sympathetic tone, a brilliant and reliable technic and a remarkable feeling for style, even if her interpretation is not quite mature. But on her reappearance, in November, it was evident that she had made considerable strides forward in this latter respect. Paul Kochansky (New York, Feb. 14; Brahms concerto) disclosed an art profoundly moving and exquisitely refined. The impression made by Carlo Sabatini (New York, Feb. 22) was that of a serious, capable artist. Like most Hungarians, Emil Telmányi (New York, Oct. 20), is preëminently a temperamental player. His tone is warm and beautiful, although the intonation is not impeccable. After an absence of twenty-seven years the erstwhile child prodigy,

Bronislaw Hubermann, returned as a mature artist (New York, Oct. 17), a formidable technician and fine interpreter. Another wonder-child, Ferenc Vecsey, returned after a period of sixteen years (New York, Nov. 1), with his original fiery, almost volcanic, temperament very much subdued, so much so, that the man's dignified repose appeared a little studied. Other eminent violinists of the year were Frits Kreisler, Juan Manén, Efrem Zimbalist, Albert Spalding, Jacques Thibaut, Duci Kerekjarto, Vasa Prihoda, Alexander Seibald, Mishel Piasiro, Gustave Tinlot, Kathleen Parlow, Isolde Menges, Helen Teschner-Tas, Daisy Kennedy, Thelma Given.—The first of the new violoncellists was a young Italian, Arturo Bonucci (New York, March 24). What he lacked in breadth of style and depth of emotion, he made up in delicacy and grace. A mere boy, Maurice Brown (New York, March 25), impressed his hearers by his wonderful technical fluency and marvelous tone. A young Hungarian, who enjoys the distinction of being Popper's last pupil, Rossi Varady (New York, Oct. 15), exhibited a truly remarkable artistry, the result of a combination of many excellent qualities in equal proportion, tending to throw into high relief the performance as a whole. The famous Russian, Josef Press (New York, Dec. 1), fairly carried away his listeners by his poetic and intensely emotional playing, his large, warm tone and an extraordinary command of dynamics. Lovers of the violoncello had the opportunity of admiring also the art of Leo Schulz, Boris Hambourg, Gutia Casini, Hans Kronold, Cornelius Van Vliet, Hans Kinder, Georges Miquelle, May Mukle.

VOCALISTS. The first recital of the famous and much-heralded Russian baritone of the Vienna Opera, Josef Schwarz (New York, January 3), gave proof of the fact that the high praise accorded him by European critics was justified. With the natural gift of a rich, vibrant, and sympathetic voice the artist combines great personal magnetism and a dramatic temperament that makes each song stand forth as a miniature drama. The début of another star of the Vienna Opera, Selma Kurz (New York, January 9), introduced one of the world's greatest coloratura sopranos, whose success was instantaneous and emphatic. Less dazzling than the two preceding was the Spanish soprano, Francesca Catalina (New York, January 1), a fine artist with a voice of unusual range, perfectly equalized in the different registers. Frieda Klink, a splendid mezzo-contralto (New York, January 11), established herself as one of the elect in the field of the Lied. The same may be said of the young mezzo-soprano Louise Stallings (New York, April 5), who exhibited rare natural gifts enhanced by perfect artistry. Another mezzo-soprano, Henrietta Safonov (New York, April 11), a niece of the great conductor, proved herself a versatile artist, worthy of the distinguished name she bears. One of the finest new baritones heard in a long time was Richard Hale (New York, April 12), a singer endowed with an unusually powerful and beautiful voice. Success little short of sensational attended the début of the Russian bass Alexander Akimov (New York, October 20), who thrilled his audience with the quality of his sonorous organ, as well as with his vivid delineation of mood. Three days after the début of her husband, Selim Palmgren, the celebrated Finnish soprano, Maikki Järnefelt, introduced herself

with a varied programme well calculated to show to advantage her striking dramatic power (New York, October 7). Fourteen years after his first visit the eminent Russian basso profundo, Feodor Shaliapin (Chaliapine) entered upon a succession of veritable triumphs, beginning with his first recital (New York, November 13). Other notable reappearances, after a greater or less number of years, were those of Alma Gluck (New York, March 6), Emma Calvé (Boston, December 25), Julia Culp (Boston, April 3), Edmond Clément (Boston, October 22), Elena Gerhardt (New York, October 23). In the case of Mmes. Gluck and Calvé the voice showed traces of the passage of time, although their artistry has remained unimpaired. The other artists were still in full possession of their splendid powers. Among the more prominent singers of the year were Ernestine Schumann-Heink, Margarete Matzenauer, Frieda Hempel, Yvonne de Tréville, Luisa Tetrazzini, Louise Homer, Carolina Lazzari, Mabel Garrison, Birgit Engell, Rosa Raisa, Nina Tarasova, Alessandro Bonci, Tito Schipa, Charles Hackett, Reinald Werrenrath, Gervase Elwes, Louis Graveure, Lambert Murphy, Rafael Diaz, Edward Johnson, Royal Dadmun.

ORCHESTRAS. Sixteen years after his first brief American visit, when he conducted two concerts of the New York Philharmonic Society (Nov. 10 and 11, 1905), Willem Mengelberg made his appearance on January 11 as conductor for the second half of the season of the National Symphony Orchestra of New York, Artur Bodansky having led the first half. Mengelberg's success was instantaneous and overwhelming. At his final concert (March 25) the demonstrations of the audience reached the pitch of frenzied enthusiasm. The wonderful results he obtained were due not only to his personal magnetism and authority, but also largely to the numerous rehearsals on which he insisted. This constant rehearsing brought the orchestra to the highest point of technical excellence, but it also added considerably to the season's deficit, so much so, that the guarantors decided to withdraw their support. Mengelberg's immense popularity and drawing-power had been watched by the directors of the Philharmonic Society, who came to an agreement with the directors of the National Symphony Orchestra. Accordingly, some of the directors of the disbanded orchestra joined the Philharmonic board; Stransky and Mengelberg were to conduct, respectively, the first and second half of the season; Bodansky was engaged for a number of concerts as guest-conductor; Hadley remained as assistant conductor. The Philharmonic orchestra was thoroughly reorganized and increased to 120 performers by the addition of the complete woodwind section from the National, from whose ranks were also selected a considerable number of players of stringed instruments to replace older or less efficient men. Instead of the old Philharmonic schedule of one two-hour rehearsal for each symphony concert, a new schedule requiring three three-hour rehearsals was adopted. The quality of the playing after the beginning of the new season in the fall left no doubt as to the beneficial results of intensive rehearsing. The success that attended two performances of the New York Symphony Orchestra conducted by Albert Coates led to his engagement as alternate conductor with Walter Damrosch. The Society offered two prizes

of \$1000 and \$500, respectively, for the two best orchestral scores by American composers. The judges (Damrosch, Stokowski, Chadwick, Carpenter, Kneisel) awarded the first prize to Louis T. Gruenberg, of New York, for his symphonic poem, *The Hill of Dreams*, the second to Carl McKinley, of Hartford, for *The Blue Flower* (for performance of these works see NOVELTIES). After the most serious crisis in its history (see YEAR BOOK for 1920) the Boston Symphony Orchestra, under Pierre Monteux, gradually recovered its equilibrium, when the ranks of the deserters had been filled. But the preceding period of storm and stress resulted in a deficit of \$131,000, which sum exceeded the pledges by about \$50,000. Under the circumstances the trustees found themselves obliged to appeal to the music-lovers at large, who were not found wanting. This manifestation of general interest led to the adoption of a new policy in the matter of guarantees. Instead of relying upon the generosity of a few wealthy patrons to cover the inevitable annual deficit, the trustees secured a larger number of guarantors. The Philadelphia Symphony Orchestra was increased from 96 to 104 players, and its New York series of eight concerts to ten. Under its regular conductor, Leopold Stokowski, it gave the first complete performance heard in Philadelphia in twenty years of Beethoven's Ninth Symphony, for which a chorus of 240 voices had been specially trained by Charles Heinroth. After ten years the Chicago Symphony Orchestra, under Frederick Stock, revisited Boston (January 24) and New York (January 25), and demonstrated once more that it need not fear comparison with the great orchestras of the East. After the death of its regular conductor, Max Zach (February 3), the remaining concerts of the St. Louis Symphony Orchestra were directed by various guest-conductors, Rudolf Ganz, Theodore Spiering, Dirk Foch, Frederick Fischer. Of these Ganz made the deepest impression, and was elected Zach's successor. Besides giving its regular series of concerts, the Detroit Symphony Orchestra (Ossip Gabrilovitch) furnished the incidental music in a cycle of dramatic masterpieces of Shakespeare and Maeterlinck. The Erie Symphony Orchestra, which, on account of the war and the death of its conductor and founder, Franz Kohler, was disbanded in 1917, was reorganized, and gave its initial concert, under the direction of Henry B. Vincent, on January 30. After several months of rehearsing the new Buffalo Symphony Orchestra, under Arnold Cornelissen, made its first public appearance on December 11. Sixty employees of the Wurlitzer Company, manufacturers of musical instruments of Chicago, organized the Wurlitzer Symphony Orchestra and gave their opening concert, under V. J. Grabel, on April 10. At the Metropolitan Museum of Art of New York a series of free symphony concerts, under the direction of David Mannes, attracted an average audience of 6000 persons. All expenses were borne by John D. Rockefeller. In order to give young musicians an opportunity to develop into skilled orchestral players, Mrs. E. H. Harriman established the American Orchestral Society of New York. A number of neighborhood orchestras, under experienced conductors, were organized. The more advanced players were formed into a central body, under Dirk Foch, and gave free concerts in various sections of the city. Within

the first two months 500 performers had enrolled in the different groups. The attendance during the fourth season of the popular open-air concerts at the Stadium of the College of the City of New York (July-September), under Henry Hadley and Victor Herbert, exceeded that of any previous season. The same fact can be recorded of the fifth season of Edwin Goldman's free band concerts on the Green of Columbia University. The enormous success of Toscanini and his La Scala Orchestra of the preceding year induced the management to arrange several additional concerts, thus extending the tour well into the past year. In the earlier part of the year differences, arising out of a reduction of salaries, between the theatrical managers and musical union in New York culminated in a general strike. In order to raise funds, the musicians formed a monster orchestra of 258 performers, under Arnold Volpe, and gave six financially highly successful concerts (in August).

FESTIVALS. Instead of giving its customary concerts through the season, the New York Oratorio Society (Walter Damrosch) repeated the successful experiment of the preceding year of concentrating its energies on a series of festival concerts on a large scale (March 29-April 2). For the performance of Pierné's *La Croisade des Enfants* the chorus was augmented by the addition of 600 children's voices, while a Bach-Wagner programme was given with the coöperation of the famous Bethlehem Bach Choir, which under its conductor, Frederick J. Wolle, gave flawless renditions of several Bach cantatas. The other works produced were Bach's *Passion According to St. Matthew*, Elgar's *Dream of Gerontius*, Verdi's *Requiem* and two dramatic performances, by Margaret Anglin's company, of Euripides' *Iphigenia in Aulis*, with incidental music by Damrosch. The closing concert of the 28th annual Ann Arbor Festival (May 19-21) marked the farewell appearance as conductor of Dr. Albert A. Stanley, who had directed every festival since the beginning in 1893. The principal works presented were Mendelssohn's *Elijah* and a concert-performance of *Aida*. The 13th annual North Shore Festival (May 21-24) was held at the Northwestern University, with the assistance of the New York Philharmonic Orchestra (Josef Stransky) and the Chicago Symphony Orchestra (Frederick Stock). A cantata for soli, chorus, and orchestra, written especially for the occasion by Stock, made a deep impression under the masterly direction of the composer. An inspiring performance of Bach's *St. Matthew Passion* was given by a chorus of 1000 voices, led by Peter Lutkin. Announcement was made of a \$1100 prize for the best orchestral score submitted by an American composer, the successful work to have its first performance at the next festival and to be also included in one of the regular programmes of the Chicago Symphony Orchestra. The offerings of the first day of the 16th Bethlehem Bach Festival (May 17, 28), held at Lehigh University under Frederick J. Wolle, included the cantata, *The Sages of Sheba*, the *Christmas Oratorio* and instrumental works, while the second day, according to established custom, was devoted to the *Mass in B minor*. The chief event of the 12th biennial festival of the National Federation of Music Clubs at the Tri-Cities (Davenport, Rock Island, and Moline, Iowa, June 6-8) was a splendid perfor-

mance, under A. Cyril Graham, of Paolo Gallico's *The Apocalypse* (June 7), the oratorio that won the \$5000 prize. It proved a work of considerable dramatic power, and won respect for its solid musicianship. For the first time since the outbreak of the war the German singing societies of Connecticut held a *Sängerfest* at Bridgeport (in June), where the Hartford *Sängerbund* carried off the first prize. All the compositions were sung in English. Under the general supervision of Prof. George P. Baker, of Harvard University, a gorgeous pageant, *The Pilgrim Spirit*, was staged at Plymouth, Mass. (July 20), in commemoration of the tercentenary of the landing of the Pilgrim Fathers. It was repeated eight times in August. The cast comprised not less than 1000 persons, and the musical portions were directed by Chalmers Clifton. The music, all written specially for the occasion, was contributed by George Chadwick, Chalmers Clifton, Henry F. Gilbert, Frederick S. Converse, Arthur Foote, Edwin B. Hill, Edgar S. Kelley, John Powell, and Leo Sowerby. The fourth annual Berkshire Festival of chamber-music was held at Pittsfield, Mass. (September 29, 30, October 1), with the participation of the Lets Quartet, Barrère Ensemble, Elshuco Trio, and Detroit Symphony String Quartet. As soloists in the production of their own works appeared Percy Grainger, Selim Palmgren, Leo Sowerby, and Henry Eichheim. The \$1000 prize for the best piano-trio was awarded to H. Waldo Warner, a member of the London String Quartet. Honorable mention was made of the scores of Renzo Bossi and Rebecca Clarke, the latter having won the same distinction in the competition of 1919. The prize work, heard in a flawless rendition by the Elshuco Trio, made no very deep impression, as the music lacked originality. There were, in fact, many echoes from Strauss, Puccini, and Debussy, with touches of English modernism. The works that afforded greatest pleasure were those of the masters, Mozart, Beethoven, Schubert, Brahms. The widespread interest in this important festival may be judged by the fact that for this year's competition 64 manuscripts, by composers of ten nationalities, were submitted. About 20 scores were by American composers. A festival arranged at Berkeley, Calif. (September 15-17), consisted of four concerts with unique programmes: I. Works of Charles W. Cadman, conducted by the composer. II. Works of resident Berkeley composers. III. Development of Public School Music. IV. Works of Bohemian Grove composers. The 63d annual Worcester Festival (October 5-7) had the assistance of the New York Symphony Orchestra, under its assistant conductor, René Pollain. The second concert was devoted exclusively to works never heard at these festivals. The new festival conductor, Nelson P. Coffin, made an excellent impression with his skillful and authoritative handling of large choral masses. The 25th Maine Festival (Bangor, October 6-8; Portland, October 10-12) marked the silver jubilee of its foundation, as well as that of its conductor, William R. Chapman.

NOVELTIES. The following list records the American premières of the more important works introduced during the year. The Chicago Symphony Orchestra (Frederick Stock): Gustav Holst, *The Planets*, symphonic poem (January 1). Each of the seven movements bears the name of one of the planets of the solar system, but the ex-

tremely modernistic music expresses nothing in particular. Arnold Bax, *The Garden of Fand* (New York, January 25), a symphonic poem of excessive length, in which a brilliant orchestration fails to conceal the poverty of musical ideas. Emanuel Moor, *Concerto for String-Quartet and Orchestra* (March 25), a work of splendid craftsmanship, but deficient in genuine inspiration. Gustav Mahler, *Symphony No. 7*, in E minor (April 15), ambitious work of enormous dimensions, complicated, diffuse, and tiring. Sergei Prokofiev, *Symphony in D* (December 16; conducted by composer), built up skillfully on well-defined, effective themes. Sergei Prokofiev, *Concerto for Piano and Orchestra* (December 16; played by composer), bristling with technical difficulties, but lacking in continuity and logical coherence. A daring experiment was undertaken by Mr. Stock, when he made an entirely new orchestration of Schumann's *Third Symphony (Rhenish)*, performed in the concerts of December 9 and 10. This brilliant new garb exploited no extraneous effects, altered no essentials of the original conception, but threw into high relief the surpassing beauties of the thematic material.—New York Symphony Society (Walter Damrosch): Claude Debussy, *Fantaisie*, for piano and orchestra (February 17; played by Cortot), one of the composer's earliest works, interesting, if not very striking. Jean Roger-Ducasse, *Marche Française* (October 20), really a symphonic poem inspired by the war, shallow, bombastic, and unbearably noisy. Louis T. Gruenberg, *The Hill of Dreams* (October 23; won the \$1000 prize, see ORCHESTRAS), a very effective mood picture with good thematic material, well developed, somewhat reminiscent of Wagner, with occasional light touches of modernism. Vincent d'Indy, *Sur les Rivages*, symphonic poem (December 1; conducted by the composer), a work of reflection rather than of inspiration, very free in form. Le Flem, *Aux Morts* (December 1), an uninspired production of a pupil of d'Indy and a faithful copy of the style of his master.—New York Philharmonic Orchestra (Josef Stransky): Reginald Sweet, *Prelude to the opera, The Riders to the Sea* (March 4), a vivid and impressive mood picture, strongly tinged with Wagnerian influence. Henry Hadley, *The Ocean*, tone-poem (November 17; conducted by the composer), ingratiating, fluent music, effectively orchestrated, although themes are lacking in distinction.—National Symphony Orchestra (Artur Bodanzky): Frederick Jacobi, *The Eve of St. Agnes*, symphonic prelude (April 29), an excellent reproduction of the poet's mood, with pregnant themes, skillfully developed and brilliantly orchestrated.—Boston Symphony Orchestra (Pierre Monteux): Richard Strauss, *Symphonische Suite* from the opera, *Der Bürger als Edelmann* (February 12), a happy imitation of the music of the period of Louis XIV, charming in its simplicity and vivid characterization. Stuart Mason, *Rhapsody on a Persian Air*, for piano and orchestra (April 22; played by the composer), highly imaginative and saturated with real oriental color. Darius Milhaud, *Deuxième Suite pour Orchestre* (April 22), a typical product of futurism, chaotic and unintelligible. D. C. Smith, *A Poem of Youth* (November 11), not remarkable in any respect, but legitimate music avoiding all modern excesses.—Philadelphia Symphony Orchestra (Leopold Stokowski): Francesco Malipiero,

Dittirambo Tragico (April 29), horribly cacophonous, received with open displeasure. Walter Braunfels, *Fantastische Variationen über ein Thema von Berlioz* (October 14), learned and dull variations on an eccentric theme. Jean Sibelius, *Symphony No. 5*, op. 82 (October 21), gloomy and austere, but very impressive. Alfredo Casella, *Pagine di Guerra*, symphonic suite in five movements (October 28), an orgy of dissonance and noise. Alfredo Casella, *A Notte Alta*, for piano and orchestra (New York, November 1), a work of the same kind as the preceding. Gregor Fitelberg, *Polnische Rhapsodie* (November 4), a finely inspired work, effective in its well-arranged contrasts and stirring climaxes.—Minneapolis Symphony Orchestra (Emil Oberhoffer): Kurt Atterberg, *Symphony No. 2*, in F, op. 6 (March 18), promises well for the future development of the young composer.—San Francisco Symphony Orchestra (Alfred Herz): Maurice Ravel, *La Valse*, *poème chorégraphique* (October 28), based on Viennese waltz themes treated in modern style, but free from exaggeration. Hans H. Wetzel, *As You Like It*, overture (November 18), a work of distinction on strictly classical lines.—St. Louis Symphony Orchestra (Rudolf Ganz): Ernest R. Kroeger, *Festival Overture*, in commemoration of the centenary of Missouri's admission as a State (November 6), unpretentious, but spirited and effective.—Cincinnati Symphony Orchestra (Eugène Ysaÿe): Théophile Ysaÿe, *Piano Concerto in E* (November 13; played by Mme. Melville-Lissniewska), built on splendid thematic material, skillfully developed, very grateful for the soloist.

OPERA. At the Metropolitan Opera House in New York 168 performances were given from a repertory of 39 works by 25 composers. According to nationality these were divided as follows: Italian, 21 works by 11 composers totaled 101 performances; French, 7 works by 6 composers totaled 28 performances; German, 6 works by 3 composers totaled 22 performances; Russian, 3 works by 3 composers totaled 11 performances; Bohemia and America were represented each by one composer with one work, each being given three times. Verdi, represented by 7, and Puccini by 4 works, each had 25 performances; second came Wagner with 17 performances of 4 works. The opera heard most frequently was Charpentier's *Louise* (9 times); Boito's *Mefistofele* and Puccini's *Bohème* came next (8 times); then Wagner's *Lohengrin*, Bizet's *Carmen*, Leoncavallo's *Zaza*, Verdi's *Aida* and Puccini's *Madame Butterfly* (each 7 times). Weber's *Oberon* and Saint-Saëns' *Samson et Dalila* were given only once. The first novelty, *The Polish Jew* (March 9), by the Bohemian Karel Weis, with Delaunois, Chamlee, Caupolican, and Gustafson in the principal rôles, under the direction of Bodanzky, was presented in an English translation of S. Spaeth and C. Cowdery. The music seldom rises above the commonplace, and is singularly deficient in power of characterization. By far the best portions are the instrumental preludes and dances. After two repetitions the work was shelved. Of very different calibre was Erich Korngold's *Die tote Stadt* (November 19), sung in the original German by Jeritza and Harrold in the chief rôles, directed by Bodanzky. Considering that the composer was only 22 years of age when he wrote the score, it is not surprising to find the music eclectic rather than

individual. The predominating influence is that of Strauss, while there is also evidence that the composer has absorbed Wagner and Puccini. But even so, there is sufficient originality to indicate that before the lapse of many years Korngold will be a foremost figure among contemporary dramatic composers. The leading motive is used but sparingly, but invariably with telling effect; the themes themselves are of striking musical beauty and dramatic expressiveness. Truly astonishing are the fluency of the writing and the intimate knowledge and perfect command of the technical resources of the complicated orchestral apparatus employed. A well-nigh perfect representation roused the enthusiasm of the audiences, both at the première and later repetitions, to a high degree. Twenty-five years after its American première Umberto Giordano's *Andrea Chénier* made its first appearance in the repertory of the Metropolitan (March 7) and was received with favor. After the restoration during the preceding year of *Parisfal* and *Tristan und Isolde*, in English, *Lohengrin*, also in English, followed on February 2. However, with the opening of the new season in the fall, the English versions were abandoned in favor of the original language. *Die Walküre* was restored on December 16. A most serious loss the company suffered in the death of Enrico Caruso (August 2), who had been the principal tenor and chief drawing-card ever since his Metropolitan début (1903). A worthy tribute was paid to the memory of this rare artist on November 27, when his widow presented to the Metropolitan Opera House a fine bronze statue of her husband (the work of Onorio Ruotolo), while all the artists of the company united in the rendition of an elaborate and impressive musical programme. The proceeds, \$12,000, were donated to the Casa di Riposo dei musicisti in Milan, in which Caruso had always been deeply interested. One of the events of the year was the special engagement of the great Russian bass, Feodor Shaliapin (Chaliapine), for the title rôle of Mussorgsky's *Boris Godunov* (December 9), when his marvelous interpretation aroused tumultuous demonstrations. Of the new artists the Vienna soprano, Marie Jeritza, made a sensational success at her début as Marietta (*Die tote Stadt*, November 19), due primarily to her extraordinary histrionic talent. Other valuable additions were Cora Chase (Gilda in *Rigoletto*, February 4), an Indian chief, Caupolican (Mathis in *The Polish Jew*, March 9), Yvonne d'Arle and Aureliano Pertile (respectively as Musetta and Cavaradossi in *La Bohème*, December 1).

The Chicago Opera Company gave 113 performances (70 in Chicago, 43 in New York) from a repertory of 36 works by 21 composers. According to nationality they were divided as follows: Italian, 19 works by 10 composers totaled 63 performances; French, 12 works by 8 composers totaled 40 performances; German, 4 works by 2 composers totaled 9 performances; one work by a Russian composer had one performance. Verdi, represented by 4 works, and Puccini, represented by 3, had each 18 performances. Next came Massenet, 3 of whose works were given 10 performances. Wagner stood third, with 8 performances of 3 works. Only one novelty was produced, Prokofiev's *Love for Three Oranges* (December 29; sung in French). The text, after a fairy tale of Gozzi, was written by the composer,

who also conducted the performance, the world-première. The work is neither opera nor music-drama, but a burlesque of the crudest type, in which the fifteen characters indulge in a succession of circus-tricks and horse-play, accompanied by typical futuristic cacophonies from the orchestra. The restoration to the repertory of *Die Walküre* (January 10; in English), with Cyrena Van Gordon as a new Brünnhilde, was hailed with delight by an immense audience, while *Tannhäuser* (November 24) inaugurated the return of the Wagnerian dramas in the original. A revival of Strauss' *Salome* (December 28), with Garden, Muratov, and Dufranne, under Polacco, aroused another storm of protest in the public press, as had been the case on the occasion of the first two performances (Nov. 25, 28, 1910), after which the work was withdrawn. Instead of the crassly realistic and revolting delineation which she gave eleven years ago, Miss Garden presented a more restrained conception of the title-rôle. Artistically the New York season (January 24-March 5) was highly successful, financially it resulted in a deficit of \$275,000. Two operas entirely new to New York were Marinuzzi's *Jacquerie* (February 4) and Leoncavallo's *Edipo Rè* (February 21) (For discussion of these see YEAR BOOK, 1920.) Four new singers, with great reputations established elsewhere, aroused unusual enthusiasm: Rosina Storchio (Cio Cio San in Puccini's *Madama Butterfly*, January 1), Edith Mason (same rôle November 16), Josef Schwarzs (Rigoletto, November 21) and Claire Dux (Mimi in Puccini's *La Bohème*, November 22). Other valuable additions were Tino Pattieri (Mario in Puccini's *Tosca*, November 15), Richard Schubert (*Tannhäuser*, November 24), Mary McCormick (Micaela in Bizet's *Carmen*, November 26), Vicente Ballester (Figaro in Rossini's *Il Barbiere di Siviglia*, December 29). Two new conductors, Angelo Ferrari (*Tosca*, November 15) and Gabriel Groves (*Manon*, December 26) proved thoroughly competent leaders. The friction resulting from the experiment of a dual directorship of the preceding year led to the resignation of Gino Marinuzzi (January 6) and the appointment of Mary Garden as directress-general (January 13). The first year of her régime can scarcely be characterized as successful, in view of the fact that at the close of the year there was considerable dissatisfaction among a number of the principal artists, and the deficit had mounted to the enormous sum of \$800,000, the largest deficit in the annals of opera in the United States. This condition led to the dissolution of the Chicago Opera Association, which was succeeded by a new body, the Chicago Civic Opera Association, to whom Mr. and Mrs. Harold F. McCormick, the principal stockholders and supporters of the former company, deeded the entire stock of scenery, costumes, and properties, valued at \$3,000,000.

BIBLIOGRAPHY.—BIOGRAPHY. A. W. Thayer, *The Life of Beethoven*, translated and edited by H. E. Krehbiel (3 vols., New York and London), a very valuable condensation of the five volumes of the German edition of Deiters and Riemann, completed from Thayer's own material R. H. Stein, *Grieg* (Berlin), sketch of life and critical discussion of works. G. Orefice, *Luigi Mancinelli* (Milan), the first biography, appreciative and sympathetic. L. Russo, *Metastasio* (Bari), a valuable critical sketch. A. Seidl,

Hans Pfitner (Leipzig), critically appreciative. K. Haase, *Max Reger* (Leipzig), a critical analysis of works. H. Unger, *Max Reger* (Munich), mainly from the esthetic standpoint. S. Zweig, *Román Rolland:—The Man and His Work*, translated by E. and C. Paul (New York), very valuable. H. de Curson, *Rossini* (Paris), rather panegyrical. H. Roth, Heinrich Kaspar Schmid (Munich) mainly analysis of works. E. Wellesz, *Arnold Schönberg* (Vienna), from the viewpoint of modernism. J. Kapp, *Frans Schreker* (Munich), a fairly accurate critical estimate. R. Hoffman, *Frans Schreker* (Vienna), an uncritical panegyric. L. Slezak, *Meine sämtlichen Werke* (Vienna), very interesting memoirs, full of humor. R. Spech, *Richard Strauss und sein Werk* (2 vols., Leipzig), sane and appreciative. H. von Waltershausen, *Richard Strauss* (Munich), brief sketch and estimate of works. Luisa Tetraxini, *My Life of Song* (London), superficial, rather a collection of anecdotes than a real autobiography. H. Oppenheim, *Hermann Zücher* (Munich), has a tendency to overestimate.—HISTORY. R. Brancourt, *Histoire des Instruments de Musique* (Paris), a valuable sketch of the evolution of the various instruments, with musical illustrations. J. Chantavoine, *De Couperin à Debussy* (Paris), a general and concise survey of French music. U. Daubeny, *Orchestral Wind Instruments* (London), a historical sketch from the earliest times to the present day. D. Ehrlich, *The History of the Flute* (New York), an account from remotest antiquity to the invention of Boehm. C. Engel, *Alla Breve: From Bach to Debussy* (New York), brief characterisations of the historical position of twenty eminent masters. W. J. Henderson, *Early History of Singing* (New York), traces the evolution from the beginning of the Christian era to 1700. J. Korngold, *Deutsches Opernschaffen der Gegenwart* (Vienna), a critical review of contemporary operas since 1900. J. G. Prod'homme, *La Jeunesse de Beethoven* (Paris), very important, a critical history of the times rather than of an individual. M. Scherillo, *L'Opera Buffa Napoletana durante il Settecento* (Palermo), a very valuable critical contribution. O. G. Sonneck, *Miscellaneous Studies in the History of Music* (New York), a work of considerable importance, embodying the results of original research.—CRITICISM, ESTHETICS. H. Brower, *Vocal Mastery* (New York), views of eminent singers regarding various phases of their art. L. Buerges and A. Denereaz, *La Musique et la Vie Intérieure* (Paris), a suggestive study of the psychological foundations of music. E. Correa

d'Oliveira, *Dante e Beethoven* (Milan), an interesting study setting forth the similarity of method and means employed by poet and composer in striving for complete artistic expression. E. Jaques-Dalcroze, *Rhythm, Music and Education* (New York), an exposition of the author's new system of eurythmics. K. Grunsky, *Das Christuseideal in der Tonkunst* (Leipzig), a summary of musical works, from the earliest times to the present, inspired either by the life of Christ or some phase of the Christian doctrine. C. G. Hamilton, *Music Appreciation* (Boston), explains the structure of dramatic music and all instrumental forms heard in modern concerts. J. G. Huneker, *Variations* (New York), a collection of posthumous essays. D. G. Mason, *Music as a Humanity* (New York), being vol. IV of the series *The Appreciation of Music*. A. W. Pollitt, *The Enjoyment of Music* (New York), far above the average of similar manuals. J. G. Prod'homme, *Richard Wagner et la France* (Paris), an earnest plea on behalf of an impartial and dispassionate attitude toward works of art. P. Stefan, *Neue Musik und Wien* (Leipzig), an impassioned, but hardly convincing, defense of modernism in music.—THEORY. G. A. Audley, *Organ-stops and their Artistic Registration* (London), an eminently practical manual. L. Auer, *Violin Playing as I Teach it* (New York), very valuable. G. Bas, *Melodo di Accompagnamento al Canto Gregoriano* (Turin), an excellent-practical treatise. G. S. Bernardi, *Counterpoint*, translated from the Italian by C. Landi (London), a clear exposition of essential principles. F. G. Fidler, *A Handbook of Orchestration* (London), concise and practical. C. Pedron, *Armonia d'Eccezione* (Milan), an attempt to discover laws underlying the multiform sound-combinations of the modernists. A. Rivarde, *The Violin and its Technic* (London), considered mainly as a means of interpretation. E. Whithorne, *The Instruments of the Modern Orchestra* (St. Louis), a practical, illustrated treatise on instrumentation.—CORRESPONDENCE. E. Foerster-Nietzsche, *The Nietzsche-Wagner Correspondence*, translated by C. V. Kerr (New York), covers the period 1869-78. H. Werner, *Hugo Wolfs Briefe an Rosa Mayreder* (Vienna), very important as throwing new light on the composer's personality.

NATAL. An original province of the Union of South Africa. See **SOUTH AFRICA, UNION OF.**

NATHAN, ERNESTO. Formerly mayor of Rome, died at Rome, April 9. He was born in 1847, the son of an English Jew banker and of an Italian woman, and lived in England until his thirteenth year, when he went to Pisa and studied for a time at the university there. He was compelled to leave Italy on account of his pronounced republican opinions. He returned in 1870 and became an editor, lecturer, and university professor. In political philosophy he was a follower of Massini, whom he personally knew. After being elected four times to the city council he was chosen mayor of Rome in 1907 and again in 1910. He was an enthusiastic freemason and became chief of the Italian order. For these reasons he was particularly obnoxious to the Vatican and the conservative parties, and during his administration he was bitterly assailed for his modernization of the city, winning the nickname in certain quarters of "Nathan, the Vandal." To those who blamed him for his alterations of buildings, he retorted that Michael Angelo altered other people's buildings and asked why he should not do so, adding that Rome was not a museum, but a modern city. His controversies with the representatives of the Church and of Italian tradition were exceedingly violent.

NATIONAL BANKS. According to the Comptroller of the Currency the number of national banks reporting on June 30, 1921, was 8154 or 124 banks more than reported on the corresponding date in 1920. The aggregate resources of these banks, exclusive of paper rediscounted, were \$19,638,446,000 or \$67,747,000 more than at the date of the comptroller's previous call, April 28, 1921, but a reduction as compared with the returns on June 30, 1920, of \$2,558,291,000. While the assets of these banks were greater on June 30 than on the date of the preceding call, a gradual decline is noted at the date of each call, subsequent to June 30, 1920, with the exception of Nov. 15, 1920, when they amounted to \$22,081,913,000, the highest point during the year. This decline is reflected principally in loans and discounts and holdings of United States Government securities.

Loans and discounts, including customers' liabilities on account of letters of credit, but exclusive of overdrafts, acceptances, and rediscounts, on June 30, 1921, amounted to \$11,125,099,000, or 73.47 per cent of their total deposits, a reduction as compared with April 28 of \$241,975,000, and in the fiscal year of \$1,281,019,000.

On June 30, 1921, national banks had invested in United States Government securities \$2,019,497,000, representing 10.28 per cent of their total assets. This amount was \$17,686,000 greater than the aggregate holdings of these securities on April 28, but a reduction from the amount held June 30, 1920, of \$250,078,000.

Included in investments in United States securities, were \$722,898,000 of United States bonds deposited with the Treasurer of the United States as security for outstanding circulation. Other bonds, stocks, and securities held by national banks on June 30, 1921, amounted to \$2,005,584,000, an increase over the amount reported April 28 of \$14,614,000, and an increase over the amount reported on June 30, 1920, of \$88,694,000.

The total cash held in the vaults of these banks, June 30, 1921, was \$374,349,000, or \$27,874,000 less than the amount reported on the date of the preceding call, and a reduction as compared with the amount reported on June 30, 1920, of \$76,002,000, while the amount due these banks from other banks and bankers including lawful reserve with the Federal reserve banks and items in process of collection of \$1,368,207,000, aggregated \$2,384,724,000, an increase over the amount reported April 28 of \$22,453,000, and a reduction during the fiscal year of \$736,477,000.

The capital stock of these banks, paid in and certified to the Comptroller of the Currency on June 30, was \$1,273,880,000, an increase over April 28 of \$2,497,000, and over June 30, 1920, \$49,714,000. Surplus and undivided profits were \$1,522,411,000 or \$23,514,000 less than on April 28, but an increase over June 30, 1920, of \$62,784,000.

The liability of national banks for outstanding circulating notes, on June 30, amounted to \$704,147,000, and was greater than the amount reported at the date of any call during the year, being \$24,570,000 in excess of the amount of outstanding circulation April 28, and \$15,969,000 greater than the amount reported June 30, 1920.

The total deposits of national banks on June 30, 1921, were \$15,142,331,000, of which amount \$8,958,864,000, including United States deposits of \$249,039,000, were on demand, and \$3,695,806,000 were time deposits. The remainder represented balances due to banks and bankers. Total deposits increased \$290,472,000 between April 28 and June 30, 1921, but decreased between the latter date and the corresponding date in 1920, to the extent of \$2,013,090,000. Bills payable and rediscounts of national banks on June 30 totaled \$1,471,979,000 a reduction of \$239,523,000 since April 28, and a decline since June 30, 1920, of \$734,089,000. Of the bills payable, \$452,368,000 were with Federal reserve banks, and \$140,195,000 with other banks, while paper rediscounted with Federal reserve banks aggregated \$808,401,000, and with other banks, \$36,215,000. Acceptances of other banks, and foreign bills of exchange sold with indorsement, amounted to \$34,800,000. The reduction in the bills payable of national banks during the year was \$398,989,000, and in rediscounts the reduction was \$335,100,000.

Between the close of 1920 and of 1921, loans and discounts declined over 9 per cent to \$10,981,783,000. Refinancing of loans as indicated by borrowings in the form of bills payable and redis-

counts declined from \$2,342,000,000, or nearly one-fifth of loans and discounts, to \$1,008,000,000 or one-eleventh of loans. Total assets fell off nearly \$2,000,000,000 to \$19,420,000,000. Total deposits declined from \$16,277,000,000 to \$15,075,000,000, while demand deposits fell off about \$900,000,000 to \$8,606,000,000. Reserve balances declined \$41,000,000 to \$1,143,000,000 but cash holdings alone fell off \$153,000,000 to \$342,000,000. Acceptances outstanding continued their decline, falling from \$375,000,000 to \$219,000,000. The general position, however, showed a distinct improvement as compared with September 6, after which time deposits and reserves considerably increased, while borrowings declined.

If regard be had to banks outside reserve cities, the picture is not a little different. Loans and discounts there declined \$388,000,000 during the year, or about 7 per cent, to a total of \$5,043,000,000. Borrowings were reduced about \$143,000,000 to an aggregate of \$516,000,000, but were still over 10 per cent of loans and discounts. The decrease, however, was particularly marked during the last four months of the year. Total assets declined from \$9,720,000,000 to \$9,140,000,000, or \$580,000,000. Demand deposits declined \$508,000,000 to a total of \$3,727,000,000. Lawful reserve declined from \$421,000,000 to \$380,000,000, and actual cash holdings were reduced about one fourth to \$198,000,000. Altogether these figures support the view that the problem of "frozen loans" has been most pressing in the agricultural districts.

NATIONAL CIVIC FEDERATION. An educational society which defines its purposes as follows: To organize the best brains of the nation in an educational movement seeking the solution of some of the great problems related to social and industrial progress; to provide for study and discussion of questions of national import; to aid thus in the crystallization of the most enlightened public opinion; and, when desirable, to promote legislation in accordance therewith. It functions through an executive committee which has representatives "on the part of the public," on the part of the employers, and "on the part of the wage earners." During the year, the National Industrial Committee, composed of publicists, officials of the leading non-revolutionary labor organizations, and employers, made a special study of questions affecting the three great divisions of society, capital, labor, and the general public. It dealt with such subjects as "Collective Bargaining," the best means of bringing together employers and wage earners in proper negotiations and contract; "Injunctions in Labor Disputes"; "Industrial Democracy"; "Compulsory Arbitration" and other subjects affecting the economic life of the nation. Its Commission on Foreign Inquiry which made a study of the labor situation in Great Britain and France reported its findings in book form. The Social Insurance Department made two inquiries and issued reports giving the facts concerning the operation of foreign systems of sickness and unemployment insurance. It published a programme on health conservation. The Welfare Department, composed only of employers, is an educational movement to secure improvements in working and living conditions of wage earners by employers. The Profit Sharing Department of the Federation made two reports upon "Profit Sharing by Amer-

ican Employers" giving also examples in England and types in France. The third edition contained an analysis of over 200 plans by which payments beyond regular wages were being made to workers in this country. The Department on Study of Revolutionary Movements spent two years inquiring into the objectives, tactics, and activities of radical forces in our churches, colleges, universities, schools, women's organizations, social and philanthropic agencies, the press, etc., and among public employees and negroes. This department through its committee on Soviet propaganda in the United States, issued several pronouncements against the recognition by the United States of the Soviet régime in Russia, giving the moral, economic, and political objections. The Department for Research and Instruction in Current Economic and Political Movements is an endeavor to expound sound principles of representative government and of economics. Its purpose is to furnish material upon current conditions, tendencies, and movements. The Women's Department undertakes through survey and experimentation to arrive at a basis for constructive remedial legislation in matters relating to industrial, social, and economic life, primarily as it affects women and children. Its programme involved the following subjects: "Americanization," "Education," "Immigration," "Naturalization," "Public Health," and "National Defense." The annual meeting of the Federation was held January 30-31 in New York, at which the following subjects were discussed: "Conciliation and Arbitration" particularly with reference to railroad controversies; "Combinations in Restraint of Trade"; "Revolutionary Forces in the United States"; "The Russian Situation"; "Preventive Unemployment Measures"; and "Unemployment Insurance."

The official organ is the *National Civic Federation Review*. Headquarters are maintained in the Metropolitan Tower, New York City. Officers in 1921 were: Alton B. Parker, President; Samuel Gompers, Vice-president; V. Everit Macy, Vice-president; Samuel McRoberts, Vice-president; D. L. Cease, Secretary, Ralph M. Easley, Chairman Executive Council; and Miss Maude Wetmore, Chairman Women's Department.

NATIONAL FEDERATION OF MUSIC CLUBS. See *Music, Festivals*.

NATIONAL GUARDS. See *MILITARY PROGRESS*.

NATIONAL MUNICIPAL LEAGUE. This organization was founded in 1894. It aims to promote thorough investigation and discussion of the conditions and details of municipal administration, and of the methods for selecting and appointing officials in American cities, and of constitutions, laws, and ordinances relating to such subjects. It furnishes for public information in addition to the proceedings of its meetings, books and periodicals bearing upon the subjects of municipal government and municipal affairs. In the past few years the scope of the League has broadened to include county and State government. The twenty-seventh annual meeting was held in Chicago, November 16-18, at which time the complete model State constitution prepared by the League and outlined in the *YEAR BOOK* for 1920, was presented for debate and action. Other features of the meeting were the debate on the application of the city manager

principle to big cities, two sessions on housing and zoning and one on new sources of municipal revenue. In connection with the latter Governor McKelvie of Nebraska addressed the meeting on "What Administrative Organization Means to a State." Resolutions were adopted approving the policy of statutes of Nebraska and Iowa regarding ballots on which the names of presidential electors do not appear but are kept on file with the Secretary of State, only the names of the nominees for president and vice-president being entered upon the official election ballot. The *National Municipal Review* (monthly) is the official organ of the organization. A number of supplements which constitute important studies on various problems are published throughout the year. Of those in 1921 may be mentioned: a symposium on "Service at cost for street railways"; "State Parks"; and "A Model Pension and Election Law." Following action taken at the Indianapolis meeting in 1920, the League united with the American Civic Association. At the Chicago meeting, Colonel Henry M. Waite, formerly City Manager of Dayton, Ohio, was elected President to succeed the Hon. Charles E. Hughes on his assumption of the office of Secretary of State. Other officers are: Clinton Rogers Woodruff, Honorary Secretary; Frank A. Vanderlip, Treasurer. H. W. Dodds is Secretary and maintains headquarters of the League at 261 Broadway, New York.

NATIONAL PARKS. See PARKS, NATIONAL.

NATIONAL SAFETY COUNCIL. This organization grew out of a safety congress held under the auspices of the Association of Iron and Steel Electrical Engineers at Milwaukee, Wis., in 1912. The establishment of the Council dates from 1913. It is an association of companies and individuals interested in promoting safety in industrial establishments and also on the streets and in the home. Its field is the prevention of accidents, with related activities affecting the health, comfort, and welfare of industrial workers. Its membership comprises 4000 members operating 8000 industrial plants and employing more than 7,000,000 men. It conducts a safety service consisting of posters for the bulletin board, a monthly magazine entitled *National Safety News*, "Safe practices" pamphlets, and consultation. The council also organizes schools for foremen and safety supervisors, and has published in loose-leaf form outlines of lectures for such schools. Safety congresses are held annually.

The present organization of the congress consists of Engineering, Public Safety, Education, Health Service, and Women in Industry sections, and various other sections devoted to safety in particular industries. The Engineering Department of the Council consists of safety engineers who have in charge the preparation of all the bulletins and "Safe Practices" pamphlets, and who investigate and answer all inquiries for technical information. The "Safe Practices" pamphlets are the results of extensive research into the particular hazards and safe practices in the construction and operation of particular equipment. Officers for 1921-22 are: President, Arthur H. Young; Vice-President in charge of service to members, David S. Beyer; Vice-President in charge of Industrial Safety, B. F. Tillson; Vice-President in charge of Public Safety, David Van Schaack; Vice-President in charge of Local Councils, C. B. Scott; Vice-

President in charge of Sectional Activities, F. A. Davidson; Secretary and Treasurer, W. E. Worth. W. H. Cameron is Executive Secretary. S. J. Williams is Chief Engineer. Headquarters are at 168 North Michigan Avenue, Chicago.

NATIONAL SYMPHONY ORCHESTRA. See MUSIC, *Orchestras*.

NAVAL ACADEMY, U. S. See UNITED STATES NAVAL ACADEMY.

NAVAL PROGRESS. The prominent features for the year are the Conference for the Limitation of Armaments, and the bombing of surface vessels by airplanes—experiments conducted by the U. S. Navy and Army off the Virginia coast.

LIMITATION OF ARMAMENTS

When President Harding issued the call for a conference on the limitation of armaments the expectations of the world as to great and important results of the meeting were more hopeful than anticipatory. The clear-cut, definite proposition of Secretary Hughes was therefore all the more startling and generally satisfactory. As Great Britain, the United States, and Japan are the three greatest naval powers, the definite part of the proposals referred chiefly to them. As the Conference has not completed its labors at this date (December 27) and as a further approval by the various nations is necessary in some cases, it is not possible to give the final result. The following is the full official text of the American proposals with amendments agreed upon to date (December 27):

"The proposal of the United States for a limitation of naval armaments.

"The United States proposes the following plan for a limitation of the naval armaments of the conferring nations. The United States believes that this plan safely guards the interests of all concerned.

"In working out this proposal the United States has been guided by four general principles:

"(a) The elimination of all capital shipbuilding programmes, either actual or projected.

"(b) Further reduction through the scrapping of certain of the older ships.

"(c) That regard should be had to the existing naval strength of the conferring powers.

"(d) The use of capital ship tonnage as the measurement of strength for navies and a proportionate allowance of auxiliary combatant craft prescribed.

CAPITAL SHIPS—UNITED STATES

"1. The United States to scrap all new capital ships now under construction and on their way to completion. This included six battle cruisers and seven battleships on the ways and building and two battleships launched.

"(Note—Paragraph 1 involves a reduction of fifteen new capital ships under construction, with a total tonnage when completed of 618,000 tons. Total amount of money already spent on fifteen capital ships, \$332,000,000.)

"2. The United States to scrap all battleships up to but not including the *Delaware* and *North Dakota*.

"(Note—The number of old battleships

scrapped under Paragraph 2 is fifteen; their total tonnage is 227,740 tons. The grand total of capital ships to be scrapped is thirty, aggregating 845,740 tons.)"

Amendment. The battleships *Colorado* and *Washington* each of 32,600 tons, are allowed in place of the *Delaware* and *North Dakota* (of 20,000 tons each) which are to be scrapped.

GREAT BRITAIN

"3. Great Britain to stop further construction on the four new *Hoods*.

"(Note—Paragraph 3 involves a reduction of four new capital ships not yet laid down, but upon which money has been spent, with a total tonnage when completed of 172,000 tons.)

"4. In addition to the four *Hoods*, Great Britain to scrap her dreadnaughts, second line battleships and first line battleships up to but not including the *King George V.* class.

"(Note—Paragraph 4 involves the disposition of nineteen capital ships certain of which have already been scrapped, with a tonnage reduction of 411,375 tons. The grand total tonnage of ships scrapped under this agreement will be 583,375 tons.)"

Amendment. Two new battle cruisers of 35,000 tons are allowed in place of 3 ships of the *King George V.* class and the *Erin* (tonnage of the 4 ships, 91,910) which are to be scrapped.

JAPAN

"5. Japan to abandon her programme of ships not yet laid down, viz: The *Ki*, *Owari*, No. 7, No. 8, battleships, and Nos. 5, 6, 7, and 8, battle cruisers.

"(Note—Paragraph 5 does not involve the stopping of construction on any ship upon which construction has begun.)

"6. Japan to scrap three battleships: The *Mutsu*, launched; the *Tosa* and *Kaga*, building, and four battle cruisers, the *Amagi* and *Akagi*, building, and the *Atago* and *Takao*, not yet laid down, but for which certain material has been assembled.

"(Note—Paragraph 6 involves a reduction of seven new capital ships under construction, with a total tonnage when completed of 288,100 tons.)

"7. Japan to scrap all pre-dreadnaughts and capital ships of the second line. This to include the scrapping of all ships up to but not including the *Settsu*.

"(Note—Paragraph 7 involves the scrapping of ten older ships with a total tonnage of 159,828 tons. The grand total reduction of tonnage on vessels existing, laid down, or for which material has been assembled is 448,928 tons.)"

Amendment. The battleship *Mutsu* of 33,800 tons is to be allowed in place of the *Settsu* of 20,800 which is to be scrapped.

FRANCE AND ITALY

"8. In view of certain extraordinary conditions due to the World War affecting the existing strength of the navies of France and Italy, the United States does not consider necessary the discussion at this stage of the proceedings of the tonnage allowance of these nations, but proposes it be reserved for the later consideration of the conference."

Amendment. France and Italy are each to be allowed 175,000 tons of capital ships.

OTHER NEW CONSTRUCTION

"9. No other new capital ships shall be constructed during the period of this agreement except replacement tonnage as provided hereinafter.

"10. If the terms of this proposal are agreed to, then the United States, Great Britain and Japan agree that their navies, three months after the making of this agreement, shall consist of the following capital ships:"

LIST OF CAPITAL SHIPS

United States: *Maryland*, *California*, *Tennessee*, *Idaho*, *Mississippi*, *New Mexico*, *Arizona*, *Pennsylvania*, *Oklahoma*, *Nevada*, *Texas*, *New York*, *Arkansas*, *Wyoming*, *Utah*, *Florida*, *North Dakota*, *Delaware*. Total, 18. Total tonnage, 500,650.

Amendment. *Colorado* and *Washington* in place of *Delaware* and *North Dakota*. Total ships, 18. Total tonnage, 525,850.

GREAT BRITAIN: *Royal Sovereign*, *Royal Oak*, *Resolution*, *Ramillies*, *Revenge*, *Queen Elizabeth*, *Warspite*, *Valkent*, *Barham*, *Malaya*, *Benbow*, *Emperor of India*, *Iron Duke*, *Marlborough*, *Erin*, *King George V.*, *Centurion*, *Ajax*, *Hood*, *Renown*, *Repulse*, *Tiger*. Total, 22. Total tonnage, 604,450.

Amendment. Two battle cruisers of 35,000 tons to replace 3 battleships of *King George V.* type and the *Erin*. Total ships, 20. Total tonnage, 582,540.

JAPAN: *Nagato*, *Hiuga*, *Ise*, *Yamashiro*, *Fu-So*, *Settsu*, *Kirishima*, *Haruna*, *Hi-Yei*, *Kongo*. Total, 10. Total tonnage, 299,700.

Amendment. *Mutsu* in place of *Settsu*. Total ships, 10. Total tonnage, 312,700.

DISPOSITION OF OLD AND NEW CONSTRUCTION

"11. Capital ships shall be disposed of in accordance with methods to be agreed upon.

REPLACEMENTS

"12. (a) The tonnage basis for capital ship replacement under this proposal to be as follows:

United States, 500,000 tons.

Great Britain, 500,000 tons.

Japan, 300,000 tons."

Amendment.

United States, 525,000 tons.

Great Britain, 525,000 tons.

Japan, 315,000 tons.

"(b) Capital ships twenty years from date of completion may be replaced by new capital ship construction, but the keels of such new construction shall not be laid until the tonnage which it is to replace is seventeen years of age from date of completion. Provided, however, that the first replacement tonnage shall not be laid down until ten years from the date of the signing of this agreement.

"(c) The scrapping of capital ships replaced by new construction shall be undertaken not later than the date of completion of the new construction, and shall be completed within three

months of the date of completion of new construction, or, if the date of completion of new construction be delayed, then within four years of the laying of the keels of such new construction.

"(d) No capital ships shall be laid down during the term of this agreement whose tonnage displacement exceeds 35,000 tons.

"(e) The same rules for determining tonnage of capital ships shall apply to the ships of each of the powers party to this agreement.

"(f) Each of the powers party to this agreement agrees to inform promptly all the other powers party to this agreement concerning:

"(1) The names of the capital ships to be replaced by new construction.

"(2) The dates of authorization of replacement tonnage.

"(3) The dates of laying the keels of replacement tonnage.

"(4) The displacement tonnage of each new ship to be laid down.

"(5) The actual date of completion of each new ship.

"(6) The fact and date of the scrapping of ships replaced.

"(g) No fabricated parts of capital ships, including parts of hulls, engines and ordnance, shall be constructed previous to the date of authorization of replacement tonnage. A list of such parts will be furnished all powers party to this agreement.

"(h) In case of the loss or accidental destruction of capital ships, they may be replaced by new capital ship construction in conformity with the foregoing rules.

AUXILIARY COMBATANT CRAFT

"13. In treating this subject auxiliary combatant craft have been divided into three classes:

"(a) Auxiliary surface combatant craft.

"(b) Submarines.

"(c) Airplane carriers and aircraft.

"14. The term auxiliary surface combatant craft includes cruisers (exclusive of battle cruisers), flotilla leaders, destroyers, and all other surface types except those specifically exempted in the following paragraph:

"15. Existing monitors, unarmored surface craft as specified in Paragraph 16, under 3000 tons, fuel ships, supply ships, tenders, repair ships, tugs, mine sweepers and vessels readily convertible from merchant vessels are exempt from the terms of this agreement.

"16. No new auxiliary combatant craft may be built exempt from this agreement regarding limitation of naval armaments that exceed 3000 tons displacement and fifteen knots speed, and carry more than four 5-inch guns.

"17. It is proposed that the total tonnage of cruisers, flotilla leaders and destroyers allowed each power shall be as follows:

"For the United States, 450,000 tons.

"For Great Britain, 450,000 tons.

"For Japan, 270,000 tons.

"Provided, however, that no power party to this agreement whose total tonnage in auxiliary surface combatant craft on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of auxiliary combatant craft for each nation shall be

reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION

"18. (a) All auxiliary surface combatant craft whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

"(b) No new construction in auxiliary surface combatant craft except replacement tonnage as provided hereinafter shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the auxiliary surface combatant craft tonnage allowances hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

"19. (a) Auxiliary surface combatant craft shall be scrapped in accordance with methods to be agreed upon.

"(b) Submarines.

"20. It is proposed that the total tonnage of submarines allowed each power shall be as follows:

"For the United States, 90,000 tons.

"For Great Britain, 90,000 tons.

"For Japan, 54,000 tons.

"Provided, however, that no power party to this agreement whose total tonnage in submarines on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of submarines for each nation shall be reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION

"21. (a) All submarines whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

"(b) No new submarine tonnage except replacement tonnage as provided hereinafter shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the submarine tonnage allowance hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

"22. Submarines shall be scrapped in accordance with methods to be agreed upon.

(c)—AIRPLANE CARRIERS AND AIRCRAFT

"23. It is proposed that the total tonnage of airplane carriers allowed each power shall be as follows:

United States, 80,000 tons.

Great Britain, 80,000 tons.

Japan, 48,000 tons.

"Provided, however, that no power party to this agreement whose total tonnage in airplane carriers on Nov. 11, 1921, exceeds the prescribed tonnage shall be required to scrap such excess tonnage until replacements begin, at which time the total tonnage of airplane carriers for each nation shall be reduced to the prescribed allowance as herein stated.

LIMITATION OF NEW CONSTRUCTION, AIRPLANE CARRIERS

"24. (a) All airplane carriers whose keels have been laid down by Nov. 11, 1921, may be carried to completion.

"(b) No new airplane carrier tonnage except replacement tonnage as provided herein shall be laid down during the period of this agreement, provided, however, that such nations as have not reached the airplane carrier tonnage hereinbefore stated may construct tonnage up to the limit of their allowance.

SCRAPPING OF OLD CONSTRUCTION

"25. Airplane carriers shall be scrapped in accordance with methods to be agreed upon.

AUXILIARY COMBAT CRAFT, REPLACEMENTS

"26. (a) Cruisers seventeen years of age from date of completion may be replaced by new construction. The keels for such new construction shall not be laid until the tonnage it is intended to replace is fifteen years of age from date of completion.

"(b) Destroyers and flotilla leaders twelve years of age from date of completion may be replaced by new construction. The keels of such new construction shall not be laid until the tonnage it is intended to replace is eleven years of age from date of completion.

"(c) Submarines twelve years of age from date of completion may be replaced by new submarine construction, but the keels of such new construction shall not be laid until the tonnage which the new tonnage is to replace is eleven years of age from date of completion.

"(d) Airplane carriers twenty years of age from date of completion may be replaced by new airplane carrier construction, but the keels of such new construction shall not be laid until the tonnage which it is to replace is seventeen years of age from date of completion.

"(e) No surface vessels carrying guns of calibre greater than eight inches shall be laid down as replacement tonnage for auxiliary combatant surface craft.

"(f) The same rules for determining tonnage of auxiliary combatant craft shall apply to the ships of each of the powers party to this agreement.

"(g) The scrapping of ships replaced by new construction shall be undertaken not later than the date of completion of the new construction and shall be completed within three months of the date of completion of the new construction, or, if the completion of new tonnage is delayed, then within four years of the laying of the keels of such new construction.

"(h) Each of the powers party to this agreement agrees to inform all the other parties to this agreement concerning:

"(1) The names or numbers of the ships to be replaced by new construction.

"(2) The date of authorization of replacement tonnage.

"(3) The dates of laying the keels of replacement tonnage.

"(4) The displacement tonnage of each new ship to be laid down.

"(5) The actual date of completion of each new ship.

"(6) The fact and date of the scrapping of ships replaced.

"(i) No fabricated parts of auxiliary combatant craft, including parts of hulls, engines, and ordnance, will be constructed previous to the date of authorization of replacement tonnage. A list of such parts will be furnished all powers party to this agreement.

"(j) In case of the loss or accidental destruction of ships of this class they may be replaced by new construction in combatant vessels of any class in such a manner that they later may become combatant vessels in another navy. They bind themselves further not to acquire combatant vessels from any foreign source.

"29. No capital ship tonnage nor auxiliary combatant craft tonnage for foreign account shall be constructed within the jurisdiction of any one of the powers party to this agreement during the term of this agreement.

MERCHANT MARINE

"30. As the importance of the merchant marine is in inverse ratio to the size of naval armaments, regulations must be provided to govern its conversion features for war purposes."

The Conference was still in session on December 31. No decision had yet been reached in regard to the limiting tonnage for submarines. Great Britain asked that they be banned as a weapon of warfare. Secretary Hughes suggested the total tonnage of Great Britain and the United States to be 60,000 while the approximate present *status quo* be the limits for France, Japan, and Italy. The French were obdurate in demanding about 90,000 tons, so the subject was temporarily dropped. However, the first part of the Root resolutions had been acceded to. This provides that submarines must proceed like surface cruisers when operating against noncombatant craft. The submarine must not attack until surrender has been demanded and refused; and the vessel must not be destroyed until the crew and passengers have been placed in safety. The refusal of France to accept the limiting proposals for submarine tonnage has prevented a limit being set on anti-submarine craft—destroyers, submarine-chasers, etc.

As regards light cruisers and other auxiliary combatant craft, the limit of size is fixed at 10,000 tons and the calibre of guns carried by them at 8 inches. The maximum tonnage for an air-craft carrier is set at 27,000 tons. Great Britain and the United States are allowed a total tonnage of 135,000; Japan, 81,000; France and Italy, each 60,000.

NAVIES IN 1921

ARGENTINA. No vessel of any importance was added to the Argentine fleet in 1921. The main strength of the fighting force consists of the two battleships *Rivadavia* and *Moreno* of 28,450 tons, carrying 12 12-inch guns, built in the United States, and launched in 1911.

AUSTRIA-HUNGARY. The navy of the former dual monarchy has been divided amongst the Allies. The 12 battleships will all be demolished: also the 2 armored cruisers. Of the 9 light cruisers

the *Helgoland* and *Saida* of 3500 tons and 27 knots will be embodied in the Italian navy and a sister ship, the *Novara*, in the navy of France. Seven destroyers will be added to the Italian flotilla, 1 to that of France, and 1 to the Greek. The remainder have been assigned to Italy and France for demolition. Eleven torpedo boats now form part of the new navy of Jugo-Slavia, 7 are added to the Greek navy, 7 to that of Roumania, and 6 to that of Portugal. The others, assigned to various powers, will be demolished; and a similar fate is assigned to the miscellaneous naval craft.

BELGIUM. It is said that the Belgian government proposes to build and maintain a small force of destroyers and submarines for the defense of the coast. No definite programme has been announced but four small war craft—type unknown—have recently been ordered in France.

BRAZIL. In 1906, the Brazilian government authorised the construction abroad of three battleships of the dreadnaught type. One was launched in 1908 and one in 1909. The third, delayed for financial reasons, was sold to Turkey while on the ways and renamed the *Sultan Osman*. Not being ready for service when the Great War broke out, she was commandeered by the British government, completed, and named the *Agincourt*. She has now been sold to the Brazilian government and it is understood that her name will be the *Rio Janeiro*. Her displacement is 27,500 tons; speed, 22.5 knots; battery, 14 12-inch guns. The two earlier ships, the *Minas Geraes* and *Sao Paulo*, are of 19,280 tons, 21.5 knots speed, and carry 12 12-inch guns. The *Minas Geraes* is now in the United States undergoing transformation similar to that already done on the *Sao Paulo*. These two ships form the important part of the Brazilian navy, the remainder consisting of monitors, cruisers, and destroyers (ten to twenty-five years old), and 3 submarines of 250 tons.

CANADA. Some years ago, the Canadian government established at Halifax a naval college for the instruction of cadets as officers for the naval service. Only a portion of the graduates were commissioned, the remainder providing a potential reserve. On Sept. 1, 1921, a training establishment for the enlisted force was opened at Halifax, but the exact character of the training to be given has not been reported. The active vessels of the Canadian navy are the light cruiser *Aurora* (3500 tons, 30 knots, 2 8-inch and 7 4-inch guns—1 anti-aircraft; completed 1914); destroyers *Patriot* and *Patrician* (980 tons, 35 knots; completed 1916), four submarines, and two tenders for torpedo craft.

CHILE. The battleship *Almirante Latorre* (ex-Canada—See CHILEAN NAVY in YEAR BOOK for 1920, p. 468) has been returned to Chile by Great Britain; also three flotilla leaders of 1700 tons likewise commandeered at the outbreak of war. One flotilla leader of the same class was sunk during the war and the battleship *Almirante Cochrane* was transformed into an airplane carrier. As these two vessels could not be returned, it has been proposed to sell to Chile on favorable terms the battle cruisers *Indomitable* and *Inflexible* of 17,250 tons and 28 knots speed. No information in regard to the progress of the negotiations for these ships has recently appeared. In addition to the vessels mentioned, Chile has an old (1897) third-class battleship, two old (1897-98)

armored cruisers, three cruisers, two flotilla leaders, eight destroyers, several torpedo boats, and six submarines (1915-17).

CHINA. The Chinese navy contains no vessels of importance. There are seven light cruisers of 1900 to 4300 tons (1898-1912) and about a dozen gunboats in fair condition. A programme for the construction of additional cruisers has been submitted to the Peking government but it is doubtful if any will be built at present.

ESTHONIA. The Esthonian government desires to maintain its present force of 2 destroyers, 5 gunboats, 2 tugs, and 15 vedette boats. Nearly all of these vessels formerly belonged to the Russian government.

FINLAND. The naval force consists of 6 torpedo boats and 4 small gunboats. It is proposed to build a gunboat of 1000 tons and 4 submarines.

LATVIA possesses no naval force but desires to acquire 8 destroyers, 4 submarines, and 1500 submarine mines.

FRANCE. The condition of the French finances demands retrenchment in every possible way and the expenditure on the navy is being cut to the lowest practicable point. In 1913, the *Normandie* class of battleships was commenced. The vessels were to have a displacement of 25,000 tons, a speed of 21.5 knots, and to carry 12 13.4-inch guns in 3 4-gun turrets. Soon after the war broke out, all work was stopped on four of the ships, but the *Béarn* was kept in hand until after launching in 1915. The design called for vessels inferior in gunpower and protection to contemporary ships and if completed now would be outclassed by American, British, and Japanese ships already completed and would be still further inferior to those under construction or proposed. The four on the ways are therefore to be scrapped while the *Béarn* is to be completed as an airplane carrier. No additional battleships are contemplated at present, but the marked deficiency of the navy in fast light cruisers, flotilla leaders, and large destroyers is to be filled and additional submarines built. The new programme, to be completed in five or six years, is as follows: 6 light cruisers of 7500 to 8000 tons, 34 knots speed, to cost about 70 million francs each; 12 flotilla leaders of 2000 tons to cost 22 million francs each; 12 destroyers of about 1200 tons to cost 11 million francs each; 36 submarines of various types to cost 504 millions in the aggregate. The French navy of to-day consists of:—7 dreadnaught battleships (4 carrying 12-inch guns, 3 carrying 13.4-inch—all laid down two years or more before the war), with a total tonnage of 163,500; 10 pre-dreadnaught battleships of 168,280 tons; 5 armored cruisers of 55,100 tons and 23 to 25.5 knots speed; 11 ineffective armored cruisers; 2 old battleships of no particular value; 8 old cruisers (more than 20 years old); no modern light cruisers except 5 of a total tonnage of 22,650 turned over by Germany—all new vessels; no flotilla leaders except 1 turned over by Germany; 60 old and small destroyers—only a few over 400 tons; 25 modern destroyers of 685 to 880 tons; 9 destroyers of 780 to 1000 tons turned over by Germany and Austria; about 150 old and small torpedo boats; about 80 submarines, not more than half of which are of much value; 10 submarines turned over by Germany.

GERMANY. By the terms of the Treaty of Versailles, as amended, Germany was allowed

to retain 6 pre-dreadnaught battleships, 6 light cruisers, 12 destroyers, and 2 torpedo boats but no submarines. All other warships were to be delivered to the Allies or scrapped. Many of the "scrapped" ships have been converted to merchant vessels. Uncompleted battleships and cruisers were transformed into oil tankers and freighters, while destroyers and even submarines have been rebuilt as passenger or freight steamers, or oil carriers. The ships left in the German navy are organized in two fleets of about equal size—one in the Baltic and one in the North sea. Much care was taken in selecting the personnel of the new navy and some observers say that the organization appears excellent. But the formation of a well-disciplined and really efficient force seems unlikely until the "soviet" and communist ideas which broke up the old service are completely eradicated. (See YEAR BOOK for 1920, p. 470.) The terms of the peace treaty are not taken very seriously by Germany and she evidently intends some day to treat the naval clauses as "scraps of paper" when time and opportunity permit. In the meantime she plans for that future day. In the administrative and staff headquarters there are 1300 officers, an astonishing number for a navy that probably has a necessary enlisted force of not much over 10,000 men. Another significant fact is the very large number of officers assigned to specialist duties such as gunnery, torpedoes, navigation, organization, and the general staff. The only new ship laid down during the year is a light, fast cruiser of 6000 tons which has been commenced at Wilhelmshaven dockyard.

GREAT BRITAIN. The present British naval policy as foreshadowed by numerous speeches of Lord Lee (First Lord of the Admiralty) and other prominent British statesmen and definitely declared at the Washington Conference on the Limitation of Armaments, is a friendly agreement with the United States through which a rivalry in naval construction can be avoided. The navy estimates for 1921-22 provide for the completion of 2 large light cruisers of 9905 tons and 31 knots and 1 of 7720 tons and 33 knots; 2 flotilla leaders of 1778 tons and 36 knots; 2 destroyers of 1092 tons and 36 knots and 4 of 1346 tons and 34 to 36 knots; 6 submarines of 904 (surface) to 1097 (submerged) tons with corresponding speeds of 17.5 and 10.5 knots; 1 submarine of 1910 to 2693 tons with speeds of 24 and 9.5 knots; 1 airplane carrier of 23,145 tons and 24 knots and 1 of 11,125 tons and 25 knots. The proposed new construction consists of 4 new battle cruisers slightly larger and faster than the *Hood*; 1 submarine of new type; 1 mine layer of submergible type. The results of the Conference on the Limitation of Armaments seem to indicate that the number of battle cruisers will be reduced to two and these of 35,000 tons.

GREECE. The navy at present consists of the 2 old battleships (formerly the *Mississippi* and *Idaho*, of 13,000 tons) purchased from the United States; 3 small battleships of 4800 tons, rebuilt 1897-1900; the armored cruiser *Giorgios Averoff*, completed in 1912; the light cruiser *Heliki* (1914) of 2600 tons; 7 destroyers of 350 tons, 4 of 980 tons, and the ex-Austrian *Ulan* of 400 tons; 4 ex-Austrian torpedo boats of 250 tons and about a dozen older and smaller torpedo boats. Two of the old battleships of 4800 tons,

two old submarines, and some old destroyers and torpedo boats are to be sold. Two light cruisers and 6 torpedo boats are to be ordered in England, and 4 submarines are to be purchased from Italy. The battleship *Salamis* was ordered in Germany before the war and 25 million drachmas were paid to the Vulcan works on account. It does not appear that the Greek government now desires her completion; but what arrangements are being made with the Vulcan works are unknown. In the early part of 1921 a British naval commission was assisting to reorganise the Greek navy but no complete report of its labors has been published. The naval budget for 1920-21 amounted to 91,036,201 drachmas (the gold drachma is worth 19.3 cents).

ITALY. The existing navy consists of 5 dreadnaught battleships, total tonnage 108,570; 7 pre-dreadnaught battleships of 82,630 tons; 5 armored cruisers of 44,208 tons; 3 small, fast light cruisers, tonnage 10,020; 8 old light cruisers, tonnage 17,569; 12 new, fast scouts of 1000 to 2000 tons, total tonnage 18,372; 48 destroyers of 26,588 tons; 64 torpedo boats of 10,000 tons; and 71 submarines, of which about 60 are useful vessels. There are under construction 3 scouts of 2200 tons each, 6 destroyers of 800 tons, 8 destroyers of 900 tons, and several small vessels of no great military value. In addition to the foregoing, Italy received from Germany the light cruisers *Pillau* (4320 tons, 27.5 knots—renamed *Bari*), and *Strassburg* (4480 tons, 28 knots—renamed *Taranto*); from Austria the light cruisers *Helgoland* (3500 tons, 27 knots—renamed *Brindisi*) and *Saida* (3500 tons, 27 knots—renamed *Venezia*). Two destroyers were also received and renamed as well as some Austrian torpedo boats. The present budget (1921-22) authorizes the laying down of 8 mine layers of 800 tons, 1 oil fuel transport of 7000 tons, 4 submarines of 600 tons (surface displacement), 1 or 2 light cruisers of about 5000 tons, 4 destroyers of 900 tons, and 8 fast motor torpedo boats. The budget for 1921-22 authorizes an expenditure of 847,837,767 lire. The budget also authorizes the sale of all fighting vessels launched before 1904 and auxiliary craft launched before 1895.

JAPAN. Unlike the other Allies, Japan is hampered by no great war debt. Indeed the war saved her tottering finances. Such money difficulties as she has experienced have been due to tumbling prices since the war and a stubborn disregard of facts by the trades' unions. The net result of the war is that the government feels able, as it never has before, to enter into a naval building competition with the United States. So rapidly and steadily has this gone on that not only were they recently gaining on but they were laying down the newer and more powerful ships while we were lagging behind. The Japanese navy of to-day has 6 dreadnaught battleships of 178,320 tons, all but one carrying 14-inch or 16-inch guns; 4 battle cruisers of 27,500 tons each (total 110,000 tons), speed 28 knots, battery 8 14-inch guns; 11 pre-dreadnaught battleships of 168,000 tons; 3 large armored cruisers of 43,000 tons; 9 smaller armored cruisers of old type, tonnage 81,500; 3 light cruisers of 4950 tons and 26 knots, 2 of 3500 tons and 31 knots; 9 of 5500 to 5780 tons and 33 knots are built or building; 10 old cruisers are still in service

but of little military value; about 30 destroyers of 1200 to 1400 tons, 10 of 835 tons, and 24 smaller ones of about 375 tons are in service; also 20 or 30 old torpedo boats; and 20 or more submarines, the exact number completed being unknown, but there are a good many new boats completed or under construction in Japan. The other vessels under construction are:—battleships: *Mutsu* (33,800 tons, 8 16-inch guns), *Kaga* and *Tosa* (41,600 tons, 10 16-inch guns); battle cruisers: *Akagi* and *Amagi* (43,500 tons, 29 knots, 10 16-inch guns); 2 battle cruisers of the same class, but perhaps slightly larger, the *Atago* and *Takao*, were to be laid down about Nov. 1, 1921; 9 light cruisers of 5500 to 5780 tons (already referred to) are either built or building; about a dozen destroyers are in some stage of construction; and several submarines—number and size unknown. The programme of new construction, approved early in 1921, provides for 4 battleships (*Oviri*, Kii No. 7, and No. 8—battery 12 16-inch or 8 18-inch guns, displacement reported as 45,000 tons); 4 battle cruisers (no information published); 12 light cruisers (at least 2, probably 4, of 7000 tons or larger); 32 destroyers; 5 gunboats, 18 special ships (such as mine-sweepers, oil fuel ships, airplane carriers, etc.). This programme to be completed by 1927.

YUGO-SLAVIA. The kingdom of Serbia had no seacoast but by the addition of part of the Austro-Hungarian empire, thereby forming the new state of Yugo-Slavia, a short coast line on the Adriatic has been obtained. A navy department has therefore been established and was recently reorganized. Two old Austrian armorclads, *Erherzog Ferdinand Maz* and *Kronprinz Rudolf* were turned over by the French when they evacuated Cattaro; also eleven torpedo boats. In addition, the new navy has a number of gunboats, river monitors (on the Danube), etc.

LATVIA. The government does not at present possess a single war vessel of any kind but expects to purchase 8 destroyers and 4 submarines and to keep on hand 1500 submarine mines.

MEXICO. It is reported that the present government has disposed of all its war vessels with exception of one or two small craft in the Pacific.

NETHERLANDS. No new programme of naval construction was put forth during the year although there has been considerable discussion of the subject in parliament. On Dec. 29, 1920, the fast, light cruiser *Sumatra* was launched at Amsterdam. She is of 7150 tons, 30 knots speed, and will carry 10 6-inch guns.

PERU. The Peruvian navy is being reorganized under the direction of officers of the United States Navy, who will also give instruction in modern naval duties to the Peruvian officers. The vessels of the navy consist of two light cruisers of 3200 tons and 24 knots; 1 old cruiser of 1800 tons bought from France; 1 old cruiser of 1700 tons; 1 destroyer of 500 tons; and 2 submarines. The old French armored cruiser *Dupuy de Lôme* (6300 tons) was purchased from France just before the war and renamed the *Elias Aguirre*.

POLAND. The law creating the Polish navy was passed in 1919, and a naval school for officers was soon afterwards established at Thorn. The vessels of the navy are, at present, only gunboats and mine-sweepers, but 5 ex-German torpedo boats destined to Poland are being repaired in England.

PORTUGAL. The Portuguese navy consists of

5 old cruisers of 1000 to 4100 tons, 1 gunboat of 600 tons, 4 destroyers (1912-14) of 700 tons, 1 of 500 tons, several torpedo boats, and 4 submarines.

ROUMANIA. Three river monitors of 433 to 527 tons, formerly belonging to the Austro-Hungarian navy have been turned over to Roumania. Two fast gunboats, or flotilla leaders, of 1500 tons and 35 knots (formerly the *Nibbio* and *Sparviero*) have been purchased from Italy. In addition to these, the navy possesses 1 small cruiser of 1320 tons, 4 gunboats of 45 to 360 tons, 5 river gunboats of 90 to 105 tons, 4 river monitors of 670 tons, 4 destroyers of 1350 to 1450 tons, 5 or 6 torpedo boats of 550 tons, and other small craft of no military value.

RUSSIA. The general inefficiency of the Bolsheviks and their ignorance of mechanical and technical matters, together with their murder of most of the former officers of the fleet, have caused the vessels to become absolutely useless with the exception of those in which Baron Wrangel's forces escaped from the Crimea. These vessels are now at the French naval port of Bizerta in Algeria and have been turned over to the French government which has agreed to maintain them for the present. They consist of the dreadnaught battleship *General Alexieff* (ex-*Imperator Alexander III*) of 22,795 tons, the old battleship *Georgi Pobiedonosets* of 11,390 tons, the cruiser *General Korniloff* (ex-*Kagul*) of 6850 tons, 6 large destroyers of 1120 to 1345 tons, 4 small destroyers, 4 submarines, 1 yacht, and a transport of 16,250 tons; also some other vessels—destroyers, gunboats, etc., of a size and character not reported. The general condition reported in the YEAR BOOK for 1920 (p. 472) remains unchanged except for the worse.

SPAIN. During the war, like other neutral countries, Spain greatly improved its financial condition and is carrying out its naval programme with a speed never before reached. The last of the three battleships of 15,700 tons has been completed and commissioned. The Spanish fleet now consists of 3 dreadnaught battleships of 15,700 tons, 1 old (1887) battleship of 9744 tons, 3 old armored cruisers (6889 to 9089 tons); 2 protected cruisers of 5287 and 5778 tons; 2 small cruisers; several gunboats; 12 destroyers; and 10 or 11 submarines. There are under construction 4 light cruisers of 5500 to 6000 tons; 6 submarines (12 more will be built); 3 destroyers of 1145 tons; and two torpedo boats. A submarine salvage vessel built in Holland was added to the special service class in 1921. The naval appropriation for 1921-22 is 119,907,672 pesetas (1 peseta = \$0.193), of which 34,000,000 pesetas are allotted to new construction. The bill provides for a naval enlisted force of 13,400 men and a marine enlisted force of 4260.

SWEDEN. The naval budget for 1921 amounted to 28,752,254 crowns (1 gold crown = \$0.268) of which 1,950,000 was for new construction. For 1922, the minister of defense asks for 15,000,000 crowns for the construction of submarines. The new third-class battleship *Drottning Victoria* of 7800 tons, 4 11-inch guns, and 23 knots speed was completed and commissioned for service in 1921. The Swedish navy now consists of 3 third-class battleships of 7100 tons; 1 coast defense turret ship of 4200 tons, 1 of 4100, 4 of 3612, 4 of 3445, and 2 of 3240; 10 destroyers of 400 to

500 tons; 32 torpedo boats of 92 to 370 tons; 10 torpedo boats of 60 tons; and 11 submarines.

UNITED STATES. The naval Appropriation Act for 1921-22 authorizes a total expenditure of \$413,067,039.23 and fixes the personnel of the navy at 106,000 and of the Marine Corps at 21,000. It authorizes the completion of the 1916 programme of construction but as the sums available for work on the various ships were much below the estimates the rate of construction has been considerably reduced. If the present agreements of the Conference for the Limitation of Armaments are finally approved by the various governments, the slowing down of the work will result in financial gain. The effective force of the navy on Jan 1, 1922, consisted of the following:—18 dreadnaught battleships (6 armed with 12-inch guns, 11 with 14-inch guns, and 1 with 16-inch) of 500,650 tons; 15 pre-dreadnaught battleships of 227,740 tons; 12 armored cruisers of 148,715 tons; 11 old protected cruisers of 44,087 tons; 3 scout cruisers (25 knots) of 3750 tons; 4 gunboats of 5170 tons; 278 destroyers of about 300,000 tons; a large number of submarines (exact number rated as effective unknown) of about 80,000 tons. As shown in the accompanying table there are under construction: 3 battleships of 32,600 tons; 6 battleships of 43,200 tons; 6 battle cruisers of 43,500 tons; total battleships and battle cruisers, 15 of 618,000 tons; 10 light cruisers of 7100 tons—total 71,000 tons; 1 gunboat; 5 auxiliaries; 4 destroyers. Twelve additional destroyers are authorized but are not under construction or contract and will probably not be built. In its amended form the Armament agreement permits the retaining of the *Colorado* and *Washington* in place of the *Delaware* and *North Dakota*. If the agreement is finally approved, the last seven battleships of the table and the six battle cruisers will be scrapped. This is unfortunate as the navy needs at least four battle cruisers as a proper balance of power in capital ships. The other points in which the navy is deficient are light cruisers, flotilla leaders (or small fast cruisers), and air craft. The cruisers building will supply the first named need and it is to be hoped that the others will be filled in the near future.

**VESSELS UNDER CONSTRUCTION FOR U. S. NAVY;
PER CENT COMPLETE NOV. 1, 1921**

Type and name	Displacement (tons)	Per cent complete
Battleships:		
Colorado.....	32,600	83.0

Perry.....	1,215	79.5
Decatur.....	1,215	73.7

In addition to the foregoing there are under construction 4 fleet submarines and 37 submarines; and there are authorized but not under construction 6 fleet submarines and 1 submarine.

AIR-CRAFT ATTACK ON SURFACE VESSELS. Ever since the war the U. S. Navy has been studying this question and formulating plans of experimental attacks. When certain German vessels were turned over to the United States for destruction and several superannuated battleships were made available for tests, the time for conducting the experiments seemed to have arrived. The Army, through the Secretary of War, was invited to participate in the work. Upon the conclusion of the tests, the Army and Navy Joint Board appointed to observe them made a report embodying the results and its opinion concerning the various points under consideration and test.

The old battleship *Iowa*, steaming slowly under radio control, was steered on varying courses such as a ship expecting aerial attack would naturally take.

The *Ostfriesland*, ex-German battleship, was the only other capital ship attacked. She lay without moving.

The weather and conditions as regards visibility and ease of operating aircraft were excellent.

Among other conclusions too numerous and extensive to be given here, the board concluded that, notwithstanding the satisfactory, comprehensive, and interesting character of the tests,—

(g) "The battleship is still the backbone of the fleet and the bulwark of the nation's sea defense, and will so remain so long as the safe navigation of the sea for purposes of trade or transportation is vital to success in war."

(h) "The aeroplane, like the submarine, destroyer, and mine, has added to the dangers to which battleships are exposed but has not made the battleship obsolete. The battleship still remains the greatest factor of naval strength."

(i) "The development of aircraft, instead of furnishing an economical instrument of war leading to the abolition of the battleship, has but added to the complexity of naval warfare."

(j) "The aviation and ordnance experiments conducted with the ex-German vessels as targets have proved that it has become imperative as a matter of national defense to provide for the maximum possible development of aviation in both the army and navy. They have proved also the necessity for aircraft carriers of the maximum size and speed to supply our fleet with the offen-

sive and defensive power which aircraft provide, within their radius of action, as an effective adjunct of the fleet. It is likewise essential that effective anti-aircraft armament be developed."

15. "Inasmuch as these experiments were not conducted under battle conditions it is difficult to draw conclusions as to the probability of hitting a target with bombs from aircraft while in action. Under the favorable conditions existing during the experiments—namely, stationary or practically stationary target, immunity from enemy interference, and excellent visibility and flying conditions, the percentage of hits was greatly in excess of that to be expected under battle conditions."

16. "The probability of hitting will be reduced in the case of a target moving at high speed on varying courses; further reduced if the target vessel is protected by effective anti-aircraft armament; and practically negligible if the target is protected by effective pursuit planes. On the other hand the probability of hitting will be increased by more efficient sighting and bomb-dropping control apparatus, by further training and further development of aerial tactics."

17. "In the present state of anti-aircraft defense it is believed that if an air force can obtain the mastery of the air, an effective percentage of hits can be obtained against surface vessels coming within the radius of action of bombing planes without an undue percentage of loss of aircraft. Anti-aircraft armament is in an early stage of development. The history of war indicates that means of defense develop rapidly to meet the development of offensive weapons. The effectiveness of the bomb carried by aircraft emphasizes the necessity for the rapid development of anti-aircraft armament and for the provision of pursuit planes as a part of the fleet."

18. "Aircraft carrying high-capacity, high explosive bombs of sufficient size have adequate offensive power to sink or seriously damage any naval vessel at present constructed, provided such projectiles can be placed in the water alongside the vessel. Furthermore, it will be difficult, if not impossible, to build any type of vessel of sufficient strength to withstand the destructive force that can be obtained with the largest bombs that aeroplanes may be able to carry from shore bases or sheltered harbors."

19. "High-capacity, high-explosive bombs hitting the upper works of a vessel are disastrous to exposed personnel, serious to light upper works, comparatively slight to heavy fittings such as guns, and negligible to turrets. The effect of direct hits was completely local. The most serious effect of bombs is the mining effect when such bombs explode close alongside and below the surface of the water."

20. "In the case of major ships, the mining effect of a bomb will be materially reduced due to the ability of the personnel to free the ship of large quantities of water by means of pumps, to distribute the excess water through the various compartments, and to shore up the water-tight doors and bulkheads which are in most serious danger of carrying away due to water pressure."

From these and other tests and from a general consideration of aircraft possibilities it is manifest that the battleship has a new and very serious enemy. But such enemies have been appearing ever since the dawn of history. In the early days of the galley period the adoption of the ram and

the development of the fast ram-galley caused the attempt to build very large fighting craft to be abandoned and stabilized the trireme. In the eighth century the invention of Greek fire and its retention as a state secret by the Eastern Empire nearly drove the fighting galleys of other powers from the seas. The development of the large handy sailing ship and the improvement in guns and gunpowder brought in the sailing battleship. This in turn succumbed to the steamer, the most powerful types becoming armor-plated as a protection against explosive shells and the increased power of the naval gun. Then came the submarine mine, the automobile torpedo and the torpedo boat, and the specially built armored ram. The enthusiastic advocates of these weapons declared the battleship would be driven from the sea. But it wasn't. It changed its design slightly, improved its speed and protection and provided itself with the torpedo boat destroyer and a special anti-torpedo boat battery of light guns. Then came the submarine with still more enthusiastic advocates. It in turn was curbed by the destroyer and patrol vessel so that in four years' war not more than one modern battleship was sunk by a submarine and it is believed that this casualty was caused by a mine and not by a submarine. The battleship will not be driven from the sea because it cannot be. It may change its design and form of protection. It may take on new means of defense and new defensive satellites but the battleship idea is indestructible. We must always have powerful ships with the greatest possible means of offense in order that we may strike as well as receive blows.

All that we know and can deduce from this knowledge impels us to the certain belief that the battleship is not rendered obsolete but that its activities in certain directions are curbed and hampered and its design may need change—possibly drastic change. It is certain however that, to enable the present type (or even some new design) to accomplish the purposes for which battleships are built, the aviation arm of the fleet must be greatly strengthened. With an adequate number of pursuit planes accompanying the fleet, effective bombing is reduced to a negligible danger and the surface ships are nearly as safe as ever. The next step is the adaptation of the bombing plane to fleet use. Up to the present no aircraft carrier has been built which readily permits such planes to take off or land. When bombers accompany fleets for use against other fleets then battleship design may need basic change. The production of a practicable helicopter may mean much in both attack and defense. See BATTLESHIPS AND OTHER WAR VESSELS.

NAVIES. See NAVAL PROGRESS.

NEBRASKA. POPULATION. According to the report of the census of 1920, there were 1,296,372 residents in the State, Jan. 1, 1920, as compared with 1,192,214 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	7,419,000	207,732,000	\$56,088,000
	1920	7,560,000	255,528,000	104,786,000
Oats.....	1921	2,585,000	70,054,000	14,711,000
	1920	2,400,000	83,040,000	30,725,000

Crop	Year	Acreage	Prod., bu.	Value
Barley.....	1921	199,000	4,915,000	1,376,000
	1920	256,000	7,424,000	3,712,000
Wheat.....	1921	3,967,000	59,875,000	49,696,000
	1920	3,593,000	60,480,000	79,229,000
Rye.....	1921	185,000	1,714,000	1,028,000
	1920	129,000	1,819,000	1,874,000
Hay.....	1921	3,821,000	4,712,000	29,194,000
	1920	3,965,000	5,553,000	53,755,000
Potatoes.....	1921	102,000	8,160,000	9,792,000
	1920	85,000	8,415,000	10,088,000

¹ Tons.

IRRIGATION. Irrigation conditions of the State in 1920 as compared with those in 1910 are shown in the accompanying table issued by the United States Bureau of the Census.

Item	Census of—	
	1920	1910
Number of all farms.....	124,417	129,678
Approximate land area of the state.....	acres.. 49,157,120	49,157,120
All land in farms.....	acres.. 42,225,475	38,622,021
Improved land in farms.....	acres.. 23,109,624	24,382,577
Number of farms irrigated.....	3,021	1,852
Area irrigated.....	acres.. 442,690	255,950
Area enterprises were capable of irrigating.....	acres.. 562,468	429,225
Area included in enterprises.....	acres.. 766,768	680,133
Per cent irrigated:		
Number of all farms.....	2.4	1.4
Approximate land area of state.....	0.9	0.5
Land in farms.....	1.0	0.7
Improved land in farms.....	1.9	1.0
Excess of area enterprises were capable of irrigating over area irrigated.....	acres.. 119,778	173,275
Excess of area included in enterprises over area irrigated.....	acres.. 324,078	424,183
Capital invested.....	\$13,909,185	\$7,798,310
Average per acre enterprises were capable of irrigating.....	24.73	18.17
Estimated final cost of existing enterprises.....	18,030,154	9,485,231
Average per acre included in enterprises.....	23.51	13.95
Average cost of operation and maintenance per acre.....	1.48	1.09

TRANSPORTATION. The total railway mileage of the State on Dec. 31, 1921, was 8392. The railroads having the longest mileage were: Chicago, Burlington and Quincy, 3601; Union Pacific, 2104; Chicago and Northwestern, 1306. Almost no railroad building was done during the year in Nebraska. Some roadbed was prepared, however, for projected extensions.

FINANCE. Owing to the financial stringency during the year, incident to shrunken prices for farm produce of all kinds, receipts at the State treasurer's office do not represent the total amount of taxes levied. The delinquency was not sufficient to embarrass the State in any of its activities, for funds were available to obviate the necessity of even short term borrowing. The total appropriations for the biennium ending June 30, 1923, amounted to \$25,792,256.33. Of this \$1,707,258.12 was to carry on construction work on the new State house building; \$1,077,434.48 is to pay the State's share of road building. The State has no bonded debt.

EDUCATION. The total school population in 1921 was 400,000. Enrollment in the public schools was 299,201; average daily attendance was 239,734. The number of teachers employed, male and female, was 13,978 and their average salary was \$100 per month. The total tax levied for support of graded schools in Nebraska for the year was \$25,253,518.17. For the support of the University of Nebraska the legislature appropriated \$6,056,954.34 for the biennium; and for the State normal schools, \$1,482,773.33.

POLITICS AND GOVERNMENT. The regular session of the legislature was held January-March.

For the first time appropriations were made in conformity to a budget prepared by the governor, under the amended State constitution. Plans for the erection of the new State capitol as presented by the commission were approved, the commission continued and an appropriation made to carry on the work. Much time of the legislature was taken up with consideration of a new revenue measure, and revision of the State banking law. No very extensive modifications were made in either. The so-called "code" law, under which the governor appoints a "cabinet" to administer the different departments of the State government, was strengthened by amendment. The office of State sheriff was created, the object being to assist local

peace officers in enforcing the laws. Salaries of all State officers were increased, as provided for by the new constitution.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Amendment prohibiting resident aliens from ownership of agricultural lands, the prohibition in the existing law applying only to non-resident aliens; provision for the preparation and presentation of a State budget; provision for the incorporation of coöperation associations; declaring English the official language of the State and prohibiting discrimination against its use by religious or social bodies; provision for a clinical psychologist under the supervision of the board of control; regulations in respect to pardons, indeterminate sentences paroles, commutations, etc.; definition of unlawful interference with work and prohibition of the same; raising school age from 14 to 16 years under certain conditions; raising the age minority of females to 21 years.

STATE OFFICERS. Governor, Samuel R. McKelvie; Lieutenant-Governor, P. A. Barrows; Secretary of State, D. M. Amsberry; Attorney-General, Clarence A. Davis; Auditor, George W. Marsh; Treasurer, D. B. Cropsey; Commissioner of Public lands, Dan Swanson; Railway Commissioners: Thorne A. Browne, H. G. Taylor, and Harry L. Cook; Superintendent of Public Instruction, John M. Matsen.

NEBRASKA, UNIVERSITY OF. A co-educational State institution of the higher learning at Lincoln, Neb.; founded in 1869. The enrollment for the fall of 1921 was 4740 of whom 2942 were men and 1798 women. The largest number was in the College of Arts and Sciences, 1776, and next to that came Business Administration, Engineering, the Teachers' Department, and Agriculture. The enrollment for the summer was 1589. The above figures do not include students of other than college rank and students enrolled in the extension department for correspondence courses. Counting these, the total enrollment for the year including the summer session was about 7500. The faculty contained 289 members, of whom 14 were added during the year. There were 154,000 bound volumes in the library. The productive funds amounted to \$901,717 and the total income to \$3,065,681. A barn in the department of Agronomy and a photograph studio building were added during the year. Chancellor, Samuel Avery.

 Perkins, Edmund Taylor.
 Perrier, Edmond.
 Peter I.
 Peters, John Punnett.
 Peterson, Sir William.
 Phillips, F. C.
 Pierson, Alden. Artist, died in 1921. He was born at Baltimore, Md., Oct. 19, 1873; and educated at the Maryland Institute School of Art and Design, Baltimore. After January, 1912 he was art manager of the *American Magazine*.
 Pike, Frederick Owen. British naval officer, died, April 5. He was born in 1851; and was retired with the rank of vice-admiral in 1911, but returned to active service during the late war.
 Pinto de Almeida, Antero.
 Piper, Otto. German author, editor and publisher of Munich, died in 1921.
 Platner, John Winthrop.
 Platner, Samuel Ball.
 Pösch, Rudolf. Austrian anthropologist, died in 1921. See article ANTHROPOLOGY.
 Pos, Sir Edmund Samuel.
 Ponchielli, Teresa Brambilla.
 Porritt, Edward.
 Porter, Henry Kirke.
 Porter, Horace.
 Poesart, Ernest Von.
 Post, James D. Former Congressman, died at Nutley.

N. J., April 1. He was born in 1846. He served as a police magistrate.

Potter, Paul Meredith.
 Pouglin, Arthur.
 Pradilla, Fr. Painter, died at Madrid, November 1.
 Preus, Christian Keyser. College president, died, May 29.
 Pritchard, Peter Connelly.
 Prouty, Charles Asro.
 Pyne, Moses Taylor.
 Rader, F. E. Superintendent of Experiment Station at Matanuska, Alaska, died, December 28.
 Ramsay, George Gilbert.
 Randall, Frank Lange.
 Randolph, Carman Fits.
 Randolph, Epes.
 Randolph, Lewis Van Syckle Fits.
 Ransborough, John Fielden Brocklehurst, Lord.
 Ranschoff, Joseph.
 Reade, Philip.
 Reinach, Joseph.
 Reyes, Rafael.
 Rhaliys Demetrios. Former Prime Minister of Greece, died, August 19. He was born in 1840.
 Ranksborough, John Fielden Brocklehurst, Lord. British army officer, died, February 28. He was educated at Rugby, and graduated at Trinity College, Cambridge in 1873. In the following year he entered the army and commanded in the Royal Horse Guards from 1894 to 1899. In the meanwhile he had served with honor in the Egyptian war of 1882 and the Nile Expedition of 1884-1885.
 Reyes, Rafael. Former president of Colombia, died at Bogota, February 19.
 Rhys-Herbert, William.
 Richards, Frederick Thompson.
 Richards, Joseph William.
 Richmond, Sir William Blake.
 Richter, Max. Leading German potash manufacturer, died at Berlin, May 14. He was born in 1856.
 Ritchie, Arthur. Clergyman, died at Nyack, N. Y., July 9. He was born in 1849.
 Ritchie, John Gerald.
 Ritter, Paul. Diplomat, died at Zurich, Switzerland, June 2. He was born in 1865.
 Rittner, Thaddaus. German dramatist, author of recent successes, died in 1921.
 Roberts, Benjamin Kearney.
 Roche, Alexander.
 Rogers, William King.
 Rosa, Edward Bennett.
 Rosen, Baron Roman Romanovitch.
 Rosemore, Derrick Warner William Westenra, Fifth Baron.
 Rougemont, Louis de.
 Ruckman, John Wilson.
 Ruthven, Walter James Hore-Ruthven.
 Saint-Saëns, (Charles-) Camille.
 Saltus, Edgar.
 Samarov, Olga.
 Sampson, Archibald J.
 Sanders, Henry Martin. Clergyman, died in Maine, July 22. He was born in 1850.
 Sandhurst, William Mansfield, Viscount of.
 Sandor, Mathias.
 Sanger, William Cary. Former Assistant Secretary of War, died in New York City, December 6. He was born at Brooklyn, N. Y., May 21, 1853; served in the Spanish-American war; was Assistant Secretary of War, 1901-03 and a prominent member of important commissions including the war relief board of the National Red Cross.
 Sasulitch (Zasulich), Vera.
 Saunders, Edwards Watts.
 Savage, Sir George Henry.
 Schaefer, William Christ.
 Schelling, Ernest.
 Scherl, August. Newspaper proprietor, died in Berlin, Germany, May 18. He was born in 1849.
 Schindel, S(amuel) John Bayard.
 Schmidt, Arthur P.
 Schnabel, Charles J. Lawyer, died in 1921. He was born at Pittsburg, Pa., Aug. 17, 1867; and after a common school education graduated in law at the University of Oregon in 1891, after which he was admitted to the Oregon bar. He was the president of the Schnabel Investment Company.
 Scofield, Cyrrus Ingerson.
 Scully, Thomas J.
 Sedgwick, William Thompson.
 Servièras, Armand.
 Sevcik, Otakar.
 Sévèrac, Déodat de.
 Sheppard, Edgar. British clergyman, died in London, August 30. After 1907 he was canon of St. George's Chapel, Windsor Castle. He was born Aug. 10, 1845, was chaplain-in-ordinary to Queen Victoria and King Edward and published volumes on the royal palaces and a *Life of the Duke of Cambridge*.
 Shrewsbury, Earl of Charles Henry.

Sifton, Arthur Lewis. Canadian official, died at Ottawa, January 21. He was appointed Secretary of State in 1920. He was born Oct. 28, 1858, educated at Victoria University, Chief justice of the Northwest Territories, 1903-05, and held successively several cabinet offices after 1910.

Skiff, Frederick James Volney.
 Sleicher, John Albert.
 Smith, Frederick H.
 Smith, Jeremiah.
 Smith, Milton H.
 Smyth, Julian Kennedy.
 Somers, Orlando Allen. Soldier, died at Kokomo, Ind., June 9. He was born at Middletown, Ind., Jan. 24, 1843, served during the Civil War and was prominent in the G. A. R. and other veteran organizations. He was member of the Indiana legislature, 1898-1900.
 Sonnino, Baron Sydney.
 Spofford, Harriet Prescott.
 Spronck, Maurice.
 Stamm-Rogers, Madame Estelle. Operatic singer, died, September 13. She was born in 1886 and sang contralto parts.

Stanchfield, John Barry.
 Stein, Leo.
 Stephen, George (Lord Mount Stephen).
 Stephens, David Stubert.
 Stevenson, Sara Yorke (Mrs. Cornelius Stevenson).
 Stoddart, Joseph M. Editor and publisher, died February 26. He was born in 1846 and was well known as a publisher in Philadelphia.
 Stone, Winthrop Ellsworth.
 Storey, John. Prime Minister of New South Wales, died October 5.

Story, Douglas.
 Stover, Martin Luther. Judge, died at Albany, N. Y., June 7. He was born at Waterloo, N. Y., Oct. 19, 1845; served in a Ohio regiment in the Civil War; was admitted to the bar in 1870 and practiced at Amsterdam, N. Y. till 1892 and in New York City after 1906. He was justice of the New York supreme court, 1891-1905.

Stowell, Calvin Llewellyn.
 Strang, William.
 Straus, Richard.
 Strong, Augustus Hopkins.
 Tagliapietra, Giovanni.
 Talaat, Pasha. Former Grand Vizier of Turkey, assassinated in Berlin, March 15, by an Armenian student who had been aroused by the accusation of the Armenians that Talaat was responsible for the massacres. The assassin attacked him on the street and, firing point blank, killed him immediately.

Taussig, Edward David.
 Taylor, Bert Leston.
 Taylor, Charles Henry.
 Taylor, F(rank) Walter.
 Taylor, Samuel Mitchell.
 Thach, Dr. C. C. Died October 3. He was for many years President of the Alabama Polytechnic Institute.
 Thayer, Abbott Handerson.
 Thoma, Ludwig. German author, died, August 26. He wrote humorous verse, fiction and plays, chiefly founded on Bavarian life.

Thomas, Earl Denison.
 Thompson, George Wallace.
 Townsend, James Bliss.
 Trabert, Wilhelm. Ex-director Zentralanstalt für Meteorologie und Geodynamik, Vienna, and professor of cosmical physics at the University of Vienna, died, February 24.

Tredwell, Daniel M.
 Troels-lund, Troels Frederik.
 Tucker, John Francis.
 Tustin, Ernest Leigh.
 Vann, Irving Goodwin.
 Van Syckel, Bennett.
 Varady, Rosal.
 Vasof, Ivan.
 Villagas y Decordero, José.
 Virgil, Almon K. Died, October 15 at St. Petersburg, Fla.
 Vogl, Therese. Died in September at Trutsing on Lake Starnberg.

Wade, James Franklin.
 Wallace, John Finley.
 Walsh, William J.
 Warfield, Benjamin Breckinridge.
 Warrington, John W. Judge, died at Cincinnati, O., May 26. He was born in Ohio in 1846 and was presiding judge of circuit court of appeals after 1911.

Watson, Henry Brereton Marriott.
 Watterson, Henry.
 Watts, Ethelbert.
 Webster, Harrie.
 Wedmore, Sir Frederick.
 Weed, Samuel Richards.
 Wekerle, Alexander. Hungarian cabinet officer, died at Budapest, August 27. He was five times Prime Minister of Hungary; born in 1848.

Weelborn, Olin. Judge, died, December 6. He was born in 1849.

Wendell, Barrett.

West, Sir Algernon. British civil official, died, March 21. He was born in 1832.

Wetmore, George Peabody.

White, Alfred Treadway.

White Edward Douglass.

Whitney, Mary Watson.

Whitney, William Flake. Anatomist, died, March 4.

Whittlesey, Charles W.

Whyte, Alexander.

Wilcox, Sidney Freeman.

Williams, William Elsa. Former Congressman from Illinois, died at Pittsfield, Ill., September 13. He was born, May 5, 1857; educated at Jacksonville, Ill.; and admitted to the bar in 1880. He was a member of Congress in 1889-1901 and 1913-1917.

Wilson, Sir Arthur Knyvet.

Wolliston, Sir Harry.

Woodhull, Alfred Alexander. Army surgeon with rank of brigadier-general, died, October 18. He was well-known as writer and lecturer on hygiene.

Woodhull, Maxwell Van Zant.

Wotherspoon, William Wallace.

Wright, George Frederick.

Wrightson, Sir Thomas.

Wurtemberg, William, former King of. Died, October 2. He was born in 1847.

Yarger, Henry Lee.

Young, John Philip.

Young, Odus Graham.

Zach, Max Wilhelm.

Zahn, John Augustine.

Zelenaki, Ladislav.

Ziel, Ernst. German editor of the Gartenlaube, died in 1921.

NEGRI SEMBILAN. A federation of nine divisions composing a state in the Malay Federated States (q. v.).

NEGRO FARMERS. See AGRICULTURE and AGRICULTURAL EXTENSION WORK.

NEPHRITIS. It has confidently been anticipated that the number and percentage of deaths from nephritis would be favorably affected by the enforcement of the XVIII Amendment. Perhaps it is too soon for improvement to be felt but the fact remains that the death rate from Bright's disease and nephritis as a whole increased during 1920 in place of diminishing. In the registration area of continental United States the number of deaths from this cause in 1919 was 75,005 and in 1920 the total had increased to 78,192. The number per 100,000 population was 88.1 in 1919 and 89.4 in 1920. It was formerly believed that nephritis was set up by direct contact of toxic substances eliminated by the urine. This mechanism can explain but few of these cases, chiefly poisoning with sublimate and oxalic acid and perhaps the cases which develop in pregnancy. Usually the kidneys are the seat of a true infection secondary to some local process such as tonsillitis. The action of alcohol in nephritis is therefore indirect and due to weakening of the defensive forces of the organism. From another angle the slightly demoralizing action of alcohol, enough for example to make a man careless about exposure, has no doubt increased the number of cases which follow wetting and chilling the surface. But removal of alcohol as one of the causal factors does not mean that the disease cannot develop in its absence. Nor is nephritis rare in callings which interdict the use of spirits, for many of the clergy die of it when a certain age period is reached just as they die of heart disease, apoplexy, and the rest of the great degenerative maladies of advanced life which are somehow the result of material civilisation.

NETHERLANDS, THE, or HOLLAND. A kingdom of Central Europe on the North sea in N.

latitude 50° 46' and 53° 34' and in E. longitude 3° 22' and 7°, consisting of eleven provinces. Capital, The Hague.

AREA, POPULATION, ETC. Total area, exclusive of water, 12,582 square miles; population, Dec. 31, 1914, 6,339,705; Dec. 31, 1919, 6,831,231, of whom 3,401,348 were males and 3,429,883, females; estimated in December, 1920, 6,841,155. The area and population by provinces and density per square mile, according to the *Statesman's Year Book* of 1921, were as follows:

Provinces	Area: sq. miles (1809)	Population		Per sq. mile, 1919
		Dec. 31, 1914	Dec. 31 1919,	
North Brabant.....	1,920	670,030	729,011	379
Guelders.....	1,939	681,824	726,390	374
South Holland.....	1,131	1,537,419	1,664,284	1,470
North Holland.....	1,066	1,202,652	1,288,826	1,209
Zealand.....	707	239,676	246,882	349
Utrecht.....	525	307,547	335,461	640
Friesland.....	1,243	372,625	385,362	310
Overijssel.....	1,295	410,826	435,047	336
Groningen.....	881	345,649	363,077	412
Drenthe.....	1,028	188,775	206,879	201
Limburg.....	847	382,682	450,012	531
Total.....	12,582	6,339,705	6,831,231	542

The total area in 1909, including gulfs, bays, and interior waters, in 1909 was 15,760 square miles. About 41 per cent of the population are gathered in the principal towns. The emigration, which has been mostly to North America, was 2439 in 1919. In that year the total births were 164,447; deaths, 89,646; marriages, 58,270. The cities with a population of over 60,000 on Dec. 31, 1919, were as follows: Amsterdam, 647,120; Rotterdam, 506,067; The Hague, 359,610; Utrecht, 138,334; Groningen, 89,030; Haarlem, 77,302; Arnhem, 71,002; Leyden, 61,408; Nimeguen, 66,833; Tilburg, 61,557. Government educational statistics for 1918-19 were as follows: 4 public universities with 352 teachers and 5201 students; 1 technical university with 81 teachers and 1979 students; elementary public schools, 3424, with 19,757 teachers and 620,737 pupils; private elementary schools, 2466, with 14,795 teachers and 443,258 pupils; public infant schools, 208, with 1672 teachers (1917-18) and 36,648 pupils; private infant schools, 1147, with 3452 teachers (1917-18) and 113,289 pupils; middle class schools, 139, with 2304 teachers and 23,084 pupils; schools for the working-people, 525, with 4333 teachers and 53,996 pupils; classical public schools, 34, with 554 teachers and 3515 pupils. There were also, a navigation school, a high school of commerce, a private university, etc.

PRODUCTION. In 1919 the cultivated land and land under forests had a total area of 2,461,112 hectares (1 hectare equals 2.47 acres). The acreage under the principal crops in 1920 was as follows: Potatoes, 426,092; oats, 397,410; winter rye, 494,355; sugar beets, 158,670; winter wheat, 138,957. In spite of the drought the latest crop returns from the Netherlands indicated that the 1921 production of grains would be the heaviest for many years. The crop estimates for the leading grains were: Wheat, 236,400 metric tons against 177,300 for 1920; rye, 422,800 metric tons against 338,200; and oats 309,000 metric tons against 285,200. The hay crop also was reported as very good. The cost of production of farm crops steadily increased after the war and

during 1920 the situation was still unsatisfactory. There was a considerable development of the flour-milling industry during the war and its activity continued during 1920. The general depression in all branches of industry were especially marked in the fisheries, the catch in 1920 being 706,996 barrels as compared with 897,296 barrels in 1919. The income from the 1920 catch was \$7,200,000 as compared with \$12,800,000 in 1919. On Oct. 24, 1920, a law went into effect establishing forty-five hours a week, that is to say the eight-hour day with a half holiday on Saturday, as the maximum, but its application to the engineering trades was postponed for two years.

ECONOMIC CONDITIONS. Prices and the cost of living in the Netherlands showed a slow decrease after 1918. On the basis of 100 in 1913 the average price index figure for food was given as 287 in 1919, 267 in 1920, and for July, 1921, as 177. A retail price index figure covering 29 articles had declined up to July, 1921, to 168 from the 1920 average of 258.

COMMERCE. The total imports (not including the transit trade) were returned as having a value of \$1,122,490,600 as compared with \$1,318,434,000 in the previous year (including the transit trade). The total exports of the country reached the equivalent in guilders of \$582,837,800 (not including the transit trade), as compared with \$692,688,700, which included the transit trade, in 1919. No returns of the value of this transit trade had been made in the Dutch statistics but commercial authorities calculated that it represented about 22 per cent of the total imports and exports. The total value of the import and export trade, including the transit trade, therefore, may be fairly returned as \$2,186,318,400 as compared with a total turnover in 1919 of \$2,011,122,700 and of only \$411,917,800 in 1918, when the influence of war was still acutely felt.

The exports for the first six months of 1921 were 727,914,415 guilders, and the imports were 1,163,226,172 guilders, a decrease in each case for the corresponding period of 1920.

FINANCE. The deficit for the year 1921 was estimated at 227,716,400 guilders; and estimates for 1922 showed total expenditures of approximately 854,570,000 guilders, and revenue of 606,590,000 guilders, in consequence of which the total deficit would amount to almost 250,000,000 guilders. The excess of expenditure in these budgets was due to the large outlay for old-age pensions and for aid to the unemployed, under recently enacted social legislation. The total funded debt of the Netherlands for the year 1920, the last for which statistics were available amounted to 2,182,889,000 guilders, practically all internal on which the interest would amount to about 101,000,000 guilders annually. The total floating debt at the end of 1920 was estimated at 430,000,000 guilders. The banknote circulation of the Bank of Netherlands showed a steady increase after 1913, when it amounted to 334,000,000 guilders, up to January, 1921, when it reached its highest point of 1,074,000,000 guilders. After that a slow decrease took place, and the total paper circulation in September, 1921, amounted to 996,000,000 guilders. Likewise, the total gold reserve in the Bank of Netherlands showed an enormous increase since before the

war. From 154,000,000 guilders in 1913, it reached 712,000,000 guilders in the middle of 1918; only a small decrease took place after that, and the figures for September showed a gold reserve in the Bank of Netherlands of 606,000,000 guilders. The Dutch guilder suffered considerably less in depreciation than the currency of other European countries, as its value in the autumn was 35.41 cents to the guilder, compared with its normal value of 40.2 cents. The lowest point was reached in November, 1920, the guilder being quoted at 29.25 cents in New York. This sudden decline was believed to have been caused by the drop of the German mark, since it occurred shortly after the transfer of large German-mark credits to the Netherlands in exchange for Dutch-guilder credits which the Germans were using for the purchase of goods in other countries. This temporary depression gave place shortly to an increase, and in May, 1921, the guilder was quoted at 39.29 cents (almost its par value). The Chamber passed unanimously on December 29, the government bill authorizing the negotiation of a loan of \$100,000,000 in the United States to be used for the benefit of the Dutch East Indies.

SHIPPING. Ships entered in 1920 numbered 11,114 with a tonnage of 11,350,436. Dutch shipping suffered less than might have been expected from the war, chiefly because of the fact that most of the Dutch shipping is engaged in regular service. Naval construction went on regularly during the year, and 116 ships with a tonnage of 565,356 were under construction.

RAILWAYS. The railways are under private ownership. The two principal lines in 1919 had a length of 2377 miles. In January, 1920, a commission was appointed to investigate the desirability of electrification of all railways in Holland. During 1920 its report was prepared and it was stated that it not only favored a scheme of general electrification but recommended the use of 1500 volts direct current. It further recommended that the electrification of the railways be accomplished in connection with the proposed unification of electric light and power service throughout the country. Inasmuch as large capital expenditures were involved, there was no indication, however, that this work would be undertaken in the near future.

DEFENSE. The peace strength of the army was placed in 1920 at 7961 officers and 262,304 men. In the reserves there were 156,000 trained men and 250,000 untrained men available for mobilization. According to law every Dutch citizen is liable to serve in the army or navy between the ages of 19 and 40, but actual service is determined by lot. The maximum annual contingent is 25,000, including 600 for sea service. At the beginning of 1921 the fleet consisted of: 3 coast defense ships with a tonnage, respectively, of 5080, 5300, 6530; and 4 cruisers with a tonnage, respectively, of 3,900, 4030, 7050, 7050.

GOVERNMENT. Executive power is vested in the sovereign (Wilhelmina Helena Pauline Maria, born August 31, 1880); and legislative power, conjointly in the sovereign and parliament or States-General, the latter body consisting of two chambers, namely, the upper or first chamber with 50 members, elected by the states; and the lower or second chamber with 100 deputies, elected directly. The ministry in 1921 was as

follows: Prime Minister and Minister of the Interior, Dr. Ch. J. M. Ruys de Beerenbrouck; Foreign Affairs, Dr. H. A. van Karnebeek; Navy, Captain van Dijk (temp.); War, Captain van Dijk; Agriculture, H. A. van Ysselsteyn; Colonies, Mr. S. de Graaff; Education, Arts and Science, Dr. Th. de Visser; Finance, Jonkheer de Geer; Public Works, A. A. H. W. König; Justice, Dr. Th. Heemkerk; Labor, Dr. Aalberse.

HISTORY. The Dutch parliament was reconvened September 20. The address from the throne was interrupted by shouts from anti-militarist members demanding that a certain prisoner who had been arrested for refusal to perform military service should be released. A feature of the Queen's address was the advocacy of an increase in the strength of the fleet for the defense of the Dutch East Indies, and another point in it was the approval of a proposed law for the exemption of conscientious objectors. A bill for the building of a new East Indian fleet was passed by the Indian Council.

NEVADA. POPULATION. According to the report of the census of 1920, there were 77,407 residents in the State, Jan. 1, 1920, as compared with 81,875 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Barley.....	1921	6,000	187,000	\$150,000
	1920	5,000	150,000	248,000
Wheat.....	1921	21,000	493,000	641,000
	1920	19,000	424,000	763,000
Hay.....	1921	358,000	1,672,000	6,048,000
	1920	348,000	1,577,000	8,176,000
Potatoes.....	1921	4,000	592,000	710,000
		4,000	540,000	842,000

¹ Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, and lead mined in Nevada decreased from \$23,879,512 in 1920 to about \$12,310,000 in 1921, according to preliminary figures of the United States Geological Survey, Department of the Interior. The decrease was general, but the output of copper and lead was unusually small, as a result of the poor market and lower prices for these metals. No zinc ore was marketed. The output of gold in Nevada decreased from \$3,566,728 in 1920 to about \$3,340,000 in 1921. The output of gold from the Tonopah district decreased from \$1,056,986 in 1920 to about \$982,000 in 1921, on account of a labor strike which interrupted operations from April to August.

The mine production of silver decreased in quantity from 7,745,093 ounces in 1920 to about 6,681,000 ounces in 1921, and in value from \$8,442,000 to about \$6,655,000. The large mines of the Tonopah district produced about 4,581,000 ounces of silver in 1921, as against 4,816,055 ounces in 1920. The mine output of copper decreased in quantity from 50,559,763 pounds in 1920 to about 15,515,000 pounds in 1921, and in value from \$9,302,996 to about \$1,956,000. The mine output of lead decreased in quantity from 21,263,700 pounds in 1920 to about 7,803,000 pounds in 1921, and in value from \$1,701,096 to about \$359,000.

No zinc ore was mined in Nevada in 1921, though the production of zinc was 10,698,040 pounds in 1920.

LEGISLATION. Among the measures passed at the legislative session of 1921, may be mentioned: Provision for prophylactic treatment of the eyes of the newly born; provision for a State budget; creation of town-planning commissions for incorporated cities and towns; provision for a standardized testing and weighing of dairy products; declaring oil pipe lines to be common carriers; prohibition of advertisement, manufacture or sale of cures for venereal diseases and sexual disorders; provision for the teaching of thrift in the public schools.

OFFICERS. Governor, Emmet D. Boyle; Lieutenant-Governor, Maurice J. Sullivan; Secretary of State, George Brodigan; Controller, Geo. A. Cole; Treasurer, Ed. Malley; Attorney-General, Leonard B. Fowler; Superintendent of Public Instruction, W. J. Hunting.

JUDICIARY. Supreme Court: Chief Justice, J. A. Sanders; Associate Justices, Edward A. Ducker and Ben. W. Coleman.

NEVADA, UNIVERSITY OF. A co-educational State institution for higher education at Reno, Nev.; founded in 1874. The student enrollment for the fall of 1921 was 635 of whom 330 were in the College of Arts and Sciences, 107 in the School of Mechanical and Electrical Engineering. The faculty numbered 60, and there were 35,500 bound volumes in the library. President, Walter E. Clarke, Ph.D., LL.D.

NEWARK, N. J. See GARBAGE AND REFUSE DISPOSAL, and MUNICIPAL GOVERNMENT.

NEW BEDFORD, MASS. See GARBAGE AND REFUSE DISPOSAL and MUNICIPAL GOVERNMENT.

NEW BRUNSWICK. One of the Maritime Provinces of Canada, east of the State of Maine and south of the Province of Quebec. Capital, Fredericton. Area, 27,985 square miles; population (1911), 351,889, showing a density per square mile of 12.61; population (1921) 388,092. The largest city is St. John with a population in 1911 of 42,511, and in 1921 of 46,504. The capital, Fredericton, had a population in 1911 of 7208 and in 1921 of 8081. Spring wheat in 1920 yielded 464,000 bushels; oats, 194,000 bushels; potatoes, 155,700 bushels. It is under a lieutenant-governor, appointed by the governor-general of Canada, and a legislative assembly of 48 members, which at the beginning of 1921 were distributed by party groups as follows: Liberals, 24; Conservatives, 13; Farmers, 9; Labor, 2. Lieutenant-governor at the beginning of 1921, W. Pugsley; Prime Minister, W. E. Foster. See CANADA.

The question of the importation of liquor for personal use was referred to the people, October 10. Only about one-third of the voters went to the polls, but of these a great majority decided against importation. Only two counties and a few of the smaller towns voted "wet."

NEW CALEDONIA. A French colony consisting of the island of New Caledonia, the most southern of the Melanesian Islands, about 850 miles from the coast of Queensland, Australia; and of the following dependencies: Isle of Pines; Wallis Archipelago; Loyalty Islands; Huon Islands; and Futuna and Alofi. The island of New Caledonia has a length of over 248 miles and an average breadth of 31 miles. Area, 7650 square miles; population, 1911, 60,608, of whom 5671 were of convict origin and 28,075, Melanesians and Polynesians. Capital, Nouméa, with a population of about 10,000. By Jan. 1, 1916, the

population of convict origin had decreased to 2680. Imports (1919), £1,000,000; exports, £950,000. The chief imports were: Coal, wine, flour, and rice; and the chief exports: Coffee, mineral, copra, rubber, guano, and preserved meats. The military force in 1921 numbered about 400 Europeans. It is under a governor, aided by a privy council and an elective council-general.

NEWELL, WILLIAM WHITING. American clergyman, died in 1921. He was born at Wappingers Falls, N. Y., August 29, 1868; and educated in theology at Geneva, Switzerland. He was pastor in Minnesota and at St. Louis, Mo., and afterwards secretary of the Congregational Church Building Society at Chicago from 1905 to 1917. He was a specialist in church finance.

NEWFOUNDLAND. An island colony of Great Britain in the northeastern part of the Gulf of St. Lawrence. Area, 42,734 square miles; population (1911), 242,619; estimated, Dec. 31, 1919, 260,922. Labrador, which is dependent on it, has an area of 120,000, and a population in 1919 of 3647. Capital, St. John's, with a population (1918) of 34,045. Other towns with their populations in 1911 are: Harbour Grace, 4277; Bonavista, 3911; Carbonear, 3540. The chief resources are agriculture and the fisheries, and there is considerable mineral wealth. No later figures for production were available than those given in the preceding YEAR BOOK. Of late there has been a large development of the paper and pulp industries. The imports, including bullion and specie, in 1919-20 amounted to £8,331,864; and the exports, to £7,164,935. The chief imports in the order of their value in 1918-19 were: Textiles, hardware, flour, salt pork, and coal; and the chief exports: Dried cod (which made up by far the greater part), herring, pulp and paper, and cod oil. In 1919-20 the imports from Canada amounted to \$18,767,238; from the United States, \$15,414,067; and from the United Kingdom, \$4,637,074. Of the exports the United Kingdom received \$6,411,967; the United States, \$4,426,142; and Canada, \$2,602,859. In 1919, 732 men and 41 Newfoundland sailing vessels were engaged in the bank cod fishery, a considerable decrease from the preceding year; and the catch in 1919 was valued at \$1,137,240, a decrease of over \$200,000 from the preceding year. In the shore cod fishery, 14,870 small boats of various kinds were employed and 37,550 men. The output was valued at \$19,465,161, an increase of nearly \$4,000,000 over the preceding year. In 1920 the number of seals caught was 33,985, valued at \$159,948, as compared with a catch of 81,293 in 1919. The total attendance at the board schools in 1919 was 50,842. The country is under a governor, assisted by an executive council, a legislative council, and an elected house of assembly with 36 representatives. In 1919 the railway mileage was: 904, government line; and 47, private line. For recent railway and other developments, see preceding YEAR BOOK. Governor at the beginning of 1921, Sir C. A. Harris; Prime Minister, R. A. Squires.

NEW GUINEA. An island of the East Indies, next in size to Australia and Greenland; area, about 310 square miles; population, roughly estimated at a little under 1,000,000; divided under Australian, Dutch, and British control, the former German dominion having ceased during

the war. It is distributed as follows: Western part to 141° E. longitude included in the Dutch East Indies; northeastern part, comprising the former German colony of Kaiser Wilhelmland, assigned to Australia; southeastern part included in the British colony of Papua. See DUTCH EAST INDIES, GERMAN NEW GUINEA, and PAPUA.

NEW HAMPSHIRE. POPULATION. According to the report of the census of 1920, there were 443,083 residents in the State, Jan. 1, 1920, as compared with 430,572 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	25,080	1,325,000	\$994,000
	1920	24,000	1,180,000	1,566,000
Hay.....	1921	462,000	1,438,000	12,184,000
	1920	481,000	1,505,000	12,575,000
Potatoes.....	1921	14,000	2,240,000	3,024,000
	1920	15,000	1,905,000	2,953,000

¹ Tons.

MANUFACTURES. A preliminary statement of the general results of the census of manufactures for the State of New Hampshire was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the factory system. As appears from the accompanying summary there was a consistent increase at the census of 1919, as compared with that for 1914, except that the number of establishments, the number of proprietors and firm members, and primary horsepower, decreased. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Value added by manufacture, 146.3 per cent; salaries, 122.7 per cent; value of products, 121.9 per cent; capital, 109.5 per cent; cost of materials, 107.5 per cent; wages, 96.3 per cent; number of salaried employees, 32.8 per cent; and number of wage earners, 4.8 per cent. The capital invested, as reported in 1919, shows a gain of \$171,689,000, or 109.5 per cent, over that in 1914. The average capital per establishment was approximately \$219,000 in 1919 and \$90,000 in 1914. The cost of materials used in 1919 shows an increase over that for 1914 of \$123,647,000, or 107.5 per cent. The average cost of materials per establishment in 1919 was approximately \$159,000, and in 1914 \$66,000. The value of products in 1919 shows an increase over that in 1914 of \$222,895,000, or 121.9 per cent. The average per establishment in 1919 was approximately \$271,000 and in 1914 \$105,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$99,248,000, or 146.3 per cent. The value added by manufacture in 1919 formed 41.2 per cent of the total value of products and in 1914, 37.1 per cent. In 1919, as compared with 1914, the number of salaried employees shows an increase of 1436, or 32.8 per cent, while the average number of wage earners increased 3770, or 4.8 per cent. The comparative summary for the State for 1914 and 1919 is shown in the table on page 607.

FINANCE. Balance on hand, Sept. 1, 1920, \$186,733.55; total receipts, Sept. 1, 1920, to June 30, 1921, \$6,287,722.69; total disbursements,

	Census—		Per cent of increase ¹ 1914-19

¹ A minus sign (—) denotes decrease.

Sept. 1, 1920, to June 30, 1921, \$5,685,414.92; balance on hand, July 1, 1921, \$789,041.32. The net indebtedness, July 1, 1921, was \$2,314,306.76, a decrease of \$726,217.41, during the fiscal year.

EDUCATION. The pupils in the public schools in 1921 numbered 95,481; teachers, 2695. The average annual salary of women elementary teachers was \$884.

CHARITIES AND CORRECTIONS. The State institutions include: Soldiers' Home, Tilton; Sanatorium, Benton; School for Feeble-minded, Laconia; State Hospital, Concord; Industrial School, Manchester; State Workshop for the Blind, West Manchester. The State Prison is at Concord.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Regulation of the practice of chiropractics; provision of further safeguards against forest fires; taxing the transfer at death of personal property of non-residents; relating to the marriage of persons having syphilis or gonorrhea; provision for the protection of maternity and infancy; regulation and limitation of the investments of savings banks.

OFFICERS. Governor, Albert O. Brown; Secretary of State, Edwin C. Bean; Treasurer, John W. Plummer; Attorney-General, Oscar S. Young; Commissioner of Education, Ernest W. Butterfield.

JUDICIARY. Supreme Court: Chief Justice, Frank N. Parsons; Associate Justices: Reuben E. Walker, John E. Young, Robert J. Peaslee, William A. Plummer.

NEW HAMPSHIRE STATE COLLEGE. A co-educational State institution of the higher learning at Durham, N. H.; founded in 1866. The enrollment for the fall of 1921 was 905, of whom 699 were men and 206 women. The faculty contained 85 members of whom 9 were added in the course of the year. Aside from the State appropriations there were received \$35,000 income. The library contained 42,000 volumes. President, Ralph Dorn Hetzel, LL.D.

NEW HEBRIDES. A group of islands in Melanesia under the joint administration of the French and British, including the islands of Espiritu Santo, Mallicolo, Efate or Sandwich, Epi, Tanna, Erromanga, Tutana, and Aneityum. Area, 5100 square miles; total population about 70,000, including at the end of 1905, 225 British and 417 French. Later estimates vary, one in 1918 giving the British 262 and the French 664, a still later one giving the British 300 and the French 400; and a French estimate in 1921

giving the French 997 and the British 258. The seat of government is Vila on the island of Efate. The natives are uncivilized but missionary work has been long carried on among them by French Catholic and many Presbyterian mission schools. Large areas of land are in the possession of the European settlers. The products include millet, corn, coffee, cocoa, cotton, and bananas. Exports, 1918-19 about £150,000; imports, about £120,000. The trade is largely with Sydney, New South Wales, and New Caledonia. There is regular steamship communication with Australia and other Pacific islands by French and British lines. The status of the islands has been the subject of much discussion of recent years. In October, 1906, an Anglo-French convention was ratified which placed the islands under a condominium or joint system of French and British control. This worked badly according to the reports and various proposals were made for its termination by disposing of the islands to one or the other of the controlling powers. In April, 1914, certain improvements were made in the system but, the war arising, they were not put into effect. Both the French and the British were demanding a solution at the close of the war. The question came up again in 1921, first, at the Conference of the Dominions in London in June, when the prime minister of New Zealand asked that the question of exchanging the rights of France for the cession of certain other territories be considered; and second, on November 4, when Mr. Hughes, prime minister of Australia, declared in parliament that the Australian government had received an offer from a French company for a sale of a large portion of the territory. Various French writers took alarm at these proposals and emphasized the importance to French interests in the Pacific of retaining the islands. Their abandonment, in the opinion of these writers, would injure the French colony of New Caledonia and might be the first step in the dissolution of French power in the Pacific. The French minister of the colonies on hearing of the offer made to Australia declared that he knew nothing about it and would refuse such an offer if it ever was made. The French company in question, however, contended that the offer was a private affair over which the French government had no control. According to the French arguments the islands ought in all justice to be attached to France on account of the French superiority in population and in property interests, and because the French colonists of both the New

Hebrides and New Caledonia insistently made this demand. The French claimed that the abandonment of the islands would result in the loss of land valued at over 150,000,000 francs without taking into account the mineral resources. Moreover, it was said that French trade, according to

the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table gives a comparative summary of the manufactures of the State in 1919 and 1914.

	Census—		Per cent of increase 1914-19
	1919	1914	
Number of establishments.....	11,062	9,742	13.5
Persons engaged in manufactures.....	603,889	431,003	40.1
Proprietors and firm members.....	10,253	8,342	22.9
Salaried employees.....	84,377	49,056	72.0
Wage earners (average number).....	509,259	373,605	36.3
Primary horsepower.....	1,147,268	703,063	44.7
Capital.....	\$2,835,441,000	\$1,352,382,000	109.7
Services.....	773,001,000	280,984,000	175.1
Salaries.....	171,389,000	69,848,000	145.4
Wages.....	601,612,000	211,136,000	184.9
Materials.....	2,271,521,000	883,464,000	157.1
Value of products.....	3,677,165,000	1,406,633,000	161.4
Value added by manufacture (value of products less cost of materials).....	1,405,644,000	523,169,000	168.7

the latest figures, amounted to nearly 9,000,000 francs as against less than 3,000,000 francs for the English. A court consisting of one French and one English judge and of a president and prosecutor nominated by the King of Spain, had been set up at Port Vila. According to the French there was much complaint of the decisions of this court. It was remote from the people under its jurisdiction and the judges frequently were absent. While the cases brought before it were not particularly important, the cumbrous method of administering justice was an illustration of the difficulties resulting from the present condominium. French writers continued in 1921 as in previous years to point out the necessity of coming to some more practical understanding in regard to the government of the islands. French resident at the beginning of 1921, J. Miramende; British resident, M. King.

NEW JERSEY. POPULATION. According to the report of the census of 1920, there were 3,155,900 residents in the State, Jan. 1, 1920, as compared with 2,537,167 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	241,000	11,327,000	\$6,003,000
	1920	236,000	10,384,000	8,826,000

	1920	10,000	1,133,000	1,396,000

¹ Tons.

² Barrels.

MANUFACTURES. The Bureau of the Census reported the general results of the 1920 census of manufactures, covering the year 1919, for the State of New Jersey. The census of manufactures, 1919, like that of 1914, excluded the hand trades,

CHARITIES AND CORRECTIONS. State institutions include: State Hospital, Morris Plains; Institution for Feeble-minded, Vineland; Colonies for Feeble-minded, New Lisbon and Woodbine; Village for Epileptics, Skillman; Home for Boys, Jamesburg; Home for Girls, Trenton; State Hospital, Trenton; Homes for Disabled Soldiers, Kearny and Vineland; New Jersey Reformatory, Rahway; State Prison, Trenton; State Prison Farm, Leesburg; Reformatory for Women, Clinton; Sanatorium for Tuberculous Diseases, Glen Gardner.

LEGISLATION. The law creating a State constabulary was passed over the governor's veto despite the opposition of organized labor. It provided for two bodies of fifty-eight men each for the protection of the rural parts of the State. The lower house ratified the prohibition amendment by a vote of 51 to 4, but the senate refused to ratify it. Representatives of the State and of New York signed on April 30 a port treaty between the two States, approved by the legislature of both States. This gave to the port authority control of the improvement and development of the port of New York, and a new board was established, made up of three representatives from each State. A pension law was passed allowing State employees retirement at sixty years, and requiring employees to contribute to the pension fund at from 3½ per cent to 8 per cent of their salaries according to their age and occupation on entering the service. Among the other measures passed at the legislative session of 1921 may be mentioned: Creating a commission to prepare a building code to apply to all parts of State in which no building code is already in force; abolition of State board of chiropractors and addition of a chiropractor to State board of medical examiners; creation of a legislative committee to investigate the shortage of coal and its causes; amendment in respect to elections doubling membership of political State and county committees and giving women equal representation; bestowal on mothers of equal rights with fathers in the custody of children; repeal of provision of 1920 defining as non-intoxicating beer whose alcoholic content is not over 3½ per cent; prohibiting the granting of marriage licenses to persons with

syphilis, gonorrhea, or chancroid in a communicable form; general revision of motor-vehicle laws and new regulations on the subject; requiring pawnbrokers to make daily reports to the police of goods pledged and amounts loaned; licensing and regulating the real estate business and creating a State real estate commission; provision for referendum on State bond issue of \$14,000,000 for construction and equipment of additional buildings for charitable and correctional institutions; extension to women of equal privileges in the holding of office and employment; provision for the serving of women on juries.

OFFICERS. Governor, Edward I. Edwards; Secretary of State, Thomas F. Martin; Attorney-General, Thomas F. McCran; Treasurer, William T. Read; Controller, Newton A. K. Bugbee; Adjutant-General, Frederick Gilkyson; Commissioner of Education, John Enright.

JUDICIARY. Supreme Court: Chief Justice, William S. Gummere; Justices: Charles W. Parker, James J. Bergen, James F. Minturn, Charles C. Black, Francis J. Swayze, Samuel Kalisch, Frank S. Katzenbach, Jr., Thomas W. Trenchard.

NEW JERUSALEM, CHURCH OF THE. Established in 1787 in London, this denomination is commonly known as the New Church. It derives its teachings from the Sacred Scriptures and writings of Emanuel Swedenborg, who was born in Sweden in 1688 and died in 1772. The founding of the first local organization in the United States dates from 1792. The church functions through its General Convention composed of twelve associations and numerous societies. The first session of the General Convention was held in 1817. The gathering in 1921 was the one-hundredth session and was held in Boston, Mass., June 25-28. Messages were received in the form of addresses from general conferences of the denomination in Great Britain. The church carries on both home and foreign mission work. The year saw the sending of a missionary to the Philippine Islands and the establishment of the first church of the denomination in the islands. In addition missionary work is conducted in Denmark, Switzerland, Czechoslovakia, Austria, Japan, France, and Germany. The formation of a Federation of French-speaking New-Church people was regarded as an important step in 1921. The denomination maintains a theological seminary at Cambridge, the New-Church Institute of Education, a school for girls in Waltham, and Urbana University at Champaign, Ill. Statistics for 1921 showed 101 ministers and a membership of 6523, a slight decrease from 1920. Societies numbered 98 and property was valued at \$1,750,000.

There occurred a split in the denomination in 1891. The new organization took the name of the General Church and differs from the main body mainly in its attitude toward the writings of Swedenborg, which it considers "divinely inspired and thus the very Word of the Lord revealed at His second coming." The latest available statistics for this branch are those of 1916 which reported 15 churches, 733 members, and church property valued at \$55,032. The general headquarters of the New Church are at 134 Bowdoin St., Boston, Mass., where also is published the official organ of the General Convention, *The New Church Messenger*.

NEWKIRK, GARRETT. Physician and dentist, died, April 7. He was born in Calhoun County, Mich., May 3, 1847; graduated at the Rush Medical College in 1868, and studied at the Chicago College of Dental Surgery. He practiced dentistry in Chicago from 1883 to 1900, and afterwards in California. He was dean of the College of Dentistry in the University of Southern California from 1901 to 1906, and president or officer of important dental societies. He wrote: *Rhymes of the States* (1896); and *Aesop's Fables Retold* (1916).

NEW MEXICO. POPULATION. According to the report of the census of 1920, there were 360,350 residents in the State, Jan. 1, 1920, as compared with 327,301 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	290,000	6,409,000	\$5,768,000
	1920	276,000	5,989,000	5,588,000
Oats.....	1921	61,000	1,690,000	811,000

IRRIGATION. The table on page 510 gives a comparative summary of irrigation conditions at the census of 1920 with those of 1910:

MINERAL PRODUCTION. Metal mines in New Mexico, according to the United States Geological Survey, Department of the Interior, produced in 1921, \$184,000 in gold, 671,000 ounces of silver, 500,000 pounds of lead, 14,460,000 pounds of copper, and 20,000 pounds of zinc, as compared with \$480,302 in gold, 768,042 ounces of silver, 2,869,525 pounds of lead, 54,400,691 pounds of copper, and 10,013,580 pounds of zinc in 1920. These figures indicate that during 1921 only ores carrying considerable silver could be mined profitably. The Chino Copper Co., with its large developed ore reserves of copper ore at Santa Rita and large milling plant at Hurley, produced 8,913,405 pounds of copper during the first quarter of 1921, but as there was no improvement in the copper market during the quarter the mines and mill of the company were closed on March 31, 1921. Later shipments brought this company's production for the year up to 9,137,282 pounds of copper as compared with 46,088,609 pounds in 1920. The zinc mines at Hanover continued development work but shipped no ore.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Additional provisions for the protection of game; regulating employment and hours of labor of children; regulation of the practice of chiropractics; creating the office of county flood commissioner and providing for emergency flood districts and their administration; provision for the prevention of forest fires; regulation and control of fraternal benefit societies; prohibition of gambling; provision for equal rights and duties of both parents of minor children; providing for a succession tax;

requiring inspection of certain "securities" offered for sale, and such regulation of the business of those who deal in them as may be necessary to prevent fraud or unfairness; provision of commission government for cities of between 3000 and 10,000 inhabitants; provision for the repression of prostitution; creating a State department of public welfare; regulation and limitation of working hours of women.

OFFICERS. Governor, Merritt C. Mechem; Lieutenant-Governor, William Duckworth; Secretary of State, M. Martinez; Treasurer, C. W. Strong; Auditor, Ed. Safford; Attorney-General, Harry Bowman.

NEW ORLEANS, LA. See GARBAGE AND REFUSE DISPOSAL.

NEW SOUTH WALES. A constituent state of the Commonwealth of Australia; situated in the southeastern part of the continent and bounded by Queensland on the north, Victoria on the south, South Australia on the west and the Pacific on the east. Capital, Sydney, the second largest city in the southern hemisphere, being next to Buenos Aires. Area, inclusive of Lord Howe Island and the Federal Capital Territory, 310,372 square miles; population, estimated June 30, 1920, 2,026,262 of whom 1,021,590 were males and 1,004,672 were females. Education, which is under state control, is compulsory between the ages of seven and fourteen. In 1919 there were 3336 public schools with 288,965 pupils enrolled and 9002 teachers; private schools 681 with 81,061 pupils and 3830 teachers, the majority of these being Roman Catholic schools. On June 30, 1920, there were 5015 miles of railway opened for traffic, and in addition to these lines which are state owned, there were 8 private lines with a mileage of 168. Gold is found throughout the country. Gold production in 1919 was 65,839 oz. valued at £279,666. From the time of the discovery of gold in New South Wales down to and including the year 1919 the production of gold was valued at £62,643,187. In 1920 the external commerce was as follows: Imports over-sea, £44,690,204; exports, over-sea, £54,663,385. The budget for 1920 was as follows: Revenue, £28,650,496; Expenditures, £30,210,013. The executive power is in a governor assisted by a cabinet and the legislative power in a parliament of two houses, namely, the Legislative Council and the

Legislative Assembly. Governor at the beginning of 1921, Sir Walter Edward Davidson; Prime Minister, John Storey. See AUSTRALIA.

The railways of New South Wales, Australia, were not on a paying basis in 1920, and suffered a deficit of some \$2,600,000. Practically all of this deficit was said to be chargeable to interest on capital used for in additions and betterments, which were not in sufficient use to produce revenue. In many cases these undertakings had not been finished and it was estimated that about \$15,000,000 would be required to complete projects begun. The expenditure of about half of this sum was contemplated in the near future, and it was proposed to give large orders for rails, bridge steel, and other construction materials.

NEWTON, SIR ALFRED JAMES. British shipowner and civil official, died in London, June 20. He was born at Hull, Oct. 19, 1849, and when about nineteen years of age began as a yeast merchant at Burton. He built up a considerable export trade with France and Belgium, and his business was finally merged in a large commercial establishment at Southwark. In 1880 he founded with some of his relatives the shipowning firm of Newton Brothers and Company, whose steamships carried troops to the Egyptian War. He left this business in 1886 and three years later was appointed to office in the London administration. In 1899 he was elected Lord Mayor. Meanwhile he had become interested in various important companies and upon his election as mayor, he was criticised by financial writers in the press for methods alleged to have been employed by him in the acquisition and management of the Industrial Contract Corporation. The Lord Mayor immediately took steps to vindicate his conduct and in the opinion of many he succeeded in doing so. During his administration many recruits were gathered for the South African war, and during the late war he was active in raising large funds for the sick and wounded and other sufferers.

NEW YORK. POPULATION. According to the report of the census of 1920, there were 10,385,227 residents in the State, Jan. 1, 1920, as compared with 9,113,614 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	798,000	36,708,000	\$24,594,000
	1920	767,000	30,680,000	35,589,000
Buckwheat.....	1921	193,000	4,150,000	3,444,000
	1920	215,000	4,300,000	6,020,000
Oats.....	1921	1,038,000	24,912,000	11,709,000
	1920	1,059,000	40,772,000	27,317,000
Barley.....	1921	158,000	3,318,000	2,057,000
	1920	170,000	4,930,000	4,881,000
Wheat.....	1921	455,000	8,747,000	9,447,000
	1920	467,000	10,203,000	17,856,000
Rye.....	1921	52,000	806,000	798,000
	1920	71,000	1,242,000	1,962,000
Hay.....	1921	4,960,000	14,960,000	89,085,000
	1920	4,960,000	16,196,000	145,794,000
Beans.....	1921	67,000	1,072,000	3,182,000
	1920	54,000	756,000	2,646,000
Potatoes.....	1921	330,000	33,990,000	36,708,000
	1920	325,000	40,625,000	47,938,000
Hops.....	1921	1,000	1,680,000	232,000
	1920	1,000	1,950,000	570,000

¹ Tons.² Pounds.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of New York was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table summarizes the results of the census of 1919 with the corresponding figures for 1914.

FINANCE. According to the controller's report at the close of the fiscal year 1921 (June 30), the total State debt was \$267,784,000, which was an increase of \$28,923,983 over the total at the close of the previous year, these figures being due principally to the sale of bonds during the year for the construction of canals, highways, and the acquisition of forest preserve land. The net State debt had increased only about \$19,188,170. The total revenue receipts available for general budget purposes were \$147,384,168 as compared with \$115,591,607 of the previous year. The total expenditures from the Treasury fund were \$182,038,511 of which \$58,160,187 represented salaries and the expenses of the general departments. The receipts from all sources for the year ending June 30 amounted to \$231,148,666. The general budget appropriations of the legislature for the year ending June 30 amounted to \$145,219,907 and the total general budget expenditures for the year were \$135,820,689. The legislature of 1921 made general budget appropriations for the year ending June 30, 1922, amounting to \$145,798,093, including an appropriation of \$7,964,748 as advances to be made on account of construction of Federal Rural Postroads, which amount was to be returned by the Federal government. The statement at foot of page presents a summary of the finances of the State during the year:

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	49,367	48,203	2.4

CHARITIES AND CORRECTIONS. The accompanying table shows the location and number of inmates in the State asylums and reformatories in 1920:

Name	1920
Western House of Refuge for Women, Albion.....	180
State School for the Blind, Batavia.....	167
State Soldiers and Sailors' Home, Bath.....	815
State Reformatory, Elmira.....	777
Eastern Reformatory, Napanoch.....	205
State Training School for Girls, Hudson.....	357
State Custod. Asyl. for Feeble-Minded Women, Newark	978
House of Refuge, Randall's Island.....	550
State Custodial Asylum, Rome.....	1,969
State Agric. and Indust. School, Industry.....	728
State Institution for Feeble-Minded Children, Syracuse	648
Thomas Indian School, Iroquois.....	187
Craig Colony for Epileptics, Sonyea.....	1,403
State Woman's Relief Corps Home, Oxford.....	141
State Reformatory for Women, Bedford.....	248
State Hos. Care Crippled & Def. Child., W. Haverstraw..	165
State Hos. Treat. of Incep. Tuberc., Raybrook.....	317
Letchworth Village, Thiells.....	811
Total.....	10,640

The accompanying table gives the location and number of patients in the State hospitals for the insane in 1920:

Hospitals	1920
Utica.....	1,329
Willard.....	2,584
Hudson River.....	3,562
Middletown.....	2,177
Buffalo.....	2,344
Binghamton.....	2,738
St. Lawrence.....	2,282
Rochester.....	1,772
Gowanda.....	1,274
Mohanic.....	
Kings Park.....	4,797
Long Island.....	1,313
Manhattan.....	6,045
Central Slip.....	5,577
Total.....	38,294

The institutions for the deaf and dumb are subsidized by the State and counties, but the building and grounds are as a rule owned by private corporations which appoint their directors.

POLITICS AND GOVERNMENT. Discontent with the administration of New York City's Mayor, Mr. John F. Hylan, who had been elected over Mr. John Purroy Mitchel four years before, led to a union of Republicans, Independent Democrats and various organizations for civic improvement, which prepared a ticket headed by Major Henry H. Curran for Mayor. After the election of Mayor Hylan, Tammany Hall had remained in complete control of the machinery of the Democratic party. There was a long and violent campaign in the course of which the press as on many previous occasions was lined up against the Tammany administration. A large volume of detailed criticism was produced and a vigorous campaign was conducted although not much hope of success was expressed. The result was the reelection of Mayor Hylan for a second term with a plurality of over 400,000. The Socialists were of little importance in the election. As to State affairs the chief feature was a vote on the constitutional amendment proposing preference to ex-service men in civil service appointments. This though well intentioned was believed to be unsound in principle and was defeated. Another matter referred to the people was an amendment for imposing a literacy test for voting, including the requirement that the voter should know the English language. This was carried not only throughout the State but even in boroughs of New York City where foreign populations predominate.

On August 31 the New York Court of Appeals ruled that the Bonus Act was unconstitutional. This act provided for a bond issue of \$45,000,000 for the payment of the soldiers' bonus. Its constitutionality had been upheld by a lower court. New York was the first State to declare such an act unconstitutional.

LEGISLATION. The legislative programme of the governor was almost completely embodied in laws. The legislative record included the following measures: A law reorganizing the State public service commission and the creating for New York City of a transit commission of three members with complete power over local transportation; a provision for the investigation of the administration of New York City, and for a charter commission to revise the city charter; repeal of Presidential primaries; the abolition of the direct primary for United States Senators, State supreme court judges, and officers elected by the State at large; candidates for such offices in the future to be named by party conventions, consisting of delegates nominated by petition and elected two months before the regular election; the direct primary to remain in force for local offices; a law providing for a board of estimate and control which was to have in charge the making of the budget; providing for the enforcement of the prohibition and the Volstead act by the local authorities; amendment making bribing of baseball players a felony punishable by imprisonment of from one to five years or a fine of not more than \$10,000; pertaining to permits and limitation of hours in the employment of children in street trades; placing administration of the income tax law under the authority of the State tax commis-

sioner; providing for investigation by the attorney-general of fraudulent practices in respect to stocks, bonds, and other securities; reorganizing the department of labor and provisions in respect to the employment of women and children, and the hours of labor; providing for the establishment of county libraries; authorizing municipalities to appropriate money for pre-natal maternity care; abolishing the military training commission; provision for the protection of foreigners in sending money abroad; amendment of law in respect to contracts for monopoly and provision for the protection of consumers; provision for commission on motion pictures and regulation of film exhibitions; respecting defense in actions based on unreasonable agreements for rent of dwellings in cities of first class and amendment of penal law in respect to discrimination against person or family on account of children; provision that the Regents of the State University shall withhold license from any school proposing to give instruction in the doctrine that organized governments shall be overthrown by unlawful means; provision for the creating of a commission and the payment of a bonus to veterans of the World War; requiring teachers in public schools to obtain certificate from commissioner of education to the effect that they are loyal and obedient to the State and Federal governments. See EDUCATION IN THE UNITED STATES.

OFFICERS. Governor, Nathan L. Miller, Rep.; Lieutenant-Governor, Jeremiah Wood, Rep.; Secretary of State, John J. Lyons, Rep.; Controller, James A. Wendell, Rep.; Treasurer, N. M. Marshall, Rep.; Attorney-General, Charles D. Newton, Rep.; Engineer and Surveyor, Frank M. Williams; Commissioner of Education, Frank P. Graves; Superintendent of Insurance, F. R. Stoddard, Jr., Rep.; Adjutant-General, Colonel J. Lester Kinkaid.

NEW YORK UNIVERSITY. A non-sectarian State institution of the higher learning in New York City; founded in 1830. It comprises the following colleges and departments: Arts and Pure Sciences; Engineering; University and Bellevue Hospital Medical College; New York State Veterinary College; Law; Commerce, Accounts and Finance; Washington Square College; Graduate School; School of Education; Wall Street Division; Graduate School of Business Administration; Women's Law Class; Summer School. The total enrollment in the above in the fall of 1921, was 11,514, the most numerous attended departments being the School of Commerce, Accounts and Finance with 5067; the Wall Street Division, 2026; the Law School,

1332; and University and Bellevue Hospital Medical College, 519. The Summer School in 1921 had an enrollment of 2096. The faculty numbered 635. The productive funds were \$2,558,534. The library contained 160,353 volumes. A new engineering building was completed at University Heights. Chancellor, Elmer Ellsworth Brown, Ph.D., LL.D.

NEW ZEALAND, DOMINION OF. A self-governing British dependency in the South Pacific, comprising the two principal islands, North and South Islands, Stewart Island, and a number of small outlying islands. Capital, Wellington.

AREA AND POPULATION. The length of the group is 1000 miles and its greatest breadth, 180 miles. The dependent islands include the Cook Islands and various small islands in the Pacific ocean. Area of North Island, 44,130 square miles; South Island, 58,120; Stewart Island, 662; total, 103,581. Other estimates place it at 104,751 square miles. The first preliminary count of the census of New Zealand, which was taken on April 17, 1921, showed a total European population of 1,216,974. Comparison with the previous census on Oct. 15, 1916, was complicated by the fact that there were then 42,666 troops abroad. The 1916 figure, not including the troops, was 1,099,449, which would give an increase of 117,525 in the 1921 count. Including the troops, the increase would be only 74,859, yet not all of the troops returned. A much greater ratio of increase was shown in the North Island than in the South Island. The increase in the North Island since October, 1916, was given at 87,599, or 13.5 per cent, as against 29,826, or 6.7 per cent, in the South Island. The population of the four leading cities of the Dominion was given as follows, compared with the figures of the census taken in 1916:

	1916	1921
Auckland.....	64,931	81,718
Wellington.....	73,305	88,876
Christchurch.....	54,925	67,232
Dunedin.....	55,256	59,198
Total.....	248,417	297,024

In 1919 the immigration numbered 20,931; and the emigration, 19,877, in each case nearly double the number of the preceding year. The births in 1919 numbered 24,483; deaths, 10,808; marriages, 9519. In 1916, 95 per cent of the population over five years of age were reported able to read and write. At the end of 1919 the public primary schools numbered 2400 with 6062 teachers and 196,059 pupils enrolled; and there were 34 secondary schools with 381 teachers and 9068 pupils. There were also 60 district high schools and 8 technical high schools. The university is simply an examining body, but there are 4 affiliated universities as follows: The Otago University at Dunedin; Canterbury College at Christchurch; the Auckland University at Auckland; the Victoria University College at Wellington; total number of students in 1918, 2140.

PRODUCTION, ETC. Many schemes for the development of water power were considered during the year throughout the entire country, including, extensive projects at Waipori Falls, Lake Coleridge, New Plymouth, and Hora Hora Rapids. During the previous six years the coal output had so declined that the country, instead of being a coal

exporting country as formerly, had to import about one-third of its coal, and this had increased the price to such an extent that the state railway companies had raised their fare 50 per cent. It was reported that there was scarcely a district in New Zealand that had not its own local project for hydro-electric development. An extensive scheme for the dominion provided for a total horse power of 270,000 of which 160,000 was for North Island and 110,000 for South Island; and work on it had already made considerable progress. In 1921 the total imports were £87,412,829 and total exports, £48,219,672. The budget estimates for 1920-21 were as follows: Revenue, £27,712,700; expenditure, £28,953,399.

COMMUNICATIONS. Railways opened for traffic, March 31, 1920, had a mileage of 3134, of which only 138 miles were private line. In 1919 vessels entered numbered 564 of 1,480,883 tons; vessels cleared, 574 of 1,505,256 tons. Of the vessels entered 505 of 1,399,862 tons were British; and of the vessels cleared, 512 of 1,425,874 tons were British.

GOVERNMENT. Executive power is in the governor-general; and legislative power, in the governor-general and general assembly of two chambers, namely, a legislative council of 43 members, appointed by the executive until recently when it was provided that at a date fixed by proclamation the body should be made elective; and a house of representatives of 80 members, elected by popular vote for three years. The distribution by parties after the general election of December, 1919, was as follows: Reform Party, 48; Liberals, 18; Labor Party, 10; Independents, 4; government seats, 50, and the opposition, 30. Governor-general and commander-in-chief at the beginning of 1921, Admiral Jellicoe (Viscount Scapa); Prime Minister, W. F. Massey. See GERMAN SAMOA.

NEY, ELLY. See MUSIC, Artists, Instrumentalists.

NICARAGUA. The largest of the six Central American republics. Capital, Managua.

AREA AND POPULATION. The estimated area is from 49,200 to 49,552 square miles; population, Dec. 31, 1913, estimated at 689,891 and, Dec. 31, 1917, at 746,000. The population is largely mestizo and Indian, though there is a considerable element of pure Spanish extraction. The mixed and Spanish populations are found principally in the western half, while the eastern half is mainly inhabited by Mosquito and Zambo Indians and negroes from the West Indies. About three-fourths of the population live in the western half. The chief towns with their estimated populations are as follows: Managua, the capital (1920), 60,342; Leon, 73,520; Granada, 20,133; Matagalpa, 15,749; Jinotega, 13,899; Masaya, 13,023; Boaco, 10,581; Chinandega, 10,542.

EDUCATION. No later figures for education were available than those given in the preceding YEAR BOOK. The elementary schools as there stated numbered about 356 and there were 10 secondary schools. There were 3 universities, namely, the Central University at Managua; the Western and Northern at Leon; and the Eastern and Southern at Granada.

PRODUCTION. The chief sources of national wealth are agriculture, timber, and mining. There is a varied production of agricultural products in the western half, the chief crops being: Coffee, sugar cane, wheat, cacao, and beans; the

average annual crop of coffee is placed at 22,500,000 lbs. In the eastern part the banana is the chief agricultural product. The woods contain mahogany and cedar which are largely exported, and various dye woods and medicinal plants. Cattle numbered about 1,200,000. Gold is worked and exported, and copper and precious stones are found. Cotton-growing has latterly increased owing to the high prices of the past few years. A considerable new acreage has been planted. The greater part of the exports of cotton went to Barcelona, Spain.

COMMERCE. The value of the chief exports in 1919 was as follows: Cotton goods, \$2,229,407; iron and steel, \$490,442; wheat flour, \$451,874; and chemicals, \$448,186. The principal sources of the imports were: United States, \$6,687,712; United Kingdom, \$689,721; Panama, \$147,613; France, \$146,330. The value of the chief exports was: Coffee, \$6,268,096; timber, \$1,655,948; sugar, \$608,795; bananas, \$559,187; hides and skins, \$417,741. The chief countries of destination were: United States, \$7,663,827; Mexico, \$277,197; Panama, \$146,848.

COMMUNICATIONS. The ships entered in 1919 numbered 1005 of 320,299 tons; and cleared, 1016 of 320,348 tons. The only railway is the Pacific Railroad, with a length of 171 miles, but a contract was made in 1918 for the construction of a line from Bluefields to a point on the line from Managua to Granada.

GOVERNMENT. Executive power is in a president who acts through a responsible ministry, comprising the following departments: Foreign affairs and public instruction; finance; war and marine; public works; interior, justice, and police. Legislative power is in a congress of two houses: A senate of 13 members, elected for 6 years; and a house of deputies, elected for 4 years by universal suffrage. President, inaugurated, Jan. 1, 1921, Dr. Diego Manuel Chamorro.

HISTORY. United States marines were arrested, February 10, for riotous acts at Managua in which a newspaper plant was wrecked. They were sentenced, February 26, to two years' confinement and dishonorable discharge. On April 15 the senate rejected a resolution, demanding the withdrawal of American troops from Managua. On August 23 war was declared against armed forces which had invaded the country from Honduras and captured two villages near the Pacific coast; and troops to the number of about 3000 were sent to the north against them with the result that they were driven to Honduras where they were captured and disarmed, the prisoners numbering, according to press reports, 1208 soldiers, and 103 officers. After the revolutionary movement on the frontier of Honduras the troops were demobilized but the revolution showing itself later on the Pacific coast a small body was again sent to that region under General Masias, who succeeded in capturing a number of them. Their leader, General Tobos, began negotiations for surrender. In November there were further outbreaks on the Honduran frontier, including an attack by the revolutionists on the town of Samotillo, November 11, in which they were repulsed after severe fighting. There was further trouble between American marines and civilians at Managua, December 10, in which four policemen were killed and one wounded, and two of the marines, wounded.

NICHOLAS I. Former king of Montenegro, died, March 1. He was born in 1844, and educated in Montenegro and in Paris. On the assassination of his uncle in August, 1860, he was proclaimed Prince. He was a popular ruler and bore a high reputation for wisdom and patriotism. During his reign the independence of Montenegro was recognized by the Treaty of Berlin, and many reforms in education and in the military and civil administration were introduced. He was a strong supporter of the Balkan alliance in 1912, and favored the policy of going to the extreme against the Turks. At the outbreak of the late war he went promptly to the aid of Serbia, but the Montenegrin forces were completely defeated and were of no further value throughout the war. In the closing years of the war and afterwards he was attacked in the press as lukewarm in the interest of the Allies, and the controversy on that subject was resumed at intervals in 1921. See preceding YEAR BOOKS.

NICKEL. In addition to the industrial depression in 1921 which led to the shutting down before the end of 1921 of all the smelters except one furnace, nearly all mining work and the refineries in the Sudbury district in the Province of Ontario, Canada, which produce about 85 per cent of the world's requirements of nickel. The proposed reduction of naval armaments was a serious blow as much of this metal is employed in making armor plate. The Sudbury mines possess known ore reserves of 150,000,000 tons or more, and they turn out a low-grade matter which for refining purposes is sent to Port Colborne, Ont.; Deschenes Que.; Bayonne, N. J., and Clydach, Wales. The three companies operating the mines are the International Nickel Company of Canada, Ltd., the Mond Nickel Company, Ltd., and the British America Nickel Corporation, Ltd.

The estimated production of nickel in 1921 from the Ontario deposits was approximately 5200 tons, and of copper 4800 tons, as compared with about 28,000 tons of nickel and 15,000 tons of copper in 1920. The maximum production was in 1918, when 45,886 tons of nickel and 23,843 tons of copper were recovered. The Sudbury ores contained also appreciable quantities of gold and silver, and were important sources of platinum and palladium.

Producers of nickel were by no means discouraged at the threatened reduction of armaments for they looked for further development in connection with steels to which nickel was added. It had been demonstrated that increased toughness, tensile strength, and resistance to corrosion were secured by adding 2.5 to 3 per cent of nickel so that for automobile steel, for axles, tires, piston rods, bridge building, railway frogs and switches, resistance wire, nickel-silver, coinage, plating, in cooking and kitchen utensils, electrical instruments, acid-resisting equipment, and numerous other uses nickel would be required in the ordinary development and extension of industry.

NIGERIA, COLONY AND PROTECTORATE OF. A British possession in West Africa, formerly divided into several areas under separate administrations, but after 1914 united into the Colony and Protectorate of Nigeria. Seat of government, Lagos: area, about 332,000 square miles; population, about 17,500,000, including about 2800 Europeans (1919). The Northern Province has an area of 256,000 square miles and 8,870,000

inhabitants; the Southern Province, 76,000 square miles and 8,900,000 inhabitants. Under the programme in respect to slavery which provided that children born after Jan. 1, 1900, should be free, 7091 slaves were liberated in 1919 in the northern provinces. In the northern provinces in 1919 there were 18 government schools with an average attendance of 998; and 98 private schools with an average attendance of 2747; while the Mohammedan schools were placed at over 31,000 with over 205,000 pupils. In the southern provinces in 1919 there were 43 government schools with 4957 pupils; 169 aided schools with 25,187 pupils; and 1099 unaided schools with about 68,909 pupils. The chief products are: Palm oil and kernels, rubber, ivory, peanuts, cotton, cocoa, coffee, kola nuts, ostrich feathers, live stock, etc. Rich deposits of tin have been found in an area extending over 9000 square miles. In the northern provinces other mineral products are: Gold, silver, manganese, ore, lignite, and monazite. No later figures for commerce were available than those given in the preceding YEAR BOOK. The revenue for 1919 was £4,959,428; expenditure, £4,529,176. The shipping, entered and cleared, in 1919 had a tonnage of 1,072,148, of which 986,731 were British, a considerable increase over the preceding year. In 1919 there were 1126 miles of railway open for traffic. The general manager of the Nigerian Railways, in his administration report for 1920, called attention to the fact that the railways are under-equipped in both locomotives and freight cars. Although orders had been placed with an English locomotive builder for forty-two locomotives in May, 1919, in May, 1921, only five had been received. Both the colony and the protectorate have been under an executive council since Jan. 1, 1914. In addition to this there is an advisory council, consisting of the governor, the executive council, and certain other official members. Governor at the beginning of 1921, Sir Hugh Clifford.

NILSSON, CHRISTINE. Swedish opera singer, died at Copenhagen, Denmark, November 22. In the United States she was often heard and was exceedingly popular. She was born near Vexio, Sweden, August 20, 1843, the daughter of a small farmer, and at an early age became a skillful player of the violin and also learned the flute. As a girl she sang at country fairs and other public places accompanying herself on the violin. The beauty of her voice was recognized by the mayor of a small town, who sent her to Stockholm, where she studied under Franz Berwald. She appeared at the court and after 1860 studied in Paris, where on Oct., 27, 1864, she appeared at the Lyric Theatre in *La Traviata*, achieving a success which brought her a three years' engagement. In 1867 she appeared in London where she became a favorite and she sang in opera and oratorios there in 1869 and 1870. In the latter year she came to the United States under the management of Maurice Strakosch and appeared in concerts and opera. In 1872 she married M. Auguste Rouzaud, a merchant of Paris. In 1876 she made her only tour of her own country. After a successful tour in Russia, where she made a great success at St. Petersburg, she returned to the United States with the Strakosch Italian Opera troupe. She was married for a second time to Count Caradi Miranda in 1887 and retired permanently from the stage in 1888.

NIOX, GENERAL. Former Governor of the Invalides in Paris died in Paris, October 26. He began his military career in 1858 and served in the Mexican campaign and during the War of 1870. He was on the staff of the Fourth Division and fought at Rezonville and St. Privat. He was afterwards for several years a lecturer at the War School and in 1901 was appointed Commander of the Fortified Camp of Paris. He entered the military school of Saint-Cyr while under age through a special dispensation and was among the best students of the school. He took part in the Mexican campaign where he did excellent service on the staff. During the war of 1870 he participated in all the great battles. After that war when the War School was established he was appointed to the chair of military geography in which subject he was soon regarded as an authority. He was particularly effective as a lecturer and had a profound influence over students. His writings and lectures were both remarkable for their varied learning and for illustrations taken from his own experience in foreign countries.

NITROGEN. See **CHEMISTRY, INDUSTRIAL; FERTILIZERS.**

NIXON, General Sir JOHN (ECCLES). British soldier, died at St. Raphael, France, December 15. During the late war he was commander of the British forces in Mesopotamia in 1915. He was born, August 16, 1857. He entered the Indian military service, taking part in the Afghan War, 1879-80; the Mahsud Waziri expedition of 1881; and other operations; and commanded a cavalry brigade in South Africa; highly distinguishing himself in both the Indian and South African services. Among his other commands was that of the Southern Army in India from 1912 to 1915. In the latter year he was appointed to command the Northern Army in India, and he was in command of the Expeditionary Force in Mesopotamia, April, 1915, to January, 1916. The investigations that followed the ill-fated campaign and the surrender of General Townsend's forces at Kut-el-Amara, resulted in placing the chief responsibility for the disaster on General Nixon. General Townsend attributed his failure to fight his way out to commands of his superior officer expressly forbidding him to do so. On the other hand, some authorities placed part of the blame on Baron Hardinge, former Viceroy of India, and on others.

NOBEL PRIZE. The Nobel Prize was created by the celebrated Swiss chemist, Dr. Alfred E. Nobel, the discoverer of dynamite, who in his will left a fund of 50,000,000 francs to establish annual prizes for chemistry, medicine, physics, literature, and peace, the amount of each prize being 200,000 francs. The American recipients of the prizes have been as follows; Peace, Theodore Roosevelt (1906); Elihu Root (1912); Woodrow Wilson (1920); Physics, Dr. Albert A. Michelson, Professor of Physics at the University of Chicago (1907); Medicine, Dr. Alexander Carrel of the Rockefeller Institute (1912); Chemistry, Professor T. W. Richards of Harvard (1914). No American writer has received the prize of literature. On November 11, the Nobel Prize of Literature for 1921 was awarded to Anatole France. M. France according to the press reports declared before he left for Stockholm that he would bestow the prize, which amounted to 300,000 francs, on relief organizations working in Russia. The

peace prize of 1921 was divided, September 5, between two candidates: Hjalmar Branting, Prime Minister of Sweden; and Christian L. Lange of Norway, Secretary of the Interparliamentary Union. The prize of chemistry for 1920 was awarded, Nov. 12, 1921, to Professor Walther Nernst of the University of Berlin. He was Director of the Institute of Physics and Chemistry at that university and an officer of the Academy of Science of Berlin. Anatole France and Professor Nernst received the Nobel Prize, a diploma, and a gold medal, from the hands of the King of Sweden in December. M. France in the course of his reply, after expressing his appreciation and making a special reference to the awards in the case of Romain Rolland, and Branting, referred to the war and the Treaty in terms that offended the ruling classes in France. He said the most horrible of wars has been followed by a treaty which was not a treaty of peace but a prolongation of the war and that Europe would perish from it if reason did not finally enter into her counsels. A leading Parisian newspaper commented on this to the effect that while these remarks would rejoice the hearts of his revolutionary friends, they would not shine with a particularly brilliant light in his complete works; and it was suggested that the prize was awarded to him in his capacity of novelist and not of Socialist orator.

NON-PARTISAN LEAGUE. See **NORTH DAKOTA.**

NORTH CAROLINA. POPULATION. According to the report of the census of 1920, there were 2,559,123 residents in the State, Jan. 1, 1920, as compared with 2,206,287 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	2,552,000	49,254,000	\$38,418,000
	1920	2,428,000	54,630,000	61,732,000
Oats.....	1921	170,000	3,060,000	2,142,000
	1920	154,000	3,388,000	3,282,000
Wheat.....	1921	600,000	4,500,000	6,480,000
	1920	680,000	7,956,000	16,708,000
Rye.....	1921	39,000	273,000	341,000
	1920	43,000	408,000	775,000

	1920	31,000	3,007,000	3,007,000
Cotton.....	1921	1,491,000	1,800,000	65,600,000
	1920	1,587,000	1,925,000	67,045,000

1 Pounds. 1 Tons. 1 Gallons. 1 Bales.

DRAINAGE. The Bureau of the Census issued the summary on page 517 of drainage conditions in the State at the Census of 1920.

The total works completed by the drainage enterprises to Dec. 31, 1919, comprised 1171.3 miles of open ditches and 33.5 miles of accessory levees; the additional lengths under construction were 367.8 miles of ditches only. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the enterprises nor the works of flood protection

or levee districts that had not undertaken the construction of ditches or tile drains. There was one pumping district for land drainage in North Carolina. All the drainage water from 100,000 acres is removed by 16 centrifugal pumps of 1,000,000 gallons per minute capacity, operated by steam engines capable of developing 1000 horse power. The principal crops raised on the land drained in drainage enterprises were corn and cotton.

FINANCE. Balance on hand, Nov. 30, 1918, \$1,039,543; receipts, 1919 and 1920, \$26,944,238; disbursements, 1919 and 1920, \$25,069,879; balance, Nov. 30, 1920, \$2,913,902. Total debt, Dec. 1, 1920, \$11,513,400. The floating debt, Jan. 8, 1921, was \$4,422,703.

EDUCATION. The latest available figures for education were those given in the *North Carolina Manual* of 1921 for the years 1916-17. Total school population was 837,665; enrollment, 645,956; average daily attendance, 432,396; number of teachers, 15,046; average annual salary of teachers, \$267.67.

CHARITIES AND CORRECTIONS. The State institutions with number of inmates in 1920 according to the *North Carolina Manual* of 1921 were as follows: State Prison, Raleigh, 825; Central Hospital for the Insane, Raleigh, 1416 (patients treated 1919-20); State Hospital, Morgantown, 1330; State Hospital, Goldsboro, 1000; Sanatorium for Treatment of Tuberculosis, Sanatorium, 130; Orthopedic Hospital, Gastonia; Orphan Asylum, Oxford, 376 (1918); Orphanage for the Colored Race, Oxford, 185; Soldiers' Home, Raleigh, 150; Confederate Woman's Home, Fayetteville.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Provision for the detention, treatment, and cure of inebriates; provision for the inspection of sanitary conditions of bakeries; regulation of banking institutions and provision for more thorough supervision of the same; definition and provision for punishment of attempted bribery of baseball players or officials; providing aid for blind students in the higher education; promoting cooperative marketing of farm products and authorizing in corporation of cooperative marketing associations; requiring sanitary conditions in ice-cream, cream, and cheese plants; requiring guests of hotels to register in their true names; provision for the sanitary inspection and conduct of hotels and restaurants; prescribing the manner

of organization of fraternal societies under the laws of the State; determining conditions for the licensing of dealers in stocks; provision against the crime of lynching; making it a crime to exhibit films or theatrical pieces of sacrilegious, obscence, or immoral character or to post advertisements of them; provision for a State system of roads for the development of agriculture and industry; provision for the issue of bonds in order to enlarge and improve the educational and charitable institutions.

OFFICERS. Governor Cameron Morrison; Lieutenant-Governor W. B. Cooper; Secretary of State, J. Bryan Grimes; Auditor, Baxter Durham; Treasurer, Benjamin R. Lacy; Superintendent of Public Instruction, E. C. Brooks; Attorney-General, James S. Manning.

JUDICIARY. Supreme Court: Chief Justice, Walter Clark; Associate Justices, Platt D. Walker, William A. Hoke, W. J. Adams, W. P. Stacy.

NORTH CAROLINA, UNIVERSITY OF. A co-educational institution at Chapel Hill, N. C.; founded in 1795. The enrollment for the fall session of 1921 was 1681; for the summer school, 1090. The faculty numbered 115. The university includes schools of law, medicine, and pharmacy and a graduate school, besides the college proper. In the last named the enrollment was 1273. The productive funds were \$291,200 and the income \$293,430. The library contained 100,172 bound volumes. In 1921 one new dormitory was completed and four others were in process of construction. Two class room buildings were also being built. The university received the gift of \$45,046 from the General Education fund to supplement the salaries of teachers. President, Harry Woodburne Chase, Ph.D., LL.D.

NORTH DAKOTA. POPULATION. According to the report of the census of 1920, there were 646,872 residents in the State, Jan. 1, 1920, as compared with 577,056 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	605,000	16,940,000	\$5,780,000
	1920	569,000	13,656,000	9,832,000

¹ No timber or cut-over land reported.

The total works completed by drainage enterprises to Dec. 31, 1919, comprised 708.3 miles of open ditches, 9.3 miles of tile drains, and 2.1 miles of accessory levees; the additional works under construction were 4.0 miles of open ditches. These figures do not include drains or levees installed by individual farm owners supplemental to the works of the drainage enterprises, nor the works of flood protection or levee districts that had not undertaken the construction of ditches or tile drains. There are no pumping districts in the

tion of the farmers of the State, had introduced many measures in the last few years which to their enemies seemed altogether too radical and as indicating a form of State Socialism. The head of the movement in the State was Governor Lynn J. Frazier. Among the radical measures during the five years of Non-Partisan control may be mentioned the establishment of a State bank and of grain elevators and flour mills under the direction of the State. The idea of the League was that the State government should be used as a

coöperative business agency in the belief that the farming communities of the State were oppressed by the methods in use under private management by the railway companies, the grain-buying companies, and the millers and merchants of large cities outside the State. The government system of Dakota provides for the recall of officials. A vote of recall was taken which resulted in the removal of Governor Frazier and two other officials (the Attorney-General and the Commissioner of Agriculture and Labor) and placing in office Mr. R. A. Nestos as governor. This was a serious reverse to the Non-Partisan League which five years before had elected Governor Frazier by a majority of four to one, although in his reelection this majority had diminished. According to press reports, Mr. A. C. Townley, who had been convicted, July 12, 1919, on the charge of violating the Minnesota sedition law and whose appeal to the United States Supreme Court had been rejected, was placed on November 2 in the Jackson County jail, Jackson, Minn., to serve his sentence of ninety days in prison.

OFFICERS. Governor, Rangvald A. Nestor; Lieutenant-Governor, Howard R. Wood; Secretary of State, Thomas Hall; State Auditor, D. C. Poin-dexter; State Treasurer, John Steen; Attorney-General, Sveinbjorn Johnson; Commissioner of Insurance, S. A. Olsness; Commissioner of Agriculture and Labor, Joseph A. Kitchen; Superintendent of Public Instruction, Minnie J. Nielson.

JUDICIARY. Supreme Court: Justices, Luther E. Birdzell, J. E. Robinson, R. H. Grace, Harry A. Bronson, A. M. Christianson.

NORTH DAKOTA, UNIVERSITY OF. A co-educational State institution of higher education at University Station, Grand Forks, N. D.; founded in 1883. The enrollment for the fall of 1921 was 1247 and for the summer session 381. The faculty numbered 121 of whom 9 were added in the course of the year. The productive funds consisted of Federal land endowments invested, and, including the value of unsold lands, amounted to \$2,203,053. Total income \$543,583. The library contained 72,000 volumes. The university received an appropriation of \$150,000 for a new law school building. President, Thomas Franklin Cain, Ph.D., LL.D.

NORTH SHORE MUSIC FESTIVAL. See Music, Festival.

NORTHERN TERRITORY. A territory of the Australian Commonwealth, situated in the central and northern part of the continent; formerly a part of the state of South Australia, but transferred under the agreement of Dec. 7, 1907, to the Commonwealth government, Jan. 1, 1911. Area, 523,620 square miles; population, exclusive of aborigines, Dec. 31, 1919, 4706, the aborigines being estimated at about 20,000. In 1916, 744 square miles had passed under ownership and 166,143 were held under lease and license. The remainder was unoccupied. Principal city, Darwin, situated on the chief harbor, with a population in 1911 of 958.

NORTHRUP, ANSEL JUDD. Lawyer and author, died in 1921. He was born in Madison County, N. Y., June 30, 1833; and graduated with honor at Hamilton College in 1858, after which he studied law at the Columbia Law School. He was admitted to the bar in 1859, and practiced law in Syracuse, N. Y. He was judge in Onondaga County from 1882 to 1894, and commissioned to

revise the statute and code of New York, 1895-1901. He was vice-president and president of the Loyal Legion during and after the Civil War; and was prominent in Presbyterian circles. He wrote two volumes pertaining to his camping and fishing experiences; also, *Slavery in New York* (1900); *Powers and Duties of Elders in the Presbyterian Church* (1908).

NORTHRUP, HENRY EVANS. Lecturer and educator, died at Brooklyn, N. Y., November 28. He was born in 1854, graduated at Yale in 1876, and for seventeen years preceding his death taught German in the Polytechnic Institute at Brooklyn. He was well known as a lecturer and traveler, and during the war he was attached to the Secret Service.

NORTHWEST PROVINCES. The prairie provinces of Canada. See CANADA.

NORTHWEST TERRITORIES. That part of western Canada which is bounded on the west by Yukon Territory and separated by the 60th parallel from British Columbia and the Prairie Provinces on the south; comprising the territories formerly known as Rupert's Land and the Northwest territories, except the portions now included in Manitoba, Saskatchewan, Alberta, and the Yukon Territory. Area, estimated at 1,242,224 square miles, including 34,298 water area; population, 1911, 18,481. It is under the administration of the Royal Northwest Mounted Police, directed by a commissioner whose headquarters are at Ottawa. Commissioner at the beginning of 1921, William Wallace Cory.

NORTHWESTERN COLLEGE. A co-educational institution of the higher learning at Naperville, Ill.; founded in 1861. The enrollment for the fall of 1921 was 554 and the faculty numbered 38 of whom an assistant-professor of military science and an assistant-professor of Spanish and French and an instructor in chemistry were added in the course of the year. The productive funds were \$387,364 and the income, \$89,169. The library contained 16,000 volumes. The college received \$500,000 additional endowment and \$250,000 for new buildings, as a result of the campaign on the part of the "Forward Movement" of the Evangelical Association to raise funds for various church purposes. President, E. Rall, Ph.D.

NORTHWESTERN UNIVERSITY. A co-educational institution of the higher learning at Evanston, and Chicago, Ill.; founded in 1851. The university consists of the College of Liberal Arts, the Graduate School, and the Schools of Medicine, Law, Engineering, Dentistry, Music, Commerce, and Journalism. The total enrollment for the fall of 1921 was 6590 and for the summer schools 1369. The faculty numbered 508. The university library contained 125,000 volumes; the Elbert B. Gray Law Library, 50,000; and the other school libraries 25,000 volumes. President, Walter Dill Scott, Ph.D., LL.D.

NORWAY. A constitutional monarchy in northwestern Europe, forming the western and northern part of the Scandinavian peninsula, with an extreme length of 1110 miles and an extreme width of 250 miles; formerly united with Sweden, but separated, June 7, 1905. Area, 125,001 square miles; population, Dec. 1, 1910, 2,391,782; estimated, Jan. 1, 1920, 2,691,855; Capital, Christiania, with an estimated population, Jan. 1, 1920, of 263,713. The next largest cities with

their populations at that date were: Bergen, 90,960; Trondhjen, 55,032; Stavanger, 44,620. The movement of population in 1919 was as follows: Births (exclusive of still born), 63,508; deaths (exclusive of still born), 43,408; marriages, 20,031. The emigration in 1919 amounted to 2432, of whom 2286 went to the United States. The national church and the only one endowed by the state is the Lutheran. In 1910 the dissenters numbered only 62,553, including 10,986 Methodists; 7659 Baptists; and 2046 Roman Catholics. Education is compulsory between six and a half years and fourteen years. No later statistics were available than those given in the preceding YEAR BOOK.

PRODUCTION. Of the total area 75 per cent is unproductive and about 22 per cent is under forests: less than 3½ per cent is under cultivation. The chief resources are forests and fisheries. The principal agricultural products are: Potatoes, hay, oats, barley, wheat and rye. In 1919 the production of potatoes was 40,667,600 bushels; barley, 607,245 quarters; oats, 1,570,069 quarters; hay, 1,715,363 tons. The forests covered an area of about 27,434 square miles, of which 75 per cent is under pine, and of which 3259 square miles are owned by the state. In 1919 the value of unwrought or partly wrought timber, exported, was 77,840,900 kroner, and of wrought timber, chiefly wood pulp, 113,048,100 kroner. The principal mineral products are: Silver, pyrites, copper, iron ore, feldspar, and nickel ore.

FISHERIES. The cod fisheries in 1920 showed a catch of 38,000,000 which was an excess over the average of the preceding four years, but unsatisfactory in respect to value because of the low prices prevailing. The total value of cod fisheries for 1920 was 45,000,000 crowns as compared with 48,000,000 crowns in 1919. The herring catch in 1920 was estimated at 6,200,000 crowns against 24,800,000 crowns in 1919. The whaling industry on the other hand was fairly successful, the total production of whale oil amounting to 212,700 barrels as compared with 163,000 barrels in 1919.

SHIPPING. The registered merchant marine of Norway, Jan. 1, 1920, was 3665 vessels of 1,315,892 net tons, of which 457 vessels of 231,862 net tons were sailing craft, the rest being steam and motor. The vessels entered in 1919 numbered 6094 of 3,056,041 net tons, of which 2971 of 1,163,108 net tons were foreign; vessels cleared, 6013 of 3,039,571 net tons, of which 2890 of 1,168,529 net tons were foreign.

RAILWAYS. Total railway mileage, Jan. 1, 1920, 2019. The railways of Norway, 80 per cent of which (1850 miles) were operated by the state, suffered during the year from abnormal costs of operation. Notwithstanding that freight rates had been increased twice since 1913, and were 200 per cent higher for all classes of merchandise except certain foodstuffs, fodder, manure, and fuel, for which the increase was but 160 per cent, the system continued to operate at a deficit. Likewise there was an increase in passenger rates from 1913 amounting to 180 to 190 per cent for first class fares and from 140 to 150 per cent for second and third class fares, though second class fares had at times been even 180 to 190 per cent above the prewar basis.

DEFENSE. Norwegian subjects are liable to military service between the ages of 18 and 55. The army is a national militia, of which the total

peace strength is placed at 118,500 and the addition available on mobilization, at 282,000. At the beginning of 1921 the main vessels of the Norwegian fleet were of old model, numbering 4 of which 2 had a displacement of 4200 tons each, and 2, of 3900 tons each. Besides these there were a number of gunboats destroyers, torpedo boats, mine layers, and 4 submarines.

GOVERNMENT. Executive power is in the king (Haakon VII, born August 3, 1872, elected king, Nov. 18, 1905) who acts through a responsible ministry, known as the council of state. Legislative power is in the Storting or parliament, elected by universal suffrage without distinction of sex. Distribution of members by party groups at the beginning of 1921: Liberals, 52; Conservatives, 39; Socialists, 18; Moderate Liberals, 10; Agricultural party, 3; Democrats, 3; Independents, 1. Ministry in 1921, appointed in June: Prime Minister and Minister of Finance, Blehr; Foreign Affairs, Raestad; Commerce, Mowinkel; Interior, Oftedal; Justice, Amundsen; Defense, Aavatsmark; Labor, Mjelde; Agriculture, Five; Worship and Public Instruction, Olsen Nalun.

HISTORY. A division of the National Labor Party on January 17 led to the formation of a new group, known as the Norwegian Socialist-Democratic-Labor party which consisted largely of moderate Socialists who believed in parliamentary methods. On September 8 the Oldesting or lower house, adopted a bill which forbade the importation of wines or liquors having over 14 per cent of alcohol. During the war the limit had been 12 per cent but the maximum was afterwards raised as above. Absolute prohibition, however, was advocated by a strong and uncompromising party and the general sentiment appeared to be in favor of it as was indicated by a considerable majority which voted for it in the plebiscite two years before. Smuggling rendered easy by the windings and irregularities of the coast was carried on to a great extent, the stock being brought largely from Denmark, Sweden, and Germany; and the illicit making of whisky and other liquor was a flourishing industry. The law prohibiting importation of wines and liquors having more than 14 per cent alcohol after passing the lower house was approved by the senate. A supplementary measure which proposed to ration liquors for medicinal purpose had meanwhile been rejected. Thus in September Norway was under a limited prohibition system which promised to endure unless the coming elections fixed for October 24 should return a Conservative majority, in which case this policy was likely to be reversed. Liquor smugglers were still active on the coast operating for the most part on German vessels which kept just outside the three-mile limit. To overcome this abuse the government put through a measure which extended Norway's jurisdiction for custom purposes to a ten-mile limit. The resumption of trade with Russia had been under discussion for a long time past and after protracted negotiations a commercial agreement was made with the Soviet government. Conservative opinion was hostile to this policy, which, it implied, amounted to a recognition of the Bolshevik state. It was also criticised on the ground that it had not obtained an acknowledgment of the claims of Norway for compensations for property of Nor-

wegians seized in Russia and amounting to about 300,000,000 kroner. Great offense was occasioned in labor circles by a demand of the executive of the Third International that 70 Norwegian trade union leaders be expelled because in the preceding labor conference at Christiania they had voted against immediate adherence to the Third International. A body representing the trade unions was sent to Moscow to try to settle the dispute.

NORWEGIAN LITERATURE. See **SCANDINAVIAN LITERATURE.**

NOTRE DAME UNIVERSITY. A Roman Catholic institution of higher learning at Notre Dame, Ind.; founded in 1842. The university includes colleges of arts and letters, science, engineering, commerce, and of law. The total enrollment for the fall of 1921 was 1490 and for the summer school 648. The faculty numbered 103 of whom 24 were added in the course of the year. The teaching is in part gratuitous, 50 members of the faculty who belong to the religious society of Holy Cross, giving their services. In 1921 the gifts totaled \$645,000. The library contained 145,000 volumes. During the year the commerce course was raised to a separate department with a dean at its head. President, Thomas A. Burns, Ph.D.

NOTTINGHAM, WILLIAM. Lawyer, died at Syracuse, N. Y., January 23. He was born at DeWitt, N. Y., Nov. 2, 1853; graduated at Syracuse University in 1876 and was admitted to the bar in 1879 after which he practiced at Syracuse. He organized the Syracuse Trust Company and was counsel or director of many important institutions in the city.

NOVA SCOTIA. One of the Maritime Provinces of Canada. Capital, Halifax, the chief naval station of Canada. Area, 21,428 square miles, of which 360 are under water; population in 1911, 492,338; in 1921, 524,579. Population of Halifax in 1911, 46,619; in 1921, 57,674; Sydney, next largest city, in 1911, 17,723; in 1921, 22,527. The movement of population in 1918-19 was as follows: Births, 12,508; deaths, 9200; marriages, 3585. The chief occupation is agriculture. Area under cultivation in 1920 was 920,000 acres, and the production was valued at \$47,847,000. There was a profitable fruit production, apples being the most important crop (output in 1920, 2,000,000 barrels). The potatoes are of a superior quality and also one of the chief crops. In 1920 there were 398,000 cattle in the province and 264,000 sheep. The average annual wool clip is over 1,000,000 lbs. The estimated forest area is 12,000 square miles. The fisheries along with those in Newfoundland are the most important in Canada, and engage

annually about 30,000. The value of the 1920 catch was \$13,890,000. Among the minerals which are very numerous are: Coal, iron, gold, copper, silica, clays, gypsum, lead, silver, and manganese. The railway mileage in 1918 was given at 1490. Executive power is in a lieutenant-governor, appointed for five years by the Dominion government, who acts through a council or responsible ministry; and legislative power is in the lieutenant-governor and a legislative council and a house of assembly, the former appointed by the crown, and the latter elected by popular vote for five years. Lieutenant-governor at the beginning of 1921, McC. Grant; Prime Minister, George H. Murray.

The elections of July 27 resulted in the overwhelming defeat of the Conservatives who elected only one member, and returned the Liberal government to power under the head of G. H. Murray. The members elected were: Liberals, 29; Labor party, 6; Farmers' party, 7. See CANADA.

NOYES, CHARLES PHELPS. Wholesale druggist and banker, died at St. Paul, Minn., April 30. He was born at Lyme, Conn., April 24, 1842 and after an academic education became clerk in a banking house in New York City in 1860. In 1861 he became partner in a wholesale druggist firm at St. Paul which later took the name of Noyes Brothers and Cutler of which he became president. He was also president of various banking, insurance, and other institutions of the State.

NUT CROPS. See **HORTICULTURE.**

NUTRITION. See **FOOD AND NUTRITION.**

NYASSALAND, or NYASALAND PROTECTORATE. A British protectorate, formerly known as British Central Africa, situated on the southern and western shores of Lake Nyassa, and extending toward the Zambesi river. Area, 39,573 square miles; population (1920), 1,202,208 natives; 1015 Europeans; and 515 Asiatics. The seat of government is Zomba and the chief settlement is Blantyre. The schools in 1918-19, numbered 1991, with 125,159 pupils enrolled. Education is in the hands of 11 Christian missionary societies. The production includes: Coffee, chiefly produced in the Shiré province; tobacco which is grown for export; and latterly cotton. Imports (1919-20), £569,890; exports, £429,086; a considerable decrease in each case from the preceding year. Revenue, £186,266; expenditure, £217,696. The military consists of a volunteer reserve and a civil police force, and since 1920 of a European police force. The protectorate is under a governor and commander-in-chief who is aided by an executive and a legislative council, both of which are nominated. Governor at the beginning of 1921, Sir George Smith.

O

OATS. As in 1920, statistics regarding the world's production of oats in 1921 were incomplete. The total yields of 26 countries reporting to the International Institute of Agriculture, Rome, aggregated 2,928,435,000 bu., which was 13.2 per cent below the total production of the same countries in the preceding year. The leading countries and their yields in 1921 were as follows: Canada, 541,973,000 bu., Germany, 324,885,000 bu., France, with Alsace-Lorraine, 245,209,000 bu., Poland, 149,790,000 bu., England and Wales, 97,714,000 bu., Czecho-Slovakia, 72,352,000 bu., Roumania, 68,372,000 bu., and Sweden, 67,612,000 bu.

The average yields for these countries for the five years 1909-13, which were as follows, indicate in a general way the relative recovery from the influences of the war: Canada, 387,678,000 bu., Germany, 591,996,000 bu., France, including Alsace-Lorraine, 323,204,000 bu., England and Wales, 82,024,000 bu., Roumania, 27,545,000 bu., and Sweden, 79,115,000 bu. The former Russian empire in 1912 and 1913 produced over 1,000,000,000 bu., but since its disruption no data on production have been available. The average yield per acre for the 5-year period 1910-14 was 21.8 bu. for European Russia, 54.7 bu. for Germany, 37.5 bu. for Austria, 31.9 bu. for Hungary, 31 bu. for France, and 42.9 bu. for the United Kingdom as compared with 30.5 bu. for the United States.

The total yield of the United States in 1921, according to estimates by the Department of Agriculture was 1,060,739,000 bu., of 435,544,000 bu. below the crop of 1920. The area devoted to oats in 1921 was 44,826,000 acres, an increase of 2,335,000 acres over the area of the preceding year, but the average acre yield was only 23.7 bu. as compared with 35.2 bu. the year before and with 29.3 bu. in 1919. The average farm value of oats per bu. on Dec. 1, 1921, was 30.3 cts., and on this basis the total value of the crop of grain was \$321,540,000 or \$366,771,000 less than the value of the crop of 1920 and \$512,382,000 less than that of 1919 with bushel values on the corresponding dates of 46 cts. and 70.4 cts, respectively. The estimated average weight per measured bushel in 1921 was 28.3 lbs., the lowest for a series of years. The low yield per acre and the light weight per bushel were due largely to late spring freezes and to droughty conditions in some of the oat-producing regions.

A large continued drought extending over large areas in Europe and eastward also reduced yields of oats and other crops in that section of the northern hemisphere. Before the European war the principal oat-exporting countries mentioned in the decreasing order of the quantities exported were Russia, Argentina, the Netherlands, Germany, Canada, the United States, and Roumania; and the principal importing countries, similarly given, were the United Kingdom, the Netherlands, Germany, France, and Switzerland.

The fact that the Netherlands and Germany appeared as both importing and exporting countries indicated commercial activity in the commodity with other countries. For the three years 1911-13 an average of about 235,000,000 bu. entered into international trade.

OBERLIN COLLEGE. A non-sectarian co-educational institution of the higher learning at Oberlin, Ohio; founded in 1873. The enrollment for the fall of 1921 was 1607 of whom 1192 were in the College of Arts and Sciences; for the summer session, 194. The teaching staff numbered 129. The library contained 221,000 volumes. The productive funds amounted to \$2,854,526 from which the income was \$142,725. During the year the college received in money \$121,796 and various valuable paintings and other objects, largely Oriental, donated to the library and the art museum. A new four-year training course for school music supervisors was organized in the Conservatory of Music. President, Henry Churchill King.

OBERLY, EUNICE ROCKWOOD. See NECROLOGY.

OCEANIA, FRENCH ESTABLISHMENTS IN. A French colony in the eastern Pacific, consisting of scattered groups of small islands. Total area estimated at 1520 square miles; population in 1911, 31,477; estimated in 1919, 81,200. Capital, Papeete on the island of Tahiti. The main group is the Society Islands, of which the most important are Tahiti and Moorea; Others are the Marquesas Islands; the French Leeward Islands, and the Gambier, Tubuai, Tuamotu, and Rapa groups. In the Society Islands, Tahiti has an area of about 600 square miles and a population of 11,691; the Marquesas Islands have a total area of about 480 square miles with a population of 3424. During the year 1920 the values of imports into French Oceania were: From France, 595,953 francs; from other countries, 13,805,153 francs; total, 14,401,106 francs. Exports to France were valued at 1,504,765 francs; to other countries, 22,851,136 francs; total, 24,355,901 francs. The total foreign commerce amounted to 38,757,007 francs, against 30,638,214 francs in 1919, the imports showing an increase of 2,385,434 francs, and the exports an increase of 5,738,406 francs.

ODLING, WILLIAM. British chemist, died at Oxford, England, in February. For forty years he was Waynflete Professor of Chemistry at Oxford. He was born at Southwark, Sept. 5, 1829, and studied for the medical profession, but early turned his attention to chemistry and went to the Continent where he studied at Strassburg. In 1868 he was elected to succeed Faraday as professor of chemistry at the Royal Institution and in 1872 became Waynflete Professor, at Oxford, holding that chair until 1912. He was an excellent teacher as well as a skillful speaker on many subjects, his interests not being confined to his specialty. Among his books may be mentioned *Manual of Chemistry* (1869); *Course of*

Practical Chemistry (1878), and an elementary work on chemistry published in 1882.

OEDENBURG. See HUNGARY, paragraph 'on *Burgenland*.

O'GORMAN, THOMAS. Roman Catholic bishop, died, September 8. He was born at Boston, Mass., May 1, 1843; and educated in Chicago and St.

census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table gives a comparative summary for the State in 1919 and 1914:

	Census—		Per cent of increase ¹ 1914-19
	1919	1914	
Number of establishments.....	16,125	15,658	2.9
Persons engaged in manufactures	978,068	606,807	61.2
Proprietors and firm members	12,823	13,624	-5.9
Salaried employees.....	139,380	82,748	68.4
Wage earners (average number)	730,733	510,435	43.2
Primary horsepower.....	2,894,389	2,002,780	44.5
Capital.....	\$3,810,859,879	\$1,677,551,633	127.2
Services.....	1,218,366,093	423,168,649	187.9
Salaries.....	1,273,714,359	105,264,836	160.0
Wages.....	944,651,734	317,923,813	197.1
Materials.....	2,910,838,308	1,020,782,015	185.2
Value of products.....	5,100,298,728	1,782,808,279	186.1
Value added by manufacture (value of products less cost of materials)	2,189,460,420	762,026,264	187.3

¹ A minus sign (—) denotes decrease.

Paul, and studied in France. He was pastor at Rochester, Minn., from 1867 to 1878, and a member of the Paulist community in New York from 1878 to 1882, and after holding a pastorate in Minnesota, became the first president of St. Thomas, Merrian Park, St. Paul, Minn., where he was professor of dogmatic theology from 1886 to 1890. During the next five years he was professor of modern church history at the Catholic University at Washington. Meanwhile, he had been consecrated bishop of Sioux Falls, April 19, 1896. He wrote among other works a history of the Roman Catholic Church in the United States.

OHIO. POPULATION. According to the report of the census of 1920, there were 5,759,394 residents in the State, Jan. 1, 1920, as compared with 4,767,121 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	3,888,000	159,326,000	\$65,324,000
	1920	3,965,000	172,081,000	117,015,000
Oats.....	1921	1,614,000	37,122,000	12,250,000
	1920	1,540,000	68,068,000	34,034,000
Barley.....	1921	97,000	2,037,000	1,039,000
	1920	102,000	2,825,000	2,316,000

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Ohio was issued by the Bureau of the Census. The

LEGISLATION. Among the measures passed at the legislative session may be mentioned: Amendment of existing laws relating to compulsory education, employment of minors, duties of boards of education, and other educational matters; creating a State bureau of criminal identification; provisions for the prevention of forest fires and the establishment of a State forest nursery, and authorization of municipal, township, or county forests; licensing of ice-cream plants; provision for cooperative marketing; provision for the appointment of a commissioner to enforce prohibition law; authorizing the localities to maintain playgrounds, gymnasiums, public baths, etc.; provision for State supervisory control of public water supplies; extending the benefits of workmen's compensation to occupational diseases; provisions for the purpose of preventing loans for current expenses or deficiencies, for the protection of sinking funds, and for the restriction of the term of loans, etc.

OFFICERS. Governor, Harry L. Davis; Lieutenant-Governor, Clarence L. Brown; Secretary of State, Harvey C. Smith; State Treasurer, Rudolph Archer; State Auditor, Joseph T. Tracy; Attorney-General, John G. Price.

OHIO NORTHERN UNIVERSITY. An institution of the higher learning at Ada, Ohio; founded in 1871. The enrollment for 1921 was 1043 and there were 35 members in the faculty. President, Albert Edwin Smith, D.D., Ph.D.

OHIO STATE UNIVERSITY. A State institution of the higher learning at Columbus, Ohio; founded in 1870. The enrollment for the fall of 1921 was 7639 of whom 5657 were men and 1982 women; for the summer session, 1562 of whom 1052 were men and 510 women. The faculty numbered 625 of whom 70 were men and of whom 56 were added during the year. The library contained 221,956 volumes. The productive funds amounted to \$1,058,084. President, William Oxley Thompson, D.D., LL.D.

OHIO UNIVERSITY. A co-educational State institution of the higher learning at Athens, Ohio; founded in 1804. The enrollment for the fall of 1921 was 1330 and for the summer session 2043. The faculty numbered 85. The library contained

53,500 volumes. President, Elmer Burritt Bryon, LL.D., Ph.D.

OHIO WESLEYAN UNIVERSITY. A co-educational institution of the higher learning at Delaware, Ohio; founded in 1844. The enrollment for the fall of 1921 was 1623 of whom 893 were women and 730 men. The faculty contained 116 members. The library had 88,343 bound volumes. The productive funds amounted to \$1,600,000 and the income to \$388,964. President, Rev. John Washington Hoffman, D.D., LL.D.

OIL. See **PETROLEUM.**

OIL ENGINES. See **INTERNAL COMBUSTION ENGINES.**

OKLAHOMA. POPULATION. According to the report of the census of 1920, there were 2,028,283 residents in the State, Jan. 1, 1920, as compared with 1,657,155 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	3,077,000	75,925,000	\$24,618,000
	1920	2,820,000	78,960,000	42,638,000
Oats.....	1921	1,765,000	35,300,000	9,531,000
	1920	1,650,000	54,450,000	23,958,000
Barley.....	1921	122,000	2,684,000	1,208,000
	1920	116,000	2,784,000	2,004,000

IRRIGATION. The United States Bureau of the Census issued the accompanying table giving a summary of the irrigation conditions of the State at the census of 1920 with corresponding figures for 1910:

	Census of—	
	1900	1910
Number of all farms.....	191,988	190,192
Approximate land area of the state.....	acres.. 44,424,960	44,424,960
All land in farms.....	acres.. 31,951,934	28,859,353
Improved land in farms.....	acres.. 18,125,321	17,551,337
Number of farms irrigated.....	73	137
Area irrigated.....	acres.. 2,969	4,388
Area enterprises were capable of irrigating.....	acres.. 9,672	6,397
Area included in enterprises.....	acres.. 11,742	8,528
Per cent irrigated:		
Number of all farms.....	(1)	0.1
Approximate land area of state.....	(1)	(1)
Land in farms.....	(1)	(1)
Improved land in farms.....	(1)	(1)
Excess of area enterprises were capable of irrigating over area irrigated.....	acres.. 6,703	2,009
Excess of area included in enterprises over area irrigated.....	acres.. 8,773	4,140
Capital invested.....	\$151,325	\$47,200
Average per acre enterprises were capable of irrigating.....	15.65	7.38
Estimated final cost of existing enterprises.....	162,775	47,200
Average per acre included in enterprises.....	13.86	5.53
Average cost of operation and maintenance per acre.....	2.92	0.51

¹ Less than one-tenth of 1 per cent.

Alfalfa and corn were the only crops for which the area reported as irrigated exceeded 100 acres. The area of irrigated alfalfa reported was 417 acres, with a yield of 615 tons, or 1.47 tons per acre. The average yield for the whole State was 1.96 tons per acre. The area of corn reported as irrigated was 237 acres, with a yield of 4124 bushels, or 17.4 bushels per acre. The average yield for the State was 21.8 bushels per acre. The remaining irrigated area was divided among other farm crops, gardens, and pastures.

MANUFACTURES. The United States Bureau of the Census issued the accompanying table (see page 525) of the census of manufactures in 1919 with corresponding figures for 1914.

In 1920 there were 12 cities in the State—Ardmore, Bartlesville, Chickasha, Enid, Guthrie, McAlester, Muskogee, Oklahoma City, Okmulgee, Sapulpa, Shawnee, and Tulsa—having more than 10,000 inhabitants. These twelve cities, the combined population of which in that year was 317,264, formed 15.6 per cent of the total for Oklahoma, and in 1919 reported 33.3 per cent of the value of the State's manufactured products. The large increases in salaries and wages, cost of materials, and the value of products, from 1914 to 1919, as presented in the table, are chiefly due to the change in industrial conditions brought about by the World War, and therefore cannot properly be used to measure the growth of manufactures during the census period 1914-19. The increases shown, however, in number of wage earners and horsepower are indicative of a decided growth in the manufacturing activities of the State. The addition of the Federal income tax since 1914 will account for the large increase in "Rent and taxes."

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Provision for prophylactic treatment of the eyes of the newly born; regulating the practice of chiropractics; providing for a survey of the State school system; requiring the teaching of American history and civil government in all the graded and high schools; definition and regulation of the practice of osteopathy.

OFFICERS. Governor, J. B. A. Robertson; Lieutenant-Governor, M. E. Trapp; Secretary of State, Joe S. Morris; Treasurer, A. N. Leecraft; Auditor, Frank Carter; Attorney-General, Prince Freeling.

	Manufacturing Industries		Per cent increase, or decrease ¹ 1914-19
	1919	1914	
Number of establishments.....	2,445	2,518	-2.9

¹ A minus sign (—) denotes decrease.

OKLAHOMA, UNIVERSITY OF. A co-educational State institution of the higher learning at Norman, Okla.; founded in 1890. The student enrollment for the fall of 1921 was 3013 not including the school for nurses. Of the above enrollment 916 were men and 1097 women and the largest number was included in the College of Arts and Sciences, 1738. Other departments are education, finance, engineering, law, pharmacy, and medicine. The faculty numbered 200. The library contained 40,000 volumes. The women's building devoted especially to the interests of the women students was completed during the year. During the year the sum of \$939,252 was applied to maintenance of the university and \$327,520 to the maintenance of the university hospital. President, Stratton D. Brooks, LL.D.

OLD AGE PENSIONS. The most considerable legislation enacted during the year in the United States was that of Illinois and New Jersey. Illinois' two new laws went into effect, July 1, 1921. One concerns itself with the creation of an annuity and benefit fund for municipal employees in each city of 200,000 or more inhabitants and makes the following provisions: "It will cover all regular civil service employees automatically, and will cover the employees in 'the labor service' of the city if they so elect. Pension funds now in operation under the law of 1911, which created them for cities of over 1,000,000 population, will be taken over by the boards of trustees of the funds created under this act. To establish his right to a retirement pension the employee has 3¼ per cent of his salary deducted, to which the city adds a sum equal to 5¾ per cent of the salary and in addition 4 per cent interest on the sum paid by the employee. The city's obligation is retroactive for whatever period of time the employee has served prior to the adoption of this system. To establish the right of his widow to an annuity after his death, the employee pays an additional 1 per cent of his salary and the city adds an additional 1¾ per cent with interest as in the former case. The percentage of salaries to be deducted for the various funds are to be revised after the system has been in operation for a year. The proportional divisions of payment between the city and the employees will remain the same, but the actual amounts will be revised to provide just the sums which experience shows to be necessary."

The second Illinois law amends the existing act

creating a pension fund for county employees so as to provide for contribution by the county itself. In 1922 each county is to contribute a sum equal to the amount paid by employees in 1921, and beginning with 1923, each county is to contribute annually a sum equal to twice the contribution of employees for the fiscal year preceding. Taxation is authorized for this purpose.

New Jersey passed four old age pension laws, two dealing with employees of city water departments and two with State employees. A State employees' retirement system, effective Jan. 1, 1922, was inaugurated to cover State employees not already covered, and any of those who shall renounce the benefits of former systems and elect to become members of this one. "All employees appointed after this act takes effect, including those who would formerly have come under some other retirement system, become members of this system automatically after completing six months' service and may elect to do so sooner. Employees appointed previous to this act may elect whether they shall become members. The board of trustees may in their discretion deny or make optional the privilege of membership for elected officials, non-civil service employees, and employees paid only in part by the State. Retirement on a service allowance is optional for an employee over sixty and obligatory for one over seventy. An employee under sixty may be retired on an ordinary disability allowance provided he becomes physically or mentally incapacitated after serving ten years or more. Special accident disability allowances are provided for employees disabled because of their work, provided they are not guilty of willful negligence. A retiring employee may draw his full annuity and pension or may draw a lesser sum during his lifetime and make one of several arrangements by which the remainder may be paid to his dependents after his death. All payments of the allowances under this act are to be made monthly and are tax and levy free."

Another law, effective March 31, 1921, provides a pension to any person who is 60 years old and has been in the State's employ for 25 years and is not entitled to a pension under any other State law. Of the two laws concerning employees of city water departments one retires on half pay at the age of 65, or if they so desire, at 60, employees who have served for 25 years. The fund is created by deducting a certain per cent from wages and

by the city's contribution of a certain per cent. The other amends the law concerning pension funds for water department employees in cities of the first class. It reduces the necessary term of service from 25 to 20 years and does not force employees leaving the service before they have served the full term to forfeit their payments.

Connecticut reduced its service requirement for State employees' pensions from 25 to 20 years. Hawaii declared all pensions paid by that territory to be free from taxation. Montana requested its Industrial Accident Board to study the condition of aged wage earners and report its recommendations for old age insurance. New York appropriated \$150,000 for its pension system and amended the law pensioning State employees. Wisconsin ordained that county pension law commissions should be appointed in every county having a population of 250,000 or over, for the purpose of collecting information concerning the operation of pension laws in municipalities, States, and counties.

FOREIGN. Argentina in February issued a law creating a national pension and subsidy fund for the permanent personnel of private companies, not railroads, engaged in the various lines of public service. The fund is principally derived from a compulsory deduction of 5 per cent from the employees' wages; a monthly contribution from the companies equal to 8 per cent of the wages of all the permanent employees; and contributions from the State. Ordinarily pensions are granted to those who are 50 years old and have served for at least 30 years.

Spain by royal decree of Jan. 23, 1921, amended the 1919 amendments which broadened the scope of the old age insurance and pension law of 1908. The decree provides compulsory old age insurance for all workers between the ages of 16 and 65 years whose annual income does not exceed 4000 pesetas (\$772 par), regardless of sex and nature of employment. The insurance fund is derived from three sources: the employers; the State; and the employees. The system is to be administered by the Institute of National Provision with the collaboration of regional or provincial institutions.

OMAN. An independent Mohammedan state in southern Arabia, guaranteed in its integrity by Great Britain and France; extending along the southern coast of the Gulf of Oman, with a coastline of nearly 1000 miles. Area, about 82,000 square miles; population, about 500,000, chiefly Arabs. Capital, Muscat, with a population of about 24,000, including the adjacent town of Muttrah. Reigning sultan at the beginning of 1921, Seyyid Taimur bin Feysal.

ONIONS, ALFRED. See **NECROLOGY.**

ONTARIO. Next to Quebec the largest province of Canada, lying between Quebec on the east and Manitoba on the west. Capital, Toronto. Area, 407,262 square miles, of which 41,382 are under water; population, 1911, 2,523,274; estimated, Jan. 21, 1919, 2,799,000. The Indians in 1911 numbered 23,044. The population of Toronto in 1919 was estimated at 499,278; Ottawa (1921), 107,137; Hamilton (1919), 108,143; London (1919), 59,100. Executive power is in a lieutenant-governor who is appointed for five years by the governor-general and who acts through a responsible ministry; and legislative power is in a single chamber of 111 members, elected for four years. At the beginning of 1921

the legislature was divided among the party groups as follows: United Farmers, 44; Liberals, 28; Conservatives, 25; Labor, 12; Independents, 2. Lieutenant-governor at the beginning of 1921, Lionel Herbert Clark; Prime Minister, E. C. Drury. See **CANADA.**

On April 18 the province voted complete prohibition by a majority of more than 25,000. The rural credit scheme went into operation in the course of the year, having local boards which worked along with a central board directly responsible to the Ministry of Agriculture. It provided for short-term loans not exceeding \$1000 and for the advance of a maximum of \$12,000 on long-term mortgages. In addition a plan was under consideration for a system of government banks.

OPEN-AIR CONCERTS. See **MUSIC, Orchestra.**

OPERA. See **MUSIC, Opera.**

OPP, JULIE (Mrs. **WILLIAM FAVERSHAM**). Actress, died, April 8. She was born in New York City, Jan. 28, 1871; and educated in a convent there. She first appeared in a minor part in *As You Like It* in London, Dec. 2, 1896, and later was for five years leading lady with Sir George Alexander. She was engaged by the Frohmans in casts with William Faversham; whom she married, Dec. 29, 1902, and with whom she starred afterwards in *The Squaw Man* and other successful plays. She herself adapted *The Squaw Man* from the play of Edwin Milton Royle.

OPPENHEIMER, Sir BERNARD. British diamond merchant, died at Stoke Poges, England, June 13. He was born, Feb. 13, 1866. For many years he had been one of the leading men in diamond exploitation. He was chairman of the New Vaal River Diamond and Exploration company and a director of other financial institutions. In 1917 he devised a scheme for training disabled soldiers in diamond-cutting, and as a result of it founded the Bernard Oppenheimer Diamond Works for disabled soldiers, which was employing in 1920 about 2000 disabled men. At the beginning of the year 1921 he was made a baronet.

ORANGE FREE STATE. A province of the Union of South Africa. Capital, Bloemfontein. See **SOUTH AFRICA, UNION OF.**

ORCHESTRA. See **MUSIC.**

OREGON. **POPULATION.** According to the report of the census of 1920, there were 783,389 residents in the State, Jan. 1, 1920 as compared with 672,765 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture, covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	66,000	1,980,000	\$1,663,000

MINERAL PRODUCTION. The production of precious metals in Oregon in 1921 is estimated by the United States Geological Survey to have been approximately 37,500 ounces of gold, valued at \$775,194; 43,120 ounces of silver, 274,400 pounds of copper, and 350 pounds of lead. Although this represents a decrease of \$242,296 in value of the gold, 48 per cent in the quantity of silver, and 88 per cent in the quantity of copper, as compared with 1920, mining in the State at the end of 1921 was far from being as depressed as these figures might indicate. The decrease was due largely to the curtailment of the operations of the Cornucopia and the Homestead Iron Dyke mines, in the eastern part of the State. The lessened activity at the Iron Dyke was due directly to the depression in the copper market.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Oregon was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table gives a summary of the census of manufactures in 1919, with corresponding figures for 1914:

bribe baseball players or officials; constituting the State board of control the budget commission of the State; providing employment for the convicts in the State penitentiary; creating a State embalmers examining board; provision for the Americanization of the foreign-born and conferring discretionary power on school boards to employ home teachers; provision for the industrial rehabilitation of veterans of the late war.

OFFICERS. Governor, Ben W. Olcott; Secretary of State, Sam A. Koser; Treasurer, O. P. Hoff; Attorney-General, I. H. Van Winkle; Superintendent of Public Instruction, J. H. Churchill; State Highway Engineer, Herbert Nunn; Superintendent of Banks, Frank C. Bramwell; Adjutant-General, George A. White.

JUDICIARY. Supreme Court: Chief Justice, George H. Burnett; Associate Justices: Henry J. Bean, Henry L. Benson, George M. Brown, Lawrence T. Harris, John McCourt, Thomas A. McBride.

OREGON, UNIVERSITY OF. A co-educational State institution of the higher learning at Eugene, Ore.; founded in 1872. The enrollment for the fall of 1921 was 2164 of whom 1074 were men, 938 women, and 152 in the Medical School. There are two summer sessions, one held in Portland and the other in Eugene. Total enrollment 879. The faculty numbered 153 of whom

45 were women and 23 added during the year. From the State the income amounted to \$847,540 and from other sources \$84,836 was received. The library contained 107,000 volumes. The following buildings were completed:

The Woman's Building cost \$300,000, which contains the Alumni hall, and various rooms for student meetings, etc., and houses the department of Physical Education for women; the Education group including the building of the School of Education, and the practice high school building with its open air gymnasium, cost about \$145,000; Commerce Hall, erected for the School of Business Administration, and the department of Economics, which is closely related thereto, and cost about \$112,000; Susan Campbell Hall, cost approximately \$107,000, one of the two halls of residence for women. A seven-year curriculum for medical students leading to the degrees of A.B. and M.D. was established during the year and a pre-engineering curriculum of three years was also established leading to the principal engineering schools of the country. The principal gift of the year was the presentation to the Law School of the library of Judge W. V. Fenton of Portland, containing over 10,000 volumes including many rare copies.

ORTHOGRAPHY. See **PHILOLOGY, MODERN**.

ORTHOPEDIC SURGERY. The recent visit to the United States of Dr. Lorenz, the Vienna orthopedist, the crowds of cripples who sought his charitable offices, the great newspaper publicity and the hostile criticisms of some of the local medical men, brought the subject into especial prominence. The United States is the birthplace of this branch of surgery and while it pertains ostensibly to

childhood or to deformities which date from that period, the recent great war has notably amplified the number of adult cripples. But the increasing interest in orthopedics is not entirely the result of the war nor, in America, is it due to chance episodes like the Lorenz visit and its publicity. It is not peculiar either to any one country. This is shown from a study of the activities of the institution in London known as the Royal National Orthopedic Hospital. This central establishment which virtually monopolizes orthopedic activity in the metropolis and is the oldest of its character in Great Britain was founded in 1834 while the new plant was opened by Edward VII in 1909. Up to 12 years ago the attendance was 11,000; now it is 82,000 with a waiting list of 1000 children. It has to date cured or relieved 500,000 crippled children of the poorer classes. To take care of the waiting list a county branch will be established at Stanmore while a special school of Orthopedic Surgery is to be created. The patients come from every part of the country and the school training of local surgeons would enable these out-of-town patients to obtain benefit without visiting the metropolis and without delay. The importance of a single great national centre in a small country like Great Britain is obvious.

OSTRANDER, FANNIE ELIZA. Author, died at New Haven, Conn., May 4. She was born at North Haven, Conn.; and taught school for several years. She became an editor for a Chicago publishing house in 1899; and contributor of verse and prose to the magazines. She wrote especially for children, and her writings include: *The Gift of the Magic Staff* (1902); *The Little Pixies Abroad* (1905); *Little White Indians* (1907); *The Boy Who Won* (1910).

PACKERS AND STOCK YARDS ACT. See AGRICULTURAL LEGISLATION.

PAGE, S(AMUEL) DAVIS. Lawyer, died at Philadelphia, Pa., October 11. He was born at Philadelphia, Sept. 22, 1840; graduated with honor at Yale in 1859, studied law at the University of Pennsylvania and Harvard and practiced at Philadelphia after 1864. He was City Controller, 1883-84; Assistant Treasurer of the United States at Philadelphia 1886-90 and was delegate to the Congress of Bankers and Financiers at the Chicago Exposition in 1893. He was an officer or member of prominent financial and social institutions of the State.

PAHANG. See FEDERATED MALAY STATES.

PAINTING AND SCULPTURE. INTRODUCTION. The buying and selling of old masters brought from Europe, assumed more normal proportions than had been possible for several years. Owing to the dispersal of valuable imperial and private collections in Germany, Austria, and elsewhere, many superb pieces became available to American collectors. The new revenue law brought considerable relief from the sales tax, which had been the cause of much depression in buying. High, and in some cases, record prices were reported at many of the sales for both old and modern art.

In the United States strenuous efforts have been made to promote a better understanding between the artist and his public. The Art Centre, an amalgamation of seven societies, and the League of New York Artists, have been recently incorporated for this purpose. Indications point to an increasing interest in American painting and in its purchase.

The necrology list of 1921 includes among American artists: Abbot H. Thayer, one of the foremost American figure painters, and an important contributor to the science of modern camouflage; J. Francis Murphy, perhaps our best known landscape painter; George Henry Smillie, veteran landscape painter; Ernest Wadsworth Longfellow, landscape painter and last surviving son of the poet, Henry Longfellow; also Carl Weber, Robert Kluth, James J. McAuliffe, landscape painters; F. W. Heine, painter and founder of the Heine Art School of Milwaukee; William Willett, stained glass designer; Mrs. Harry Watrous, figure painter; Frank Walter Taylor, illustrator; Lawrence C. Earle, designer; Louis Kurz, mural painter and one of the founders of the Art Institute, Chicago; Guernsey Mitchell and Meta B. Wilson, sculptors. Interesting figures in the world of art were James Gibbons Huneker, critic and writer of international reputation; James Bliss Townsend, well-known editor of the *American Art News*; Henry Reinhardt, art dealer, one of the pioneers of art in the West; and Augustus A. Healy, art patron and president of the Brooklyn Museum. In Great Britain are noted the deaths of Marcus Stone, veteran figure painter; William Strang, painter, etcher, and

engraver; Sir William Blake Richmond, figure painter; Alexander Roche and Peter Graham, Scotch landscape painters; W. Robert Colton, R. A., sculpture; Sir Frederick Wedmore, art critic and poet; and William L. Peacock, well-known art dealer. The European list includes Prof. Franz von Defregger, German historical painter; Dr. Max Dvorak, art historian, and August Gaul, German sculptor; Julius Kronberg, Swedish figure and historical painter; Axel Herman Haig, famous Swedish etcher, the teacher of Zorn; Fernand Knopff, Belgian figure painter, and Theodore Besseger, Swiss water colorist. From France we have Jean Paul Laurens, well-known painter, decorator, and illustrator; Eugene Burnand, landscape painter; and the celebrated writer and archæologist, Comte Robert de Lasteyrie. Noted names from Spain were Francisco Pradilla, foremost historical painter and former director of the Prado Museum, and Rafael Ramirez Arellano, painter, and director of the Royal Academy of Fine Arts.

PENNSYLVANIA ACADEMY. The 116th exhibition of the Pennsylvania Academy of Fine Arts upheld, much better than last year, its reputation of having probably the finest display of present day American painting of a somewhat conservative character. The 501 oils and 130 pieces of sculpture were both well hung, and advantageously placed, in the spacious rooms. The general impression was stimulating and agreeable. A number of good portraits were noted, including an early portrait by John Sargent of Carolus Duran, exceedingly handsome; President Eliot of Harvard by C. Hopkinson; two portraits of women by Ernest I. Ipsen; self-portrait by Sidney Dickinson; the decorative "Miss W." by DeWitt Lockman; two fine examples by Robert Susan, and others by Wayman Adams, Eugene Castello, and Alexander Smith. Among the figure pieces were two by Robert Henri and a nude by W. Paxton, and interiors by Frank Benson, Joseph Decamp, and A. B. Carles. The Widener Memorial prize went to Evelyn Longman's graceful "The Future." Other awards were: Temple Gold Medal to Leopold Seyffert for "The Model"; the large triple portrait group "Eleanor, Joan and Anne," by George Bellows, the Beck Medal; Charles Morris Young's "Wind on the Sound," the Seanan Medal; and Irving Couse's "Chant to the Rain God," an Indian subject in his characteristic manner, the Lippincott prize. Fine representative landscapes by Henry Ritschel, Daniel Garber, Paul King, Hayley Lever, Emil Carlsen, Gardner Symons, Ernest Lawson, and many more well-known artists were seen and enjoyed. A charming little "wood interior" by Katherine Patton received the Mary Smith prize.

ARCHITECTURAL LEAGUE. The 36th annual display of this society was held in the new wing of the Metropolitan Museum, thus affording adequate space for a very elaborate decorative undertaking. The effect was indeed striking, so

much so that the individual exhibits appeared somewhat overwhelmed by their surroundings. The medal of honor was awarded to John Gregory for his beautiful "Philomela," a seated winged figure. Other medal winners were Francis Creamer, Harold Sterner, Charles Claude, Greville Ricard, and Benjamin Moscovitz. Leo Lentelli received the Avery prize for a charming fountain figure. Other interesting sculptural exhibits were: a memorial group by Robert Aikens, several groups by Charles Keck, and a garden figure by Sherry Fry. There was an excellent showing of stained glass windows, and many mural decorations, drawings, etc., some of heroic size; including forty examples by the late George W. Breck; six by Edwin Blashfield; thirty pieces by Ezra Winter, and several by Eugene Savage. Other exhibitions included exotic screens by R. W. Chanler; garden sculpture, iron-work, batiks, tapestries, and over-mantels, textiles, brocades, potteries, designs for tiles, furniture, lamps,—in all quite the most ambitious undertaking of this kind yet seen.

NATIONAL ACADEMY, SPRING EXHIBITION. The 96th annual academy exhibition assumed its familiar appearance with the reopening of the rebuilt Vanderbilt wing in the Fine Arts Building, 254 oils, 62 sculptures, and 157 etchings and lithographs comprised the sum total, as compared with some 900 exhibits last year in the Brooklyn Museum. Owing to the omission of the Winter Academy all prizes were doubled, affording considerable interest and competition. The Altman landscape prizes were awarded to Ernest Lawson's "Vanishing Mists," which later received the Carnegie Gold Medal and prize; and Robert Spencer's "Rag Pickers." Walter Ufer's "Hunger" received the first Altman prize for figure or genre painting; and Helen M. Turner's "Flower Girl" was awarded the second. Other prize winning canvases were as follows: "Jersey Water Front" by John Folinsbee, the Carnegie prize; "In the Hills" by Leon Kroll, the Thomas B. Clarke prize; the first, second, and third Hallgarten prizes to Ross E. Moffat's "The Old Fisherman"; "October" by Felicie Waldo Howell; "Michael Brennan" by William Auerbach Levy; the Isidor Gold Medal to Howard E. Smith's "Comrades"; the Saltus Gold Medal to Charles H. Davis for "Sunny Hillside"; the Thomas Proctor and Isaac N. Maynard prizes for portraiture to Leopold Seyffert for "Portrait of Dr. Richard Harte," and R. Sloan Bredin for "Young Lady in White." The Sculpture awards were "The Offering" by Malvina Hoffman, which won the Helen Foster Barnett prize; "Head of an Italian Peasant" by Katherine Lawson, awarded the Julia A. Shaw Memorial Prize; and "Allegresse" by Bessie Potter Vonnob, awarded the E. N. Watrous Gold Medal. Twenty works were sold, including some etchings. The exhibition as a whole, lacked interest and vitality, although individual canvases possessed much merit. Among these are mentioned: "Winding Stream," Gardner Symons; "Mountain Preacher," James R. Hopkins; "Sage Brush," Carl Rungius; "Woman Sewing," William Paxton; Portrait of Wm. A. Coffin, DeWitt Lockman. Other artists exhibiting included Hayley Lever, Victor Higgins, Roy Brown, Charles Hawthorne, George Elmer Brown, Howard Giles, Albert Groll. "The Sermon on

the Mount" a large canvas by Max Bohm was an unfortunate venture.

ART INSTITUTE, CHICAGO. Each year the annual Exhibition of American Art at the Art Institute is hailed as the "best ever presented," and the thirty-fourth with 216 paintings and 84 pieces of sculpture proved to be no exception. An attendance of over 5000 on the opening day and nearly twice as many sales as the National Academy exhibition was proudly announced. "The Dancing Lesson" by Cecelia Beaux was awarded the Logan prize and medal. George Bellows received the Harris silver medal and prize for a characteristic "Portrait of an Old Lady;" and "Ave Maria," a decorative canvas by Wellington J. Reynolds, was awarded the second Harris prize. The Spalding prize went to Elmer Schofield for "Morninglight," a well-executed landscape. The first award of the Peabody prize was won by Felicie Waldo Howell for "From the Attic Window," and the French Memorial Gold Medal went to Eugene Savage for decorative designs. A carefully-modeled bust of the late Frank Duveneck by Charles Grafty received the Potter Palmer prize and gold medal, besides being purchased by the Friends of American Art for the permanent collection of the Art Institute. All the prize winning canvases were conservative in character and execution. Well-known artists, adequately represented, included: Frank Benson, Oliver Dennet Grover, John Sloan, James R. Hopkins, Emil Carlsen, Hayley Lever, John Noble, Marie Danforth Page, Gardner Symons. "The Model" by Leopold Seyffert, which won the Temple Gold Medal at Pennsylvania Academy, was purchased for the permanent collection of the Museum. The hanging was well done, and the sculpture exhibits advantageously placed. "Philomela" by John Gregory showed great charm.

NATIONAL ACADEMY, WINTER EXHIBITION. The winter exhibition was small, well-hung, carefully selected, evidently, and most uninspiring. The small "Sunshine after Rain" by Ernest Dawson formed a bright spot amidst the gloom, as did also "Windy Day" by Hayley Lever; a characteristic piece by John Costigan; "Forest Primeval" by Charles Chapman; "Wilton Hills" by Roy Brown; "Tampa" by Reynolds Beal; a marine by Frederick Waugh; and a sensitive portrait by Charles W. Hawthorne. "Superstition" by E. L. Blumenschein was awarded the first Altman Prize, and the fanciful "Sunrise" by Arthur Spear received the second. Other prize winning canvases were "The White Vase," George L. Nelson, awarded the Isidor Medal; "John Lane of London," Ernest F. Ipsen, the Proctor prize; "The Tang Jar," Dorothy Ochtmann, the Julia A. Shaw prize; "High River," John Folinsbee, the J. F. Murphy prize for the best landscape by an artist under 41, awarded for the first time. The Watrous Gold Medal went to Robert I. Aitkens for his design of the George Rogers Clark monument, and "Prairie Fire" by John M. Lore, received the Helen Foster Barnett prize. A beautiful "Portrait of a Lady" by Abbot Thayer occupied the place of honor. Among the paintings sold were "Forest Primeval" by Charles Chapman, which won the Carnegie prize; "Repose of Evening" by Ben Foster; "Fall Round-up" by Carl Rungius; "The Invalid" by Murray Bewley; and the

canvases mentioned above by Arthur Spear, Roy Brown, and Chauncey Ryder.

CORCORAN ART GALLERY WASHINGTON. The eighth biennial exhibition of American art opened with more paintings and a larger attendance than ever before. The 300 paintings exhibited represented practically all the foremost artists of the United States. Many visiting foreigners attended, giving quite an international atmosphere, especially on the opening day. The William A. Clark prizes, perpetuated last year through the generosity of the donor, were awarded as follows: first prize and Corcoran Gold Medal to Daniel Garber for "South Room, Green Street," a sunlit interior with standing figure of a young girl; silver medal and second prize to Burtis Baker for another interior, a young girl at a dressing table, the whole presenting an unusual composition; the third and fourth prizes to John Folsabee's "Jersey Waterfront" and "Quarry Wharves" by Lester Stevens. The awarding of these four prizes did not show any flight of the imagination on part of the jury.

CARNEGIE INSTITUTE, PITTSBURG. A new departure in the jury of awards was arranged for the 20th annual international exhibition at Pittsburg. Instead of ten members, the jury consisted of four, two Americans and two foreigners, with meetings in Paris, London, and New York to consider desirable exhibits. A decided limitation in the number of works shown took place, and the sales, nine paintings in all, were sadly inadequate. On the whole the exhibition was disappointing, especially in its lack of representative foreign material. All three prizes were awarded to the following American exhibits: "Vanishing Mists," a fine canvas by Ernest Lawson, already awarded the first Altman prize at the National Academy Exhibition; "Portrait of a Young Woman" by Howard Giles; and "Girl with Green Hat" by Eugene Speicher. Two English artists, R. J. Enright Moony and Sidney Lee, received honorable mention, as also did Ross Moffat for his "Old Fisherman." Of the 633 paintings submitted, 385 were hung, of which 182 were by British and European artists. The French painter, Eugène Le Sidaner, was given the one-man exhibition this year, with 25 poetic canvases on view.

OTHER EXHIBITIONS. The unceasing endeavor to stimulate the interest of the public in art is shown in the varied and increased number of exhibitions. Associations such as the New Society of Artists, the Allied Artists of America, the National Association of Women Painters and Sculptors, the American Water Color Society now have exhibitions which vie in interest with the official ones. Most interesting was the "Retrospective Exhibition of American Art" containing examples from the earliest portrait painters down to the modern extremists. Santa Fé, New Mexico, has become the centre of the western groups of painters, and the summer artist colonies, such as Gloucester, Ogonquit, Newport, Nanuet, Provincetown, Rockport, Lyme, Mystic, etc., are fast assuming such importance that art dealer, critic, and patron keep in close touch with these centres. In Lyme a beautiful new gallery has been erected, and Provincetown artists are planning new Museum galleries. Individual exhibitions of interest during the year were the Abbot Thayer and J. Francis Murphy Memorial exhibitions; a

comprehensive water color show at Brooklyn Museum; a selection of 70 Oriental, chiefly Turkish rugs from the collection of James F. Ballard of St. Louis, shown in the Metropolitan Museum; and a large collection of Lepère etchings. Of first importance was a loan exhibition of ancient Chinese paintings at a New York dealer's and from Japan came an interesting group of contemporary works, exhibited in various museums. The Brooklyn Museum took the lead in displaying the so-called "Modernists" with a large exhibition of French masters, including such men as Cézanne, Gauguin, Matisse, Pissarro, de Vlaminck, Guillaumin, and their immediate precursors, Toulouse-Lautrec, Signac; also Manet, Renoir, Monet, Degas. This was the first exhibition of ultra modern art to be sponsored by a public Museum in the United States. The Metropolitan Museum of New York followed with a smaller but more important group contrasted with representative impressionist painters. These exhibitions were the cause of much controversy, literary and otherwise. Other exhibitions of modern art came from Holland, Switzerland, and France. A fine collection of Fragonards was shown in Paris. In London, the Royal Academy adopted the policy of reducing its 1500 exhibits to 300, with some degree of success. Even staid Philadelphia had an exhibition of "modern" American art. The Society of Independent Artists held its Fifth Annual Exhibition with an ever-increasing membership and over a thousand exhibits. The great majority of these were by unknown artists, deservedly so, but there were some of good quality. A memorial exhibition of Mary Rogers' oils and water colors occupied one entire section. The untimely death of this young artist cut short a career full of greatest promise.

MUSEUM ACCESSIONS. The Michael Dreicer bequest of eighty-two objects of art, nearly one-third of which are paintings of the highest rank, was the most important bequest of the year to the Metropolitan Museum. The paintings are chiefly northern primitives, with fine examples by Memling, Rogier van der Weyden, Martin Schongauer, Piero di Cosimo, Lucas Cranach; and there are many fine pieces of Gothic sculpture. The Herrmann bequest enriches the Metropolitan Museum with six oil paintings, including a fine Gabriel Metsu and an unusual Gustave Moreau. An important collection of Persian, Chinese, Italian, and other ceramics, and a beautiful Van Dyck were bequeathed by Edmund C. Converse. Important purchases by the Metropolitan Museum include: two fine Largillière portraits; a superb landscape by Breughel the Elder; a tondo of enameled terra cotta by Luca della Robbia; several representative Roman portrait busts, two paintings of the Siennese school, and some interesting Chinese sculpture of the "Tang" period. The Chicago Art Institute was enriched by the Potter Palmer Collection of paintings, and a gift of 5000 drawings, dating from the 13th to the 19th centuries. A superb Velazquez, a life-size portrait of the Infanta Maria Theresa, was presented to the Boston Museum by a generous patron who purchased it from the late imperial collection of Vienna. Twenty paintings, including examples by Gentile Bellini, Canaletto, Frans Hals, J. F. Millet, Rubens, and the Maris brothers were bequeathed to the Brooklyn Museum by A. A. Healy, its late

president. The collections of this museum were further augmented by the William H. Hermann bequest of modern paintings, antique furniture, glass, potteries, and sculpture. By purchase the Pennsylvania Museum acquired nine examples of French impressionistic art, and the city of Philadelphia received the McFadden collection of old English masters, one of the finest in the world. Minor acquisitions were those of a Greek head of the fourth century, by the St. Louis Museum; a portrait of George Washington by Joseph Wright by the Cleveland Museum; and the purchase of several modern German paintings by the Detroit Museum. The Kansas City Museum and the Minneapolis Art Institute were the recipients of large money bequests.

In Tokyo, Japan, a large museum has been given by private donation and is being filled with examples of modern occidental art. Seventy paintings by Frank Brangwyn have already been purchased, together with many French paintings. American art has not yet been included. The famous "Carpenter Shop" by Millais was purchased by the National Gallery, London, and the Louvre paid an immense sum for the "Death of Sardanapalus" by Delacroix. The city of Paris received the Edward Tuck Collection, which was supposed to have been promised to Concord, N. H. Thirty-six paintings by the old English masters, including Gainsborough's famous "Mrs. Nisbet," were donated to the Edinburgh Museum.

ITEMS OF INTEREST. The rotunda decorations in the Boston Museum by John Singer Sargent have been completed, after five years' labor. By their simplicity of design and originality of color and execution they strike a new note in the treatment of classical subjects. Besides the paintings, the artist executed the reliefs and their moldings. A replica of the Joan of Arc monument at Rheims by Du Bois, was erected in Washington. A. Phimister Proctor completed a bronze equestrian statue of Theodore Roosevelt for the city of Portland, Oregon. The famous Alma-Tadema palace in London has been placed upon the market with rumors of an American purchaser. In Berlin the former imperial palace has been opened as a Museum of Arts and Crafts, one of the most remarkable in Europe, and the Berlin Museum has become the fortunate possessor of the Simon collection of early German art, presented by the owner. The Committee for the Diffusion of Modern French Painting in the United States donated twenty-eight more paintings for this purpose, in addition to the seventy-one already installed in various museums.

SALES. A number of important sales took place abroad, especially among private collections in Germany and Austria: such as the Worch Sale of Chinese antiques in Paris; the Davidsohn Collection of prints in Leipzig; and in Brussels the Willems collection of paintings, with fine examples of the Barbizon School. The Burdett-Coutts collection of old masters, miniatures, etc., was sold in London. The most spectacular single sale of the year was that of Gainsborough's famous "Blue Boy" from the Duke of Westminster's Collection. It was acquired by a well-known New York firm at the highest price yet paid for any one painting. "Mrs. Siddons as a Tragic Muse" by Reynolds, was acquired at the same sale and by the same dealer. Two Rembrandts from the Prince Yussupoff Collection were bought

by Mr. Widener of Philadelphia, and a superb Frans Hals portrait from the Warsaw Blue Palace became the property of John McCormack who also acquired a Romney and a Gainsborough in London. From the Duke of Buccleugh's collection to a New York collector comes "Tarquin" and the "Cumaen Sybil" two masterpieces by Mantegna, and Mr. Michael Friedsam, also of New York, purchased "The Savior" by Albrecht Dürer, and "Rest on the Flight into Egypt" by Quentin Matsys. A beautiful Lawrence, "Miss Harriet Day," was sold to an American collector. Private collections in the United States are rapidly becoming the foremost in the world.

PALESTINE. The new state of Palestine under British mandate and serving as a national home of the Jews was organized in 1920. The annual report of the British High Commissioner, Sir Herbert Samuel, presented to Parliament in August, 1921, is the basis for most of the information contained in the following paragraphs.

POPULATION. The population was estimated in 1921 at about 700,000 of whom 235,000 were in larger towns and 465,000 in the smaller towns and villages. The Mohammedan element made up about four-fifths, mostly of mixed races, but including a small proportion of Bedouin Arabs. The Christians numbering about 77,000 were chiefly members of the Orthodox Church, the minority belonging to the Latin or the Uniate Greek Catholic Church or Protestant sects. The Jews numbered about 76,000 most of whom had entered the country during the last forty years. Before 1850 there were but very few Jews in Palestine and these had come as religious pilgrims. The Russian persecutions in the latter part of the nineteenth century increased the Jewish immigration and agricultural colonies were founded by them. These colonies flourished and drew the attention of the Jews throughout the world; and many societies for the promotion of Jewish colonization in Palestine were formed. The colonies practiced agriculture according to modern methods, developing orange culture and making and exporting wine. The language of the non-Jewish population is Arabic. The Jews have revived the Hebrew language which with new words added from contemporary life is used as the language of the daily speech by most of the younger generation and many of the elders. It is the language of instruction and the Jewish newspapers are published in it. The Zionist movement was approved and supported by the British government which in November, 1917, declared that it would do its best to cooperate in the movement to make Palestine the national home of the Jews. After the British forces had occupied the country under General Allenby the Zionist Commission was sent there. Its work was endangered by the hostility of the Arabs who began a campaign against the Jews which led in April to riots in Jerusalem resulting in the killing and wounding of a number of Jews. In this state of affairs the British government set up a civil administration in the country with the programme of fair play to the Arabs and the development of Zionist aspirations. There was difficulty in securing the necessary money for public works, etc., on account of the delay in settling the international status of the country and for a time development and immigration

was slow, but after the opening of the ports to immigration in August, 1920, a little over 10,000 immigrants arrived, chiefly Jewish, and of these 8084 entered the country under the Zionist organization. There was a suspension of all immigration in May owing to the disturbances in Jaffa. (See below under *History*.) The ports were again opened in July. It was required for entry into the country that a person should show a certificate proving that he belonged to one of certain definite classes, namely, persons of independent means contemplating permanent residence; members of professions which they intended to pursue; wives and persons wholly dependent on residents; persons having definite prospects of employment, etc. Among the newcomers as well as among the prewar residents a small group of Bolsheviks was active in propaganda and certain members of it were identified and deported.

EDUCATION. Among the Moslems illiteracy prevails. The administration during the year was endeavoring to induce the people to co-operate in providing means of education to the extent of supplying suitable buildings in villages where schools were needed. The salaries of teachers and other costs of the service were paid by the government. New schools were reported to be rapidly opening. In addition to the schools developed in the regular way there were a number of voluntary schools organized by associations outside the country.

PRODUCTION. The productive portion of the country is the narrow strip of valley land running along the Mediterranean from Gaza to Haifa. The richest region is in the neighborhood of Jaffa which has been developed by Jewish colonists who have carried orange cultivation in that district to a high degree of production. An agricultural department had been already formed under the military administration and it comprised in 1921 a considerable personnel who had charge of matters pertaining to plant diseases and insect pests, to the fishery service, forestry, meteorology, etc. Considerable areas were under cultivation in 1921 and stock-raising was reported as showing remarkable improvement. A survey department was created; land settlement courts were established; and a land ordinance was passed designed to prevent land from being kept from productive use by speculation. The department of Commerce and Industry was making efforts to promote economic development, and chambers of commerce were established in the chief towns. The prices of commodities were falling but still remained high in comparison with those of Egypt. The restrictions upon the import and export trade were removed with the exception of the prohibition of the exportation of live-stock and certain police regulations in respect to the importation of arms, injurious drugs, etc. The chief mineral productions are: Sulphur, iron, coal, and salt. The last-named is extracted from the water of the Dead sea. Oil has been found in the vicinity of the Dead sea, but had not been exploited in 1921. Bitumen is also found.

FINANCE. It was reported in 1921 that the civil administration had been maintained mainly out of the returns from the local revenue without calling upon the British treasury for any grants in aid. Certain small taxes regarded as oppressive were abolished. Import duties on building materials and live stock were reduced from 11

per cent to 5 per cent. The octroi was removed and in place of it an additional import duty ranging from 1 per cent to 2 per cent on certain articles was levied. The tobacco monopoly established by the Turks was abolished with the result that the price to the consumer was greatly lowered and the manufacture by private enterprise on a considerable scale was indicated. The government had taken over the railways from the military authorities in October, 1920, and after that their budget was included in that of the government. Palestine was charged with her share of the debt of Turkey before the war.

TRANSPORTATION. The railways have been placed under the control of the government which through its railway department operates the Sinai military railway between the Suez Canal and the Egyptian-Palestine frontier. The whole system has a length of about 1000 kilometres. Improvements were made during 1921 and the main line was strengthened. The branch from Jaffa to Ludd Junction was turned from narrow gauge into broad.

DEFENSE. In 1921 the garrison had been reduced to 5000 active troops. The cost of the military establishment devolved on the British government and was placed at £2,500,000 a year. A police force maintained by the administration and recruited from among the people, had a strength of 1300 and in addition a force of gendarmes numbering 500 was being organized.

GOVERNMENT. The government is in the hands of the High Commissioner who acts through the heads of the several departments. An Advisory Council was created in October, 1920, consisting of 10 members nominated by the High Commissioner, including 4 Moslems, 3 Christians, and 3 Jews, and 10 members of the administration, its functions being consultative. Turkish law is applied wherever possible. A judicial system had already been established by the military administration and was continued under the civil administration. The High Commissioner, the heads of the central departments, and the district chiefs were British officers, and in the judiciary, the four district courts trying the most serious cases were British but twelve native members in each court served in an advisory capacity. At Jerusalem there was a court of appeal with a British chief justice. High Commissioner in 1921, Sir Herbert Samuel.

HISTORY. During the first week of May 1, anti-Jewish riots took place at Jaffa, Chederah, and Pitha Tikvah, resulting in the killing of 88 persons and the wounding of 238. This was followed by an order of the Palestine government suspending Jewish immigration. The Arabs had presented grievances against the Jews of Palestine in the previous year, and the riots at Jaffa as well as certain disorders at Easter time in Jerusalem were the result of a political campaign to stir up the people. This campaign arose from the demand of the Arabs for a united Syria and their preference for Turkish rule rather than that of the western nations. This was the point of view of the well-to-do class among the Arabs and they also feared that the immigration of the Jews might raise the standard of the Arab laboring class. Another class opposed to the Jews was that which favored French rule over Palestine. One of the arguments of the Arabs was that the Jews if admitted would gain the highest places

in trade, industry, and politics. The real effect, however, of Jewish settlement was believed by some observers to be advantageous to the Arabs, as tending to set a higher standard of civilization and it was said that economic progress had already been made among them owing to the example set by the Jews, and that they were already improving their judicial methods and their education after Jewish models. The development of the country was checked to some extent by the anti-Jewish riots above mentioned. They were suppressed by the troops who suffered a considerable loss, and martial law was enforced for some weeks over the disturbed region. The British High Commissioner suspended immigration from southeastern Europe. Several of the agitators were prosecuted by special courts, and a commission of inquiry was appointed under the British chief justice of Palestine. In July a delegation representing Moslem and Christian interests was sent to England for the purpose of laying their grievances before the authorities. On September 14 the Jewish Congress at Carlsbad passed a resolution urging that the principles laid down by the British government in 1917 in respect to furthering the interests of the Jewish people while recognizing the civil and religious merits of the non-Jewish elements should be carried into effect. At the same time the Congress voted a budget of £1,500,000 for the development of the country in respect to agriculture and education. Disappointment among the Jews was caused by the publication of the text of the British mandate and the revelation, that, while Great Britain as a mandatory power expected to establish a national home for the Jewish people, it did not intend to create a Jewish state. It was its intention to insure political, racial, and religious liberty. The British Colonial Secretary, Mr. Winston Churchill, outlined the government's policy in June. In this statement assurance was given that the rights of the Arab minority would be protected and the interests of the French in Syria, respected.

PALMGREN, SELIM. See *MUSIC, Artists, Instrumentalists.*

PANAMA. A state of Latin America, situated between Colombia and Costa Rica; previous to Nov. 3, 1903, a department of Colombia. Capital, Panama.

The area of the eight provinces into which the country is divided is estimated at 32,380 square miles; population, according to the census of 1920, 401,428 exclusive of Indians, an increase of 33 per cent over that of 1910. For distribution of population by provinces, see preceding *YEAR BOOK*. Chief towns: Panama with a population of 61,369; Colon, 26,076. Education is compulsory between the ages of seven and fifteen. The government schools in 1917 numbered 398 with 22,000 pupils. There is a university, known as the National Institute.

The soil is fertile, but only about three-eighths of the surface are occupied, and of that only a small portion is cultivated by modern methods. The chief products are: Caoutchouc, coffee, cocoa, coconuts, cabinet woods, medicinal plants, sugar, tobacco, and live stock. The timber resources are especially rich. The commerce exclusive of the Canal Zone in 1919 was according to a British authority as follows: Imports, £2,281,376; exports, £785,711. Of the imports

about 82 per cent came from the United States. The two-year budget of 1919-21 was estimated as balancing at 7,220,470 balboas (a balboa equals one dollar in United States currency). The foreign debt at the beginning of the year according to British sources was £556,600. The ports of Panama and Colon are connected by railway and there are branches extending from Pedro Miguel to Las Cascades and about 140 miles of track in the province of Bocas de Toro, owned by an American fruit company. This and other lines were being extended. Both sides of the isthmus are in communication by several regular steamship lines with European and American ports.

Under the constitution adopted, Feb. 13, 1904, and amended, Dec. 26, 1918, executive power is in the hands of a president, elected by direct vote for four years and ineligible for the succeeding term; and legislative power is in a chamber of deputies of thirty-three members which meets biennially. President at the beginning of 1921, Felix Belisario Porras.

HISTORY. Costa Ricans invaded Panama territory at Coto, February 28, but were captured in the presence of American marines. The Panama assembly in extraordinary session took defensive measures, March 1. On March 4, Costa Ricans occupied the town of Guabito. Meanwhile the government of Panama had accepted the mediation of the United States which had been offered under the Wilson administration, and on March 5, Secretary of State Hughes sent notes in respect to a peaceful settlement to the governments of Panama and Costa Rica. Costa Rica accepted the award which had been rendered by Chief Justice White, and addressed a note on March 7 to Secretary Hughes, promising to withdraw the troops. On March 7 Panama refused to accept the boundary line defined by Chief Justice White, but promised Secretary Hughes to withdraw their troops from Coto. On March 14 the American Secretary of State offered to rectify the boundary line between Panama and Costa Rica, and on March 17 asked Panama to accept the White boundary so far as the Atlantic end was concerned, while a commission should determine the remainder of the line. On March 19 in reply to an appeal from President Porras of Panama President Harding declared that the White boundary award must remain. On April 13 the Panama government restated its objections to that award. On May 2 the United States government sent an ultimatum to Panama, demanding an acceptance of the White boundary. On July 25 the Panama government asked that the dispute be referred to The Hague Court. An emphatic note having been sent from the United States secretary of state, Panama ordered the evacuation of Coto which had been awarded to Costa Rica by the White decision. On August 24 Chief Justice Taft of the United States Supreme Court, appointed surveyors to review the Anderson-Porras agreement concerning the frontier. A treaty between the United States and Colombia finally fixed definitely the status of Panama, whose independence was definitely recognized by Colombia in that instrument. See *COLOMBIA*.

PANAMA CANAL. Traffic through the Panama Canal in 1921 exceeded that of 1920, and the tonnage of cargo carried in the fiscal year ended

June 30, 1921, was approximately 11,600,000 tons as compared with 9,374,499 in the fiscal year 1920. The year 1921 was a record year for American shipping going through the canal, as it amounted to 5,162,000 tons, or more than in any previous year by 615,888 tons. Next place was held by British ships with a total of 3,738,250 tons thus exceeding their previous record year of 1917. Japan stood third in the test with 758,000 tons which was 32,270 tons more than ever before, while Norway ranked fourth with 637,880 tons, a less amount than in 1918. The other 89 per cent of the total commerce passing through the canal was carried by ships of the four maritime nations mentioned.

The number of commercial ships which passed through the Panama Canal in the calendar year 1921 was 2783, an average of 232 a month, or 7.6 per day. In 1920 the number was 2814, averaging 234.5 a month. The decrease was 31 ships for the year.

In net tonnage and tolls 1921 exceeded 1920. Net tonnage amounted to 11,435,811 tons, Panama Canal measurement, as compared with 10,378,265 tons in 1920. Tolls aggregated \$10,325,718.02 in 1921 compared with \$10,295,362.21 in 1920.

The cargo carried through the Canal in 1921 amounted to approximately 10,708,338 tons of 2240 pounds, or 527,771 tons less than the 11,236,119 tons that make the transit in 1920.

The decrease in the number of ships was 1.1 per cent. That in cargo was 4.7 per cent. The increase in net tonnage was slightly over one-half of 1 per cent, and that in tolls about three-tenths of 1 per cent.

Senator Borah's bill providing for exemption from tolls by American coast-wise shipping passing through the Panama Canal was under discussion in the summer and it was decided to take a final vote on it in October, but later, in view of the approaching Disarmament Conference, it was proposed that it should be postponed. It was believed that the measure was offensive to Great Britain and there were many prominent Americans who regarded it as a violation of the Hay-Pauncefote treaty.

PANAMA CANAL ZONE. The strip of land on each side of the canal route, granted by Panama to the United States in the treaty of Nov. 18, 1903. The area, comprised within the five mile limits on each side of the canal, is 441½ square miles, of which 106½ are taken up by Gatun Lake. Civil population, June 30, 1920, 21,650, of whom 8514 were Americans. The zone is a military reservation under the command of a governor, appointed by the President of the United States. Governor at the beginning of 1921, Brigadier-general Chester Harding; succeeded by Colonel Jay J. Morrow, appointed, March 28.

HISTORY. On October 6 the report of the Zone Commission appointed to investigate the labor situation and methods of administration was published. It recommended that the Governor of the Canal Zone should ignore the labor unions and deal only with committees of employees; favored the open-shop policy and the employment of tropical native labor. It recommended that free housing, heating, lighting, etc., be discontinued and that the canal be operated independently of the railway and steamship lines. The recommendations of the report were attacked by Samuel Gompers, President of the American

Federation of Labor. The question of canal tolls came up again in accordance with the plank of the Republican platform concerning exemption of American coastwise vessels and a bill was proposed by Senator Borah according to this exemption. It was passed, October 10, by vote of 47 to 37 divided according to parties as follows: 35 Republicans for and 17 against, 12 Democrats for and 20 against. See UNITED STATES.

PAPER. In 1921 American and Canadian paper and pulp mills, were seeking to return to normal conditions and all things considered, the industry was in as good condition as could be expected. American manufacturers and users of paper were interested in the tariff discussions, the former advocating protection for both pulp and paper, while the latter, especially the consumers of news print, urged low duties or the free list. An encouraging feature of the paper industry in 1921 was that the newspapers were printing larger papers and the advertising was such as to make publication on the whole profitable. In this field at least there was not the anticipated falling off. The consumption of standard news print paper which normally was about 92 per cent of the total output of news print, increased in 1920 only about 5 per cent over the record year of 1919. In 1921 which was a year of general depression, the decline in consumption from 1920 was only about 2 per cent in this field, and actually amounted to 3 per cent more than in 1919. In 1920 production had increased 10 per cent over 1919, but the consumption was only 5 per cent more than in that year.

The American paper and pulp industry had shown a remarkable development, the output increasing from 4,216,700 tons of paper in 1909 to 7,334,614 tons in 1920. The distribution of this last amount is of interest and was as follows: Board, 2,313,449 tons; news print, 1,511,960 tons; book, 1,104,464 tons; wrapping, 1,043,812 tons; fine papers, 389,322 tons; felts and building, 366,940 tons; tissue, 177,441 tons; hanging, 113,024 tons; miscellaneous, 313,387 tons. The value of the more important products was roughly estimated at \$200,000,000 for board, \$150,000,000 for news print, and \$220,000,000 for book papers.

In 1921 the total output of paper in the United States was estimated at 5,300,000 tons as compared with 7,334,614 tons for 1920.

In Canada the 1921 production of news print was 812,727 tons, as compared with 875,696 in 1920, and the shipments were 807,972 tons. The production of pulp for sale in all chemical pulp mills in Canada in 1921 was estimated at 617,496 tons, comprising 148,400 tons of Kraft and 469,096 tons of sulphite. The production and shipments of sulphite were reported as follows:

	Production	Shipment
News.....	253,566	50,253
Easy bleaching.....	86,831	69,690
Bleached.....	85,498	82,895
1920.....	425,895	202,838
1921.....	600,685	380,709

The American paper and pulp industry was apprehensive of foreign competition. During 1921 the imports into the United States were of greater value than in previous years and the exports of Germany and Scandinavia were feared unless restricted by tariff rates.

PAPUA. A territory in the southeastern part of the island of New Guinea, comprising also all the groups of small islands between 8° and 12° S. latitude, and 141° and 155° E. longitude; formerly known as British New Guinea and constituting a British colony, but transferred, Sept. 1, 1906, to the Australian government. Total area, 90,540 square miles, of which about 87,786 are on the island of New Guinea; population estimated, June 30, 1919, at 250,000 Papuans; 971 Europeans; and 316 colored, other than Papuan. Capital, Port Moresby. Other ports of entry: Samarai, Misima, and Daru. The chief products are: Cocosnats, rubber, sisal hemp, sago, valuable timber, gold, and copper. Agriculture has not been developed, but gold mining has recently made great progress. Petroleum resources have been reported. Large steamships ply between Sydney and Port Moresby. During the year 1920 the increase in exports and revenue was large, and the returns were generally of an encouraging nature. The revenue amounted to nearly £80,000 as compared with £61,000 for the preceding year. The value of imports was £422,741 as compared with £258,112, and exports amounted to £270,481, as against £176,247 for 1919. There was a great increase in the amount of copra exported, which totaled 94,080 tons as compared with 2598 tons for the year 1919. The abnormally low price now being paid for copra seriously affected the total value of exports. Pearls found showed a decrease in quantity, but an increase in value, which was £25,577 as against £21,550 in 1918-19. Osmiridium, which has been found in Papua for some years in small quantities, was recorded for the first time as an export, the amount exported being 88.5 ounces. Gold exports also showed a slight increase.

PARAGUAY. A republic of South America, situated between the Paraguay and Alto Parana rivers and between 20° 16' and 26° 31' S. latitude and 54° 37' and 62° W. longitude. Capital Asuncion.

AREA AND POPULATION. The area of Paraguay proper has been variously estimated at from 65,000 to 75,673, but the so-called Chaco, that is to say, the region between the rivers Paraguay and Pilcomayo, which is in dispute with Bolivia, has an area of over 100,000 square miles. Population of Paraguay proper, estimated in 1917 at about 1,000,000, exclusive of Chaco Indians, numbering about 50,000. The population is largely of Guarani Indian stock. The number of foreigners in the country was placed at 60,000 in 1917. Asuncion, the largest city (founded in 1537), had a population, Sept. 30, 1920, of 99,836. Other cities are Villarrica with 26,000; Concepcion and Carapegua with 15,000 each. Catholicism is the state religion. Education is free, and, so far as schools are available, compulsory. No later figures for education were available than those given in the preceding YEAR BOOK.

PRODUCTION. The soil is fertile and well adapted to the cultivation of sub-tropical products. The chief occupations are agriculture and cattle raising, and manufacturing is on a small scale including mainly articles for local consumption. Sugar production, however, is important and in 1920 reached its highest record, considerable quantities being exported of which Uruguay took the larger part.

COMMERCE, ETC. The trade for Paraguay for 1920 was as follows: Exports, \$14,959,175 in Argentine gold; imports, \$13,118,504 in Argentine gold; as compared with \$14,816,117 and \$15,835,970, respectively, in 1919. The increase since 1913 was exceedingly large, the exports in that year being \$5,630,929 and the imports \$8,119,997. The following table shows the value of exports by countries for 1913, 1919, and 1920:

Country of destination	1913 Pesos	1919 Pesos	1920 Pesos
Argentina.....	3,516,417	8,261,687	8,526,227
France.....	34,091	1,332,405	1,794,604
United States.....		644,182	1,393,250
Spain.....	25,974	1,568,330	1,217,671
Uruguay.....	694,622	834,973	1,258,682
England.....	163	690,821	313,958
Others.....	1,359,662	1,423,719	454,783
Total.....	5,630,929	14,816,117	14,959,175

The chief countries from which products were imported in 1920 were Argentina, United States, England, which contributed about 85 per cent. It should be noted that a large part of the goods credited to Argentina were not of Argentine origin but manufactured in other countries and reexported. In 1913 the largest part of the imports were from England, Germany, and Argentina, in that order. The following table shows the value of the chief imports from the United States in 1920:

Article	Pesos
Groceries and foodstuffs.....	86,052
Hardware, cutlery, machinery, motor vehicles, tools, etc.....	1,790,234
Electrical goods and lighting fixtures.....	68,891
Firearms and ammunition.....	86,483
Chemicals, drugs, oils, and paints.....	451,352
Haberdashery, novelties, paper and paper goods, and perfumery.....	83,296
Clothing, ready-to-wear.....	98,294
Textiles, table and bed coverings.....	375,494

The budget estimates for 1920 according to British authority were: Revenue, £1,069,530; expenditure, £1,082,846.

COMMUNICATIONS. The river affords the main outlet for the foreign commerce of the country, only a small part of which is ordinarily carried by the railway. The main line is the Paraguay Central railway which connects with the Argentine Northeastern railway. In fifty years railway construction amounted only to 300 kilometres, but in 1921 the Paraguay Central railway was planning various branch lines which promised to open up some of the richest and most densely populated parts of the country.

GOVERNMENT. Executive authority is vested to a president who acts through a responsible ministry of five members; and legislative authority, in a congress of two houses, namely, a senate and a chamber of deputies, both elected directly by the people. President at the beginning of the year, Manuel Gondra. There was a revolutionary movement in the autumn which during the first week of November resulted in his resignation and he was succeeded by Eusebio Hyala.

PARDO BAZAN, EMILIA, COUNTESS OF. Spanish novelist, critic, and pioneer in the Spanish woman suffrage movement, died at Madrid,

May 12. She was born at Coruña, Sept. 16, 1851; and married Señor D. José Quiroga in 1868. She won a prize at an early age for an essay on an eighteenth century Spanish writer, and after travels in Europe founded a review at Madrid. Her leading novels show the influence of Zola, and deal with the decadence of the aristocracy of Spain. The two that have been most praised are: *Los Pazos de Ulloa* (1886); and *La madre naturaleza*, published in 1886 and 1887, respectively. Before that she wrote *El cisne de Vilamorta* (1885). Besides novels, she wrote essays on realism and naturalism in the modern novels and various other critical works. In 1910 she was appointed a member of the council of public instruction. The list of her writings other than those above mentioned includes the following: *Pascual López; Un viaje de novios; La tribuna; La dama joven; Insolación; Morrina; Una cristiana; La prueba; La piedra angular*; essays and critical treatises, *San Francisco de Asís; De mi tierra* (1888); *El Padre Luis Coloma; Pedro Antonio de Alarcón; La revolución y la novela en Rusia* (1887); *La cuestión palpitante* (4th ed., 1891), rhetorical essays dealing with realism and naturalism in the modern novel; *Polémicas y estudios literarios*, a supplement to the matter contained in *La cuestión palpitante*. The first play that she wrote, *Verdad*, was published in 1906. Subsequent writings were: *Misterio* (1911), a novel; *Belcebú* (1912); *Cuentos Trágicos* (1913).

PARK, Sir MATTHEW. South African publicist. died at Capetown, March 15. He was editor of the *Cape Times* and the chief correspondent of the *London Times* in South Africa. He was born at Cumbernauld in 1862 and educated at the Glasgow high school and University, winning high distinction in the latter. After graduation he went into journalism, first in Scotland and later in India where he became assistant-editor of the *Pioneer*. He went thence to Capetown where he edited the *Cape Times*, which he succeeded in bringing to a position of great influence. He played a moderate part in the negotiations between the divergent political elements which preceded the Union, advocating a policy of generosity toward the Dutch. He was a supporter and adviser of both Botha and Smuts during their premierships.

PARK COLLEGE. A non-sectarian institution of the higher learning at Parkville, Mo.; founded in 1875. The enrollment for the fall of 1921 was 427 of whom 115 were in the preparatory department. The faculty numbered 21. The productive funds were \$800,000 and the income \$43,000. The library contained 27,500 volumes. During the year a new building, Science Hall, was completed. President, F. W. Hawley, D.D.

PARKHURST, FREDERIC HALE. Lawyer and Governor of Maine, died, January 31. He was born at Unity, Maine, Nov. 5, 1864; educated at the public schools of Bangor and studied law at the law school of Columbian University, Washington, D. C. He was admitted to the bar of Maine in 1887, and thereafter practiced law in Bangor. He was several times member of the Maine House of Representatives; chairman of the Republican State Committee from 1912 to 1915; and elected Governor of Maine for the term ending in 1923.

PARKS, NATIONAL. The year ending June 30, 1921, was remarkable for the heavy tourist travel,

surpassing even 1920 which had been the most successful year down to that time. The visitors to the national parks in 1921 numbered 1,007,335 as against 919,504 in 1920. The visitors to the national monuments numbered 164,461 in 1921 as against 138,951 in 1920. An important event of the year was the holding for the first time of the National Conference on State Parks. This met at Des Moines, Iowa, January 10-12, and representatives of more than half the States were present. The purpose of the movement was to preserve places in the various States and maintain them under State control as centres of health, recreation, and education. The meeting pronounced in favor of a policy that should make ample provisions to this end, until eventually there should be public parks within immediate access of all the people of the country, and it recommended: The appointment of a special commission to study the park laws of the several States; that further national, State, county, and municipal forests should be established; that all public parks now or hereafter acquired should be considered as forever dedicated to the people; that constant effort should be made to foster a sentiment favorable to the preservation of wild life; that similar meetings should be held in the future, and in particular that another conference on parks should be held in 1922. As a result of the conference several States, including Washington and Virginia which had no State parks, introduced bills providing for them in their legislatures; Wisconsin set aside a tract of 7800 acres as the Northern Lakes Park; California appropriated \$300,000 for the purchase of Redwoods in Humboldt and Mendocino Counties; and New York established Allegheny Park with about 50,000 acres in Cattaraugus County. The Hawaii National Park was formally dedicated, July 9, on the rim of the crater, Halemaumau, with appropriate ceremonies, and addresses from native and visiting officials. The park contains the two great active volcanoes, Kilauea and Mokuaweoweo. New projects proposed during the year in bills presented to Congress favored the establishment of the following national parks: A national park in Utah; Mammoth Cave, Kentucky; Mt. Katahdin, Maine; Mississippi Valley, Iowa and Wisconsin; Mt. Baker, Washington; Battell, Vermont; Killdeer Mountain, North Dakota; Roosevelt National Park, North Dakota. The most important of these seemed to be the proposal in respect to Mammoth Cave which had been long under consideration. The area containing this natural curiosity was still in private hands under the terms of a will, requiring the land to be held in trust until the death of the last named heirs when it was to be sold at public auction in its entirety. There were only two of the heirs surviving in 1921, and they had already reached an advanced age. Proposals for national monuments included: The remarkable tract containing Palm Canyon, California, the largest of the three canyons south of the Village of Palm Spring, Washington, and with native palms growing along the shores of the stream for a distance of ten miles; Castle Gardens, a deep gorge of remarkable scenic interest near Salida, Colo.; Lehman Cave, an extensive cave near Baker, Nev.; Mystic Maze, a small area containing monuments of early Indian or other prehistoric peoples, thirteen miles southwest of

Needles, Calif.; Picture Rocks, a pile of rocks inscribed with Indian designs, fourteen miles west of Tucson, Ariz.; The Valley of the Moon, an area of from 1000 to 1200 square miles, containing sixty-three extinct volcanic craters, many ice-caves, etc., lying between the main line of the Oregon Short Line Railway and the State highway from Hailey to Arco.

While the national parks comprise only one-third of one per cent of the country's area, the complete protection afforded the wild life within their boundaries insures a constant supply. The main difficulty arises when severe winters drive out the animals in search of food in States whose too liberal game laws permit their slaughter, as happened in the case of the Yellowstone elk in 1920. A milder winter did much to restore the herds in the Yellowstone, which during the past few years has been a distributing centre for elks and other animals sent for propagation purposes to many of the States and to Canada. A game patrol was established in Mt. McKinley. The experiment was made of introducing elk in Yosemite Park. Progress was made in the preservation of the great redwoods in northern California, and the measure above mentioned appropriating funds for their purchase, received the hearty support of the people of California.

PAYNTER, THOMAS H. Former senator from Kentucky, died at Frankfort, Ky., March 8. He was born in Lewis County, Ky., Dec. 9, 1851; studied at Centre College, Kentucky; admitted to the bar in 1872; and afterwards practiced at Frankfort, Ky. He was a member of Congress from 1889 to 1894, after which he was judge of the Kentucky court of appeals until 1906. From 1907 to 1913 he was Senator. In politics he was a Democrat.

PEABODY MUSEUM. Extensive field work was carried on by this institution of Harvard University during 1921. The expedition to middle America, under Dr. H. J. Spinden visited the lesser known ruins in northern Yucatan, and continued the investigations into northern Guatemala. This was planned as a preliminary entrance into a large unexplored area. S. J. Guernsey continued the Museum explorations in northeastern Arizona and was successful in discovering important additional material and data relating to the Basket-makers and Post-Basket-makers, the earliest known occupants of this region. Explorations were carried on in France and Belgium by Dr. Charles Peabody, and much new material was obtained. Two fine examples of house-posts, about sixteen feet high, were collected by Dr. Newcombe from the Kwakiutl Indians of British Columbia. A large shipment of ethnological material from Southern Cameroon was added to the extensive collection obtained for the Museum by George Schwab, an associate in Anthropology. The Rev. E. Carroll Condict gave the Museum some very interesting specimens which he collected from the Burmese and Southern China, while stationed there as a missionary near Thayetmayo, Burma. The Museum also received numerous gifts of collections and specimens from all parts of the world. Three Museum papers were published during 1921: *A Possible Solution of the Number Series on*

Pages 51 to 58 of the Dresden Codex, by Carl E. Guthe; *Basket-maker Caves of Northeastern Arizona*, by S. J. Guernsey and A. V. Kidder; and *A Maya Grammar*, by Alfred M. Tozzer. Volume three of the *Harvard African Studies* was expected from the press soon. A report on the *Museum Explorations at Chichen Itza, Yucatan*, was in course of preparation by Professor Tozzer and Dr. Spinden, to be issued as a Museum Memoir.

PEARSON, Sir ARTHUR. British journalist and publisher, died as a result of an accident in his home in London, December 9. Several well-known British periodicals were published by him. He was born near Wells, England, Feb. 24, 1866, and educated at Winchester. In 1888 he was a fellow clerk with Alfred Harmsworth, afterwards Lord Northcliffe, in the office of *Tit Bits*, published by Sir George Newnes and he and Harmsworth began undertakings on their own account as a result of their experience. These ventures were successful and Pearson founded a series of magazines and newspapers, among others *Pearson's Magazine* and the *Daily Express*, finally becoming the proprietor of a chain of newspapers and magazines. Though a successful newspaper proprietor, his publications never attained the great popularity of the Northcliffe papers. Despite the loss of his eyesight, he continued in active work, priding himself on his ability to overcome this defect. He wrote a book on the subject, *Victory over Blindness* and was president of the National Institution for the Blind.

PECK, HENRY ALLEN. Astronomer and educator, died at Syracuse, N. Y., November 17. In the summer preceding his death he was appointed Vice-Chancellor of the University. He was born at Mexico, N. Y., May 4, 1863, graduated at Syracuse University in 1885 and studied in Germany. After teaching in the common schools and in a private school at Williamsport, Pa., he became instructor of astronomy at Syracuse University in 1887. After 1893 he was professor and after 1917 Dean of the College of Liberal Arts. He was a frequent contributor to technical journals and a member of important scientific bodies in his field of work.

PECK, TRACY. University professor, died at Rome, Italy, November 24. At the time of his death he was emeritus professor of Latin at Yale University. He was born at Bristol, Conn., May 24, 1838, graduated at Yale in 1861 and studied at the universities of Berlin and Bonn. After holding a tutorship at Yale he became professor of Latin at Cornell, 1871-80 and from 1882-1908 was professor of Latin at Yale, in the latter year retiring with the status of emeritus professor and after 1909 living in Rome. He was the editor of important college Latin texts and contributed largely to the learned periodicals.

PENANG. One of the Strait Settlements (q. v.).

PENNIE, JOHN C. Patent lawyer, died in New York City, December 23. He was born at Albany, N. Y., in 1858, graduated at Union College in 1877 and became an examiner of patents in the United States Patent Office in 1880. He afterwards went into the practice of patent law, first in Washington and then in New York

where he became prominent as a patent law expert. He was an adviser of the members of the Peace Conference in 1919 in respect to patent law provisions of the Treaty.

PENNSYLVANIA. POPULATION. According to the report of the census of 1920, there were 8,720,017 residents in the State, Jan. 1, 1920, as compared with 7,665,111 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	1,589,000	76,272,000	\$41,950,000
	1920	1,556,000	70,020,000	70,020,000
Buckwheat.....	1921	225,000	5,175,000	3,881,000
	1920	232,000	4,176,000	5,011,000
Oats.....	1921	1,238,000	35,283,000	15,877,000
	1920	1,210,000	47,190,000	31,145,000
Wheat.....	1921	1,365,000	23,850,000	24,566,000
	1920	1,368,000	22,700,000	38,590,000
Rye.....	1921	188,000	3,008,000	2,858,000
	1920	186,000	2,976,000	4,166,000
Tobacco.....	1921	42,000	61,320,000	8,830,000
	1920	43,000	64,930,000	12,986,000
Hay.....	1921	3,048,000	3,658,000	62,046,000
	1920	2,961,000	4,142,000	97,188,000
Potatoes.....	1921	251,000	21,586,000	28,709,000
	1920	246,000	28,290,000	35,080,000

¹ Pounds.

¹ Tons.

MANUFACTURES. The Bureau of the Census reported the general results of the 1920 census of manufactures, covering the year 1919, for the State of Pennsylvania. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The following table gives a summary of the census of manufactures of 1919, with corresponding figures for 1914:

	Census—		Per cent of increase ¹
	1919	1914	1914-19
Number of establishments.....	27,975	27,521	1.6
Persons engaged in manufactures.....	1,324,175	1,060,562	24.9
Proprietors and firm members.....	27,434	28,034	-2.1
Salaried employees.....	160,489	108,050	48.5
Wage earners (average number).....	1,136,252	924,478	22.9
Primary horsepower.....	4,454,796	3,549,858	25.5
Capital.....	\$6,227,268,000	\$3,149,411,000	97.7
Services.....	1,741,508,000	672,563,000	158.9
Salaries.....	334,947,000	144,610,000	131.6
Wages.....	1,406,561,000	527,953,000	166.4
Materials.....	4,211,079,000	1,688,921,000	149.3
Value of products.....	7,316,063,000	2,832,349,000	158.3
Value added by manufacture (value of products less cost of materials).....	3,104,984,000	1,143,428,000	171.6

¹ A minus sign (—) denotes decrease.

LEGISLATION. The feature of the 1921 session of the legislature was the fight against the legislative programme advanced by Governor William C. Sproul, which reached its climax on April 25 when the administration forces held a "rump" session, ousted Speaker Robert S. Spangler and put Samuel W. Whitaker in his place, and passed the measures which had been held up by the contest. These included a bill creating a Welfare Department to take over the duties of the old board of public charities, the lunacy committee, the prison labor board, and related activities, and two measures repealing the only non-partisan election laws in the State, those dealing with

the election of judges and of officials of cities of the second class. Other acts of the legislature were the repeal of the full-crew law and the passage of a bill generally increasing teachers' salaries. While efforts to repeal the Brooks high license law for saloons and to secure a rigid State enforcement bill failed, a compromise prohibition enforcement measure was passed. The legislature approved a proposed constitutional amendment providing a \$35,000,000 bond issue for the purpose of providing veterans of the World War with a bonus of \$10 for each month of service, the limit in each case being \$200. To become part of the constitution this measure must be approved by the 1923 legislature and by the voters of the State at the November election of that year.

ELECTIONS. A special election for the place of Congressman-at-large, made vacant by the death of Congressman M. M. Garland, held on September 20, resulted as follows: Thomas S. Crago (Republican), 705,876; John P. Bracken (Democrat), 221,288; Cora M. Bixler (Socialist), 29,781; B. E. P. Prugh (Prohibition), 74,837; Crago having a majority of 279,919 over all others, and 484,588 over Bracken. In the fall election William I. Schaffer was reelected Justice of the Supreme Court, the vote being: Schaffer (Republican), 991,389; Eugene C. Bonniwell (Democrat), 500,758; A. B. Lewis (Socialist), 50,674; Charles Palmer (Prohibition), 87,862. The proposal to hold a constitutional convention for the purpose of making a new State constitution, approved by the legislature, was rejected by the voters, the result being: Yes, 419,191; No, 518,889. The same proposition voted on in 1891 resulted: In favor, 173,813; against 420,598. The present constitution was framed in 1873.

OFFICERS. Governor, William C. Sproul; Lieutenant-Governor, Edward E. Beidleman; Secretary of the Commonwealth, Bernard J.

Myers; Attorney-General, George E. Alter; Auditor-General, Samuel S. Lewis; Treasurer, Charles A. Snyder; Secretary of Internal Affairs, James F. Woodward; Superintendent of Public Instruction, Thomas E. Finegan; Adjutant-General, Frank D. Beary; Commissioner of Banking, John S. Fisher; Secretary of Agriculture, Frederik Rasmussen; Commissioner of Forestry, Gifford Pinchot; Commissioner of Labor and Industry, Clifford B. Connelley; Commissioner of Welfare, J. M. Baldy; Highway Commissioner, Lewis S. Sadler.

JUDICIARY. Supreme Court: Chief Justice, Robert von Moschizsker; Justices, Robert S.

Fraser, Emory A. Walling, Alexander Simpson, Jr., John W. Kephart, Sylvester B. Sadler, William I. Schaffer.

PENNSYLVANIA, UNIVERSITY OF. A co-educational, non-sectarian institution of the higher learning at Philadelphia, Pa.; founded in 1740. The enrollment for the fall of 1921 was 14,199; for the summer school 1768. The faculty numbered 1006. The library contained 500,000 volumes. The productive funds amounted to \$11,526,762 and the income from the invested funds to \$603,858. Acting Provost, Josiah H. Pennyman, Ph.D., LL.D.

PENNSYLVANIA STATE COLLEGE. A non-sectarian co-educational institution at State College, Pa.; founded in 1859. The enrollment for the fall of 1921 was 3129 of whom 1107 were in the School of Engineering; for the summer session, 1905. The university includes besides the engineering school, schools of liberal arts, agriculture, mining, natural science, and home economics. The College of Liberal Arts had an enrollment of 579. The faculty numbered 301. The library contained 77,500 volumes. The funds available for the expenses of the year amounted to \$2,000,000. President, John Martin Thomas, D.D., Ph.D., former president of the Middlebury College, Vermont.

PENOLOGY. In all progressive modern systems attention is concentrated on the reformation of the prisoners, and in the United States the two chief features introduced for this purpose have been the indeterminate sentences and the parole. The former was first practically applied in this country in Michigan at the suggestion of the late Zebulon R. Brockway in 1867, when a law was passed authorizing the release of a prostitute at an earlier date than the expiration of the three-year sentence on assurance of her fitness and intention to lead a better life. This was followed in New York State by the legislation creating the Elmira system which was inspired by the success of English and Irish experiments. There is a wide divergence in the manner of applying the principles of indeterminate sentences, not only from State to State, but even in the same State, where one system may be applicable to the State prison, another to the State reformatory, etc. There have been no complete indeterminate sentences either in the State or under the Federal government applicable to responsible persons convicted of crime; and all indeterminate sentences are sentences which are indeterminate within minimum or maximum limits, the sentences having a definite limitation as to the longest period for which a convicted person may be imprisoned. Parole is the term applied to the period of supervision exercised by the authorities over a prisoner after he has left confinement in accordance with the varying requirements of the law or administration. Parole becomes operative at different periods of a sentence, and there is great variety in the practice of the different States. In some States conditional release may follow the expiration of the minimum sentence; in others, the expiration of one-third or one-half of a sentence; in a few immediately upon entrance into the institution; and in still others, may be granted by the governor. The term of parole varies from six months to one year, but in some States may last until the expiration of the maximum sentence. In view of the confusion resulting from the fact

that each State has had its own methods in respect to minimum sentences and for parole, a useful piece of work was done in 1921 by Mr. E. R. Cass, Secretary of the Prison Association of New York, who studied the methods of each State and summarized present practices. The difficulty of judging the after-careers of prisoners is obvious, and the reports as to the percentage of criminals who have undergone reformation are not based on any uniform and definite criterion, hence, it is impossible to secure exact information in respect to the effect of the American features of the indeterminate sentence and parole on the after-life of prisoners. After an investigation of this subject Mr. Cass made the following recommendation: "To trace the after-careers of prisoners, two methods are suggested: The first is that an intensive study be made in such States as California, New York, New Jersey, Massachusetts, Illinois, and Indiana, of the conduct of former inmates who have been released, from parole custody, for a period of five or ten years. The American Institute of Criminal Law and Criminology has long urged that such a study be made, and, at the time of this writing, has hopes that, through a financial pledge from the Carnegie Corporation, it will soon be in a position to undertake the same. In 1912, the New York Prison Association, with the financial aid of the Russell Sage Foundation, expended thousands of dollars in making a study of former Elmira inmates. This study was seriously handicapped by the inability of the investigators to locate many of the released prisoners. Likewise, any similar study will meet with the same difficulties. Therefore, it is my firm belief that we shall never be able to determine, with any reasonable accuracy, the results of the indeterminate sentence and parole until there is established a system whereby every penal institution in this country will be required to file with a central Federal bureau, duplicate copies of the records of its inmates." A summary of pardon, indeterminate sentence, and parole laws in use in the several States of United States in the year 1921 will be found in the pamphlet by Mr. E. R. Cass above mentioned, entitled, "A Study of Parole Laws and Methods in the United States" which was read at the annual congress of the American Prison Association in Jacksonville, Fla., November 1. His summaries for Federal institutions and those of New York State were as follows:

Federal. Any prisoner confined for a term over one year may be paroled after serving one-third of the term or terms for which he was sentenced. Board of Parole consists of Superintendent of Prisons of Department of Justice, warden of each United States penitentiary and its physician. It establishes rules for procedure, subject to Attorney-General's approval, prisoner may make application for parole. He is under control of the warden of the prison from which paroled until expiration of term minus good time allowance. Is given a limit of residence. United States Attorney-General must approve action of Board before release. Warden may have prisoner rearrested. Then he appears before Board of Parole and decides action. If reimprisoned then time of parole does not count in sentence. Paroled prisoners must be supplied with clothing, transportation, and \$5. A United States prisoner confined in any State reformatory is subject to parole laws of that

State. United States Attorney-General must approve order for parole, however, and prisoner when on parole may return to State he lives in under supervision of marshal of his district. Above all laws is the power of the President to grant pardon or commutation in any case and good time allowance.

New York. Three different types of indeterminate sentence laws are in vogue. Elmira Reformatory receives male offenders between 16 and 30 years of age, convicted for the first time of a felony and for the second time of a misdemeanor. Felons may be detained for the maximum period laid down in the Penal Code for the specific offense, but no minimum is prescribed, and the Board of Managers has full power to release a prisoner at any time it sees fit. The maximum in the case of misdemeanants is three years. As a matter of practice, the Board has established a system of marking which is the principal factor in deciding when a prisoner is eligible for parole. The minimum period qualifying for release is a little over 12 months. The average time at which prisoners are actually paroled is about 14 months. In some instances prisoners are held longer.

The indeterminate sentence, as it applies to those committed to a State prison, is as follows: "A person never before convicted of a crime punishable by imprisonment in a state prison, who is convicted in any court in this state of a felony other than murder first or second degree, and sentenced to a state prison, shall be sentenced thereto under an indeterminate sentence, the minimum of which shall not be less than one year, or in case a minimum is fixed by law, not less than such minimum; otherwise, the minimum of such sentence shall not be more than one-half the longest period and the maximum shall not be more than the longest period fixed by law for which the crime is punishable of which the offender is convicted."

At the expiration of the minimum period, less time allowance for good conduct, a prisoner serving an indeterminate sentence may be paroled. The usual practice is to parole prisoners at the expiration of the minimum period. Paroles are decided by the Board of Parole, which consists of two salaried members and the Superintendent of Prisons, ex-officio. There are three parole officers, but the actual supervision of those on parole is conducted by organizations coöperating with the Board of Parole. The parole period is usually one year, except for those whose sentence was commuted, or who were committed for murder, second degree, for which cases the parole period is usually two years. The Parole Board, of course, can keep a prisoner on parole until the expiration of his maximum sentence.

A recent amendment to the law provides that prisoners released after serving a definite sentence, shall be placed in the custody of the Parole Board for the period of time which was deducted from their sentence for good behavior.

The third kind of indeterminate sentence law operating in the State is based upon the law of 1915, which is applicable to all cities of the first class in the State, but has so far only been actually applied to New York City. This relates to persons sentenced to imprisonment in any penitentiary, workhouse, or reformatory in a city of the first class. In the case of the reformatory and penitentiary, every sentence is for an indefinite term,

subject to a maximum of three years, while in the case of the workhouse the sentence may be indeterminate, and, if so, is subject to a maximum of two years. The Parole Commission has absolute discretion to release a prisoner from a reformatory or workhouse at any time after the commencement of the sentence, but it is required to first send to the committing judge notice of the time and place of the meeting at which the case will be disposed of, so as to give him an opportunity to express an opinion or make a suggestion regarding its disposal. In the case of prisoners committed to a penitentiary, the Parole Commission may similarly, at any time, make a recommendation in favor of parole to the committing judge, but his approval in writing is necessary before such recommendation becomes effective. This law, it will be noticed, in some ways more closely approaches a true indeterminate sentence than that in force in most parts of the country. There is no special maximum fixed by the statute or by the court for each offense, but merely the general maximum of two years for all offenses in the case of an inmate of a workhouse, and of three years in the case of an inmate of a reformatory or penitentiary; nor is there any minimum. The Parole Commission can release a prisoner on the day after the sentence is passed, provided that in the case of an inmate of a penitentiary the sanction of the committing judge is obtained. The Parole Committee consists of three salaried members and two ex-officio members, namely, the Commissioner of the Department of Correction and the Commissioner of the Police Department; there is also a paid secretary and a large staff of parole officers. The three paid commissioners are appointed by the mayor of the city and are required by law to give full time service. The parole officers are appointed from a civil service list by the commissioners.

GREAT BRITAIN. According to the report of the Commissioner of Prisons for the year ending March 31, the number of prisoners had increased by 10,000 over the preceding year; sentences to imprisonment had risen from 34,000 to 42,000; persons imprisoned as debtors or on civil processes, from 2800 to 5200; and male prisoners increased by eight per cent while female prisoners decreased by twenty-two per cent. The results were considered extremely satisfactory in view of the unemployment and industrial unrest. The decrease since the period before the war was remarkable as shown in the following table:

<i>Offenses</i>	<i>1913-14</i>	<i>1920-21</i>
Indictable—		
Murder, manslaughter, wounding, &c.	474	389
Burglary, housebreaking, &c.	1,960	1,548
Larceny, embezzlement, receiving, and false pretences.	19,126	12,995
Non-indictable—		
Assaults.	8,666	3,312
Drunkenness, &c.	51,851	8,752
Police regulations, offenses against.	8,661	1,948
Poor law, offenses against.	4,275	1,122
Prostitution.	7,952	2,958
Begging and sleeping out.	15,019	2,539

In certain parts of the country a marked change in the character of offenses was noted. For example, the governor of Durham prison, contrasting the number of first offenders in 1921, 18,000, with those in 1913-14, 45,000, pointed out the fact that a new stamp of offenders had

sprung into existence and that men and women of respectable antecedents and in regular employment were taking to serious crimes, especially, fraud, embezzlement, housebreaking, etc. Owing to the large proportion of women among these offenders it was not believed that the war was responsible for the increased lawlessness of this class. The men offenders were reported as being usually intelligent and of a fair education.

PENROSE, BOIES. United States Senator and party leader, died at Washington, D. C., December 31. Down almost to the day of his death he was busy with public affairs, being Chairman of the Finance Committee and having to deal in that capacity with pressing matters of tax and tariff legislation. He was born at Philadelphia, Pa., Nov. 1, 1860, the son of a well-known Philadelphia physician and university professor, and was educated at Harvard, where he graduated in 1881 with the second highest honors of his class, the first place being held by his brother. He was admitted to the bar in 1883 and practiced at Philadelphia but from the first devoted himself to politics and continued his political activity throughout his life. He was a member of the Pennsylvania State house of representatives 1884-86, and of the State senate 1887-97. From that time on he served continuously in the United States Senate. He was Chairman of the Republican State committee 1903-05 and a member of the Republican National Committee after 1904, except for the interval 1912-16, and he was a delegate to the Republican National Conventions of 1900, 1904, 1908, and 1916. His skill as a politician was remarkable and for many years he dominated the politics of his State and exercised a powerful influence in the Republican party as a whole. He was regarded as the representative of the old party machine and successor to the great political bosses, such as Platt, Quay, and Hanna. In Pennsylvania he had been preceded by Cameron and Quay, but it was generally held that his ability as a leader was superior to theirs. He was admired as a party manager or condemned as a political boss according to the prepossessions of the writer and his name became almost synonymous with the sort of control over political affairs which Roosevelt and the more progressive members of both parties as well as liberal sentiment generally had condemned. By Roosevelt the corrupt control of politics was termed, for example, "Penrosism." In spite of the attacks upon him as a boss he was not personally involved in any of the political scandals of the organization in which he took part during the last fifteen years of his life. The main features of his political career were his long fight against Theodore Roosevelt and his contest with the faction of the Republican party in Philadelphia headed by the Vare brothers. In the Senate he advocated United States intervention in Mexico as early as 1913. He opposed the Treaty of Peace when it was submitted and he condemned the cession of Shantung to Japan as a violation of every principle of the League of Nations. His chief interest was in revenue legislation and his rare speeches in the Senate were generally on matters pertaining to it. He opposed Prohibition and fought against the Federal amendment. In the Senate he was a member of the four important committees: Finance; Banking and Currency; Immigration; and Naval Affairs. Mr. Penrose was among the

most widely read and scholarly men of the Senate. In regard to his private life little was known for he avoided publicity in that respect wherever possible. His death left no single man with the capacity and the following that marked him as successor and it was believed that the power formerly wielded by him would be divided among several. The chairmanship of the Finance Committee passed for the first time in forty years to a representative of a western State. He was the author of a *History of the City Government of Philadelphia*.

PENSIONS. See OLD AGE PENSIONS, and UNITED STATES.

PERAK. The most northerly of the Federated Malay States (q. v.).

PERIN, GEORGE LANDOR. Clergyman, died at Brookline, Mass., December 22. He was the first missionary of the Universalist Church in Japan. He was born in Jasper County, Iowa, July 31, 1854, and ordained to the Universalist ministry in 1878. He was a Universalist missionary in Japan from 1890 to 1894. Except for the interval of these four years he held a pastorate in Boston from 1883 to 1910. In 1901 he founded a home for working girls and students. He wrote *The Sunny Side of Life* (1901).

PERKINS, EDMUND TAYLOR. Civil engineer, died at Chicago, May 21. He was known as a reclamation expert. He was born at Scottsville, Va., Sept. 8, 1864; graduated in the regular college course and in civil engineering at Union College, New York, in 1885 and was topographer on the United States Geological Survey, 1885-1902, after which he was engineer in the United States Reclamation Service till 1910. He was president of the Edmund T. Perkins Engineering Company at Chicago after Nov. 1, 1910. He contributed to the magazines on various engineering and reclamation topics.

PERRIER, EDMOND. French zoölogist, died in Paris in August. He was former Director of the Museum of Natural History. He was born near Corrèze, May 1, 1844, and studied at the Polytechnic, and Superior Normal schools, graduating from the latter in 1866 in mathematical and physical sciences. In 1868 he entered the staff of the museum of natural history and in 1876 he became professor and administrator of the museum. He was a member of the commission engaged in deep-sea explorations in the Mediterranean and the Atlantic, 1881-83, and from his experiences he derived much material for his scientific papers. He was an ardent follower of Lamarck and Geoffroy Saint-Hilaire and one of his first works dealt with the subject of zoölogical philosophy before Darwin. He was elected to the Academy of Sciences in 1892 and an associate of the Academy of Medicine in 1898. His work at the museum of natural history was twofold, in the first place, consisting of researches in pure science and studies in which the Lamarck theory was sustained; in the second devoted to the development and improvement of the botanical garden and to the securing of the necessary buildings for the valuable collections of the museum. As museum administrator he established relations with the governments of the French colonies and set on foot a number of important expeditions for the study of fauna and flora. Under him naturalists explored many parts of the world and brought back rich collections for the botanical

gardens. He was an ardent defender of the practical application of natural history to industry and did much to contribute the development of the fisheries. He founded one of the first laboratories of marine biology, at Tahiti. Certain changes in the nomenclature of morphology were suggested by him. In 1913 he became President of the Academy of Sciences. Among his writings may be mentioned the following: *Les colonies animales et la formation des organismes* (1881; 2nd ed., 1898); *Les principaux types des êtres vivants*, etc. (1882); *La philosophie zoologique avant Darwin* (1884); *Éléments de zoologie* (1886; 8th ed., 1899); *Traité de zoologie* (1892-1903); *La vie des animaux illustrée* (1903-06); *La femme dans la nature et l'évolution du sexe féminin* (1908).

PERSIA. A monarchy of Asia between 25° and 40° N. latitude and 44° and 60° 30' E. longitude, and reaching from the Gulf of Oman to the Caspian sea. Capital, Teheran.

AREA AND POPULATION. Area variously estimated at from 628,000 square miles to 635,135 square miles; population, from 8,000,000 to 16,000,000. A large portion of the area is absolute desert and at a high altitude, in which regions the average density of the population is reckoned at not more than 15 to the square mile. The only navigable river is the Karun. In the north and west there are extensive forests, but the central and eastern part is occupied by a salt desert. About 3,000,000 of the inhabitants are nomads, including about 720,000 Turks; 675,000 Kurds and Leks; 260,000 Arabs; 234,000 Lurs; 20,700 Baluchis and Gypsies. The European residents have been placed at about 1200. Chief cities: Teheran, 220,000 to 350,000; Tabriz, 200,000; Meshed and Kermanshah, 70,000 to 80,000 each; Ispahan, 80,000. All the above figures for population are mere estimates. The Persians belong to the Shiite sect of Mohammedans. The schools have been estimated at only 180 in number with about 10,000 pupils, but there are many colleges, supported by public funds.

PRODUCTION. The chief agricultural products are: Wheat, barley, rice, gums, fruits, drugs, wool, cotton, silk, and opium. There has latterly been an increase in the production of opium and tragacanth. Wool of especially fine quality is raised at Khorassan. Persian silks and Persian carpets are celebrated all over the world, the carpets are all made by hand, and the centres of the industry are at Tabriz, Kerman, Sultanabad, and Hamadan. There are rich but undeveloped mineral resources, including: Lead, iron, copper, coal, salt, manganese, marble, borax, mercury, nickel, cobalt, petroleum, and turquoises. No later figures for production were available than those given in the preceding YEAR BOOK.

COMMERCE. The chief products for export and import are shown in the following table from the *Statesman's Year Book* of 1921 in thousands of krans in the years 1917-18 and 1918-19, inclusive (a kran equals about nine cents):

Imports	1917-18	1918-19
	1000 krans	1000 krans
Cottons.....	130,542	154,763
Sugar.....	101,055	125,563
Tea.....	13,508	53,567
Gold and silver bars.....	8,508	2,900
Gold and silver coin.....	15,294	3,140
Petroleum.....	16,041	7,596
Yarn.....	12,876	5,218

Imports	1917-18	1918-19
	1000 krans	1000 krans
Flour.....	4,561	3,117
Woolens.....	4,411	3,287
Indigo and kermes.....	6,112	4,779
Haberdashery.....	5,351	2,819
Rice.....	19,045	14,142
Spices.....	3,471	7,873
Wool.....	3,071	914
Animals.....	6,514	7,015
Silk goods.....	2,067	2,155
Tin, zinc, and lead.....	869	1,732
Tobacco.....	404	858

Netherlands and Colonies.....	324,530	
Russia.....	1,192,410	1,890,455
Switzerland.....	11,430	
Turkey.....	368,051	1,333,014
Muscat.....	2,780	4,333
Oman.....	178,280	151,536
Japan.....	67,834	7,539

Great Britain's share of the total trade for the year ending March 20, 1919, was about 70 per cent.

COMMUNICATIONS. The total length of the railways at the beginning of 1921 was placed at about 150 miles. Since 1903 the highways have been greatly extended and improved. The principal routes are by way of Trebizond, Resht, and Meshed to Russia; Khorassan and Seistan to India; Kermanshah to Bagdad; Bushire to Ispahan and Teheran; and Bender Abbas to the interior.

DEFENSE. By the Anglo-Persian agreement of August 9, 1919, there was to be a uniform military force under the command of British officers. Meanwhile a Cossack brigade had been formed by Russia under an agreement with the Persian

government in 1912. The Cossack division in 1919 consisted of 7856 Persian troops, 202 Persian officers, and 56 Russian officers. The cost of maintaining this division was borne chiefly by Great Britain, the balance of about one-third being paid by Persia. The Russian officers were dismissed in October, 1920, and British officers were substituted. There were also at the end of 1920 two brigades of South Persian rifles, consisting of 5400 Persian troops with 306 British officers and 190 Persian officers. In April, 1920, the Anglo-Persian military commission recommended the placing of the South Persian rifles and the Cossack division directly under the command of the Persian government, and that the military forces, including existing formations, should be maintained at the strength of 43,000. This arrangement was not ratified by the Persian government. The British and Indian troops in northwest Persia in January, 1921, numbered about 70,000. They were withdrawn at the close of the year. See below under *History*.

GOVERNMENT. The attempt to transform Persia from an absolute monarchy to a constitutional state in 1906 led to many disturbances, and the parliament or Mejliss constituted at that time practically ceased to exist as a legislative or administrative body after November, 1915. The reigning Shah in 1921 was the Sultan Ahmed, born, Jan. 20, 1898, and crowned, July 21, 1914, but the government has been under the control of the cabinet. An agreement was made by the British and Persian governments, August 9, 1919, providing for a British adviser in Persian administration; British financial assistance in administrative reforms; and a joint British and Persian military commission for the establishment of a military defense force (see *YEAR BOOK* of 1919), but this agreement did not go into force and was rejected by the Persian prime minister, Feb. 27, 1921. The ministry as constituted March 1, 1921, was as follows: Prime Minister and Minister of the Interior, Seyed Ziaed-Din; Foreign Affairs, Modirel-Molk; War, Reza Khan; Education, Nayerol-Molk; Finance, Mirza Eissa Khan; Justice, Mansuree-Sultaneh; Posts and Telegraphs, Mochir-Moazam; Public Health and Charity, Moadebod-Dowleh; Public Works, Movaghared-Dowleh.

HISTORY

CABINET CRISES. The Sipahdar ministry was overthrown by military forces under General Reza Khan, February 20, the movement having started, according to the reports, at the British headquarters at Kasvin. The new ministry under Seyed Zia-ed-Din, issued its programme (March 11), which among other things undertook to annul the last Anglo-Persian agreement and to rid Persia of foreign troops. This cabinet was in turn overthrown at the beginning of June, and a new ministry was established, June 4, under Ghevam-es-Saltaneh as prime minister and minister of home affairs, which on June 11 issued a statement to the foreign offices of other Powers to the effect that Persia would be entirely independent, henceforth, while it desired at the same time to maintain the most friendly relations with all nations.

WITHDRAWAL OF THE BRITISH. The withdrawal of the British troops from the former

Russian sphere of interest in northern Persia began January 18. The British forces left the capital, May 16. The address of Lord Curzon, British Foreign Minister, in the House of Lords, July 26, gave great offense in Persia, especially its implication that Great Britain would cease to interest herself in Persia now that the Persian government had denounced the Anglo-Persian treaty and had allied itself with Moscow. The Persian press also attacked the British financial administration, complaining of the policy of the British financial adviser, Mr. Armitage-Smith. It denied that Great Britain had saved Persia in the war. As to the invasion of Persia by the Bolsheviks, that would not have happened if British troops had not been occupying the country. A contrast between the British financial policy and that of the American adviser, Mr. Morgan Shuster, was pointed out to the great disadvantage of the former. The last remnants of British participation in the internal affairs of Persia disappeared with the departure from the capital of the British controller of Persian finances, Mr. Armitage-Smith, September 20, and the disbanding of the South Persian Rifles, September 23. The offer of the Persian government to take over this military corps was rejected by the British foreign minister who decided that no arms or munitions should be turned over by the British government either to Persian officials or Persian individuals.

RELATIONS WITH RUSSIA. In January there were reports of negotiations between the government and Moscow agents. On February 26 the Persian government signed a treaty with the Soviet government according diplomatic rights to the latter. Envoys from the Soviet government arrived at the capital, May 1.

OTHER EVENTS. In November President Harding received the credentials of the new Persian Minister, Mirza Hussein, and at the close of the year Rabbi Joseph Saul Kornfeld became United States minister to Persia. In December negotiations were going on between British and American interests in the oil fields, but it was a question whether the situation would not have to be settled by diplomatic action.

PERU. A South American republic. Capital, Lima.

AREA AND POPULATION. Area, estimated at from 679,600 to 723,461 square miles, the latter including the department of Tacna, in dispute with Chile (q. v.); population, estimated at from 4,500,000 to 4,620,201. Lima had a population, estimated in 1919 at 175,000. Other important cities with estimates of population are: Callao, 34,346; and Arequipa, 35,000 to 40,000. The above estimates do not include uncivilized Indians whose numbers are unknown. No later figures for education were available than those given in the preceding *YEAR BOOK*.

PRODUCTION. The chief agricultural products are: Sugar, coffee, and cotton. The sugar industry is the most important and is carried on chiefly in the coast region. In 1918 it employed about 23,456 laborers in the cultivation of the cane which covered an area of 124,510 acres, with an output of 238,190 tons. Cotton production in 1918 amounted to 24,603 tons. Other products are: Rice, cocoa, wheat, tobacco, wines, and spirits, olives, ramie, and corn. The development of rice cultivation has been an important feature

of the last ten years, and rice has become one of the chief crops of the northern part of the country, where about 90 per cent of the total crop is grown. The production rose from 33,000 metric tons in 1915 to 42,040 metric tons in 1918, and 42,650 in 1919. The crop of the last-named year had an acreage of 72,552. There is a considerable production of cocaine in Lima and several other towns. The important cocoa-growing district is in the department of La Libertad. Various medicinal plants, including cinchona, are produced; and there are large shipments of rubber on the Amazon from Iquitos. Alpaca, sheep, and llama wool is exported in large quantities. The quantity and value of mineral production for 1919, according to a British authority, is as follows:

	Quantity	1919 Value £
Copper.....	Metric tons.. 39,230	2,879,983
Petroleum.....	" 348,649	2,363,544
Silver.....	Kilos. 305,497	2,071,257
Gold.....	" 2,029	267,303
Coal.....	Metric tons. 344,260	263,368
Vanadium ore (45 per cent).....	" 2,947	388,470
Tungsten ore (65 per cent).....	" 129	14,120
Lead.....	" 1,066	16,227
Salt.....	" 27,724	24,843
Borates.....	" 519	7,785

Molybdenum ore (82 per cent).....	" 4,740	1,194
Quicksilver.....	Kilos.....	
Total (including all others).....		8,306,776

¹ The value after the petroleum has been refined.

FINANCE. In the autumn a measure was before congress for the creation of a national bank, of which the capital was to be £10,000,000 subscribed half by the government and half by private capital. The issue of banknotes was authorised, half of it to be secured by gold and government banknote deposits, and half by commercial paper.

COMMUNICATIONS. The ships, entered, at Callao in 1919 in the foreign trade numbered 586 steamships of 1,004,862 tons; cleared, 576 of 991,158 tons. Of the steamships entered: 147 were British; 143, Chilean; 128, Peruvian; 111, United States; 12, Japanese. In 1918 the railways open for traffic had a mileage of 1889, of which 1358 miles were state lines under the control of the Peruvian corporation. By executive decree of August 31 the Peruvian Government was to secure the control and administration of the Northwestern Railway of Peru from the British company owning the line for a sum of some \$3,500,000. This railway connected the towns of Ancon and Huacho—a distance apart of about 90 miles, but two other short branches of the road ran from Huacho to Sayan and from Hualar to Chancay—distances of 34 and 8 miles, respectively. There was also activity manifested towards new construction, and late in the year it was reported that British-Canadian interests and the Peruvian government were nearing an understanding whereby the former were to construct some 1500 miles of railway in various parts of Peru and receive in return large grants of agricultural and mineral lands. Negotiations were reported to have advanced sufficiently for the government to be ready to send the contracts to congress for ratification as soon as assurance was forthcoming on the part of the promoters of their financial ability to carry through the undertaking.

Y-B-21—18

GOVERNMENT. Executive power is in a president elected for five years and legislative power in a senate of 57 members and a house of representatives of 128 members. President in 1921, Augusto B. Leguia. See NAVAL PROGRESS and EXPLORATIONS.

HISTORY. The government announced, on December 14, that the rebel forces had been repulsed in three encounters and denied the report of any government defeat. A presidential decree at the close of the year, forbade any foreign aviator to cross the boundaries at an altitude of less than 3000 metres, and fixed a protective zone, beyond which any aviator found trespassing would be suspected of espionage, but foreign aircraft were to be permitted to cross Peruvian territory if previously authorized by Peruvian officials. The government, on December 25, notified Bolivia of its readiness to coöperate in bringing about arbitration between Bolivia and Chile, if the controversy between the latter and Peru were settled by arbitration. This was in reply to a note from Bolivia, that in the event of continued dispute over Tacna and Arica, there should be an international conference of disinterested nations to settle the conflicting claims.

PETER I (PETER KARAGEORGEVITCH), king of Serbia, died at Belgrade, August 16. For many years of his life he had been a wanderer and did not reach the throne until he was middle-aged. He was born at Belgrade in 1846, grandson of "Black" George and son of Prince Alexander of Serbia who was deposed in 1858. While still only a second-lieutenant just out of the French military school of Saint-Cyr, he fought with a thousand comrades maintained at his own expense in an endeavor to regain the throne. Through the intervention of the Great Powers his exile was ordered. During the war of 1870 he offered his sword to France and was given a commission. He won the rank of captain at Villersexel where he was wounded; and received also the star of the Legion of Honor in recognition of his bravery. He returned to his own country at the time of the Russo-Turkish war in which he fought on the side of the Russians. After 1890 he took up his residence at Geneva and devoted himself to study and to the education of his sons. After the murder of Alexander I and Draga in 1903 he regained the throne of his ancestors. It was a position of great danger and difficulty and brought with it little honor. Although all the people had hailed him as a liberator and although they held him guiltless of any complicity in the murder, the courts and chancelleries of Europe looked at him askance. Austria realized that he would not be a mere figurehead like Milan or Alexander. England professed to be shocked that he should owe his crown to a double murder. Russia feared that such an example be copied in her own dominions. France remained indifferent to the affairs of the Balkans at that time and followed the lead of Russia. Germany continued to plan her aggressive policy in the Near East and Italy was even then coveting the Dalmatian coast. Several times attempts were made to assassinate him. The enmity of Austria robbed him of Bosnia and Herzegovina and stood in the way of the Serbian dream of a Greater Serbia. Furthermore, Austria desired Albania. Then came the Balkan Alliance which King Peter joined in the hope of breaking the hostile circle which surrounded his country.

The victory, however, left him in grave anxiety on account of the rivalry of the other members of the alliance. The dreams of peace justified his apprehensions. After the Austrian attack on Serbia he left the country, but not before he had fired some shots from the trenches along with his soldiers. His health was already broken and after the exile in Corfu, Egypt, and Tunis, he returned to Saloniki and remained during the terrible winter of 1915-16. Considering Constantine of Greece a traitor to the cause of the Allies, he refused the military honors accorded to him by the Greek king. He then went to the Serbian legation and lived there in modest quarters until the time of his death.

PETERS, JOHN PUNNETT. Archaeologist, Hebrew scholar, and clergyman, died in New York City, November 10. For many years he was well known for his archaeological work in Babylonia. He was born in New York City, Dec. 16, 1852, graduated at Yale University in 1873, and studied at the Universities of Berlin and Leipzig, 1879-83. He was the son of Rev. Dr. Thomas McClure Peters, rector of St. Michael's Episcopal Church in New York City. He was ordained priest in 1877; was a tutor at Yale 1876-79; and after 1885 was Professor of Hebrew in the University of Pennsylvania. During part of that time he also held the chair of Old Testament Languages at the Episcopal Divinity School, Philadelphia. He succeeded his father as rector of St. Michael's in New York City in 1893 maintaining that charge until 1919 after which he became Rector Emeritus and Professor of New Testament Literature and Languages in the University of the South, Sewanee, Tenn. In the meanwhile from 1888 to 1895 he was in charge of the archaeological excavations in Babylonia undertaken by the University of Pennsylvania, being the first archaeological expedition sent out by the university. Under his direction the site of ancient Nippur was discovered and the excavation of the city was begun. He took a prominent part in the civic life of New York in the interest of good government and was President of the West Side Independent Club from 1896 to 1916. He was particularly active in connection with the traction problems of the time. Shortly before his death he took a public stand in favor of the election of William T. Manning to the bishopric of New York. The list of his archaeological and philological writings is too long to be repeated here but includes treatises on Nippur and other subjects connected with the excavations, on modern Christianity, on early Hebrew life, the religion of the Hebrews, etc., and he edited or collaborated in a number of works of history, biography, literature, etc.

PETERSON, SIR WILLIAM. Principal of McGill University, Montreal, died, January 4, at Hampstead, London. He was born in Edinburgh, Scotland, in 1856 and educated at the University there and at the University of Göttingen. In the Scottish university he distinguished himself in the classics and later became a scholar at Oxford. Thence he was called as a teacher to Harrow and in 1879 returned to the University of Edinburgh where he was made assistant-professor of classics. In 1882 he became the first Principal of University College, Dundee, and was still at that institution in 1895 when he was appointed Principal of McGill University at Montreal and professor of classics. His administration was remarkable for

many new endowments and for academic progress, especially in the arts, medicine, and applied science. Although he held that the arts course was the foundation of a university education, he brought the medical department to a high level, making it rank in Canada with the Harvard and Johns Hopkins medical schools in the United States. He was a strong imperialist and an advocate of Anglo-Saxon unity.

PETROLEUM. Production of petroleum in the United States in 1921, as indicated by the quantity transported from producing properties compiled from company reports to the United States Geological Survey, amounted to 469,639,000 barrels, representing an estimated value at the wells of \$753,300,000. This was the greatest quantity ever produced in the United States in any one year and represented an increase of 26,237,000 barrels over the production of 1920 and was more than double the quantity produced in the United States in 1912. World's production figures for 1921 were not available, but preliminary estimates indicated a total not far from 750 million barrels as compared with 695 million barrels produced in 1920.

Imports of crude oil into the United States during 1921 amounted to 125,307,000 barrels as compared with 106,175,000 barrels in 1920 and with 52,822,000 barrels in 1919, these figures corresponding respectively to 27, 24, and 14 per cent of the domestic production of the past three years. Exports of crude oil during 1921 amounted to 8,940,000 barrels and during 1920 to 8,757,000 barrels.

Estimated consumption (deliveries to consumers) of domestic and imported crude oil during 1921 amounted to 525,407,000 barrels as contrasted with 530,474,000 barrels in 1920. Consumption for the year just ended therefore amounted to 55,768,000 barrels more than the country produced.

Stocks of crude oil increased 60,599,000 barrels during the year, as follows: Net pipe-line and tank-farm stocks east of California 42,142,000 barrels; gross pipe-line and tank-farm and producers' stocks in California 12,359,000 barrels, and stocks of Mexican petroleum held in the United States by importers 6,098,000 barrels. On Dec. 31, 1921, stocks of crude oil, exclusive of lease storage and of stocks at refineries, amounted to 183,890,000 barrels, equivalent to 119.3 days' supply at the current rate of consumption. On the last day of 1920 similar stocks amounted to 123,291,000 barrels, equivalent to 80 days' supply.

The year opened with record prices—\$6.10 per barrel at the wells for Pennsylvania grade and \$3.50 per barrel for Oklahoma-Kansas grade, which had held for several months in spite of rapidly increasing stocks. Shortly after the beginning of the year, however, prices began to fall, and within a few months Pennsylvania grade had declined to \$2.25 a barrel and Oklahoma-Kansas grade to \$1 a barrel. These low prices held until the rate of rapidly increasing stocks eased off somewhat in September and October, and the year closed with Pennsylvania grade at \$4 and Oklahoma-Kansas grade at \$2 a barrel. Low prices were reflected in a marked curtailment of field activity, and 15,012 producing wells are reported to have been completed during 1921 as contrasted with 24,222 in 1920. In spite of this, however, a number of important new pools were

opened up, among which were Haynesville, La., El Dorado, Ark., Burbank, Okla., and Pierce Junction and Mexia, Texas, and extensive new developments were made in the Elk Hills and at Huntington Beach, Calif. The strike in the oil fields of California naturally cut down the production of that State, which nevertheless produced a record output of approximately 114 million barrels. Oklahoma also established a new record,

produced more than 100 million barrels and in December, as a result of developments at Mexia, ranked first among the producing States.

PRODUCTION BY STATES. The following figures, compiled from company reports to the U. S. Geological Survey, show the quantity of petroleum transported from producing properties. Oil consumed on the leases is not included.

State	(Barrels of 48 U. S. Gallons)

COMPANIES ORGANIZED. During 1921, 936 companies with aggregate indicated investment amounting to \$1,255,657,000 were formed to engage in some branch of the oil industry, as compared with 1712 concerns formed in 1920 with an aggregate indicated investment of \$2,786,814,000, the loss for 1921 being about \$1,500,000,000.

For 1921 the average monthly total put into the exploitation of the oil industry as judged by the new concerns organized stood at \$104,638,083. This compared with a monthly average of \$232,234,000 in 1920. The average per company organized in 1921 was \$1,341,500. In 1920 the company average was \$1,627,812.

The average monthly indicated investment and the average capitalization for each company formed during the periods stated are as follows:

	Monthly	Company
Five months, 1914.....	\$7,647,400	\$ 497,000
Year, 1915.....	6,711,100	410,900
Year, 1916.....	34,978,800	1,748,000
Year 1917.....	70,018,283	1,641,053
Year, 1918.....	35,873,300	524,906
Year 1919.....	315,500,500	2,324,128
Year, 1920.....	232,234,500	1,627,812
Year, 1921.....	104,638,083	1,341,500

The following table shows the record for the indicated months:

EXHAUSTION OF AMERICAN FIELDS. A study made in 1921 dealing with the producing probable and possible oil-bearing regions in the United States undertaken by a joint committee composed of members of the American Association of Petroleum Geologists and of the United States Geological Survey resulted in an inventory estimate that 9,000,000,000 barrels of oil recoverable by methods now in use remained in the ground in this country Dec. 31, 1922. In other words, the oil reserves in the United States would be exhausted within twenty years at the rate of consumption prevailing in 1921.

While the reserves of coal, iron, and copper in the United States were so large that appre-

hension of their early exhaustion was not justified, the oil reserves of the country, on the other hand, as the public had frequently been warned, seemed adequate to supply the demand for only a limited number of years. The annual production of the United States in 1921 was almost half a billion barrels, but the annual consumption, already well beyond the half billion mark, was increasing so that for some years it had been necessary to import oil, and with the growth in demand dependence on foreign oil had become steadily greater in spite of increase in American output.

The estimates for local areas, fields or districts appearing in this estimate are shown herewith consolidated by States, groups of States, or broad regions in the case of non-productive States. They are, counting millions of barrels:

New York, 100; Pennsylvania, 260; West Virginia, 200; Ohio, 190; Indiana and Michigan, 70; Illinois, 440; Kentucky, Tennessee, northern Alabama, and northeastern Mississippi, 175; Missouri, Iowa, North Dakota, Wisconsin, and Minnesota, 40; Kansas, 425; Oklahoma, 1340; northern Louisiana and Arkansas, 525; Texas, except Gulf Coast, 670; Gulf Coast, Texas, and Louisiana, 2100; Colorado, New Mexico, and Arizona, 50; Wyoming, 525; Montana, Nebraska, and South Dakota, 100; Utah, Nevada, Oregon, Washington, and Idaho, 80; California, 1850; eastern Gulf coastal plain and Atlantic Coast States, 10.

It will appear from the foregoing that the estimated reserves are enough to satisfy the requirements of the United States for only twenty years if the oil could be taken out of the ground as fast as it is wanted. Should these estimates fall even so much as 2,000,000,000 barrels short of the actual recovery that error of 22 per cent would be equivalent to but four years' supply.

PHILIPPINES. An insular possession of the United States ceded by Spain in the treaty of April 11, 1899; the largest island group of the Malay archipelago. Capital, Manila.

AREA AND POPULATION. The group contains 7000 islands of which the most important with their respective areas are as follows: Luzon, 40,804 square miles; Mindanao, 36,906; Samar, 5124; Negros, 4903; Palawan, 4500; Panay, 4448; Mindoro, 3794; Leyte, 2799. Total area, 114,420 square miles; population at the end of 1918, 10,350,640, distributed among different nationalities as follows: Filipinos, 9,429,857; Chinese, 45,156; Japanese, 6684; Americans, 6405; Spaniards, 4015; English, 1063; Swiss, 451; Germans, 312; French, 218; other nationalities, 1111. Population of Manila, the capital and chief industrial centre, was 283,613. Other large towns with their populations: Iloilo on the island of Panay, 48,000; Cebu on the island of Cebu, 46,000; Laoag, 46,000, and Albay, 43,000, both on Luzon; Zamboango on Mindanao, 30,000. Arrivals in the year 1920 numbered 27,735 and departures, 24,713. Of the arrivals 4421 were citizens of the United States and 5319, citizens returning from abroad. Of the alien arrivals the Chinese were

the most numerous being 14,875, of whom 9461 were immigrants; the Japanese numbered 952, of whom 490 were immigrants. The total number of Japanese arrivals showed a decrease of 42 per cent from the preceding year. Of the total arrivals 22,162 were males and 5573 were females. Of the departures 4372 were citizens of the United States and 6523 citizens of the Philippines, going to the United States or to foreign countries. Of the aliens departing 10,536 were Chinese, of whom 89 were emigrants. The number of Japanese departing was 11,222, of whom 598 were emigrants. Of those who left the island during the year, 20,642 were males and 4071 females.

EDUCATION. English was at first used as the language of the schools as it was the only language in which American teachers could give instruction. It had been found that not more than one-tenth of the Filipinos knew Spanish and that of the native dialects there was not one that was used by more than 20 per cent of the population. Moreover, English was the prevailing commercial language of the Far East. At the present time English is the only language spoken in the primary and intermediate grades everywhere in the islands. The chief aim of the school system was to provide a minimum common-school education for every child, and a three-year course was finally decided upon as the minimum. The school attendance had increased by 1908 to such an extent that the three-year primary course was crowded and the common-school course was accordingly increased to four years. By September, 1919, the pupils in the first four grades totaled 612,503, of which nearly half, that is 300,277 were enrolled in the first grade. During the school year 1920-21, the pupils increased to about 800,000, the total school population in the islands being placed at not more than 1,300,000. While the curriculum of the primary department corresponds in general to that in the United States there is more attention given to concrete subjects, as, for example, plant life and gardening. There is a system of school gardening in operation and in the school year 1918-19 there were 3485 school gardens as well as many home gardens cultivated under school supervision. Manual training is another feature of these schools, including the weaving of baskets, mats, and hats, lace-making, embroidery, and carpentry. The system contains other agricultural and industrial features. The required studies of the four-year primary course are oral and written English, arithmetic, geography, and physical training, and there is also instruction in morals and right conduct. There is a difference in the classes of industrial work as between the two schools. In the intermediate grades vocational training is offered and the student may elect certain groups of subjects, as for example, a farm course, housekeeping and household arts course, a trade course, a general course, etc. It was reported in 1920 that the effect of this vocational training could be seen everywhere throughout the islands in the fact that Filipino craftsmen were rapidly doing the work which formerly had been done by imported Chinese artisans. In the intermediate grades in 1919 the pupils numbered 57,392. As to secondary and university education it was based on the same general principals as in the United States. In all the provincial capitals and other large cities high schools are found with a

general course and with trade, farming, domestic work, and teaching courses, and there are, besides, special technical schools supported by the local or insular government including the Philippine School of Arts and Trades, the Philippine Normal School, School of Commerce, Nautical School, etc. Normal schools were reported to be developing rapidly in several of the islands. A serious problem has been the adjustment of the educational system to the needs of the Moros. These Mohammedan natives occupy at least one-fourth of the Philippine territory. After the American colonization of the islands nothing could at first be done among them in the way of education. The disarmament policy begun by General Wood in 1913 was practically completed under General Pershing in 1913. Meanwhile in the more peaceful centres schools were opened. In 1921 the schools in the Moro territory were reported as having over 40,000 pupils.

AGRICULTURE. The year 1920 was a record year in production, according to the preliminary report of the Department of Agriculture, as illustrated by the following statistics: The value of the six most important agricultural products of the Philippines—rice, sugar, abaca (hemp), cocoanuts, tobacco, and corn, for the year 1920 amounted to \$343,500,000. In 1919 the money value of the same products was \$219,000,000, in 1918 \$175,000,000, and in 1917, \$120,500,000. While the increase in value was partly due to the high prices, the increase in the area cultivated and the quality of the products helped to swell the value of the production indicated. In 1920 the area of land cultivated, or planted to rice was 1,484,895 hectares (2.47 acres equals one hectare) as compared with only 1,321,339 hectares for 1919; showing an increase of 7 per cent. The rice produced in 1920 was sold in the municipal markets for 254,856,395 pesos, an increase of 37 per cent over that of 1919. The total production in rice was 1,725,726,600 litres. The area planted to corn in 1920 was 537,135 hectares, with a production of 532,907,380 litres, valued at 54,997,315 pesos, whereas in 1919, the area planted was only 436,715 hectares, the corn produced from it being valued at 37,391,425 pesos, indicating an increase of 25 per cent for 1920; 599,386 hectares were planted to abaca (Manila hemp), with a production of 165,081,480 kilos, valued at 63,058,847 pesos; whereas, in 1919, the area cultivated was 515,563, with a production of 148,340,000 kilos, valued at 85,006,006 pesos,—an increase of 3 per cent for 1920. The production of cocoanuts in 1920 amounted to 79,406,104 trees, valued at 122,188,891 pesos, as compared with 74,650,102 cocoanut trees in 1919, valued at 75,438,291 pesos. There were 197,403 hectares planted to sugar cane—with a production of 425,580,503 kilos, valued at 159,257,117 pesos, as compared with 200,199 hectares of land cultivated in 1919, and a production of 411,272,659 kilos, valued at 74,452,819. The significant fact of these figures is that while a decrease of 1 per cent in the area cultivated is shown, the value of the crop increased 3 per cent. The production of tobacco in 1920 was 64,695,534 kilos of leaf tobacco, from 101,123 hectares, valued at 28,765,947 pesos; as against 56,497,740 kilos in 1919 from 73,659 hectares, valued at 17,585,449 pesos; an increase in the value of the crop of 18 per cent for 1920.

COMMERCE. The following information in

respect to the foreign trade during 1920 was supplied by the Philippine Bureau of Customs:

The trade of the islands for the year 1920 was the largest ever recorded since the American occupation, amounting in value to 601,124,276 pesos. Of this amount 298,876,565 pesos represented the value of imports and 302,247,711 pesos that of the exports. Both of these figures are larger than the corresponding ones for previous years since 1899. On account of the greater value of the exports the balance of trade at the close of the year was in favor of the Islands to the amount of 3,371,146

crease both as to imports and exports, except the United Kingdom, China, the French East Indies, Hongkong, France, Siam, Switzerland, Japanese China, the Netherlands, Germany, Norway, Belgium, and British Africa, the exportation of Philippine products to all of which showed a decrease; while on the other hand imports from Australasia, Spain, Dutch East Indies, and Japanese China showed a decrease. The following tables show the values of imports from, exports to, and total trade with the different countries for 1920 and 1919:

VALUES OF IMPORTS, EXPORTS, AND TOTAL TRADE BY COUNTRIES ARRANGED CONSECUTIVELY ACCORDING TO THE VOLUME OF TRADE

pesos. The volume of cargo imported during the year, about 5 per cent, of which was for transshipment to foreign ports, was 1,643,361.25 tons, as compared with 1,086,337.65 tons in 1919, while the exports amounted to 580,125.86 tons, compared with 571,659.02 tons for the previous year. It will thus be seen that during the last two years imports largely exceeded the exports in quantity, and the balance of trade in 1919 naturally resulted against the Islands. It will therefore strike one as surprising to note that there was a favorable trade balance in 1920, explainable only through inferring that increased prices for Philippine staples prevailed in foreign markets, to the evident advantage of the commerce of the Islands.

Of the different countries trading with the Islands during the year, the United States consumed almost 65½ per cent of the trade. The balance was distributed among the other countries, the largest part going to Japan (7.83 per cent); the next, to the United Kingdom (5.75 per cent); the third, to China (4.31 per cent); the fourth, to Hongkong (2.49 per cent); the fifth, to Spain (2.14 per cent); and the rest in small portions to other countries. Compared with the year before, during the year under consideration the two principal countries doing business with the Islands, to wit, the United States and Japan, registered an increase both in their imports from and exports to the Islands. Trade with other countries also showed an in-

crease both as to imports and exports, except the United Kingdom, China, the French East Indies, Hongkong, France, Siam, Switzerland, Japanese China, the Netherlands, Germany, Norway, Belgium, and British Africa, the exportation of Philippine products to all of which showed a decrease; while on the other hand imports from Australasia, Spain, Dutch East Indies, and Japanese China showed a decrease. The following tables show the values of imports from, exports to, and total trade with the different countries for 1920 and 1919:

HEALTH AND SANITATION. The year 1920 was relatively free from the major epidemic diseases. The development and adoption of the health index system materially aided in the early detection and prompt implantation of eradication measures against such maladies. The mortality from smallpox was reduced to about 16 per cent, compared with that of the year before, and the mortality from cholera to less than one-tenth of 1 per cent. There were 50 per cent less deaths from dysentery, and typhoid fever also showed an appreciable reduction. Anticholera vaccination had proved its usefulness as a supplementary measure in stamping out incipient outbreaks of the disease and the partial results of the modern treatment of leprosy obtained at San Lazaro Hospital by the Investigating Committee brought the hope of cure to many as well as their redemption as outcasts from society. Four additional provinces were organized into regular health districts, leaving but one unorganized province in the Division of Sanitation in the Provinces, which was in process of organization at the end of the year. Malaria and tuberculosis remained the chief causes of morbidity and mortality in the Philippine Islands. In no other diseases perhaps can the influence of sanitary education be employed to better advantage than in these. Both are easily preventable and the means of infection have been known even to the laity for more than

three decades. Owing to the lack of complete morbidity statistics on the above diseases, only the mortality figures are given: During 1920, malaria claimed 24,440 victims, as against 33,444 in 1919, and tuberculosis 29,572 in 1920, as against 30,902 in 1919.

FINANCE. The following table shows the budget figures for four years:

in 1919, showing a slight decrease. Boats of other nationalities, including Philippine vessels, also registered decreases in transporting the Islands' importations, with few exceptions. As to Philippine products exported abroad those transported in American bottoms had the greatest value, reaching the figure of 153,664,815 pesos, while in 1919 they only transported 97,042,637

SHIPPING. The actual number of vessels of different nationalities trading with the Islands during the year was 450, with a total net tonnage of 1,400,555.44, as against 306 in 1919, with a total net tonnage of 880,831.59. Almost 33 1/2 per cent of these vessels was of American registry, the number being 153, net tonnage 579,164.41. Second on the list was the number of British vessels, the same being 120, net tonnage 399,094.66, and third the Japanese, with a total number of 177, net tonnage 328,092.74. British and Japanese vessels have increased in number compared with the previous year. Philippine vessels are fourth. Of the goods imported into and exported from the Philippine Islands during the year those carried in American vessels were valued at 259,643,836 pesos, which was more than those transported in them in 1919; in English bottoms, at 215,220,275 pesos, also more than the preceding year; in Japanese ships, at 70,235,674 pesos, likewise more than the year before; in Spanish boats, at 12,918,428 pesos, which was more than the year previous. Philippine vessels, however, which in 1919 stood fourth in importance in the carrying trade among the vessels of different nations, this year retrograded to the extent of transporting only 5,242,209 pesos worth of merchandise, when the year before these boats had to their credit 16,180,685 pesos worth of goods carried. Of the goods imported into the Islands during the year those carried in British vessels had the greatest value, amounting to 138,082,663 pesos, whereas in 1919 they only carried 73,295,196 pesos. American bottoms stood second, the value carried being 105,979,021 pesos, as against 84,789,950 pesos in 1919. Japanese ships imported goods to the value of 30,464,729 pesos, as compared with 43,688,317 pesos

pesos worth of these goods. British vessels in the carrying of our exports were in the second place, with the Japanese ships standing third, the figures being 77,137,612 pesos and 39,770,945 pesos, respectively, compared with 75,547,467 pesos and 25,370,947 pesos, respectively, for 1919. On the other hand, boats of other countries, including Philippine vessels, registered decreased spaces in taking Philippine products to foreign markets, with few exceptions.

HISTORY

THE NEW GOVERNOR-GENERAL. Francis Burton Harrison after serving eight years resigned, February 5. President Harding nominated as his successor, Major-General Leonard C. Wood. He had previously appointed General Wood along with W. Cameron Forbes, the former governor-general, to investigate and report on the question of Philippine independence, and during the summer this mission was making a tour of inspection in the Islands. General Wood assumed office October 15, and at once outlined his programme in his inaugural address. The main points in it were an efficient and progressive administration in the spirit of the Jones bill and government of the people by their representatives to the extent provided for in that bill. Declaring that the people of the Philippines had made wonderful progress during the last 23 years, he said there must be no turning back. He attributed this progress not only to the Filipinos but to the unselfish aid of many loyal Americans who had introduced improvements. He emphasized also the aid rendered by the church, and declared that upon the firmness of their religious faith depended the real stability and progress of the Islands. As to education he said it must be free to all and

accord equal opportunities to women. The judiciary must be independent and absolutely outside politics. He laid especial emphasis on the need of proper sanitary and health conditions as indicated by the alarming circumstance that one-third of all children born in the Islands died in the first year. Measures must also be taken for the cure of lepers. Other points noted in his address were the necessity of furthering public works, developing agriculture, expanding natural resources, building up commerce, the instruction of public opinion, the promotion of the study of the English language and the strengthening of the spirit of solidarity, in all of which measures the coöperation of the people themselves was required.

DEMAND FOR INDEPENDENCE. Many arguments were published during the year from prominent Filipinos in favor of independence and in respect as to the question whether it was actually desired by the people. It was pointed out that every legislature of the Islands had adopted a resolution or an address asking for complete independence. The representatives in so doing had the enthusiastic support of their constituents. At every public meeting the great eagerness with which independence was desired was manifest, and this was true of every part of the Islands. As to the question of illiteracy it was argued that the Islands on the whole were less illiterate than the American colonies when they fought the Revolutionary War. The movement could not be regarded as the work of ambitious leaders who wished merely to advance their own ends. The fear of any domination by the Japanese was dismissed as groundless. On the whole the control of the United States had been fair and it was true that after 1916 the people had been securing an increasing share in the government. Arguments for independence did not rest on the view that the control by the United States had been unjust or oppressive, but simply arose from the natural desire of the people to determine its own destiny and express its own spirit in its government. On December 1, a joint resolution of the legislature was transmitted to President Harding with reference to the Disarmament Conference, requesting that whenever the interests of the Island should in any way be affected by the deliberations of the Conference, the government of the United States should consult the wishes of the Filipino people by calling their representatives into its council.

THE COMMISSION'S REPORT. The report of the Special Commission, consisting of Major-General Leonard Wood and W. Cameron Forbes, which began its investigation on May 4 was completed, October 8, and published soon afterwards. It gave a detailed account of the resources, the condition of the people, and the progress under the American administration. On the main point, namely, the question of separation from the United States, its recommendation were as follows:

"1. We recommend that the present general status of the Philippine Islands continue until the people have had time to absorb and thoroughly master the powers already in their hands.

"2. We recommend that the responsible representative of the United States, the Governor General, have authority commensurate with the responsibilities of his position. In case of failure to secure the necessary corrective action by the

Philippine Legislature, we recommend that Congress declare null and void legislation which has been enacted diminishing, limiting, or dividing the authority granted the Governor General under act No. 240 of the Sixty-fourth Congress, known as the Jones bill.

"3. We recommend that in case of a deadlock between the Governor General and the Philippine Senate in the confirmation of appointments that the President of the United States be authorized to make and render the final decision.

"4. We recommend that under no circumstances should the American Government permit to be established in the Philippine Islands a situation which would leave the United States in a position of responsibility without authority."

PHILIPS, F. C. British novelist and dramatist, died in London, April 21. He was born at Brighton, England, Feb. 23, 1849; educated at Brighton College and then served in the army for three years. He was admitted to the bar in 1884 but soon afterwards devoted himself to the writings of novels and dramas and contributing to the leading London periodicals. The list of his works is too long for reproduction here but includes *As in a Looking Glass*; *Jack and Three Jills*; *A Full Confession*; *Young Mr. Atansie's Courtship*; *A Doctor in Difficulties*, *The Strange Adventures of Lucy Smith*. His plays included *The Dean's Daughter* (with Sydney Grundy); *A Free Pardon* (with Leonard Merrick), etc.

PHILLIPS UNIVERSITY. A non-sectarian co-educational institution, situated at East Enid, Okla. founded in 1907. The enrollment for 1921 was 1203. There were 53 members of its faculty. The assets including productive endowment are \$254,870. President, Isaac Newton McCash, LL.D.

PHILOLOGY, CLASSICAL. In 1921, classical scholarship in America suffered severe blows in the deaths of Charles E. Bennett, John M. Burnam, Samuel Ball Platner, and Tracy Peck. Accounts of their careers will be found elsewhere in this volume of the YEAR BOOK.

Late in the year *The Year's Work in Classical Studies, 1920*, appeared, at Bristol, England. The volume, smaller than usual, because, as the Preface says, "It is increasingly difficult to find scholars with leisure sufficient to enable them to write articles" for this work, contained surveys of the books and articles published in 1920 on Roman Law; Latin Palæography; Greek Literature; Latin Literature; Greek and Roman Religion; Grammar, Lexicography and Metric; and Italian Archaeology and Excavation.

At this point attention may be called to certain other means whereby one may, to a greater or less extent, control, in particular, the articles scattered in periodicals: the summaries or abstracts in *The Classical Weekly* (under the caption "Classical Articles in Non-Classical Periodicals"), *The Classical Quarterly*, *The Classical Review*, and the *Philologische Wochenschrift* (on all these see more, below).

To the *Loeb Classical Library* (see YEAR BOOKS for 1911-20) were added, on the Greek side, translations of Apollodorus, *Bibliotheca* (two volumes), Sir J. G. Fraser; in one volume, *Cylinmachus* and *Lycophron*, A. W. Mair, and the *Phænomena* of Aratus, G. R. Mair; Herodotus (the first two of four volumes), A. D. Godley; Lucian (the third of eight volumes), A. M.

Harmon; Menander, *The Principal Fragments*, Francis G. Allinson; Plato, vol. ii (containing the *Theaetetus* and the *Sophistes*), H. N. Fowler; Plutarch, *Lives* (the tenth of eleven volumes), B. Perrin; *Thucydides* (the third of four volumes), C. F. Smith; Xenophon, *Hellenica*, VI-VII, *Anabasis*, I-III, by C. L. Brownson. On the Latin side were added versions of Ausonius, vol. ii, H. G. Evelyn White; *Quintilian* (the first two of four volumes), H. E. Butler; *Sallust*, J. C. Rolfe. The name of Professor Allinson should be added to those given in the YEAR BOOK for 1920 as names of American contributors to this Library.

Quite apart from the *Loeb Classical Library*, there is very great activity in the publication of translations of parts of Greek and Latin literature. There is, however, no space to go into this in detail. Mention must, nevertheless, be made of the translation of all the works of Aristotle, which has been under way for some years, under the editorship of W. D. Ross (Oxford University Press). Five of the eleven volumes have been published. For notice of parts, by St. George Stock, see *The Classical Review*, xxxv. Two renderings of Lucretius must also be named. R. C. Trevelyan translated *Selections*, in verse (for a notice of the book, by C. Knapp, see *The Classical Weekly*, xv), and Sir Robert Allison translated the whole poem of Lucretius, in verse (for a notice of this, by Cyril Bailey, see *The Classical Review*, xxxiv). There has been, also, much interest in the effort to translate Horace. The London Society for the Promotion of Christian Knowledge has published the first of five volumes of a translation of the *Bibliotheca* of Photius, which will be useful to many.

In *The American Journal of Philology*, xlii, were published the following articles: "And and Or," W. H. Kirk (a discussion of passages, Latin and English, showing a copulative conjunction instead of the expected disjunctive conjunction); "Plato's Hedonism," T. D. Goodell ("an elevated doctrine, wholly consistent with the entire body of his ethical teaching"); "Clitarchus," R. B. Steele; "Petrarch's Africa," W. P. Mustard; "Comic Terminations in Aristophanes, Part V," C. W. Peppeler; "Chansons de Geste and the Homeric Problem," W. P. Shepard; "Vulgate Homeric Papyri," G. M. Bolling; "Word-Ends and Pauses in the Hexameter," E. H. Sturtevant; "Original Elements in Cicero's Ideal Constitution," C. W. Keyes ("in the constitution which he composed for a Roman Republic of the ideal future, he has shown far more originality than has ever been recognized"); "The Carmen Sæculare of Horace," Tenney Frank (an attempt, via a special study of *cæsura* in the poem, to determine which stanzas were sung by the boys alone, which by the girls alone, and which were sung antiphonally, and to prove who really are the chief deities of the poem).

The fourth number of this volume appeared on October 23, the ninetieth anniversary of the birth of Professor Basil Lanneau Gildersleeve, for forty years its editor; the whole volume was dedicated to him. There was also in this number an "Index Scoliodromicus," of thirteen pages, to Professor Gildersleeve's extrasyntactical contributions to this periodical, supplementing the "Indiculus Syntacticus," *American Journal of Philology*, xxxvi, which gave access to Professor Gildersleeve's very valuable notes in this periodical in the sphere of syntax.

Important reviews in this volume are those of Hans Fischl, *Ergebnisse und Aussichten der Homeranalyse*, by G. M. Bolling; of E. H. Sturtevant, *The Pronunciation of Greek and Latin*, by R. G. Kent; of Ulrich von Wilamowitz-Moellendorf, *Die Ilias und Homer*, by G. M. Bolling; of Charles Upson Clark, *Collectanea Hispanica*, by E. K. Rand (on this work, see below).

In this volume are to be found also summaries of several foreign periodicals: *Glotta*, x (1919), by Franklin Edgerton; *Hermes*, lv, 1-2 (1920), by H. L. Ebeling; *Philologus*, lxxvi, 1-2 (1920), by G. D. Kellogg; *Revue de Philologie*, xliii, 3-4 (1919), by W. P. Mustard; *Rheinisches Museum*, lxxiii, 1-2, by R. P. Strickler; *Rivista di Filologia e di Istruzione Classica*, xlviii, 1-4 (1920), by W. P. Mustard; *Romania*, xlv (1918-19), by G. C. Keidel.

From *Classical Philology*, xvi, we mention the following articles: "TA ΓΕΡΡΑ ΕΝΕΠΙΜΗΡΑΖΑΝ, Demosthenes xviii. 169," Charles D. Adams (the writer defends the manuscript reading, as cited in his title, and supports, with new arguments, an old explanation, that the γέρρα were the mats of which the shop-booths were made; when news came that Philip of Macedon had seized Elateia, these were burned, to clear the agora or market-place, that the militia might camp there under arms); "Land Registers of Western Asia under the Seleucids," W. L. Westermann; "Homer as the Poet of the *Thebais*," John A. Scott (the author rejects as worthless the evidence usually advanced as proving that Homer was recognized, as early as the seventh century B. C., as the author of the poem of the Epic Cycle called the *Thebais*); "The *Latina Colonia* of Livy xl. 43," Lily R. Taylor (Livy's reference to the establishment of a colony in 180 B. C. is right; the colony was established at Pisa, not at Luca, as scholars generally have supposed); "Studies in Greek Noun-Formation. Dental Terminations II. 1-3" (three articles), C. D. Buck; "Latin and Greek Etymologies," Francis A. Wood; "Two Sophoclean Cruxes," W. A. Heidel (the article includes a very interesting attempt to explain away, by a simple emendation, the famous crux in Sophocles, *Antigone* 4, due to the negatives); "The Tradition of Greek Arithmology," F. E. Robbins; "The Origin of the Cult of the Lares," G. J. Laing; "Dryden's *Lucian*," Hardin Craig; "The Uninundated Lands in Ptolemaic and Roman Egypt," W. L. Westermann; "On Vergil 'Eclogue' iv. 60-63," Duane Reed Stuart; "Ego Emphatic and Unemphatic, in Rises and Falls of Old Latin Dramatic Verse," E. A. Sonnenschein; "The Megarian Decrees," R. J. Bonner; "The Persian Army and Tribute Lists in Herodotus," A. G. Laird; "Callimachus' Epigram on the Nautilus," H. W. Prescott; "The Prytaneum in the Athenian Amnesty Law," Gertrude Smith; "Ablative of the Efficient," R. B. Steele.

The most important review in this volume is that of C. Autran, *Phéniciens, Essai de Contribution à l'Histoire Antique de la Méditerranée*, J. H. Breasted. Others are those of Eduard Norden, *Die Germanische Urgeschichte in Tacitus Germania*, G. J. Laing; of Theodor Le Roux, *De Richardo Bentley aique de Ratione eius Critica*, B. L. Ullman; of E. Kornemann, *Mausoleum und Tatenbericht des Augustus*, S. B. Platner; of E. Meyer, *Cæsars Monarchie und das Principat des Pompeius*, Tenney Frank; of Carlo Pascal, *La Critica dei Poeti Romani in Orazio*, B. L. Ullman; of W. R. Hardie, *Res Metrica*, Paul Shorey.

In *The Classical Journal*, xvi-xvii, appeared the following articles: "Cicero and the Agrarian Proposals of 63 B. C.," Evan T. Sage (the author holds that the purpose of the agrarian proposals of Rullus was to offer Cicero, then consul, a chance to relieve discontent and to improve economic conditions, but to offer the chance in a form that would court refusal, and so emphasize the unwillingness of Cicero and the senatorial party to do anything for the poor. There is an interesting argument, too, that, down into his consulship, Cicero was a democrat, though of a moderate sort; he became a conservative and upholder of the senate during his consulship); "Two Imperial Poets—Horace and Kipling," L. E. Lord; "The Latinisms in Shakespeare's Diction," Edith Frances Clafin; "An Antique League of Nations," C. H. Weller (an account of five new inscriptions, found at Epidauros, during excavations in 1916 and 1918, which throw light on the workings of the Achaean League); "Training Soldiers for the Roman Legion," S. E. Stout; "Archæology in Italy and its Contribution to Philology," G. J. Laing; "Some Features of Ovid's Style: III. Ovid's Methods of Ordering and Transition in the *Metamorphoses*," Frank J. Miller; "Ad Alpes," H. C. Nutting (a story, in Latin, of the travels of a fictitious Roman family, in the second century A. D.); "Catullus," H. J. Rose; "Trial by Jury in Athens and America," J. O. Lofberg; "The Humor of the Greek Anthology," J. W. Hewitt; "When Did Cæsar Defeat the Usipates and Teneteri?," A. T. Walker; "Cicero and his Critics," M. S. Slaughter.

Of the reviews in this volume the following are to be mentioned: of Aristides Phourides, *Kostas Palamas: Life Immobile* (poems, translated by a modern Greek, from the Greek of Kostas Palamas, the leading poet of contemporary Greece), W. S. Ebersole; of H. M. Hubbell, *The Rhetorica of Philodemus*, V. D. Hill; of H. G. Wells, *The Outline of History*, L. E. Lord; of T. D. Goodell, *Athenian Tragedy*, H. W. Prescott.

In *The Classical Weekly*, xiv-xv, appeared the following articles: "Lucretius 1.1-28: A Study in Interpretation and Punctuation," C. Knapp; "An Animal Weather Bureau," E. S. McCartney (a valuable running commentary on certain passages in Vergil, *Georgics*, Book 1, in which Vergil sets forth the weather signs derived in ancient times from animals); "Browning's Use of the Classics," Elisabeth Nitchie; "Some Illustrations of Jwenal's Third Satire," C. Knapp; "Æneid 2.783 and Æneid 3 Again: Æneas's Attitude Toward Visions," E. Adelaide Hahn (in Æneid 3, Æneas disregards what the shade of his wife Creusa had said to him, in Æneid 2.783, concerning Hesperia and Lydius Thybris, because he thinks of her as mortal: he heeds only visions from the gods); "An Illustration of Horace, *Sermones* 1.3," C. Knapp; "Some Spheres of Roman Originality," R. B. Steele; "Horace, *Sermones* 1.3.29-34: A Matter of Style," C. Knapp; "The English Essay and Some of its Ancient Prototypes," R. M. Gummere; "A Classification of the Similes in the *Argonautica* of Apollonius Rhodius," Eliza G. Wilkins; "A Classification of the Similes in Vergil's *Æneid* and *Georgics*," Eliza G. Wilkins; "Horace, *Epodes* 2.33-34," C. Knapp; "The Classical Element in the Poems of Rudyard Kipling," H. W. Gilmer; "Virgilian Determinism," A. S. Pease (a criticism—adverse—of an article by Tenney Frank, "Epi-

curean Determinism in the *Æneid*," *American Journal of Philology*, xl; to Professor Pease, as to most scholars, the dominant philosophical influence in the *Æneid* is Stoicism); "New Light on Some Problems of Ancient History," Ida Carleton Thallon (a study of the light thrown on our conceptions of ancient history by excavations at various points in Greece and Italy, especially at Sparta, and at points in Etruria); "The Tragedy of Latinus," Catharine Saunders (in Æneid vii-xii we have the tragedy of the House of Latinus, balancing the tragedy of Dido in Æneid i-vi); "Prometheus Bound of Æschylus," W. K. Prentice; "Homer and Recent Discoveries," A. Shewan (a fine article, on the light thrown by the excavations of the last fifty years on Homer and the study of Homer); "On the Frequency of Short Words in Verse" (Greek, Latin, and English), E. H. Sturtevant.

Of reviews in these volumes the following may be mentioned: of Franz Studnicska, *Das Bildnis Menanders*, W. N. Bates; of J. Geffcken, *Die Griechische Tragödie*, and of A. Körte, *Die Griechische Komödie*, Edward Fitch; of Ulrich von Wilamowitz-Moellendorf, *Die Ilias und Homer*, S. E. Bassett; of R. O. Jolliffe, *Phases of Corruption in Roman Administration in the last Half-Century of the Roman Republic*, Ethel H. Brewster; of Sir Thomas L. Heath, *Euclid in Greek, Book I. With Introduction and Notes*, M. W. Humphreys, and David Eugene Smith; of Robert Elliott, *Transition in the Attic Orators*, LaRue Van Hook; of W. M. Caldwell, *Hellenic Conceptions of Peace*, W. K. Prentice; of Agnes Carr Vaughan, *Madness in Greek Thought and Custom*, D. M. Robinson; of F. A. Marshall, *Discovery in Greek Lands. A Sketch of the Principal Excavations and Discoveries of the Last Fifty Years*, D. M. Robinson; of Henry Jewell Bassett, *Macrinus and Diadumenianus*, A. E. R. Boak; of Rudyard Kipling, Charles Graves, and E. Godley, etc., *Q. Horati Flacci Carminum Liber Quintus*, G. D. Kellogg; of Gordon J. Laing, *The Genitive of Value in Latin and Other Constructions with Verbs of Rating*, A. L. Wheeler; of Ivan M. Linforth, *Solon the Athenian*, W. S. Ferguson; of A. Diels, *Antike Technik*, M. W. Humphreys; of James T. Allen, *The Greek Theater of the Fifth Century Before Christ*, D. M. Robinson; of A. Gudeman, *P. Cornelii Taciti De Germania*, B. L. Ullman; of R. R. Marett, *Psychology and Folk-Lore*, H. L. Ebeling; of Frederick Poulsen, *Delphi*, D. M. Robinson; of John R. Crawford, *De Bruma et Brumalibus Festis*, H. W. Wright; of Alice Hill Byrne, *Titus Pomponius Atticus: Chapters of a Biography*, William D. Gray.

The Transactions of the American Philological Association, li, contained the following papers, read before the Association, at Baltimore, in December, 1920: "Thermopylæ and Artemisium," W. K. Prentice; "The Alleged Conflict of the Accents in Latin Verse," R. G. Kent; "Prorsus," J. C. Rolfe (an interesting study of the Latin word *prorsus*, both as an adjective and as an adverb); "The Tauric Maiden and Allied Cults," C. A. Manning; "Bellerophon's Tablet and the Homeric Question in the Light of Oriental Research," N. Schmidt; "Prudentius and Christian Humanism," E. K. Rand; "Spontaneous Generation and Kindred Notions in Antiquity," E. S. McCartney; "The Worship of Augustus in Italy During his Lifetime," Lily Ross Taylor; "The Exposure of

Infants at Athens," LaRue Van Hook (the author holds that there is no sound evidence for the prevalence of the exposure of new-born infants in Athens of the classical period); "The Juvenile Works of Ovid and the Spondaic Period of his Metrical Art," R. S. Radford; "The *Ἀρχιλοχοί* of Cratinus and Callias ὁ λακκόπλουτος," R. H. Tanner.

As in the YEAR BOOK for 1917-20, attention is called to the fact that in the *Bulletins* or *Studies* published under the auspices of various Universities papers appear that fall within the purview of this article.

In the *Proceedings of the American Academy of Arts and Letters*, lvi, appeared "Anaximander's Book: The Earliest Known Geographical Treatise," W. A. Heidel. For a notice of the book, by C. W. E. Miller, see *American Journal of Philology*, xlii. In the *Transactions of the Connecticut Academy of Arts and Sciences*, xxiv, Charles Upson Clark published *Collectanea Hispanica*, an account of 214 manuscripts, photographed and studied by him in Spain, examples of the Visigothic or Spanish script (for eulogistic reviews of this very important book, see E. K. Rand, *American Journal of Philology*, xlii, and A. C. Clark, *The Year's Work in Classical Studies*, 1920). In the *University of California Publications in Classical Philology*, v, appeared "Notes on the *Silvæ* of Statius, Book V," W. A. Merrill.

Harvard Studies in Classical Philology, xxxii, contained three articles: "The Commentary on *Æschylus's Prometheus* in the Codex Neapolitanus," H. W. Smyth; "Prophecy in the Ancient Epic," C. H. Moore (the article deals with prophecy in Homer, the *Argonautica* of Apollonius Rhodius, the *Æneid* of Vergil, the *Punica* of Silius Italicus, the *Argonautica* of Valerius Flaccus, and the *Thebais* of Statius); "Studies in the Minoan Hieroglyphic Inscriptions. I. The Phæstos Whorl," C. Burridge (the author believes that it is now possible to read many of the Minoan hieroglyphic inscriptions, including that on this "Phæstos Disk," and hopes soon to publish a book on this theme).

In the *University of Illinois Studies in Language and Literature*, v, appeared "Ysopet-Avionnet: The Latin and French Texts," edited by Kenneth McKenzie and William A. Oldfather. Volume vi contained "M. Tulli Ciceronis De Divinatione, Liber Primus," edited, with notes, by Arthur Stanley Pease; this is the first English commentary, since 1828, on any part of this important work of Cicero.

In the *University of Missouri Studies*, iii, *Social Science Series*, Lucile Craven published "Antony's Oriental Policy until the Defeat of the Parthian Expedition." In *Public Lectures by Members of the University of Pennsylvania, 1919-20*, vii, there was an article entitled "Going to Church in Ancient Rome," G. D. Hadzsits (a study of Roman modes of worship, at altars and in temples). On these lectures see YEAR BOOK for 1920.

In the last days of the year announcement was made that, in January, 1922, there would be published at the University of Iowa the first number of the *Philological Quarterly*, a journal to be devoted to the publication of texts, notes, reviews, and original scholarly articles in the fields of English, Romance, Germanic, Latin, Greek, and Comparative Literature. The contributors are not

to be limited to members of the faculty of the University of Iowa.

From *The Classical Quarterly*, xv, we mention the following articles: "Vindicatæ Platonis III," John Burnet (a discussion of the text in various passages of the *Philebus*, the *Symposium*, and the *Phædrus*); "The Fragments of Lucilius IX. on *EI* and *I*," F. H. Colson; "Notes on Lucretius," Cyril Bailey; "Case-Usage in the Greek of Asia Minor," D. E. Evans; "The Earliest Narrative Poetry of Rome," Ethel Mary Stuart (the author emphasizes the evidence for the existence, prior to Livius Andronicus, of a school of native Italian poetry, consisting of short quasi-lyrical eulogies and dirges, poems of a mythological religious character, half-legendary, half-historical lays, and, finally, poems dealing with authenticated historical characters. She thus harks back to the position of Niebuhr and Macaulay, set forth so interestingly by the latter in the Preface to his *Lays of Ancient Rome*); "The MSS of Callimachus' Hymns," M. T. Smiley; "Caesar's Funeral in Lucan VIII. 729-735," B. L. Ullman; "Isocrates," M. L. W. Laistner; "On Eth. Nic. I. c. 5," C. M. Mulvany (a lengthy discussion of a passage in the *Nicomachean Ethics* of Aristotle); "Nuances in Plautine Metre," F. W. Hall; "Plato's Simile of Light. Part I. The Similes of the Sun and the Line," A. S. Ferguson; "Greek Colour-Perception," M. Platnauer; "The Singular *Nos* in Vergil," E. H. W. Conway (a study of the ways in which Vergil uses the first person plural pronoun with singular meaning. The author applied to Vergil the results of a study of the same matter in Cicero, especially in his *Letters*, published by R. S. Conway, in *Cambridge Philological Society Transactions*, Volume V, Part 1, 1899. For a convenient summary of those views, see R. S. Conway, *New Studies of a Great Inheritance*, first paper).

The Classical Quarterly continued to give summaries of the contents of various periodicals, but from July on it gave such summaries only of "original work." The periodicals thus summarised were: *American Journal of Philology*, (*Berliner Philologische Wochenschrift*, *Bodleian Quarterly Record*, *Classical Philology*, *The Classical Weekly*, *Glotta*, *Hermathena*, *Hermes*, *Indogermanische Forschungen*, *Mémoires de la Société de Linguistique de Paris*, *Mnemosyne*, *Rassegna Italiana*, *Revue de Philologie*).

With the beginning of Volume xxxv of *The Classical Review* the policy of this periodical changed; such articles as appear in it are to be devoted rather to the pedagogy of the classics, and to the popularisation of the ancient humanities. Hence we can mention here only the following: "The Homeric Hymns—XIV, XV," T. L. Agar; "The Rhesus," A. C. Pearson (the author concludes that the internal evidence makes against ascribing the play to Euripides; the external evidence is inconclusive); "The Technique of Vergil's Verse," C. E. S. Headlam; "Virgil's 'Eclogues': A Metrical Clue to the Order of Composition," Alexander J. D. Porteous.

The reviews in this volume, though brief, are often important: we mention those of Gilbert Norwood, *Greek Tragedy*, H. J. Rose; of A. E. Housman, *M. Manili Astronomicum Liber Quartus*, H. W. Garrod; of W. R. Hardie, *Res Metrica*, D. S. Robertson; of J. E. Sandys, *Latin Epigraphy*, W. M. Calder; of A. M. Andreades, *A History of Greek Public Finance*, M. Cary; of J.

Toutain, *Les Cultes Païens dans l'Empire Romain, Tome III*, Cyril Bailey (the volume deals with Cultes Indigènes Nationaux et Locaux, in North Africa, Spain, and Gaul); of Vittorio Macchioro, *Zagreus, Studi sull' Orfismo*, A. W. Pickard-Cambridge; of J. Sargeant, *The Trees, Shrubs, and Plants of Virgil*, H. P. Chalmers; of J. Carcopino, *Vergile et les Origines d'Ostie*, H. E. Butler; of H. E. Butler, *The Sixth Book of the Æneid*, R. S. Conway.

A new department of *The Classical Review* was instituted in this volume. It is devoted to brief summaries of selected materials, mostly reviews, from various periodicals, under such heads as Archaeology, Art, Epigraphy, Geography, History, Law, Lexicography, Linguistics, Metric, Numismatics, Palseography and Papyri, Greek Literature, Latin Literature, Philology, Philosophy, Religion, and Mythology, Science, Textual, Topography. The periodicals thus treated include *The Classical Weekly*, *Deutsche Literaturzeitung*, *Göttingische Gelehrte Anzeigen*, *La Musée Belge*, *Neue Jahrbücher für das Klassische Alterum*, *Philologische Wochenschrift*, *Wochenschrift für Klassische Philologie*.

Two other English periodicals, the *Journal of Hellenic Studies*, and the *Journal of Roman Studies*, contain many articles of wide appeal. From the latter, viii, we mention, for example, "A Great Agricultural Emigration from Italy," W. E. Heitland; "Vespasian's Reconstruction of Spain," R. J. McElderry; "Studies in the Roman Province of Galatia," W. M. Ramsay.

Father A. F. Geyser, S. J., has published *Musa Americana. Fourth Series* (see YEAR BOOKS for 1919-20). This is entitled "Vicus Desertus," and is a Latin version, in hexameters, of Goldsmith's *Deserted Village*. A review of it, by G. D. Kellogg, will appear in *The Classical Weekly*, xv. A good deal of Latin is being written in America, not only in verse, but also in the form of plays, and, in the case of H. C. Nutting's *Ad Alpes* (see above), of a story. Such material may be found especially in *The Classical Journal* and *The Classical Weekly*.

As was noted in the YEAR BOOK for 1920, the work of younger American scholars is best seen in the dissertations presented by them to various Universities in partial fulfillment of the requirements for the degree of Doctor of Philosophy. The Library of Congress published during the year three volumes giving the list of American Doctoral Dissertations printed in 1917, 1918, 1919. To the list given in the last YEAR BOOK may be added: *A Study in the Commerce of Latium from the Early Iron Age through the Sixth Century B. C.* (Bryn Mawr), Louise E. W. Adams; *The Stylistic Influence of the Second Sophistic on the Panegyric Sermons of St. John Chrysostom: A Study in Greek Rhetoric* (Catholic University of America), Thomas E. Ameringer; *The Use of ΕΤΕΙΕ in Fifth-Century Literature* (Chicago), J. W. Beardslee; *The Indicative of Indirect Question in Latin* (Chicago), Alice Freda Bräunlich; *Roman Craftsmen and Tradesmen of the Early Empire* (Pennsylvania), Ethel H. Brewster; *Gaius Verres: An Historical Study* (Cornell), F. H. Cowles; *The Spurious Speeches in the Lycaean Corpus* (Bryn Mawr), Angela C. Darkow; *A Study of the Impersonal Passive of the Ventum Est Type* (Pennsylvania), Alice A. Deckman; *The Supplementary Participle in Herodotus* (Wisconsin), E. J. Filbey; *The Lupercales*

(Columbia), Alberta Mildred Franklin; *Plato's View of Poetry* (Harvard), W. C. Greene; *Studies in Stichomythia* (Chicago), J. L. Hancock; *Notes on the Works and Days of Hesiod* (Chicago), H. M. Hays; *The Pre-Hellenistic Stage in the Evolution of the Literary Art at Rome* (Wisconsin), E. A. Hooton; *The Georgic: A Contribution to the Study of the Vergilian Type of Didactic Poetry* (Johns Hopkins), Lilly Marie Loretto; *The Tradition of the Latin Accent* (Virginia), J. S. McLemore; *On the Second Book of Aristotle's Poetics and the Source of Theophrastus' Definition of Tragedy* (Harvard), A. S. McMahon; *The Cynegetica of Nemesianus* (Cornell), Donnis Martin; *Laus Pisonis* (Cornell), Gladys Martin; *The Consolations of Death in Ancient Greek Literature* (Catholic University of America), Sister Mary Evaristus Moran; *The Use of the Adjective as a Substantive in Horace* (Pennsylvania), A. L. Myers; *The Plebs in Cicero's Day: A Study of Their Provenance and of Their Employment* (Bryn Mawr), Marion Edwards Park; *Lions in Greek Art* (Bryn Mawr), Eleanor Ferguson Rambo; *De Catulli Carmine Sexagesimo Quarto Quaestiones Diversae* (Columbia), L. L. Sell; *A Study of Piety in the Greek Tragic Chorus* (Pennsylvania), H. V. Shelley; *A Study of Exposition in Greek Tragedy* (Radcliffe), Evelyn Spring; *Athenian Political Commissions* (Chicago), Frederick D. Smith; *The Mythology of Vergil's Æneid According to Servius* (New York), J. P. Taylor; *Georgius Gemistus Pletho's Criticism of Plato and Aristotle* (Chicago), John Wilson Taylor; *Madness in Greek Thought and Customs* (Michigan), Agnes Carr Vaughan; "Know Thyself" in Greek and Latin Literature (Chicago), Eliza G. Wilkins; and *The Sacra Idulia in Ovid's Fasti: A Study of Ovid's Credibility in Regard to the Place and the Victims of this Sacrifice* (Pennsylvania), H. W. Wright.

With the year 1920 the periodical known as the *Wochenschrift für Klassische Philologie* came to an end. It had been published at Berlin. It was combined with the *Berliner Philologische Wochenschrift*, and the name of that periodical was changed to *Philologische Wochenschrift*, xli. This is an exceedingly valuable periodical. The reviews, numerous and as a rule detailed, of German, English, French, Italian, and American books and articles constitute its main business. Under the caption "Auszüge aus Zeitschriften," were given abstracts—very brief—of articles in other classical periodicals: *American Journal of Archaeology*, *Archäologischer Anzeiger*, *Anzeiger für Schweizer Altertumskunde*, *Archiv für Geschichte der Philosophie*, *Archiv für Papyrusforschung*, *Archiv für Religionswissenschaft*, *Bayerische Akademie der Wissenschaften*, *Berliner Museum*, *Bulletin de Correspondance Hellénique*, *Byzantinische Zeitschrift*, *Deutsche Rundschau*, *Germania*, *Glotta*, *Geographical Journal*, *Hermes*, *Indogermanische Forschungen*, *Internationale Monatsschrift*, *Internationales Archiv für Ethnographie*, *Jahrbuch des Deutschen Archäologischen Instituts*, *Jahresbericht des Philologischen Vereins zu Berlin*, *Journal des Savants*, *Journal of Hellenic Studies*, *Klio*, *Mitteilungen aus der Historischen Literatur*, *Mitteilungen des Deutschen Archäologischen Instituts*, *Mémoires de la Société de Linguistique de Paris*, *Monatschrift für Höhere Schulen*, *Neue Jahrbücher*, *Philologus*, *Revue Archéologique*, *Revue des Études Grecques*, *Revue de Philologie*, *Rheinisches Museum*, *Sokrates*, *The Classical*

Review, The Classical Weekly, The English Historical Review, Zeitschrift der Deutschen Morgenländischen Gesellschaft, Zeitschrift für die Neueste-Wissenschaft, Zeitschrift für Vergleichende Sprachforschung, etc. Another valuable department, entitled "Resensions-Verzeichnis Philologischer Schriften," gives references to reviews of books in other magazines, with some indication of the nature of the review, as favorable or the reverse.

In the field of history, much work is being done. Works such as Rosenberg, *Einleitung und Quellenkunde zur Römischen Geschichte*, and B. W. Henderson, *The Study of Roman History*, aim to go to the very fundamentals. An essay dealing with the scope and method of historical study is that by W. McDougall, *Anthropology and History*. In the *American Historical Review*, xxvii, John R. Knipping, in "German Historians and Macedonian Imperialism," after studying the spirit and the degree of historical accuracy which historians of the nineteenth and twentieth century in Germany reflected in their treatment of the age of Macedonian expansion under Philip II (358-338 B. C.), concludes that their studies are in "crying need of revision." In a periodical entitled *History*, in October, 1920, there appeared an article, "Some Recent Books on Roman History," by N. H. Baynes, which formed a general review of the subject. In each number of the *American Historical Review* there are notes on new books and articles in the field of ancient history. Particularly interesting, in 1921, were the articles by classical scholars in which attention was called to the inaccuracies and the bias, in matters of ancient history, of H. G. Wells, *Outline of History*. See especially the review, by L. E. Lord, in *The Classical Journal* (see above), and a pamphlet, *Mr. Wells as Historian*, by A. W. Gomme.

Reference was made in the YEAR BOOK for 1920 to C. Autran, *Phéniciens: Essai de Contribution à l'Histoire Antique de la Méditerranée*. For an elaborate review (unfavorable) of the book, by J. H. Breasted, see *Classical Philology*, xvi.

Other books dealing with the earliest history of Europe, and more especially of the Mediterranean Basin, are *Pre-History*, M. C. Burkitt (a study of early cultures in Europe and the Mediterranean Basin); D. Fimmen, *Die Kretisch-Mykenische Kultur*. Books dealing with various aspects of Greek and Roman history, within the historical period, are *Die Ionische Kolonisation*, Fridrich Bilabel (an investigation, on the basis of all literary and epigraphical material available, of the political and religious organization of the Ionic colonies and their relations to the mother cities); *A Short History of Rome to 685 A. D.*, A. E. R. Boak; *A Short History of Antioch*, E. S. Bouchier; Georg Brandes, *Cajus Julius Cæsar, Vol. I*; E. Cavaignac, *Histoire de l'Antiquité* (index volume); G. De Sanctis, *Storia dei Romani. Vol. III: L'Età delle Guerre Puniche*; G. Ferrero, *La Ruine de la Civilisation Antique* (the author holds that the final destruction of senatorial authority under Septimius Severus was the catastrophe from which the decline of the Empire began. He saw in the Great War a similar catastrophic breakdown of civilization. But to Ferrero monarchical authority seems the only legitimate authority); J. Geffcken, *Das Christentum im Kampf und Ausgleich mit der Griechisch-Römischen Welt* (third edition);

Johannes Hasebroek, *Untersuchungen zur Geschichte des Kaisers Septimius Severus*; C. Julian, *Histoire de la Gaule. V. La Civilisation Galloromaine. Etat Matériel*; E. Kornemann, *Mausoleum und Tatenbericht des Augustus*; J. Lesquier, *L'Armée Romaine d'Égypte*; E. Norden, *Die Germanische Urgeschichte in Tacitus Germania* (highly praised by G. J. Laing, in *Classical Philology*, xvi); Ettore Pais, *Fasti Triumphales Populi Romani*, and *Storia Critica di Roma durante i Primi Cinque Secoli, Volume IV*; L. Pareti, *Storia di Sparta Arcaica, Volume I* (the book deals with the period prior to the conquest of Messenia); T. Petersson, *Cicero: A Biography* (much praised, by various reviewers); A. Rostagni, *Giuliano l'Apostata* (a critical study, with translations and annotations, of Julian's political and satirical writings); C. H. St. L. Russell, *The Tradition of the Roman Empire* (the author finds the heart of European history in Rome; starting, then, with "The Making of the Roman Empire," he traces the history of Europe down to the present day); Seeck, *Geschichte des Untergangs der Antiken Welt* (the sixth and last volume); J. A. K. Thomson, *Greeks and Barbarians*; C. Veith, *Der Feldzug von Dyrrachium zwischen Cæsar und Pompeius*, and *Die Feldzüge des C. Julius Cæsar Octavianus in Illyrien in den Jahren 35-33 v. Chr.*; A. von Hofmann, *Das Land Italien und Seine Geschichte*.

In the general field of ancient life, in its various aspects, culture, law, mythology, religion, and the like, we name D. A. Mackenzie, *Myths of Crete and Pre-Hellenic Europe*; K. H. E. DeJong, *Das Antike Mysterienwesen in Religionsgeschichtlicher, Ethnologischer, und Psychologischer Bedeutung* (a thoroughly revised and enlarged edition); C. Robert, *Die Griechische Heldensage. Die Nationalhelden* (Book 2 of Volume ii of L. Preller, *Griechische Mythologie*, fourth edition); L. Bréhier and Mgr. Batiffol, *Les Survivances du Culte Impérial Romain, à-propos des Rites Shintoïstes* (this study, which grew out of the proposal to require officials in Japan to conform to the religion of the Emperor, treats the manner in which the Christians met a similar difficulty in the fourth century. It gives a masterly account of the Imperial cult in Rome and the relation of the Christians thereto); S. Eitrem, *Beiträge zur Griechischen Religionsgeschichte*; P. Roussel, *Les Cultes Égyptiens à Delos du III^e au 1^{er} Siècle av. J. C.* (a collection of all the epigraphical material that has to do with the cult of the Egyptian gods in Delos from the third to the first century B. C.); P. Stengel, *Die Griechischen Kultusaltertümer* (third edition: the book forms Volume v, Part 3 of Müller, *Handbuch der Klassischen Altertumswissenschaft*); Margaretha Bieber, *Die Denkmäler zum Theaterwesen im Altertum* (a well-illustrated study of the extant remains of Greek and Roman theatres); G. Beseler, *Beiträge zur Kritik der Römischen Rechtsquellen, Part IV*; G. Busolt, *Griechische Staatskunde* (third edition); H. Diels, *Antike Technik* (second edition: for a review, by M. W. Humphreys, see *The Classical Weekly*, xv); F. Friedländer, *Darstellungen aus der Sittengeschichte des Roms* (ninth edition; four volumes have appeared); W. E. Heitland, *Agri-cola: A Study of Roman Agricultural Life in the Græco-Roman World from the Point of View of Labour*; B. Schwartz, *Die Öffentliche und Private Urkunde im Römischen Ägypten*.

Pauly-Wissowa, *Real-Encyclopädie der Klassischen Altertumswissenschaft*, an enormous undertaking, time-consuming and expensive, has been making progress. In 1914-21, three and a half volumes, IX, X, XI (Part i), and I A, were published. These cover articles from "Hyaia" to "Komödie," and from "Ra" to "Sarmantho." Because of delays in the preparation of various articles the "Zweite Reihe" of volumes, to be numbered I A, etc., and beginning with the article "Ra," on the River Volga, was started. Supplementband III, covering "Aachen" to "Ad Iuglandem," was published in 1918. These volumes form our latest, and, on the whole, best dictionary of classical biography and geography and of antiquities, in certain phases. They contain comprehensive treatments of such themes as "Hymnos," "Jagd" (hunting), "Iambographien," "India," "Industrie und Handel," "Institutionen," "Interdictum," "Isis," "Isokrates," "Itinerarien," "Iulius" (Caesar), "Iulius (Augustus)," "Iulius (Tiberius)," "Iurisprudentia," "Kalender," "Karten" (maps and plans), "Katabasis" (the descent to the lower world), "Komödie," "Reiterei," "Res Publica," "Sæculares Ludi," "Römische Haus," "Salamis," and "Salustius."

The first volume of Sir John Edwin Sandys's invaluable book, *A History of Classical Scholarship*, in a third edition, carefully revised, covers the period from the sixth century B. C. to the end of the Middle Ages. So, too, Professor Sandys's *Companion to Latin Studies* reached a third edition. In this, the articles on "Topography" and "Flora," in particular, have been carefully revised; the bibliographies have been enlarged.

In the great field of Greek and Latin literature much good work is being done. The study of Homer loses none of its attractiveness. In the *Jahresbericht für Altertumswissenschaft*, No. 182, there was a long survey, by D. Mülher, of the literature on Homer, the "höhere Kritik" for 1912-19. The Unitarians, those who hold that one man composed the *Iliad* and the *Odyssey*, are having their innings in the United States and in England. Especially prominent here in the former country are Professor John A. Scott, of Northwestern University, and Professor Samuel E. Bassett, of the University of Vermont. Opposed to them is Professor G. M. Bolling, of Ohio State University. Professor Scott writes frequently on Homer in *Classical Philology* and *The Classical Journal*. His book, *The Unity of Homer*, forms Volume 1 of the Sather Classical Lectures (University of California Press, 1921). These lectures have been given annually, for some years, at the University of California, but they were not previously published. In the paragraph above dealing with *The Classical Weekly* reference was made to Professor Bassett's review of Wilamowitz, *Die Ilias und Homer*. In England, Dr. Walter Leaf, classical scholar and banker, has recently recanted, and approached closely the position of the Unitarians. Active in England in support of the Unitarian position is A. Shewan (see the paragraphs above on *The Classical Weekly*). Other works on Homer are T. W. Allen, *The Homeric Catalogue of Ships*; W. Bacher, *De Pausaniae Studii Homericis*; Paul Cauer, *Grundfragen der Homerkritik* (third edition); E. Drerup, *Homersche Poetik*, dealing with "Prinzipien und Methoden der Homererklärung"; G. Finsler, *Homer:*

Zweiter Teil, Inhalt und Aufbau der Gedichte, second edition (for a review, by S. E. Bassett, see *The Classical Weekly*, xiv); F. Stürmer, *Die Rhapsodiender Odyssee*. The famous Ameis-Hentze commentary on the *Odyssey* has reached a thirteenth edition, by P. Cauer.

Other works dealing with special authors are P. Petersen, *Geschichte der Aristotelischen Philosophie im Protestantischen Deutschland*; R. J. Walker, *Euripidean Fragments*, and *The Macedonian Tetralogy of Euripides* (a discussion of the fragments of the *Alcmena*, the *Temenus*, the *Temenides*, and the *Archelaus* of Euripides); Giorgio Pasquali, *Orazio Lirico*; E. Stemplinger, *Horas im Urteil der Jahrhunderte*; R. Laqueur, *Der Jüdische Historiker, Flavius Josephus*; Henry Dwight Sedgwick, *Marcus Aurelius* (a biography, told mainly through Marcus's own Letters, together with some account of the Stoic religion, and an exposition of the Roman government's attempt to suppress Christianity during Marcus's reign); R. Heinze, *Ovids Elegische Erzählungen*; Luise Reinhardt, *Die Anakoluthe bei Platon*; R. J. Walker, *Sophocles and Sophoclean Fragments*; J. N. Figgis, *The Political Aspects of St. Augustine's "City of God"*; E. Schwartz, *Das Geschichtswerk des Thukydides*; R. S. Conway, *New Studies of a Great Inheritance* (contains papers on Cicero, Horace, Vergil). The *Historia Augusta* received some attention; in *Hermes*, lv, appeared E. Hohl, "Über den Ursprung der Historia Augusta," and J. Geffcken, "Religionsgeschichtliches in der Historia Augusta."

In the *Jahresbericht für Altertumswissenschaft*, No. 183, there was a survey of work on the Roman fable-writer Phædrus and on Roman fable-literature in general, 1909-17, by H. Draheim; in No. 184, there was a similar survey of the literature on Sallust, for 1899-1918, by A. Kurfess.

New text editions of various classical authors have appeared. Thus, in the Oxford Classical Text Series, A. C. Clark brought out a revised version of his text of certain speeches of Cicero. To the same Series, C. F. Walters and R. S. Conway contributed the second volume of their text of Livy (Books vi-x). A new text edition of Vergil, an editio maior, by G. Janell, has been brought out in the Teubner Series.

Some annotated editions of importance must be noted. A. E. Housman has brought out his commentary on the fourth book of Manilius, *Astronomica*. Note also Fr. Kraner and W. Dittenberger, edition of Caesar, *De Bello Gallico*, volumes 2 and 3, seventeenth version, by H. Meusel; J. Van Leeuwen, *Menander, Fragments*, third edition; M. Rothstein, *Sextus Propertius*, second edition; K. Müllenhoff, *Die Germania des Tacitus*, new edition by M. Roediger; and the first volume of a revision (the fifth) by J. Steup, of J. Classen's famous edition of *Thucydides*.

In connection with more general works on Greek and Latin literature, it may be noted that of W. von Christ, *Geschichte Der Griechischen Literatur*, edited by W. Schmidt and Oscar Stählin, Part 2 of edition six, First Half, appeared (this deals with the earlier portion of the post-classical period of Greek literature, from 320 B. C. to 100 A. D.). Of M. Schanz, *Geschichte der Römischen Literatur*, Volume iv, Part 2, appeared (this deals with the Latin literature of the fifth and sixth centuries A. D.). W. S. Teuffel, *Geschichte der Römischen Literatur*, reached its seventh edition.

More general works to be mentioned are J. Burnet, *Early Greek Philosophy* (third edition); Thomas Dwight Goodell, *Athenian Tragedy: A Study of the Popular Art*; T. Whittaker, *The Neo-Platonists* (second edition), with a Supplement on the Commentaries of Proclus.

In the field of linguistics, grammar, and lexicography, we mention H. Birt, *Indogermanische Grammatik: Teil II. Der Indogermanische Vokalismus*; A. Meillet, *Linguistique Historique et Linguistique Générale*. The second edition of A. Meillet, *Aperçu d'une Histoire de la Langue Grecque*, was published. Professor W. M. Lindsay, of St. Andrews University, Scotland, well known as the editor of texts of Plautus, Martial, Festus, and Nonius Marcellus, has been interesting himself and others in the glosses. See especially some remarks of his in *The Classical Review*, xxxv, 112-113. He published also, in 1921, two books in this field: *The Corpus, Epinal, Erfurt*, and *Leyden Glossaries*, and *The Corpus Glossary* (Oxford University Press, Cambridge University Press).

In the field of metre we mention W. R. Hardie, *Res Metrica* (reviewed by Paul Shorey, *Classical Philology*, xvi, and D. S. Robertson, *The Classical Review*, xxxv), and Ulrich von Wilamowitz-Moellendorf, *Griechische Verskunst*.

In the field of palaeography, a very honorable place is occupied by C. U. Clark's *Collectanea Hispanica* (see above, in the reference to the *Transactions of the Connecticut Academy of Arts and Sciences*, xxiv). Other works or articles deserving of mention are A. Adler, *Catalogue Supplémentaire des Manuscrits Grecs de la Bibliothèque Royale de Copenhague*; N. A. Bees, *Verzeichnis der Griechischen Handschriften des Peloponnesischen Klosters Mega Spilæon*, Vol. I.; J. Bell, *Greek Papyri in the British Museum. V*; G. M. Bolling, "Vulgate Homeric Papyri," in *American Journal of Philology*, xlii; R. Fawtier, "List of Additions to Latin Manuscripts in the John Rylands Library," in the *Bulletin of the John Rylands Library*, January; S. Gaselee, *The Greek Manuscripts in the Old Seraglio in Constantinople*; V. Gardthausen, *Handbuch der Wissenschaftlichen Bibliothekskunde*, 2 vols.; Julius P. Gilson, *Students' Guide to the Manuscripts in the British Museum*; B. P. Grenfell, *The Present Position of Papyrology*, in the *Bulletin of the John Rylands Library*; B. P. Grenfell, "The Value of Papyri for the Textual Criticism of Extant Greek Authors," in *Journal of the Hellenic Society*; B. P. Grenfell and A. S. Hunt, *The Oxyrhynchus Papyri, Part xiv*; F. G. Kenyon, "Greek Papyri and their Contribution to Classical Literature," in *Journal of Hellenic Studies*, xxxix (1919: the article concludes with a bibliography of the most important publications of literary papyri down to 1916); Hans Kreller, *Erbrechtliche Untersuchungen auf Gräcoägyptischen Papyruskunden*; J. Maspero, *Papyrus Grecs d'Époque Byzantine. III*; A. Ments, *Geschichte der Griechisch-Römischen Schrift bis zur Erfindung des Buchdrucks mit Beweglichen Lettern. Ein Versuch*; P. M. Meyer, *Juristische Papyri. Erklärung von Erkunden zur Einführung in die Juristische Papyruskunde, und Griechische Texte aus Ägypten. I. Papyri des Neutestamentlichen Seminars der Universität Berlin. II. Ostraka der Sammlung Deissmann*; L. Traube, *Vorlesungen und Abhandlungen. Vol. III* (this volume contains Traube's

"Kleine Schriften"); Hugh G. Evelyn White, *The Sayings of Jesus from Oxyrhynchus*, Edited with Introduction, Critical Apparatus and Commentary.

It may be noted here that of W. Dittenberger, *Sylloge Inscriptionum Graecarum*, third edition, Volume iii and part of Volume iv appeared.

Finally, we may state that Mr. Edward Lucas White, who is not only a classical scholar and teacher, but a novelist of distinction, published during the year a story entitled *Andivius Hedulo*, *Adventures of a Roman Nobleman in the Days of the Empire (Commodus)*. Mr. White had previously published two volumes of stories of classical content: *The Unwilling Vestal* and *The Song of the Sirens and other Stories* (for notices of these books, by W. B. McDaniel, see *The Classical Weekly*, xii, xiii).

PHILOLOGY, MODERN. The most striking feature of the year 1921 from the general philological point of view, is the great revival of interest in the study of language and its attendant problems. It seems that many Europeans at least have sought solace from the sufferings and disillusionments of war in the inspiration furnished by President Wilson's cherished theory of self-determination according to linguistic and racial unity. This has been a most vital and stirring problem with all of these peoples more or less from almost time immemorial. A characteristic attitude is that of Camille Jullian, the brilliant and very learned historian of Gaul, who, in his preface to Dottin's *La Langue Gauloise* which was mentioned in these pages last year, inveighs against the imperialistic Romans for having wiped out, without hardly leaving a trace, a language "qui a servi de lien et de communion aux pensées et au commerce de près de cent millions d'hommes" as a consequence of which catastrophe, "un des plus nobles chapitres de l'esprit humain nous sera éternellement caché."

Encouraged by this general tendency some scholars have been venturesome enough to return to the investigation of fundamental problems of comparative linguistics. Among these is Q. Meillet, one of the most original and versatile minds that has ever appeared in the domain of philology. In a volume of essays entitled *Linguistique Historique et Linguistique Générale* (Paris*) this comprehensive genius has laid the basic principles for the reconstitution of the methodology of general linguistics. In his opinion, all languages show common tendencies, general similarities in phonetics and grammar, determined, on the one hand, by the structure of the vocal organs and the limited number of phonetic possibilities that they offer, and, on the other, by the laws of general psychology. These tendencies are obvious in such universal changes as the weakening of intervocalic consonants, vowel-breaking, or in the normalization of paradigms through the principle of analogy. "Le changement linguistique," says M. Meillet, "est lié à des faits de civilisation et à l'état des sociétés qui emploient les langues considérées." In so far as it is a means of communication between the members of a same clan or of a same nation, language tends either to become infinitely differentiated or to fuse its divergent dialects into a common speech, according to the inclination to division or unification of the groups or peoples

* When no date is given, the work appeared in 1921.

that speak it. Thus their religious mentality, their conception of the world, their relations with their neighbors, their habits and occupations are reflected in their mode of speech. It is therefore not without reason that the modern languages assume incessantly a more abstract character. The progress of language is inseparably bound up with the progress of society.

It is thus in extending our grasp of the great problem of linguistics that we are approaching more closely an understanding of the race as well as the individual. How ever imperfect language may be as an expression of our thought it is nevertheless the sole means in our possession. It serves therefore in its limited way to reveal our mental attitude. M. Meillet is thus leading philology from the arid domain of phonetic formulæ into the very fertile, though most intricate, field of human life. While it is true that others have hitherto made investigations along these lines, he has glimpsed, like a Darwin or a Spencer, the general principles which will serve as fundamentals for future progress. In the NEW INTERNATIONAL YEAR BOOK for 1914 (p. 548) the present writer, in a paragraph devoted to the transformation of philology, called attention to the importance of these doctrines.

Another epoch-making manual is that of J. de Morgan, *L'Humain Préhistorique* (Paris) which contains an excellent panorama of general pre-history. Like that of the lamented Déchelette this work is divided into three chapters, viz. "évolution des industries," "vie de l'homme préhistorique," and "développement intellectuel et les relations des peuples entre eux." And before beginning a more special classification mention should also be made of J. Marouzeau, *La linguistique ou science du langage* (ib.) which, while distinguishing this subject from logic, metaphysics, polyglotry, philosophy, etc., fails to consider sufficiently accent, tabus, physiology, geography, history of morals, etc.; and of E. Sapir, *Language* (N. Y.) which analyzes the psychological and formal characteristics of language and its relations to thought, race, culture, art—a comprehensive and stimulating work.

GENERAL. Of interest to the student of language are N. Beckman, *Språkets Liv* (Stockholm), an introduction to linguistic science; H. Lommel, *Wie studiert man Sprachwissenschaft* (Frankfurt); W. Horn, *Sprachkörper und Sprachfunktion* (Berlin); A. Seidel, *Sprachlaut und Schrift* (Vienna), with a pompous sub-title; and H. Palmer, *Principles of Language Study* (London), a useful manual. H. Hirt issued part 2 of his important *Indogermanische Grammatik* (Heidelberg) though part 1 has not yet appeared.

In palaeography an interesting contribution is W. A. Mason, *History of the Art of Writing* (N. Y.). This subject suffered a severe loss in the death of Professor John M. Burnam of the University of Cincinnati (see NECROLOGY). Not only did this gifted scholar enjoy the honor of being in the first rank of the world's greatest in his chosen subject, but he will also be remembered as the collector of one of the largest and most complete private libraries of manuscript facsimiles in existence. Those privileged to know him will never forget his sincerity, loyalty, and extreme modesty.

We called attention last year to the widespread interest in Basque. At last the Abbé

Ithurry's *Grammaire basque: dialecte labourdin* (Bayonne, 1920) has made its appearance. The printing of this work was begun in 1895, yet it was still unfinished at the time of the death of the author a few years ago. It is by far the best of recent works of its kind and deals especially with the dialect of ancient Labourd, which was touched upon by Lucien Bonaparte in his *Verbe basque*. D. de Areitio has begun the publication of a catalogue of Basque works in the *Biblioteca de la Real Academia de la Lengua Vasca* (Bilbao, 1920).

Sanskrit. Sir G. A. Grierson has issued vol. X of the Linguistic Survey of India which contains *Specimens of Languages of the Eranian Family* (Calcutta). Among works of a general nature are F. E. Keay, *History of Hindi Literature* (N. Y.) and J. N. Farquhar, *Outline of the Religious Literature of India* (ib.). Studies of a more special nature include A. B. Keith, *Karma Mimamsa* (N. Y.) published in the *Heritage of India Series* and consisting of a study of the development and literary history of the subject; E. W. Burlingame, *Buddhist Legends* (Cambridge, Mass.) consisting of a translation from the original Pali text of the Dhammapada commentary and forming vols. 28, 29, and 30 of the Harvard Oriental Series; and S. Lévi, *La Légende de Nala et Damayanti* (Paris, 1920), another translation of this beautiful poem.

Celtic. Though not dealing with philology, H. M. Pim, *Short History of Celtic Philosophy*, (Dundalk, 1920) deserves mention here. In early Irish we have R. Thurneysen's admirable *Die Irische Heldensage und Königsage bis zum XVII Jahrhundert* (Halle) while the modern language is represented by Rev. G. O'Nolan, *Studies in Modern Irish* (Part I, Dublin, 1920). In Welsh we have A. Arnoux, *La Légende du roi Arthur at les chevaliers de la Table ronde* (Paris) and W. E. Griffiths, *Welsh Fairy Tales* (N. Y.) both works of a popular nature. Breton has been more fortunate in that it was the subject of several serious works: A. Sommerfelt, *Le Breton parlé à St.-Pol-de-Léon*, a Paris doctoral dissertation, containing phonology and morphology of this dialect; R. Grand, *Mélanges d'archéologie bretonne* (Vannes, 1ère série) seeks an answer to the question: "Y a-t-il un art breton?"; F. Vallée, *Vocabulaire français breton de Le Gonidec* (St. Brieux, 1920) a new edition; and finally J.-P. Calloc'h, *A genouz* (Paris), a collection of lays translated into French by P. Mocaër, with a bilingual preface by J. Loth.

Slavic. A most noteworthy contribution to this vast domain of research is the founding in Paris of the *Revue des Etudes Slaves* under the editorship of A. Meillet and Paul Boyer. Its purpose is, on the one hand, "permettre au lecteur occidental de suivre aisément les progrès de la slavistique," and on the other, to facilitate "le rapprochement et la collaboration de tous les slavistes de toutes disciplines, linguistes, philologues, historiens de la littérature et de l'art, archéologues, etc." Among the few indications of life in this, at present, dormant field are *Le Sloglav ou les cent chapitres* (Paris, 1920, a translation by E. Duchesne of the decisions of the ecclesiastical assembly of Moscow in 1551; and A. Mason, *L'œuvre de la guerre et de la révolution en Russie, 1914-18* (ib.). H. H. Bender, *Lithuanian Etymological Index* (Princeton) is very useful. Setälä, *La lutte des langues en Finlande* (Paris, 1920) discusses the encroachment of Slavic on

the northernmost of the three non-Indo-European oases in Europe — the other two being Hungarian and Basque.

English. An interesting popular work is N. Ault, *Life in Ancient Britain* (N. Y., 1920). The 6th livraison of K. Luick, *Historische Grammatik der englischen Sprache* (Leipzig) was the most important contribution to English philology. Passing mention may be made of H. C. Wyld's inaugural lecture *English Philology in English Universities* (Oxford). In Anglo-Saxon we have the 2d ed. of M. Förster, *Allenglisches Lesebuch für Anfänger* (Heidelberg) and Helen Buckhurst's *Anglo-Saxon Index* to W. M. Lindsay's *Corpus Glossary* (Cambridge). *The Essays and Studies by Members of the English Association* (Oxford) collected by A. C. Bradley, contains, among other studies, G. Langen felt, *Semantological Differences in the Toponymical Word-group*. A. G. Kennedy, *The Modern English Verb-Adverb Combination* (Stanford University, 1920) discusses, in a convincing manner, such compounds as "make out," "come by," "bottle up," etc. From the University of Nebraska come two works of high class: L. C. Wimberly, *Minstrelsy, Music and the Dance in the English and Scottish Popular Ballads*; and Louise Pound, *Poetic Origins and the Ballad* (N. Y.), a most heartless and annihilating attack by a very learned iconoclast on the cherished theory of our unsophisticated scholars. The fact that this fanciful explanation was accepted blandly for so many years makes us wonder why Max Müller was unable to have similar success with his equally naive Je-Hai-Ho and Ding-Dong theories of the origin of language. To toponymy the only addition seems to have been A. Mawer, *Place-Names of Northumberland and Durham* (Cambridge). While J. Sargeant, *Pronunciation of English Words derived from Latin* (Oxford) with notes by H. Bradley, is thoroughly scientific and substantial, Brander Matthews, *Englishing of French Words* and R. Bridges, *Dialectal Words in Blunden's Poems* (ib.) are popular rehashings of oft-treated themes. "American" is subjected to another searching examination in G. E. Tucker, *American English* (N. Y.), which, however, does not carry with it the flippant tone that is deemed necessary. A work of importance for the history of English versification is T. S. Omond, *English Metrists* (Oxford) which is represented as a sketch of prosodical criticism from Elizabethan times to the present. Useful bibliographies are L. Spence *Dictionary of Medieval Romance and Romance Writers* (London) and *Bibliography of English Language and Literature, 1920* (Cambridge) compiled by members of the Modern Humanities Research Association. Lexicographical works include the following: Allen's *Synonyms and Antonyms* (N. Y.), ed. by F. Sturges; E. Weekley, *Etymological Dictionary of Modern English*, (London); I. F. and W. D. Henderson, *Dictionary of Scientific Terms* (N. Y.); F. H. Vizetelly, *Words We Misspell in Business* (ib.), containing 10,000 terms; and also his *What? When? Where? What? Mend Your Speech; Punctuation and Capitalization* (ib.), in three small volumes.

Gothic. The only work worthy of note is the 14th edition of Stamm-Heyne, *Ulfilas* (Paderborn) with grammar and vocabulary by F. Vrede — a standard version of the celebrated bishop's translation of the New Testament.

Germanic. Contributions of a general nature include G. Rossima, *Die deutsche Vorgeschichte, eine hervorragende nationale Wissenschaft* (3rd ed., Leipzig), dealing with the primitive Germans; and F. Kluge, *Deutsche Sprachgeschichte* (ib.). In Old High German we have the 8th edition of W. Braune, *Althochdeutsches Lesebuch* (Halle); and in Middle High German, M. Lexer, *Mittelhochdeutsches Taschenwörterbuch* (15th ed., Leipzig); V. Michels, *Mittelhochdeutsches Elementarbuch* (4th ed., Heidelberg); and F. Zarncke, *Das Nibelungenlied* (Halle, 1920), a school edition. Of general interest to the student of the modern language are B. Delbrück, *Grundlagen der neuhochdeutschen Satzlehre* (Berlin, 1920), a textbook; A. Holz, *Die befreitende deutsche Wortkunst* (Vienna); A. Waage, *Bedeutungsentwicklung unseres Wortschatzes* (4th ed., Lehr); and L. Wolf, *Studien über die dreiconsonanz in den germanischen sprachen* (Berlin). The position occupied by the German language in the French curricula is shown in F. Bertsaux, *L'Allemand au baccalauréat et aux grandes écoles du gouvernement* (Paris). Special studies include R. Much, *Der Name Germanen* (Munich), which, in all probability, is derived from the Old Irish, *gairm, shout*; and O. Gaupp, *Zur Geschichte des Wortes "rein"* (Tübingen, 1920), a dissertation. In dialectology, besides H. Wix, *Studien zur westfäl. Dialektgeographie im Süden des Teutoburgerwaldes* (Marburg), the most important contributions were made by Swiss savants with reference to the different patois of the Republic, e. g., K. Stucki, *Schweizer-deutsch Abriss einer grammatik mit Laut- und Formenlehre* (Zürich); J. Hugentlober, *Zur schweizerdeutschen Amtssprache* (ib.); H. Gubler, *Die Liquid- und Nasal-Suffixe in der schweizerdeutschen Substantivbildung* (Basle, 1920); H. Baumgartner, *Die Laute der Mundarten des Berner Seelandes* (Bern); and J. Hallauer, *Dialekt der Berner Jura im 14. Jahrhundert* (Zürich), the last three works being dissertations. In lexicography we must note the 17th livraison of vol. XIII of J. and W. Grimm, *Deutsches Wörterbuch* (Leipzig); the 9th ed. of F. Kluge, *Etymologisches Wörterbuch der deutschen Sprache* (Berlin), of which the first edition appeared forty years ago; H. Paul, *Deutsches Wörterbuch* (3rd ed., Halle); and the 64th livraison of H. Fischer, *Schwabisches Wörterbuch* (Tübingen) edited by W. Pfeiderer.

Dutch. C. P. F. Lecoutere, *Inleiding tot de Taalkunde en tot de Geschiedenis van het Nederlandsch* (2nd ed., Brussels) contains an introduction to general linguistics and an excellent history of the Dutch language. Of a similar nature is M. Schönfeld, *Historiese grammatica van het Nederlands* (Zutphen), a very useful work. In dialectology there appeared T. Frings and J. Vandenheuvel, *Die südniederländischen Mundarten* (Marburg) containing texts.

Scandinavian. Prominent among the works in Old Norse is the 2nd ed. of *Den oldnorske og oldislandske Litterature Historie* (Copenhagen) by the indefatigable F. Jónsson. Three other works in the same category are deserving of praise: R. C. Boer, *Oudnoorsche Handboek* (Haarlem); M. Cahen, *Études sur le vocabulaire religieux du Vieux Scandinave* (Paris), treating especially 'la libation'; and the same author's *Le mot "Dieu" en Vieux-Scandinave* (ib.).

In Icelandic mention should be made of

A. Heusler, *Altisländisches Elementarbuch* (2nd ed., Heidelberg); R. Meissner, *Die Kenningar der Skalden* (Bonn), an attempt to rehabilitate the curious, but highly interesting, symbolical poetry of the Skalds; Bertha Phillpotts, *The Elder Edda and Ancient Scandinavian Drama* (N. Y.); and H. Hermannsson, *Bibliography of the Eddas* (Ithaca, 1920).

In Swedish we have the 4th part of A. Kock, *Svensk Ljudhistoria* (Lund), an excellent work; G. Cederschiöld, *Svensk Stilistik* (Stockholm); and O. Östergren, *Nusvensk Ordbok* (ib.) of which the 15th häft (*Stingaforslåde*) appeared.

The contributions to Danish include the 2nd edition of V. Dahlerup, *Det danske Sprogs Historie* (Copenhagen); J. Lollesgaard, *Syntaktiske Studier over det ældste danske, Skriftsprog* (ib.), reaching back to the year 1300; and H. Bertelsen, *Danske Grammatikere fra Midten af det 17. til midten af det 18. Aarhundrede* (part IV, ib.).

Romance. Among the works treating of the general Romance field are W. Meyer-Lübke, *Romanisches etymologisches Wörterbuch* (Heidelberg) of which the 14th Lieferung appeared; C. Santesson, *La particule 'cum' comme préposition dans les langues romanes* (Paris); G. Nicholson, *Recherches étymologiques romanes* (ib.); and E. Gamillscheg and L. Spitzer, *Beiträge zur romanischen Wortbildungslehre* (Florence). Two practical technical dictionaries deserve note: T. F. Palmer, *Dictionary of Technical Textile Terms* (Philadelphia), a small volume in English, French, and Spanish; and H. Viard, *Vocabulaire en cinq langues* (N. Y., 1920), dealing with wireless telegraphy and telephony.

French. J. Gilliéron continues his most interesting studies under the title *Pathologie et thérapeutique verbales* (III, Paris), in which he discusses such questions as "fleur dans son atrophie sémantique actuelle, l'analogue réparatrice, la phonétique, artificielle," etc. The same author's *Etude de géographie linguistique* as well as the supplement to volume I of the *Atlas linguistique de la France* (Paris), which was edited in collaboration with E. Edmont, were among the year's contributions. The 3rd edition of volume I of W. Meyer-Lübke, *Historische Grammatik der französischen Sprache* (Heidelberg) was published, while the 2nd vol. of the same work, devoted to *Wortbildungslehre* was making its first appearance. In 1920 appeared the first fascicule of the posthumous work of A. Longnon, *Les noms de lieux de la France* (Paris), a very valuable compilation containing place-names of Phœnician, Greek, Ligurian, Gaulish, and Roman origin. And now is announced the second fascicule supplying those of Saxon, Burgundian, Gothic, Frankish, Scandinavian, Breton, and Basque sources.

In Old French philology note should be taken of A. Tobler, *Altfranzösisches Wörterbuch* (Berlin, 1920), of which the 5th Lieferung (*assez-avalé*) of volume I appeared; and the 3rd edition of the same author's well-known *Vermischte Beiträge zur französischen Grammatik* (Leipzig). Other works of interest are E. Lerch, *Einführung in das Altfranzösische* (ib., 1920), containing texts and translations; and W. Foerster and E. Koschwitz, *Altfranzösisches Übungsbuch* (ib.), 6th edition by A. Hilka. The 2nd edition of volumes I and II of J. Bédier, *Légendes épiques* (Paris) was among the most important contributions of the year. When this monumental work first appeared in 1910-13,

it was predicted in these columns (cf. *NEW INTERNATIONAL YEAR BOOK*, 1910, p. 581; 1913, p. 547) that, notwithstanding the reams of hostile criticism that its revolutionary doctrines aroused, it was destined to occupy a place in the front rank of the great contributions to scholarship. Only a few months ago Professor Bédier was received into the French Academy. Other literary studies and editions of texts that deserve to be mentioned include J. Bédier, *Roland à Roncevaux* (Oxford); A. Jeanroy and A. Longfons, *Chansons satiriques et bachiques du XIII^e siècle*, (Paris); H. Suchier, *Aucassin und Nicolette* (Paderborn), 9th ed. by W. Suchier; *Gormont et Isembart* (Paris), edited by A. Bayot; and G. Feger, *Rutebeufs Kritik an den Zuständen seiner Zeit* (Basle). Syntactical studies include O. Towles, *Prepositional Phrases of Asseveration and Adjuration in Old and Middle French* (Paris, 1920), a scholarly dissertation of Johns Hopkins University; G. G. Laubscher, *Syntactical Causes of Case Reduction* (Princeton), another valuable volume of the Elliott Monographs; J. Storm, *Större fransk Syntaks* (part III, Christiania, 1920); and F. D'Ovidio, *Studi sulla più antica versificazione francese* (Rome).

In dialectology we noted above the activity of the Swiss-German scholars. On the French side their compatriots have shown the same spirit, if we may judge by W. Pierrehumbert, *Dictionnaire historique du parler neuchâtelois et suisse romand* (Neuchâtel), which is appearing in fascicules; and O. Keller, *Der genfer Dialekt dargestellt auf Grund der Mundart von Certoux* (part I, Zürich, 1920). In France proper we have F. Arnaud and G. Morin, *Le Langage de la vallée de Barcelonnette* (Paris).

With relation to the epoch of the Renaissance there appeared A. Humpers, *Etude sur la langue de Jean Lemaire de Belges* (Paris); G. Tracconaglia, *Quelques Observations sur l'origine et le développement des théories italiennes qui facilitèrent aux Français la fixation, l'enrichissement et l'embellissement de leur langue au XVI^e siècle* (Lodi); and Kathleen Lambley, *Teaching and Cultivation of the French Language in England during Tudor and Stuart Times* (Manchester, 1920).

Finally touching upon the evolution of the contemporary language we may note the 6th Lieferung of G. Krüger, *Französische Synonymik nebst Beiträgen zum Wortgebrauch* (Dresden); W. Hunger, *Argot, Soldaten-Ausdrücke und Volkstrümliche Redensarten der französischen Sprache* (Leipzig, 1920); L. Sainéan, *Le Langage parisien au XIX^e siècle* (Paris, 1920); and H. Kjellman, *Mots abrégés et tendances d'abréviation en français* (Uppsala).

The following dictionaries and phrase-books are of use: A. M. Patterson, *French-English Dictionary for Chemists* (N. Y.); A. Gordon, *French-English Medical Dictionary* (Philadelphia); and D. N. Sanson, *English into French* (N. Y.), containing 5000 English locutions rendered into French.

Italian. As little of importance was done in this language during the year, a few titles will suffice. Of somewhat general interest are E. Migliaccio, *Essai de Synonymie et quelques études comparatives entre les deux langues italienne et française* (Naples, 1920); and V. Crescini, *Appunti su l'etimologia di 'goliardo'* (Padua). In dialectology, which, it may be added, is becoming one of

the most important subjects by reason of the light that it brings to bear on the origin and growth of language, we have C. Battisti, *Testi dialettali italiani in trascrizione fonetica* (part II, Halle) dealing with central and southern Italy; F. Piazza, *Le colonie e i dialetti lombardo-siculi* (Catania); and M. G. Bartoli, *Le parlate italiane della Venezia Giulia e della Dalmazia* (Grattaferatta). An interesting introduction to the use of the dictionary is G. Finzi, *Guida teorico-pratica allo studio e all'uso del dizionario* (Turin, 1920). Serviceable lexicographies include N. Tommaseo, *Dizionario della lingua italiana compendiato ad uso delle famiglie* da G. Biagi (vol. II, ib.); G. Ravazzini, *Dizionario di architettura* (Milan); F. Salveraglio, *Nuovissimo vocabolario italiano illustrato* (new ed., ib.); W. T. Davis, *Dizionario navale italiano-inglese e inglese-italiano* (ib.) for naval engineering and architecture, merchant and military marine etc.; and G. Richieri, *Dizionario italiano-inglese e inglese-italiano* (ib.), a volume of 2000 pp. containing a supplement of technical, sporting, aviation, and other terms.

Spanish. A volume that should be in the hands of everyone interested in the study of Spanish is R. Foulché-Delbosc and L. Barreau-Dihigo, *Manuel de l'Hispanisant* (tome I, N. Y., 1920). W. A. Beardsley, *Infinitive Constructions in Old Spanish* (N. Y.) is one of the most important contributions to Spanish syntax in recent years. J. Cejador y Frauca, *Historia de la literatura castellana* (Madrid, 1920) has now reached volume XIII, extending from 1908 to the first part of 1920. Deserving of mention is also J. Rogerio Sánchez, *Historia de la lengua y literatura españolas* (3rd ed., ib.). Dr. H. Thomas, *Short-title Catalogue of Books printed in Spain and of Spanish Books printed elsewhere in Europe before 1801 now in the British Museum* (London) contains about 3000 titles, or approximately one-sixth of those extant.

Important contributions to dialectology include the 19th cuaderno of the *Diccionario gallego-castellano* (Coruña) issued by the Royal Galician Academy; J. Ribelles Comín, *Bibliografía de la lengua valenciana* (Madrid, 1920); G. Vergara Martín, *Materiales para la formación de un vocabulario de palabras usadas en Segovia y su tierra* (ib.); E. Lamao, *Apuntes críticos sobre el idioma castellano, provincialismos de Riohacha, apellidos españoles que en Colombia sólo se encuentran en la costa Atlántica* (Santa Marta, Colombia, 1920); and W. E. Retana, *Diccionario de filipinismos* (Madrid).

Useful grammars are P. Lemus y Rubio, *Compendio de Gramática española* (Murcia, 1920); and M. F. Becerra, *La nueva gramática castellana* (Chiapas) intended for the secondary schools of Mexico. Finally, mention may be made of R. Lusum, *Spanish-English and English-Spanish Commercial Dictionary* (N. Y.).

Provençal. A welcome volume is J. Anglade, *Grammaire de l'ancien provençal* (Paris) containing a very satisfactory outline of the phonology and morphology. A splendid scientific contribution to the rarely studied modern language is H. E. Ford, *Modern Provençal Phonology and Morphology* (N. Y.), studied in the language of Mistral. Other studies of note are de Gélis, *La vraie langue d'oc* (Toulouse); and C. Julian and P. Fontan, *Anthologie du félibrige provençal* (vol. I, Paris, 1920). The famous E. Levy, *Provenz. Supple-*

ment-Wörterbuch, edited by C. Appel, has now reached the 37th heft of vol. VIII (*Toler-tras-foguier*).

Rheto-Romance. The *Annales della Società reto-romantscha* celebrated its 35th year. Of importance to the scholar is R. von Planta, *Die Sprache der rätoromanischen Urkunden des 8. bis 10. Jahrhunderts* (Bonn, 1920).

Roumanian. It is indeed gratifying to note the activity of the scholars of this deserving nation in the face of untoward events to which their colleagues of larger nations have apparently been forced to succumb. A general work of great interest is N. Jorga, *Histoire des Roumains et de leur civilisation* (Paris, 1920). Comprehensive contributions to the study of the literature include S. Puscariu, *Istoria Literaturii Române* (vol. I, Sibiu, 1920), devoted to the ancient period; N. Jorga, *Istoria Literaturii Romanice* (3 vols., Bucharest, 1920); and O. Densusianu, *Literatura Română Modernă* (3 vols., ib.). A new edition of B. P. Hasdeu, *Din Etymologicum Magnum Romanica* (ib.) was welcomed, as also G. Pascu, *Beiträge zur Geschichte der rumänischen Philologie* (Leipzig, 1920). The following grammars also deserve mention: Herzog-Puscariu, *Rumänische Grammatik* (Bucharest); and G. N. Costescu, *Melodica Limbei Române* (ib.).

Phonetics. In the English branch of this subject we note the 3rd edition of D. Jones, *Phonetic Readings in English* (Heidelberg); the 2nd ed. of A. C. Dunstan, *Englische Phonetik mit Lesestücken* (Leipzig); the 2nd ed. of O. Jespersen, *Engelsk Phonetik* (Copenhagen); and T. Nicklin, *Sounds of Standard English* (Oxford). In French, Bateman and Thornton, *How to Teach French Phonetics* (Cambridge); E. Tilley, *Aid to French Pronunciation* (N. Y., 1920); L. Bascan, *Manuel pratique de prononciation et de lecture françaises* (ib.); S. W. Grace, *Primer of French Pronunciation* (London, 1920); L. Tesson, *Practical Study of French Pronunciation* (Boston, 1920); and Noël-Armfield and L. B. Brandin, *Un peu de rire français* (Cambridge), with phonetic transcription. For Italian we have J. J. Dicio, *Phonetic Italian* (Norristown, Pa.). And finally to Spanish the contributions include: H. Gavel, *Essai sur l'évolution de la prononciation du castillan depuis le XIV^e siècle* (Paris); T. Navarro Tomás, *Doctrina fonética de Juan Pablo Bonet* (1620) (Madrid, 1920); E. A. Peers, *Phonetic Spanish Reader* (N. Y., 1920); and A. Nascentes, *Um ensaio de fonética diferencial luso-castelhana* (Rio de Janeiro), a comparative Portuguese-Spanish study with emphasis on the Greek elements in the latter language.

PHOSPHATE. See FERTILIZERS.

PHOSPHATE ROCK. According to the United States Geological Survey, the phosphate rock sold in the United States in 1920 amounted to 4,103,982 long tons, valued at \$25,079,572, an increase in quantity of 80 per cent and in value of 116 per cent over 1919.

The quantity of phosphate rock mined in any year is not the same as that sold, and the quantity in stock at the mines or drying plants at the end of each year is variable. The total quantity

PHOSPHATE ROCK SOLD IN THE UNITED STATES,
1911-20

Year	Quantity (long tons)	Value
1911.....	3,053,279	\$11,900,693
1912.....	2,973,332	11,675,774
1913.....	3,111,221	11,796,231
1914.....	2,734,043	9,608,041
1915.....	1,835,667	5,413,449
1916.....	1,982,385	5,896,993
1917.....	2,584,287	7,771,084
1918.....	2,490,760	8,214,463
1919.....	2,271,983	11,591,268
1920.....	4,103,982	25,079,572

of phosphate rock mined in 1920 was 3,975,001 long tons, an increase of 115 per cent over the output in 1919. South Carolina and Wyoming were the only States in which production decreased.

PHOSPHATE ROCK MINED IN 1919 AND 1920, BY
STATES, IN LONG TONS

State	1919	1920	Percent- age of in- crease or decrease
Florida.....	1,254,609	3,255,720	+160
South Carolina.....	49,032	42,709	- 13
Tennessee and Kentucky.....	530,973	627,677	+ 18
Western States.....	16,935	48,895	+189
	1,851,549	3,975,001	+115

The quantity of phosphate rock exported from the United States steadily declined from 1913 to 1918, falling from 1,300,000 long tons to 143,455, tons, or to about one-tenth of its former volume. In 1919, however, European demand for phosphate rock was renewed, and in 1920, for the first time since 1913, exports were more than 1,000,000 tons. The total output of phosphate rock in the Western States in 1920 was 55,609 long tons, valued at \$304,006. This was an increase of 228 per cent in quantity and of 335 per cent in value over 1919. There were four operators, three in Bear Lake County, Idaho, and one in Rich County, Utah. The Utah production was less than 5 per cent of the total. The average price per ton of rock sold seems to have varied from \$5 to \$6.50, depending on the condition and quality of the material. Rock that had been crushed and dried brought a higher price than that sold in the crude lump form. The average price for the whole district was \$5.47 a ton. The use of raw phosphate rock for direct application to the soil had grown considerably during the last few years and seemed to indicate that excellent results had been obtained in increased crops. Several companies, especially in the Florida and Tennessee phosphate fields, were handling this product.

PHYSICAL CHEMISTRY. See **CHEMISTRY**.

PHYSICS. The year 1921 was notable in physics for the variety and interest of new research results. The structure of the atom remained the centre of interest, the problem being attacked from various angles. Isotopes, relativity, the quantum, and the structure of the positive nucleus of the atom are receiving widespread experimental and mathematical treatment. Hydrogen atoms have been shot off from the nuclei of six other elements. The octet configuration of the atom receives additional confirmation.

Atomic and molecular radii are being measured and the distribution of the atoms in crystals is being determined. X-ray diffraction is also applied to studying the micro-crystalline structure of metals, introducing a new era in such work. The new Optical Institute of Russia is conducting a splendid programme of research. The German Scientific Association, corresponding to our American Association for the Advancement of Science, met during the year for the first time in seven years. In America physics is contributing much to the technical control of industry, and as war budgets decrease scientific research should command an increasing share of national income to which it contributes in so extraordinary a degree. Industrial research in which physics plays a dominant rôle is beginning to be appreciated, and the growth of popular scientific and technical magazines promises a nation-wide interest in physics which should bring adequate support for all research programmes.

During the year laboratory temperatures have been produced far exceeding those of the solar surface; a million volts have been produced emphasizing the basic need of insulation research; mercury arc rectifiers have been made in units as high as 500 amperes and voltages as high as 1000; and laboratory instruments and methods are being transferred to the shops and mills for, as R. S. Whipple said before the Optical Society, "The instrument of to-day is the tool of to-morrow." The use of interferometry in the production and testing of high precision shop gauges is an example in point, and on the horizon looms the "ultra-micrometer" of Wheddington and its improvement in America so that it will indicate lengths as slight as a billionth of an inch. Coblentz has greatly improved the sensitiveness of his star-heat apparatus which he expects will respond to the heat of a candle at a distance of 500 miles. The diameter of Antares (alpha Scorpiotis) was measured by interferometric methods and found to have a diameter 500 times that of our sun. The same methods are being applied to other stars so that a new method is available for astronomy, by which, for example, the orbits of spectroscopic binaries can be measured as to magnitude just as the spectrophotometer measures the component velocities and periods.

Spectrograms of Nebula N. G. C. 936 (34-hour exposure) show line-displacements toward the red which indicate that the nebula is moving away from the earth at a velocity of 800 miles per second (1300 kilometres). The distance of star cluster N. G. C. 7006 is determined by Shapley and Mayberry as 217,000 light years, the furthest cluster yet determined,—incidentally it was found that there is no sensible absorption of light in space, the color of far stars being comparable with that of the nearer stars, whereas if light were absorbed in space the far stars would be the redder.

The Einstein tower of the Potsdam Astrophysical Observatory is completed and is being used to investigate the shift in the spectrum lines toward the red in the gravitational field of the sun. Dr. Freundlich will be in charge under the general supervision of Professor Einstein. The subject of relativity is receiving much attention. Weyl generalizes Einstein's theory, giving a complex geometry in which he follows up Einstein's physical assumptions by the further assumption that his quantities determine the electromagnetic

field. He thus brings Weyl's generalisation of Riemann's geometry into relation with physical coördinates. The method is beautiful, complete, and attractive. His coördinate system does not involve measurement at the bottom but only numbering according to an ordered and consistent scheme. Relativity now covers change of gauge as well as of coördinates, that is, we must establish an expression which will make the differential equations of physics invariant both with respect to arbitrarily transformed coördinates as well as for arbitrarily varying gauges.

Ch. Maurain in summarizing our principal sources of energy, recounts the danger of exhaustion of coal deposits, and emphasizes the possible use of subatomic energy "if one could find a means of making it available." This discovery would have an importance comparable to that of fire. As yet no approach to a method of artificially releasing subatomic energy is known unless it lies in the critical frequencies at which electrons are loosened from the atomic structure regardless of how small the radiation. The breaking down of silver grains by the impact of a quantum on the photographic plate shows that we do not yet understand the relation between light waves, quanta, and the method by which photo-effects are produced. Maurain quotes Arrhenius that only $\frac{1}{8}$ of 1 per cent of the solar energy reaching the earth is stored up in vegetation, $\frac{1}{8}$ of that amount going into forests, $\frac{1}{4}$ for cultivated areas, and the remainder the scant vegetation on the steppes and deserts.

E. T. Allen finds that volcanic gases (water the most important) are traceable to igneous rocks. The inert gases are in some cases of atmospheric origin, in others of deep-seated origin. Surface combustion aids in keeping up the temperature. Water in contact with volcanic material causes secondary explosions, but the primary explosions are the result of the pressure from "magmatic" gases and not of chemical action.

Physical methods of estimating the earth's age have engaged British scientific thought during the past year. Kelvin's 30,000,000 years has long since been discarded. Rayleigh points out that if radium exists inside the earth in the same ratio as at the earth's crust a layer 20 miles deep would account for the earth's heat without assuming a primeval stock. Eddington has measured the actual change of density in Delta Cephei as 1 per cent in 29,000 years. Rayleigh uses the radioactive disintegration as basis for estimating the earth's age since the transformations of uranium ending in lead isotope, and its periods are well known. The Pre-Cambrian rocks furnish a close estimate of a billion years. Assuming the helium of the earth came from radioactive minerals the minimum age of the earth is one-third of this estimate. Professor Gregory on the basis of the growth of salinity in the sea estimates 150,000,000 years. Jeffreys on the tidal theory of the origin of the solar system, allowing for the radioactivity factor estimates two billion years since the earth's crust became solid. The contraction hypothesis is absurdly inadequate. The consensus is that the earth is about a billion years old.

Davison in a study of earthquake after-shocks finds epoch maxima near midnight, just a half day later than ordinary earthquakes which have maxima about noon. The annual maxima occur from December to March for strong earthquakes.

Charles F. Brush reports experiments confirmatory of his kinetic theory of gravitation, which assumes universal wave motions in every direction, isotropic and of such frequency that they pass through all bodies, the atoms being buffeted in all directions like particles in a fluid. The average kinetic energy of the atom or particle is permanently drawn from the ether. A spherical energy shadow, or spherical zone of diminished wave impacts, is thus cast by each particle. The depth or intensity of the shadow follows the inverse law. The shadows of two gravitating bodies interblend so that the energy density between them is less, and they are pushed together by superior wave pressure. He finds, using spheres and oscillating pendulum, a shadow effect equal to one part in 17,432. Bismuth pendulum shows a shorter period than zinc by a part in 1333. He defers conclusions from these remarkable results.

Professor Evershed calls attention to the close connection between sunspot disturbance and earth's magnetism. The magnetic disturbances recurred at 27-day intervals for seven periods during the past year, terminating November 21 with a moderate magnetic storm. Carl Stormer of Norway, by making photographs of the aurora from stations eighty kilometres apart, with exposures of one second, finds the upper limit of the aurora at about 500 kilometres (310 miles).

Extraordinary interest attaches to the problem of the transmutation of the elements which on a minute scale has been realized in Rutherford's disintegration of the atoms under the bombardment of the alpha particles from radium C. The atomic nucleus itself has now been broken apart in this manner, for nitrogen, boron, fluorine, sodium, aluminum, and phosphorus. About one in a million of the alpha particles (helium nucleus) detaches a hydrogen nucleus (high-speed hydrogen atom). A new phase appeared when Rutherford noted that no effect was obtained for "pure" elements the mass of which is $4n$ where n is a whole number. The effect is marked, however, in some elements having mass $4n + 2$ or $4n + 3$. If the building of the atoms of the $4n$ type is by means of stable helium nuclei and the $4n + 1$ a type of the helium and hydrogen nuclei, the results would have been anticipated. No particles from elements of mass exceeding 31 have been observed—and this may indicate a critical change in the nucleus at this point. Carbon, oxygen, sulphur, with mass $4n$ show no effect. It is assumed that the H nuclei are satellites of the main nucleus, hence easily set free at high speeds. Rutherford discusses a mechanism for the liberation of the H atom.

Harkins' persistent work in unifying the elements on the basis of hydrogen and helium as building units, receives striking confirmation by Rutherford's work since hydrogen is the by-product of six of the elements which on Harkins' theory contain hydrogen. Helium itself is well-known as a by-product of the continuous breaking up of the radio-active elements. It is now supposed that a helium nucleus is composed of 4 hydrogen nuclei and 2 electrons. The forces which bind the components of the nucleus are so intense that great energy is required to disrupt them. The helium nucleus is expelled when the radio-active atoms disrupt with a velocity of 10,000 miles a second, or an energy of motion 400,000,000 times greater, relatively to weight, than that of a bullet. It is

this particle and this energy which Rutherford is using to break down the structure of the central nucleus of the elemental atoms. So much for the nucleus. The electrons which build up the outer structure or satellite system of the atom are set free by impacts of critical velocities. The study of the critical voltages at which ionization results is a field thoroughly developed by Foote and Mohler and now the subject of researches by numbers of physicists.

An event of the utmost significance for physics is the work of the newly founded Russian Optical Institute. A special commission for atomic research has been appointed. For the determination of electronic orbits on the quantum theory, the membership includes physicists, mathematicians, and astronomers. D. S. Rogestvensky of the Institute has already found a striking relation between the alkali metals, the spectra of which are derived from the hydrogen spectrum, the latter being distorted more with elements of greater atomic weight. The orbits of the lithium atom electrons have been calculated accurately.

A. O. Rankine, comparing the atomic dimensions of neon, argon, krypton, and xenon with those of chlorine, bromine, and iodine, shows that the diameter of the outer electron shell of neon is practically identical with those of O and N. This strengthens the Langmuir concept. Rankine later confirmed his results which closely agreed with the atomic radius from Chapman's formula and van der Waal's law. Bragg thinks that not even the outer electrons intermingle in the encounter of gas atoms agitated by heat. He finds agreement between the dimensions deduced from kinetic gas theory and X-ray crystal measurements, that the monatomic atoms of the inert group are almost identical as to size and shape with the next diatomic elements of the periodic table. Boughall finds the size of the neon atom, 2.58×10^{-8} cm.

Dauvillier and de Broglie has attacked the very difficult problem of the distribution of electrons in the heavier atoms. Their report includes a detailed account of the L-series of uranium and suggests the sources of energy in the heavy atoms. They calculate most of the sources for tungsten and uranium.

Several confirmations of the Lewis-Langmuir theory of valence are announced. The nitrogen molecule has, on this theory, an outer cell of 8 electrons, 2 nuclei and 2 electrons being within. The nitrogen molecule, it is assumed, would behave like an elastic sphere. Rankine notes a kinetic behavior for nitrogen differing from that of oxygen and the halides (which act like a 2-celled structure). Thompson states that Rayleigh's results on the scattering of polarized light show that nitrogen and oxygen behave differently, the latter differing most from the behavior of a sphere. Again, both the rare gases and nitrogen fail to absorb negative charges whereas H, Cl, C, and O readily take negative charges. Again, the outer shell determines the mobility of electrons, and since in Ne and N the octet is complete, the electron mobility is greater than in O and Cl, where the bicellular form is broken down easily. Rankine furthermore shows that the molecules of CO₂ and N₂O act as if they had the same size and shape and also as if the electrons resembled those of 3 neon atoms with their centres in a line. The computed "target area" for such an assumed

triple-neon molecule is $.895 \times 10^{-16}$ and $.867 \times 10^{-16}$ are the values for CO₂ and N₂O, respectively. These confirm the Langmuir theory.

Eve compares Bragg's atomic diameters with the cube root of the atomic volume, finding the work of removing a valence electron from the first group of the periodic table nearly inversely proportional to the radius, the same law holding for the first four elements of the second group, the last four of which diverge. M. M. Saha agrees with Eve that the atomic radius varies inversely as the ionization potential.

Kolkmeijer devises atomic models with stationary and periodically moving electron systems, using the "world line" of the electron in a four-dimensional Minkowski world, which adds to the spatial symmetry of the system an expression of the time periodicity.

Masson proposes a system of notation for expressing any action that occurs within the nucleus, for the purpose of permitting precise mathematical expression for the constitution of the atom so that its status shall be clearly indicated. He suggests the term "baron" (from baros, meaning weight) as the name for the positive nucleus, or rather the positive electrical particle.

H. Geiger considers that the shell electrons protect the nucleus from attack by other atoms, except at high speeds. Radioactivity indicates a complex nucleus, with oscillating systems becoming unstable under certain conditions. The substance has a shorter life in proportion to the speed of the emitted alpha particle.

J. J. Thompson publishes a superb study of the structure of the molecule and chemical combinations, a review which might serve as a model for other topics of physics. Such reviews bring together the recent knowledge in a given field in a manner useful to all physicists. The correlation of new knowledge is quite as important as the discovery of new knowledge, and reviews of the status of each branch of physics would be most helpful.

Isotopes command interest and attention from many observers. G. P. Thompson has studied the isotopes by means of anode rays, obtaining photographs of the parabolas for lithium, beryllium, sodium, potassium, calcium, and strontium. He finds lithium to be a mixture of atoms of weights 6 and 7 and that calcium is an "isobar." Aston finds iodine to be a simple element of atomic weight 127, not in accord with Broek and others. For example, Kohlweiler claims that by diffusion he has obtained five different iodines. Harkins and Mullekan have separated isotopes of mercury having an atomic weight difference of .027. Aston finds two isotopes of nickel of ratio 2:1, consistent with the accepted value 58.68 for nickel.

B. Brauner of Prague regards the Harkins isotopes of chlorine as mixtures of extremely similar elements, forming one of a class of isotopes. The other class consists of the disintegration products of radioactivity, leading to the "leads" (atomic weights 206 and 208). The former class are in constant proportion and their atomic masses represented by whole numbers (oxygen = 16). These run from hydrogen to caesium. Brauner recommends that they be called "atomic masses," the old atomic weights still referring to those quantities obtained by chemical methods.

Kaptsov and Momanov have made a model

showing all the phenomena observable in the passage of X-rays through crystals. By using short electromagnetic waves (from 4 to 6 centimetres) it becomes possible to verify the theory of crystal structure, including the disposition of the atoms by the use of artificial models. Potapenko is investigating the spectra of short electromagnetic waves ranging from 25 to 50 centimetres, in organic substances. Theodorovich is conducting a similar research on similar waves 10 to 30 metres in length.

W. H. Bragg reports on the crystal structure of organic substances by X-ray analysis. In spite of their molecular complexity, it is possible to obtain results by assuming that the benzene or naphthalene ring has a definite existence, size, and shape, and that the ring is built into the molecule as a whole. His results are quantitative and open up a vast and interesting field of research directed to finding the linear dimensions of organic crystals, assuming the benzene and naphthalene to be fixed building units of the compound series. The idea tallies well with Langmuir's work on surface films and experimental work of others.

The metallurgical congress at Moscow took the most intense interest in the new work of Uspensky and Konobeievsky on the microcrystalline structure of rolled laminae of metals, using the diffraction of X-rays as the method. This opens up a distinct departure in the micro-study of metals.

Duane, Palmer, and Chi-Sun Yeh have determined the value of h , the universal constant of action, as $6.556 (= h \times 10^{27})$ with a probable error in h about $\pm .009$, using the method of the X-ray spectrum and the quantum law $Ve = h\nu$.

Sommerfeld reviewing Bohr's theory as to the quantum relations of the series lines substitutes planetary ellipses for the circular orbits, applying relativity mechanics, and working out the structure of the hydrogen atom only. The helium atom is in doubt. Mohler and Foote have studied the photoelectric effect of radiation on two electrodes entirely shielded from ions produced in the arc. The photoelectric current has almost a linear relation and change of slope at critical potentials, when plotted in terms of exciting voltage. As these increase, successive changes occur in the spectrum excited by electron impact. The highest frequency ν of each additional group of lines has the quantum relation $Ve = h\nu$. Professor Vegard concludes that light is emitted both when the positively charged atom is neutralized and when the neutral atom collides with the molecules of the gas.

In a recent experiment by Anderson at Mt. Wilson Observatory, the spectra of the explosion of fine wires from condenser discharge was studied. The intrinsic brightness produced was about a hundred times that of the solar surface, a black body temperature being attained of twenty thousand degrees Centigrade. The problem of light production is in a promising status. The success of the Sperry arc in producing 900 candle-power per square millimetre has created a new era in motion picture studio lighting. Dubois and Harvey have extracted "luciferose and luciferine," two substances supposed to be the cause of animal light. Luciferine emits no light on agitation, but luciferose bursts into a momentary brilliancy if shaken. When mixed the two substances emit continuous light, apparently requiring

moisture or oxygen. G. A. Percival has made a fluorite lamp, experimentally, which gives light at 150 degrees Centigrade, using the property of thermoluminescence. The efficiency was high since a large part of the total energy was made luminous. The knowledge that nine-tenths of the energy used in light production is wasted raises a problem worthy of the most intensive efforts in physical research.

Remarkable progress has been made in X-ray photography. Baker and Levy report a new calcium tungstate plate for the purpose, 30 times more efficient and cheaper than the usual high-speed plate. The need for such high speed is in connection with the photography of moving objects such as the lungs and heart. The tungstate fluoresces, affecting the plate by shorter exposure, the fluorescence affecting the deeper silver bromide layer.

Oliver Lodge discusses the supposed weight and ultimate fate of radiation, assuming that light unable to escape would accumulate near the boundary of a system. If liberated by an expansion or other catastrophe of the system, for example through a gradual growth of instability, it would burst forth in a blase. If light has weight in a real sense he is tempted to treat it as a gas of great velocity and low molecular weight. The density of solar radiation at the earth's distance can be measured from the pressure and equals about 10^{-28} g/cc. He asks "What becomes of all the radiation poured into space by innumerable suns through incalculable ages? Is it possible that some of it is trapped, without absorption, by reservoirs of matter lurking in the depths of space, and held until they burst into new stars?" He also asks "Does such energy become stored in rotational form, tie itself into electrons and add to the mass of the body?" The density of ordinary sunshine near the earth is such that 10 cubic millimetres of earth's sunshine, the equivalent of $1/4600$ mm³ could be checked and condensed until its density is 10^{13} and converted into an electron of mass 10^{-27} gram.

Herbert Dingle in *Science Progress* reviews the status of spectroscopy in a manner worthy of following for other fields. Saunders reviews the status of the series in the spectra of the elements, recounting the two new laws (stated by Kossel and Sommerfeld), the first that the spectrum of an ionized element (lacking 1 electron) is like that of the element in the next column to the left in Mendelejeff's table, though shifted toward higher frequencies; ionized Ca (Ca^+) gives a spectrum very like that of K as would be expected since each have but one external electron. The second law is that the spectra alternate in character in passing across Mendelejeff's table. Na and Al consist of a pair series resembling each other closely, N is probably similar. Saunders considers that this indicates that when electrons are added to the outside of an atom in passing from left to right across the table, the electrons unite into inactive pairs. The aluminum spectrum is due to a single external electron, though three are present, but apparently two are bound so closely that they emit no light. This pairing tendency of electrons tallies Langmuir's theory based on quite different evidence.

A real contribution to labor-saving methods is contributed by W. P. Davey in his new apparatus for taking X-ray diffraction patterns of 15 dif-

ferent powdered crystals at once. A direct reading scale gives the distance (in Angstrom units) between the planes in a crystal, and may be read directly from the diffraction pattern. The apparatus is valuable for research and for factory control work. For certain classes of crystals, the atomic structure may be easily found by using logarithmic plots of the diffraction patterns.

W. F. Meggers gives tables of standard determinations of the wave lengths of the inert gases helium, neon, argon, krypton, and xenon, the latter three being just published. The work of the Bureau of Standards is now the basis for correcting the wave lengths measured in air, proper correction tables having been prepared on the basis of some 1200 measurements of the index of refraction of air for wave lengths from the extreme ultra-violet through the visible spectrum and in the infra-red. For the first time spectroscopy has had the full fundamental data to make its results free from ambiguity due to the air of vacuum reductions.

Ames describes the systems of color standards defined as to hue (wave length), chroma (saturation), value (brightness), suggesting as essential 50 to 80 steps in hue, 70 to 100 steps in value, and 35 to 50 steps in chroma (13,000 cards in all) in order to express any given color. Priest suggests a method and gives precise specifications for producing radiant energy having the visible spectral distribution of a theoretically complete radiator (by Planck's formula $c_1 = 14,350$). Priest's work on the spectral distribution of energy required to evoke the gray sensation, is of first importance. He finds that the average results of his observers indicate that "white light may be represented: (1) theoretically, by the light from a Planckian radiator at a temperature of 5200° absolute; (2) practically, to a fair approximation, by average noon sunlight at Washington." Forsythe finds that experienced observers can set for color match within 3 degrees K at an illumination of 5.1 foot candles. Ives suggests a colorimetric method consisting essentially of the spectrophotometry of adjacent patches of the spectrum, the width of each patch being inversely as the hue sensibility, the number of patches depending upon the kind of color and degree of accuracy required. He suggests an instrument for using the method.

Houstoun, studying the color vision of 1000 students, finds no satisfactory definition of a homogeneous population, and finds a very good Gaussian distribution on the red-green test for men, and that normal variation plays a larger rôle than thought probable. Anderson and Haas report on illumination, and traffic accidents, find a steady increase from 1906 to 1920, that October has most cases, and that the daily accidents are a maximum between 5 and 6 p. m., and a minimum between 3 and 4 a. m. They suggest plans for distributing three or four times as much light on the road surface as the usual fixtures afford. They report that proper lighting eliminated fatal accidents on a road near Schenectady where 70 serious accidents had occurred in eleven months.

Ames and Proctor in an interesting study of the dioptries of the eye describe the important characteristics, spherical aberration, chromatic aberration, oblique astigmatism, and distortion. The same authors are making a photographic lens with which by the use of the three-color process a

substantial reproduction of the retinal picture can be obtained.

Margaret Shields finds that abnormal visibility function is not necessarily associated with color function, but that color defect modifies the visibility function. The brightness sense is probably not lowered by color defects, contrary to the Young-Helmholtz theory.

Dr. A. G. Webster has summarized his studies on sound including his instrument for measuring in absolute units the sound intensity at any point. The extreme minuteness of the forces and energies involved makes this a difficult problem. He finds that 10,000,000 cornets playing fortissimo would emit only one horsepower of sound. The speaker's voice produces pressure variations only of less than a few millionths of an atmosphere. His phonometer, however, is able to measure displacements of his glass and mica diaphragm not greater than 1/24,000 of 1 millimetre. V. Cheval assigns reasons for the audibility limits, showing from the anatomy of the human ear that less than 16 complete vibrations per second will not give a musical note and that more than 32,760 will be inaudible. The latter has a half wave length of about 26 mm. (the length of the basilar membrane). The speed of sound in the liquid of the inner ear is assumed as 1700 metres per second. Danilevsky has designed a direction indicator for sounds, such that the electrical rhythm is zero when the indicator points toward the sound. It is expected to apply the system to reading fog signals.

J. H. Coblin has devised a photochronograph for measuring very small intervals of time. A film moves at right angles to the vibration plane of the tuning fork. The source of light is intermittent, the sine wave, its amplitude, and the interval between two images give the phase at the beginning and end of each flash. The clock-time scale is accurate to 1/80,000 second and by adding a rotating mirror on an axis at right angles to the film movement, the traces are reflected and recorded on the film, giving a precision of 1/2,400,000 second. Coblin ingeniously suggests the use of this apparatus to determine the Fitzgerald-Lorentz contraction. Two tuning forks set to vibrate at right angles, mounted on a plate containing the direction of contraction, Lissajous figures are formed and Coblin estimates that if the contraction exists it should be perceptible by a phase difference within ten seconds.

On the whole it has been an interesting year in physics. No new or startling ideas stand out, but a rapid development of many fruitful lines of research characterizes current work in physics. The most striking fact of current physics is the closing in upon the problem of atomic structure and the correlation of such structure with the properties of the elements.

PLATINUM. Estimates of the production of crude placer platinum in the United States in 1920 give Alaska, 27 ounces; California, 656 ounces; Oregon, 23 ounces; and Washington, 8 ounces. Refiners reported a production of 41,544 troy ounces of new platinum metals in 1920, of which 36,015 ounces were platinum, 418 ounces iridium, 409 ounces osmiridium, 4309 ounces palladium, and 393 ounces of the minor metals including rhodium and osmium. This represents a decrease of 3565 ounces, as compared with the production in 1919. There were also produced 57,710 ounces of secondary platinum metals in 1920, of which 51,255 ounces were platinum, 3355 ounces iridium, and 3100 ounces palladium. This represents a decrease of 3806 ounces, as compared with the production in 1919. The platinum metals imported for consumption in 1920 included 80,955 ounces of crude platinum and unmanufactured ingots, bars, sheets, etc., of which approximately 58,009 ounces are believed to be refined metal; 4718 ounces of iridium; 4473 ounces of osmiridium; 6944 ounces of palladium; 2675 ounces of the minor metals; and 781 ounces of manufactured platinum ware. The imports of platinum for consumption in 1920 were 32,492 ounces greater than in 1919. The consumption of platinum metals in the United States in 1920 was 141,041 ounces, of which the jewelers took 57 per cent, the electrical industry 19 per cent, the dental industry 11 per cent, the chemical industry 10 per cent, and miscellaneous uses 3 per cent. The stocks of platinum metals at the end of 1920 amounted to 67,508 ounces, which is an increase of 55 per cent, as compared with the stocks at the end of 1919. Colombia was the leading source of platinum received in the United States during 1921 and there was every indication that this production would continue to increase. Russia with its extraordinary mines and rich deposits continued to neglect its opportunities and refused to begin working. In Canada the nickel smelters were closed so that several hundred ounces of platinum and palladium from this source were not available. As stated, the United States derived more than half of its crude platinum from Colombia, but England and France also shipped considerable amounts. Japan on the other took platinum from the United States and placed an embargo on its export with the evident plan of establishing a reserve of the metal.

In the United States the stocks of platinum

at the beginning of 1921 were 46,747 ounces, nearly 75 per cent greater than in 1920. Imports for the first nine months of 1921 were 52,200 ounces, or slightly lower than in 1920. There were, however, in the jewelry and other industries decreased demands for platinum so that its price continued to decrease until the low mark \$65 per ounce was reached in July, from which there was an increase until by mid-November a maximum of \$85 was secured for small lots. The range of prices during the year is shown in the accompanying table:

AVERAGE MONTHLY PRICES OF PLATINUM

PLATNER, JOHN WINTHROP. Educator and church historian, died at Cambridge, Mass., March 18. He was born at Lee, Mass., May 15, 1865; graduated at Yale in 1885; studied at Union Theological Seminary from 1890 to 1893; and at the University of Berlin from 1893 to 1895. He became an instructor in the Union Theological Seminary in 1895; was assistant professor of church history at Harvard from 1896 to 1901; and professor of church history at the Andover Theological Seminary after 1901, becoming president of the faculty in 1919. After 1908 he was also Andover professor of church history at Harvard. He was a contributor on his subject to the various historical and church reviews and to the first edition of the *NEW INTERNATIONAL ENCYCLOPEDIA*.

PLATNER, SAMUEL BALL. Classical scholar and university professor, died, August 20. He was born at Unionville, Conn., Dec. 4, 1863, and graduated at Yale in 1883. He entered the faculty of the Western Reserve University in 1885 and after 1892 was professor of Latin. He wrote *Topography of Ancient Rome* (1904) and edited *Greek and Roman Versification* and the letters of Pliny.

PLATOON SCHOOL ORGANIZATION. See **EDUCATION IN THE UNITED STATES.**

PLAYGROUND AND RECREATION ASSOCIATION OF AMERICA. An organization established in 1906; has been active in helping communities throughout the United States to establish year-round municipal recreation systems. During 1921 the association sent field workers into communities desiring their services to help plan the work, and to secure municipal appropriations, published a number of pamphlets and a monthly magazine, *The Playground*, answered through correspondence and personal conferences thousands of inquiries regarding various phases of community recreation, and maintained an employment department for the service of recreation

officials and workers throughout the country. It also established a continuation service, through which cities already having recreation systems might receive help and advice in their recreation problems from workers who have had valuable experience in the recreation field. The National Physical Education Service, inaugurated in 1919, helped during 1921 to secure adequate compulsory physical education laws for a number of states and worked toward the passage of a federal physical education bill. Officers during 1921 were as follows: President, Joseph Lee; treasurer, Gustavus T. Kirby; secretary, H. S. Braucher.

POCH, RUDOLF. See NECROLOGY.

PODOLIA. Formerly a government of the Russian empire, but after the revolution comprised within the territory of the Ukrainian republic; situated to the east of Galicia, and between Volhynia and Bessarabia. Area, 16,224 square miles; population estimated, Jan. 1, 1915, 4,127,600. Capital, Kamenets-Polsk, with a population, estimated before the war at 52,000, of whom one-half were Jews.

POE, Sir EDMUND SAMUEL. British admiral, died in England early in April. He was born, Sept. 11, 1849, and entered the navy in 1862. Two years later he barely escaped from the battleship *Bombay* which was destroyed by fire off Montevideo. He reached the rank of captain in June, 1888, and rear-admiral in September, 1901, and was appointed second in command of the Home Fleet on its formation in 1903. After September, 1905, he was for three years in command of the East Indies and on the Cape of Good Hope Station, serving in that capacity with distinction and being appointed vice-admiral. He retired, Sept. 11, 1914.

POETRY. See LITERATURE, ENGLISH AND AMERICAN; also articles on French, German, and Spanish literature.

POLAND. A European republic established as a result of the war, and comprising the territory formerly divided among the three great powers Austria-Hungary, Russia, and Prussia, after the three partitions of Poland in 1772, 1793, and 1795; boundaries to be defined under the treaty with Russia and Lithuania and under the award of the League of Nations in respect to the plebiscite, in Upper Silesia. An estimate of the area at the beginning of 1921 placed it at 149,042 square miles; and in 1920 an estimate of population placed it at 24,272,349. See UPPER-SILESIA; RUSSIA; and WAR OF THE NATIONS. Capital, Warsaw, with a population of about 980,000. Other large cities with estimates of populations are: Lodz, 429,775; Lemberg, 206,113; Cracow, 176,463; Posen, 156,691. Before the war Russian Poland had an area of 43,946 square miles; and a population estimated, Jan. 1, 1915, at 12,247,600, of whom about 70 per cent were Poles and about 75 per cent Roman Catholics.

AGRICULTURE. About 85 per cent of the total area has been estimated as productive and about 50 per cent under cultivation. Agriculture is the main occupation. The chief crops are wheat, rice, barley, oats, and sugar beets. Before the war the territories now united in the Polish state, produced a surplus of food exporting especially potatoes, potato alcohol, and sugar, for the most part to Germany. Agricultural production was greatly reduced by the war, extensive areas being

devastated and the country being almost entirely deprived of artificial fertilizers and losing many of its farm animals. During the first three years under the new government there was, as a result of these conditions, a serious food shortage, which necessitated the importation of large quantities of breadstuffs. The new government requisitioned grain and fixed prices, which tended to check the restoration of agriculture. In 1919 and the first half of 1920 grain imports were largely furnished on credits from the United States government. In 1920 the acreage planted showed a considerable increase over the two preceding years, but the Bolshevik invasion at the time of the harvest reduced the output. The grain crop of 1921 according to the official estimates was considerably larger than that of 1920. The imports of breadstuffs for 1920 and 1921 made up only one-tenth of the domestic production though an important item in the trade balance. It was expected that grain production in 1921 would render importation of grain unnecessary. Food though still short in 1921 was far more abundant than during the war and observers reported a great improvement in the physical condition of the people. The number of children requiring charitable care through American relief administration decreased during the year from 1,500,000 to 700,000. Beet sugar was one of the chief industries before the war and was largely exported. In 1913-14 there were 91 sugar factories in what is now Poland; in 1920-21 there were 61.

Statistics for agricultural production were not complete, but the following figures were supplied in 1921 for the area and crops of the chief agricultural products in 1920: Wheat, area, 827,000 hectares, and 697,000 metric tons; rye, 3,303,000, and 2,085,000; barley, 841,000, and 878,000; oats, 1,645,000, and 1,870,000; potatoes, 1,671,000, and 19,138,000. In 1921 measures were being taken to put into practice the laws passed by parliament, July 16, 1920, for limiting the size of the large estates and reducing the size of holdings in the neighborhood of cities. The 1921 crop of bread grains, wheat, and rye combined, was put at 4,436,000 metric tons, as compared with 2,782,000 tons in 1920—an increase of nearly 60 per cent. The total yield for 1921 of the four principal crops (wheat, rye, barley, oats) was placed at 7,537,000 metric tons, as against 5,530,000 tons in 1920 and 6,137,000 tons in 1919.

MINERAL PRODUCTION. The chief minerals are coal, petroleum, and salt. Before the war the present Polish territories produced an annual average of about 9,000,000 tons of coal which provided for about one-half of the consumption, the rest coming mainly from Upper Silesia. The government made serious efforts to increase the coal output in 1919 and there was a moderate increase in 1920. The total amount of coal produced in Poland in 1920 was 6,658,347 tons, of which 5,114,905 tons were from the Dombrowa Basin and 1,543,442 tons from Galicia. The mines of the Dombrowa furnished pit coal to the amount of 4,873,437 tons and brown coal to the amount of 241,468 tons, while Galicia furnished 1,532,982 tons of pit coal and 10,460 tons of brown coal. In 1921 the increase was very considerable and the output in April of that year was nearly up to the monthly average of 1913. In oil production Poland reached the

maximum during 1909 but declined even before the war. In 1909 the production was 2,086,000 metric tons and in 1920, 765,000. The salt mines which are for the most part in Galicia are owned by the state which has made special efforts at exploiting them with a result that in 1920 the average monthly production was about 27,000 tons.

MANUFACTURES. The textile industry, especially cotton, is the chief manufacturing occupation and during the three years following the war there was an increase in the volume of business; they were producing in 1921 about two-thirds of the prewar output. The cotton mills, however, had been gradually shut down by the war and in 1921 were operating at about 40 per cent of their prewar capacity. A revival in the manufacture of iron and steel products was reported in 1921. Timber which is especially abundant in Galicia and the eastern part of the country, is one of the chief resources.

ECONOMIC CONDITIONS. The industries of Poland suffered severely during the war and afterwards. The chief recent obstacles have been the lack of coal, lack of railway cars, and the difficulty of getting raw materials. Some progress had been made toward overcoming these obstacles in 1920, the industries showing a considerable advance over the previous year. So far as data were available for comparison, the advance appeared to be continuing during the first half of 1921. Coal during that period showed an output of 3,627,619 metric tons, alcohol a production of 40,000,000 litres of which 30,000,000 would be exported, and cement production about 40 per cent of its prewar output. In the textile industry, production was hampered by the unfavorable exchange. In 1920 the industry was producing at the rate of about 40 per cent to 50 per cent of its prewar capacity in cotton goods and 19 per cent to 26 per cent in woolen goods. In May, 1921, production had risen to 65 per cent in cottons and a little over 40 per cent in woolens and this continued down to the latter part of July when it was checked by labor troubles and difficulties in getting raw materials. There was a marked increase in the production of salt during the first six months of 1921. As to the mining and smelting industries the following table shows the output during the first half of 1921:

MINING AND SMELTING DATA, JANUARY-JUNE, 1921

Industries	Workmen	Establishments ¹	Production in metric tons
Black coal.....	47,284	66	3,506,322
Brown coal.....	2,291	13	121,297
Crude oil.....	12,597	335	342,287

² Figures for Congress Poland are not yet available.

³ For first four months of 1921 only; data for May and June not yet available.

⁴ Seven blast furnaces are operated in the 16 smelting plants.

In Poland there was a better adjustment of wages and living conditions to the increase of prices. Depreciation of the currency seemed to bring less hardship there than in any of the other countries. Wages rose nearly in proportion with the rise of prices; and in the leading industries of the country production was considerably above what it had been during the three preceding years. Cost of living rose during the summer at an exceptional rate after the government abandoned its policy of price control over grain and grain products. This led to strikes for increased wages and to a demand for severe measures against profiteering. There were indications of a great change in foreign trade conditions toward the close of the year. Until that time the value of the imports was many times as great as that of the exports; but during the last six months of the year the proportion was rapidly changing, and estimates indicated that instead of having to import large quantities of grain, the country would be able to export a considerable quantity from the crop of 1921. The annexation of the coal mines of Upper Silesia also exercised a favorable effect on the balance of trade.

The exchange value of the mark fell from about \$.0005 at the beginning of July to \$.00015 at the close of September; rising rapidly to a maximum of about \$.00038 early in November, it stood about \$.0003 in December. The amount of currency a little more than doubled between July 1 and December 1, standing at the latter date at 207 billions of marks. The new Finance Minister, Dr. Michalski, in October, proposed legislation increasing very greatly the existing taxes, the plan in his opinion being adequate, if adopted, to balance the budget. The Bill was still under discussion at the close of the year. During the summer, the government abandoned its control of food prices and prices rose with more than usual rapidity, the index of the cost of food for a working man's family rising from 1003 on June 30 to 1078 on September 30.

COMMERCE. In regard to the general commercial situation the United States Bureau of Foreign and Domestic Commerce supplied the following information: Approximately complete data regarding the weight of goods moving in foreign trade were published for the year 1920, but there were no figures for earlier years as a basis of comparison. During 1920 the reported imports totaled 3,530,000 metric tons and exports 620,000 tons. Over 2,600,000 tons of the imports represented coal from Germany (Upper Silesia). The next most important import was food products, chiefly grain, of which the United States supplied over 100,000 tons besides part of the more than 100,000 tons reported as imported from Dantzig. Fuel, part coal and part oil, shipped to Austria accounts for 142,000 tons of the exports. Plant raw materials, chiefly lumber, to the amount of about 85,000 tons, were sent to Germany, Dantzig, England, and Holland. Food products, mostly potatoes, weighing 107,000 tons, were sent to Germany.

FINANCE. The total expenditures for the budget of 1921 were about 209,000,000,000 marks and the receipts about 135,000,000,000 marks, thus leaving a deficit of about 74,000,000,000 marks.

RAILWAYS. The rehabilitation and equipment of the Polish railways was being undertaken in

earnest in 1921 and the Polish ministry of railways was reported to have placed orders with Polish firms for 2970 locomotives, 7800 passenger coaches, and 70,000 freight cars.

The contracts for locomotives were to run to 1932, and cars to 1922, and nearly 200 locomotives were to be delivered during the first two years. The cars were to be completed more speedily.

The various orders were distributed as follows: First Locomotive Construction Company, Chrsanow, 1200 locomotives; Locomotive Construction Company, Warsaw, 360 locomotives; H. Cegielski Company, Posen, 1410 locomotives and 4400 coaches and freight cars; Wagon Car Factory, Ostrow, 2800 coaches and 18,000 freight cars; Lipop, Rau, and Loewenstein, Warsaw, 3000 coaches and 20,000 freight cars; Boiler Manufacturing Company, Ostrowiec, 20,000 freight cars.

It was announced that the Polish government would permit the construction and operation of railway lines by private concerns, but under terms so unfavorable that they would have a very limited appeal to financial interest. Some of these conditions as given currency in the railway technical journals were as follows:

"The company must secure the permission of the government before it can make preliminary surveys and studies.

"The Minister of Railways decides upon the granting of the concession, depending upon his opinion regarding the desirability of the proposed railway and the financial and other arrangements advanced by the company. The company must assure the Minister of its ability to finance the project.

"At the end of 99 years the railway so constructed, with all its buildings, real properties, rolling stock, etc., automatically become the property of the government—*without compensation to the company.*

"The government may buy the railway at any time before the concession expires by the payment of a sum arrived at as follows: Average annual net income for the best 6 of the preceding 8 years (but not less than 4 per cent on the outstanding stock) capitalized at 5 per cent (if the concession has 20 years or more to run—otherwise the average annual net income multiplied by the years the concession has to run). The government is not limited in granting concessions to other companies for lines connecting with the one to be built.

"The Minister of Railways must approve the detailed construction plans. He will supervise the work of construction. He may order the construction of new buildings.

"The company, upon the demand of competent authority, must rebuild any bridges or highways affected by its activities and, apparently, must provide overhead or subway structures for all highways.

"The Minister may lower rates as he sees fit or allow the government to participate in profits over a certain amount.

"The government has the right-of-way for telegraph and telephone lines along the railway.

"The company will be required to transport postal parcels and employees free of charge and, when cars are provided by the postal authorities, handle and repair these cars at the company's expense.

"The company must enter into such relations as

to joint use of facilities or equipment as the Minister may require."

DEFENSE. In 1921 the Polish army was still on a war footing, but demobilisation was in progress in the spring. There were about 14,000 officers and 700,000 men of all arms. Military service is compulsory, and all able-bodied males are liable. See NAVAL PROGRESS.

HISTORY

GOVERNMENT. A Polish constitution was adopted on March 17. It combined features of the French and American constitutions. Executive power was vested in a president elected for seven years by a national assembly and in a cabinet responsible to the legislature. The president's powers were similar to those of the president of the United States, except that during war the responsibility was shifted to the minister of war, and that he did not possess the power of pardon. Legislative power was vested in a national assembly, consisting of a house and a senate. The judiciary was framed on the model of that of the United States. The constitution contained the usual guarantees in respect to life, liberty, and property, and assured religious toleration. Catholicism continued as the leading religion, and the relations between the church and the state were to be determined by an agreement with the Vatican, subject to approval by parliament. The rights of minorities were to be guaranteed by special legislation, and all citizens were to have the right to use their own language. Ministry at the beginning of the year (appointed August 21, 1920), constituted as follows: Prime Minister, Wincenty Witos; Foreign Affairs, Eustachy Prince Sapieha; Commerce and Industry, Wieslaw Przanowski; Finance, Dr. Jan Kanty Stecowski; Interior, Leopold Skulski; Communications, Zygmunt Jasinski; Posts and Telegraphs, Wladyslaw Steslowicz; Agriculture, Josef Racynski; Art, Jan Heurich; Labor, Jan Jankowski; Food, Boleslaw Grodzicki; Justice, Stanislaw Nowodworski; Public Works, Gabriel Narutowicz; War, General Gosutowski; Education, Maciej Rataj; former Prussian Province, Wladyslaw Kucharski; Health, Witold Chodzko.

RELATIONS WITH RUSSIA. The treaty of peace with Russia was signed at Riga, March 18. Its general result was to cause Russia a loss of 87,000 square miles with a population of about 7,000,000. See the article WAR OF THE NATIONS. Friction between the Russian and Polish governments continued throughout the year, and each charged the other with hostile propaganda. At the end of November a Soviet note accused the Warsaw government of complicity in the Ukrainian revolts, but these charges were denied by it, and the Polish government, November 21, complained in its turn that the Soviet government was supporting armed invasions of the Polish frontier. On November 8 the Polish government dispatched a note to Russia demanding that the terms of the treaty of Riga be carried out. Toward the close of the year laws were pending against the Communists, and, according to their provisions, every attempt against the government was to be punishable by death, and every preparation for such an attempt, by imprisonment for twenty years.

ALLIANCE WITH RUMANIA. Early in the year

the terms of a defensive and offensive alliance between Rumania and Poland were under discussion. The main purpose of it was to serve against any attack from Russia on one hand or Bulgaria on the other. It was signed at Bucharest, March 3, 1921, and ratified by the Polish Diet, July 1. By it each country agreed to support the other if it were attacked on its present eastern frontier, without provocation and to give aid in accordance with a military convention to be agreed upon, which should last five years subject to the right of either party to denounce it after two years on six months' notice. Neither party was to conclude an alliance with any other Power except upon an understanding with the other party to the alliance.

THE VILNA SETTLEMENT. The affair of Vilna has been described in the preceding YEAR BOOK under title of WAR OF THE NATIONS, where it was noted that the difficulty was referred to the League of Nations. The latter body had it under consideration after September 1, 1920. As noted in the previous account, General Zeligowsky occupied the city of Vilna in November, 1920, and set up a provisional government there. Attempts on the part of Poland and Lithuania to come to an understanding failed and the Polish general remained in spite of the Lithuanians and even against the authority of the Polish government. The Lithuanians charged that the Polish government was really responsible for the aggression, but the latter persistently denied this. The League of Nations decided upon direct negotiations and this plan being accepted, representatives of the two disputing nations met at Brussels under the president of the League, M. Paul Hymans. This attempt failed and the negotiations were broken off. In September, 1921, a settlement was finally reached by the League of Nations. According to this, General Zeligowsky was to evacuate the city and a local military force was to be created there for police purposes. On September 12, it was announced that both parties to the dispute had accepted the plan with certain reservations. The situation was complicated by the fact that the Polish general still continued to occupy the city of Vilna, and the Lithuanians refused to act on the League's request unless the Polish government should compel him to evacuate. For a moment there was a danger of a renewal of hostilities, but on November 16 the Polish assembly finally adopted the proposal of the prime minister, General Pilsudski, which provided for the resignation of General Zeligowski and the transformation of Vilna into a middle Lithuanian state. The prime minister resigned on account of the opposition to this measure, but afterwards withdrew his resignation. See WAR OF THE NATIONS.

THE UPPER SILESIAN DECISION. An account of the Upper Silesian question, the holding of the plebiscite, and the decision of the League of Nations is given in the articles, WAR OF THE NATIONS and UPPER SILESLIA. The Poles were well pleased with the decision of October 10 which was correspondingly disappointing to Germany. See also GERMANY.

RELATIONS WITH GERMANY. According to the new prime minister, M. Ponikowski (see below), it was possible now that the UPPER SILESIAN question had been settled that friendly relations should be maintained with Germany. On ac-

count of the long period of German oppression some years must pass in order to remove ill-feeling on the part of the Poles, but there was no reason why commercial relations should be injuriously affected by this. He added, "From the political point of view, Poland, being first of all bound by her alliance with France, has been guided and will always be guided in respect to Germany by a line of conduct entirely in sympathy with and adapted to that which had been followed by France."

THE NEW MINISTRY. Attempts to form a ministry under the former Austrian Minister of Railways which gave the Nationalist Democratic party the upper hand having failed, the Centre Parties united in favor of M. Ponikowski, Director of the Warsaw Polytechnic College, who had been known as an "Activist," that is to say, a supporter of the policy during the German occupation, of making common cause with the enemies of Russia. He succeeded in forming a ministry as follows: Premier, Antoni Ponikowski; Minister of Foreign Affairs, Konstanty Skirmunt; Minister of Finance, George Michalski; Minister of Transportation, Boleslaw Sikorski; Minister of Public Works, Gabryel Narutowicz; Minister of War, Casimir Sosnkowski; Minister of Commerce and Industry, Henryk Strasburger; Minister of Agriculture, Joseph Raczynski; Minister of Posts and Telegraphs, Wladislaw Steslowicz; Minister of Health, Witold Chodzko; Minister of Justice, Bronislaw Sobolewski; Minister of Provisions, Hieronim Wyczkowski; Minister of the former German Poland, Dr. Julius Trzcinski; Minister of Public Welfare, Ludwik Darowski; Minister of Internal Affairs, Stanislas Downarowicz.

OTHER EVENTS. For two years past the subject of Polish atrocities against the Jews was under discussion and a great volume of testimony on both sides had been published. The Morgenthau mission published a report definitely citing instances of massacre and other outrages against the Jews. This brought out many denials from quarters favorable to Poland. The subject continued to be violently debated during the year. See the article Jews. An agreement was signed between Poland and the free city of Danzig, October 25, providing for the free interchange of goods. It was announced on November 4 by the Polish representative at Danzig that the agreement was being successfully executed. Goods were freely circulating under a common customs régime. A treaty with Czecho-Slovakia was signed at Prague, November 7, whereby each nation guaranteed benevolent neutrality in case the other was attacked, and Poland promised not to interfere in Slovakia, and received a similar pledge from Czecho-Slovakia of non-interference in Galicia which was under Polish administration.

By the middle of December the first payment under the Riga treaty was received, amounting to 15,000,000 Polish marks. Polish refugees were arriving in December to the number of about 6000 daily and many of them were frozen to death in unheated cars, which led to the charge of criminal neglect against the Soviet government. Measures were taken for the development of trade and the improvement of transport between Poland and Soviet Russia and a special commission was formed at Warsaw having that end in view.

At the close of the year a considerable quantity of agricultural implements was being sent from Poland to Russia. Trade with the Ukraine was also reported to be active. The treaty with Czecho-Slovakia of November 7 was sent to the League of Nations about the middle of December. According to this, future disputes were to be settled by compulsory arbitration with appeal to the Court of International Justice. Improvement in the relations with Danzig were reported.

POLAR RESEARCH. The year 1921 was marked by renewed activity in Polar explorations, both in search of new lands and in the domain of science. Arctic America, the Arctic ocean, Nova Zembla, Spitsbergen, and the Antarctic were visited. The Scott memorial fund is to be used in part for the maintenance of an Institute for Polar Research, to be affiliated with the Department of Geography at Cambridge; expeditions and publications are to be recipients.

ANTARCTIC. Cope's private expedition returned in April to Montevideo for a new ship; he reports new land west of Graham Land, with no definite information. Great interest was shown regarding the renewal of Antarctic research by the successful explorer, Sir Ernest Shackleton, who planned a circumnavigation of the continent of Antarctica, beginning with the coasts of Enderby Land. He also planned to locate astronomically some uncertain sub-polar islands,—Bouvet, Heard, Lindsay, Prince Edward, etc. His ship, the *Quest*, although unusually small was fitted out with the utmost care, and was to be lighted and warmed by electricity. Seaplanes, gyro-magnetic apparatus, sounding wires, wireless telephones, and long-distance radio sets were among the scientific means to be employed; the scientific staff was said to be thoroughly competent. In December, 1921, the *Quest* was at South Georgia.

ARCTIC. Amundsen again met with misfortune. Entering the Arctic ocean at North Cape he skirted the Siberian coast and wintered near Bering Strait, 1918-19, and was obliged to refit in 1920 at Nome. Starting again his ship, the *Maud*, was disabled near Cape Serdze, Siberia, and repaired again at Nome. He planned to attempt the drift across the Arctic ocean in 1922. The *Maud* was equipped with wireless, and Amundsen added airplanes and aviators to his expedition. The safety of the *Maud* was insured by the prompt action of the United States Revenue Service, which entering the Arctic ocean found the ship disabled, and towing her a hundred miles south from the pack enabled her to reach Nome: The Norwegian Parliament voted 500,000 kronen for the continuance of Amundsen's voyage, for which he took seven years' supplies. Russian hunters report the death of Tessen and Knudsen, who left the *Maud* on the Siberian coast.

The Dane, Knud Rasmussen, was engaged in another Arctic expedition, which had in view the ethnological survey of that part of the American Polar archipelago, situated between Greenland and Hudson Bay. He left Godthaab, Greenland, September, 1921, in the *Sea King*, with a party of eight, including Eskimo hunters, taking seventy-two dogs for means of travel. The winter of 1921-22, was to be passed on Melville and Boothia peninsulas, Baffin Land, etc. The party were to take quarter at native encampments, and acquire data as

to life methods migrations, legendary history, and folk-lore. The *Sea King* was to winter meanwhile at St. Johns, Newfoundland. Later Rasmussen intended to visit the lands of Ellesmere, North Devon, South Somerset, and Melville, returning to Denmark in 1924.

McMillan's Arctic expedition covers in part the same territory as that of Rasmussen-Baffin Land. McMillan had in view, however, researches in natural history, the physics and of geography: Baffin Land is known only as to its southern parts, and he hoped to survey the entire region. Fortunately escaping serious injury in a collision at sea, after leaving Wiscasset, McMillan sailed from North Sidney for Baffin Land on July 27, 1921, in the *Bowdoin*.

Professor Høitvedt, University of Christiania, led a Norwegian expedition to Nova Zembla, where his scientific researches were most successful. The main mountain ranges were investigated as to their geological evolution. Remains of land vegetation and of fresh water fishes, belonging to the later Devonian age, were found under conditions which are thought to prove that the continental mainland of that age included Nova Zembla.

The occupation of Spitsbergen by coal-mining industries, under the sovereignty of Norway, appears to have stimulated scientific research in that archipelago. Oxford University sent, under F. C. R. Jourdain, a scientific expedition during 1921 to Spitsbergen, with special reference to zoology and other branches of natural history. Jourdain reported that animal and bird life were in a fair way to total extinction. Walrus, once found in numerous large herds, are now rarely seen on the west coast, occupied by coal miners. The colonies of eider ducks and brent geese were systematically and mercilessly raided for eggs and down.

The ultimate object of Stefansson's expedition to Wrangel Land was attributed either to the development of this uninhabited island, or to its use as a base for further exploration.

POLITICAL AND SOCIAL SCIENCE, AMERICAN ACADEMY OF. The American Academy was established nearly thirty years ago as a forum for the scientific discussion of social, civic, industrial, and economic topics. It publishes as its official organ a bi-monthly journal, known as *The Annals*, in which discussions on questions of national or international importance are presented. These volumes are sent to all members. During 1921 the following volumes were published: January, *Present-Day Immigration*; March, *International Trade Situation*; May, *Taxation and Public Expenditures*; July, *The Place of the United States in a World Organization for the Maintenance of Peace*; September, *Revival of American Business*; November, *Child Welfare*. The following officers were elected at the annual meeting: L. S. Rowe, president; Clark Kelsey, vice-president; Charles William Dabney, vice-president; David P. Barrows, vice-president; J. P. Lichtenberger, secretary; Charles J. Rhoads, treasurer. Clyde L. King is Editor of *The Annals*. Headquarters are maintained care of West Philadelphia Post Office, Philadelphia, Pa.

POLITICAL SCIENCE. See LITERATURE, ENGLISH AND AMERICAN.

POLITICAL SCIENCE, ACADEMY OF. An organization founded in New York in 1880, for the purpose of cultivating the political sciences and their application to the solution of social and political problems. It seeks to educate public opinion by meetings and publications. The semiannual meeting of 1921 was held May 23 at the Hotel Astor, New York. It took the form of a national conference on "National Expenditures and Public Economy." The President of the United States was a guest of honor at this meeting and many other distinguished men, including several members of the President's Cabinet, spoke on matters pertaining to the general topic. The forty-first annual meeting was held on November 4-5. "Constructive Experiments in Industrial Cooperation Between Employers and Employees" was the subject of discussion. The first session was held jointly with the Industrial Relations Association of America. Leaders of several large industrial concerns spoke on different phases of the subject. The attendance at each of the meetings was over 1400 and the report of the May meeting is published in Volume 9, No. 3, of *Proceedings*, and the November meeting in Volume 9, No. 4. Between five and six thousand copies of each report have been distributed. In addition to the *Proceedings* of its meetings, the Academy publishes the *Political Science Quarterly* and the *Annual Record of Political Events*. The membership of the Academy in 1921 was 4811. The Board of Trustees was composed of Samuel McCune Lindsay, President; Albert Shaw and Paul M. Warburg, Vice-Presidents; Parker Thomas Moon, Secretary; and George A. Plimpton, Treasurer.

POLITICS, INSTITUTE OF. A movement founded at Williams College, Williamstown, Mass., for the purpose of advancing the study of politics and of promoting a better understanding of international problems and relations. It offers opportunities to scholars and those engaged in the direction of affairs of state to devote a few weeks each summer to an intensive study of the problems with which they are dealing during the rest of the year, to exchange views, to hear those whose books they have read or whose contributions to the chosen subject are known to them through public utterances, in a word, to enjoy personal association with the leaders of thought.

On May 1, 1913, the Board of Trustees of Williams College approved the inauguration of the Institute, the Board of Advisors was chosen in September, 1919, but for various reasons the inaugural session was postponed until the summer of 1921. Membership in the Institute is limited to members of the faculties of colleges and universities and to those to whom, by reason of special training and experience in the field of politics, invitations are extended. Through the generosity of Mr. Bernard M. Baruch, funds were furnished for the expense of the Institute for three years. The activities of the Institute are of two general kinds: lectures by scholars and statesmen from abroad, and round-table conferences conducted by professors of leading educational institutions.

The Institute convened in Williamstown in 1921, July 29 to August 27. The subject chosen was that of International Relations, which was treated in its historical, political, legal, commer-

cial, and institutional phases, including a discussion of the causes of wars and the means of averting them. The list of topics chosen for the lecture courses and the lectures were as follows: "International Relations of the Old World States," by Viscount James Bryce; "Russian Foreign Relations during the last Half Century," by Baron Sergious S. Korff, Russia; "The Place of Hungary in European History," by Count Paul Teleki, Hungary; "Near Eastern Affairs and Conditions," by Stephen Panaretoff, Bulgaria; "Modern Italy, its intellectual, Cultural, and Financial Aspects," Tomasso Tittioni, Italy; "The Economic Factor in International Relations," by Prof. A. Viallate, France. The Round-table Conference subjects related to the general subject of the session and were led by prominent statesmen and college professors.

The second session of the Institute is to be held July 27 to August 26, 1922, and the general topic chosen is International Relations with special emphasis upon the problems of Central and Eastern Europe, the Far East and Latin-America. A number of eminent statesmen and scholars have been invited to deliver courses of lectures.

The administrative officers of the Institute are: Harry A. Garfield, Chairman; Walter Wallace McLaren, Executive Secretary; and Willard E. Hoyt, Treasurer, all of Williams College. The Board of Advisors includes distinguished representatives of many large universities.

POLO. The United States regained possession of the International Cup lost in 1914 by defeating Great Britain in two straight matches at Hurlingham, England. The scores were eleven to four and ten to six. The victorious team comprised Louis E. Stoddard, Thomas Hitchcock, Jr., J. Watson Webb, and Devereux Milburn, while the losing four were Major F. W. Barrett, Lieut.-Col. H. A. Tomkinson, Major Lockett, and Lord Wodehouse. The ease with which the U. S. players triumphed afforded considerable surprise to many followers of the game who figured that the American ponies would not be sufficiently well acclimated to be at their best. It was the sterling condition of their mounts, however, that smoothed the way for the visiting team.

The U. S. National open championship was won by the Great Neck players who defeated the Rockaway team in the final round by a score of eight to six. The national senior title went to Rockaway, and the Meadow Brook Foxhunters carried off the junior laurels.

PONCHIELLI, TERESA BRAMBILLA. Widow of the famous composer, Amilcare Ponchielli, died at Vercelli, in July. She was born at Cassano Val d'Adda, in 1845. Already famous at the time of her marriage (1872), she won her greatest triumphs as interpreter of her husband's works. After his death, in 1886, she retired from the stage and devoted herself to teaching.

PORK. See LIVE STOCK.

PORRITT, EDWARD. British-American writer, committed suicide, October 8, by jumping overboard from the steamer *Baltic* after leaving Liverpool. He was born in England, Dec. 8, 1860, began newspaper work at an early age on a provincial journal, but later was on the staffs of Liverpool and London papers. He came to the United States and lived for a time at Farmington,

Conn., contributing largely to American periodicals and serving as correspondent for the *London Times* and *Manchester Guardian*. He visited South Africa in 1902 and wrote articles on trade conditions there. He was lecturer at Johns Hopkins University and at the University of California. His wife was widely known as a suffragist leader. He wrote: *The Englishman at Home* (1894); *Breakup of English Party System* (1895); *The Unreformed House of Commons* (2 vols., with Mrs. Annie G. Porritt, 1903); *Sixty Years of Protection in Canada, 1848-1906* (1907); *Revolt against the New Feudalism in Canada* (1911); *Barriers against Democracy in the British Electoral System* (1911); *The Evolution of the Dominion of Canada; its Government and its Politics* (1918).

PORTER, HENRY KIRKE. Former Congressman from Pennsylvania, died, April 11. He was born at Concord, N. H., Nov. 24, 1840; educated at Brown University, Newton Theological Institution, and Rochester Theological Seminary; enlisted in 1862, in the Massachusetts volunteers in the Civil War, and was mustered out in July, 1863. After the war he went into the manufacture of light locomotives, establishing an important company of which he became president. He was a member of Congress from 1903 to 1905, and an officer of many important financial and other institutions in the city of Pittsburg, Pa.

PORTER, HORACE. Diplomat, soldier, and railroad president, died, May 29. At the time of his death he was the last survivor of General Grant's staff. He was born at Huntingdon, Pa., April 15, 1837; educated at the Lawrence Scientific School, Harvard; and graduated at the United States Military Academy in 1860. He entered the Civil War as a second-lieutenant, and became captain, March 3, 1863; and lieutenant-colonel and aid on the staff of General Grant, April 4, 1864. He distinguished himself at the siege of Pulaaski, in the battle of Chickamauga, the battle of the Wilderness, and at Newmarket Heights, Va. On March 13, 1865, he was breveted brigadier-general for gallant services in the field. He was assistant-secretary of war in 1860, and executive secretary to President Grant, 1869-73. In the latter year he was made vice-president of the Pullman Palace Car company, and was afterwards president of the New York, West Shore, and Buffalo railroad and of the St. Louis and Santa Fé. From 1897 to 1905 he was ambassador to France. As an orator of unusual merit he was in demand on all great public occasions and was prominent during many years at a large number of public ceremonies. He secured by private subscription the necessary funds for the building of Grant's Tomb in New York City, and was the orator at its dedication, April 27, 1897. Through his efforts and at his own personal expense he recovered the body of Paul Jones in Paris, April 7, 1905, and officiated at the interment at Annapolis, April 23, 1906. Among his writings are: *West Point Life* (1866); *Campaigning with Grant* (1897); and articles in *Battles and Leaders of the Civil War* (1887).

PORTLAND CEMENT. The production of Portland cement in 1920 was 100,023,245 barrels, exceeding that in 1917, the next highest year in production, by 7,209,043 barrels. This amount was an increase of 24 per cent over the

production in 1919—80,777,935 barrels. The stocks at the mills increased from 5,256,900 barrels at the end of 1919 to 8,941,046 barrels at the end of 1920.

The shipments in 1920 amounted to 96,311,719 barrels, valued at \$194,439,025, as compared with 85,612,899 barrels, valued at \$146,734,844, in 1919, an increase in quantity of 13 per cent and in value of 33 per cent. Of the 27 States in which Portland cement was manufactured in 1920, 21 showed an increase in shipments and 6 showed a decrease as compared with 1919, and 25 showed an increase in production and 2 showed a decrease. There were increases in production in all the commercial districts and increases in shipments in all except three as compared with 1919, and yet the estimated Portland-cement manufacturing capacity utilized during the year was only about 66 per cent.

In 1920 the average factory price per barrel for Portland cement in bulk was higher in all the districts and ranged from \$1.83 in Indiana and in the Illinois and western Indiana district to \$2.46 in Michigan; in 1919 it ranged from \$1.62 in Illinois and the Illinois and western Indiana district to \$2.08, the average in Oregon and Washington. The average factory price per barrel for the whole country was \$2.02 in 1920, as compared with \$1.71 in 1919, an increase of 31 cents per barrel, or 18 per cent. This is the highest average price on record since 1892. The lowest average price recorded was \$0.813 in 1909 and 1912.

The combined production of natural and puzzolan cements in 1920 was 767,481 barrels, valued at \$1,150,890, as compared with 528,589 barrels, valued at \$583,554, in 1919. In 1920, 8 plants reported production of natural cement and 1 plant made puzzolan cement.

The exports of hydraulic cement from the United States in 1920 were 2,985,807 barrels, valued at \$10,045,369, or \$3.36 per barrel, as compared with 2,463,573 barrels, valued at \$7,513,389, or \$3.05 per barrel in 1919, showing an increase in quantity of more than 21 per cent and in value of nearly 34 per cent. The exports were sent principally to South America, the West Indies, Central America, and Mexico. The imports for consumption in 1920 were 524,604 barrels of 376 pounds, valued at \$1,254,729, or \$2.39 per barrel, as compared with 9026 barrels, valued at \$52,636, or \$5.83 per barrel in 1919. This great increase in imports, which were largely from Canada, is noteworthy.

PORTO RICO. AREA AND POPULATION. The area of the island is placed at 3435 square miles. The population in 1920 was 1,299,809, an increase of 181,797 in less than 10 years and an increase of 346,616 since the census was taken by the American administration in 1899. At the last census under the Spanish government in 1887 the population was given at 798,565 and it increased during the last 22 years of Spanish government by 221,595, or 30 per cent. Under the 21 years of American government it increased 346,616 or 36 per cent. As a result of this increase the density of the population has become enormous, that is to say, 378.4 per square mile.

EDUCATION. The following statistics of education were supplied by the Bureau of Insular Affairs:

	1920	1921
Total enrollment.....	184,991	193,269
Distributed by schools:		
Rural.....	115,077	119,947
Elementary urban.....	59,174	62,126
Secondary.....	3,882	4,364
Collegiate Depts. U. of P. R.....	644	565
Private school enrollment.....	5,823	6,818
School population, 5 to 18 years.....	452,446	452,446
Enrollment in public schools to school population.....	40.7%	42.7
Teachers, number of.....	3,288	3,354
All native Porto Rican teachers except.....	153	158
Buildings.....	1,903	1,911
Buildings government owned.....	569	596

¹ Basis 1920 population.

² Basis 1920 school population.

COMMERCE. Shipments of merchandise to and from the United States constitutes more than 90 per cent of the commerce of Porto Rico, the trade of the United States with Porto Rico exceeding that with any Latin-American country, except Argentina, Brazil, and Cuba. The chief exports are sugar, tobacco, cigars, coffee, and fruits. The chief imports are rice, flour, cotton manufactures, manufactures of iron and steel, and fertilizers. In 1920-21 imports were valued at \$105,479,703, a slight increase over the previous year, and exports at \$112,278,575, a decrease of approximately 25 per cent as compared with 1920, due to the general falling off in prices. Breadstuffs of which almost all came from the United States amounted to \$13,912,595, and the importation of cotton goods was \$15,127,920. The sugar shipments to the United States of 409,022 short tons were valued at \$71,367,290 and constituted practically the entire sugar output. Exports of unmanufactured tobacco amounted to 14,667,932 lbs. valued at \$13,568,249. The development of external trade during 21 years, including the fiscal year 1921 was as follows: Exports from Porto Rico to the United States, \$103,388,227; to foreign countries, \$8,890,348; total, \$112,278,575. Imports to Porto Rico from the United States, \$97,074,399; from foreign countries, \$8,405,304; total, \$105,479,703.

MANUFACTURES. The accompanying table issued by the U. S. Bureau of the Census gives a comparative summary of the census of manufactures in 1919 with corresponding figures for 1909 for purposes of comparison:

	Manufacturing Industries		Per cent of increase ¹ 1909-19
	1919	1909	
Number of establishments.....	619	939	-34.1
Persons engaged.....	18,454	18,122	1.8
Proprietors and firm members.....	787	1,478	-46.8
Salaried employees.....	1,682	1,062	58.4
Wage earners (average number).....	15,985	15,582	2.6
Primary horsepower.....	67,226	34,005	97.7
Capital.....	\$84,151,310	\$25,544,385	229.4
Salaries and wages.....	9,104,465	4,898,228	85.9
Salaries.....	2,338,861	1,259,032	85.8
Wages.....	6,765,604	3,639,196	85.9
Paid for contract work.....	157,784	21,326	639.9
Rent and taxes.....	2,194,740	2,941,292	-25.4
Cost of materials.....	59,827,274	21,479,292	178.5
Value of products.....	85,506,834	36,749,742	132.7
Value added by manufacture.....	25,679,560	15,270,450	68.2

¹ A minus sign (—) denotes decrease.

² Value of products less cost of materials.

The two leading manufacturing cities, San Juan and Ponce, showed considerable increases in the number of females employed in 1919 over

1909, while the class "under 16 years of age" was reduced from 135 to 3 in San Juan and from 88 to 3 in Ponce during the decade.

HEALTH AND SANITATION. The campaign against tuberculosis, malaria, and uncinariasis, the three diseases which are the cause of the high death rate registered in Porto Rico, was continued by the health authorities with the effective co-operation of the Rockefeller Foundation. The bubonic plague which made its appearance in San Juan on February 17, was the only transmissible disease which assumed epidemic character during the year. The epidemic, proclaimed on February 21, was quickly got under control through prompt action by the health authorities, but 25 cases being reported up to June 30. Infant mortality was reported at 42.25 per cent of the total mortality. The vital statistics showed a death rate of 22.33 per thousand for the fiscal year ending June 30, 1921.

FINANCE. The income of the insular treasury, estimated for the fiscal year 1921-22, was \$10,230,000, and the total assets for the year including cash on hand and deferred revenues amounted to \$11,856,335.81, with total liabilities of \$11,783,409.57, leaving an estimated cash balance, June 30, 1922, of \$72,926.24. The total bonded indebtedness was increased during the year by the sale of various bonds, including an issue of \$1,000,000 public improvement bonds of 1920, making a total bonded indebtedness at the close of the fiscal year of \$12,146,000. The limit of indebtedness was \$28,641,551.60, having been raised to 10 per cent on the basis of assessed valuation in 1920-21, according to amendment to the organic act.

ECONOMIC CONDITIONS. The financial troubles which prevailed elsewhere throughout the world were particularly acute in Porto Rico. Its principal agricultural product, sugar, dropped in price from twenty-three to about four cents per pound, and in the closing months of the year fluctuated between four and five cents. The price of other products also fell off, resulting in a greater strain upon finances than had been the case in most other places. The readjustment of wages necessarily brought about by the drop in price of the products of the island was carried on in such a way that there was not great complaint on that

account. The only important strikes during the year involved the question of open shop and reduced production. These had not been completely

settled at the end of the year, but the industries were able to continue owing to the fact that many of the laborers had refused to take part in the strikes.

LEGISLATION. The tenth legislature of Porto Rico convened for its first biennial session February 14, and adjourned, June 28, 1921, after the passage of 120 bills and 53 joint resolutions, of which 91 bills and 49 joint resolutions became laws of the islands as follows: 88 bills and 49 joint resolutions were duly approved by either the Governor or the Acting-Governor, and 3 bills became laws without the approval and signature of the Governor, as they were not returned to the legislature, the latter being still in session, within the term of ten days provided for in Section 34 of the Organic Act; 29 bills, and 3 joint resolutions did not become laws because they were not signed by the Acting-Governor within thirty days after receipt by him as prescribed also in Section 34 of the Organic Act, the legislature by adjournment having prevented their return. One joint resolution was returned by the Governor with his objections to the Senate, where it originated, and was never submitted again in an amended form to the Governor's approval.

The Congress of the United States amended, February 27, the Federal Farm Loan Act of July 17, 1916, extending its provisions to Porto Rico. Congress also amended, February 3, sections of the act of March 2, 1917, providing a civil government for Porto Rico, to read as follows:

"That no public money or property shall ever be appropriated, applied, donated, used, directly or indirectly, for the use, benefit, or support of any sect, church, denomination, sectarian institution, or association, or system of religion, or for the use, benefit, or support of any priest, preacher, minister, or other religious teacher or dignitary as such. Contracting of polygamous or plural marriages hereafter is prohibited.

"That no export duties shall be levied or collected on exports from Porto Rico, but taxes and assessments on property, internal revenue, and license fees, and royalties for franchises, privileges, and concessions may be imposed for the purposes of the insular and municipal governments, respectively, as may be provided and defined by the Legislature of Porto Rico; and, when necessary to anticipate taxes and revenues, bonds and other obligations may be issued by Porto Rico or any municipal government therein as may be provided by law, and to protect the public credit: *Provided, however,* That no public indebtedness of Porto Rico or of any subdivision or municipality thereof shall be authorized or allowed in excess of 10 per centum of the aggregate tax valuation of its property, and all bonds issued by the government of Porto Rico, or by its authority, shall be exempt from taxation by the Government of the United States or by the government of Porto Rico or of any political or municipal subdivision thereof, or by any State, or by any county, municipality, or other municipal subdivision of any State or Territory of the United States, or by the District of Columbia. In computing the indebtedness of the people of Porto Rico, bonds issued by the people of Porto Rico secured by an equivalent amount of bonds of municipal corporations or school boards of Porto Rico shall not be counted."

OFFICERS. Governor, E. Mont Reilly; Treasurer, Jose E. Benedicto; Auditor, W. L. Kessinger; Attorney-General, Salvadoro Mestre; Commissioner of Education, Juan B. Huyke; Commissioner of Interior, John A. Wilson; Commissioner of Agriculture and Labor, Carlos Toro; Commissioner of Health, W. F. Lippitt.

SITUATION AT THE CLOSE OF THE YEAR. The majority of both the lower and upper house in Porto Rico petitioned President Harding for the removal of Gov. Reilly, but the President took no action upon it and instructed the governor to return to his duties, December 16. Answers to the charge that the governor had appointed an unusual

number of Americans to positions on the Island were offered at the end of the year. According to President Harding, 5911 natives and 49 continentals were employed in the Porto Rican administration on July 1 when Mr. Reilly became governor. Changes from that date to the close of the year numbered only six and in four of these changes continentals had been replaced by Porto Ricans. In fact, the number of Americans in the service had been reduced from 49 to 45. The Speaker of the Porto Rican House of Representatives, in an address at Madrid, Spain, December 20, complained that Spain and Latin-America had been ignored at the Washington Conference and recommended the founding of a Spain League of Nations. The American administration appointed Associate Justice Emilio del Toro, Chief Justice of the Supreme Court of Porto Rico, December 22.

HISTORY

THE GOVERNOR'S DIFFICULTIES. The most notable feature of the year's record was the campaign against the American governor, Mr. Reilly, carried on among the people and in the press and resulting in the sending of a delegation to Washington to ask for his removal. This movement proceeded from the nationalist party which was accused by the supporters of Governor Reilly at aiming at secession from the United States. This party was in the majority, and its head was Antonio R. Barcelo, president of the Porto Rican senate. The supporters of Governor Reilly declared that its influence over the island politics was injurious and that its leader was endeavoring to make himself a dictator. On the other hand, the Unionists, as they were called, maintained that the party was a patriotic league working to the end that the people should show their capacity for self-government. It had the support of the main body of the population as had been indicated by repeated victories at the polls. As summarized from press accounts the situation was as follows: When the governor returned for a visit to the United States it was found that the ship was on fire and it was reported that this had resulted from an attempt on the life of the governor by some one who had placed a bomb in the vessel when it left San Juan. He appeared to be convinced of sedition on the island and he attributed it to the activities of the Unionists. At the beginning of his term he declared that he would not bestow any offices on advocates of independence and that he intended to make the English language the language of the schools. He was especially criticised for his rebuke of the president of the Porto Rican senate, Señor Antonio Barcelo, to whom he said in a letter of August 17 a propos of Señor Barcelo's recommendation of certain persons for local offices, that he wanted him fully to understand that the governor would never appoint any man to office who was an advocate of independence but that he would be glad to have his recommendations after he had publicly denounced independence and broken loose from some of his "pernicious and un-American associates." The rank and file of the Unionist party were irritated and made hostile demonstrations in the streets. Mr. Barcelo resigned from his leadership of the party but was obliged to resume it on account of the insistence of his supporters. Another step of the governor's

was to request the resignation of a Unionist member on the commission of a workmen's indemnity on the ground that he believed in Porto Rican independence. The Unionists sent three other names to the governor for nomination. On this occasion the governor declared his intention to "clean house" and not to appoint any one to office who believed in independence. After this the Unionist party took a more aggressive attitude and its programme laid more emphasis on the independence of the island. A convention of the party was held and it was decided to send a delegation to Washington for the purpose of causing the governor to be restrained or removed. Meanwhile the governor caused the resignation of the Secretary of Agriculture and Labor, the Secretary of Public Health, and the Secretary of Interior and replaced them with Republicans. But their appointment was subject to the approval of the Senate which was not to meet till February, 1922. The governor during the interval endeavored to secure from the United States Congress a change in the organic act which would permit the President to decide in case of dispute between the Porto Rican executive and the Senate. That was the situation at the close of the year. The efforts of Governor Reilly had tended to bring into prominence the Republican party of the island and his association with a representative of the Socialist party had indicated overtures to that party as well. From a certain point of view his attitude was criticised in Porto Rico as showing friendship for the more radical element. As to his appointments he had distributed the offices among all three political parties though making sure that the Unionist appointees were not those who favored independence. He made several important appointments from among the Socialists and he pardoned several of the Socialists who had been imprisoned for disorders during strikes or elections. The delegation to the United States government to demand the governor's removal arrived in November. The members were representatives of the Unionist party. In interviews with the press they accused the governor of complete incapacity and ignorance in regard to the administration of the island and blamed him for a campaign of slander against the natives. The question of language in the schools was under discussion during the year. The American governor recommended that English and Spanish both should be taught on the same footing in the schools, and that other languages should have a secondary place.

POLITICAL PARTIES. The party situation on the governor's arrival in the island has been summed up as follows: There were three political parties of which the largest was the Unionist. This included the most prominent and wealthy of the citizens and its programme was self-government for the present and independence as an ultimate aim. In November, 1920, it had polled 120,000 votes. Next in numerical importance was the Republican party which had polled 61,000 votes and whose declared aim was the Americanization of the island and its incorporation as an American State. Finally there was the so-called Socialist party which, however, was rather of the nature of a progressive labor party, aiming at public ownership of certain public utilities, more radical labor laws, an increase in the number of schools, high income tax, etc. This had polled in

November, 1920, 59,000 votes. The new governor saw in the Unionist party a menace to the American government. He believed that its members hated the Americans and were disloyal to the government; in short that they were directly moving toward complete independence of American control. According to others, however, the Unionist party was not in reality seeking independence as an immediate end but was using the term as a rallying cry to the masses and had in mind only ultimate independence at some distant and unspecified date; in other words, that it was an appeal to the sentimental aspirations of the people while their real interests were vested in the present situation for they profited from the tariff system and belonged to the class generally that benefited from American control.

PORTS AND HARBORS. In 1921 there was a serious consideration of the development of ports and harbors though actual construction was hindered by the limited funds available. At the Port of New York, for example, there was much discussion over the preparation of plans and projects. River and Harbor bills restricted port-work to necessities or the continuation of what was under way, while in Europe no great undertakings were being discussed although various projects were under consideration for future development.

NEW YORK PORT DEVELOPMENT. There was much active discussion of the development of the Port of New York during 1921, in which there was considerable difference of opinion. In these differences, politics and policies figured as well as engineering opinion, the last being far from united in approving the various suggestions or in its general appreciation of the fundamental and broad questions involved. There had been established by coöperative action of the States of New York and New Jersey, a Port Authority which aimed at the development of the port facilities about New York Bay including both New York and New Jersey, in a harmonious scheme to serve the various cities of the metropolitan districts. On the other hand, this general scheme was not approved by the municipal government of New York City on the score that it would develop New Jersey and New Jersey cities at the expense of New York and was a usurpation of the local authority. On both sides engineering and traffic studies were made, for it was realized that the great problem was not at the shores of the harbor but to transport too from the shipping the goods of commerce. In other words, the insular position of New York City and the many moors and bays which went to make up so fine a harbor acted to cut off the city from access especially for its freight and foodstuffs. The problem was a large one in which there were proposed tunnels, bridges, belt railways, classification facilities, relocation of railways, building new lines, etc., and furthermore it was realized that there was a pressing need of immediate facilities. Accordingly a system of belt lines, spurs, and marginal railways were recommended, and to supply Manhattan an underground "automatic-electric" freight subway loop system which would bring freight to distribution centres in Manhattan and elsewhere. This plan was put during the year and was generally discussed.

On Dec. 7, 1921, there was held a conference of the so-called advisory council, made up of representatives of the various interests in the

Port of New York which was provided for, and E. H. Outerbridge, chairman, Port of New York Authority, submitted what he called a preliminary report of a comprehensive plan for the development of the Port of New York.

The plan presented in the conference reemphasizes the fact that the problem of the Port of New York was a railway terminal problem and to the solution of that problem it suggested a number of belt lines divided into the inner or water-front group, the middle group, and the outer group. It also again made clear that the west water front of Manhattan Island must be cleared of terminals and made free for ocean shipping, that the opposite or Jersey shore should be developed for pierhead rail lines, and that the terminal break-up stations and classification yards must be back of the Palisades on the Jersey shore and back from the Hudson water front on Manhattan Island, with the connecting tunnel and the automatic-electric railway which had been emphasized in an earlier report. This report also called attention to the development of the ferries for motor-truck transportation to inland union terminals.

As distinct from the plans of the Port Authority the Board of Estimate and Apportionment of the City of New York submitted during the year a preliminary report on port and harbor development where the main feature was the construction of a tunnel or tunnels to connect Staten Island with Brooklyn. The general plan in addition involved a system of belt lines, industrial tracks and other facilities necessary to create a greater unification of the present steam railroad and electric traction lines leading in and out of New York City. This plan also involved an outer belt line, somewhat similar to the outer belt line suggested in the report of the New York-New Jersey Commission, intersecting all the New Jersey roads and running from Haworth, N. J., on the north, via Paterson, N. J., the Passaic river, Short Hills-Summit, Scotch Plains, and Metuchen to Perth Amboy on the south. Crossing Arthur Kill on a high level viaduct, the line would bisect Staten Island from south to north for its entire length and connects with the proposed tunnel under the Narrows. The plan included connections on the Staten Island with the existing Staten Island Rapid Transit Railway for access to the new Stapleton piers, and for purposes of passenger business.

Passing under the Narrows the line would enter into Bay Ridge, Brooklyn, and connect with the Long Island Railroad, over which access can be had to the Jamaica Bay development, to points in Long Island, the Bronx, and New England, and to a proposed industrial railway along the Brooklyn waterfront. Classification yards were proposed in New Jersey and also on Staten Island. It was also proposed to connect the New York Central and the New York, New Haven & Hartford by a double track tunnel about 3.7 miles long running from a point approximately opposite West 168th street in Manhattan, under the Harlem river to about Longwood avenue in the Bronx, so as to permit a connection with the New York Connecting Railroad over the Hell Gate bridge, or to the New Haven's yards at Oak Point.

The total cost of the project was estimated at \$141,000,000, subdivided as follows: Cost of the belt line and classification yard, \$42,000,000;

freight and passenger tunnels and connections, \$51,000,000; elevated industrial railroad along Brooklyn water front, \$25,000,000; and the tunnel or connecting link between the New York Central and the New Haven, with all connections, \$23,000,000.

NEW YORK CITY—STATEN ISLAND PIERS. The twelve piers which the city of New York put under in May, 1920, at Stapleton, Staten Island, were reaching completion at the end of the year and formed the largest steamship pier development ever undertaken at one time by the city. This work was described in the *YEAR BOOK* for 1920 and involved a rail connection with the Baltimore and Ohio railroad which extending across Arthur Kill by bridge afforded access to all of the railways entering the port on the New Jersey side.

The Rivers and Harbors bill authorizing the expenditure of \$15,000,000 for maintenance of present works and the prosecution of projects already authorized, under the direction of the Secretary of War and the supervision of the Chief of Engineers, was approved March 1. The bill in addition made \$250,000 immediately available for examinations, surveys and "contingencies for rivers and harbors for which there may be no special appropriation," but no part of this sum was to be spent on projects not already authorized by law. There was also appropriated \$7,170,000 for flood control work.

Later in the year came the annual estimates of expenditures submitted to Congress December 5 by the President and the Director of the Budget. In these requests are made fee appropriations totaling \$27,885,260 for river and harbor work during the fiscal year 1923-24. This was exclusive of the continuing contract work, for which an additional \$7,070,000 was asked. Of this latter amount, \$6,670,000 was intended for flood-control work on the Mississippi and \$400,000 for flood control work on the Sacramento river.

The Chief of Engineers of the U. S. Army in his annual report to the Secretary of War recommended an expenditure of approximately \$43,000,000 for rivers and harbors in the fiscal year 1923, exclusive of a proposed \$7,500,000 for the Muscle Shoals, Ala., project in the Tennessee river.

The principal harbor projects so recommended were: New York, \$2,900,000, including \$2,200,000 for the East river and \$350,000 for the Hudson river channel; Philadelphia to the sea, \$3,660,000, including \$500,000 for Philadelphia Harbor and \$1,500,000 for Liston Range; Savannah, \$1,025,000; Norfolk, \$500,000; Los Angeles, \$300,000; Humboldt, Calif., \$400,000 and Gray's Harbor and Bar Entrance, Wash., \$660,000.

Principal river projects were: Mississippi from the mouth of the Ohio to the mouth of the Missouri, \$1,000,000, from the mouth of the Missouri to Minneapolis, \$2,000,000; Southwest Pass, \$1,136,000, and South Pass Channel, \$250,000; Ohio for locks and dams, \$5,000,000 and for general open channel work, \$435,000; Allegheny for locks and dams, \$900,000, and open channel work, \$5000; Detroit, \$1,100,000; Illinois below Copras Creek, \$440,000; Columbia and Lower Williamette below Vancouver and Portland, Ore., \$850,000; Missouri, \$145,000, including \$25,000 from Kansas City to Sioux City and \$20,000 from Sioux City to Fort Benton, Mont., and St. Mary's river, Mich., \$557,000.

Miscellaneous items included \$2,500,000 for the inland waterway from the Delaware river to Chesapeake Bay; \$400,000 inland waterway from Norfolk, Va., to Beaufort Inlet, N. C.; \$6,670,000 for the Mississippi River Commission (flood control); \$548,000 for the California Debris Commission; \$459,155 for the prevention of deposits in New York Harbor.

Aside from those mentioned, there were the usual number of minor projects.

The American Association of Port Authorities held its tenth annual convention in Seattle, Wash., Oct. 11-14. Among the twenty papers presented to the convention a number were descriptions of specific ports, but in most cases there was a discussion of some engineering problem of port design or control. The convention voted approval and support for the War Department's investigation of port terminal charges and practices in America, and also decided to take action to secure the passage by the governments at Washington and Ottawa of laws to overcome the floating oil menace in harbors. Such action was to take the form of a petition in which other bodies would join, which would point out the fire danger to terminals and shipping presented by this menace. Benjamin Thompson, of Tampa, Fla., and M. P. Fennell, Jr., of the Harbor Commission of Montreal were reelected president and secretary, respectively.

Ports and Port Problems figured prominently at the fall meeting of the American Society of Civil Engineers, September 7 and 8, and the papers then presented covered an unusually wide range of activity in this field. This is indicated by the following list of speakers and the titles of their papers:

Frederic W. Cowie, chief engineer, Harbor Commissioners of Montreal, "National Phases of Port Problems"; Major-Gen. Lansing H. Beach, Chief of Engineers, U. S. Army, "Terminals"; Frederic H. Fay, of Fay, Spofford & Thorndike, consulting engineers, Boston, "Development of the Smaller Ports"; M. A. Long, of the M. A. Long Co., engineers and constructors, Baltimore, "Relation of Warehouses to Port Development"; John Meigs, consulting engineer, Philadelphia, "Uncoördinated Design in American Ports"; W. Watters Pagon, consulting engineer, Baltimore, "Brief Comparison of American and Foreign Sea Ports"; Edwin J. Clapp, New York City, "Some Observations on Port Finances"; Carrol R. Thompson, assistant director Department of Wharves, Docks and Ferries, Philadelphia, "Improvement and Development of Ports"; J. A. Bense, consulting engineer, New York City, "Port Problems in New York"; Colonel W. J. Wilgus, consulting engineer, New York City, "Relationship of Rail and Water Carriers"; B. F. Cresson, Jr., chief engineer, the Port of New York Authority, N. Y., "Port Administration"; H. McL. Harding, designing terminal engineer, New York City, "Pier Designs as Developed from Quay Designs."

The part and responsibility of the National Government for the development of harbors and ports was presented in a paper entitled "The Importance of Port Facilities in the Development of a Merchant Marine and Commerce," read before the annual meeting of the Society of Naval Architects and Marine Engineers, by Rear-Admiral H. H. Rousseau, Civil Engineer Corps, U. S. Navy. He advocated national aid only to such ports as

encourage American ships and said that, "With the existing fierce competition between ports, both for business and for appropriations from the national treasury for the further improvement thereof, it would seem to be proper and consistent that Congress should now give definite notice that hereafter preference will be given in making any appropriations for harbor improvements to those ports that show themselves most interested and most successful in carrying out our national policy that the greater part of our foreign commerce shall be carried in American vessels. Compliance with any such policy by a port, or the giving of satisfactory guarantees to fulfill any conditions like this, could be best undertaken by an organized and unified port authority, and the matter of efficient organization is perhaps our ports' greatest need today. . . . Such an act of Congress relative to water terminals and vesting the Secretary of War with discretion to delay or suspend expenditures for the improvement of any port unless at least 50 per cent of the gross tonnage of vessels engaged in foreign commerce entering and clearing from that port is American tonnage, or until satisfactory assurances are received that that percentage will be secured within a reasonable time and will be thereafter maintained, would instantly broaden competition between our ports beyond the present mere unorganized scramble for business on the part of individual carriers and other interests, and would initiate a competition that would bring concrete results in promoting steps to obtain a unified port authority and in assisting our merchant marine to get much needed cargo, as well as passenger business, that at present is going to foreign vessels. . . . Should Congress also direct the Interstate Commerce Commission to exercise its rate-making power so as to give due preference and assistance to those ports where at least 50 per cent of the gross tonnage of vessels engaged in foreign commerce, using that port, is American tonnage, the effect would be striking in enabling our merchant vessels to cope more successfully with foreign competition."

LONDON PORT FACILITIES. During the year the extension of the Royal Albert docks was well under way and the Port of London Authority decided on further development of the water front facilities at London at an estimated cost of over £14,000,000 for the purpose of attracting to that port a portion of the Transatlantic trade handled through Liverpool. It was proposed to provide a floating landing stage 1700 ft. in length, adjoining the Midland Ry. station at Tilbury with a 35-ft. depth of water at low tide. It was also planned to have sufficient additional docks at Tilbury to provide 600 yd. of quay with 42-ft. depth of water. The quay here was completed and equipped with freight-handling machinery and trackage. There were also to be provided extensive dry dock facilities.

ITALIAN HARBOR IMPROVEMENTS. During the year it was announced that the Italian Ministry of Public Works had approved the plans for improvement of the port of Leghorn, prepared by the Leghorn Harbor Works Board in accordance with the governmental project of December, 1916. The plans decided on contemplated the expenditure of 70,000,000 lire (\$13,510,000 at normal exchange) in construction and equipment, of which 37,000,000 lire was for a new harbor basin, 8,000,000 lire for railway terminals, and 25,000,000 lire

for mechanical equipment, warehouses, etc. The carrying out of this project would increase more than twofold the harbor facilities of Leghorn and the work was expected to take 10 years for its completion. An outlet on the sea for the important town of Pisa, 10 miles from Leghorn, by means of an interior waterway was an interesting feature of the project and during the year construction was under way. A Royal Decree of Jan. 29, 1921, authorized the Italian Treasury to set aside 8,000,000 lire for use of the Leghorn Harbor Works Board.

PORT OF SHANGHAI. The Wangpoo Conservancy Board, which has control of the port of Shanghai, China, and was engaged in the preparation of plans for its extensive development, during the year invited Maj.-Gen. G. W. Goethals to represent America on the engineers committee which was to report on improvements to the Wangpoo and Yangtse river. These projects would include not only the main port of Shanghai but the adjacent ports of Woosung and Pootung. Preliminary studies of this port have been in progress for a number of years, and it was expected that work eventually would be started on projects of larger cost and important character.

See BRIDGES, CANALS, DRYDOCKS, LIGHTHOUSES.

PORTS AND HARBORS. During the year there was put into commission at the port of Rotterdam a large floating drydock with a lifting capacity of 46. This dock had a length of 692 ft., an outside width of 167 ft. and an inside width between fenders of 137½ ft. Its first service was in connection with the overhauling of the Holland-American liner *Rotterdam*.

PORTUGAL. A republic occupying the western part of the Iberian peninsula; the most westerly of the states on the continent of Europe. Capital, Lisbon.

AREA AND POPULATION. Area, 35,490 square miles; population (1919), 5,957,985, giving a density of 152.8 per square mile. Of the above area 1236 square miles is that of the Azores and Madeira Islands whose population, included in the above total, was 412,390. For details, see 1917 and preceding YEAR BOOKS. The largest cities with their populations in 1911 were: Lisbon, 435,359; Oporto, 194,009.

PRODUCTION, COMMERCE, ETC. The chief productions are: Corn, wheat, rye, oats, barley, beans, and potatoes, and other vegetables; wine, olive oil, and fruits. Live stock includes: Oxen, pigs, sheep, and goats. The fisheries employed in 1918, 36,673 persons, and the value of the catch in that year was 20,205,006 escudos, of which more than half were sardines. The forests contain valuable timber; and cork is one of the chief sources of wealth. For further details of production, see preceding YEAR BOOK. The following table from the *Statesman's Year Book* of 1921 shows the chief articles of import and export in 1919:

Article	Imports	
	Kilos	Escudos
Coal.....	604,909 ¹	24,621,472
Cotton.....	7,274,259	12,283,579

² Litres.

In 1919 exports were valued at 110,554,000 escudos and imports at 231,603,000 escudos (escudo = \$1.08 at par, but varied widely during this period. Trade with the colonies has not reached its full development, though it has attained a considerable volume. During the ten years before the war, that is to say, the period, 1904-13, colonial goods imported into the country were valued at about \$600,000,000, while Portugal exported to the colonies about \$300,000,000, the large balance in favor of Portugal being chiefly the profits of Portugal merchants and steamship companies. This surplus in imports was not all consumed in the mother country, but resold to importers in other countries. During the past twenty-five years the direct trade between the Portuguese East African colonies and foreign countries has been increasing, while the trade of the West African countries, on account of the easier communication with Portugal, has been mainly with Lisbon.

Economic conditions in the summer of 1921 were reported as very unfavorable. The high exchange rates were materially affecting imports. Increased inflation through extension of bank loans was reported. The financial situation seems to be growing worse. This was somewhat indicated by the fact that the government bank had increased the discount rate to 7 per cent. Government reports for the fiscal year show that expenditures were exceeding revenues. Revenues were less than the budget estimate by 160,000,000 escudos. It was believed that the government would be unable to meet the interest on its foreign debt unless a new loan were floated. Exports in the summer were decreasing, while imports remained stationary. The market was generally understocked as regards cotton, coal, wheat, corn, lumber, petroleum products, machinery, locomotives, and railway material. There was a notable decrease in the exports to the United States and to England. Railway mileage, Jan. 1, 1921, 2128.

DEFENSE. The army is a militia based on conscription and consisting of active, reserve, and territorial forces, ten years' service being required in the first two, and eight in the third. The peace strength of the active army is placed at 30,000.

During the war Portugal sent to France 65,062 officers and men, of whom 1862 were reported killed, 5224 wounded, and 6678 prisoners. See NAVAL PROGRESS.

GOVERNMENT. The constitution dates from August 20, 1911, which established the basis of the republic, the monarchy having been overthrown in the preceding year. Executive power is vested in a president, elected by parliament for four years; and legislative power is in a parliament, consisting of two chambers, namely, the upper chamber, elected by the municipal councils; and

the lower chamber or national council, consisting of 164 members and elected by direct vote for three years. The president of the republic in 1921 was Dr. Antonio Jose de Almeida. The ministry as constituted, March 2, 1921, was as follows: Premier and Minister of the Interior, Dr. Bernardino Machado; Foreign Affairs, Domingos Pereira; Finance, Antonio Maria Silva; Justice, Lopes Cardoso; War, Alvaro Castro; Marine, Fernando Brederode; Colonies, Faiva Gomes; Commerce, Antonio da Fonseca; Education, Julio Martins; Labor, Domingues dos Santos; Agriculture, S. Durao.

HISTORY

MINISTERIAL CRISES. On February 18 in consequence of insurgent movements among the military and professional classes, the Pinto ministry resigned, and a new ministry was appointed under Bernardino Machado, February 24. (See above.) This government was overthrown in turn, May 23, and was succeeded by a new ministry under Thomé Barros Queiroz, Prime Minister and Minister of Finance. The election of July gave the Queiroz Ministry sixty-five seats in parliament where its financial measures of reform had the support of fifty-seven Democrats. These assured it a large majority, but the Prime Minister's own party, the Liberals, revolted from him, and they were followed by others. The result was the overthrow of his government. He was succeeded as prime minister by Senhor Antonio Granjo, August 30, who formed a coalition ministry which was regarded as merely temporary.

ASSASSINATION OF THE PRIME MINISTER. On the occasion of a revolutionary outbreak on October 20, Senhor Antonio Granjo and several other officials were killed in a rising of the military party. According to press dispatches the Portuguese troops remained faithful to the government, marched at once on Lisbon, and put down the insurrection. A new government was elected and one of its first acts was to declare the country under a state of siege for a period of fifteen days. The inhabitants of Lisbon were forbidden to appear in the streets after nine o'clock in the evening and soldiers patroled the city and disarmed the citizens. Another decree of the new government was to order the release of the men implicated in the plot which had resulted in the assassination of President Sidonio Paes in December, 1918. According to the press accounts the premiership passed to Cunha Leal, December 15. The new Prime Minister had entered politics only three years before and was barely thirty years of age, having served in the army in Africa and Flanders and attained the rank of captain of the Engineer Corps. He showed firmness and courage on the occasion of his installation when, on being threatened by the revolutionists, he declared that nothing would frighten him from assuming office. He declared the purpose of his ministry was to maintain order and reorganize the administration. First of all the financial situation, which was serious owing to Portugal's failure to increase taxation during the war, must be remedied and measures must be taken to control the high cost of living. In the following week two persons were killed and five others wounded at the capital through an explosion of bombs in process of manu-

facture, in a building that belonged to the General Confederation of Labor, and several arrests were made, December 29.

BOLSHEVISM. Such news as could be had from Portugal in November was alarming, but owing to disturbed conditions could not be verified. The items published indicated a wave of Bolshevism throughout the country. Down to that time disturbances had usually resulted from the rivalry between the political groups, but according to reports in November they were now the result of the Bolshevist movement. The radicals were said to be in control of the great cities, and numerous bomb-throwings and other acts of violence were reported, especially in the province of Alemtejo. At Lisbon an attempt on the American consulate was reported, and it was also said that a Portuguese gunboat had been prevented with difficulty from torpedoing some Spanish ships. In certain British newspapers the possibility of intervention in order to repress Bolshevism was suggested.

PORTUGUESE EAST AFRICA or MOZAMBIQUE. A Portuguese colony on the east coast of Africa with an area of 423,532 square miles; and an estimated population of 3,000,000 natives, 10,500 whites, and 1100 Asiatics and half-castes. It comprises three parts: (1) The province of Mozambique (295,000 square miles); (2) The territory under the Mozambique Company (59,840 square miles); (3) The district under the Nyassa Company (73,292 square miles). In addition to these the right of Portugal to a region south of Rovuma, known as the "Kionga Triangle," was acknowledged at the Peace Conference; and the territory was allotted to her, Sept. 23, 1919. It had been a part of German East Africa. The capital of Portuguese East Africa is Lourenço Marques, the chief port; population in 1912, 13,154, of whom 4691 were Europeans. The other principal ports are Mozambique and Beira. The chief products are: Cocoanuts, sugar, beeswax, and minerals. Imports in 1918, 23,017,816 escudos; exports, 8,124,069; reexports, 23,392,700; transit, 30,357,031.

PORTUGUESE GUINEA. A Portuguese colony on the west coast of Africa, including the archipelago of Bijagaz along with the island of Bolama. Capital, Bolama. Area, 13,940 square miles; population, estimated at 289,000. The principal port is Bissau. In 1919 the imports amounted to 4,661,404 escudos and the exports, to 4,327,272 escudos.

PORTUGUESE LANGUAGE. See **PHILLOGY**, **MODERN**.

POSSART, ERNEST VON. German actor and play producer, died, April 8. He was born at Berlin in 1841; and appeared in his youth as an actor at Breslau, Berne, and Hamburg; entered the Munich Court Theatre in 1864; and became its director in 1875. Two years later he was made director of the Bavarian Royal Theatre. He toured in the United States, Germany, Russia, and Holland from 1887 to 1892; and afterwards directed the Bavarian Hof-theatre from 1895 to 1905. He opened the Prince Regent's Theatre in 1901. Among his most noted rôles were: Nathan Gessler, Mephisto, Iago, and Shylock. He edited German versions of several of Shakespeare's plays; and wrote a few plays and works pertaining to the stage.

POST, JAMES D. See **NECROLOGY**.

POST OFFICE. See UNITED STATES.

POTASH. According to the United States Geological Survey 57 companies, operating 66 plants, produced 166,834 short tons of crude potash material in this country in 1920. This material contained an average of 28.8 per cent or 48,077 short tons of potash (K_2O), which was equivalent to about 19 per cent of the average annual consumption of the country for the five years immediately preceding the World War, this average consumption being estimated at about 250,000 short tons. Nine kinds of raw material were utilized. The production in 1920 did not equal that of 1918 by about 5700 tons of potash, but it exceeded that of any other year and it was almost 50 per cent larger than that of 1919. The sales for the year amounted to 139,963 tons of crude material, containing 41,444 short tons of potash (K_2O), valued at \$7,463,026, an average price of \$1.80 a unit. The stocks reported on hand at the end of the year were 32,378 short tons of crude material, containing 8999 short tons of potash.

In 1920 there were imported and entered for consumption in the United States 918,698 short tons of potash salts, containing 197,795 short tons of potash (K_2O), to be used largely as fertilizer, and 63,563 short tons of manufactured potash salts, containing 26,997 short tons of potash, a total of 982,261 short tons of potash material, containing 224,792 short tons of potash (K_2O), valued at \$43,389,783. For the five years prior to 1913 the United States imported annually from Germany an average of about 250,000 short tons of potash (K_2O).

The discovery of potash in samples of salts were received at the United States Geological Survey from new wells bored for oil at two additional localities in western Texas extended the area in which small amounts of potash salts were known to occur some 30 miles north and 50 miles east of the area of previous discoveries. See FERTILIZERS.

POTASSIUM. See CHEMISTRY, INDUSTRIAL.

POTATO DISEASES. See BOTANY.

POTATOES. The world's potato production in prewar times ranged from 5 to 6 billion bushels. An approximate estimate by the International Institute of Agriculture, Rome, placed the world's yield in 1921 at $4\frac{1}{2}$ billion bushels. According to estimates by the same authority Germany in 1921 produced 985,247,000 bu., Poland, 567,091,000 bu., Czecho-Slovakia, 136,430,000 bu., Canada, 110,895,000 bu., Spain, 102,225,000 bu., Belgium, 93,366,000 bu., and the Netherlands, 84,768,000 bu. The total yield of 20 reporting countries was placed at 2,174,844,000 bu., or $10\frac{1}{2}$ per cent below their aggregate yield in 1920.

The present status of the world's production is indicated by the average yields of the leading producing countries for the five years 1909-13, which were approximately as follows: Germany, 1,500,000,000 bu., the former Russian empire, 1,300,000,000 bu., Austria-Hungary, 600,000,000 bu., France, 490,000,000 bu., and the United States, 357,000,000 bu. The average acre yields for the 5-year period 1910-15 were 222.8 bu. for the United Kingdom, 205.7 bu. for Germany, 145.6 bu. for Austria, 122.2 bu. for Hungary, 116.3 bu. for France, 107.9 bu. for European Russia, and 97.6 bu. for the United States.

Estimates published by the Department of

Agriculture placed the potato production of the United States in 1921 at 346,823,000 bu. as against 403,296,000 bu., in 1920 and 322,867,000 bu., in 1919. The area in potatoes was given as 3,815,000 acres or 158,000 acres more than in the preceding year. The average yield per acre was 90.9 bu., while in 1920 it was 110.3 bu. The average farm value on Dec. 1, 1920, was 111.1 cts. per bushel, making the total farm value of the crop \$385,192,000 or \$76,586,000 less than the corresponding value in 1920 and \$129,663,000 less than that in 1919. Prices were at the lowest level about the time new potatoes appeared upon the markets, but as soon as it was realized that the 1921 crop would be short prices rose. During May an unusually wide difference existed between the prices of old and new potatoes, the new stock selling for approximately 4 times the price of the old.

The United States grades for grading market potatoes had been established at the close of the year in 14 States, and it was estimated that officially about 30 per cent and unofficially 30 to 45 per cent more of the quantities marketed are graded according to these grades. The past year was the first these grades were in use and it was reported that they proved generally satisfactory to both grower and shipper. The growing of certified seed potatoes was extended in a number of States and in Canada during the year. This work was fostered by a committee in charge of seed potato certification appointed by the Potato Association of America. The largest consuming centres of the United States are New York and Chicago, which use annually about 19,000 and 12,000 carloads, respectively.

The following publications relating to potato culture were issued during the year: *How to Grow an Acre of Potatoes*, U. S. Department of Agriculture, Farmers' Bulletin No. 1195; *Potato Production in the South*, U. S. Department of Agriculture Farmers' Bulletin No. 1205; *The Potato Leaf Hopper and its Control*, U. S. Department of Agriculture, Farmers' Bulletin No. 1225.

POTTER, PAUL MEREDITH. Playwright, died in New York City, March 7. He was born at Brighton, England, June 31, 1853; and passed many years as a newspaper man, serving as foreign editor, London correspondent, and dramatic critic of the New York *Herald* down to 1887; and joined the editorial staff of the Chicago *Tribune* in 1888. He wrote *The City Directory*, produced in 1889, which was followed by a long series of successful plays, produced both in this country and abroad, in which many leading actors of the time appeared. The list is too long for reproduction here, but includes among the most popular productions: *Our Country Cousins* (1893); *The Pacific Mail*, written for Crane (1894); *The Victoria Cross*, written for Sothern (1894); *Trilby* (1895); *Under Two Flags* (1901); *The School Girl* (1904); *Nancy Stair* (1905); *The Honor of the Family* (1907); *The Girl from Rector's* (1909). He was American representative at the Congress of Dramatic Art at the Paris Exposition in 1900.

POTTERY PRODUCTS. According to the Geological Survey the value of the pottery produced in the United States in 1920 was about \$105,700,000, an increase of 39 per cent over the value in 1919. The increase in 1920 over 1918 was

65 per cent. As compared with the value in 1910 the value of the pottery marketed in the United States in 1920 increased 213 per cent, and as compared with that in 1900 it increased 434 per cent. Every kind of pottery classified by the Geological Survey increased in value except red and brown white-lined cooking ware and chemical porcelain, neither of which is produced in large quantities, for in 1920 they together amounted to less than 1 per cent of the total value. Whiteware, valued at \$39,360,000, showed the largest increase, \$9,660,000; sanitary ware, valued at \$21,480,000, increased \$7,000,000; porcelain electrical supplies, valued at \$18,560,000, increased \$6,370,000; china, valued at \$11,060,000, increased \$3,435,000. Stoneware, the fifth product in importance, was valued at \$6,025,000, and increased \$1,240,000. If chemical stoneware is added, the value of stoneware was over \$7,000,000, and the increase was \$1,595,000. Whiteware and china, which comprise the general household wares and which constituted 48 per cent of all pottery products, were valued at \$50,420,000, an increase of \$13,095,000. If to this sum is added the value of sanitary ware and porcelain electrical supplies, their value would be \$90,460,000 or 86 per cent of the total value, an increase of \$26,465,000 over the value in 1919.

The imports of pottery for consumption in the United States in 1920 were valued at \$10,850,772, an increase of 50 per cent as compared with those in 1919. Some of this increase was due no doubt to the increase in the selling price of the ware, but the bulk of imports also increased very considerably in 1920. Ninety-six per cent of the value of imports was that of the general ware, of which 93 per cent was decorated. Every variety of pottery classified by the Bureau of Foreign and Domestic Commerce increased in value but two—tobacco smoking pipes and earthenware and crockery not decorated. Decorated china showed the largest increase in value—\$2,129,689—and decorated earthenware the next largest—\$1,329,745. Notwithstanding the great home demand for pottery, the exports of earthen and stoneware, china, and sanitary ware (valued at \$2,837,469) increased \$601,823 in 1920 compared with 1919 and reached their highest value.

tory. In 1855 he became a conductor there and from 1860-63 he was first violin at the Opera Comique. He became a frequent contributor to all the leading French musical periodicals as well as a well-known writer on music for the journals. His work in biography was also well known.

POWER. One of the most important matters under consideration in the United States, and the same was more or less true for Europe and the other continents, was the taking thought to develop such natural resources as would make available economical, convenient, and efficient power as required in industry. In its larger aspect this matter had received the attention of the United States Geological Survey and in Part II of a "World Atlas of Commercial Geography" prepared by its engineers and other experts, is contained a careful study with maps which show the altitude of the land, the annual precipitation, the location and extent of the water powers, along with statistics of estimates of water power already developed and the capacity of water wheels installed.

This is done for the entire world as discussed somewhat later, but in the United States the problem has been handled with more detail, not only involving the extension and development of water-power resources, but also the interconnection and systematic relation of other sources of power, taking into consideration the possibility of installing steam central stations at or near coal mines and transmitting the energy there produced as well as establishing more economical measures for power production and distribution.

SUPERPOWER REPORT. The so-called "Superpower Report" made to the United States Geological Survey by a group of engineers headed by W. S. Murray, had as its object a consideration of the "possible economy of fuel, labor, and material resulting from the use in the Boston-Washington region of a comprehensive system for generating and distributing electricity to transportation lines and industries." The investigation was made possible by a federal appropriation of \$125,000 and \$26,000 was contributed by various utilities.

The superpower zone thus studied was between

VALUE OF POTTERY PRODUCTS IN 1919 AND 1920

¹ Including art pottery, crackle porcelain, doll heads, gas-burner tips, gas-mantle rings, hardware trimmings, heating porcelain, nursery ware, pins, stilt, and spurs for potters' use, porcelain thread guides, radiants, saggers, smoking pipes, soda fountain supplies, and turpentine cups.

² Including art pottery, crackle porcelain, doll heads, earthenware, fittings for textile mills, gas and electric lighting and heating appliances, hardware trimmings, heating porcelain, lead pots, pins, stilt, and spurs for potters' use, porcelain caster cups and door knobs; potters' supplies, smoking pipes, and turpentine cups.

POUGIN, ARTHUR. French musical and dramatic critic, died in Paris, August 8. He was born in 1834 and studied at the Paris Conserva-

the thirty-ninth and forty-fourth parallels of latitude, and extends from the coast approximately 150 miles inland, that is, roughly, the

Atlantic coast from Boston to Washington and inland as far as Harrisburg and Utica. It was of prime industrial importance as within its limits were concentrated one-quarter of the population of the United States and there were operated 315 electric public utilities, 18 steam railroads, and 96,000 industrial plants. In the proposed superpower system the intention was to coordinate and supplement the existing utilities so as to secure to a higher degree the economies incident to their present operation. The first element of the question was to determine the total amount and location of the power load that would be required for private, municipal, industrial, and railroad purposes at a date sufficiently in advance to permit the construction of a system of the highest economy to supply it, and the date selected for such a development was 1930. In the course of this work full consideration was given to and reports made on electric utilities, proposed electrification of heavy traction railroads, nature and cost of the superpower system, steam-electric plants, hydro-electric plants, transmission systems, reliability of service, relation of coal and coal deliveries to the system, use of process fuels, basic costs, and existing stations. Furthermore, the question was taken up on a practical basis so as to secure the greatest return at the earliest possible date in proportion to the capital investment. In this connection the report suggested that the quickest return on the investment in such a superpower system would be obtained by following in chronological sequence an order of procedure as follows:

1. The construction of a steam-electric plant near Pittston, Pa., to supply a part of its energy to the anthracite division of the superpower zone and the remainder to the metropolitan division, particularly New Jersey.
2. The construction of a steam-electric plant near Sunbury, Pa., to supply a part of its energy to the anthracite division, a part to the Reading load centre, and the remainder to Philadelphia.
3. The construction of hydro-electric plants on the Delaware and Susquehanna rivers to supplement the steam plants indicated above.
4. The progressive development of the Hudson River projects to meet the growth of energy requirements at the Schenectady, Utica, Poughkeepsie, and Pittsfield load centres.
5. The construction of a steam-electric plant

other parts of the United States, was not particularly rich in hydro-electric power resources and possibilities. Under favorable conditions of development by 1930, about 21 per cent of the total energy requirement could be supplied from water power, that is, about six billion kilowatt-hours. Inasmuch as some of the best coal deposits in the world were situated near the zone itself, it was deemed desirable in the interests of the fullest economy to join the hydro-electric supply power to the steam electric supply so as to produce a maximum of energy for a minimum investment of capital and a minimum operating expense. This of course would involve locating the steam-electric plants where they would secure the advantage of low freight rates, and especially easy coal-delivery routes and ample condensing water.

Such an arrangement would mean the building of base load steam plants to range from 60,000 to 300,000 kw., in capacity, and turbo-generators of at least 30,000 kw. capacity would be used in every such station. Such plants it was estimated would be able to produce electric energy at 0.99 c. per kilowatt-hour, as compared with 2.12 c., the average cost at a steam station in 1919. The unit investment cost in new power plants for the superpower system would be \$118.25 per kilowatt of effective capacity. The unit reproduction cost of the electric utilities in 1919 was \$156 per kilowatt.

The Superpower Report estimated the requirement of energy supplied through the electric utilities for municipal, private, industrial, and railroad purposes in 1930 to be 31,000,000,000 kw.-hr., and stated that such an amount of energy could be supplied by a coordinated power system at an annual cost of \$239,000,000 less than by the uncoordinated system in use in 1921. The total investment involved in developing such a system of generating and transmission facilities would be in excess of \$1,000,000,000, of which \$400,000,000 would represent the value of existing facilities. This superpower zone included some 36,000 miles of railroad, measured as single track, and of this there was no question but that about 19,000 miles could be profitably electrified, so as to produce by 1930 an annual saving of \$81,000,000 compared with the cost of operation by steam. The capital expenditure necessary to electrify the 19,000 miles would be \$570,000,000.

PROPOSED HYDRO-ELECTRIC DEVELOPMENT OF SUPERPOWER SYSTEM PROJECT

	Capacity, kw.	Output (millions of kw.-hr.)	Investment	Production cost (mills per kw.-hr.)
Potomac	200,000	950	\$22,000,000	3.36
Susquehanna	185,000	1,230	28,000,000	3.22
Delaware	350,000	1,250	51,500,000	5.95
Hudson	150,000	900	38,350,000	5.84
Connecticut	165,000	760	29,000,000	5.455

near Boston to supply the Boston, Lowell, and Newburyport load centres.

6. The construction of a steam-electric plant near New Haven to supply the New Haven, Bridgeport, Waterbury, and Norwich load centres.

7. The partial construction of the first hydro-electric plant in the development of the Potomac river as soon as the power demands of the Baltimore and Washington load centres require additional plant capacity.

The region under study, unlike the West and

One of the features of the superpower survey and report was the proposition to develop additional water power, particularly on the St. Lawrence river, thus making it possible to increase the load carried by hydraulic plants from 15 per cent in 1919 to 21 per cent in 1930. By bringing St. Lawrence power over long-distance transmission lines to the system as laid out and planned in the survey it would be possible to save, according to estimate, over \$11,000,000 a year in the cost of energy. Furthermore the

total capital investment required to develop power purchased from this source would be \$25,000,000 less than the cost of steam plants to render equivalent service.

FEDERAL WATER POWER. All important water-power development in the United States must be taken under the direction of the Federal Power Commission established by the Water Power Act of 1920. Up to the end of 1921, there had been filed with the commission 260 applications involving over 16,000,000 hp. of which about 10,500,000 hp. was primary power and 5,500,000 secondary power. In the great majority of these applications the development and sale of power as public utilities was contemplated. The reports of the Bureau of the Census for 1917 showed an aggregate water-power development in the United States in that year of about seven million horsepower. The total at the end of 1921 was probably between eight and nine million horsepower or even more according to the tables prepared by the geological survey, that is, approximately one-half the amount represented by the applications before the commission in 1921. In 1917 there were only 259 water-power stations of a capacity in excess of 1000 hp. engaged in the public utility service, with an aggregate capacity of 4,000,000 hp. The average investment in plant and equipment of these stations was \$240 per hp. Assuming that the average investment required in the projects before the Commission to be only one-half as much, an expenditure of \$2,000,000,000 would be involved, not considering the collateral expenditures for distribution systems, for customers' installation, and in accessory industries, which naturally would be several times greater.

In addition to receiving these applications the Federal Power Commission was able to act on a number and between March 1, 1921, and the end of the year there was authorized by that body the issuance of thirty licenses involving 1,269,000 hp. and twenty-four preliminary permits involving 1,280,000 hp., a total of 2,549,000 hp. The commission by the end of the year had taken final action upon one-third of the applications filed. Several of the applications approved under the Act involved projects for the construction of which specific congressional authority was sought for many years, but never obtained. In this connection there were included important projects on the Niagara, on the Connecticut river at Enfield Rapids, and on the Coosa river in Alabama. So important and promising were these hydro-electric schemes that notwithstanding

the industrial depression and the uncertain financial situation, projects aggregating 1,277,000 hp. and an investment of approximately \$100,000,000 were under construction during 1921 in New York, Alabama, Wisconsin, Oregon, and California.

At Niagara Falls it was stated that only about one-sixth of a potential water power of 4,000,000 horsepower available without impairing the scenic beauty of the Falls had been developed, while the plan for the development of the St. Lawrence river involved the building of two and later a third dam at each of which a hydro-electric station would be installed with a total ultimate capacity of some 4,000,000 kilowatts. Among the more important power developments proposed or under consideration during the year were, the 75,000 kilowatt Great Falls project on the Potomac, a Delaware river development to total 500,000 kilowatts with a 100,000 kilowatt steam plant; a development of 2,500,000 horsepower on the Colorado river by the Southern California Edison Co., the 400,000 horsepower Kings river project of the San Joaquin Light and Power Corporation, and a 100,000 horsepower project on the Coosa river in Alabama.

POWER RESOURCES OF THE UNITED STATES. In view of the foregoing projects it is of interest to consider what are the water-power resources of the United States, and for that purpose recourse may be had to the Atlas of the Geological Survey from which the accompanying tables are taken. The figures given are said to be most conservative both for the minimum and maximum potential resources, and in some States as in New England complete development would mean the building of plants with four times the estimated capacity at low water. Moreover, if all the water power in the United States were similarly developed, the total capacity of the plants would be 112,000,000 hp. Acting on the correctness of this estimate it would appear that in 1921 the water-power resources of the United States were only about 8 per cent developed.

POWER RESOURCES OF THE WORLD. What is true for the United States also applies to the whole world, for while in 1920 the estimated potential water power of the world was nearly 440,000,000 hp. when the streams are at ordinary low-water stage the capacity of power generating plants installed was but little more than 23,000,000 hp., or more than 5 per cent of the estimated potential water power. In fact considering the less known regions it was probable that only 2 or 3 per cent of the total potential water power had been developed. The extreme ultimate development with

Total.....	2,477,000	19,954,000

Considering the comparative resources of the continents as brought out in the table it would appear that North America containing as it does less than 15 per cent of the water-power resources of the globe, had developed more water power than all the rest of the world. Naturally about 41 per cent of the developed water powers of the world were to be found in the United States. European countries, particularly Germany, the territory comprised in the former empire of Austria-Hungary, Norway, Sweden, France, Italy, and Switzerland, had developed a relatively large percentage of their water power, and the percentage was greater in Germany than in any other country of Europe. In all of these countries hydro-electric developments, particularly in connection with transportation, were under consideration and installation as fast as funds were available.

In Switzerland the potential water power had been estimated at 750,000 hp. at low water and 2,500,000 hp. for a flow available six months of the year, and one engineer estimated that 3,000,000 hp. may be developed at low water with storage. Switzerland stands unique among the nations of the world in the large number of small plants. The plants below 20 hp. capacity in 1918 numbered 6025 and their total capacity was only 38,880 hp., or an average of about 6 hp. each. On Jan. 1, 1918, the number of plants of more than 20 hp. was 840 and their capacity at mean stage was 556,200 hp.

Nearly half of the 439,000,000 hp. potential water power in the world (or 190,000,000 hp.) is in Africa, but only about 11,000 hp. had been

developed. The Kongo river alone afforded greater water-power resources than any other river system in the world and more than one-quarter of the potential water power of the world is in this one river basin. Up to 1921 this great resource was undeveloped. It was estimated that on this river for 90 miles, above tidewater, there could be developed more than 100,000,000 hp.

See WATER WHEELS and TURBINES; STEAM ENGINES; MUSCLE SHOALS.

DEVELOPED AND POTENTIAL WATER POWER OF THE WORLD IN 1920 IN HORSEPOWER

	Developed	Potential

PRADILLA, FRANCISCO. See NECROLOGY.

PRADO, JAVIER. Peruvian scholar and statesman. See SPANISH LITERATURE.

PRAIRIE PROVINCES. The name applied to the three Canadian provinces of Manitoba, Saskatchewan, and Alberta; separated from the United States on the south by the 49th parallel of latitude. Area estimated at 758,817 square miles; population according to the census of June 1, 1916, 1,698,220. According to the preliminary returns of the census of 1921, Manitoba had a population of 613,008; and Alberta, 581,995.

PRATT INSTITUTE. A non-sectarian co-educational institution of the higher learning at Brooklyn, N. Y. It comprises schools of fine arts and applied science, household sciences and arts, sciences and technology, and library science. The total enrollment for the fall was 3766. The faculty numbered 153 and the library contained 127,000 volumes. President of the Board of Trustees, Charles M. Pratt; Executive head, Frederic B. Pratt.

PRESBYTERIAN CHURCH. United under the Alliance of the Reformed Churches throughout the world holding the Presbyterian system are one hundred and six denominational and national churches, situated on all the six continents. In 1921 statistics showed that there were about 41,500,000 members and adherents, besides 5,000,000 Reformed Lutherans. The largest branch of the denomination is the Presbyterian Church in the United States of America. The following figures are given for 1921: 46 Synods, 302 Presbyteries, 9979 ministers, 45,581 elders, 17,714 deacons, 9842 churches, 1,722,361 communicants, 1,433,292 Sunday school scholars; \$3,701,369 contributed for Home Missions, \$4,200,144 for Foreign Missions, \$1,077,067 for Education, \$30,996,123 for congregational expenses, and with other benevolent contributions for the year, making a total expenditure of \$47,036,442. During the year the Presbyterian Church in the United States had the greatest number of accessions on confession of faith in its whole history, 122,231 being added to the Church on examination.

The Presbyterian Church in the United States is a separate denomination, commonly called "The Southern Church" which had 397,058 Com-

municants in 1921. The United Presbyterian Church of North America had 212,621 communicants in 1921. There are two branches of the denomination in Canada, the largest of which is the Presbyterian Church of Canada, which had 350,674 communicants in 1921. The Church of Scotland had about 10,000, while adherents for both churches numbered about 700,000.

The following figures (1921) were approximately correct for the entire Alliance of the Reformed Churches holding the Presbyterian System:

IN THE UNITED STATES	
	Communicants

PRICES. According to the United States Department of Labor, the year 1921 was a period of falling prices for many important commodities. From the beginning to the middle of the year prices declined rapidly, reacting to some extent in late summer and autumn but subsiding again in the last three months. For practically all commodities, except cotton and its manufactures, which were influenced by the short crop, prices at the end of the year were considerably lower than at the beginning. Among food commodities showing decided price decreases in the first half of the year were cattle, hogs, butter, eggs, milk, wheat, wheat flour, corn, oats, rye, rye flour, rice, and sugar. Cotton and woolen goods, hides, leather, shoes, coal, pig iron, steel, tin, and petroleum also declined in price, as did most building materials. Potatoes in the Chicago market decreased greatly in the first four months, but reached a high peak in August. In the second half of 1921 prices of some articles rose sharply, as butter, eggs, milk, rice, cotton, cotton goods, hides, pig tin, lead, zinc, crude and refined petroleum, and lumber. Brick, lime, cement, plate glass, nails, structural steel, and linseed oil, on the contrary, decreased materially in price during the period stated.

A survey of thirty-two cities of the United States showed a decrease of 19.5 per cent from June, 1920, to December, 1921, and of 1.7 per cent from September, 1921, to December, 1921. The accompanying table based in the reports of the thirty-two cities shows changes in the cost of living, 1913-1921.

CHANGES IN COST OF LIVING IN THE UNITED STATES, 1913 TO DECEMBER, 1921

PRIMITIVE METHODIST CHURCH. See METHODISTS, WESLEYAN.

PRINCE EDWARD ISLAND. One of the Canadian Maritime Provinces, the smallest province in the Dominion; situated at the mouth of the St. Lawrence. Area, 2184 square miles; population (1911) 93,728, according to the preliminary figures of the census of 1921, 88,536. The capital and largest town is Charlottetown, with a population (1911) of 11,203; (1921) 12,329. It is under a lieutenant-governor and a legislative assembly of 30 members, elected for four years, one-half on a suffrage based on property, and one-half, on manhood suffrage. At the beginning of 1921 the members of the legislative assembly were distributed by political parties as follows: Liberals, 26; Conservatives, 4. Lieutenant-Governor at the beginning of 1921, Murdock McKinnon; Prime Minister, John H. Bell.

PRINCETON UNIVERSITY. A non-sectarian institution for the higher education of men at Princeton, N. J.; founded in 1746. The enrollment for the fall of 1921 was 2067. The faculty numbered 217. The library contained 500,000 volumes. The productive funds amounted to \$12,137,784, and the income to \$1,244,500. President, John Drier Hibben.

PRITCHARD, JETER CONNELLY. Judge, died, April 10. He was born at Jonesboro, Tenn., July 12, 1857; and after a common school education, was engaged in local journalism until 1887, when he was admitted to the bar and began practice at Marshall, N. C. He was three times elected a member of the North Carolina house of representatives and was United States senator from 1894 to 1903. He was made associate justice of the supreme court of the District of Columbia in 1903, and was circuit judge of the 4th circuit from 1904 to 1911, and judge of the circuit court of appeals after Jan. 1, 1912. He was president of the North Carolina Protective League.

PROTESTANT EPISCOPAL CHURCH. A denomination similar in its doctrines to the Church of England, founded by members of that church in this country at the time of the American Revolution, and now one of the largest single bodies in the United States. In 1873 there was a separation of a few churches from the main body which became the Reformed Episcopal Church. The latter is less ritualistic in its ceremonies but otherwise very similar. (See REFORMED EPISCOPAL CHURCH.) Complete statistics for the Protestant Episcopal Church in 1921 were not available. There were 1,104,029 communicants, as compared with

1,077,042 at the beginning of 1920. Contributions totaled \$34,873,221.20 and ministers numbered 6001. There were 8190 churches in 1920. A new canon adopted at the General Convention in 1920 provided for the organization of the Presiding Bishop and Council. This Council, it was declared, should among other things exercise all the powers of the Domestic and Foreign Missionary Society and have charge of the unification, development, and prosecution of the work of Missions, Church Extension, Religious Education and Christian Social Service. The Missionary Society, however, still retains its corporate existence and continues to receive and hold bequests, trust funds, and titles to property of all kinds. Foreign Missionary work is being carried on in Africa, China, Japan, Haiti, Brazil, Cuba, and Mexico. Domestic missionary work is conducted for the Indians, the negro communities, the Swedes, the Japanese in California and the deaf mutes in the South and West. This department also supervises the work in Hawaii, the Philippines, Porto Rico, the Panama Canal Zone, and Alaska. A Woman's Auxiliary does much valuable work also. The official magazine of the Domestic and Foreign Missionary Society is *The Spirit of Missions*.

There are several societies among the male membership of the church. The chief organization is the Brotherhood of St. Andrew which according to latest statistics had about 1200 chapters and 8000 members. A boys' organization is maintained called the Knights of St. Paul, with 160 chapters. Other special organizations for mission work are: the Church Mission to Deaf Mutes, Society for the Promotion of Church Work Among the Deaf Mutes, the Mid-Western Deaf Mute Mission, Conference of Church Workers among the Deaf, and the Seabury Society of New York. There are also national organizations for women and girls. Among these may be mentioned the Girls' Friendly Society in America, the Order of the Daughters of the King; organizations for the Increase, Aid and Better Sustenance of the Ministry, are the Clergymen's Mutual Insurance League, the Clergymen's Retiring Fund; organizations for education purposes, church defense and propaganda are The Protestant Episcopal Society for Promotion of Evangelical Knowledge, the Clerical Union for the Maintenance and Defense of Catholic Principles, the American Church Union, Albany Cathedral Summer School, Society for the Home Study of Holy Scripture and Church History, Cambridge Conference, the Church Periodical Club, New York Bible and Common Prayer Book Society, the Church Historical Society, the Church Mission Publishing Company, the American Society of Church Literature, and the Joint Diocesan Lesson Board; organizations

for social betterment, for the Advancement of the Interest of Labor, are the Church Socialist League, the Church Temperance Society, the Church Mission of Help, and the Society for Social Advance. There are many other local societies established for promoting church unity, various guilds for devotional purposes, and religious orders for both men and women.

The Rt. Rev. Thomas F. Gailor of Tennessee is President of the Council; Rev. Franklin J. Clark is secretary and Lewis B. Franklin treasurer. The Most Rev. Daniel Sylvester Tuttle of St. Louis, Mo., is the presiding Bishop. Offices of the national organization are maintained at 281 Fourth Avenue, New York City.

PROUTY, CHARLES AZRO. Lawyer and public official, died at Newport, Vt. July 8. He was born at Newport, Vt., Oct. 9, 1853; graduated at Dartmouth in 1875; was admitted to the Vermont bar in 1882; and practiced at Newport, Vt., until 1896. He was a member of the Vermont house of representatives in 1888. From December, 1896, to Feb. 3, 1914, he was a member of the United States Interstate Commerce Commission, and was chairman of that body from 1912 to 1913. In February, 1918, he was appointed director of the division of public service and accounting in the railway administration staff at Washington.

PROVIDENCE, R. I. See GARBAGE AND REFUSE DISPOSAL.

PRUSSIA. Until the October revolution of 1918 a kingdom of the German empire; proclaimed a republic, Nov. 13, 1918. Capital, Berlin. Area before the war, 134,650 square miles; population, according to the census of Dec. 1, 1910, 40,165,219. According to estimates at the beginning of the year the area after the execution of the terms of the Treaty of Versailles would be 113,852 square miles, with a population (1919 estimates) of 37,075,240, giving a density of 325.6 per square mile. The above excludes the Saar District and Eupen and Malmedy and does not allow for changes following the decision in respect to Upper Silesia. See the articles UPPER SILESIA and WAR OF THE NATIONS. In 1910 the Protestants numbered 24,830,547 and the Roman Catholics, 14,581,829. The movement of population in 1918 was as follows: Births, 630,524; deaths, 1,035,279; marriages, 229,851. The chief cities with their populations in 1919 were: Berlin, 1,902,509; Charlottenburg, 322,766; Cologne, 633,904; Breslau, 529,260; Essen, 439,257; Frankfurt (Main), 433,002; Neukölln, 262,127; Duisburg, 244,302; Stettin, 232,726; Kiel, 205,330. The latest available statistics for education date from before the war and will be found in preceding YEAR BOOKS. There are 12 universities, with 2070 members of the teaching staff, and 42,000 students, including 4150 women (1918-19).

Under the new constitution adopted, Nov. 30, 1920, the government is in the hands of the Diet, elected by male and female, equal, secret, and direct suffrage, and a state council, elected by the provincial assemblies. At the head of the government is the cabinet whose premier is elected by the Diet. In the Diet after the elections of February, 1921, the party groups were represented as follows: Majority Socialists, 114; Centre (Catholics), 81; German National Party, 75;

German Peoples Party, 58; Communists, 30; Independent Socialists, 29; Democrats, 6; Quelpas, 11; Economic Party, 4; total, 428. The 74 members of the state council in the spring of 1921 were distributed as follows: Peoples Party and German Nationalists, 27; Social Democrats, 18; Centre, 16; Independent Socialists, 7; Democrats, 4; Communists, 2. The cabinet as constituted, April 18, 1921, was as follows: Prime Minister and Minister of National Welfare, Herr Adam Stegerwald (Centre); Justice, Herr Zehnhoff (Centre); Commerce, Herr Fischbeck (Democrat); the Interior, Herr Dominicus (Official); Agriculture, Herr Dr. Warmbold (Official); Finance, Herr Haenisch; Education and Public Worship, Herr Becker (Official). See GERMANY.

PSYCHICAL RESEARCH. In *Practical Views on Psychic Phenomena* G. E. Wright considers the rules of evidence in their relation to the phenomena of the physical sciences and to the phenomena of the psychical, and concludes that we cannot expect the same laws to apply in the two different domains. The test in science is repetition; does the same sequence of events take place, given the same conditions? The test for psychic phenomena is cumulation; does the evidence support itself, given enough of it? If the principle of the accumulation of evidence is to be the guide, then the question arises: What kind of evidence will finally sum up to a "proof"? and does the evidence which does not sum up have a subtractive value? The question of evidential testimony or messages remains the dominating idea in psychical research circles. In two articles, *The Apocatastasis* (18, 471) and *Two Separate Problems in Psychic Research* (18, 140), J. H. Hyslop insists on the distinction between the problem of origin and the problem of validity, or between the source and the truth of messages. Most critics direct their attack from the point of view of truth, whereas there is no evidence that spirits are more free from error than the living. In a third article, *Credibility and Truth* (18, 86), Hyslop maintains that many of the facts (such as the velocity of heavenly bodies and the vibration-frequency of light) set forth by physical science are far more inconceivable, hence more incredible, than are the phenomena of ghosts and spirits. It is prejudice that makes us accept the one and reject the other. Mrs. W. H. Salter, in *A Further Report on Sittings with Mrs. Leonard* (19, b, 1), finds that new sitters obtain somewhat less positive evidence than do the old; the spirits have to learn to use their means of communication; there must be a rapport established between sitter and medium. Some characteristics of Feda, and perhaps of controls in general, came out; she uses conventional padding, she likes to please the sitter, she shows typical lines of structure which reflect the times (during and after the war all spirits were likely to be young men who died in battle). The control reacts unfavorably upon any attempt to force a crucial test by direct attack. Mrs. Henry Sidgwick reports *An Examination of Book-Tests Obtained in Sittings with Mrs. Leonard* (19, h, 241). The analysis, beyond the attempt to get veridical statements and to throw more light on the habits and ways of Feda, seeks to answer the question of clairvoyance. Feda, the author fears, may get the habit of giving book-tests in and out of season, quite as a matter

of her own imagining. The tests offer some very strong evidence of clairvoyance, but the case is less positive than it should be. The author concludes in favor of clairvoyance as a handmaid of telepathy, if not as the same thing. The two together are more effective than either alone. W. W. Smith, in *A Suggested New Method of Research* (19, a, 401), proposes to use the association method with the psycho-galvanic reflex to determine whether the control is the same or a separate personality from the medium. He assumes that in the case of multiple personality the same or nearly the same affective toning will occur no matter which personality is present. The basis for this assumption is the previous work of Prince and Peterson. G. M. Stratton, in *The Control of Another Person by Obscure Signs* (20, 301), finds in the case of Eugene Rubini, who claims to be impelled or guided to the correct movement, that when there are no possible visual cues present the number of correct movements falls to what chance would demand; the elimination of auditory cues did not affect the results. E. J. Dingwall examines *De Gasparin's Experiments in the Light of Recent Research* (18, 370), and finds that the development of the plasma is a function of the mind of the worldly and that we need not call upon the spirits for help or for explanation. S. Alrutz, in *Problems of Hypnotism: An Experimental Investigation* (19, b, 151), finds that with the passes a plasma exudes from the hands, or from other parts of the body, which effluence different substances absorb, transmit, or reflect. The fact that the presence of the effluence depends upon a state of rapport proves that it is more than mere energetics. E. J. Dingwall, in *The Plasma Theory* (18, 207), considers the phenomenon of the plasma as an established fact. In the case of Miss Goligher, at least, the plasma is a transformation of bodily cells which have a mental as well as a physical nature. Other articles are: H. Thurston, *The Phenomena of Stigmatization* (19, b, 179); J. W. Hayward, *Fortune Telling* (18, 185); W. F. Prince, *An Object Lesson in Reporting* (18, 456); J. H. Hyslop, *Question Begging Explanations* (18, 68); Dr. Hodgson as a Communicator (18, 1); and *Psychic Phenomena in Græco-Roman Times* (18, 419); W. F. Prince, *Peculiar Experiences Connected with Noted Persons* (18, 109; 378); C. C. Carter, *A Lesson in the Psychology of Deception* (18, 252; 320); W. L. Sullivan, *A Case of Witchcraft in a Modern Court* (18, 133); J. H. Leuba, *A Modern Mystic* (1, a, 209); A. B. Thaw, *Psychic Research and Human Welfare* (14, 64); and A. J. Edmunds, *Gregory the Great as a Psychological Researcher* (18, 434). Some books are: W. J. Crawford, *The Psychological Structures of the Goligher Circle*; S. M. Kingsford, *Psychical Research for the Plain Man*; C. Richet, *Premonitions and other Strange Experiences in France during the Great War*; W. W. Kenilworth, *Practical Occultism*; M. E. Monteith, *Fringe of Immortality*; G. E. Wright, *Church and Psychical Research*; M. L. Arnold-Foster, *Studies in Dreams*; J. A. Jackson and H. M. Salisbury, *Outwitting Our Nerves*; D. H. Lawrence, *Psychoanalysis and the Unconscious*; and P. Glenconner, *The Earthen Vessel*. Mention should be made of the abridged reprint of the original work of Mme. D. Home.

PSYCHOANALYSIS. W. Stekel, one of Freud's best known pupils, has recently summed up the present status of this method of treating disease. He entitles his article "The Limitations, Dangers and Abuses of Psychoanalysis." He announces incidentally a cure of paranoia, a mental condition commonly regarded as inalterable and two cures of compulsion neurosis. He analyzed one case of the latter for three years before the psychic trauma was laid bare. Generally speaking these long analyses are unnecessary and injurious, when the patient becomes free from his neurosis only to develop another as the result of his long analytical experience. Stekel believes that the long "dream-pursuit" of the original "soul-injury" is usually not required for the cure of these affections. In some of the worst neuroses there is no evidence that a mental trauma has ever occurred. Not all cases are sexually motivated for in some religion replaces sex; and not all hark back to infantile traumas for some originate in adult life. The trauma in fact does not make the neurosis although the neurotic reacts to the trauma. Janet's "fixed idea" is a greater discovery than the Freudian infantile wish. The neurotic is born with a tendency to fixed ideas but ordinarily can largely suppress the latter. Attempts to locate the fixed idea are often followed by rapid cures.

Stekel says of the libido theory that it is a matter of metapsychics of no value in curing disease. The Oedipus complex has been greatly overemphasized as the central nucleus of neuroses. The castration complex is seldom of value in treatment. The practice of analysis requires much limitation in every direction—for example no neurotic physician or layman should ever practice it for he will be blind to his own complex. It can hardly be learned save from witnessing a first-class man work. The more the analyst knows of medicine, neurology, and psychiatry the better will be his work. Failure is bound to occur at times and analysis is no panacea, but Freud and his disciples have enabled many nominally incurable cases to regain mental and physical health.

PSYCHOLOGY. One of the most welcome events of the year is the reappearance, under the editorship of H. Pierson, of *L'année psychologique*, which ceased publication in 1914. The present volume, with due allowance for time, comes up to the standard of quality set in pre-war years.

Psychology has lost by death G. T. Ladd, Professor of Philosophy and Psychology at Yale University, at the age of 79 years and B. Erdmann, Professor of Philosophy at the University of Berlin, at the age of 70 years.

The annual meeting of the American Psychological Association was held at Princeton, N. J., December 28, 29, and 30, under the presidency of M. F. Washburn. The British Association for the Advancement of Science was held at Edinburgh, Scotland, Sept. 7 to 14; Psychology, under the presidency of C. L. Morgan, had for the first time an independent section.

F. Krueger of Leipzig has begun the publication of a new journal, *Arbeiten zur Entwicklungspsychologie*, of which the first five issues have appeared. *Praktische Psychologie*, edited by W. Moede and C. Pwrowski of Berlin, began publication in 1919. *The Psychopathic Review*,

edited at the Psychopathic Clinic of San Diego, Calif., began publication in September of the present year. The *Journal de Psychologie* has extended its scope to include pathology, and its staff to include men from all the Latin countries. The editorship of *The American Journal of Psychology* passed from G. S. Hall to E. B. Titchener. Hall had been editor since its foundation in 1887.

GENERAL PSYCHOLOGY: SYSTEMATIC, TEXT-BOOKS AND TREATISES. Two articles by E. B. Titchener show clearly the systematic trend of the time. The first, "Brentano and Wundt: Empirical and Experimental Psychology" (2, 108), sets forth the positions, in the light of their derivations, of these two writers, which in many respects were alike yet in emphasis, support, and method were almost direct opposites: this not so much in the language used or even in the topics treated as rather in the outlook. The one appealed to authority to support an empirical structure; the other appealed to the laboratory and to experiment with his eyes turned toward the future. The other article, "Functional Psychology and the Psychology of Act": I (2, 519), treats of the attempts made to erect a system on the basis of the concept of function. Throughout the systems function dominates content; consciousness is dynamic; the view is teleological; and psychology forms the approach to other disciplines. The whole rests on an empirical basis which made inevitable its failure as a science; it reflects the past of Aristotle instead of the future of science. Here, then, we have presented in terms of the men who gave them their modern formulation the two molds in which all systems are cast. The articles raise the question whether any "empirical" system can fulfill the rigorous demands of science.

Yet the teleological appeal is strong and, as M. Bentley in "Dynamic Principles in Recent Psychology" (21, b, No. 3) points out, has always been with us. It was man's earliest conception of mind that it is "an intangible and inscrutable substance which was at once an active personal agent, a private possession, and a unique source of power and authority." Bentley makes out at least four kinds of dynamical elements in recent psychology, for which he finds illustrations in the writings of six modern psychologists. "Much that would otherwise fall to observation and to logic is more elegantly done by a force or power; 'instincts,' 'capacities' and 'intelligences' can thus be hypostatized and made to serve as surrogates for facts. The temptation toward dynamism in psychology bears more than a superficial resemblance to the lure of vitalistic 'causes' in biology." All that mind contributes in addition to processes is meaning; and to attribute this addition to a dynamic element is to introduce a psychosomatic function which in its turn implies bodily terms. Hence if "mental force" is hypothetically assumed in explanation of behavior or pathological cases it should be recognized for what it is and should not be allowed, illegitimately, to supplant mental processes. This is the view of one who would restrict psychology to a definite subject-matter, a subject-matter limited by a strictly scientific point of view, and would not make it coordinate with all human interests and activities as the teleological attitude inclines to

do. Those, on the other hand, who defend dynamism make no distinction between explanation and science by observation, between value and existential subject-matter. They counter with the claim that they thereby enrich the "science," even though it be at the cost of making it non-scientific according to Machian canons. Thus J. M. Fletcher, in "Geneticism as a Heuristic Principle in Psychology" (22, 421), after denouncing as inadequate, due to a too narrow restriction in point of view, the position of the geneticist and the analyst, proceeds: "an inquiry thus prescribed can not pretend to answer all the demands of all sorts of explanations that could arise." He rightly maintains that he speaks for Kantor (*Psych. Rev.*, xxv, 1), for the psychology of dynamics, for the psychology of behaviorism, and for the psychoanalysts. The chief inquiry, according to this view, has reference to the functional efficiency of mental components; the study of mental tests and especially of practical psychology seeks to differentiate the useful and the useless. Fletcher thus brings utility, value, the whole gamut of human significances, into the science of mind. J. R. Kantor, in "The Primary Data of Psychology" (22, 253), lays less stress upon values, but is no less insistent upon the dynamic character of the data of psychology. That these data are dynamic we know from the nature of the response systems of which the stimulus is a part. The individual constitutes a totality or unit, and any reaction involves the whole organism in so far as it participates in the response system; the point of departure is organismic and not mental; the point of view is broad enough to include all of man's responses, meaning fully conceived, to meaningful situations. Meaning, in "An Objective Interpretation of Meanings" (2, 231), is an act or an adjustment which conditions a following response. These precurrent reactions may be overt or implicit. The touching-off of a segment of behavior which in a sense is specific to the situation and which, therefore, reveals evaluation constitutes or is meaning. H. B. English, in "Dynamic Psychology and the Problem of Motivation" (20, 239), feels the impulsion of a dynamic psychology which will tell why and how our minds act rather than what our minds are. To this end we must distinguish mechanism, motive power, and end. The mechanism is an established psychophysical disposition; the mental dynamics come no less from habit than from instinctively given dispositions; and the end follows interest, which is the affective aspect of the unitary psychomotor response. Or, perhaps more specifically, the instincts furnish the drive but acquired dispositions, habits, give direction to it. For M. Prince, in "The Structure and Dynamic Elements of Human Personality" (1, 403), the instincts have a teleological nature. The acquired dispositions use the innate as a foundation, till we have an elaborate structure of complexes and of systems of complexes, all with one or more primary units as a basis. The integration of all these units, complexes, and systems of complexes, constitutes personality. The innate dispositions give instinctive and emotional dynamics to the whole, so that the predominance of certain dispositions determines the individuality personality. H. C. Warren, in "Psychology and the Central Nervous System" (20, 249), sets forth in detail

the advantages which come if and when we adopt the double-aspect hypothesis. But since the common link in the double-aspect theory is the neural impulse, it becomes, naturally, the object of study. Mental process, neural impulse and response form an unbroken series, toward any member or members of which we may set our faces. Since no one of the three partial attitudes affords a complete or even a satisfactory picture for purposes of explanation, we must extend psychology to include the whole list. Because experience and behavior are phenomena of organic creatures, therefore they fall within the purview of the same science. When we include neurological study, we have a trio which should give a complete picture of mental happenings. W. E. Hocking, in "The Dilemma in the Conception of Instinct, as Applied to Human Psychology" (1, 73), finds it necessary to discard instinct, as a term too loose to serve the needs of science. Both the strictly physiological and the vitalistic concepts fail to meet the needs of psychology; but the hypothesis of a motive in the form of appearance, a general physiological urge, which Hocking calls "the will to power" satisfies the requirements. J. W. Scott, in "Psychology and Idealistic Philosophy" (22, 170), sounds a similar note in his "power to live," which he believes may point to the path which idealism missed because it was unable to maintain relative values. Of like import, with differences of emphasis or form, are articles by P. Janet, "La tension psychologique, ses degrés, ses oscillations" (7, a, 1 and 209) and "Les oscillations de l'activité mentale" (24, 140); B. H. Bode, "Intelligence and Behavior" (22, 10); and R. B. Perry, "A Behavioristic View of Purpose" (22, 85). If we turn from these psychological and philosophical writers to the supporters of psychoanalysis and the psychiatrists, we find that they take their drives for granted; it has ceased to be a question whether mind is dynamic; they debate about the nature or origin of the drive, and not about its existence.

No one should be deceived by all this into the belief that it is anything other than an attempt to explain, to give value to life as we live it. Since the beginnings of history man has sought the ultimate in the form of a power or drive; he has always shown curiosity about the why rather than about the what. The present attempt to give respectability to empiricism finds its chief characteristics in the generalizing of the function and in the assignment to the drive, so far as may be, of a physiological origin.

The following books should receive mention as being of general interest: S. Paton, *Human Behavior*; J. Drever, *Psychology and Everyday Life*; B. A. W. Russell, *Analysis of Mind*; S. Smith and E. Guthrie, *Chapters in General Psychology* (Rev. Ed.); C. S. Myers, *Mind and Work*; F. Giese, *Psychologisches Wörterbuch*; F. Tracy, *Psychology of Adolescence*; C. Platt, *The Psychology of Thought and Feeling*; and R. Briffault, *Psyche's Lamp: A Revolution of Psychological Principles as Foundation of all Thought*. Likewise the following articles: E. Becker, "W. Köhler's physikalische Theorie der physiologischen Vorgänge die der Gestaltwahrnehmung zugrunde liegen" (31, b, 1); F. R. Bichowsky, "The Basic Assumption of Experimental Science" (22, 295); G. C. Field, "Faculty Psychology and Instinct Psychology" (17,

257) C. Long, "Psychological Adaptation" (8, a, 34); H. B. English, "In Aid of Introspection" (2, 404); J. C. Gregory, "A Comparison of Strong's Theory of Perception with Reid's" (23, 352); M. Picard, "The Unity of Consciousness" (22, 347); M. W. Calkins, "The Truly Psychological Behaviorism" (20, 1); G. B. Denton, "Early Psychological Theories of Herbert Spencer" (2, 5); G. Revault d'Allonnes, "Le mécanisme de la pensée" (24, 282); and F. J. E. Woodbridge, "Mind Discerned" (22, 33).

S. I. Franz in "Cerebral-Mental Relations" (20, 81), cites cases to show that there is no necessary one-to-one correlation between neural activity and mental states. A brain lesion at first reflects itself in the mental life, but there is no impairment of imagery, and complete recovery of the mental life is possible. M. Picard, in "Coordinate Character of Feeling and Cognition" (22, 288), after a review of the arguments and experimental results for and against the independent status of feeling as a mental element, concludes that it is a process coordinate with cognition. He accepts the doctrine of mixed feelings, despite results of P. T. Young (1919) to which he does not refer. H. Hartridge, in "A Vindication of the Resonance Hypothesis of Audition" (7, a, 277, b, 142), answers, in part by experiment and in part by analogy, some of the objections raised against the Helmholtz theory. He points out two phenomena of hearing which the displacement theory of Wrightson does not explain: the facts that very short intervals of silence come to experience as noises, and that a change by π in the phase of the tone produces a beat-effect.

E. G. Boring, in "The Stimulus-Error" (2, 449), reviews the arguments for and against the "quantity" objection to mental measurement, in connection with which the notion of "stimulus-error" had its origin. With the advent of the psychology of capacity a new point of view arose, a point of view which accepted that which the notion of "stimulus-error" implied, and so failed to recognize anything but a direct measure in terms of stimulus. This psychology of capacity did not seek to correlate or find a relation between mental and physical measurements, since for it the first term of the relation did not exist. It is doubtful if the position is sound even in the field of mental testing and of educational measurements; in true psychophysical investigations the use of the data of introspection is necessary even for a psychology of function. S. W. Fernberger, in "An Experimental Study of the Stimulus-Error" (13, 63), makes a direct experimental attack upon the problem of the stimulus-error. He gave instructions which, if carried out, would lead in one case to reports of relative magnitude or "quantity" of experience itself and in another to reports about the magnitude of the objective stimulus. The practiced *O* gave different values for the *DL* and very different values for the interval of uncertainty: a result which proves that under the different attitudes we do not measure the same thing.

We have from G. S. Brett the second and third volumes of his *History of Psychology, Ancient and Patristic*. The second volume covers the period of mediæval and early modern psychology and the third volume, modern psychology. H. C. Warren gives us a sympathetic *History of the Association Psychology*. For the most part, it

states the position of the different men in their own terms, without any very serious effort to show origins and relations. It is what C. R. Griffith, in "Some Neglected Aspects of a History of Psychology" (21, b, No. 3), calls static. Griffith enters a plea for a history which shall centre about primary and secondary themes, in order that the whole may appear as a history of connected growth and development. Wundt's autobiography, *Erlebtes und Erkanntes*, and Kuelpe's incomplete *Vorlesungen über Psychologie*, edited by K. Buehler, are reviewed by E. B. Titchener (2, 575) and R. M. Ogden (*Amer. Jour. Psychol.*, 33, 145). Wundt does not lay bare the motives which led him into psychology, or to the publication of the *Physiologische Psychologie*, or to the change of plan in the first edition of this work (see E. B. Titchener, 2, 596). The following notes of appreciation have appeared: "In Memory of Wilhelm Wundt" by His American Students (20, 153); "Wilhelm Wundt" by E. B. Titchener (2, 161); and "Unserem grossen Lehrer Wilhelm Wundt in unaussprechlicher Dankbarkeit zum Gedächtnis" by W. Wirth (4, a, 1).

SENSATION AND IMAGE. Last year we gave as the central problem in experimental work the phenomenological analysis of perception. Even then we might have predicted that such a programme would lead to a study of the constituent elements from the same point of view; for the work on perception showed gaps in our knowledge of the ultimate character of sensory and imaginal data, as well as inadequate knowledge of the variable dimensions of experience. The swing toward the study of elements shows in the trend of studies rather than in numbers. Another trend of equal or greater significance is the approximation of sensory and perceptual studies; it is difficult to place certain studies definitely in the one class or the other; which means that the elements are studied in integrated complexes, without however any lessening of experimental control. These trends are to be discerned in the report of studies which follows. W. Fuchs, in *Untersuchungen über das Sehen der Hemianopiker und Hemiamblyopiker. ii. Die totalisierende Gestaltauffassung* (31, a, 1), contributes the fifth paper to the Gelb-Goldstein series. Under certain conditions the subject had experiences of clear vision correlated with defective or injured parts of the retina. This central supplementation is not a matter of images or of residua or of attention, but it is a central *Gesamtgestaltprozess* of the same kind as that which fills in the blind spot, the fovea in twilight vision, and visual forms under certain conditions of observation. J. C. Flugel, in "A Minor Study of Nyctopsia" (7, a, 287), finds that there is no certain relation between visual acuity in daylight and visual acuity at night, and very little correlation between acuity when the differences of illumination are small if both are fairly low. L. W. Jones, in "A Method of Measuring Nyctopsia with some Results" (7, a, 299), describes an apparatus for testing nyctopsia after varying intervals of time. The results show very large individual differences in the amount of adaptation after any given interval, as well as very different rates after any interval; even the same individual varies markedly in the rate of adaptation as time goes on; the curve is irregular. The region of greatest sensitivity is 20° temporal to the fovea. E. Kaila, in *Eine*

neue Theorie des Aubert-Försterschen Phänomens (31, a, 193), shows that this phenomenon (that optical figures which are small and near are recognized over a larger portion of the field of vision than large and distant objects which subtend the same visual angle) is independent of accommodation and convergence. The key to the phenomenon lies in the fact that distant objects arouse more residue than near; hence there is mutual inhibition. The cutting-off of residue also explains the Koster phenomenon. G. Marsynski, in *Studien zur zentralen Transformation der Farben* (31, b, 45), argues that total or partial "transformation" is not identical with the phenomenological change in brightness when a given gray is lightened or darkened by the admixture of W or Bk or by the increase or decrease of total or partial illumination. Constancy of differential sensitivity appears only where transformation is present. A shadowed paper compared with an unshadowed appears darker under the subjective than under the objective attitude, but still lighter than under the reductive procedure. H. Henning, in *Ein optisches Hintereinander und Ineinander: Gemischte Farbenempfindungen* (31, a, 144), reports an experiment whose result is that of two colored areas which by a stereoscopic arrangement appear at different distances, yet on corresponding retinal areas, the nearer is a transparent surface. The seeing of two colored lines with corresponding areas and at identically the same place depends upon fusion of contours and degree of attention. A. Kirschmann, in *Der Metallglanz und die Farbe der Metalle* (4, b, 90), concludes that metallic lustre results from the reflection of light from successive layers of transparent particles which have a high index of refraction. So we have parallax of indirect vision for these lustres, and binocular parallax and parallax of movement for the surface lustres. F. Schumann, in a second paper on *Die Dimensionen des Raumes* (31, a, 254; for first paper see *Zeit. f. Psy.*, 85, 224), raises the question of the truly tridimensional nature of the plastic spatial impression. The glassy sensation and the fact that we can see two colors at different distances in the same visual direction seem to guarantee tridimensionality. In the field of audition H. G. Bishop, in "An Experimental Investigation of the Positive-After-Image in Audition" (2, 305), puts the findings of A. M. Mayer to a critical test. Results of various experiments give no evidence of a positive after-image like that found in vision. Tones have a characteristic modified ending which depends for its intensity upon the intensity of stimulus and for its insistence upon intensity and duration of stimulation. M. Tittel, in "Ueber Angleichung und Kontrast im Tongebeit" (4, b, 353), finds that assimilation occurs when the two tones are near together in the tonal scale; contrast when they are farther apart,—somewhat with the intervals of the 4th and 5th, but especially with intervals of more than an octave. The induction-effect, which is greater in the upper part of the scale, is a central factor. I. G. Campbell, in "Some Problems in Regard to Alimentary Sensitivity" (2, 26), made observations during a period of duodenal feeding upon the complexes of hunger, appetite, and fullness as well as upon thermal sensitivity. S. Tung, in "The Integration of Punitive Cold and Pressure" (2, 421),

reports that the integration of the qualities of cold and pressure gives an experience of wetness. R. S. Malmud, in "The Integration of Punctiform Warmth and Pressure" (2, 571), finds that the two qualities fuse under equal attention and with identical localization. No new quality or perception arises. A. Baron and M. Bentley, in "The Intensive Summation of Thermal Sensations" (21, b, No. 3), disprove the contention of Siebrand that thermal sensations are summated within the area stimulated. The results give no hint that sensory elements summate. The attitude of the observer is important. C. Brad-dock, in "An Experimental Study of Cutaneous Imagery" (2, 415), casts doubt upon the occurrence of images of warmth, of cold, and even of cutaneous pressure, except perhaps under special conditions. A. H. Sullivan, in "An Experimental Study of Kinæsthetic Imagery" (2, 54), makes out two kinds of kinæsthetic imagery, resident and projected. The resident images approximate single processes which differ from kinæsthetic sensations in general uniformity, simplicity, and lack of "body." They may be simple processes coordinate with sensation. The projected are complex, coordinate with perception. The two involve opposite attitudes on the part of the observer. Finally, we have six studies by E. R. Jaensch and his pupils on the general subject *Ueber die Vorstellungswelt der Jugendlichen und den Aufbau des intellektuellen Lebens*. In the first paper E. Gotthel, "Ueber das latente Sinnengedächtnis der Jugendlichen und seine Aufdeckung" (31, b, 73), concludes that an eidetic phase of development is perhaps normal, since tests made by way of the after-image and memory-image bring out rudiments of images of sense-memory where a direct test fails. The second, by E. R. and W. Jaensch, *Ueber die Verbreitung der eidetischen Anlage im Jugendalter* (31, b, 91), presents a statistical confirmation of the preceding study. In the third, by A. Grosser, *Ueber die Gründe des verschiedenen Verhaltens der einzelnen Gedächtnisstufen* (31, b, 97), many tests (mode of appearance of background, freedom from background, influence of rotating or uneven background, of a colored projection-surface, and of assimilation to objects of perception) indicate that as the memory series proceeds from after-image to images of sense-memory and thence to memory-images, the connection of the image with the object of perception, simultaneously presented, becomes weaker. The fourth paper, by B. Herwig *Ueber den inneren Farbensinn der Jugendlichen und seine Beziehung zur den allgemeinen Fragen des Lichtsinns* (31, b, 129), is a discussion of the nature and distribution of the image of sense-memory, its difference from the after-image, and the conditions of its appearance as positive or negative. Some sense-phenomena appear in an exaggerated and hence more accessible form in the image. The color-blindness of the peripheral retina may be due to induction rather than to anatomical deficiency. E. R. Jaensch in the fifth paper, *Ueber Kontrast im optischen Anschauungsbild* (31, b, 211), finds that contrast-effects are enhanced in the image. The experimental results of B. Herwig and E. R. Jaensch, *Ueber Mischung von objektiv dargebotenen Farben mit Farben des Anschauungsbildes* (31, b, 217: the sixth paper of the series), prove that both mixture and rivalry occur, but rivalry less often.

The facts of mixture confirm the status of the image.

PERCEPTION. The studies of perception show the same tendency toward phenomenological description and an intimate correlation with conditions that we have previously noted. The analysis of "The Illusory Perception of Movement on the Skin" (2, 472) by A. K. Whitchurch is typical. The perception of movement comes from the successive stimulation of two adjacent pressure-spots. The interval between stimuli determines the perception to a greater degree than do other conditions. The existential correlate appears to be an integration of quality, duration, and cutaneous extent. E. R. Jaensch and F. Reich, in *Ueber die Lokalisation im Seh-raum* (31, a, 278), prove by experiments that the region of attention determines the localization of images of sense-memory whether fixation remains steady or the point of regard shifts. An experiment parallel to the fundamental experiment of Hering-Hillebrand on horopter-deviation showed, with images, all the phenomena observable with actual threads. The observers of F. Hermann, *Einfluss des Kontrastes auf den Sukzessivvergleich innerhalb eines festen Reizsystems bei Augenmassversuchen* (4, b, 1), when given lines for comparison, all of which were of about equal length, formed an idea of mean or average length which was less than the actual average length and which served in part as the basis for judging. This idea of mean length affected the first more than the second stimulus, and affected deviations above the median more than those below it. J. E. Lips, in *Die gleichzeitige Vergleichung Zweier Strecken mit einer dritten nach dem Augenmass: zum Drei-Reize-Problem in der Psychophysik* (4, a, 267), finds that the double comparison of the total extent of two vertical lines shown simultaneously with a third line shown in succession gives more accurate results than does the single judgment. O. Klemm, in *Untersuchungen über die Lokalisation von Schall-reizen: 4. Ueber den Einfluss des binauralen Zeitunterschiedes auf die Lokalisation* (4, a, 117), leads sounds separately to the two ears, and by the use of the Helmholtz pendulum controls their time relations. He concludes that the time relations, which varied down to .002 sigma, condition the perception of localization. C. A. Ruckmick, in "Experiments in Sound Localization" (21, b, No. 3), finds that difference in intensity conditions the perception. C. C. Pratt, in "Some Qualitative Aspects of Bitonal Complexes" (2, 490) attacks the problem of fusion descriptively. T. Lehmann, in "Zur Psychologie des Vergleichs kurzer Zeiten" (4, b, 309), obtains results which confirm Katz in regard to the unimembral judgment; it comes with a highly stable sensory "set." K. M. Dallenbach, in "Subjective Perceptions" (13, 143), finds that subjective perceptions fall into the same classes as those objectively determined. W. A. Thalman, in "The After-Effect of Seen Movement when the Whole Visual Field is Filled by a Moving Stimulus" (2, 429), notes an after-effect depending on duration of stimulus. Two studies deal with poetry: E. W. Scripture, "The Nature of Verse" (7, a, 225), and E. Scherrer, "Das Problem der anschaulichen Gestaltung in der Lyrik" (4, a, 147).

C. Comstock, "On the Relevancy of Imagery to the Process of Thought" (2, 196), could find

no image which was irrelevant. F. C. Bartlett, "The Function of Images" (7, a, 320), concludes that images aid in the resolution of some deficiency either of process or of behavior.

COMPLEX STATES: EMOTION. It is evident that the time is not ripe for the investigation of the more complex mental states; not till the phenomenological description of the simpler integrations has gone farther will the highly complex formations yield to analysis. J. R. Kantor, in, "An Attempt Toward a Naturalistic Description of Emotion" (20, 19; 120), describes the mechanism of the emotions in terms of the organismic concept. An emotion arises when in the face of some situation no organized response system comes to function. F. T. Russell, in "A Poet's Portrayal of Emotion" (20, 222), thinks that a poet such as Browning has insight into the emotions from both the scientific and the artistic points of view, and so forms a common meeting place for the two classes of workers.

ACTION. The results of E. L. Gatewood, "Individual Differences in Finger Reaction" (21, a, No. 4), show that the speed and accuracy of reaction differ with individuals under the conditions of his experiment. The best records for both speed and accuracy come with the use of one finger of each hand; the worst, with two fingers of the left hand. F. L. Wells, C. M. Kelley, and G. Murphy, in "Comparative Simple Reactions to Light and Sound" (13, 57) show that the relation between reaction-time to sound and light depends on the intensity of the stimuli compared and upon the pre-stimulus time. The same authors, in "Effects Stimulating Fatigue in Simple Reaction" (13, 137), conclude that the increase in reaction-time during a 40 min. period arises from the monotonous nature of the task and not from fatigue. W. Schilling, in "The Effect of Caffein and Acetaulid on Simple Reaction-Time" (20, 72), finds that both drugs tend to retard and to make more irregular the reaction-times. I. Hermann, in "Ueber formale Wahl-tendenzen" (31, b, 345), presents experimental results which show that the subject owing to the tendencies of conservation and of stability, tends to choose the middle member of a series.

MEMORY. R. H. Crosland, in "A Qualitative Analysis of the Process of Forgetting" (21, a, No. 2), presents cross-sections of the memory consciousness for different kinds of material. They show characteristic changes, which the author accounts for by hypothetical mechanisms which savor of Freud. K. Winzen, in *Die Abhängigkeit der paarweisen Assoziation von der Stellung des besser haftenden Glieder* (31, a, 236), finds that the more familiar or more insistent member of a pair of ideas to be associated should come first. This is contrary to the usual practice with vocabularies. W. W. Smith in three articles, "Experiments on Memory and Affective Tone" (7, a, 236); "Some Properties of Complex Indicators" (8, a, 281); and "The Relation between Complex Indicators and the Form of the Association" (8, a, 297), proves that the affective tone of an idea may be negative or positive, may shorten or lengthen the association time. Of the indicators the psychogalvanic is best to detect tone; the memory test, to indicate the color of the tone. Inner associations are more strongly negatively toned. C. L. Hull and L. S. Lugoff in, "Complex Signs in Diagnostic Free Association" (13, 111), make a statis-

tical study of eight indicators. Two are more significant than one if they fall on the same reaction. H. Lundholm has a paper on "The Affective Tone of Lines: Experimental Researches" (20, 43); and E. Bullough reviews "Recent Work in Experimental Aesthetics" (7, b, 76).

APPLIED PSYCHOLOGY: EDUCATION. L. M. Terman, in "The Status of Applied Psychology in the United States" (3, 1), believes it a good omen that somewhat more than half the members of the American Psychological Association, who carry on research, devote themselves to problems in the applied field. Germany is perhaps the only country in the world to-day of which this statement is not true. The fact may signify either that most persons by temperament turn to the practical or that our colleges, the centres of training, fail to develop in their students the true spirit of research.

We note some studies which deal specifically with education. L. A. Peckstein, in "Massed versus Distributed Effort in Learning" (12, 92), finds as in his previous studies, that motor problems are learned most easily, in shortest time and with fewest errors if learned in small, fairly easy units by the massed method, and if then these parts are linked together by the massed method. S. D. M. Austin, in "A Study in Logical Memory" (2, 370), finds on the contrary that for retention divided repetitions are more effective than cumulative or massed presentations. The curve of forgetting for logical material is the same as that given by Ebbinghaus for nonsense syllables. J. W. Barton, in "Smaller vs. Larger Units in Learning to Typewrite" (12, 465), draws inferences of general pedagogical import from the result that students learned to write more rapidly, and in shorter time if the units were large from the beginning. J. J. O'Brien, "A Qualitative Investigation of the Effects of Mode of Presentation upon the Process of Learning" (2, 249), shows that recall is not necessarily in terms of the imagery of the presentation. Vocimotor imagery is the one indispensable mode, especially for the earlier stages of learning. Manu-motor imagery aids neither learning nor retention. The results confirm the laws of association so far as applicable. Many other studies undertake the analysis of some particular subject. The titles of the following indicate their general nature: J. R. Thompson, "The Interference Factors in Mental Processes; An Experiment in Correlation and Transfer" (13, 13); F. A. C. Perrin, "Experimental Study of Motor Ability" (12, 24); C. R. Lavin, "A Preliminary Study of the Reproduction of Hand Movements" (7, b, 47); E. L. Thorndike, "The Constitution of Arithmetical Abilities" (12, 14); "The Psychology of Drill in Arithmetic" (12, 183); E. J. Ashbaugh, "Measurement of Language: What is Measured and its Significance" (11, 34); L. W. and S. L. Pressey, "A Critical Study of the Concept of Silent Reading Ability" (12, 25); F. J. Hosc, "Empirical Studies in School Reading" (Columbia Univ. Contr. to Ed., No. 114); G. T. Buswell, "The Relation between Eye-Perception and Voice Response in Reading" (12, 217); H. J. Mulford, "The Child Mind" (2, 179); G. T. Johnson, "A Survey of the Physiology of Cerebration" (1, 136); M. E. Wells, "A Project Curriculum"; R. Pintner and H. Marshall, "A Combined Mental Educational Survey" (12, 32). We note also the following

books: L. A. Averill, *Psychology for Normal Schools*; M. V. O'Shea, *Mental Development and Education*; E. Claparède, *Psychologie de l'enfant et pédagogie expérimentale*; G. S. Hall and His Students, *Aspects of Child Life and Education*; W. H. Pyle, *The Psychology of Learning*; J. A. O'Brien, *Silent Reading*; J. H. Snowden, *Meaning of Education*; J. C. M. Garnett, *Education and World Citizenship*; J. L. Stockton, *The Definition of Intelligence in Relation to Modern Methods of Mental Measurement*.

TESTS. The making of tests is not at an end, but it is abated. The creative impulse finds its outlet in the application of the test method to educational, social, and industrial problems (see Pressey, 2, 354). The intelligence score as such is of little value; its importance lies in its significance for life. But it would be a mistake to believe that the interest in the tests of mentality for their own sake is less strong than heretofore. There is yet a goodly body of workers who feel keenly the problems which intelligence, as such, sets for the investigator. To realize this we need only note the names and the attitude of the men who took part in the "Symposium" (12, 123, 195, 271) on intelligence; the list includes E. L. Thorndike, L. M. Terman, F. N. Freeman, S. S. Colvin, B. Pintner, B. Ruml, S. L. Pressey, V. A. C. Hinmon, J. Peterson, L. L. Thurstone, H. Woodrow, M. E. Haggerty, and B. R. Buckingham. There is evidence in the proposed definitions of a more practical, less abstract, conception of intelligence. Of a similar trend are the following: S. D. Porteus, "New Definition of Feeble-mindedness" (29, 7); E. L. Thorndike, "On the Organization of Intelligence" (20, 141); P. B. Ballard, "The Limit of the Growth of Intelligence" (7, b, 123); and S. Naccarati, "The Morphological Aspect of Intelligence" (5, No. 45). One aspect of the problem which has received special consideration is the form of the curve for the growth of intelligence. According to F. N. Freeman, "The Interpretation and Application of the Intelligence Quotient" (12, 3), the norms from point-scales indicate that mental growth follows a uniform rate, and that neither of the two current assumptions—the logarithmic character of the growth curve and the divergence of the curves with advancing years—is valid. Whatever it may be, the exact nature of the curve of mental growth has yet to be determined. At any rate, the IQ does not apply to tests other than the Binet. L. M. Terman, in "Mental Growth and the IQ" (12, 325; 341), replies with a review of the work of Doll, Wallin, Mateer, and Freeman, wherein he disposes of the first three on the ground of errors committed. The objections of Freeman cannot be settled offhand. J. Peterson, in "The Growth of Intelligence and the Intelligence Quotient" (12, 148), thinks that the contradiction (that the curves of growth of intelligence diverge and slow up with advancing years) asserted by Freeman rests on an unwarranted assumption; the assumption that the test scores are the growth curve, whereas time and perhaps many other factors require consideration. Freeman replies (12, 135) that we simply have not the data or the insight to overcome the difficulty. H. Rugg and C. Colloton, in "Constancy of the Stanford-Binet IQ as Shown by Retests" (12, 315), review the results of eight investigators and conclude

in favor of the prognostic value of the IQ. F. Kuhlmann, in "The Results of Repeated Mental Re-examination of 639 Feeble-minded over a Period of Ten Years" (3, 197), finds that mental age increases at a rate proportional to the final status. Those of the lower mental levels show loss in IQ more frequently than those of the higher; but with increase of age there is a decrease in IQ whatever the mental level, and here the decrease is greatest in amount for the higher mental levels. Other studies are: J. E. W. Wallin, "The Results of Retests by Means of the Binet Scale" (12, 392); L. E. Poull, "Constancy of the IQ in Mental Defectives According to the Stanford Revision of the Binet Tests" (12, 392); and S. C. Garrison, "Fluctuations of Intelligence Quotient" (27, 647). A. S. Otis and H. E. Knollin, in "The Reliability of the Binet Scale and of Pedagogical Scales" (11, 121), give formulae with their derivation for testing the reliability serial scores. The following general articles have appeared: B. Ruml, "Reconstruction in Mental Tests" (22, 181), in which the writer upholds the view that mental testing is a descriptive and not a technical science; T. L. Kelley and L. M. Terman, "Dr. Ruml's Criticism of Mental Tests" (22, 459), a reply to previous criticism; R. Fraumeni and F. B. Knight, "Criteria to Employ in Choice of Tests" (12, 408); M. M. Fairgrieve, "A Mass Test with Mr. Cyril Burt's Intelligence Questions" (13, 27); C. F. Hansen and M. J. Ream, "The Predictive Value of Short Intelligence Tests" (3, 184); S. L. Pressey, "The Problem of the Unselected Group in the Standardization of Tests" (3, 64); C. Fox, "A New Method of Marking Group Tests" (7, b, 181); G. M. Whipple, "The National Intelligence Tests" (11, 16). The following represent special aspects of testing. A. F. Bronner, in "Apperceptive Abilities" (20, 270), believes that there is a special, unique apperceptive ability and proposes tests. S. L. Pressey, in "A Group Scale for Investigating the Emotions" (1, 55), presents a test of 600 items to be done in 25 minutes. B. Muscio, in "Is a Fatigue Test Possible" (7, b, 31), argues that nonperformance tests offer the only possibility for a test of fatigue. A. A. Roback, in "Subjective vs. Objective Tests" (12, 439), finds that objective tests secure ease and quickness of scoring to the disadvantage of the more intelligent subject. G. M. Ruch, in "A Preliminary Study of the Correlations between Estimates of Volitional Traits and the Results from the Downey 'Will Profile'" (3, 159), discovers no correlation. W. Healy, in "Pictorial Test II" (3, 225), gives directions, scores, and a general discussion of the test. J. C. Bell, in "Group Tests of Intelligence: An Annotated List" (12, 103), gives a list of 30 group tests of recent origin. T. C. Kelley (Stanford Univ. Pub., Spec. Mon. No. 1) presents "A Chart to Facilitate the Calculation of Partial Coefficients of Correlation and Regression Equations."

The following show the extent to which tests serve the ends of education and something of the nature and scope of the problems attached: J. C. Reamer, "Mental and Educational Measurements of the Deaf" (21, a, No. 3); M. D. Lindsay and R. S. Gamsby, "Where Test Scores and Teacher's Marks Disagree" (28, 679); R. H. Bracewell, "The Freeman-Rugg General Intelligence Tests as an Aid to Economy in School Admini-

tration" (28, 460); A. I. Gates, "An Experimental and Statistical Study of Reading and Reading Tests" (12, 303; 378; 445); S. L. Pressey, "The Influence of Color upon Mental and Motor Efficiency" (2, 326); H. Davis, "Army Alpha and Student's Grades, Illustrating the Value of the Regression Equation" (27, 223); J. E. DeCamp, "Studies in Mental Tests" (22, 254); L. L. Thurstone, "A Cycle-Omnibus Intelligence Test for College Students" (11, 265); A. I. Gates, "The True-False Test as a Measure of Achievement in College Courses" (12, 276); S. S. Colvin, "The Use of Intelligence Tests" (10, 134); S. S. Colvin, "Educational Guidance and Tests in College" (3, 32); W. M. Proctor, "Psychological Tests and Guidance of High School Pupils" (Jou. Ed. Res. Mon. No. 1); V. A. Bird and L. A. Peckstein, "General Intelligence, Machine Shop Work and Educational Guidance in the Junior High School" (28, 782); J. C. and J. L. Almack, "Gifted Pupils in the High School" (27, 227); I. J. Bright, "The Intelligence Examination for High School Freshmen" (11, 44); C. E. and G. C. Myers, "Group Mental Testing in Altoona, Pa." (27, 624); C. F. and L. M. Chassell, "A Survey of the Three First Grades of the Horace Mann School by Means of Psychological Tests and Teacher's Estimates and a Statistical Evaluation of the Measures Employed" (12, 72; 243); P. L. Gray and R. E. Marsden, "An Application of Intelligence Tests" (13, 33); E. J. Pratt, "The Application of the Binet-Simon Tests to a Toronto Public School" (9, 95); R. Pintner and H. Marshall, "Results of the Combined Mental-Educational Survey Tests" (12, 82); A. G. Morphy and W. D. Tait, "Mental Hygiene Survey of Montreal Protestant Schools" (9, 49); C. Fordyce, "Intelligence Tests in Classifying Children in the Elementary Schools" (11, 40); G. H. Thomson, "A Rating Scale for Teaching Ability in Students" (13, 75); C. A. Wagner, "The Construction of a Teachers Rating Scale" (El. Sc. Jr., 21, 361); S. S. Brooks, "Measuring the Progress of Pupils by Means of Standardized Tests" (11, 161); J. B. Sears, "The Measurement of Teaching Efficiency" (11, 81). We mention the following books: H. R. Douglass, *The Derivation and Standardization of a Series of Diagnostic Tests for the Fundamentals of First Year Algebra*; W. S. Monroe, *Report of Bureau of Educational Research, Division of Educational Tests*; A. Gesell, *Exceptional Children and Public School Policy*; J. A. Bades, *The First Practical Steps in Selecting Gifted Children in a Large City School*; W. A. McCall, *How to Measure Education*; C. H. Town, *Analytic Study of a Group of Five- and Six-Year-Old Children*; B. P. Ballard, *Mental Tests*; M. R. Trabue and F. P. Stockbridge, *Measure Your Mind*.

SOCIAL. R. H. Gault, in "The Standpoint of Social Psychology" (1, 41), insists that social and individual psychology, as such, are the same; there are no minds or processes which are unique for social psychology; they all belong to individuals. If we take up a particular attitude toward the psychology of the individual, which has as its stimulus certain conditions, then we have social psychology. In general, when the stimulus is other members of society, and the response or significance leads back toward or reacts upon other members, the conditions fulfill the requirements. In fact, here, as in all forms of

applied work, there are two possible points of departure: the one emphasizes the mental side, the other lays stress upon the reactions, as a kind of social behaviorism.

As we shall see presently, the test method has invaded the social field as it has the educational. The following articles and books deal with various phases of social psychology: L. L. Bernard, in "The Misuse of Instinct in the Social Sciences" (20, 96), holds that the very names of the instincts imply both function and value, and hence are interpretations rather than facts. Environment, as social contact and social control, plays a large part in shaping the social creature. A. B. Wolfe, in "The Motivation of Radicalism" (20, 280), argues that, at bottom, the end term which drives all innovators may be an instinctive urge, a kind of pugnacious temperament, but that there is in addition a broad, intensive social sympathy. J. C. Flügel, "On the Biological Basis of Sexual Repression and its Sociological Significance" (8, a, 225), declares that the limited amount of human energy may be diverted to the ends of individuation or to those of genesis. As the race advances in civilization, individuation gains over genesis, and thus sets up a conflict with consequent repression. C. Theodoridis, in "Sexuelles Fühlen und Werten" (4, a, 1), argues that sexual values form the basis of moral percepts and of the social structure. For S. C. Pepper, "The Law of Habituation" (20, 61), changes in taste are not a matter of imitation; our likes and dislikes depend upon chains of connected dispositions or affective sequences which function as a whole. A change, brought about by stimulation, of any member of the group brings changes in the entire affective sequence, or a change in taste. T. H. Pear, in "The Intellectual Respectability of Muscular Skill" (7, b, 161), and J. L. Stenquist, in "The Case for the Low IQ" (11, 241), enter a plea for a better social rating of the person who has muscular "intelligence" and develops it, even if he does not possess high intelligence as rated by an intelligence test. Other articles are: A. W. Stearns and J. V. Chapman, "The Kinds of Men in Prison" (1, 335); H. Rugg, "Is the Rating of Human Character Practicable" (12, 425); S. D. Porteus, "The Social Rating Scale" (29, 33); F. H. and G. W. Allport, "Personality Traits, Their Classification and Measurement" (1, b, 6); E. R. Spaulding, "The Role of Personality Development in the Reconstruction of the Delinquent" (1, b, 97); W. T. Root, "A Socio-Psychological Study of Fifty-three Super-Normal Children" (21, a, No. 4); W. H. Burnham, "Sex Differences in Mental Ability" (10, 273); A. H. Arlitt, "On the Need for Caution in Establishing Race Norms" (3, 179); K. T. Yeung, "The Intelligence of Chinese Children in San Francisco and Vicinity" (3, 267); A. J. Dauphinee, "Vancouver's Sub-Normal Problem" (9, 117); "Novia Scotia Survey" (9, 1); W. K. Wright, "McDougall's Social Psychology in the Light of Recent Discussion" (22, 141). We note the following books: J. Dewey, *Human Nature and Conduct*; B. T. Baldwin, *The Physical Growth of Children from Birth to Maturity*; T. W. Galloway, *The Sex Factor in Human Life*, and *The Father and His Boy*; E. G. Conklin, *Direction of Human Evolution*. The following works have to do with criminal psychology: E. A. Doll, "Criminal Psychology" (29, 17); H. S. Langfeld, "Psychophysical Symp-

toms of Deception" (1, a, 319); H. E. Burt, "The Inspiration-Expiration Ratio During Truth and Falsehood" (13, 1); R. Rudlowski, "Kasuis-tischer Beitrag zur Psychologie der Aussage" (4, b, 270); F. Grossart, "Das tachistoskopische Verlesen unter besonderer Berücksichtigung des Einflusses von Gefühlen und der Frage des objektiven und subjektiven Types" (4, b, 121); F. Averling and H. L. Hargreaves, "Suggestibility with and without Prestige in Children" (7, 53).

INDUSTRIAL. The application of tests to the problems of industry goes on apace. We have the following to list: F. Watts, "The Construction of Tests for the Discovery of Vocational Fitness" (3, 240); M. S. Viteles, "Tests in Industry" (3, 57); E. O. Bregman, "A Study in Industrial Psychology: Tests for Special Abilities" (3, 127); B. Muscio, "Feeling Tone in Industry" (7, b, 150); E. Wallenstein, "An Attempt at Vocational Testing" (10, 392); H. D. Kitson, "Minor Studies in the Psychology of Advertising" (3, 5); M. Freyd, "A Test Series for Journalistic Aptitude" (3, 46); M. A. Bills, "Methods for the Selection of Comptometer Operators" (3, 275). The following list of books testifies to the interest that now attaches to the problems of industry: J. Drever, *Psychology of Industry*; F. Watts, *Introduction to the Psychological Problems of Industry*; J. C. Chapman, *Trade Tests*; E. L. Munson, *Management of Men*; H. D. Kitson, *The Mind of the Buyer*; L. C. Andrews, *Military Man Power: Psychology as Applied to the Training of Men and the Increase of Their Effectiveness*; A. Felek, *The Musician's Mind*; A. C. Higgins, *The Psychology of Nursing*.

PSYCHOLOGY OF THE ABNORMAL; PSYCHOTHERAPEUTICS. The psychology of the school of Zurich dominates every aspect of abnormal psychology. There are dissenting voices, but they receive scant heed. The revolt against the extreme sexuality of Freud spreads; even Freud now admits that in the case of the war neuroses others than the Oedipus-complex or the libido may have supplied the drive. Some see in the activities of psychoanalytic "quacks" a great evil turned loose upon the world; complexes are made to grow where there were no complexes before. More and more of the medical profession accept and practice psychotherapy; and in England as well as in America psychoanalysis is the vogue as spiritualism was a short time ago. S. Freud, in "One of the Difficulties of Psychoanalysis" (16, 3), says that the difficulty in question is attitudinal rather than intellectual, and attributes it to the difference in temperament or attitude of the man of the West and the man of the East. E. Jones, in "Recent Advances in Psychoanalysis" (8, a, 49), finds four points of advance: the use of the rule of "abstinence"; the addition of the "oral" or cannibalistic stage to character types; the "discovery" of narcissism; and the advance in metapsychology. It is in the latter subject that Freud's true interest lies; he desires to know the mechanism, but above all to know the power that drives it. In this country, at least, the point of view of Jung seems to be more acceptable than that of Freud. The studies of case histories is voluminous; we list some of the more general articles. W. S. Inman, in "Emotion and Eye Strain" (8, b, 47), finds that most trouble with the eyes is the effect of emotional disturbance. R. Reed, in "Some Notes on the Stammering Problem" (1, b, 161), finds the

usual devices for the treatment of stammering worse than useless, for stammering is due to the presence of some infantile reaction; the subject has the inferiority complex owing to domination by some other member of the family. G. Humphrey, in "Education and Freudianism: The Freudian Mechanisms and the Conditioned Reflex" (1, a, 350) and "The Child's Unconscious Mind" (1, a, 387), shows that the phenomena included under the different mechanisms find a better explanation in the conditioned reflex. The mechanisms, when applied to education, break down as means of explanation. W. Brown, C. S. Myers, and W. McDougall, in "The Revival of Emotional Memories and Its Therapeutic Value" (8, a, 16), discuss the question whether the emotions become suppressed and remain active as entities, so that abreaction frees the mind, or whether the phenomenon is one of dissociation of ideas and affection. J. H. Cooper, in "The Psychoanalytical Method Applied to the Study of Repression" (1, b, 144), asserts that the repression force is the sexual gratification obtained by repressing another sexual desire, and usually dates from early childhood. L. H. Horton, in "What Drives the Dream Mechanism" (1, a, 224) and "The Mechanistic Features in the Dream Process" (1, b, 169), finds no need for dynamics. The disposition or "set" of the nervous system makes for the phantasmagorical nature of the product. K. Dunlap, in "Sleep and Dreams" (1, b, 197), argues that a study of the symptoms of sleep leads to the prophecy and validation of dreams. The integrated activity of the nervous system makes for less varied associations. Other articles are: W. Brown, "Criticism of Present-Day Psychoanalysis" (16, 17); C. S. Read, "Homosexuality" (16, 8); W. Rees-Thomas, "Sadism and Masochism" (16, 12); W. H. B. Stoddart, "A Brief Résumé of Freud's Psychology" (16, 1); H. H. Goddard, "The Subnormal Mind versus the Abnormal" (1, b, 47); T. W. Mitchell, "Psychology and the Unconscious" (8, a, 327); C. Burt, "The Dreams and Day Dreams of a Delinquent Girl" (13, 1, 66); C. Moxon, "Mystical Ecstasy and Hysterical Dream States" (1, a, 329); W. H. R. Rivers, "Affect in the Dream" (7, b, 113); W. L. Brown, "The Influence of the Endocrines in the Psychoneuroses" (8, b, 1); W. M. Wheeler, "On Instincts" (1, a, 295); P. Janet, "The Fear of Action" (1, b, 150); L. J. Walker, "The Psychology of the Spiritual Exercises" (14, 401). The International Psychoanalytic Press began, during the year, the publication of *The International Psycho-Analytical Library*, of which we have the first volumes. The first is *Addresses on Psychoanalysis* by J. J. Putnam with an introduction by S. Freud; the second is *Psychoanalysis and the War Neuroses* by S. Ferenczi, K. Abraham, E. Simmel, and E. Jones. Other books are: C. B. Burr, *Practical Psychology and Psychiatry* (5th Ed.); M. Prince, *Unconscious, the Fundamentals of Human Personality, Normal and Abnormal*; C. Baudouin, *Suggestion and Autosuggestion* (trans. by E. and C. Paul); W. Brown, *Psychology and Psychotherapy*; A. C. Buckley, *The Basis of Psychiatry*; C. E. Long, *Collected Papers on the Psychology of Phantasy*; J. F. W. Howley, *Psychology and Mystical Experience*; K. Dunlap, *Mysticism, Freudianism and Scientific Psychology*; J. L. des Bancelles, *Introduction à la psychologie, l'instinct et l'émotion*;

J. Varendonck, *The Psychology of Day Dreams*; E. Kraepelin, *Manic-Depressive Insanity and Paranoia* (trans. by R. M. Barclay); J. Ralph, *The Psychology of Nervous Ailments. The Quimby Manuscripts*, edited by H. W. Dresser, deserve special mention because of their bearing on the history of mental healing.

PYNE, MOSES TAYLOR. Lawyer and philanthropist, died, April 22. He was born in New York City, Dec. 21, 1855, graduated at Princeton in 1877, and practiced law but after a few years devoted himself to the management of his large financial interests. He was president or director of many important companies, including railroads, banks, insurance companies, etc., but is best known for his work at Princeton University, of which he was a trustee for over thirty years, building two dormitories at his own cost and contributing to it large sums of which he kept no account.

Q

QUAKERS. See **FRIENDS**.

QUEBEC. A province of Canada, extending from Ontario to the northern border of the United States and New Brunswick, and northward to the Hudson Strait, including most of the Labrador peninsula. Capital, Quebec. Area, 706,834 square miles, including 15,969 square miles of water. Population (1911), 2,003,232, of whom 1,605,339 were of French origin, but the above figures do not include Ungava, annexed in 1912, with an area of 351,873 square miles. In 1917 the population of the whole province was estimated at 2,380,042. Chief cities with their populations in 1921: Montreal, 607,063 (including Maisonneuve, etc.) as compared with 489,880 in 1911; Quebec, 103,000 (1917); Hull, 23,867; Three Rivers, 22,317; Sherbrooke, 22,097. It is under a lieutenant-governor who acts through a responsible ministry; a legislative council of 24 members, appointed for life; and a legislative assembly of 81 members, elected for five years. At the beginning of 1921 the legislature was divided among political groups as follows: Liberals, 72; Conservatives, 7; Labor, 2. Lieutenant-Governor at the beginning of 1921, Sir Charles Fitzpatrick; Prime Minister and Attorney-General, L. A. Taschereau. See **CANADA**.

QUEENSLAND. A state of the Commonwealth of Australia, situated to the north of New South Wales, and next to the largest of the Australian states. Area, estimated at 670,500 square miles; population (1911), 605,813; estimated, June 30, 1920, 737,085, exclusive of aborigines, whose number has been estimated at 20,000. The immigration in 1919 was 79,005; and the emigration, 58,362. The movement of population in 1919 was as follows: Births, 18,699; deaths, 8860; marriages, 5431. Capital, Brisbane, with a population estimated in 1919 at 189,576. Executive power is in a governor who acts through

a responsible ministry; and legislative power, in a legislative council of 61 members, nominated by the Crown for life, and a legislative assembly of 72 members, elected for three years by male and female adult suffrage. Governor at the beginning of 1921, Lieutenant-Colonel Sir Mathew Nathan; Prime Minister, E. G. Theodore.

QUICKSILVER. Preliminary figures showing the production of quicksilver in the United States in 1921, compiled by the United States Geological Survey, gave a total of 6339 flasks, as compared with 13,392 flasks in 1920. Of this output 3094 flasks were credited to California, 3144 to Texas, 100 to Nevada, and 1 to Idaho. So far as could be learned, Oregon produced no quicksilver in 1921. Never before had the quicksilver mining industry in the United States sunk to so low an ebb. The first recorded annual production was 7723 flasks, in 1850, and from that year to 1920, inclusive, the annual output was 10,000 flasks or more—in fact in only five years was it less than 20,000 flasks. In 1859 it was 13,000 flasks; in 1860, 10,000; in 1908, 19,750; in 1914, 16,548; and in 1920, 13,392. The maximum output, that of 1877, was 79,395 flasks. The output in 1921 was thus the smallest on record. The average price in 1921, although of course much lower than that for the years during and immediately after the war, nevertheless compared favorably with pre-war prices. The average price during the 10 years from 1904 to 1913, inclusive, was \$42.32, or \$5.10 per flask lower than the average in 1921. The cost of production, however, had not declined so rapidly as the price, and no large bodies of ore are now known that are comparable in tenor to those that were exploited when quicksilver mining in the United States could be considered a flourishing industry.

QUINIDINE. See **HEART DISEASE**.

R

RACING. Morrish, a two-year-old, owned by Benjamin Block, proved the sensation of the year in the American racing world. This colt was the greatest money-winner of 1921, the purses he captured being valued at more than \$115,000, and he also had the satisfaction of triumphing in all the important events in which he was entered. Among the three-year-olds Grey Lag, owned by Harry F. Sinclair, stood out most prominently with winnings of more than \$60,000. Other leading horses of the year were Charles A. Stoneham's Yellow Hand and Willis S. Kilmer's Exterminator. B. Marinelli, E. Sande, and L. Fator were the most successful jockeys.

The winners of the more important American turf fixtures in the United States during 1921 were:

Brooklyn Handicap, Grey Lag; Saratoga Handicap, Yellow Hand; Suburban Handicap, Audacious; Saratoga Cup, Exterminator; Futurity, Bunting; Latonia Derby, Brother Batch; Kentucky Derby, Behave Yourself; Brooklyn Derby (Dwyer Stakes), Grey Lag; Metropolitan Handicap, Mad Hatter; Preakness Stakes, Broomspun.

The English Derby was won by Humorist, owned by J. B. Joel, and the Grand Prix de Paris by Kizil Kourgan, owned by M. E. de St. Alary.

The principal achievement of the year in trotting fell to the lot of Peter Manning, a gelding owned by I. W. Gleason. This remarkable horse covered a mile against time at Lexington, Ky., on October 6 in 1:57 $\frac{3}{4}$, setting a new world's record. The Grand Circuit season comprised 319 races, the prize money amounting to nearly \$600,000. The largest individual winner was Jeannette Rankin with Grayworthy a close second, \$28,000 and \$25,000, respectively. The leading driver was the veteran T. W. Murphy. Single G. outclassed all rivals of the year in pacing.

RACQUETS and COURT TENNIS. Clarence C. Pell for the second year in succession won the national amateur racquet championship of the United States, and, teamed with S. G. Mortimer, also took the doubles title. In addition Pell in a match played at Montreal defeated H. Dickson, thereby gaining the Canadian championship.

Jay Gould was again the outstanding figure in court tennis, capturing the open championship through his victory over Jack Soutar and the national honors by defeating C. S. Cutting. In squash Gould was not so successful, losing the title match to Fillmore Van S. Hyde. The Canadian squash title went to C. C. Peabody.

RADCLIFFE COLLEGE. A non-sectarian institution for the higher learning for the education of women, at Cambridge, Mass.; founded in 1879. The enrollment for the fall of 1921 was 628. The faculty numbered 133 Harvard professors and instructors. The library contained 47,000 volumes. President, LeBaron Russell Briggs, LL.D., Litt.D.

RADER, F. E. See **NECROLOGY.**

RADIO FOG SIGNALS. See **LIGHTHOUSES.**

RADIO-TELEGRAPHY AND TELEPHONY.

Radio-telegraphy made steady progress as an international medium of communication. The increased power and range of stations in the United States and other countries enabled more prompt and dependable communication to be obtained, and as a result, the rapid exchange of news was facilitated and cable messages were not so subject to delay as formerly. The new radio station at Rocky Point, Long Island, New York, mentioned in the 1920 YEAR BOOK (see **WIRELESS TELEGRAPHY AND TELEPHONY**), was partially completed and in operation to the extent of about one-sixth of its capacity. This station, for transmission only, was designed to be the most powerful in the world, and when tested, its signals were intelligible in almost every quarter of the globe, being distinctly received in South America, Japan, and Australia.

The aerial system of this plant is arranged like a large wheel, with 12 spokes radiating in a horizontal plane, at a height of 410 ft., for a distance of 1 $\frac{1}{2}$ -mile from the power station as a centre. Each of the 12 aërials is intended for communicating with a different region. For example, there is one for France, one for England, one for Scandinavian countries, etc. Each aerial consists of 16 silicon-bronze, $\frac{3}{8}$ -inch cables supported from cross arms on steel towers. The generating plant includes a 200-kw., Alexanderson, high speed, high frequency, alternating current generator, for supplying transmitting energy.

For marine use, wireless telegraphy continued to demonstrate that it was indispensable to safe navigation. It was employed on an increasing scale for direction and position finding. Many wireless stations along the Atlantic Coast were equipped with direction-finding coils as adjuncts to standard receiving apparatus, and when called by a ship at sea, were able to furnish exact information to the master of the vessel as to his position.

The type of vacuum tube variously called audion, amplifier, heterodyne receiver, and thermionic valve, etc., that had become so vital a part of wireless telegraph apparatus was brought into use for radio-telephony as well, and with striking success. In its latest form, this device did more to advance the art of radio communication than any other one piece of apparatus. It was found that any ordinary receiving circuit appropriately tuned to the radiations emitted from a powerful station, could, by including an amplifier, receive speech, music or any other sounds originating at that station. During the year 1921, several occasions arose that offered excellent opportunities to test the capabilities of the device for disseminating news from a central point. On Armistice Day, Nov. 11, 1921, President Harding's address at the burial of the Unknown Soldier, at Arlington Cemetery, Washington, D. C., was delivered before a specially arranged receiver connected to a high power radio transmitting circuit. In many large cities,

receivers provided with amplifiers were set up, with the result that every word spoken by the President was distinctly heard by large audiences.

This notable demonstration furnished the suggestion, instantly acted on, to "broadcast" news items, market reports, music, sermons, etc., from large radio stations to any individual who would provide himself with a comparatively simple outfit, closely resembling the common radio receiving set; but including a vacuum tube amplifier. The result was immediate, and marked the greatest popular demand for scientific apparatus ever known. Manufacturers of radio outfits were swamped with orders to supply this suddenly created demand, and at the end of the year it was estimated that there were several hundred thousand amateurs, including schools, churches, clubs, etc., that were daily and nightly receiving aerial news, weather reports, concerts, etc., sent out from a few powerful "broadcasting" radio stations. Newark, New Jersey, and Pittsburg, Pa., were the chief centres of such service in the East.

The significance of this development is far reaching. It is impossible to forecast to what extent the increasing interest in radio-telephony may change the habits and domestic life of the people. With so many youthful amateurs interested in the subject, each eager for information and fascinated by the experimental opportunities presented, it seems likely that radio-telephony is about to take its place in the life of the people with the automobile and moving pictures.

RADIUM. The amount of radium produced in the United States during 1920 was $32\frac{1}{4}$ gm., but in 1921 production was more active and it was estimated would exceed 35 gm. By Jan. 1, 1921, 115 gm. of radium had been produced in the United States and the regular production was greater than all the rest of the world. This was due both to efforts made by the Bureau of Mines in the way of discovery and the initiative of private enterprises which have gone forward with confidence not withstanding temporary set backs and depressed markets. In fact there was enough radium produced in the United States to meet commercial requirements. Prices of radium remained steady during 1921, and was practically the same as in 1920. For small lots of radium, the price varied from \$115 to \$120 per mg. of radium element with reductions for larger lots, depending upon conditions of purchase and upon the amount of radium involved.

A substitute for radium in certain uses, particularly for luminous paint, was being employed in the form of mesothorium, which both the Welsbach Company and the Lindsay Light Company were producing as a byproduct in the manufacture of thorium nitrate for gas mantles. The mesothorium contained from 12 to 25 per cent radium, and, in practice, the manufacturers of luminous paint usually add a little more radium so as to bring the percentage of radium up to a slightly higher figure than is natural in the mesothorium. This mesothorium compound applicable to industrial use has the life of five or six years after it has "ripened" for about a year, so that its employment tends to conserve radium for medical use, research, and experimentation.

The United States is by far the largest producer of radium and has the largest known reserves of radium-bearing minerals. The quan-

tity produced, when compared with that of other minerals, even the most precious, such as gold, platinum, or diamonds, seems absurdly small, but in no other substance is so large a monetary value compressed into so small a bulk. The yearly output of gold and platinum may be measured by the ton, the output of diamonds by the thousand pounds, but the output of radium is measured by the gram (15.43 grains). Gold and platinum are sold by the ounce, and diamonds are sold by the carat ($4\frac{1}{6}$ grains), but radium is sold by the milligram, one two-hundred-and-fifth of a carat. The value of the other minerals named is due largely to their use as ornaments, but radium commands its price because it is most seriously useful. In 1920 the United States produced ore carrying 42.1 grams (about 1.5 ounces) of radium, and during the year the nine radium plants of the country isolated and placed in tubes 32,539 grams (1.15 ounces), worth about \$3,253,900.

Since 1911, when the first uranium minerals were mined in this country for radium, ore carrying 186.5 grams (6.6 ounces) has been mined and shipped to reduction plants, and about 125 grams (4.4 ounces) of radium has been extracted in this country. Before the World War some ore was shipped to Europe, and the radium was extracted in France, Germany, and Scotland. The quantity extracted abroad was probably not more than 10 grams, though this is a mere guess. The remainder of the 186.5 grams of radium was probably lost, for at first the quantity extracted in some plants was less than 50 per cent of the radium in the ore. Probably 25 per cent of the total output has been dissipated on watch faces, signs, etc., mostly during the war, some has been exported, and only 80 or 90 grams (3 ounces) has been placed in the hands of physicians and in hospitals. Europe probably almost exhausted its radium supplies by wasting uses similar to ours during the World War.

Three States produce radium-bearing minerals in commercially valuable quantities—Colorado, Utah, and Wyoming—but Colorado produces nearly nine-tenths of the whole. Nearly all of the Colorado ore carries carnotite as the uranium mineral, and it is mined in the southwestern part of the State, near the Utah line, between Gateway on the north and Cedar on the south. A little pitchblende was mined near Central City. In Utah uvanite, another radium mineral, was mined at Temple Rock, 45 miles southwest of Greenriver, and carnotite was mined near Thompsons and Moab. In Wyoming uranophane, still another radium mineral, was mined at Lusk. Efforts were made to mine torbernite, another radium mineral, near Silver City, N. Mex., but the deposit was too lean to afford a profit. No large deposits of radium minerals are known outside of the United States. Some pitchblende has been mined in Austria, England, and Germany; autunite and torbernite have been mined in Portugal, Madagascar, Tonkin, and South Australia; some tyuyamunite has been mined in Russian Turkestan; and a little carnotite and some obscure radium minerals have been mined in South Australia. From the ore mined at all these deposits probably less than 40 grams (1.4 ounces) of radium has been isolated. The whole stock of radium in the world to-day is probably less than 100 grams (3.5 ounces). 100 grams would be worth \$10,000,000. An

equivalent amount of gold coin would weigh about 17 tons. See CHEMISTRY, INDUSTRIAL.

RAILWAY ACCIDENTS. While the number of persons injured on or in connection with American railways continue to be appallingly large yet there were evidences of improvement notwithstanding a more or less evident deterioration in equipment during and following the war and failure to obtain and maintain in all respects adequate discipline. The Interstate Commerce Commission during the year published its annual statistics for the year 1920, and these furnished an excellent basis of comparison with an early period. While there were slight changes in the method of compiling and arranging the statistics, nevertheless those of 1920 can be compared with those of 1911 with considerable profit and show an improved record.

	Year ended June 30, 1911	Year ended Dec. 31, 1920
Total persons killed in train and train service accidents.....	10,396	6,958
Nontrespassers.....		
Passengers.....	299	229
Employees on duty.....	2,871	2,107
Employees not on duty.....	292	91
Persons carried under contract.....	57	35
Other nontrespassers.....	1,154	1,867
Nontrain accidents.....		
Industrial accidents—employees and others.....	439	463
Trespassers.....	5,284	2,166
	1911	1920
Number of employees.....	1,599,854	2,031,927
Passengers carried one mile.....	32,371,444.783	46,724,880,000
Ton-miles.....	249,843,166.302	409,970,656,000
Passenger train miles.....	548,279.061	571,653,863
Freight train miles.....	608,678.284	633,972,312
Total train miles.....	1,156,957.345	1,205,626,175

In fact an analysis of the Interstate Commerce Commission figures, prepared by the Committee on Accident Statistics of the American Railway Association, showed that fewer people were killed in 1920 than in any year since 1898. In that year the number of passengers killed was 315, while in 1921 the official records show only 229. Although the total number of employees in the railroad service in 1920 was several times greater than in 1891, the fatal injuries to employees in 1919 and 1920 were less each year than they were twenty-nine years previously.

Aside from the inexcusable loss of life itself there was also the purely economic side of the question, as during the year 1920 the aggregate of the payments made by the railroads of the United States on account of personal injury to employees, passengers, and others was estimated at over \$53,000,000; and a large proportion of the accidents resulted also in damage to property as will appear later. Every injury to an employee had the effect of disturbing the organization when his work was temporarily assigned to another with less experience. Every case of personal injury to a passenger had a harmful effect on morale and upon public good will.

While these factors could not be measured in dollars and cents, but including all factors the railroad expenditures on account of accidents which caused personal injury in 1920 were certainly far in excess of \$100,000,000. On the score of damage to property, in the year ended Dec. 31, 1920, the Interstate Commerce Commission reported a total of 36,313 train accidents resulting in damage to railway property amounting to \$34,129,860. Of those

the train accidents causing damage to railway property were placed at 33,384, of which 8858 were collisions, 21,314 derailments, 22 locomotive boiler accidents, 692 other locomotive accidents, and 2561 miscellaneous train accidents. In 17,955 cases the damage amounted to more than \$350 in each case.

DISTRIBUTION OF CASUALTIES AT HIGHWAY GRADE CROSSINGS

	1917	1918	1919	1920
Casualties:				
Killed.....	1,969	1,852	1,784	1,791
Injured.....	4,764	4,683	4,616	5,077
Total.....	6,733	6,535	6,400	6,868
Pedestrians.....	982	778	698	687
Occupants of:				
Automobiles.....	4,083	4,240	4,790	5,250
Other vehicles.....	1,668	1,517	912	931

The highway grade crossing continued to be a fertile field for accidents and there was no diminution in their number or seriousness. In the case of motor vehicles drivers unquestionably were to blame in many cases, and the railways were taking active measures to bring home personal responsibility. The accompanying table gives the nature and distribution of these accidents over a period of years.

BLOCK SIGNAL MILEAGE. On Jan. 1, 1921, the block signal mileage of the railroads of the United States, for the whole country, aggregated 101,833.6 miles of road. The totals are:

	Automatic	Miles of road Manual	Total
1921.....	38,543.9	63,339.7	101,883.6
1920.....	37,968.8	63,915.4	101,884.2
	Inc. 575.1	Dec. 575.7	Dec. 0.6

This statement showed that in a number of cases automatic signals had been installed in the place of manual signals and also indicated the more notable changes in 1920:

NOTABLE CHANGES OF BLOCK SIGNALS IN 1920 (MILES OF ROAD)

Name of road	Increase Automatic	Nonauto- matic	Decrease nonauto- matic
Atchison, Topeka, & Santa Fe.....	29.1		
Baltimore & Ohio.....	25.0		20.1
Boston & Maine.....		32.4	
Chicago, Burlington, & Quincy.....	215.1		216.8
Detroit United.....	1.5	326.7	
Grand Trunk.....	10.1	131.3	
Missouri, Kansas, & Texas; Missouri, Kansas, & Texas of Texas; and Wichita Falls & Northwestern.....	93.3		2.7
New York, New Haven, & Hartford.....	1.2	19.2	
Northern Pacific.....	126.8		4.5
Pennsylvania.....	42.5		45.7
Pere Marquette.....	32.2		
Richmond, Fredericksburg, & Potomac.....	32.2		
Southern Pacific.....			129.6
Texas & Pacific.....		139.0	

The net total length of road equipped with automatic block signals appeared to be 38,108 miles. This figure is the one of most immediate interest, in any study of progress, for the reason that the nonautomatic block system is operated under such varying rules and often applies to such

a small part of the trains that no measure of the value of the system is practicable without a study of the train movements and of the volume of traffic. Automatic block signals were reported electrically lighted on 8153 miles of road, 442 miles more than shown in the preceding report. The telephone is used for train orders on 122,022 miles of road, 2868 miles more than on Jan. 1, 1920.

SERIOUS ACCIDENTS. A disastrous collision occurred on the evening of February 27, when westbound New York Central passenger train No. 151 the "Interstate Express" plowed through the third coach of eastbound Michigan Central train No. 20, the "Canadian," at an interlocked crossing of these lines at Porter, Ind., some 40 miles southeast of Chicago. Thirty-seven persons were killed and 20 seriously injured. It was demonstrated that the Michigan Central train had run past a home interlocked signal in the stop position protecting the crossing at a high rate of speed, and was derailed on the split point derail which was open. The train ran on the ties for a distance of approximately 800 ft., and then while the third coach of the train remained upright and standing directly on the crossing of the New York Central, it was struck by the New York Central train, traveling at high speed, and absolutely demolished, and occasioning a frightful loss of life.

The Royal Palm Limited, No. 2, on the Cincinnati, New Orleans, & Texas, northbound, was derailed April 6, at New River, Tenn. Three coaches were nearly overturned and 5 passengers were killed. Other casualties included over 70 passengers, one employee, and three other persons injured. The locomotive was thrown off the track at a point where the outside rail of a curve of six degrees was not properly supported, the track being under repair at the time. Three steel passenger cars were badly damaged by coming in contact with rocks projecting from the bluffs on the outside of the curve.

A local passenger train on the Norfolk and Western was involved in the collision at Welch, W. Va., on May 2. While running backwards at about 15 miles an hour on a curve this train ran over a switch left misplaced by track repairers, and collided with a string of coal cars standing on a side track. Two coaches were crushed in the collision, 6 passengers were killed and 41 passengers and 1 employee were injured. The lookout was inefficient.

A rear end collision of westbound interurban cars on the Detroit United Railway at Warsaw, Mich., on June 18, resulted in the deaths of 4 persons and injuries to 24. Here a steel car approached a wooden car on a side track at uncontrollable speed on a descending grade. The motorman of the second car was blamed for negligence in not controlling speed.

A serious collision happily without loss of life occurred on the Pennsylvania Railroad near Manhattan Transfer, N. J., on the morning of October 28, about 12:30 o'clock, between westbound passenger trains. In this, 38 passengers, 4 Pullman employees and 4 railroad employees were injured. The accident was due to dense fog and express train No. 103, consisting of electric Motor No. 11 and 12 sleeping cars, moving at from 10 to 25 miles an hour, struck the rear of a preceding train, No. 701, which had been brought to a stop about one mile east of Man-

hattan Transfer station. This track was well protected by block signals, but train 103 ran past two automatic block signals set against it, one at caution and the other at stop; a second stop signal 271 ft. in the rear of the standing train; and also past a flagman and fusee and torpedo signals, not very far back from the standing train.

The flagman was censured for not affording his train proper protection, while the engineman passed the two automatic signals without observing their indications; and did not make a sufficient reduction of speed. The engineman's helper on train 103 also failed to observe the signals and to warn the engineman that signal locations had been passed without the indications being seen.

All of the cars involved in the collision were of steel; and this unquestionably prevented a large loss of life.

The Oregon-Washington limited, No. 17, westbound, collided head-on with eastbound train No. 12, which, because of washouts east of Portland, had been routed over the Spokane, Portland, & Seattle to the crossing of the Columbia river at Fallbridge, Wash. This accident happened on December 1, near Celilo, Ore., 96 miles east of Portland, and resulted in 6 persons being killed and 22 injured. Train No. 12 had just crossed the river to Celilo, and started east over its own line, on the Oregon side of the river, when the collision occurred. Three of the killed were passengers and one was a marine acting as mail guard.

One of the most serious accidents of the year was a butting collision of passenger trains on the single track Newton branch of the Philadelphia & Reading, near Bryn Athyn, near Woodmont, 16 miles north of Philadelphia, on the morning of December 5, resulting in the death of 27 persons and the injury of 65 passengers and 5 employees. The explanation of the accident as brought out in the investigation was that the train crew of the northbound train disregarded a meet order while a southbound train was allowed to depart from Churchville.

The two trains met head-on on a curve in a narrow rock cut. Here the wreckage piled up instead of scattering over the right-of-way and to this the heavy loss of life may be laid. Many victims were imprisoned beneath the mass of wreckage and so perished, who might have been saved if the debris had been scattered. As the cars of both trains were of wood they soon caught fire, and thus interfered with the active work of rescue by volunteer parties hastily assembled. The flames soon consumed both trains and with them perished the unfortunates imprisoned by the wreckage.

The injured were taken care of by a relief train from Philadelphia and removed to neighboring hospitals as rapidly as possible.

There was shown in the investigation a general laxity in the observance of block signal rules and lack of discipline in this connection. The fire was doubtless aggravated by the use of illuminating gas and the absence of steel cars was probably responsible for loss of life.

BRITISH RAILWAY ACCIDENTS. The usually good record for safety in operation of the British railways was severely impaired early in the year by a butting collision of passenger trains which took place near Abermule, Wales, on the Cambrian Railway, January 26, resulting in 17 persons being killed. The disaster was said to be unique

in the annals of British railways; and an unusual circumstance for British operation was the fact that two of the persons at fault were boys under 18 years of age, not well trained, but engaged in responsible station work.

Abermule, the scene of the collision, is about ten miles southwest of Welshpool and about four miles north of Newton, being the junction of a branch to Kerry. There was in use on the line here the electric train-tablet system, and the collision, one mile south of Abermule on official investigation was found to be due to negligence in allowing the southbound train to enter the block section at Abermule with the tablet just surrendered by that train for the section north of Abermule. The two trains met at a speed of about 25 or 30 miles an hour, and the engineman and fireman at fault were killed. The annual accident statistics of the Ministry of Transport showed that 991 persons were killed in railway accidents on British Railways in the year 1920, as compared with 932 in the year 1919. There was a total of 25,933 injured in the year 1920, as against 23,983 in 1919, an increase of 1950. Figures also were available showing that in Great Britain during the 20 years, 1901 to 1920, inclusive, 99 cases of bursting of boilers or tubes of locomotives had occurred, resulting in 7 railway employees being killed and 111 injured. In all but 6 cases employees were injured, so that it was apparent that the consequences were serious on each occasion.

FRENCH RAILWAY ACCIDENT. One of the most serious European railway accidents of the year was a rear collision of outgoing suburban passenger trains which occurred in a tunnel in Paris, France, on the evening of October 5. Thirty-three passengers were killed and a large number injured, many being injured or killed by flames. The trains had just left the St. Lazare station, about four minutes apart; but the progress of the leading train, whose destination was Versailles, was interrupted by the rupture of an air brake pipe.

The following train was for Marly-le-Roi and the immediate result of the collision was the breaking into flames of the cars, which was intensified by the explosion of a gas tank.

RAILWAYS. Whereas 1920 was a year in which the efforts of railroad officers were directed primarily to restoring the physical condition of the railroads, the year 1921 was a continuous effort to get the organization, and morale of labor, back on a normal basis. This fight was successful.

During the entire twelve months of 1921, railroad traffic was far below that of 1920. The railroads were operating with the increased freight and passenger rates which had been granted them in 1920, but likewise under the increased wages for labor, and at the beginning of 1921 the tendency for all roads was to show larger and larger net losses. A very considerable portion of a railroad's expenses are not directly variable with an increase or decrease in traffic, therefore, it is particularly difficult to offset a lower revenue through a reduction in expenses. Nevertheless, a majority of the railroads succeeded in doing this, largely because of the greatly inflated labor situation at the beginning of the year. In other words, had conditions been normal to start with, no such improvement as was shown would have been possible. Railroad labor

was actually earning only a small fraction of the wages that were being paid it at the beginning of the year.

On Jan. 10, 1921, E. T. Whitter, Chairman of the Conference Committee of Managers of the Association of Railway Executives, and T. M. Jewell, President of the Railway Employees Department of the American Federation of Labor, began the fight for the reduction of wages and the abrogation of the so-called National Agreements. The National Agreements are regulations by which the nature of various classes of railway employees' work is prescribed in minute detail and a standard set of conditions of work and pay are prescribed. On January 31, General W. W. Atterbury, Vice President of the Pennsylvania Railroad and Chairman of the Labor Committee of the Association of Railway Executives, appeared before the Railroad Labor Board and asked the immediate abrogation of all National Agreements. It was not, however, until March 18 that the railway executives were called as witnesses before the Board. On March 24 Mr. Jewell, representing the various Railway Labor organizations, began his reply to the executives.

The Board finally began, on April 14, to issue a series of decisions. In its first decision, the railroads' interpretation of collective bargaining was upheld. The Board, however, outlined sixteen principles with which new agreements made between employers and employees must be consistent. The negotiations between individual roads and their employees proved, almost without exception, to be abortive, and on June 28 the Labor Board issued an order continuing all National Agreements, and these agreements were in effect at the end of 1921.

One of the principles which the Labor Board laid down in connection with its order of April 14 was that in the negotiations between an individual railroad company and its employees, the dealings between the management and the men must be carried on by a duly elected representative of the men, and that in disputes before the Labor Board the men should be represented by duly elected representatives. The effect of this in practice was to put the entire control of the situation in the hands of the professional labor leaders of existing labor unions. In other words, it accomplished for railroad labor what Samuel Gompers, President of the American Federation of Labor, had attempted to accomplish for Labor generally in the two President's Conferences called by Woodrow Wilson, both of which split over this far-reaching question of a gift of national power to labor leaders.

Railroad men generally either failed to recognize this fact or accepted it as inevitable. The management of the Pennsylvania Railroad, however, was an exception. It called its employees together, told them they could vote for one of themselves as a representative to deal with the management and to appear before the Labor Board, but that the management would not accept as a representative any man not an employee of the Pennsylvania. This, if successful, would render the National labor leaders, who live on the salaries collected from the dues of labor union members, comparatively impotent. A large majority of the Pennsylvania employees accepted the conditions laid down by the management, selected representatives from among their

own number and voted to accept a reduction of wages. The shop crafts, however, refused to vote at all, claiming that this method was not in accordance with the ruling of the Labor Board. They appealed to the Labor Board and the Board upheld their contentions and ruled that the Pennsylvania's method was not in accordance with their findings.

There is no penalty provided in the law creating the Labor Board for the Board to impose on either employer or employee who disobeys its findings. Both sides to the controversy felt it important to have the legal status of the Labor Board passed upon by the Supreme Court, and finally the Pennsylvania applied for an injunction against the Board in an attempt to get the whole matter of the Board's jurisdiction before the Courts. The decision on this application was still pending at the end of 1921.

Besides the attempt to have the National Agreements abrogated, the railroads applied to the Board for a reduction of wages, and on June 1 the Board handed down a decision, effective July 1, reducing wages on an average of 12 per cent, which represented almost exactly half of the reduction which the railroad executives had asked for. After some negotiations, National labor leaders called upon the railway managements to wipe out the wage cut of July 1, to withdraw applications to the Labor Board for further wage cuts and for the abolition of the payment of punitive overtime. In the meantime a referendum vote, giving the labor leaders authority to call a general strike, was taken and the asked for authority was given.

The labor leaders called a strike for October 30 for the Train Service organizations. The other railway labor organizations held back and the Train Service organizations were left to carry on the fight. The Labor Board made various attempts to bring about an agreement without a strike, and finally W. B. Hooper, Vice Chairman of the Board, went to the labor leaders, in his personal capacity, and explained to them that the Board had issued a memorandum by which it stated, among other things, that further requests for reductions in wages would not be considered by the Board until all pending disputes regarding the rules and working conditions were disposed of.

In the meantime it became increasingly obvious to railroad managers that the strike, if one were called, would be a failure and a number of railroad executives quite openly expressed the hope that the "bluff of the labor leaders" would be carried through and a strike called. On October 27, three days before the strike was to take place, the Brotherhood leaders, after a conference with Mr. Hooper, made the announcement that the Board's memorandum was a "satisfactory settlement" of their grievances. There was therefore no strike.

The results that were being obtained by managers through the increase in labor efficiency, due to the growing conviction on the part of railroad employees individually that railroad labor had obtained more than railroad revenue was able to pay and that a reduction in wages and a readjustment of working conditions was inevitable, was clearly reflected month by month in net railroad operating revenues. By October most of the larger railroads, with certain notable exceptions, had returned to a normal operating ratio, by

which is meant that the ratio of operating expenses to operating revenues had fallen below 80 per cent.

In an article for the New York *Tribune* the author estimated that out of twenty-nine of the larger railroad companies, only four would fail to earn interest charges in addition to operating expenses in 1921, and figures available up to the end of 1921 bore out this estimate.

RECEIVERSHIPS. During this trying year of 1921 there was only one important receivership, that of the Atlanta, Birmingham & Atlantic. This was because the Government, in making its settlement with the railroads, had agreed to carry the roads over a certain period of time. The indebtedness of the Railroad Administration to the railroads is estimated at \$750,670,588 and the amounts due the railroad administration by the railroads on account of additions and betterments was placed at \$507,628,508.

Of the 241,194 miles of railroad taken over by the Government, the companies owning 107,063 miles have effected a final settlement with the Government. These settlements were made before arriving at the figures given above.

In all the Government spent \$1,144,000,000 in additions and betterments. Part of this has been actually paid and part has been taken care of by the issue of bonds and promissory notes and by the issue of 15-year equipment trust certificates.

Another factor which has prevented more railroad receiverships has been the ability, in the last few months of 1921, of the roads to borrow from the Revolving Fund. In all, the roads have borrowed \$263,000,000 from this fund and have paid back, up to the end of the year, \$21,000,000.

According to the compilation of the *Railway Age* there were thirteen small companies in addition to the Atlanta, Birmingham & Atlantic which went into receivers' hands, with a total mileage, including the A. B. & A., of 1744 miles, a total funded debt of \$21,662,413 and total capital stock of \$42,209,700.

FORECLOSURE SALES. There were two important reorganizations—the Denver & Rio Grande and the Chicago & Eastern Illinois. In all there was 4173 miles of railroad sold under foreclosure. The Chicago and Eastern Illinois accounted for 1131 miles and the Denver & Rio Grande for 2485 miles. The sale of the Denver and Rio Grande actually took place in November, 1920, but was not confirmed until March 28, 1921. Bankers and Protective Committees are still working on the reorganization plan.

The road was sold because of its default to pay interest on the guaranteed bonds of the Western Pacific. It was sold subject to existing mortgages, but reorganization plan contemplated the exchange of the first and refunding 5 per cent mortgage bonds for part stock and part bonds of the new company, which is to operate both the Denver & Rio Grande and the Western Pacific under the name of the Denver & Rio Grande Western.

The Chicago & Eastern Illinois was turned over on Jan. 1, 1922, to the new company of the same name. The reorganization plan of this company reduced the capitalization, exclusive of unpaid interest, from \$94,204,448 to \$91,033,750. The readjustment consisted of an increase in stock and a decrease in funded debt from \$62,908,000 to \$38,469,000. Fixed charges of the new company

are \$2,327,051, as compared with \$3,759,996 of the old company.

NEW MILEAGE. There was a total of 1626 miles of railroad lines abandoned in 1921, while there were but 475 miles of new railroad built. In Canada there were 151 miles new railroad built. From an investigation made in 1921 for the *New York Tribune* the conclusion was reached by the writer that there is a very small mileage of new railroads needed in this country and that what new mileage will be built in the next few years, will largely be to develop newly discovered mineral resources.

RAILROAD SECURITY ISSUES. The Interstate Commerce Commission's power to regulate the issue of securities by railroad companies became effective June 28, 1920. During the eighteen months since, the Commission has passed on about \$2,000,000 principal amount of securities. The reports of this department are for the fiscal year ending October 31 and in the year ended Oct. 31, 1921, the Commission had authorized the issue of \$242,647,500 stocks, \$1,276,761,616 bonds, \$98,402,195 notes, and \$97,780,313 miscellaneous securities.

In most cases the Interstate Commerce Commission approved the applications for permission to issue new securities.

In the case of the refinancing of the Great Northern and Northern Pacific Joint Bonds, secured by the stock of the Chicago, Burlington & Quincy, which became due July 1, 1921, the Commission refused the original plan presented by the bankers. There were \$250,000,000 of these collateral bonds outstanding. This collateral, of course, was held by the Northern Pacific and Great Northern jointly. The Burlington had put its earnings above 8 per cent on its stock back into the property for a number of years and carried a large surplus on its balance sheet. The Commission was asked to approve of the issue of \$60,000,000 of stock as a stock dividend by the Burlington and \$80,000,000 of bonds, to be used also as a dividend. The Commission refused permission for the issue of the bonds and finally a plan was worked out under which the Burlington issued a \$60,000,000 stock dividend and the Northern Pacific and Great Northern jointly sold a \$230,000,000 issue of 6½ per cent bonds which were secured by the deposit of both old and new stock of the Burlington and which were guaranteed, principal and interest, by the Northern Pacific and the Great Northern jointly.

These 6½ per cent bonds were convertible at the option of the holder into Great Northern 7 per cent bonds or Northern Pacific 6 per cent bonds at par. When the bonds were converted into either Great Northern or Northern Pacific, stock of the Burlington was transferred from the trustee of the joint bonds to the trustee of the Great Northern, 7 per cent bonds or the Northern Pacific 6 per cent bonds as the case might be. It was provided that when half of the joint bonds have been converted into one issue, the remaining bonds could be converted only into the other issue. The result has been that up to the end of 1921 the full amount had been converted into Great Northern 7s and the corresponding stock of the Burlington had been transferred to the trustee of the Great Northern bonds, while, on the other hand, only about \$20,000,000 of joint bonds were converted into Northern Pacific 6s. This has given the Great Northern control of the Burlington.

The sale of \$230,000,000 of Northern Pacific-Great Northern bonds marked a distinct change for the better in railroad credit generally. It marked a change for the better in the whole bond market, but it is the effect of the change on railroads that is important for the purposes of this article. Earlier in the year there had been a reaction after the sale in 1920 of New York Central, Pennsylvania, and other railroad bonds, and the poor earnings statements of the roads for the early months of 1921 intensified this reaction. In the latter part of the year deficits were largely ignored by investors and railroad companies which had been considered, over a long period of years, sound were able to sell well-secured mortgage bonds at a better price than other industries. For instance, the Buffalo, Rochester & Pittsburg sold, approximately, \$4,000,000 of its consolidated mortgage 4½ per cent bonds to Dillon, Read & Company, which bonds were offered to the public at 91¼ which is a slightly less than 5 per cent income yield basis. Earlier in the year even the strong roads had to pay more than 7 per cent for their money.

LOCOMOTIVES AND CARS. According to the statistics compiled by the *Railway Age*, the total number of locomotives ordered for the larger American railways in 1921 was 190; and the total for domestic use, including large and small railroads and industrial companies was 239. In addition there were 35 locomotives ordered from United States builders and 546 ordered from United States builders for export to foreign countries other than Canada. This makes a grand total of 820. This compares with 2905 ordered from American builders in 1920, 1170 in 1919 and 4888 in 1918. It is the smallest number ordered from American locomotive builders since 1897.

The number of locomotives built in a given year only in part reflects the orders of that year and in part reflects the orders of previous years. The total number of locomotives built in the United States in 1921 was 1708, and in addition 115 locomotives were built in Canada, making a total of 1823, which compares with a total of 2022 in 1920 and 2162 in 1919.

Again using the figures compiled by the *Railway Age* the full number of freight cars ordered for the larger American railroads was 21,003 and the total for all roads and for private car lines and industrials was 23,346. In addition there were 30 cars ordered for Canada and 4982 cars for export to other foreign countries, making a grand total of 28,358. This grand total compares with 105,669 in 1920, 29,893 in 1919, and 177,317 in 1918.

The number of freight cars built in the United States in 1921 was 46,704, as compared with 75,435 in 1920, 156,764 in 1919, and 108,044 in 1918. In Canada in 1921 they built 9149 freight cars, comparing with 6421 in 1919, and 16,664 in 1918. The 1920 figures were not given out.

The number of passenger cars ordered in 1921 for all United States railroads was 246. There were 91 ordered for service in Canada and 155 for export to other countries, making a grand total of 492, comparing with a grand total in 1920 of 2094 and of 782 in 1919, and 157 in 1918.

There were 1314 passenger cars built in 1921 in the United States and 361 in Canada, a total of 1675.

BLOCK SIGNALING. During 1921, 824 miles of railroad in the United States and Canada were

equipped with block signals. In part this work represents new construction, but in part also reconstruction and the substitution of automatic block signals for manual block signals.

There were fifty-three interlocking plants installed in the United States and six in Canada, as compared with forty-three in 1920 in the United States and two in Canada.

An installation of automatic train control is under construction on the Chesapeake & Ohio for a distance of forty miles. This section is single track and colored light signals are to be used in connection with the system.

CHANGES IN PERSONNEL. The two most important railroad regulatory bodies are, of course, the Interstate Commerce Commission and the Railroad Labor Board. On April 25, 1921, the Senate confirmed the appointment of W. B. Hooper, S. Higgins, and W. L. McMeninen as members of the Railroad Labor Board, representing the public, the managers and labor respectively. They succeeded H. W. Hunt, W. L. Park, and J. J. Forrester. On March 25 John J. Esch, who had been Chairman of the House Committee which had sat concurrently with the Cummings Committee of the Senate during the hearings on the railroad bills, which eventually were consolidated into the Transportation Act, was appointed Recess member of the Interstate Commerce Commission. On May 3 the Senate confirmed the appointments of E. I. Lewis and J. V. Campbell to the Interstate Commerce Commission, and on June 18 Edgar E. Clark was reelected Chairman of the Interstate Commerce Commission. On July 22 Chairman Clark resigned and was succeeded by Frederick I. Cox as a member of the Interstate Commerce Commission, and on October 3 Charles C. McChord, who had been a member of the Interstate Commerce Commission for a number of years, was elected Chairman, succeeding Mr. Clark in that office.

Charles A. Prouty, Director of Valuations and former member of the Interstate Commerce Commission, died on July 8, 1921, at Newport, Vt., and Charles S. Staples was, on July 16, appointed Acting Director of Valuation.

John Barton Payne, who had been Secretary of the Interior and Director General of Railroads, retired on March 4 and James C. Davis was appointed Director General of Railroads on March 26. The Railroad Administration is being continued until claims and counterclaims between the railroads and the Government have all been finally settled. It is this work which Mr. Davis will be in charge of.

The more important changes among the personnel of railroad executives were the death of Milton H. Smith, President of the Louisville & Nashville, and the appointment of Frederick L. Mapother as his successor. Mr. Smith had been recognized as one of the unusually able railroad executives. He was a man of the older traditions of railroading, opposed to government regulation, not in sympathy with the general attitude of the public toward railroads in the last ten years, but an unusually able administrator and a man generally respected both by his associates and employees and by the men who were opposed to his policy.

George R. Loyal, who had been Assistant to the President of the Southern Railway and had served under the Railway Administration, was

elected President of the Norfolk Southern. E. L. Brown, formerly president of the Denver & Rio Grande, Henry D. Ledyard, Chairman of the Board of Directors, and former President of the Michigan Central, J. F. Wallace, Chairman of the Chicago Railway Terminal Commission, and Epps Randolph, President of the Arizona Eastern and of the Southern Pacific of Mexico, died during the year.

NEW ENGLAND SITUATION. The New England railroad situation in 1921 became a matter of national concern and the New England railroads applied to the Interstate Commerce Commission for some form of relief. On March 15 a committee of New England governors began the statement of the New England railroads' case and when in April it was proposed to make the reductions in railroad freight rates, this committee appeared to protest against such reduction for New England. Operating costs on the railroads in New England have risen until all New England railroads in 1921 were facing severe financial difficulties. Terminal costs had risen more rapidly than any other class of costs on railroads and New England is much like a great, complicated railroad terminal.

By far the greater part of the freight business done by the New England railroads is an interchange of traffic with other lines, the raw materials being sent into New England and manufactured articles being sent out of New England. The New England roads asked that the Interstate Commerce Commission readjust the provision of through rates, as between New England roads and connecting United States roads, so as to give the New England roads a larger proportion of the total rates. The New England manufacturers claim, and it was generally conceded, that they cannot successfully compete with manufacturers in other parts of the country if either the freight rate on raw materials or the outgoing freight rate on manufactured articles was increased.

The trunk lines refused to concede the fairness of the New England roads' contentions, pointing out that the New England railroads entered into a joint rate with the Canadian roads, which was lower from points in the West than the rate via the trunk lines. The United States trunk lines suggested that if the New England roads wanted for revenues, they could go to the Canadian roads for a more generous division of through rates. On July 28, notwithstanding the fact that the Classification Law gives the Interstate Commerce Commission the power to fix the proportion of joint rates to be received by each railroad, the Commission refused to undertake to fix these New England rate divisions.

CONCLUSION. The Interstate Commerce Commission during the year gave out its tentative plan for the consolidation of the railroads. In the meanwhile the railroads themselves had been studying this question. No important consolidations have, however, taken place. It is probably fair to say that whereas in January of 1921 it was still extremely doubtful whether the roads could work out their own salvation under the Transportation Act, the railroads during 1921, with the exception of the New England roads, have demonstrated at least to the satisfaction of investors that they are able to work out their problem and remain solvent. It would appear, at the end of 1921, that they will be given a chance to do this through some kind of consolidation.

RAILWAYS, ELECTRIC. Financial depression made itself felt on street and interurban railways quite as much as in the case of industries generally. While there were few receiverships announced, there was no cessation of the discussion and agitation that marked former years in what may be termed "the war on the trolleys." While complaints of inadequate service and failure to make new extensions and developments were common in many cities, these complaints were loudest in the City of New York, where the municipal authorities, aided and abetted by a certain section of the press, were condemning all existing public transportation lines, in particular, the surface and elevated roads. It was quite evident that these criticisms and proposals to "scrap" all such lines and replace them with municipally-owned motor buses had a large element of political expediency in them. The unfortunate feature of the situation, however, was the inability of City and State authorities to agree upon any definite plan, either for improving the existing roads or for building new ones. At the end of the year, the Rapid Transit Commission was about to make public its report on the valuation of all surface, elevated and subway lines in the city. It was generally understood that this report would disclose a valuation considerably less than the amount for which these lines had been capitalized; a result of past financial mismanagement, at a time when a true realization of the city's rapid growth had not yet been obtained.

As regards steam railroad electrification, none was undertaken in the United States during the year. There were many plans under discussion; in most instances awaiting more favorable financial conditions before reaching the stage of letting contracts. At Chicago, the electrification of the terminal districts, that had often been under serious consideration, was again postponed. The Delaware, Lackawanna & Western Railroad asked for bids on construction and equipment for about twenty miles of its line in the mountainous region near Scranton, Pa., but no particulars of the motive power (whether alternating or direct current energy) were made public. The announcement and partial plan of the Super Power Scheme—(see **ELECTRIC POWERS, TRANSMISSION OF**), influenced many steam railroad executives to give serious consideration to the possibility of using electric power for their lines in the not distant future. In England, France, Switzerland, Italy and one or two South American countries, electrification of steam roads was proceeding slowly but steadily. The Italian State Railways, at the end of the year were operating a large proportion of their lines by electric energy derived from water power stations recently completed, Sweden, in which country there were already many miles of electrified roads, was preparing to make a considerable extension of them during the next year. In almost all cases, financial restrictions prevented further developments.

RAINFALL. See **METEOROLOGY**.

RAMSAY, GEORGE GILBERT. Scotch, educator, died at Saint Andrews, Scotland in March. From 1863 to 1908 he held the Chair of Humanity in Glasgow University. He was born in 1839 and educated at Rugby and at Oxford, winning distinction in his university course. He was called by his uncle, Professor William Ramsay, to Glasgow in 1861 and succeeded him in the

Latin chair. His teaching was most effective and he also showed ability in the administrative work of the institution. In politics he was at first a Liberal, but after the division of 1886, a Unionist, and he was well known for the effectiveness of his platform speeches. He resigned in 1908.

RANDALL, FRANK LANGE. Penologist, died at Minneapolis, Minn., August 6. He was born at Fort Ridgely, Minn., Sept. 30, 1856; educated at St. Johns College, Wisconsin; and after serving as a county superintendent of schools in Minnesota, was admitted to the bar in 1880. He was general superintendent of the Minnesota State Reformatory at St. Cloud, Minn., from 1900 to 1913; chairman of the prison commission of Massachusetts from 1913 to 1916; and director of the prisons of Massachusetts in 1916.

RANDOLPH, CARMAN FITZ. Lawyer, died, in 1921. He was born at Jersey City, N. J., August 17, 1856; studied at Harvard and Columbia Law Schools; and was admitted to the bar in 1879. He was a New Jersey delegate to the democratic National Convention in 1884, and a member of the New Jersey constitutional convention in 1894. Besides contributions to the reviews on public questions, he wrote: *The Law of Eminent Domain* (1894); and *The Law and Policy of Annexation* (1901).

RANDOLPH, EPES. Railroad president, died, at Tucson, Ariz., August 22. He was born in Lunenburg County, Va.; and was engaged in railway service in the south and in Mexico from 1876 to 1885. He was chief or consulting engineer of many lines, beginning with the Kentucky Central in 1885 and was high official successively of many important lines in the west and in Mexico.

RANDOLPH, LEWIS VAN SYCKLE FITZ. Financier, died at Plainfield, N. J. January 2. He was at one time president of the Consolidated Stock Exchange of New York City. He was born at Somerville, N. J., May 16, 1838; educated in private schools at Plainfield, N. J.; and employed in the American Exchange Bank in New York City from 1854 to 1863. During the Civil War he served in the New Jersey militia. In 1864 he became private secretary of the I. C. railroad company and afterwards its director and treasurer. He was president of the Atlantic Trust company from 1895 to 1903, a director of many other large corporations, and an executor of the estate of Samuel J. Tilden. He wrote a volume of poems, entitled *Survivals* (1901); and *Fitz Randolph Traditions* (1907).

RANKSBOROUGH, JOHN FIELDEN BROCKLEHURST, LORD. See **NECROLOGY**.

RANSOHOFF, JOSEPH. Surgeon, died at Cincinnati, Ohio, March 10. He was born at Cincinnati, May 26, 1853; and graduated at the Medical College of Ohio in 1874. He practiced surgery at Cincinnati after 1877, and was a professor in the Medical College of Ohio (incorporated in the University of Cincinnati) after 1879. He was a surgeon at the various important hospitals of the city and an extensive contributor on his subject to the scientific press.

RAPID TRANSIT. The difficulties of urban and interurban traction companies continued in 1921, and there was comparatively little done in the way of extensions or new construction. In many of the cities there was such congestion

as to give rise to demands for greater transit facilities while at the same time the crowded condition of streets made desirable subway or tunnel construction not always for through lines but as a means of handling suburban traffic centering at business centres. In 1921, however, private capital was little disposed to embark in such projects, while municipalities in many cases were unwilling or unable to finance bond issues for such construction. Furthermore, the question of operating costs and fares also figured, and in many communities there seemed to be a sentiment in favor of holding the fare to a five cent basis, irrespective of the nature or cost of service. Municipal ownership continued to be discussed during the year, but there was little actual progress made in that direction. Unquestionably in the municipal election in the City of New York the transit issue figured, obscured and distorted as it was; for to a proportion of the electorate apparently it seemed as if the five cent fare was a matter at issue. See New York.

CINCINNATI. There was under construction during the year a rapid-transit system which was noteworthy for its low construction cost and for a most convenient and serviceable arrangement, namely, a belt line surrounding the residential part of the city and traversing the heart of the business district. The city engineers were able to use for this purpose the right-of-way of the abandoned Miami & Erie Canal, which was turned over by the State for city transportation purposes. The belt line, irrespective of the advantage of the canal location, was considered as specially well adapted to the conditions in Cincinnati and the general arrangement of the new system was thought to be such as to exert later a great influence on the growth and development of the city.

During the year 1921 four sections of the subway portion of the line were under active construction and working plans were ready for two more sections. It was believed that by the end of 1923 about 11 miles of the system, which as planned was 16½ miles long, would probably be ready for operation. To construct the remaining 5½ miles additional money must be voted by the citizens. The line begins at Fountain Square, and extends north in subway in Walnut St., where it joins the canal and thence west in subway in the canal, or Central Parkway as it became known, to Plum St. At about Race St. a combined rapid-transit and interurban terminal station was planned, where at the outset only the centre portion of the station, to be used as a combined interurban and rapid-transit station, was to be built. If later traffic and other developments required this the rapid-transit tracks were to be put on the outside of the station under construction which would then be used exclusively as an interurban station.

From Canal and Plum Sts. the line turns and extends north in subway to Brighton. From this point a circuit is made returning to the starting point, the line except for a short tunnel being in the open, either of standard-gauge surface construction or reinforced-concrete elevated railway. The total length of the loop was about 16.45 miles, consisting of 2.45 miles of subway; 9 miles in the open, with bridges or subways at intersecting streets; 0.2 miles of tunnel; 3.4 miles of concrete

trestle, and 1.4 miles of concrete elevated structure.

When the plans for this new rapid transit were definitely developed in 1915 the total estimated cost was put at \$6,000,000 and this amount was duly authorized for construction by vote in April, 1916. Naturally on account of the intervention of the war and the resulting higher cost of construction, this amount in 1921 was, of course, inadequate and an additional bond issue of between \$4,000,000 and \$5,000,000 would be required. The portion of the line to Canal and Walnut Sts. could be constructed for the \$6,000,000 authorized. It runs through the suburbs of Oakley, Norwood, Bond Hill, St. Bernard, and Cumminsville and could be operated with profit before the entire system was completed. It included about 11 miles out of the total of 16.45 miles.

St. Louis. To secure improved transportation facilities and the more even growth of the city, as well as to relieve congestion in the business district and provide more direct access to suburban and other localities, the City Plan Commission of St. Louis and other official bodies have been engaged in studying the situation. There were found many deficiencies in the street railway operation due partly to poor location of routes and to the fact that the single operating company was in the hands of a receiver. In connection with the city's policy of opening, widening, and extending numerous streets, it was felt that a new arrangement of the street car lines could be effected which would facilitate more direct routing and quicken operation of individual lines. The plan aimed to connect and extend various lines and remove others which helped to increase rather than to relieve congestion.

The proposed extension and rerouting of the street railway service it was claimed would serve the needs of the city without serious inconvenience for at least ten years, so that independent rapid-transit facilities were not needed at this time.

However, the removal of certain transit lines from the surface of the narrow streets of the business district was considered an urgent necessity for the rush hour movement in St. Louis was said to be rather heavier than in other cities, and the increased crowding of these narrow streets by automobiles made it almost impossible to handle the evening rush hour traffic within this district.

Accordingly a subway loop was therefore, for all east and west lines across the business district, to be about 25 ft. wide and 14 ft. high, with its roof as close as possible to the street surface. Stations with stairways to the sidewalk would be located conveniently and the plans called for the eastern or downtown side of the loop to be placed on 9th St. in order to avoid interference with the steam railway tunnel on 8th St., connecting the Eads Bridge with the union station. It was realized that subway loops for rapid transit lines independent of the street car lines would be necessary eventually, but these would be distinct from the street car subways. Alternative plans for the rapid transit subways were suggested: (1) To divert railway traffic to the Municipal Bridge and use the lower (railway) deck of the Eads Bridge for rapid transit purposes; (2) that a new railway tunnel be built on 3d St., outside of the subway district, in which case the present 8th St. tunnel could be utilized as a rapid transit subway.

For rapid transit service beyond the subway district four elevated lines were proposed, two running west and the others northwest and southeast, respectively. These would be concrete structures spanning the street car tracks, except that the one on the private right-of-way of the Hodiamont line would be a solid fill with concrete retaining walls and street bridges.

In 1920 the estimates of cost were \$17,000,000 for the street car subway and \$17,000,000 for the rapid transit subway or \$80,000,000 for the complete rapid transit system, including elevated lines and subways. This would mean \$97,000,000 for relieving the street congestion and providing rapid transit facilities, but this could be distributed over a number of years as the execution of the project would be gradual.

The Department of Public Utilities also have given attention to this problem and during the year its engineers recommended a downtown suburban terminal station for steam railways at St. Louis, Mo., and a combined elevated and subway rapid-transit line for street and interurban electric cars. A 16-track suburban station at the southeast corner of Market and Twelfth Sts. was therefore proposed, having its floor 17 ft. below street level. Increased suburban train service was recommended, and a belt line service around the city and connection with East St. Louis, as the heavy traffic with the latter city was accommodated mainly by street and interurban electric lines.

To provide for the rapid transit electric service it was proposed that the Hodiamont line, which had a private right-of-way, should be elevated on a solid fill between concrete retaining walls from Maple Ave. to Spring Ave. At the latter point the line would pass into a subway ending in a loop under Lucas, Morgan, and Sixth Sts. and Broadway. Both suburban and interurban lines could use this route, the interurban cars making only few stops.

NEW YORK. Another step forward was taken in the development of the New York Subway system when the New York Transit Commission in October awarded the contract for the extension of the Queensboro route of the dual subway system from Grand Central Station under 42nd St. and Bryant Park to 8th Ave. The amount of the bid was \$3,867,138 and work was to begin in the near future.

In New York City the transit question as already suggested became one of politics rather than of design and construction. By chapter 134 of the Laws of 1921 the Public Service Commission for the first and second districts was abolished and a new commission for the entire State to consist of four members was established. There was also created for New York City a Transit Commission of three members appointed by the governor and authorized to make contracts for use of streets for surface railroads and for stage and omnibus routes. The Commissioners appointed were George McAneny, Leroy T. Harkness, and John F. O'Ryan. The organization and functioning of this committee was opposed by the municipal government and a controversy began which lasted through the entire year, the constitutionality of the act creating the commission being assailed in court. The New York authorities advocated an extensive system of omnibuses rather than the use of the

surface tracks. The commission sought to develop a general plan and made a survey of the situation, but there was more controversy and discussion than actual progress in clearing up the situation during the year.

Nevertheless in a report put out on September 29 the N. Y. Transit Commission made a general announcement of policy stating that it favored the valuation, consolidation, and municipal ownership of all transportation facilities in New York City. The plan of the commission contemplated the consolidation and municipal ownership of all surface, sub-surface, and elevated lines, deemed by the commission to be useful and essential, and their inclusion in three new operating groups. Group 1 was to comprise the subway and elevated railroads operated by the Interborough Rapid Transit Co., and leased by it from the city, and the Manhattan Railway Co. Group 2 would include the subway, elevated, and surface railroads operated in the Brooklyn rapid transit system; and Group 3 would embrace the surface railroads of the boroughs of Manhattan and the Bronx.

Administration of all the lines by a board of control of seven members was proposed, and operation was to be carried on by three operating corporate agencies to be created for the purpose. The commission further proposed that the transportation lines should be acquired without delay by the city, by amortizing out of earnings the valuation fixed by the Transit Commission. It also proposed that existing securities should be replaced by an issue of bonds of a consolidated company representing a new physical valuation of the properties. The much discussed question of fare it proposed to settle by having rates of fare based on actual cost and automatically determined by the amount of a contingent reserve or barometer fund. The Transit Commission expressed the hope that the 5-cent fare might be retained, and that the charge for transfers could be abolished. Recognizing that new construction was necessary it proposed that this should be provided for by increasing the city's debt-incurring capacity. Participation by operating personnel as well as new security holders in surplus profits resulting from efficient management and operation was also an element in the readjustment plan.

SAN FRANCISCO SUBWAY. Traffic conditions were developing to such an extent in San Francisco that the Board of Supervisors at their meeting on November 21, ordered the city engineer to study and prepare plans for a four-track subway under Market St. from the Ferry to Valencia St. a distance of about 2½ miles.

LONDON RAPID TRANSIT MAIL SERVICE. An underground electrically-operated railway was under construction during the year, which when completed would connect the chief post offices and trunk-line depots in the London district. This plan involved an automatic control electric system and was worked out by the engineering department of the London post office and Mr. Dalrymple-Hay.

From the Western Central District post office to Mount Pleasant sorting office and the general post office at King Edward building as centres or junction points it was proposed to develop a system extending to various railway stations and important post offices. Between the stations

the railway would consist of two lines of 2-ft. gauge track, each contained in a single tube of an inside diameter of 9 ft.

The trains will be operated without drivers on the remote-control system, using three types of electric current: high speed (HS), intermediate speed (IS); and low speed (LS). When the train is running between stations, HS current will be applied. The regulation of the current and the energizing of the conductor rails as required will condition the speed and stopping of the trains, there being an electric brake system which is also automatic.

The current and conductors can be so arranged that cars will be moved into slidings and stopped at certain sections in the same manner as that employed to stop them at station platforms, and a device will be supplied for automatically reversing the connections of the car motors so that they may be easily coupled up to form trains of two or more cars.

The position and destination of each train will be indicated to the switchman who will, with levers, set the track for any specified route and will energize the conductor rail sections with the current needed. A complete interlocking system will be in force between the different routes as regards track, switches, and current.

The arrangement provides that between the stations the conductor rail will be divided into sections, and while running between stations and before coming under the control of the switchman, the train will act to render each section dead as it leaves it and will energize it again upon entering the next section. This would secure a dead-rail section between adjacent trains. See TUNNELS.

READE, PHILIP. Army officer, died in 1921. He was born at Lowell, Mass., Oct. 13, 1844; and studied at the United States Military Academy. He had risen to the rank of captain in November, 1889, and in the following year served as instructor-general of volunteers. He returned to the regular army and was raised to the rank of colonel, August 13, 1903; retired, Oct. 13, 1908; and was made a brigadier-general, May 4, 1911. His military service lasted forty-four years, in the course of which he took part in the Civil War, Indian campaigns, the Spanish-American War, serving in Cuba and the Philippine Islands. He was a member of many important military and patriotic societies.

RECLAMATION. The general economic and financial disorganization throughout the world and the world-wide depression in agriculture following the World War have deterred the undertaking of large land-reclamation enterprises during 1921. While there have been everywhere proposals for placing veterans on the land, the fact that farmers are almost everywhere in financial distress has tended to minimize the interest taken in such settlement by the veterans.

IRRIGATION: UNITED STATES.—Reports of the Fourteenth Census of the United States, which included irrigation, were published during the year 1921, and the reports of irrigation are summarized in the following paragraphs:

The census of irrigation covered the States of North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Arkansas, and Louisiana, and all the States between those named and the Pacific ocean. East of these States irrigation is practiced to a limited extent for fruit and truck crops, but

is not general, since there is sufficient rainfall for ordinary crops. Within the territory covered by the census the number of farms on which irrigation was practiced in 1919 was 231,541, which was 12 per cent of all the farms reported in that territory.

The area irrigated in 1919 was 19,191,716 acres, an increase of 33 per cent over the area irrigated in 1909. Existing irrigation enterprises reported that they were capable of irrigating 26,020,477 acres, which is 6,828,761 acres in excess of the area actually irrigated in 1919. There was included in irrigation enterprises in 1920 an area of 35,890,821 acres, which is 16,699,105 acres in excess of the area irrigated in 1919. The annual average increase from 1909 to 1919 in the area irrigated was 475,843 acres, and the excess of land to which existing enterprises were capable of supplying water in 1920 over that irrigated in 1919 would provide for the continuation of the average rate of increase for a period of more than fourteen years without any additional construction; while the completion of existing enterprises with capacity to supply the full areas now included in their plans would provide for maintaining the average rate of increase for over 35 years without the undertaking of any new enterprises. The areas reported as included in existing enterprises are undoubtedly larger than can be served by these enterprises, but, making liberal allowances for this, the figures indicate that there is no immediate demand for the undertaking of new enterprises unless the rate of expansion in the area irrigated is to be increased greatly.

The total capital invested in irrigation works up to 1920 is reported as \$697,657,328, an increase of 117 per cent over the amount reported in 1910. The average investment per acre enterprises were capable of supplying with water in 1920 was \$26.81, as against an average of \$15.85 in 1910.

The area irrigated in 1919 was distributed among the States as follows: Arizona, 467,565 acres, Arkansas, 143,946 acres, California, 4,219,040 acres, Colorado, 3,348,385 acres, Idaho, 2,488,806 acres, Kansas, 47,312 acres, Louisiana, 454,882 acres, Montana, 1,681,729 acres, Nebraska, 442,790 acres, Nevada, 561,447 acres, New Mexico, 538,377 acres, North Dakota, 12,072 acres, Oklahoma, 2,969 acres, Oregon, 986,162 acres, South Dakota, 100,682 acres, Texas, 586,120 acres, Utah, 1,371,651 acres, Washington, 529,899 acres, Wyoming, 1,207,982 acres.

The relative importance of the various agencies supplying water for irrigation is shown by the following distribution of the acreage irrigated in 1919 by type of enterprise: Individual and partnership enterprises, 6,848,807 acres, which is 35.7 per cent of the total; cooperative enterprises, 6,581,400 acres, which is 34.3 per cent of the total; irrigation districts, 1,822,887 acres, which is 9.5 per cent of the total; commercial enterprises, 1,822,001 acres, which is 9.5 per cent of the total; United States Reclamation Service, 1,254,569 acres, which is 6.5 per cent of the total; Carey Act, 523,929 acres, which is 2.7 per cent of the total; United States Indian Service, 284,551 acres, which is 1.5 per cent of the total; all others, 53,572 acres, which is 0.3 per cent of the total.

The sources from which water is obtained for irrigation are shown by the following distribution of the area irrigated in 1919 by source of water

supply: Gravity flow from streams, 14,527,080 acres, which is 75.7 per cent of the total; pumped from streams, 1,226,510 acres, which is 6.4 per cent of the total; from streams, partly by gravity and partly pumped, 199,598 acres, which is 1.4 per cent of the total; pumped from wells, 1,263,098 acres, which is 6.6 per cent of the total; flowing wells, 65,856 acres, which is 0.3 per cent of the total; gravity flow from lakes, 100,646 acres, which is 0.5 per cent of the total; pumped from lakes, 35,730 acres, which is 0.2 per cent of the total; springs, 198,008 acres, which is 1.0 per cent of the total; stored storm water, 98,873 acres, which is 0.5 per cent of the total; other and mixed sources, 1,440,652 acres, which is 7.5 per cent of the total. The area receiving its total supply from streams is 83.4 per cent of the total; the area in the various mixed classes that gets part of its supply from streams is 7.4 per cent of the total, making something over 90 per cent of the total area irrigated that receives all or most of its water supply from streams. The area receiving its total supply from wells is 7.1 per cent of the total area irrigated.

The irrigation data are also classified by the drainage basins in which the irrigated land lies: The area irrigated in 1919 is distributed among the main drainage basins as follows: Missouri river and tributaries, 4,147,278 acres; Mississippi river and tributaries other than the Missouri, 953,493 acres; streams flowing to the Gulf of Mexico other than the Mississippi and the Rio Grande, 698,077 acres; the Rio Grande and tributaries, 1,293,863 acres; Colorado river and tributaries, 2,312,047 acres; the Great Basin drainage, 2,313,163 acres; Columbia river and tributaries, 3,873,245 acres; Pacific ocean streams other than Colorado and Columbia rivers, 3,570,687 acres. A very small area in New Mexico and Arizona lies in drainage basins that cannot be included in any of those named.

The census reports state that the reports of crops grown on irrigated lands are incomplete, but it is probable that the relative importance of the crops, as shown by reports of acreage and value, are correct. Alfalfa ranks first in both acreage and value, with 3,151,675 acres harvested in 1919, and a value of \$186,391,299. Wild, salt, or prairie grasses rank second in area, with 974,507 acres cut in 1919, but it ranks below many other crops in total value, the amount reported being only \$17,954,630. Rough rice ranks third in area, with 892,761 acres, and second in total value, with \$96,368,090. Spring wheat ranks fourth in area, with 877,411 acres harvested in 1919, but in value it ranks much lower, the amount reported being \$37,556,853. Tree fruits are not reported by acres but by number of trees. Oranges rank third in value, being exceeded by only rice and alfalfa, with a total of \$58,244,422. Potatoes follow oranges in value with a total of \$50,778,993, for an area of 154,194 acres. Sugar beets grown for sugar rank next to potatoes in value, with \$38,831,339, and an area of 377,655 acres. Grapes follow sugar beets in value with a total of \$36,304,252, the area not being reported. Cotton ranks next in value with \$30,457,881, and an area of 214,576 acres. Peaches and apples follow cotton with values of \$24,670,264 and \$24,566,584 respectively.

The twentieth Annual Report of the United States Reclamation Service shows the following facts as to its finances, and the results of its work:

Receipts to June 30, 1921: Sale of public lands, \$103,050,209.64, sale of town lots, \$549,718.56, advances from the general treasury, \$20,000,000, oil leasing royalties, \$4,617,665.13, potassium royalties, \$12,724.47, collections, \$37,055,942.14, total, \$165,286,259.14. The construction cost to June 30, 1921, was \$140,199,968.44, and the repayments on construction amounted to \$9,508,777.46. The gross cost of operation and maintenance to June 30, 1921, was \$13,654,158.54, and the revenues \$10,275,219.35, leaving a deficit on operation and maintenance of \$3,378,939.19.

The area irrigated in 1920 was 1,225,480 acres, and the area to which the service was prepared to supply water in 1920 was 1,661,960 acres. In addition to the area reported above about 1,000,000 acres received a supplemental supply, although deriving its principal supply from other sources. On the basis of the area to which water could have been supplied in 1920 the average construction cost per acre was \$84.35; however, a part of the cost should be charged to the land which receives a supplemental supply from the Government works. The report does not show how much of the cost should be so charged, but including the whole 1,000,000 acres in the area over which the cost is spread the average cost per acre becomes \$52.67 per acre. It is probable that the correct average cost per acre should be placed about midway between the two averages given.

FOREIGN COUNTRIES. The present government of Mexico has announced itself as in favor of irrigation development throughout the country. In January, 1921, it asked Congress for an appropriation of 25,000,000 pesos for irrigation work. The states also are backing irrigation. Several projects are in contemplation in San Luis Potosi. In Lower California the local government is backing a project to irrigate about 40,000 acres in the San Quinten Valley for the growing of sugar cane. In the state of Sinaloa the state authorities are building a canal to be about 50 miles long, to serve land in the Culiacan River Valley. In the Dominican Republic, notwithstanding the slump in sugar, an extensive irrigation project tapping the Yaque river is being completed. In Peru an irrigation project containing about 20,000 acres is under construction in the Cafeta Valley, about 140 kilometres south of Lima. Another large government project, the Pampas Imperial project, is under construction.

In Spain projects are being carried out on the Ebro and Duero rivers. The Commonwealth of Australia and the states of Victoria, New South Wales, and South Australia have arrived at an agreement regarding the storage and use of the Murray river waters. The agreement provides for a joint commission and that the cost shall be borne in equal shares by each of the parties. The total area irrigated in India in 1920 is estimated at 49,000,000 acres, an increase of about 2,000,000 acres over the area irrigated in the preceding year. In Siam a large irrigation project is under construction, to provide water for rice growing. Among the public works under construction in the Philippines are irrigation projects designed to supply water to 300,000 hectares of land. They will require about ten years for completion.

DRAINAGE: UNITED STATES. The first census of drainage in the United States was taken as

a part of the Fourteenth Census in 1920. The figures all relate to drainage of land for agricultural purposes. Drainage has been provided for 53,024,975 acres of agricultural lands which is 5.5 per cent of all the land in farms in the United States. This area is equal to 10.5 per cent of all the improved land in farms in the United States. The additional area of farm land in need of drainage is reported as 39,110,357 acres, or 4.1 per cent of all land in farms. Of this additional area in need of drainage, 10,459,181 acres can be made available for agricultural use by drainage only, while 28,651,176 acres require clearing as well as draining.

The figures just given relate to land in farms at the date of the census. A further enumeration was made for organized drainage enterprises, most of which furnish only drainage outlets, leaving the farm drains to be installed by individual farmers. Nearly all of the drainage enterprises are controlled by public corporations organized under State laws, and known as drainage districts or local improvement districts. Usually these corporations have power to issue bonds to obtain funds for construction and to levy and collect taxes to pay their bonds and the expenses of operation and maintenance. Operating enterprises include all that had completed or had begun actual construction of drainage works by Jan. 1, 1920. The total area in operating drainage enterprises is 65,495,038 acres, which is approximately 3.4 per cent of the entire land area of the United States. Enterprises that had been organized, but had not begun construction by Jan. 1, 1920, which were termed "non-operating" enterprises, embraced a total area of 3,924,821 acres.

Operating drainage enterprises included 44,288,235 acres of improved land, 11,283,532 acres of timbered and cut-over land, and 9,923,271 acres of other unimproved land.

The capital invested in operating drainage enterprises to Dec. 31, 1919, was \$372,273,567, and the estimated additional investment to complete the works authorized was \$62,321,412. The average investment per acre for the United States as a whole was \$6.64 per acre. This, generally, includes outlet drainage only.

The acreage of farm land drained is distributed among the geographic divisions as follows: New England, 129,799 acres; Middle Atlantic, 1,673,638 acres; East North Central, 30,737,056 acres; West North Central, 11,758,939 acres; South Atlantic, 2,865,872 acres; East South Central, 1,720,517 acres; West South Central, 2,365,701 acres; Mountain, 456,015 acres; and Pacific, 1,318,238 acres.

FOREIGN DRAINAGE: Canada. Plans are under way for the drainage of 1,000,000 acres south of Winnipeg, at a cost of approximately \$1,250,000, by the Manitoba Drainage Commission. Out of 6,000,000 acres under cultivation in Manitoba more than 1,750,000 acres are in provincial drainage districts. The greater part of the land is being purchased by American settlers. **Holland.** Work on draining the Zuider Zee is progressing. It will reclaim about 480,000 acres, at a cost of about \$100,000,000. **Italy.** Large drainage projects along the Adriatic near Venice are being carried out to give employment to labor. **Brazil.** By a decree of Dec. 30, 1920, there was created a commission for the improvement of the low lands of Rio Janeiro.

RED CROSS, AMERICAN. This movement operates under a charter granted by Act of Congress, Jan. 5, 1905, and is officially designated (1) To furnish volunteer aid to the sick and wounded of armies in times of war in accordance with the conventions of Geneva; (2) To act in matters of voluntary relief and in accord with the military and naval authorities as a medium of communication between the American people and their army and navy; (3) To continue and carry on a system of national and international relief in time of peace and to apply the same in mitigating the sufferings caused by pestilence, famine, fire, floods, and other great national calamities; and (4) To devise and carry on measures for preventing the same.

The record of the Red Cross work during 1921 showed marked expansion in peace-time activities at home and a contraction in foreign fields. The outstanding features of the year ending June 30, were as follows: (1) A reduction of the fourteen operating divisions to nine; (3) extensive and varied assistance to American veterans of the World War; (3) increased activity in public health and nursing service; (4) effective disaster relief at home and abroad; (5) a widening Junior Red Cross programme; (6) marked contraction of relief activities in Europe; and (7) a concentration of effort overseas on child welfare work, medical in character.

This work cost National Headquarters and the 3452 active chapters of the American Red Cross \$24,492,741.35, apportioned as follows: Relief in Europe, \$12,616,016.31; Other foreign relief (including China famine relief), \$2,092,613.01; Junior Red Cross activities, \$420,557.50; Relief of military service men and women, \$1,931,598.40 (in addition to which the National Organization spent \$1,255,706.82); Disaster relief, \$270,505.07; *Red Cross Magazine* and *Junior Red Cross News*, \$215,904.53; Operation of relief and service officers at National and Divisional Headquarters, \$3,378,603.53; Operation of bureaus for handling relief supplies, also transportation in United States of relief supplies, \$247,992.98; operation of management offices at National and Divisional Headquarters, \$1,015,547.43; Collections and enrollments and special publicity, \$631,494.49; Special public health activities, \$136,389.31; Special nursing activities, \$75,146.15; and Miscellaneous expenditures, \$1,460,372.64.

A summary of the year's disasters in which the American Red Cross rendered relief shows that they were of varying types, including several which previously have never been regarded as falling within the disaster classification. The organization furnished relief in seventeen fires, five floods, seven tornadoes or cyclones, one devastating storm, three explosions, including the one in Wall Street; one building accident, two typhoid epidemics, the most serious being that at Salem, Ohio, which affected 9 per cent of the population; one smallpox epidemic in the Republic of Haiti, one train wreck, the race riot at Tulsa, Okla., the famine in China, affecting millions of persons, emergency relief in famine among the Indians in Alaska, the grasshopper plague in North Dakota, and earthquakes in Italy and Albania. The forty-five disasters occurring in the United States resulted in the death of nine hundred persons and the injury of twenty-eight hundred, while property damage affecting sixty-nine com-

munities and rendering ninety thousand families homeless was estimated at thirty million dollars.

SERVICE TO WORLD WAR VETERANS. Service to veterans continued on a large scale. On June 30, 26,300 disabled World War veterans were in government and contract hospitals. To them the Red Cross rendered Home Service, recreational service, temporary financial aid, and many other forms of assistance, large and small, supplementary to governmental, medical, nursing and hospital service. There were 2329 Red Cross Chapters still engaged in some kind of war work; 448 Red Cross workers were continually on duty in the hospitals. The Red Cross expended, from the funds of National Headquarters and of the Chapters, nearly \$10,000,000 in behalf of the veterans during the year, and at the request of the government, with the American Legion assisted the Veterans' Bureau in a canvass of the country to locate all disabled ex-service men and acquaint them with their rights and privileges under the law. The Red Cross during the fiscal year, also made temporary loans to ex-service men amounting to several hundred thousand dollars, the bulk of which loans has been repaid. During the year the Red Cross assisted approximately 82,000 compensation and insurance claims, 80,000 allotment and allowance cases, 5000 miscellaneous claims, and secured the delivery of 2200 Liberty Bonds held as undeliverable by the War Department. In its Institute for the Blind at Evergreen, Md., the Red Cross trained 147 blinded ex-service men.

The gradual but marked reductions, retrenchments and readjustments of the Army and Navy had a corresponding effect upon that branch of the Red Cross charged with the responsibility of rendering service to the military forces. This service was available to virtually all men stationed at Army and Navy camps, posts, stations and hospitals in the United States and its possessions. There were 267 military and naval establishments served during the year; 999,819 visits were paid to patients, 38,843 letters written, and 8333 entertainments given.

On July 1, there were 37,787 nurses enrolled in the Red Cross Nursing Service, showing an increase during the past year of 1084. To meet the needs of three governmental services, the Army, the Navy, and the United States Public Health Service for assistance in caring for the veterans of the World War, 500 nurses were assigned from the Red Cross Nursing Service during the year. There were 1267 Red Cross Public Health nurses employed in 817 places.

In 1921 there were 73,592 certificates issued to women and girls who completed the Red Cross course in Home Hygiene and Care of the Sick. These classes included foreigners, Indians, deaf mutes, the blind; telephone operators, members of the W. C. T. U., and the Y. W. C. A., waitresses in hotels, women working in laundries and girls in Florence Crittenton Homes. On June 30, 1763 nurse instructors had been enrolled, of whom 591 were active. Red Cross nurse instructors also conducted classes in Poland under the auspices of the Polish Red Cross, where 742 certificates were issued from May to October, 1920.

Nutrition Service continued the work of enrolling women trained in home economics to act as dietitians in hospitals of the Army, Navy, and United States Public Health Service, or as in-

structors in the course in Food Selection. There were 22 hospital dietitians and 101 instructors enrolled during 1921. The total enrollment at the end of the year was 2514. The prevalence of malnutrition among children of the nation, rich and poor alike, as shown by inspections made by physicians, is a menace to the health of the nation and as such constitutes an emergency which the Red Cross tried to meet. Reports for the year show that 1114 nutrition classes were conducted, with an enrollment of 22,096 children. Visits totaling 4732 were made to the homes of these children.

FOREIGN RELIEF OPERATIONS. The American Red Cross confined its efforts in Europe almost entirely to the establishing of a chain of child health units and aiding countless numbers of refugees. In Austria food, clothing, and medical supplies were distributed to 500,000 persons, mostly children. Employment in the way of garment making was given to 40,000 native women. The work called for an expenditure from all sources of 25,000,000 francs worth of medical and other supplies to 235 hospitals, providing 3800 beds to 135 institutions, caring for 27,000 children and assisting organizations reaching 107,000 persons.

In South Russia and Constantinople the American Red Cross, in the middle of the winter, helped handle one of the most complex refugee problems in history. Called upon to suddenly care for 150,000 refugees, who were forced to leave the Crimea when Wrangel's army collapsed and were dumped into Constantinople on 111 ships of all kinds, the Constantinople unit did the work in a manner which won the praise of the allied nations whose agents were familiar with what was done. Not only did the American Red Cross distribute all the supplies originally placed at its disposal in the Near East, but it distributed \$300,000 sent by the Russian Embassy in the United States and an additional \$400,000 worth of supplies provided by the reserve fund at National Headquarters.

In Poland 40,000 refugees who had fled before the Russian Soviet invasion, were cared for, 500,000 under-nourished children were assisted with food and clothing, and permanent relief work was established in the way of child-health in 22 children's hospitals, 33 hospitals with children's wards, 345 children's orphanages and similar institutions. Through a system of railway relief trains, more than 1000 surgical cases were cared for weekly and a maximum of 750,000 persons were fed in a single month.

In Italy the chief work of the American Red Cross last year was assistance given in the Mugello and Tuscany earthquakes, when it gave an example of its utility in an emergency by having 215 tents with all relief supplies erected and in operation within 48 hours.

In Hungary the outstanding feature of the work for 1921 was the distribution to needy children and refugees of 1,500,000 articles of clothing and the mobilization of 50,000 native women in a nation-wide knitting campaign. A Junior Red Cross was also organized with a membership of 20,000. The total relief supply distributions of the Red Cross in Hungary for the year averaged ten tons per day.

In Greece 50,000 Greek refugees from the Caucasus were assisted with food and clothing and

later were given such supplies that a large number of them were able to colonize in 52 deserted villages and resume their normal occupations. A complete child-health programme was also inaugurated and some 10,000 children were started on the right course.

In Czechoslovakia the work for the year included a medical survey of 50,000 children; enrollment of 165,000 children into a Junior Red Cross, mobilization of 72,000 children into a health crusade; the distribution of large quantities of medical supplies and clothing and the establishment of the first two of 21 medical centres for child-health work.

In Montenegro the work of the Red Cross was devoted to assisting the war orphans of that country. The work was delayed by the necessity of caring for 18,000 Russian refugees who drifted in, but in spite of this the child-feeding kitchens served during the year a total of over 3,000,000 meals, while the health centres supervised and aided 20,000 children with medical supplies and surgical treatment.

In Serbia, another of the Jugo-Slav countries, relief work was thoroughly established among the 90,000 war-orphans, a large percentage of whom are suffering from tuberculosis and other diseases brought about by the low standard of living resulting from the war.

The work in Roumania was entirely among the children and consisted of financial assistance given to Roumanian organizations, both from the regular relief funds and the Junior Red Cross.

In Western Russia and the Baltic states child-health centres were opened by the American Red Cross during the year to the number of 132, and 13,000 children were treated monthly during the last two months of the year. When the programme is complete, medical supervision will be maintained over 450,000 children. In addition to medical care, 31,000 children were furnished clothing, an epidemic of dysentery was overcome in Latvia, and a still more threatening epidemic of typhus was destroyed in Lithuania. In the four Baltic states, 240 hospitals were also assisted.

Although the American Red Cross had liquidated most of its relief operations of France in 1920, during the past year it continued to help the children in the devastated regions and made several gifts of cash to carry on the work being done among the maimed soldiers.

In Belgium there was considerable distribution of supplies and general aid in the rehabilitation work being done. During the spring of 1921 all the remaining supplies of the American Red Cross in that country were distributed to hospitals, schools and other institutions, especially those caring for the children.

In Albania the American Red Cross, in several cities, established child-health stations so that in the month of June, 4200 children received medical assistance. Heroic work was also done during the earthquake disasters, lasting from Dec. 18, 1920, for nearly a week. In addition to what was done for the Albanians, the Red Cross fed 1000 refugees daily for a period of nine months.

In China, the Red Cross spent \$1,200,000 for the relief of the famine sufferers and it has been estimated that more than 600,000 people were thus saved from starvation. The method of relief employed by the movement was particularly effective for, in addition to saving thousands of

lives it gave China more than 900 miles of permanent roads that are sorely needed to prevent a recurrence of famine.

JUNIOR RED CROSS. This movement had for its programme for the year the "training for citizenship through service." This new phase of Junior work sought to make available to the schools, public, parochial, and private, the several services of the American Red Cross as a means of opening to the teachers and school authorities a wide range of projects designed to link up the schools and the local Red Cross Chapter. With a broad range of philanthropic activities for the unfortunate children at home, and educational relief projects for destitute children in thirteen foreign lands, it served to enlighten the minds, to nurture the good will, to improve the health, and to increase the happiness of thousands of children. More than 237,000 destitute or needy children in European countries were benefited by the relief work of the Junior American Red Cross during 1921. The National Children's Fund raised by the School children, was drawn on for \$420,557.50 for this work. Last year \$1,107,662.36 was received and \$638,396.24 expended.

REED COLLEGE. A co-educational institution of the higher learning at Portland, Ore.; founded in 1911. The enrollment for the fall of 1921 was 300. The faculty numbered 29. The library contained 20,965 volumes. A Commons-Union building was completed during the year. Changes were made in the requirements for admission, and the curriculum of freshman and sophomore years was reorganized. President, Richard Frederick Scholz.

REFORMED EPISCOPAL CHURCH. Under the leadership of Bishop David Cummins of Kentucky, a number of members of the Protestant Episcopal Church, who separated from the mother church because of its ritualistic practice, founded this denomination in New York in 1873. With the exception mentioned its doctrines are similar to those of the Protestant Episcopal Church and the Church of England. Also it has close connections with the Liturgical Free Churches of England. Meetings are held every three years. There was a convention in 1921, when there were reported to be 74 churches, and 11,050 communicants, a slight decrease from the figures of 1918. Church property was valued at \$1,702,187. Sunday school members numbered more than 9000. Seventeen missionaries carry on the missionary work of the Board of Home Missions among the needy churches and negroes of the south. Extensive foreign missionary work is conducted in India by 6 missionaries and 20 native helpers. There are 8 missionary stations. Educational activities of the denomination consist of a theological seminary in Philadelphia and 17 primary schools. It maintains two hospitals where 45,000 persons are treated annually, and an orphanage with about 50 inmates. The church publishing house is in Philadelphia, which issues *The Episcopal Recorder*, said to be the oldest church periodical in the United States.

REFORMED PRESBYTERIAN CHURCHES. Seven denominational churches form the Council of the Reformed Churches in America, following in general the Presbyterian principles. The Council was organized in 1906 and includes the following: The Reformed Church in America, the Presbyterian Church in the United States of America,

the Presbyterian Church in the United States, the Reformed Church in the United States, the United Presbyterian Church, the Associate Reformed Presbyterian Synod, and the Cumberland Presbyterian Church, Colored. The function of the Council is to act in the nature of a unifying and coöperative agency for the Reformed Presbyterian Churches. It meets biennially and between these meetings the business is intrusted to the Executive Committee consisting of the officers and committee chairmen. A meeting was held in Philadelphia March 15, when the constitution of the Presbyterian Reformed Church in America to effect a federal union of the bodies comprising the Council, was presented and in substance approved. It was urged at this meeting that steps be taken to have the United Assembly take the place of the present Council of Reformed Churches to avoid duplication of work. Statistics for 1921 for reformed Presbyterian churches were as follows: Reformed Church in America, 144,929 communicants; 757 church buildings; Reformed Church in the United States, 344,374 communicants, 1719 church buildings; Christian Reformed Church, 38,668 communicants, 233 church buildings; Reformed Presbyterian Church in North America, General Synod, 2386 communicants, 15 church buildings; Synod of Reformed Presbyterian Church of North America, 8185 communicants, 102 church buildings; and the Associate Reformed Presbyterian Church, 15,124 communicants, 130 church buildings. See also PRESBYTERIAN CHURCH, AND CUMBERLAND PRESBYTERIAN CHURCH.

REINACH, JOSEPH. French publicist, one of the leading supporters of Dreyfus, died in Paris, April 18. He was born in Paris, Sept. 30, 1856; studied at a lycée and in the law faculty of the University of Paris; and was admitted to the bar in 1877. He was private secretary to Gambetta from 1881 to 1882. He had already written largely for the press, and in 1886 he went again into newspaper work, becoming part owner of a Union-Republican paper. He was elected to the Chamber of Deputies as a Liberal-Republican in 1889, and again in 1893. He vigorously attacked the authorities for the introduction of secret documents in the Dreyfus trial of 1894; denounced the forgeries of the witnesses against Dreyfus; and was a fearless champion of the movement for revision. His writings pertaining to the Dreyfus affairs are voluminous, including a collection of pamphlets republished in 1898-99; a further account in 1900; and a six-volume history of the Dreyfus affair in 1901-04. Finally on this subject he published in 1905, *Les nouvelles catilinaires* (1905). A pamphlet on the teaching of history which originally appeared in the *Siècle*, caused his expulsion from his captaincy in the territorial army as a gross offense against discipline, and the withdrawal of his decoration of the Legion of Honor. His other publications include studies on the Near East; a history of the Gambetta ministry; a volume of literary and historical studies; various articles against Boulanger; and collections of articles on military subjects; also *Mes complexes rendus* (1911); and *La Réforme Electorale* (1912).

RELATIVITY. See ASTRONOMY.

RELIEF FOR WAR VICTIMS. With conditions in many of the countries improving, the most important development of the year was the Russian famine relief work undertaken by the American Relief Administration, the International Relief Conference of Geneva, of which Dr. Nansen was in charge, the American Friends Service Committee, and the Jewish Joint Distribution Committee. Heretofore three of these organizations had been working in Russia: Dr. Nansen in Siberia repatriating war prisoners, the Joint Distribution Committee in the Ukraine working among the refugees, and the Friends Service Committee in Moscow distributing soap, milk, and fats among the school children. But the excessive drought with its ensuing grain shortage caused a change or enlargement of policy. Reports of investigations showed the famine to be due to destruction through drought rather than to discouraged production under the Bolshevik régime. Approximately 80 per cent of the grain crop of the Volga district, the principal grain-growing territory of Europe, was destroyed. Consequently the problem has not been that of feeding the city dwellers alone, but of feeding the food producers—the farmers—as well. Ex-Governor James P. Goodrich of Indiana and Dr. Vernon Kellogg who had gone to Russia at the request of Mr. Hoover, found conditions in the Volga district so terrible that on their return to the United States they laid before the President and Congress a report on Russian conditions and urged that a government appropriation of \$20,000,000 be made for the purchase of corn and seed grains for relief. A bill making such an appropriation was passed and signed by the President, December 23, who designated the American Relief Administration as the agency for the distribution of these commodities. The purchase of the grain was placed in the hands of a commission composed of Herbert Hoover, James P. Goodrich, Edward M. Fleisch, Edgar Rickard, and Don Livingston. Five days after the President signed the relief bill the first cargo of corn purchased under the Congressional appropriation was ready for shipment from the United States.

AMERICAN RELIEF ADMINISTRATION. On July 23, Herbert Hoover as chairman of the American Relief Administration replied to the appeal of Maxim Gorki for aid for the famine sufferers in Russia. On August 20 an agreement between the American Relief Administration and the Soviet government was signed at Riga and supplies and personnel were immediately sent to Russia. Under this agreement all relief supplies furnished by the A. R. A. were to be distributed by its agents without interference of any kind from the Soviet government and all Americans detained in Russia were to be immediately released. Colonel William N. Haskell, formerly Allied High Commissioner in the Near East, was appointed Director of the American Relief Administration in Russia; headquarters were established in Moscow; and food stations were rapidly opened in Petrograd and Moscow and in the provinces of Saratov, Samara, Simbirsk, Kazan, Ufa, Orenburg, and Astrakhan. By the end of the year the American Relief Administration was feeding approximately 1,000,000 children in Russia and the number was rapidly increasing.

On October 19, an agreement was completed

with the Soviet government whereby individuals outside of Russia were enabled to purchase from the American Relief Administration food remittances in values of \$10 or multiples thereof for the benefit of their relatives or friends in Russia. Food packages corresponding to the amount of the remittances were delivered to the consignees from the A. R. A. warehouses in Russia. Thirty-three days after the food remittance agreement was signed in Moscow the first packages were delivered to Russian beneficiaries and by the middle of December over \$280,000 worth of remittances had been sold and deliveries were being made to all parts of European Russia. At the close of the year the sales were rapidly mounting.

On December 30 an agreement was signed in London by Walter Lyman Brown, representing the A. R. A., and Leonid Krassin, representing Soviet Russia, whereby the Soviet government allocated the sum of \$10,200,000 in gold for the purchase of American food and seed grains by the A. R. A. for famine relief. With this allocation the American Relief Administration had available for Russian relief at the end of 1921 supplies and money to a total of approximately \$40,200,000, which included the \$20,000,000 Congressional appropriation, \$10,000,000 representing the balance of A. R. A. funds for child feeding, and \$10,200,000 from the Soviet government. With these funds the Russian feeding programme of the A. R. A. was increased to 2,000,000 children and 500,000 adults with plans for further increases to 3,000,000 children and 5,000,000 adults as rapidly as transport conditions in Russia would permit.

The audited accounts of the A. R. A. for the fiscal year ending June 30, 1921, showed the following items under the heading "total relief applied":

Armenia in Caucasus.....	\$ 137,410.98
Czecho-Slovakia.....	269,621.69
Ethonia.....	186,260.07
Finland.....	16,678.14
Hungary.....	169,394.16
Latvia.....	145,655.77
Lithuania.....	31,197.28
Poland.....	5,104,102.71
Russia.....	13,897.79
Serbia (S. H. S.).....	71,260.61
Austria.....	3,256,983.89
American Friends' Service Committee (Germany, etc.).....	3,600,598.81
Danish.....	3,554.26
Liberated Districts of France.....	25,000.00

Total per Statement of Child Relief Operations.....\$13,031,616.16

During the winter of 1920-21 the American Relief Administration provided relief for over 3,500,000 children in Poland, Austria, Hungary, Czecho-Slovakia, Finland, Esthonia, Latvia, and Lithuania and in Germany, the latter through the agency of the American Friends Service Committee. In addition, it furnished funds for the relief of Russian refugees, clothing and supplies for the Serbian Child Welfare Association and the American Women's Hospitals in Siberia, food supplies to the American Red Cross toward the support of children in Montenegro, and aid to the Comité d'Assistance toward the support of children in the devastated regions of France. During the summer of 1921 conditions in Europe improved to such an extent that by the harvest of that year the A. R. A. was able to withdraw its

child feeding missions from Czecho-Slovakia and Lithuania and reduce considerably operations in other countries, so that at the end of the year less than a million children were being fed outside of Russia.

The headquarters of the American Relief Administration are at 42 Broadway, New York City.

THE NEAR EAST RELIEF. The Near East Relief, incorporated by act of congress in 1919, was working in 1921 among the people of Syria, Palestine, Turkey, Persia, Mesopotamia, and Russian Transcaucasia; a region that is equal in extent to the whole area covered by the European child-feeding programme. The organization was caring for over 100,000 children, the majority in orphanages, the others in soup kitchens and clinics. Owing to the recent fighting and destruction in the Caucasus and Western Turkey fully as many more children at the close of the year were in desperate need, but the organization could not give them shelter because of insufficient funds, and so the death wagon gathered them up as it made its daily rounds. While all the money of the Near East Relief does not go for orphan work, it is the chief emphasis everywhere; and in Syria, Palestine, and Transcaucasia at present it is practically the only activity.

The following brief financial statement, from July 1, 1920, to June 30, 1921, was the last official summary after all accounts for the year had been audited:

Caucasus.....	\$1,468,648.55
Constantinople, including Anatolia, Western Cilicia, and Greek Islands.....	2,207,050.25
Syria, including Eastern Cilicia, and Palestine.....	1,248,589.93
Persia.....	347,000.00
Mesopotamia.....	230,000.00
Mesopotamia—Persia.....	30,000.00
Personnel.....	151,382.96
Miscellaneous.....	560,970.88
Relief cargoes.....	3,009,306.60
Individual remittances.....	713,077.03
Total.....	\$9,984,026.20

Though \$10,000,000 was the amount raised during the year, larger sums were needed on account of the increasing need owing to political conditions, and at the close of the year the situation was still more aggravated.

The official relief totals of the Near East for 1921 were:

Orphanages.....	124
Orphans—entire.....	45,080
Orphans—partial.....	19,027
Partial orphanages.....	58
Home orphans.....	19,817
Hospitals.....	38
Beds.....	1,671
Patients.....	9,579
Clinics.....	66
Clinic patients.....	88,401
Rescue home.....	7
Rescued persons.....	749
Industrial relief.....	12,561
Direct relief.....	168,641
School for orphans.....	1
Children in school.....	121

No one will question that the Near East Relief has done an almost unexampled piece of work in the last few years. Thousands of children who wandered homeless in Asia Minor, have been gathered together into orphanages. Hundreds of young Armenian girls, the victims of Turkish brutality, have been rescued. Practically the en-

tire population of the Armenian Republic was saved on the brink of starvation. Great pestilences have been stamped out. Over a million people live now who would have to-day been dead. But the question that now faced the Near East Relief and its contributors at home and abroad was, what to do in the future with these rescued people. They had as yet no means of caring for themselves and until they could, or until other agencies could be found to carry on the work, it seemed that the Near East was in duty bound to continue the work which had been so well begun.

The offices of the organization are at 151 Fifth Avenue, New York. The officers are: James L. Barton, chairman; Charles V. Vickery, secretary; and Cleveland H. Dodge, treasurer.

JEWISH RELIEF WORK has been carried on since 1914 by American Jews through the Joint Distribution Committee. This is a disbursing and directing committee organized to spend most advantageously the funds collected by three Jewish relief committees: The American Jewish Relief Committee; the Central Relief Committee; and the People's Relief Committee. While many other organizations were seeing their obligations decrease and were able to diminish their support the Joint Distribution Committee expected to require \$14,000,000 for its work in 1922, which is an increase of about a million dollars over the expenditures for 1920. The committee estimated that \$5,000,000 alone were needed each year for the next five years to properly carry on the work of providing for the orphaned children. Child care, economic reconstruction, and medical relief among Jewish sufferers, together with the care of refugees, were the committee's chief concern. The refugee problem was one of the most difficult, not only because of the large numbers of people who were homeless, but also because in the wake of this problem came great political disturbances and the physical manifestation of anti-semitism in its worst form. The committee's field of operation has included not only Europe and Asia-Minor but has extended on occasion to Abyssinia and Siberia. Probably the chief beneficiaries, arranged in the order of their importance, have been Poland, Palestine, Russia, and the Ukraine, and those lands formerly composing Austria-Hungary. Wherever it has been possible for Joint Distribution Committee and the American Relief Administration to cooperate they have done so. The offices of the Joint Distribution Committee are at 20 Exchange Place, New York. Dr. Boris D. Bogen is the director-general.

OTHER FUNDS. The American Committee for Devastated France, 16 East 39th Street, which began its work of social reconstitution and agricultural restoration in 1918 was continuing for the present its operations, which were chiefly in the Department of the Aisne, but expected to be able in 1922 to inaugurate a programme of liquidation. The Committee has a record of achievement that would seem to justify the belief that "when the American Committee finally withdraws it will leave behind it in the four cantons a stronger race than can be found elsewhere in the devastated regions." The amount of land under cultivation in this district was 90 per cent of the prewar acreage and despite the summer's prolonged drouth which ruined the sugar, beet, and potato crops, the total harvest was more than 70 per cent of the normal. The Committee's Nursing department

had 27 nurses and covered 106 villages and the large towns of Rheims and Soissons; it also maintains a hospital at Blérancourt. "Foyers," or centres for community life, have been built in 20 different towns, libraries have been established and over 4000 boys and girls were receiving physical training. The work abroad was in charge of Mrs. A. M. Dike. The receipts for the year ending March 31, 1921, totaled \$563,625.55; a decrease of \$240,675.40 on the receipts for the previous year.

The Argonne Association, which has offices at 140 West 58th St. and whose secretary is Dr. Royal Storrs Haynes, supports and educates 200 French orphans. In its own words it is: "a permanent memorial to the Americans who fought in France; an organization for the care of French war-orphaned in families; a method for making self-supporting citizens of dependent children; an American demonstration of an efficient and economical plan for the care of dependent children anywhere."

The American Central Committee for Russian Relief was organized and incorporated in 1919 by a group of the friends of Russia, including the civilian members of the Russian Mission of Senator Elihu Root and prominent Russians and Americans, for the purpose of aiding the Russians who were victims of the Bolshevik tyranny, but political developments soon made it impossible to send relief to anti-Bolshevik Russians who were in the Soviet territory, hence all efforts were concentrated on the aid of the exiles scattered along the Russian frontiers. According to the Princess Cantacuzene, chairman of the board of directors, there were in 1921 at least one million Russian refugees who had been driven outside of Russia by the Bolsheviks, and the American Central Committee for Russian Relief was about the only society in this particular field of charitable work. The refugees were widely scattered and as yet the committee had not ascertained the numbers in France, England, Spain, Italy, and Austria, but in Scandinavia, Poland, Finland, Switzerland, Germany, Constantinople and the Balkan states and China there were about one million. The situation in Constantinople was especially bad as there were about 75,000 refugees living there in shacks, hovels, tents, cellars, and barracks with little or no means of livelihood to be found. During the two years of its activity the committee sent abroad for relief \$187,005.66 and 432 cases of food, clothing, and drugs. The amount sent abroad for the fiscal year ending Sept. 30, 1921, equaled \$128,829.66; the total receipts for the year were \$189,391.55. The committee was cooperating in every possible way with the American and Russian Red Cross Societies, with the Near East Relief and with other similar organizations so that there might be no overlapping of efforts. The headquarters of the committee are at 532 Seventeenth Street, N. W., Washington, D. C., Mr. Alex. Kaznakoff is the acting secretary. See RED CROSS.

the following departments: Civil Engineering, 327; Mechanical Engineering, 258; Electrical Engineering, 288; Chemical Engineering, 207; General Science, 3; Special and Graduate students 29. The faculty numbered 83. The productive funds amounted to \$2,055,000 and the income to \$340,000. The library contained 14,000 volumes and 16,000 pamphlets, which are almost wholly technical. An addition to the Chemical Laboratory was finished at the beginning of this scholastic year at a cost of \$175,000. In the spring contracts for four new dormitory buildings were to be let, funds for which were to be raised by the alumni. President, Palmer C. Ricketts, LL.D.

REORGANIZED CHURCH OF JESUS CHRIST OF LATTER DAY SAINTS. A Mormon denomination defined as the outgrowth or successor of the church founded at Fayette, N. Y., in 1830 by Joseph Smith, with which it is identical in faith and principle. For history see preceding YEAR BOOK. The church has a membership of about 95,000, distributed throughout the United States and many foreign countries. Churches number about 850. Foreign and domestic missionary work is carried on by the denomination. Zionism occupies an important part of its programme. A college is maintained at Lamoni, Iowa, and in addition the church conducts homes for children and the aged and a hospital. There are three publishing houses, located at Lamoni, Iowa, Independence, Missouri, and Sydney, Aust. The grandson of the original founder, Frederick M. Smith, is now president of the church. The headquarters of the denomination is at Independence, Mo.

RESEARCH COUNCIL, NATIONAL. Established in 1916 at the request of the President of the United States under the charter of the National Academy of Sciences. In 1918 the Academy was requested by executive order of the President to perpetuate the Council. It is a coöperative organization of the scientific men of America, including a representation of men of affairs and business men interested in industry and engineering and in the fundamental or "pure" science on which the "applied" science used in these activities depends. It is controlled by its own membership and supported by other than government aid, although it seeks to maintain close contact with government departments and organizations interested in specific scientific work and in the general promotion of science in the United States. It is composed of a series of major divisions, one group of seven divisions of science and technology representing physics, mathematics, and astronomy, chemistry and chemical technology, psychology and anthropology, geology and geography, biology and agriculture, medical sciences, and engineering; and another group of six divisions of general relations representing federal relations, foreign relations, States' relations, educational relations, research extension, and research information. Officers of the Council for 1922 are George E. Hale, Honorary Chairman; John C. Merriam, Chairman of the Executive Board; Charles D. Walcott, First Vice-chairman; Gano Dunn, Second Vice-chairman; R. A. Millikan, Third Vice-chairman; Vernon Kellogg, permanent secretary; F. L. Ransome, treasurer. The publications of the Council include the Annual Report, Bulletin and Reprint and Circular Series. Headquarters are care of the Smithsonian Institution, Washington, D. C.

REUNION. An island belonging to France, situated about 420 miles east of Madagascar. Area, 970 square miles; population (1912), 173,822, of whom 159,218 were Europeans, 130,000 of these being of French origin. Chief towns: St. Pierre, 29,481; St. Denis, 23,972; St. Paul, 18,646; St. Louis, 13,346. The chief port is Pointe de Galets which is connected by rail (state-owned) with St. Pierre. The elementary schools in 1920 numbered 169, with 361 teachers and 17,808 pupils. The chief products are: Sugar, rum, coffee, manioc, vanilla, tapioca, and spices, of which the chief exports are sugar and rum. In 1919 the imports were 41,759,750 francs; and the exports, 50,311,574 francs. In 1920 the budget balanced at 12,170,760 francs. It is under a governor, assisted by a privy council and an elective council in general, and it sends to the French parliament one senator and two deputies.

RHEUMATISM AND RHEUMATOID AFFECTIONS, CHRONIC. For a decade or more it has been realized that certain painful and disabling affections which closely resemble chronic rheumatism of the muscles and joints are due to or aggravated by the presence of small collections of pus in various parts of the system, notably infected teeth and tonsils. The eminent surgeon, Dr. J. B. Murphy of Chicago, looked forward to the time when our original conception of rheumatism as a disease of exposure, old age, and uric acid would give way to another based on what is termed focal infection. These affections include also what is popularly called neuritis. Many aggravated cases of these painful and incapacitating states have been cured or greatly benefited and invalids have been completely rehabilitated in this way. On the other hand, this idea has led to great abuses. An infected tonsil is best removed on general principles, perhaps, even if the owner seems in good health; but many teeth have been mistakenly pulled which might have been treated with success by conservative dentistry. Moreover, removal of infected teeth and tonsils may not lead to the desired result. In some cases this is due to overlooking some other focus of infection in the body of which there may be a number. These may be seated in the nasal passages, in the ear and in some of the pelvic organs of both sexes. The profession are beginning to realize that a search for a hidden deposit of pus in the body is a very exacting matter, involving the coöperation of a number of specialists. Even after the foci have all been localized and treated the patient may not recover his health; conversely there are individuals who may have badly infected mouths or nasal passages and yet preserve their health. Some of these cases of chronic rheumatism are of the type that yield readily to diet and medication. It is clearly best in the presence of these affections to begin with ordinary personal hygiene, diet and the use of drugs like atophan, cinchophen, tolysin, etc., in the belief that they are due to accumulation of uric acid. Here also belong the application of diathermic electricity, baking, ultraviolet light, massage and passive motion, mud baths and the use of alkaline mineral waters—in fact all of

our older resources which antedate the theory of focal infection. We may assume that the affected individual has kept his teeth in fair condition by occasional visits to the dentists. The patient who

MANUFACTURES. The accompanying table summarizes the final returns of the census of manufactures of 1919, with corresponding figures for 1914.

	1919	1914	Per cent of increase, 1914-19

fails to improve under the management for uric acid accumulation naturally comes under suspicion of focal infection and so widespread is the tendency to seek for occult pus deposits of small extent to explain chronic invalidism that teeth and tonsils have been removed for conditions like tuberculosis, trichinosis, or pork-worm disease, venereal rheumatism, pernicious anemia, gallstone disease and, in fact, almost the entire range of chronic infectious disease. At the first glimpse these overlooked diagnoses suggest a miscarriage of medical art but this is only partly true, for in many cases these subjects have really suffered from focal infections over and above their associated ailments and removal of the focus has been followed by remarkable benefit to the general state. Dr. Hartzell, a dentist who is also a physician, writes instructively of such cases in the *Journal of the National Dental Association* for September, 1921. He shows conclusively that in chronic invalidism attributed to infected teeth or tonsils some serious condition may be masked and that before removal of the foci it will be necessary to exclude numerous familiar causes of chronic disease, as tuberculosis, primary or pernicious anemia, diseases due to worms, gallstone disease, and appendicitis, venereal rheumatism, etc., etc. In some of these cases dental extraction or rather the use of the anæsthetic for that purpose may be very badly borne. Much of the abuse of the conception of focal infection has arisen from defective and unskilled interpretation of the radiograms of teeth, which should be left wholly to the judgment of an expert dentist.

RHODE ISLAND. POPULATION. According to the report of the census of 1920, there were 604,397 residents in the State, Jan. 1, 1920, as compared with 542,610 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	14,000	644,000	\$ 708,000
	1920	14,000	580,000	1,008,000
Hay.....	1921	46,000	151,000	1,367,000
	1920	46,000	151,000	1,685,000
Potatoes.....	1921	3,000	345,000	552,000
	1920	3,000	330,000	528,000

¹ Tons.

In 1920 there were 11 cities in the State—Bristol, Central Falls, Cranston, Cumberland, East Providence, Newport, Pawtucket, Providence, Warwick, West Warwick, and Woonsocket—having more than 10,000 inhabitants. The combined population of these cities in that year was 501,362, forming 83 per cent of the total population for Rhode Island, and in 1919 they reported 82.7 per cent of the value of the State's manufactured products. The predominance of corporate ownership is brought out by the following considerations: Although corporations owned but 34.6 per cent of the number of establishments in the State in 1919, they reported 90 per cent of the average number of wage earners and 91.2 per cent of the total value of products. During the five-year period 1914-19, the average number of wage earners in corporations increased 30,833, or 32.5 per cent, and the value of products, \$444,173,534, or 187.2 per cent.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Amendment of the corporation law; respecting working permits for backward children; amendment of laws relating to administration of estates (Sayles Probate Act); prescribing a course in fire prevention in the schools; providing for vocational rehabilitation of disabled persons and their return to civil life; prevention of sale of fraudulent "securities"; establishing a new milk standard and empowering cities and towns to regulate sanitation of milk; making all women subject to poll tax and provision for collection of poll tax on alien women; provisions for preventing and treating venereal disease; making an appropriation in aid of discharged soldiers and sailors out of employment; provision of requirements for bringing the State within the Federal registration area; disbaring women from serving on juries; increasing benefits to employees under the workmen's compensation law; authorizing cities to enact zoning ordinances.

OFFICERS. Governor, Emery J. San Souci; Lieutenant-Governor, Harold J. Gross; Secretary of State, J. Fred Parker; Attorney-General, Herbert A. Rice; Treasurer, Richard W. Jennings.

JUDICIARY. Supreme Courts: Chief Justice, William H. Sweetland; Associate Justices, Walter B. Vincent, Charles F. Stearns, Elmer J. Rathbun, John W. Sweeney.

RHODES SCHOLARS. See **UNIVERSITIES AND COLLEGES.**

RHODESIA. A territory belonging to Great Britain, situated to the north of the Transvaal and extending northward to the borders of the Kongo State and Tanganyika Territory (formerly German East Africa); constituting a British protectorate under the administration of the British South Africa Company whose charter dates from Oct. 29, 1889. It is divided into Northern Rhodesia, lying north of the Zambezi river; and Southern Rhodesia, to the south of that river, including Matabeleland and Mashonaland.

Northern Rhodesia, comprising the two former provinces of Northeastern and Northwestern Rhodesia which were amalgamated, August 17, 1911, has an area of about 291,000 square miles, with a native population of about 928,000 (Europeans estimated in 1919 at 2945). Seat of government, Livingstone on the Zambezi river. Chief agricultural products: Corn, tobacco, cotton, wheat, and fruits. Rubber is cultivated, and there is an abundance of timber. Minerals include: Gold, copper, zinc, lead, and coal. Imports in 1919, £434,354; exports, £454,366. Revenue, 1919-20, £149,792; expenditure, £215,288. Acting administrator in 1921, H. C. Marshall.

Southern Rhodesia has an area of about 149,000 square miles, with an estimated native population (1919) of about 770,000, and a European population, estimated at about 38,000. There are also about 3000 Asiatics and other persons of colored race. In 1919 there were 77 public and 4 aided schools, with 4674 pupils; and 696 native schools, with 39,381 pupils. There is a thriving fruit industry, especially of oranges and lemons to which development was assured by the construction of a dam across the Mazoe river in March, 1920, providing for the irrigation of the orange groves in the region. The acreage under crops in 1919 was 1,204,000, cultivated by natives; 210,000, by Europeans. There are rich resources of gold and other minerals. The output of gold from 1890 down to Jan. 1, 1921, was valued at £45,227,793. The mineral production for 1920 was valued at £4,450,988 as compared with £3,519,375 in 1919, the chief increase being in gold which in 1920 amounted to £3,056,549. Imports in 1919 were valued at £3,206,853. In Southern Rhodesia there were several branches of the Rhodesian railway system which begins in Cape Colony and extends to the Kongo State frontier. Revenue, 1919-20, £1,050,379; expenditure, £1,309,807. After 1916 Southern Rhodesia was under an administrator of the Company, aided by an executive council, appointed by the Company, and a legislative council, partly appointed by the Company and partly elected by registered voters. See **SOUTH AFRICA, UNION OF.**

RHYS-HERBERT, WILLIAM. American composer, died in Chicago, October 3. He was born at Resolven, South Wales, Oct. 3, 1868. For twenty-five years he lived in Minneapolis as organist, conductor, and composer of light operas. Among the most successful of his works are *The Nautical Knot*, *Bulbul*, *Sylvia*, and *The Wild Rose*.

RICE. Provisional estimates published by the International Institute of Agriculture, Rome, placed the rice production of the countries from which reports had been received as follows: Japan, 514,380,000 bu., Philippines, 80,344,000 bu., Ceylon, 13,776,000 bu., Italy, 23,624,000 bu.,

Spain, 15,502,000 bu., and Bulgaria, 224,400 bu. of rough rice. The world's production in 1921, by the same authority, was estimated approximately at more than 9,000,000,000 bu., so that the available data represented only a small part of the world's rice-producing areas. In 1920 British India produced 2,148,732,000 bu., and Indo China 226,193,000 bu. No data are published regarding the large rice production of China.

The rice crop of the United States in 1921, according to estimates by the Department of Agriculture, amounted to 39,653,000 bu. produced on 1,022,000 acres, the average yield being 38.8 bu. per acre, which was only slightly under the average acre yields of the two preceding years. The average farm values on Dec. 1, 1921, were 96.3 cts. per bushel, as compared with 119.1 cts. and 266.6 cts. on the corresponding dates of 1920 and 1919, respectively. As in previous years, Louisiana, California, Texas, and Arkansas were the important producing States, supplying about 90 per cent of the total yield.

In 1920 the production of the United States was 51,629,000 bu. and of the four States mentioned as follows: Louisiana, 25,200,000, California, 9,720,000, Texas, 9,554,000, and Arkansas, 8,889,000 bu. The highest average yield per acre in 1920, 60 bu., was secured in California. The rice crop of Japan in 1921, due to damage by rains and typhoons late in the season, was reduced to less than the approximate annual consumption.

RICE INSTITUTE. An institution of the higher learning at Houston, Texas; founded in 1912. The enrollment for the fall of 1921 was 878. The faculty numbered 53 with 73 fellows, assistants and student assistants. The endowment amounted to \$10,000,000 and the income to \$652,000. Gifts to the amount of \$8500 were received. The library contained 30,000 volumes. President, Edgar Odell Lovett.

RICHARDS, FREDERICK THOMPSON. Illustrator, died at Philadelphia, Pa., July 8. He was born at Philadelphia, Pa., May 27, 1864; studied at the Pennsylvania Academy of Fine Arts and the Art Students' League of New York City. He was on the staff of *Life* after 1889, and was cartoonist for various New York papers. Among his publications were: *The Royal Game of Golf* (a series of color prints); *Color Prints from Dickens*; and *The Blot Book*.

RICHARDS, JOSEPH WILLIAM. Metallurgist, died at Bethlehem, Pa., October 12. He was regarded as one of the leading authorities on aluminum. He was born at Oldbury, England, July 28, 1864, came to the United States in boyhood and was educated here. From 1887 he taught at Lehigh University, Bethlehem, Pa., being a professor of metallurgy there after 1903. He published in 1887 his treatise on aluminum which became the standard book in English and passed through three editions, and he was the author of several other valuable works on metallurgy.

RICHMOND, Sir WILLIAM BLAKE. British painter, died, February 11. He was born in London, England, Nov. 29, 1842; studied at the Royal Academy where he won two silver medals, and exhibited at the Royal Academy in 1860. From 1878 to 1883 he was Slade professor at Oxford, and he became president of the Society of Miniature Painters in 1899. He passed much of his time in Italy, Greece, and Egypt, and pub-

lished: *The Silver Chain* (1917), and *Impressions of Half a Century* (1919).

RICHTER, MAX. See NECROLOGY.

RICKETS. The disease rickets which consists chiefly of bone deformities appearing either in young children or later in life (late rickets), is generally believed to have been on the increase as a result of defective nutrition during the war. Even in the United States it is thought to be more common than usual and various theories have been advanced to explain it, such as exhaustion of the soil from excessive crop rotation during the war. But as far as can be determined ordinary rickets was not increased throughout the countries that were nearest to starvation. Certain other affections of the bones including the so-called late rickets, may have been more common but rickets in all probability is not due to defective nourishment nor to absence of the fat-soluble vitamine.

from the Federal aid funds. From the passage of the Federal Aid Act in 1916 to the close of the calendar year 1918 a total of about \$18,000,000 was paid out on Federal aid projects, about equally divided between money from the Federal treasury and from States and counties, this sum providing for 1706 miles of improved roadways. Up to Nov. 1, 1921, according to figures given out by Thomas H. MacDonald, chief, United States Bureau of Public Roads, 28,135 miles of highways had been completed or were under agreement under Federal aid, involving a total expenditure of almost a half billion dollars, of which the Federal government contributed about 40 per cent. The distribution of this mileage in accordance with types of improvement is shown by the accompanying table. Of the total mileage mentioned, about 21,000 miles had been actually completed.

FEDERAL AID ROAD PROJECTS COMPLETED AND UNDER AGREEMENT TO NOV. 1, 1921

Type	Cost		Mileage	
	Total	Federal aid	Total	Percentage of total
Graded and drained.....	\$ 55,704,253	\$ 24,721,021	6,864	24.4
Sand clay.....	22,226,362	10,495,172	2,696	9.6
Gravel.....	104,614,067	47,192,895	10,044	35.7
W. B. macadam.....	22,452,779	9,729,201	1,291	4.6
Bituminous macadam.....	41,412,557	18,646,066	1,323	4.7
Bituminous concrete.....	23,445,375	9,299,864	772	2.7
Concrete.....	184,021,245	75,600,279	4,654	16.5
Brick.....	22,039,845	6,925,483	444	1.6
Bridges.....	20,235,200	8,525,395	47	0.2
Totals.....	\$496,151,683	\$211,135,376	28,135	

The truth is that rickets not infrequently attacks fat and overfed infants which eat freely of foods containing lime and fat. Rickets is an affection greatly favored by absence of sunlight and fresh air and especially by lack of exercise. An ideal way of bringing it about would be to place a young child two years old in a barrel in a dark and unventilated room. One of the most efficient remedies is the exposure of the infant to direct solar light or what amounts to the same thing the use of ultraviolet rays as furnished by the quartz lamp. Rickets is a disease preëminently of civilized countries although most prone to develop in large industrial centres. It is in the latter that the neglect of child hygiene is greatest as not infrequently the women of the household work in the factories and the children have to be shut up in close quarters for many hours.

RINDERPEST. See VETERINARY MEDICINE.

RITCHIE, ARTHUR. See NECROLOGY.

RITCHIE, JOHN GERALD. British Indian civil service official, died at Chelsea, England, in May. His name is best known from its association with that of Thackeray the novelist, the families having intermarried. He was born at Calcutta, India, in 1853, educated at Cambridge and entered the Indian service. Latterly he opposed the Montagu-Chelmsford requirements and sharply criticised them in the press, although he was a Liberal in politics. He published a volume of family and personal reminiscences under the title of *The Ritchies in India*.

RITTER, PAUL. See NECROLOGY.

RITTNER, THADDÄUS. See NECROLOGY.

ROADS AND PAVEMENTS. Immense sums for highway construction continued to be expended during the year from the proceeds of state, county, and other local appropriations and

A new Federal Aid Act, effective Nov. 9, 1921, contained an appropriation of \$75,000,000, to be distributed among the several States—provided each Federal aid dollar is matched by a dollar provided by the State—on the basis of their population, area, and mileage, as in the case of the earlier appropriations except that under the 1921 act no single State is to receive less than one-half of 1 per cent of the total \$75,000,000, or \$365,625. This gives larger amounts than formerly to the four States of Delaware, New Hampshire, Rhode Island, and Vermont. The new law provides that in approving federal aid projects, the Secretary of Agriculture "shall give preference to such projects as will expedite the completion of an adequate and connected system of highways, interstate in character." The distribution of funds is further conditioned upon the highway department of any State receiving the money designating "a system of highways not to exceed 7 per cent of the total highway mileage of such state as shown by the records of the state highway department at the time of the passage of this act." This 7 per cent road system is to be divided into interstate and intercounty highways, the interstate highways to comprise three-sevenths of the system but not to exceed more than 60 per cent of the Federal aid allotment to that State without special approval by the Secretary of Agriculture. The act provides for more highly centralized State control of roads built with aid from the Federal fund than heretofore; provides also that the roads must be 18 ft. wide or more as a rule; and recognizes the importance of proper maintenance. Heretofore the Federal aid fund has been available if matched dollar by dollar from money provided by the State or the county or some other source, but under the 1921 act every dollar of Federal money must be

matched by a dollar of State money and all the construction must be under State control—subject to Federal approval.

In Canada a dominion appropriation of \$20,000,000 for road aid is available for use in five years, the dominion to provide 60 per cent and the several provinces 40 per cent of the cost of dominion aid roads. According to the *Canadian Engineer* of Jan. 10, 1922, there were 4726 miles of dominion aid road under construction, estimated to cost a total of \$29,220,667, or an average of \$6183 per mile. Detailed figures by provinces are shown in the accompanying table: The

CANADIAN DOMINION AID ROAD PROJECTS

	Mileage	Estimated cost	Average cost per mile
New Brunswick.....	1,200	\$ 3,058,708	\$ 2,571
Nova Scotia.....	168	1,790,325	10,605
P. E. Island.....	181	329,565	1,818
Quebec.....	243	2,712,226	11,116
Ontario.....	603	13,863,155	22,980
Manitoba.....	764	3,478,902	4,546
Alberta.....	None		
Saskatchewan.....	1,230	1,875,093	1,124
British Columbia.....	337	2,612,093	7,731
	4,726	\$29,220,667	\$ 6,183

variation in the cost per mile is obviously due to the character of the improvements, which in some of the provinces can be little if anything more than ditching and grading earth roads.

A notable event affecting both city pavements and highway road improvements (the latter often now being very little different than the former in character and cost) was an agreement to reduce the number of varieties of paving brick from sixty-six to eleven. This agreement was reached in Washington on November 15 at a conference between representatives of engineering societies and paving brick manufacturers, together with officials of the Department of Commerce. The standardization thus effected lies largely in sizes and patterns. All brick under the new standards will be 8½ in. long, but there will be a choice, limited compared with the past, in the other dimensions.

Highway construction has been on so vast a scale for some years past and municipal improvements in general have been so much restricted that little new comes to the front on the subject of city pavements. These seem to continue on very much the same old line and to be affected in many respects by the same general conditions as govern improved highway surfacing for heavy motor-vehicle traffic. There is an apparent movement toward the construction of municipally owned plants for building asphaltic and other bituminous pavements, especially plants for repair work. In March, 1921, the city of Philadelphia put in operation a municipal asphalt plant which is one of the largest city owned plants in the United States. It has a rated capacity of about 3700 sq. yds. of finished sheet asphalt surfacing per day, if devoted to that purpose alone, but the plant is also used to produce binder and bituminous concrete. In July, 1921, Philadelphia had some 620 miles of sheet asphalt and 115 miles of bituminous country road to keep in repair. For the present the plant mentioned will be used wholly for repair work.

ROBERTS, BENJAMIN KEARNEY. Army officer, died at Ossining, N. Y. July 16. He was

born at Memphis, Tenn., Nov. 28, 1846; and entered the Civil War as a lieutenant in the Iowa cavalry. He was on the staff of General George H. Thomas in 1865. After the war he entered the regular army, and had risen to the rank of major of artillery in 1899; colonel in 1903; and brigadier-general in 1905, when he retired after forty years of service.

ROCHE, ALEXANDER. Scottish painter, died at Edinburgh, March 10. He was born at Glasgow, August 17, 1861; and educated there and in Paris. His subjects are of great variety, including landscapes and figures, and many of them were exhibited in the United States as well as in Europe. Those in the United States include: "The Window Seat," in the Carnegie Institute, Pittsburg; and a portrait of Mrs. Andrew Carnegie and daughter (1903). Among his others are: "Tête-à-Tête" (1891); "Spring" (1900); "Prue" (1902); "An Old Song" (1902); "The Building of the Ship" (1905); "Old Harbor" (1907); "Pittenweem Harbor" (1908); "The Prison Gate, Mogador"; a portrait of himself (1916). His works are to be found in many foreign collections. They have been remarked for their refined handling and pleasing color, and his landscapes have been especially praised for their poetic insight.

ROCHESTER, UNIVERSITY OF. A non-sectarian co-educational institution of the higher learning at Rochester, N. Y.; founded in 1850. The enrollment for the fall of 1921 was 486 men and 391 women, and for the summer session of 1921, 96 men and 230 women. The faculty contained 74 members, of whom 14 were added during the year. The productive funds were \$14,417,133 and the income was \$762,456. The library contained 90,000 volumes, including 7000 in the Musical Library. The Eastman School of Music was opened for instruction, September, 1921. The School of Medicine and Dentistry was in process of organization and was expected to be open for instruction in the fall of 1924. President, Rush Rhees, A. M., D.D., LL.D.

ROCHESTER, N. Y. See GARBAGE AND REFUSE DISPOSAL.

ROCKEFELLER FOUNDATION. The Rockefeller Foundation was chartered by the State of New York in 1913, "To promote the well-being of mankind throughout the world." Although its chartered purposes are thus broad, it has so devoted its resources to programmes of public health and medical education throughout the world, that these have come to be regarded definitely as its fields. Its present resources are \$170,000,000, both the income and principal of which are available for appropriation. The Foundation accomplishes its work through (1) agencies which it creates to carry out specific programmes, and (2) other existing organizations unaffiliated with the Foundation, to which it makes appropriations to enable them to carry specific items of programmes in public health and medical education. Agencies of the first class are (1) International Health Board; (2) China Medical Board; (3) Division of Medical Education.

INTERNATIONAL HEALTH BOARD. This agency has from the beginning been under the directorship of Mr. Wickliffe Rose. During 1921 the Rockefeller Foundation made available for the use of this Board approximately \$2,500,000. This was expended in continuing and extending demonstra-

tions in the control of disease and in the development of coöperative public health programmes in different parts of the world. These programmes, always in coöperation with the governments concerned, were carried on during 1921 principally in twelve Southern States in this country in organizing efficient State and county health departments, in combating malaria and hookworm disease and in twenty-two foreign countries, states and islands in these diseases and yellow fever. Marked progress in world wide eradication of yellow fever has been made during the year; Guayaquil, Ecuador, an endemic centre from 1740 to May, 1919, remains free; an epidemic in Peru was quickly snuffed out before spreading to other countries. The Foundation's representatives have met with cordial coöperation in Mexico and in central and South American countries, regions where yellow fever is known to be endemic. A strong popular demand for preventive measures has been developed. Control measures have been instituted in every section of the world where yellow fever is known to exist. The International Health Board's Commission for the Prevention of Tuberculosis in France has continued, during 1921, its work begun during the war.

Thorough reorganization of public health agencies and administration is being carried out by many countries with the assistance of experts lent by the Foundation or its boards and by direct contribution of funds, notably Austria and Czecho-Slovakia. For the purpose of training native personnel and promoting greater efficiency and higher standards in public health, foreign fellowships for the study of public health in the United States have been provided. Those who have completed their training in previous years are taking the lead in progressive movements at home. Experts from various countries, as guests of the Foundation, have studied medical education and public health in the United States, Canada, and England.

As part of its public health programme, the Foundation has established and is maintaining a school of public health at Johns Hopkins University; is coöperating with Harvard University in developing the Harvard School of Public Health, and has made appropriations to New York University and Sao Paulo, Brazil, for the same purpose.

THE CHINA MEDICAL BOARD. This Board is charged with the development of the Foundation's programme of medical education in China. Mr. Roger S. Greene is director of this board. In September, 1921, the Peking Union Medical College was formally dedicated. This medical center was built by the China Medical Board which also provides for its annual budget. This group includes a medical school, pre-medical department, hospital and nurse training school. Aid is given by the Foundation through the China Medical Board to medical schools and hospitals already established in China, and fellowships and scholarships are provided to make possible advanced medical study in the United States, for medical missionaries on furlough and for Chinese physicians and nurses.

THE DIVISION OF MEDICAL EDUCATION. This agency is under the directorship of Dr. Richard M. Pearce, and has conducted investigations of medical education in the United States, Canada, western and central Europe, and the Far East. Five million dollars has been set aside to aid medical

education in Canada. The College of Physicians and Surgeons of Columbia University has been granted during the year \$1,000,000 toward a programme for reorganization of medical instruction in that institution. A coöperative programme, involving contributions of approximately \$4,000,000 by the Foundation, has been undertaken in connection with the medical centre in London, composed of University College and University College Hospital Medical School. Appropriations have been made to further the plan for developing a strong medical centre in Brussels.

Studies in nurse training, hospital administration and dispensary development are being made under Foundation auspices. The pay clinic at Cornell Medical School is being assisted as part of this programme. Emergency assistance in supplying American and British medical journals and in replenishing scientific equipment has been given to universities in Central Europe.

The executive officers of the Foundation are: George E. Vincent, president, and Edwin E. Embree, secretary. The offices are at 61 Broadway, New York.

ROGERS, WILLIAM KING. Physician, died, in 1921. He was born at Hastings, Minn., July 14, 1863; and graduated in medicine at the Medical College of New York University in 1889. After 1900 he was professor of otology at Ohio State University. He was surgeon or consulting surgeon of various hospitals, and a member of the important medical bodies within his specialty.

"ROMA," U.S. NAVY AIRSHIP. See **AERONAUTICS.**

ROMAN CATHOLICS. The constantly increasing prestige and influence of the Vatican as one of the direct consequences of the chaotic conditions, political and social, following the great World War was one of the outstanding features of the Church's record during the year. Some thirty governments were officially represented at the Holy See and five nuncios were delegated to the Central European states where the solitary one at Vienna used to suffice in former days. France restored her old diplomatic relations and the influential Archbishop Cerretti who began his notable diplomatic career at Washington was named in May the nuncio at Paris, and Archbishop Giardini was sent as a like official to Japan. Pope Benedict XV continued to favorably regard the more harmonious relations with the Italian government and in his formal public addresses and encyclical letters urged the return of a genuine Christian peace based on the principles of justice rather than the expedience of political greed and ambitions. He upheld the dignity of labor and the indissolubility of Christian marriage as the salvation of the family, the foundation of civilization, and the only true remedy for the social demoralization of the day. The Dante centenary was the occasion in May of an encyclical lauding the great poet as a disciple of St. Thomas of Aquin and wishing that his poetry should remain in the schools as a fruitful source of Christian truths. The Congregation of Rites met on November 28 and advanced the process of the beatification of John N. Neumann, who was Bishop of Philadelphia, U. S. 1852-60.

The changes in the College of Cardinals were numerous. These cardinals died: Philip Camassei, former Patriarch of Jerusalem, January 18; Andrew Ferrari, Archbishop of Milan, February 2;

James Gibbons, Archbishop of Baltimore, March 24; George Gusmini, Archbishop of Bologna, August 24; Augustus Dubourg, Archbishop of Rennes, September 25; Francis Cabrieres, Bishop of Montpelier, December 21. On March 7 the following cardinals were created: Dennis J. Dougherty, Archbishop of Philadelphia; Francisco Vidal Barraquer, Archbishop of Tarragona, Spain; Juan Benlloch y Vivo, Archbishop of Burgos, Spain; Karl Josef Schulte, Archbishop of Cologne; Michael von Faulhaber, Archbishop of Munich; Francesco Ragonesi, Papal Nuncio at Madrid. On June 13, three Italian Cardinals were added: Giovanni Tacci Porcelli, the Papal Major Domo; Camillo Laurenti, Secretary of the Congregation of the Propaganda, and Achille Ratti, Papal Nuncio to Poland.

At the end of the year there were eight vacancies in the College of Cardinals, 35 of its members having died during the Pontificate of Benedict XV.

THE HIERARCHY. With the death of the venerable Cardinal Gibbons, Archbishop of Baltimore on March 24, there passed away the last of the famous group of prelates that dominated the activities of the Church in the United States for two generations. The many new accessions to the ranks of the hierarchy have introduced new ideals, new influences and new methods. Besides the Cardinal the deaths of the year included: Bishop William A. Jones of Porto Rico, February 7; Bishop John P. Farrelly of Cleveland, February 13; Bishop H. G. Gabriels of Ogdensburg, March 24; Bishop Matthew Harkins of Providence, May 25; Bishop James Schwebach of La Crosse, June 6; Bishop J. M. Koudelka of Superior, June 24; Bishop Charles E. McDonnell of Brooklyn, August 8; Bishop Thomas Ogorman, September 18; Bishop James Trobec, retired, of St. Cloud, December 14, and Bishop Thomas Grace, of Sacramento, December 27.

To fill the vacancy made by the death of Cardinal Gibbons, Bishop Michael J. Curley was transferred from St. Augustine, Fla., and promoted to the Archbishopric of Baltimore, August 5. The other appointments to the vacant sees were: Bishop J. F. Canevin of Pittsburgh made titular Archbishop of Pelusium, January 10, and succeeded in Pittsburgh by the Rev. Hugh C. Boyle, April 27; Joseph McGrath, Bishop of Baker City, January 3; Francis J. Tief, Bishop of Concordia, March 30; E. Ledvina, Bishop of Corpus Christi, and M. F. Burke, Administrator of St. Joseph, Mo., April 27; August Schwertner, Bishop of Wichita, June 8; William A. Hickey, Bishop of Providence, June 13; Joseph Schrems, Bishop of Cleveland; Samuel A. Stritch, Bishop of Toledo, August 5; George C. Caruana, Bishop of Porto Rico; John J. Dunn, Auxiliary of New York; Michael J. Crane, Auxiliary of Philadelphia, August 19; Thomas H. O'Leary, Springfield, Mass., September 8; Thomas E. Molloy, Bishop of Brooklyn; Alexander J. McGavick, Bishop of La Crosse, and Edward F. Hoban, Auxiliary of Chicago, November 21; Joseph G. Pinten, Bishop of Superior, December 3; James P. Cronin, Administrator of Louisville, December 16.

CONVOCATIONS. The annual meeting of the hierarchy, Cardinal O'Connell, presiding began at Washington, September 21. It adopted resolutions favoring the limitation of armaments; the peaceful settlement of the Irish question, and selection of February as press month to help the prosperity

of the Catholic press. Reports showed the accomplishments of the Welfare Council during the year to have been the most successful since the inauguration of these annual meetings in 1919.

Important conventions were the Supreme meeting of the Knights of Columbus at San Francisco, August 4, at which the total membership was reported as 758,155, an increase of 87,600 during the year. The Catholic Young Men's 47th annual National Convention, at Atlantic City, urged a continuation of welfare work among boys. The National Conference of Catholic Charities, at Milwaukee, September 18-22, devoted the sessions to the problems of social hygiene, dependent children, moral welfare, and delinquents. The National Catholic Union of Men met at Washington on September 23 and of Women on October 19—and adopted inspiring programmes of social and community service; protective work for immigrants, travelers, and young girls.

American missionary activity in the Far East received a special impetus. In June, twenty Jesuits left for the Philippines to take over the work of the Spanish members of the Order who had gone to India to replace the missionaries there who had been displaced by the incidents of the World War. In January five Jesuits from St. Louis, Mo., went to India for the same purpose. Later five members of the Passionist order went to China as the first representatives of that order to do missionary work there.

A new Jesuit province, taking in all the new England States, was established with headquarters at Weston, Mass.

STATISTICS. The total membership of the Catholic Church in the United States and its possessions is given in the *Official Directory*, for 1921 as 28,122,859 of which number 17,885,646 are in continental United States, an increase here of 150,093 over the previous year and of 300,000 in the grand total. During 1920 the converts to the Church in 101 dioceses numbered 39,000 adults. There are in the United States 16 Archbishops, of whom 2 are Cardinals; 93 bishops; and 21,643 priests, an increase of more than 600. During the year 182 new parishes were organized increasing the total of churches, with resident priests to 18,790, as against 10,608. There are 5790 missions with churches, making the total of 16,580 churches and of these 399 were newly erected during the year. The free parochial schools number 6048 with an average attendance of 1,771,418. Four new colleges for boys, 16 academies for girls, and 2 orphanages were built. The number of orphans cared for is 46,777.

Under the direction of the Department of Education of the National Catholic Welfare Council (the official bureau of the Catholic bishops) a directory of the Catholic educational institutions of the United States was compiled for the first time and a summary of all the details gives these figures:

	Schools	Faculties	Students
Universities.....	16	2,000	19,802
Seminaries.....	51	1,063	6,667
Colleges.....	114	1,897	18,891
High schools.....	1,552	7,924	129,838
Religious seminaries.....	113	not given	4,581
Training schools.....	309	not given	10,544
Elementary schools.....	6,551	41,581	1,795,673
Totals.....	8,706	54,265	1,981,051

The elementary schools, consist of 5690 parochial, 503 private, and 358 institutional schools; 309 religious novitiates and normal training schools; and 113 religious seminaries.

Stated in terms of grades, there are 41,581 elementary school teachers (38,002 parochial, 1208 private, and 2371 institutional school teachers); 7924 high school teachers; 1697 college professors; 1063 seminary instructors, and 2000 university professors. The classification of the faculties of the schools shows 507 from the diocesan clergy, 4229 religious (men), 35,780 religious (women), 5871 lay, 7618 religious (unclassified), 114 unclassified, and 146 special teachers. There is a total of 766,034 boys in the schools as against 816,971 girls, and 398,056 unclassified. In the colleges (not including those in secondary departments) there are 15,566 male and 2385 women students, and the total enrollment for all colleges, including those that maintain secondary departments, was 37,890 of both sexes. St. Louis University had the largest enrollment; Georgetown the second, and Fordham the third. The Jesuits conducted 25 of the 74 colleges for men.

ROMAN CATHOLIC STATISTICS. The estimate of the Catholics in England and Wales, according to the *Catholic Directory*, is 1,931,991 as against 1,915,475 for the previous year. Children's baptisms increased from 58,092 to 77,721; marriages from 21,751 to 23,940, and conversions from 10,592 to 12,621. There are 4560 priests as against 4570, the decrease being accounted for by the war. Churches and chapels have increased by three, the number being 2363. There are three less secondary schools, although the number of pupils has increased to 43,965. Elementary schools decreased by eight. The number of pupils given is 316,917.

The centenary celebration of St. Mary's Cathedral, Sydney, the mother church of Australasia, in October showed that at present the Catholics in Australasia number 1,104,116, with 2165 churches, 1185 secular priests, 392 regular priests, 664 religious Brothers, 8082 nuns, and a Catholic school system, with 178,347 pupils.

ROMANCE LANGUAGES. See PHILOLOGY, MODERN.

ROSA, EDWARD BENNETT. Physicist at Washington, D. C., died, May 17. He was born at Rogersville, N. Y., Oct. 4, 1861; and graduated at Wesleyan University in 1886 where he was professor of physics from 1891 to 1902. In 1901 he was appointed to the Bureau of Standards as physicist and became chief physicist after 1910. He contributed extensively to American and European journals on the subjects of physics and electricity, making a specialty of theoretical and applied electricity and electrical measurements. He was in charge of the electrical division of the Bureau of Standards.

ROSEN, BARON ROMAN ROMANOVITCH. Diplomat, died in New York City, December 31, as a result of an injury from an automobile accident on December 14. He was Russian ambassador to the United States 1905-11 and after the Bolshevik revolution was obliged to take refuge in this country where he spent his last years in writing extensively for American magazines and preparing his memoirs. He was born in 1847, the descendant of Swedish ancestors who had settled in Lithuania after the wars of Gustavus Adolphus

and had acquired great wealth and prominence. He was educated at the University of Dorpat and later studied law in Petrograd. He was exceptionally qualified for diplomacy by his great gift for languages, social tact, and general cultivation. He began his career in diplomacy at the Russian Legation at Tokyo. He first came to this country as consul-general at San Francisco; next as chargé at Washington and later as consul-general at New York. The diplomatic posts held by him in other countries included ministries in Mexico, Serbia, Bavaria, Greece, and Japan, after which he became ambassador at Washington in 1905, succeeding Count Cassini. He and his family lost everything under the Bolshevik régime and he succeeded in escaping only after many dangers and difficulties, arriving in New York with only a small amount of money. For a long time he lived by the sale of his wife's jewels, but despite his age he became a very successful writer for the magazines, his articles being widely circulated. A part of the material was gathered and supplemented by him for a book under the title of *Forty Years of a Diplomat's Life* and shortly before his death its publication was undertaken by a London publisher. He spoke English, French, German, Italian, and Japanese. His command of English was remarkable.

ROSSMORE, DERRICK WARNER WILLIAM WESTENRA, Fifth Baron. British sportsman, died at Rossmore Park, Ireland, February 3. He was celebrated as a fox hunter and also for his social qualities. He succeeded his brother as baron in 1874. A book published by him in 1912 under the title of *Things I Can Tell* was widely known for its anecdotes and reminiscences of sporting and social experience.

ROUGEMONT, LOUIS DE. British author, died in London early in June. He was born in 1847 and in the last decade of the nineteenth century drew attention by his tales of adventure among the aborigines in Australia and the South Seas. A considerable sensation was caused by the disclosure that the accounts were fictitious. He died in the Kensington Infirmary to which he had been admitted under an assumed name. The name of Rougemont was, it is said, assumed; his real name was believed to be Henry Louis Grin, and he was said to be the descendant of a French-Swiss family.

ROWING. The Duluth Boat Club of Duluth, Minn., carried off the amateur rowing honors in the United States in 1921, being victorious in the national singles, fours, and eights. The championships were held under the auspices of the National Association of Amateur Oarsmen of America at Buffalo, N. Y., in August, the winners in the more important events being:

Senior eight-oared shells, Duluth Boat Club; junior eight-oared shells, Worcester A. C.; intermediate eight-oared shells, University of Toronto Rowing Club; senior international four-oared shells, Vesper Boat Club, Philadelphia; senior four-oared shells, Duluth Boat Club; single sculls, Walter Hoover, Duluth Boat Club; double sculls, Paul Costello, bow, and Jack Kelly, stroke, of the Vesper Boat Club, by default.

The intercollegiate regatta returned to Poughkeepsie after a lapse of four years, but the varsity race was contested over a three-mile course for the first time. The crew of the U. S. Naval Academy, which won the Olympic championship

in 1920, was the victor in the chief event with the University of California second and Cornell University third. Cornell won the freshman race, Syracuse being second and Pennsylvania third. The four-oared contest also was captured by a Cornell crew.

The annual Harvard-Yale regatta on the Thames resulted in a triumph for Yale, despite the fact that as a result of a quarrel between Guy Nickalls and the college rowing authorities, the former resigned as coach a few days before the date for the classic. Harvard's only winning crew was its junior eight. Several dual and triangular college regattas were held during the year, the Princeton oarsmen making an especially good showing.

Cambridge won the annual race with Oxford.

RUBBER. Rubber in 1921 suffered from the results of over-production and curtailed demand. In the eastern rubber producing regions there was a reduction in acreage and in further planting, quite a reaction from the excitement and activity of a few years previous. The estimated eastern plantation output of rubber for 1921 was placed at not more than 200,000 tons, or but 65 per cent of the 309,100 tons produced in 1920. It was also estimated that the rubber industry of the United States would require 242,000 tons for 1922, as compared with 229,000 tons in 1921, and as the United States was the market for about 70 per cent of the world's production, it was evident that the year's supply might not equal the demands of the industry. However no such fears were expressed as the world stocks of raw rubber were estimated at between 125,000 and 175,000 tons. So that it seemed at the end of the year that there was plenty of rubber still obtainable, and in addition no extraordinary demand or use likely to develop.

AUTOMOBILE TIRES. Naturally motor car tires form a leading consumption of rubber and it had been estimated by rubber company statisticians that about 32,000,000 tires would be required for the year 1921 to replace those worn out on the 9,211,295 cars registered at the end of 1920, at the rate of $3\frac{1}{2}$ tires per vehicle. The 1921 production totaled only 19,379,000 pneumatic tire casings, 24,157,000 inner tubes and 377,000 solid tires, and in this number were included not only the replacements but 6,720,000 tires for the 1,680,000 new cars produced. This represents a decrease of 33 per cent from the 32,400,000 tires produced during the year 1920.

It was believed that in addition to greater care and economy and decreased use of cars that still greater mileage was being obtained from the more general use of cord tires of ever-improving quality, and some authorities express the belief that the generally accepted ratio per car for annual replacements, $3\frac{1}{2}$ tires, might again have to be lowered. During 1921 it was only $1\frac{1}{2}$ tires per registered car, but as low a ratio cannot continue.

Conservative rubber men believe, however, that the actual demand in 1922 would be about two tires per car, or 20,000,000, making a total demand of some 28,000,000 tires and 35,000,000 tubes. The small number of solid tires produced in 1921 indicated conclusively the steady gains being made by giant pneumatics as equipment for trucks.

During the year the Tire and Rim Division of

the Society of Automotive Engineers, recommended that the S. A. E. standard for pneumatic tires and rims be revised by eliminating the 32 by $3\frac{1}{2}$, 33 by 4 and 33 by $4\frac{1}{2}$ -inch rim sizes and the corresponding regular and oversize tire sizes, and by adding the 30 by $3\frac{1}{2}$ -inch straight-side rim and the 31 by 4-inch oversize straight-side tire. The adoption of this proposal would reduce the standard to 5 rim sizes and 9 tire sizes for passenger cars and an equal number for motor trucks.

This action was taken in view of a widely expressed demand for greater simplicity and coöperation. Rubber manufacturers recalled that the original list of standard pneumatic tire sizes which was first adopted by the Association of Licensed Automobile Manufacturers nearly 15 years previously has been changed at frequent intervals, additions generally being made until during the war a definite schedule for eliminating certain sizes by groups at stated intervals of time was approved. This did not become effective and the standard was more or less disregarded by many car and tire manufacturers for use on new equipment.

However at a conference held in Cleveland in November, 1920, and attended by tire, rim, and automobile manufacturers a resolution was passed that the Society appoint a special committee representing the National Automobile Chamber of Commerce, the Rubber Association of America, and the Society of Automotive Engineers, for the purpose of carefully studying the existing conditions and preparing a recommendation satisfactory to the organizations represented and the industry in general.

The committee thus appointed conferred with the automobile and tire manufacturers and after careful study and many conferences the proposal recommended was finally agreed upon, submitted to the Standardization Committee of the Tire Manufacturers' Division of the Rubber Association of America, which approved it, and to the National Automobile Chamber of Commerce.

PROPOSED S. A. E. TIRE AND RIM RECOMMENDED PRACTICE

Type	Rim Size	Type	Tire size		Tire-seat Diameter
			Regular	Oversize	
Passenger car...	30 x $3\frac{1}{2}$	C	30 x $3\frac{1}{2}$	31 x 4	23
	30 x $3\frac{1}{2}$	SS		31 x 4	23
	32 x 4	SS	32 x 4	33 x $4\frac{1}{2}$	24
	32 x $4\frac{1}{2}$	SS	32 x $4\frac{1}{2}$	33 x 5	23
	34 x $4\frac{1}{2}$	SS	34 x $4\frac{1}{2}$	35 x 5	25
Motor truck...	34 x 5	SS	34 x 5	36 x 6	24
	36 x 6	SS	36 x 5	38 x 7	24
	38 x 7	SS	38 x 7	40 x 8	24
	40 x 8	SS	40 x 8	42 x 9	24
	44 x 10	SS	44 x 10		24

All dimensions in inches.

The list of tire and rim sizes revised in accord with the proposal of the Division is given in the table. The Division recommends that the proposed list be used by passenger-car and motor-truck designers to select tire sizes for apparatus not yet in production, or at such a time as a change to a recommended size can be logically made.

Another development of the year was the doing away with the mileage guarantee on tires and the adoption of a standard warranty covering possible defects in manufacture. See **CHEMISTRY, INDUSTRIAL.**

RUCKMAN, JOHN WILSON. Army officer, died at Brookline, Mass., June 7. He was born at Sydney, Ill., Oct. 10, 1858; graduated at the United States Military Academy in 1883; and became major, June 30, 1906; colonel, March 7, 1912; brigadier-general, July 20, 1916; and major-general, August 5, 1917. He was the first editor of the *Journal of United States artillery*. He served in the army of occupation in Cuba from 1899 to 1901; and was inspector-general in the Philippine Islands from 1911 to 1912. During the trouble on the Mexican border he was in command of the districts of El Paso and Laredo from 1916 to 1917. From 1917 to 1918 he was in command of the southern department of the artillery; and in the summer of 1918, of the north-eastern department, Boston; and after July 21, 1918, of the North Atlantic coast artillery, Boston. Besides many technical articles in the *Journal of United States artillery*, he wrote: *The Command and Administration of the Fortress of Port Arthur during the Russo-Japanese War*. He was the inventor of many devices for use in war.

RUHR BASIN. An important industrial and mining region of Germany, temporarily occupied by the French forces in 1920 after disturbances had occurred there which the German government had not succeeded in repressing. A description of the region and an account of the incident are given in the preceding YEAR BOOK. During the year threats of occupation were frequently made in France on account of difficulties in the matter of reparations.

RUMANIA. A constitutional monarchy, situated on the Black sea; separated from Hungary by the Carpathian Mountains and the Transylvanian Alps; from Bulgaria by the Danube river; and from Russia by the Pruth river. Capital, Bucharest; before the war consisting of the former principalities of Wallachia and Moldavia which had been united since 1861, and of the territory of the Dobrudja, but as a result of the war Bessarabia was joined to it in March, 1918; Bukovina in November, 1918; and Transylvania in December, 1918. Area before the war, 53,489 square miles; population, including the territory taken from Bulgaria by the treaty of Bucharest, August 7, 1913, 7,516,418. In 1920, including the additions resulting from the war, the area was given at 122,282 square miles; and the population, at 17,393,149. For population by divisions see preceding YEAR BOOK. Chief cities with their populations: Bucharest, 308,987; Chisinau, 114,100; Czernowitz, 87,128; Ismail, 85,600; Jassy, 76,120; Galatz, 73,512. There is great racial diversity, especially in the Dobrudja territory where many Turks and Tatars are found in addition to Bulgarians, Russians, and Germans. In central Moldavia and eastern Transylvania many Magyars are found; and in southern Transylvania and the Banat there are numerous Saxons and Suabians. The movement of population in 1918 was as follows: Births, 103,072; deaths, 297,310; marriages, 57,345. Education is free and compulsory. In 1918-19 the elementary schools numbered 5764, with 11,088 teachers and 692,896 pupils. There are 4 universities, namely, at Bucharest, 289 teachers and 4644 students; at Jassy, 172 teachers and 952 students; Cluj in Transylvania (founded in 1919), 1980 students; and at Czernowitz in Bukovina (founded in 1920).

PRODUCTION AND COMMERCE. The chief crops are: Corn, wheat, oats, barley, and rye. In 1920 the area under corn was 4,051,494 acres and in 1919 the production was 2,597,000 tons. The area under wheat in 1920 was 2,095,890 acres and the production in 1919 was 1,320,000 tons. The acreage under forests was about 18,750,000. The chief minerals are: Lignite, salt, petroleum, and iron and copper ores, and the total output in 1919 was 919,847 metric tons. The chief exports in 1919 in respect to value were: Petroleum and bitumen; vegetables, flower seeds, and plants; mineral water and salt; timber; and other manufactures. The chief imports were: Vegetable fibres and their manufactures; cereal and cereal by-products; wool and hair and their manufactures; ready-made clothing; hides and their manufactures; mineral food products. The trade in 1919 was given as follows: Imports, 3,582,945,633 lei; exports, 103,891,198 lei (1 leu = a franc).

FINANCE. The budget for 1920-21 was as follows: Revenue, 6,115,920,000 lei; expenditure, 6,036,171,967 lei. The public debt, April 1, 1921, was 20,311,293,312 lei, exclusive of the proportions of the Austro-Hungarian and Russian debts assumed by Rumania which were estimated at a total of 10,000,000,000 lei. Expenditures for 1921-2 were estimated at 7,708,477,296 lei.

The Rumanian monetary unit, the leu, which at par has a value of a franc (in United States currency, 19.3 cents) was quoted on December 10 in New York at between .8 and .9 of a cent (\$0.008417). During the six months preceding, it had followed somewhat closely the downward course of the German mark. It declined from about \$0.015 in July to a minimum of about \$0.005 at the beginning of November, after which it rose. The beginning of November was accompanied by a run on the banks in Bucharest and one of the important banks failed. The government, however, adopted a law providing for a heavy tax on capital, which promised to improve the financial situation.

SHIPPING. The merchant navy in 1919 contained 158 vessels of 71,158 tons. The vessels entering the ports in that year numbered 10,546 of 2,991,095 tons.

RAILWAYS. The railways in 1920 had a mileage of 7240. Reports indicated improvement in passenger transportation since 1918 but it was still far from adequate. The loss during the German occupation was placed at 1500 passenger cars but these were replaced by requisitions during the occupation of Budapest in 1919. The rolling stock thus requisitioned amounted to 1292 locomotives, 2000 passenger cars, 700 postal cars, 28,918 freight cars, and 2371 tenders, but the stock was said to be in bad repair. During the year Rumania was seeking to restore and rehabilitate its transportation systems. A grant of 400,000,000 lei (approximately \$44,081,600 at the normal rate of exchange) was reported made to the Ministry of Communications for alterations and improvements, the greater part of which was to be used in the repair of the permanent way and material and to the enlargement and completion of railway shops. Inasmuch as practically nothing had been done to replace the bridges destroyed during the war, many branch and some main lines were still out of service in 1921 and much was necessary to restore and standardize track. The rolling stock also was in bad condition, the pas-

senger coaches being generally without windows and upholstery. Ten million lei (approximately \$1,927,040 at the normal rate of exchange) was appropriated for the standardization of railway lines in the newly acquired provinces of Bessarabia, these lines being on the broad gauge system used in Russia, of which Bessarabia formerly was a part. In the effort to secure new equipment the Société Franco-Roumaine du Matériel du Chemin de Fer was organized in Bucharest for the manufacture of railway rolling stock. Furthermore, the Rumanian State Railway Administration ordered 150 locomotives and 1500 freight cars from Germany. In this connection it was reported that Rumanian factories acquired by Hugo Stinnes had begun the construction of 2000 locomotives for the Russian Soviet government. The programme of the Rumanian Ministry of Public Works provided for the construction of the following railroad lines: Liveseni-Bumbesti, 27 kilometres (1 kilometre = 0.62137 mile), to establish direct communication between the coal district of the Jiu Valley and old Rumania; Brasov-Nehoiias, 100 kilometres, to relieve the congestion on the Brasov-Predael-Ploestie line; and Ilva-Mica-Vatra Dorna, to connect the Transylvanian system with Moldavia and the Bukovina.

GOVERNMENT. Executive power is in the king (Ferdinand I, born, August 21, 1865; Crown Prince, Carol, born, Oct. 15, 1893) who acts through a responsible ministry; and legislative power is in a senate and chamber of deputies. The parliament at the beginning of 1921 was distributed among the various political groups as follows: Peoples Party, 215; Federal Democrats, 34; Bessarabian Peasants, 25; Transylvanian Nationalists, 21; Socialists, 19; Independent Democrats, 6; other groups, 12. The ministry at the beginning of the year was constituted as follows: Prime Minister, General Averescu; Foreign Affairs, Take Jonescu; the Interior, M. Argetoiano; War, General Rascano; Finance, M. Titulesco; Justice, Michel Antonescu; Agriculture, M. Cudalbu; Public Works, M. Petrovici; Public Instruction, M. Negulesco; Fine Arts and Public Worship, Octavian Goga; Communications, General Veleano; Labor, Francou Jassi; Commerce and Industry, Octavian Tagloanu; Transylvania, M. Mocsonyi; Bukovina, Baron Starcea; Bessarabia, Serghie Nitza. See NAVAL PROGRESS.

HISTORY. On March 30 the Rumanian government informed the Supreme Council that, while it approved a modification of the Treaty of Sévres, it reserved for Rumania access through the Straits to the Black sea. On June 8 Rumania signed with Jugo-Slavia a treaty to maintain the status of the peace treaties of Bulgaria and Hungary. On September 12 it was announced that the Soviet government had declared a state of war in Bessarabia. This government had not recognized the decree of the Supreme Council which had been ratified by the Council of the League of Nations giving Bessarabia to Rumania. For two years past Bessarabia had been under the civil administration of Rumania. Its area was about 18,000 square miles and its population about 2,000,000, half of whom claimed to be of pure Rumanian stock, and the other half consisted of Russians, Tatars, Slavs, Greeks, Armenians, Jews, and gypsies. On December 12 a ministerial crisis occurred as a result of the resignation of the minister of foreign affairs and justice and a new cabinet was an-

nounced, December 19, under M. Take Jonescu, constituted as follows: Premier and Minister of Finance, Take Jonescu; Foreign Minister, G. O. Derussi; Minister of War, General Holban; Interior, M. Camarasesco; Justice, Selian Popesco; Worship, Demetresco Braila; Domains, M. Vladesco; Industry and Commerce, M. Ormola; Agriculture, M. Demetresco; Works, M. Lucasiowits; Transportation, M. Cihodariu; Labor, M. Xen; Education, M. Mironescu; Minister for Transylvania, M. Brediceanu. See WAR OF THE NATIONS.

RUMANIAN LANGUAGE. See PHILOLOGY, MODERN.

RUSSELL SAGE FOUNDATION. A foundation organized in 1907 for the improvement of social and living conditions in the United States. The endowment of about \$15,000,000, was given by Mrs. Russell Sage in memory of her husband. The Foundation is primarily an educational institution. It does not attempt to relieve individual or family need or to duplicate the work of existing social agencies. It studies and interprets facts with regard to social conditions and methods of social work, makes this information available by publications, conferences, and other means of public education, and seeks in various ways to stimulate community action for social betterment.

The work of the Foundation is carried on through a general office, through a limited number of subsidies to other organizations, and through the following departments: Charity Organization, Child-Helping, Industrial Studies, Library, Publications, Recreation, Remedial Loans, Statistics, and Surveys and Exhibits. Departments of the Foundation, now discontinued, were with their directors: Child Hygiene, Luther H. Gulick; Education, Leonard P. Ayres; and Southern Highland, John C. Campbell.

The Charity Organization Department, Mary E. Richmond, Director, has continued its work of studying and teaching in the field of social case work. A four weeks' Institute of Family Social Work was held, as usual, for practical workers who wished to supplement experience by study. The report of one of the standing committees of the Institute, "The Training of Case Workers," was published in *The Family*. The annual conference of Case Work Supervisors was also held in the offices of the Department.

Proceeding with its investigation of the administration of marriage laws, the Department has extended its field work to some 40 cities in 14 different States. New material, which is in preparation, will be of service to social agencies, civic and legislative bodies and others concerned with the administration of marriage laws. The publication of the digest of "American Marriage Laws" in 1919, has led to increased interest in the subject of marriage law enforcement by license issuers, court officials, clergymen and others.

A book by Mary E. Richmond, *What Is Social Case Work?* an introductory description of what social case work is, why it is, and the relation it bears to other forms of social work has been completed and is now ready for publication.

The Department of Child-Helping, Hastings H. Hart, Director, has conducted its regular work for the welfare of dependent, delinquent, neglected, and defective children. The business of

the Department is carried on by means of office interviews, committee meetings, public addresses, visits to institutions, letters of advice, counsel with reference to building new institutions or remodeling old plants, information regarding standards of administration, legislative campaigns, personnel, and child welfare in general. The Department is engaged in an extensive survey of schools for delinquent children which will include about 150 reformatories for boys and girls. Since no comprehensive study of such institutions has been published in this country, it is expected that the investigation will furnish valuable material to those concerned with juvenile delinquents.

The present activities of the Department of Industrial Studies, directed by Mary Van Kleeck, centre in the investigation of various forms of employees' representation. The purpose of these studies is to make available, in published form, the experiences of those companies which have been experimenting in efforts to give to the workers a large share in determining the conditions of their employment.

The Department of Recreation, Lee F. Hanmer, Director, in addition to its usual functions, which comprise answering inquiries about problems of local recreation and legislation, lending lantern slides, helping with information on local undertakings and keeping in touch with progress in the field of public recreation, has given special attention to community centre development and to work with New York City recreation agencies and organizations for better film exhibitions. *The Community Centre*, official organ of the National Community Centre Association, was edited by the Department, and a pamphlet was issued by Clarence A. Perry, Associate Director, entitled "Ten Years of the Community Centre Movement." The Department has been interested in the development of several New York organizations which are seeking to improve public recreation facilities. It promoted for a season, as an experiment, a Registered Acquaintance Dancing Club, which has now become self-supporting. Through the New York Drama League, attention has also been given to the development of the Little Theatre movement. A study of the motion picture industry, which includes an intensive survey of local efforts to establish censorship, is in process. New publications of the Department are: *Sources of Information on Play and Recreation (Revised)*; *Contributions to Community Centre Progress*; and *Motion Pictures for Schools, Churches, Clubs and Community Centres*.

The Department of Remedial Loans, in connection with the Uniform Loan Bill, has carried on its usual legislative work. The bill was enacted in Iowa, and campaigns which were successful only in arousing public interest were conducted in Michigan and Minnesota. The Department has continued its work to promote credit unions and assisted in the reorganization of the New York State Association of Credit Unions. An investigation of saving and loan associations is still in process.

The Department of Statistics' work, directed by Ralph G. Hurlin, is twofold: the first is a practical review of material prepared for publication by the Foundation; the second is statistical research which is at present centred upon a study of the change in the economic condition of the American workingman during the development

of industry in this country. Articles by Dr. Hurlin, which embody the results of phases of various researches of the Department were published during the year in *School and Society*, the *Annalist*, the *Journal of Heredity*, the *School Board Journal* and *World Agriculture*.

The Department of Surveys and Exhibits immediate concern, Shelby M. Harrison, Director, is studying the methods employed in community projects involving the collection and educational use of facts, advising with those facing practical problems in these fields and spreading chiefly through its publications, the information and experience thus gained. In working out methods for making surveys and of interesting the public in social facts, the Department is in touch with many social agencies. One new book, *Social Conditions in an American City*, by Shelby M. Harrison, was issued during the current year. This is a summary of the findings of the Springfield (Ill.) survey, with the recommendations made for improving conditions and a description of methods used in making the survey. Several studies are in process, among them, *Public Employment Methods*, *Social Welfare and Educational Publicity*, the *Social Survey Handbook*, and the *Survey Bibliography and Source Book*. *Arts and Crafts of the Homelands*, by Allen Eaton, a book which describes two notable exhibits of the native arts and crafts of immigrant people in America, is now ready for publication.

A special library, open to the public, containing over 20,000 books and about 63,500 pamphlets on social subjects is maintained by the Foundation. Classes of books in which the library is especially strong are: child-welfare, medical inspection, school feeding, public health, garden cities, town planning, industrial problems, penology, and the care of the defective. The library receives 250 periodicals and keeps complete files of proceedings of national and international conferences, as well as Federal, State and institutional reports. The service of the library includes bibliographical help, ranging from two or three titles to a comprehensive bibliography, furnished upon request. The library issue bi-monthly bulletins containing bibliographies on social questions. New numbers in the series are: *American Foundations*, *Community Health*, *Books on Social Subjects* (published in 1920), *Financial Federations and Coöperation*. The most recent publication of the library is the *Social Workers' Guide to the Serial Publications of Representative Social Agencies*, by E. M. Rushmore. This is a checklist of the publications of 4000 institutions and organizations, arranged alphabetically and by subject. It also contains a selected list of periodicals of value to social workers and libraries. The librarian and Director of the Department of Publications is Frederick W. Jenkins.

The trustees of the Foundation are: Robert W. de Forest, President; Mrs. William B. Rice, Vice-president; Frederic A. Delano, John H. Finley, Charles D. Norton, Miss Louisa Lee Schuyler, Mrs. Finley J. Shepard, Dwight W. Morrow, and John M. Glenn, who is also Secretary and General Director. Headquarters are at 130 East 22d Street, New York.

RUSSIA. A republic, officially entitled the Russian Federative Republic (familiarily known as the Russian Soviet Republic) stretching over a vast area in eastern Europe and northern Asia;

boundaries unsettled at the close of the year on account of incomplete arrangements with border states. (See below under *History*, and the articles, ESTHONIA, FINLAND, LATVIA, LITHUANIA, POLAND, GEORGIA, ARMENIA, AZERBAIJAN, UKRAINE.)

AREA AND POPULATION. The area of the former empire was 8,417,118 square miles; population (1915), 182,182,600. The population according to the census of August 20, 1920, was about 136,000,000, of whom 53 per cent were females; as compared with 94,000,000 in the same area at the 1897 census. The population of Petrograd, the capital, in 1915 was 2,318,645; and of Moscow, 1,817,100. Subsequent estimates were made by the same authorities, as of July 1, 1921. According to the results, reported in the Bolshevik press, the population of Soviet Russia in 1921 was 130,707,600. This includes the Ukraine, Caucasus, Turkestan, and Siberia (apparently, however, not Eastern Siberia, which was under the Far Eastern Republic and not federated with the Moscow government), but of course did not include territory which had passed to Finland, Poland, Esthonia, Latvia, Lithuania, and Roumania.

No official census was taken by the old Russian government subsequent to 1897, but the changes in population were estimated each year by comparing the statistics of births, deaths, and migration. Difficulty in comparison of these prewar estimates with the recent census arises from the changes in boundaries. It was impossible from available information to distinguish exactly the prewar (estimated) population of the parts of certain Russian districts (called "Governments") which had been divided between Soviet Russia and other countries. Calculating for these parts as closely as possible, the population of the territory corresponding to the present Soviet Russia was, on Jan. 1, 1915, about 148,910,000. An error of not more than two or three million can exist in this figure by reason of inaccuracy as to the territory included. If, therefore, the prewar official government estimates of population be taken as correct and also the census of the Soviet authorities, it would appear that there had been a decrease of about 18,000,000 in the population since the beginning of the war. In view of the fact that, prior to the war, the population was rapidly increasing (for prewar Russia as a whole from 128,924,000 in 1897 to 182,183,000 in 1914), this decrease is striking. Owing to the difficulties of collecting statistics in a country like Russia, too great accuracy should not be attributed either to the prewar population figures or to those for 1921.

EDUCATION. Education is free and compulsory, and one of its important features under the Soviet government has been the introduction of the so-called unified labor schools, consisting of two grades, one for children between eight and twelve, and the other for children between thirteen and sixteen. The pupils have been provided with free lunches and the necessary books and apparatus. The schools in 1919 numbered 63,317 with 4,796,284 pupils; as compared with 47,855 schools in 1911 with 3,060,418 pupils. Schools were secularized along with other educational institutions by the decree of Dec. 28, 1917. The universities include those of: Moscow, Petrograd, Saratov, Tomsk, Perm, Kazan, Irkutsk, Nijni-Novgorod (established in 1918); Smolensk, Jaroslav, Orel, Kostroma, Tambov, Astrakhan, Tashkent, Samara, Simbirsk (established in

1919); Ekaterinburg, Ekaterinodar, Veliki Ustvig (established in 1920). Besides the universities there are various institutes of economics, medicine, philology, and schools of technology and for the education of teachers. The educational system is centralized under the commissariat for education which took the place of the former ministry of popular education, embracing under its jurisdiction various artistic and musical institutes and the state theatres. Partial statistics on illiteracy down to Oct. 1, 1920, showed that out of a total of 5,769,956 illiterates, 325,083 had been taught to read and write in schools especially designed for the instruction of the illiterate—established since the beginning of 1920.

The following more recent information was given out in respect to education by the Russian Educational Commission in Berlin. In the first place, kindergarten teaching, in which respect Russia was the most backward of the civilized countries before the war, had advanced greatly. In 1914 there were only a few public kindergartens. In 1921 there were 6000 attended by 350,000 children. In 1914 there were 600 homes under the supervision of the Empress in which young children were cared for to the number of about 30,000. After the revolution they were transferred to the Commissariat of Public Education and in 1921 there were 3000 such homes, in which 360,000 children were maintained. As to the number of orphans cared for by the state, in February, 1917, they were placed at 3784; in October, 1917, at 4890; in 1918, 20,000; in 1919, 37,000 and in 1921 70,000. The public schools of the first class, according to the last census before the war numbered 47,855, with 3,000,000 pupils and 74,000 teachers. In 1918-19 they were placed at 63,617 with 4,800,000 pupils and 150,000 teachers. The number of illiterates during the first year of the Educational Commission's activity was reduced by about 2,700,000 of whom 25,000 were in Petrograd, 19,000 in Moscow, 40,000 in the Tambov government. The secondary schools were vocational in aim, seeking to draw pupils into productive work. Construction of primitive shops was undertaken as a means to this end in the provinces where access to industrial plants was impossible. The difficulty in providing this form of secondary education was serious. The former secondary school was of no use for the purpose and secondary education on this new basis had to be created anew. The average number of secondary pupils decreased considerably after the revolution and while the population of school age in Russia was placed at 6,000,000 there were in 1921 only about 350,000 pupils in the secondary schools. As to the higher technical education there were 67 institutions with about 39,000 students. The universities numbered 19 with about 100,000 students of whom over half were medical students. Both the medical students and all other technical students formed part of the new Russian army. Of the higher education for teachers, there were 60 institutions with about 12,000 students. There were also special three-year courses with 20,000 students and various shorter courses. Workmen's universities attached to the regular universities numbered 59 with 22,500 students.

PRODUCTION. After 1916 the state maintained a monopoly of grain, of which the amount collected compulsorily in 1919-20 was 260,000,000

poods; and for the first eight months of the fiscal year, 1920-21, 275,000,000 poods. Live stock in 1919 was as follows: Sheep, 15,910,000; horned cattle, 9,433,000; horses, 6,214,000; pigs, 1,584,000. The cotton production in 1920 was 847,000 poods and in 1921 (estimated), 1,500,000 poods. The rich mineral resources of the country have never been developed, but mining has steadily increased of late years. The following figures for the production of iron foundries (excluding Poland) were supplied by the United States Bureau of Foreign and Domestic Commerce. The average annual production for the 10-year period, 1906 to 1915, was about 195,000,000 poods (62 poods equal 1 long ton). Practically the same amount was consumed. During most of this period production increased steadily, reaching its highest point, 257,000,000 poods, in 1913, after which it declined as follows:

Year	Siberia, poods	Urals, poods	Middle Russia, poods	Total production, poods
1916.....	176,000,000	46,000,000	10,000,000	232,000,000
1917.....	136,000,000	45,000,000	9,000,000	190,000,000
1918.....	17,000,000	14,000,000	3,000,000	34,000,000
1919.....		2,000,000	2,000,000	4,000,000
1920.....	900,000	5,000,000	1,500,000	7,400,000
1921.....	(1)	4,500,000	1,500,000	* 6,000,000

¹ Not known.

^{*} Exclusive of Siberia's production, if any.

It was estimated that in 1922 the output would fall to about 3,000,000 poods, because of the lack of wood in the Urals (only 1 out of 65 blast furnaces in southern Russia was in operation at the close of 1921). This would mean nothing less than a catastrophe for industry and especially for the railways, whose stock of metal had diminished as follows: Nov. 1, 1918, 44,000,000 poods; Jan. 1, 1919, 41,000,000 poods; Jan. 1, 1920, 27,200,000 poods; July 1, 1920, 38,900,000 poods; Jan. 1, 1921, 8,900,000 poods. The government programme for 1922 called for a "normal" production of 13,400,000 poods and a maximum of 24,700,000 poods, necessitating an increase of workers in the Ural district from 38,000 to 60,000 and in South Russia from 40,000 to 60,000, together with a great increase in the wood output. The coal industry is situated in four regions, namely: Donets, the Moscow District, the Urals, and Siberia. In 1920 the production in the Donets basin amounted to 4,413,000 long tons; in the Moscow district, 549,500 long tons; in the chief district of the Urals, 258,600 long tons. Figures for the other districts were not available. Reports indicated a decline in the number of workmen employed and in their efficiency. The following table shows the industrial production during the year 1920 in percentages of prewar output:

	Per cent
Pig iron.....	2.0
Copper ore.....	.6
Iron ore.....	2.0
Manganese ore.....	2.9
Salt.....	15.0
Rubber industry.....	5.0
Watch industry.....	15.0
Paper industry.....	20.0
Sugar industry.....	5.0
Printing.....	15.0
Production of coal.....	20.0
Cotton spindles operating.....	3.0
Woolen cloth.....	4.0

It was thus estimated that industry in general had decreased over 90 per cent.

ECONOMIC CONDITIONS. The Soviet system has been fully described in preceding YEAR BOOKS, but a brief summary may be here given. Its central principle is that of state ownership and control of the means of production, distribution, and exchange. The nationalization of trade and industry was largely effected during the first eight months following the November revolution (1917). An early result of this change was great confusion on account of the lack of effective machinery for organizing production, and on June 28, 1918, it was provided by decree that, while the state should take over the large and well equipped plants, the minor establishments should be left to private industry. Figures for April 1, 1920, showed that out of 6,775,000 industrial establishments with 1,185,542 employees, 4141 with 983,049 had been nationalized. The chief economic authority has been the Supreme Economic Council, consisting of an executive board of eleven members, including representatives of the government, trade unions, and economic bodies. Under it are about fifty departments. Locally the control has been distributed among provincial and district economic councils, constituted in the same manner as the central body, and among central boards for each branch of industry. The central boards have been subdivided in turn into syndicate boards representing the respective groups of allied industries.

The famine situation is described in other paragraphs (see *History*, below). In general it arose from the drought which, however, was aggravated by the fact that agriculture had fallen into decay and that the transport system was in confusion. Within the famine area reports in the spring showed that only 58 per cent of the acreage cultivated the preceding year in the province of Samara was sown in 1920, and that in the province of Kazan there was no sowing at all. Aside from this there had been a steady decline in agricultural production after the Bolshevik revolution on account of the insecurity of the farmers and the fact that the urban population produced few goods for exchange. The following information as to economic conditions in the summer was supplied by the United States Bureau of Foreign and Domestic Commerce:

There was such deterioration of transportation that there was doubt as to ability to move the local surpluses in the richer grain-producing provinces in Siberia and the south to those areas which normally depend upon them. The Volga region is even less accessible to transport of relief from abroad through the seaports than from Siberia. The North Russian shortage was due not so much to local famine as to general agriculture decadence and especially to breakdown in transport from the south and east. This area is nearer seaboard and can be relieved to some extent from the outside. The decadence in fat production was even more general and more acute than in breadstuffs owing to the requisition of animals and the diversion of animal feeds to breadstuffs. Consequently children were suffering more acutely in many sections than adults. Out of a total of 19,106 locomotives in good condition before the war, there were in 1921 from 5500 to 7650 reported in working order by different authorities, or a decrease of motive power by 60 to 75 per cent.

Of that number approximately 1000 were idle owing to lack of fuel. Serviceable cars were reported at from 150,000 to 286,000, or a decrease of from 48 to 70 per cent of the prewar number. The roadbeds were reported in very bad condition, and if large repairs were not made at an early date considerable sections would have to be closed to traffic. According to the latest estimate at least 25,000,000 ties must be replaced and the programme called for only 5,000,000 replacements. A considerable mileage of branch lines was removed and used for repair material (see *Railways*, below). The fuel situation was very serious. Cessation in production of coal by 80 per cent and the deterioration of the mines forced the railways to depend much more upon wood. Such wood had to come from the forest of northern Russia, and the haul was too long for supply to southern Russia railways. It was estimated that the value of the gold in the possession of the Soviet government on August 1 was \$19,040,200. The total value of the gold exported from August 2 to 10 was \$17,775,889, and it was estimated that the balance on hand on August 10 was \$1,264,311.

COMMERCE. During the first six months of 1921 the official statistics of the Russian government gave the imports at 11,369,000 poods or 183,371 long tons and for the 8½ months from April 18 to Dec. 30, 1920, at 5,223,357 poods or 84,247 tons. In 1921 the imports came for the most part through Yamburg on the Estonian frontier and through Murmansk and Petrograd. Of the imports in 1921, 37.1 per cent were foodstuffs as against 23.1 per cent in 1920. Fuel was 17.3 per cent against 43.5 per cent in 1921; and metal products 21.3 per cent in 1921 against 14.6 per cent in 1920. Exports during the first six months of 1921 were 2,602,863 poods or 41,981 tons and for the 8½ months between April 18 and Dec. 30, 1920, 655,246 poods or 10,568 tons. The chief class of exports in 1921 was raw materials, constituting 93.6 per cent as against 59.8 per cent in 1920. Exports of foodstuffs in 1921 made up 6.1 per cent of the total, as compared with 40.1 per cent in 1920.

The total trade of the United States with the territory comprising the former Russian empire (except Finland and Poland) amounted in the calendar year 1920 to \$41,208,304, of which \$12,480,586 represented imports from Russia and \$28,727,718 American exports to Russia. This 1920 total, if increased by the value of trade with what was Russian Poland, doubtless would exceed the normal prewar figures of the trade for 1913 (\$51,286,777), and not fall far short of the trade of 1919 (\$92,099,273). The heavy trade of the war years, 1915-17, reached its highest point (\$479,126,949) in 1916, decreased to \$439,024,890 in 1917, and sank to its lowest point (\$28,095,525) in 1918—the year which witnessed the establishment of the Soviet régime in Russia and the separate organization of Poland and the three governments comprising the former Baltic Provinces. The total trade for the first six months of 1921 amounted to \$13,297,135, of which the imports from Russia constituted \$693,934 and the American exports to Russia \$12,603,201. This is far below the corresponding period of either 1919 or 1920. For the first six months of 1919 the total trade was \$42,438,915, of which \$2,974,803 represented imports from Russia and \$39,464,112 exports to Russia; for the corresponding period of

1920 the total trade amounted to \$32,064,802, of which \$8,554,886 constituted American imports from Russia and \$23,509,916 the American exports to Russia. In the normal prewar year, 1913, the trade of the United States with European Russia, as regards both imports and exports, greatly exceeded the trade with Asiatic Russia. In 1916, when the war trade reached its highest point, the imports from European and Asiatic Russia did not differ so greatly in value; and the exports, which had increased enormously, showed an Asiatic figure by no means so low in proportion to the European as in 1913. In 1918, when the total trade with Russia territory was very low, the imports from European Russia were practically twice as great as from Asiatic Russia, while the exports to both sections were quite similar in amount.

RAILWAYS. The railway mileage was given in October, 1917, at 34,000. On the basis of semi-official information it was stated during the year that the roadbed on the main line of the Trans-Siberian Railway was apparently in good condition, as section hands and trackmen employed under the old régime had remained at their posts, despite arrears in their pay, and had made the necessary repairs in track ballast. The telegraph lines also were in good condition, and fully half the poles had been renewed since 1918. It was of course admitted that the rolling stock of the railways was in a very unsatisfactory condition, chiefly due to lack of spare parts for repairs, this being especially true of locomotives, and the yards in practically every terminal were filled with locomotives that had been junked. There was apparently a large supply of box and gondola cars, although many of them had been requisitioned on sidetracks to house soldiers and in some cases refugees. There was great shortage of passenger cars, and all of them were in bad condition.

During the year it was said that trains were running regularly three times a week from Irkutsk to Omsk, taking four days for the journey, and to both Petrograd and Moscow, requiring from four to five days each. A large number of the passengers on these trains were Soviet officials, as it was exceedingly difficult for civilians to secure permission from the authorities to travel. A large number of civilians, however, were traveling with their possessions in freight cars in both directions. In European Russia it was reported that the north route to Perm and the routes from Moscow to Petrograd, Reval, and Riga were in fair condition, but the southern routes to the Urals and many of the others in central and southern Russia had been partially or completely abandoned. During the year a German commission was in Moscow negotiating for the operation of some of the railway lines. Naturally the government was seeking repairs to equipment and it was reported that the Balto-British Shipyard Company, Reval, Russia, would carry on the repair of one thousand locomotives for the Russian railways during the ensuing five years.

DEFENSE. A workers' and peasants' army of volunteers was established by government decree, Feb. 1, 1918. The discipline of the Red Army which was at first unsatisfactory steadily improved under the necessities of warfare. A system of inspection was organized and rigorously carried out for the purpose of making sure of the loyalty of the officers and troops. The success

of the Red Army against the various reactionary movements down to and including those of General Wrangel (1920) indicated the efficiency of the military system, and by January, 1921, no hostile force of any importance existed within the Soviet limits. Supplementary to the Red Army is the militia, based on the principle of universal military service beginning at the age of eighteen. Full and exact details for the navy were not available. See NAVAL PROGRESS.

GOVERNMENT. At the head of the government is the Central Executive Committee of Soviets, elected by the All-Russian Congress for a period of three months, but subject to recall at any time by the Executive Committee of the Peoples' Commissaries, and this applies also to the members of the government. The Council of Peoples' Commissaries is directly dependent upon the All-Russian Congress. It was constituted in May, 1921, as follows: President, M. Vladimir Ilich Ulianov-Lenin; Foreign Affairs, M. Chicherin; War and Marine; M. Trotsky; Finance, M. Krestinsky; Health, M. Semashko; Posts and Telegraphs, M. Liubovich (acting); Ways and Communications, M. Dzerzhinsky; Supreme Economic Council, M. Rykov; Agriculture, M. Ossinsky (acting); Food, M. Tsuriupa; Justice, M. Kurasky; Social Welfare, M. Vinokurov; Labor, M. Schmidt; Education, M. Lunacharsky; Nationalities, M. Stalin; Workers' and Peasants' Inspection, M. Stalin; Home Affairs, Extraordinary Commission, M. Dzerzhinsky; Foreign Trade, M. Krassin.

HISTORY

FAILURE OF RADICAL POLICY. The belief that it was too early to put into effect a complete communistic system had been indicated in governing circles in 1920. Definite steps were taken in 1921 toward a return to capitalism. At the tenth communistic congress at Moscow early in March, Lenin declared that Russia must compromise with the capitalist classes and must abandon certain principles of administration. He proposed a long list of changes, including the following which were adopted: Greater freedom in the exchange of goods; abandonment of compulsory requisition of farm products; a greater degree of private initiative in industry; and greater liberty for the coöperative societies. He contended that the approach to pure Socialism must be by way of state Socialism which must compromise at present with the private system of production. The stricter Communists opposed these changes as conceding too much to the peasant and middle classes. Lenin, however, contended that the peasants were the mainstay of the state, and that peasant discontent must be allayed, or there would result a war between the peasantry and the proletariat. In the course of the year Lenin, Trotsky, Tchitcherin, Krassin, and other Bolshevik leaders repeatedly explained the change in economic policy. They said that it was necessary on grounds of expediency and that it did not affect the ultimate aims of the Soviet government. The ideas of the governing class remained the same, but at present Russian society could not dispense with capitalistic methods. It must appeal to the personal interest of the peasant. Taxes in kind would be levied, and after the government had taken what it needed, the remainder could be marketed by the

farmers. It was announced that the basis of foreign policy would be coöperation with the capitalistic states. Private enterprises would now be permitted and factories could be opened under private management. Nevertheless ownership would still be fixed in the Soviet government which would control also all foreign trade, but the right of importing machinery and other necessities would be allowed to foreigners and they would be allowed to export manufactured products. Goods from abroad must be paid by foreign credits, and not by money taken from Russia. The government had for its chief aim increase in production. On September 23 Leo Kamenev, head of the Moscow Soviet, declared that with the exception of railways and metallurgical, textile, and fuel resources, industries would be returned to private ownership. He had already predicted a complete change in the national and industrial life, and he now declared restrictions on private commercial and industrial activity would be at once removed, the government having realized that it was impossible to rebuild society at one stroke. The present policy was to be considered as a step in the gradual evolution of society toward the Socialistic stage. Lenin returned to the subject in October, saying that the real meaning of the government's new economic policy was that it had met a great defeat in its plans and was now making a strategic retreat. There had been criticism of the government's course by the strict doctrinaires of the Communist party, and Lenin's speech delivered at Moscow October 18 was in answer to it. He said they had thought that the peasants would supply food for the support of industrial workers, but in this they had been mistaken, and it was necessary to build on a new foundation. It should be regarded, however, in the light of a mere retreat and it did not mean that the cause was lost. The supplying of manufactured goods to the country and its direct relation with the problem of reconstruction of the cities was the chief cause of the economic and political crisis of the spring of 1921. On the following day, in the course of another address, as declared that the Russians must face the fact that they were reëstablishing capitalism and it was a question whether the peasantry would follow the capitalists or the Communists. The present problem was to make the capitalist system subject to the state and to convince the peasantry and workers generally of the necessity of the government's aims. The present return to capitalism was not, he said, a reëstablishment of private ownership, but a necessary step in the carrying out ultimately of the communistic programme.

In speeches and articles in November Lenin explained in more detail the new economic policy of the country and the reasons for adopting it. He said that as far back as 1918, the possibility of these changes had been announced. After the revolution the military difficulties had at once arisen and had continued during the next two years. It had been impossible to carry out the economic programme in the circumstances. It had been supposed that the peasants under requisition would supply the government with the needed quantity of food which would be distributed among factories and workshops and thus admit of communistic production. This expectation was not realized. The productive forces of

the country were checked and the result was the economic and political crisis of the spring of 1921. It must be admitted that this has been a severe defeat to the cause of Communism. It was therefore necessary to change the economic policy of the government. The new policy involved the change from the requisition system to an impost and was thus a definite step backward into capitalism. Concessions had been made to foreign capitalists and leases had been granted to private capitalists. Under the new plan the peasant would enjoy free trade for his surplus products that were not taken by the tax. The peasants made up the largest part of the population. The main question was whether the peasants would follow the groups who wished to build up a Socialistic society or would insist on a return to capitalism. He said that it was evident in spite of the famine that the general condition of the people had improved. If capitalism should return, industrial production would increase and the proletariat would increase with it. The question was which of the two systems would succeed—whether the Communists or the capitalists would organize their system first. Theories and idealism must be abandoned. The military enemy had been defeated and the real enemy at present was the class that desired a return to capitalism. In view of the vast illiteracy of the peasants it would be difficult to make the people realize this. The task before the communistic party was to make the public understand that the real enemy was anarchistic capitalism and anarchistic trade exchange. The bourgeois class which was far stronger in other countries than in Russia was supporting the Russian bourgeois class in all the countries of the world. Although the proletariat had conquered in Russia it was still weak in international affairs. It must unite all the working men and peasants of Russia. There could be no immediate change to Communism. It must be gradually built up on the self-interest of the peasants. The dictatorship of the proletariat meant a long and bitter struggle but the principles on which it rested were economically sound. The entire economic structure must be based on self-interest. As to the government it must be more severe than it had been before. The necessity of this severity had been demonstrated in the case of the Red Army which finally had been brought to a discipline not inferior to that of the former army. The government had been blamed for employing severe measures and even shooting offenders, but it had done so consciously and it had been justified by the results. It must be remembered that Soviet Russia impoverished with its long struggles was surrounded by countries hostile to its social system and that the capitalistic world outside Russia was developing faster than Russia and was using all its forces against it. Russia was too weak for a direct attack on capitalism. The state must learn to trade in such a manner that industry shall meet the needs of the peasant.

"The capitalists can stick to their hypocrisy and summon men to national defense. They may invoke the American fatherland against the Japanese, and vice versa; the French fatherland against the English, and vice versa. Keep on drawing up manifestoes on how to prevent imperialistic wars—that of Basle in 1912 may serve you for a model, ye pacifistic lesser bourgeoisie, ye knights of Internationale 2 and 2½."

"The first communistic revolution has snatched a first one

hundred millions of people from the horror of imperialistic wars and the servitude of the régime from which these are derived. Subsequent revolutions will liberate the rest of the human race.

"The last part of our task, the most important and difficult and, up to now, far from accomplishment, is to lay the economic foundations of the new socialistic society which will replace the destroyed feudalistic society and the shaken capitalistic society. In this, the most important and difficult work, we have made the most mistakes, suffered the most setbacks; nor could this have been otherwise. But we are at work; already our new economic policy is correcting some of our mistakes; we are learning to build without flaws the socialistic edifice in a country where the small peasant proprietor predominates.

"We shall continue our work to the end, despite the fact that economic and political conditions in the world make this task more difficult than we imagined. But, no matter what may be the cost, sufferings, misery, ruin or famine during the period of transition, we shall not allow ourselves to be discouraged by anything, and we shall be able to assure the ultimate triumph of our cause."

The chief features of the new programme, as announced at the end of the year, were the partial restoration of free trade in agricultural production; the substitution of a labor tax for the system of requisition of labor; the compensation of state employees according to service rendered instead of by a uniform rate of wages; and the leasing to private individuals of certain industrial plants which had been controlled by the state. It was further promised that state enterprises would henceforth adopt commercial methods and pay private producers according to the market value of services and products.

THE FAMINE. Famine conditions prevailed throughout the year. According to accounts published in the summer the famine area included the entire lower Volga basin; the country through which flows the Don river; the region around the lower course of the Dnieper and Bug rivers; Astrakhan, Samara, Saratov, Ufa, Kazan, Kuban, the Don Cossak region, Taurida, Kherson, Ekaterinoslav, and parts of other districts—the total covering an area of about 600,000 square versts, with a population of about 15,000,000, of whom 13,000,000 were peasants. Many estimates were made of the number of persons destined to starvation even if outside aid were received, some of these being as high as 2,000,000. Conditions were reported to be especially bad in Saratov and Samara, where it was said the people were dying in vast numbers, being driven to the eating of grass, bark, etc., as substitutes for food. The Soviet government attributed the calamity to the long period of warfare which they blamed the capitalist nations for continuing, and showed a suspicion of the Allied nations when they proposed to send commissions to investigate the conditions. The Russian government appeared to suspect that such a movement on the part of the Allies might result in counter-revolutionary attempts. A scheme proposed by Dr. Fridthof Nansen, who had been long engaged in the work of repatriating war prisoners from Russia under the League of Nations, met with more approval from the Soviet government, but he could not secure the consent of the authorities to an independent distribution of provisions. While the Soviet government welcomed his proposal it refused to allow him a free hand in distribution. The Russian novelist, Maxim Gorky, had established a nonpartisan relief committee, but this was dismissed in September on the ground that it was being used by outside Powers as a means of injuring the government. Gorky and other prominent men issued an appeal

to the world and there was especial hope that this would find support in the United States. In this they were not disappointed. The American Secretary of Commerce, Mr. Herbert Hoover, pledged the support of the relief organization, and the Soviet leaders on July 30 consented in advance to any arrangement he might make if it were backed by President Harding and Secretary Hughes. The American political prisoners in Russia were freed and the full coöperation of the Soviet authorities was pledged to the American organization. The Russian government also accepted the demand of Mr. Hoover for an entirely free hand in distributing food supplies. On August 10 the representative of Mr. Hoover conferred with the Russian representative M. Litvinoff, and on August 13 an agreement was reached on methods, which included: Free movement of food from the ports to the consumers, the expense to be borne by the Russian government, but the materials of transport, etc., to remain in the hands of the relief administration. By the end of September the relief organization under Hoover whose leaders were Professor Vernon Kellogg and Colonel Haskell had delivered 5000 tons of food in Russia, and additional supplies were regularly going forward. On September 9, it was estimated that 900,000 children were without food in the Tartar provinces, and that hundreds of men and women were starving there. But the figures were vague and conflicting. According to one of the relief officials the number of adults starving in the famine region was placed at 35,000,000. Various detailed reports were published in the press from travelers in Kazan, Samara, and Saratov which were the first centres of the famine region to receive supplies. The situation was complicated by the scattering of the starving people all over the country, and by the tendency of the famine-stricken communities to take no measures of self-help, but to depend exclusively upon the central government. In October the report of the Russian Commission of Far Eastern Relief was under discussion. Among other proposals it recommended that a commission be authorized by Congress to deliver 1,845,000 tons of grain in coöperation with the Soviet government to be used in part for the relief of the famine districts and in part for seed, the loan to be repaid in kind beginning in 1925. The report also recommended an association of American manufacturers of agricultural machinery which should be organized under export trades acts for the purpose of supplying Russia with \$500,000,000 worth of agricultural machines and that similar groups be formed for supplying locomotives, railway material, bridge iron and steel, etc. The Commission believed that Russia was solvent and declared that it had found the Soviet officials earnest and hardworking men, as well equipped for their duties as the average officials of any country. The report declared that the economic blockade of Russia had inflicted a wrong on the country and that the United States bore a share of the blame. It did not advocate the policy of supplying simply immediate relief for the 20,000,000 inhabitants of the Volga famine districts but held that any measures, if they were to accomplish permanent results, must include the supply of food sufficient to enable the peasants, who made up 85 per cent of the population in the famine area, to live on their farms until the next harvest;

sufficient seed to sow the acreage of 1920 in the Volga region; sufficient agricultural implements for sowing and harvesting, etc.; draft animals to take the place of those lost on account of military service or famine, and sufficient means of transport to insure rapid transportation. The Commission estimated that of the 20,000,000 inhabitants of the Volga region, about half were suffering from hunger and about 3,000,000 had left their homes and were wandering over the country in search of food.

The American intervention for the relief of the famine sufferers was followed by a more friendly attitude on the part of the United States as reflected in the press toward the Bolshevik government, and many articles began to appear in quarters hitherto unfriendly to Russia pointing to the new moderation of the Russian government, its abandonment of a part of its radical programme, and its return to the methods of capitalistic society. It was believed in the United States that confidence should be reposed in the good faith of the Soviet government. On the other hand, the movement for aid to Russia was regarded in France as simply a device for strengthening the Bolshevik government. In Russia the fact that the investigation which the Allied nations proposed was to include in its personnel a French diplomat who, while in Russia, had been charged with pro-Ally propaganda, accounted in part for the Russian refusal.

On December 23 President Harding signed an appropriation of \$20,000,000 for Russian relief. At that time it was estimated according to the relief authorities that some 27,000,000 people in Russia were in danger of starving to death. The Soviet government, December 24, promised to contribute the sum of \$10,000,000 for the purchase of supplies of food and seed in the United States within ninety days and asked for permission to send a Russian representative to supervise these purchases, which permission was granted by the American Secretary of Commerce, Mr. Hoover. In the meantime, five large ships carrying grain had sailed for Russia. See RELIEF FOR WAR VICTIMS.

FOREIGN AFFAIRS. The relations of the Soviet government with other Powers are described in more detail as regards the leading features in accompanying paragraphs and also under WAR OF THE NATIONS, but may be briefly summarised here in their chronological order: The Moscow government signed a treaty with the Turkish Nationalists, March 16. In this Constantinople was recognized as the capital of Turkey. On March 22 the treaty negotiated by Krassin in 1920 with the British government for the resumption of trade between the two countries was signed (see below). The Russian government sent a note, March 22, to the United States government, requesting the resumption of trade relations, but the Secretary of State, Mr. Hughes, replied, March 23, declining to resume relations until the Russian system of production had been organized on a sound basis. On May 27 it was reported that a democratic government had been organized at Vladivostok after the city had fallen into the hands of anti-Bolshevik troops under General Kappell. At the beginning of June the Japanese were reported to be active in the neighborhood of Korea against the Bolshevik movement in that region. Famine and cholera were ravaging the

country in the summer, and measures of relief were under discussion by the Russian and foreign governments as noted above. The International Relief Commission at a meeting in Belgium required as a condition that Russia recognize her present debts, and the Moscow government provisionally agreed to this. On October 29 the Russian government published an announcement that under certain conditions it would recognize the prewar foreign debts of the state (see below).

TRADE AGREEMENTS. The terms of the Anglo-Russian trade agreement had been determined at the close of 1920, as noted in the preceding YEAR BOOK, after the negotiations of the Russian delegate, M. Krassin, with the British government, and it was signed by the representatives of both countries, March 22. The principal features of it were as follows: Lifting immediately of the blockade by Great Britain; release of war prisoners by both governments; cessation of Bolshevik propaganda in British territory; according of diplomatic rights to official agents; assumption by the Soviet government of responsibility for the Russian debts to British subjects in return for British abstention from any plan for the seizure of Russian gold in order to pay the old Russian debt to France. The entering into this trade agreement with Russia amounted, according to the admission of Lloyd George, March 22, to a recognition of the Soviet as the de facto government. The United States, March 25, refused to enter into a trade agreement with Russia, and the year passed without official resumption of trade relations. A trade treaty, however, modeled on that of Great Britain was concluded with Germany, May 6. Canada in October declared that trade relations would be resumed with the Soviet government. On September 2, Norway signed a trade agreement, and in October, Germany, and Japan began negotiations for the resumption of trade. The question with Italy was pending at the close of the year.

To sum up the situation, while some progress was made toward resumption of trade in 1921, official sanction was not obtained from the United States, Italy, or France, and there was difficulty with Great Britain. The British government charged the Soviet government with permitting anti-British propaganda in Persia, Afghanistan, and Central Asia. This was denied in a Soviet note, September 26, in which the foreign minister, T. Tchitcherin, said the accusations were based on forgeries. This in turn was denied by the British foreign minister, Lord Curzon, November 15, who produced documentary evidence. In November a trade agreement between Italy and Russia was under consideration, but on December 5 the Italian foreign minister announced that it had failed because the Soviet representatives refused to promise to refrain from propaganda and insisted on certain political clauses in the treaty.

THE FOREIGN DEBT. Much discussion followed the interchange of notes in respect to Russian recognition of debts abroad dating from before the war. The main question was that of the debt to France, and the attitude of France may be summed up as follows: It was argued that the cancellation of the public debt had been from the first one of the chief features of the Bolsheviks' programme, having been put forward by Lenin and his partisans in 1917 when they over-

threw Kerensky, and having been frequently insisted upon in Bolshevik propaganda afterwards. The following figures were compiled by French authorities who based them on Russian sources: Before the war the interest on the national debt cost Russia about 420,000,000 rubles a year. In June, 1916, the credit of the country was sufficiently assured for the borrowing of a new loan, June, 1916, in the United States of \$50,000,000. At the time of the Bolshevik revolution the service of the Russian debt amounted to nearly a billion rubles. In September, 1921, the Bolshevik minister of finance estimated the circulation of paper rubles at 3,500,000,000,000. He further estimated that the enormous sum of 22,000,000,000,000 were required for all the needs of the state, but the printing presses were unable to provide for more than 13,000,000,000,000 or 14,000,000,000,000, so he had taken measures for the issue of bills for a large denomination, namely, bills for 1,000,000, 5,000,000, and 10,000,000 rubles. In such a grotesque situation with the currency mounting into trillions, it was obvious that the government had no means of paying its foreign bonds, nor its recent notes of October and November. As to the recognition of its foreign debt, it did not refer to any measure it intended to take in order to become solvent, and it was argued by the French that the proposal was simply a political move, looking to a conference in which the Soviet government would find occasion somehow to make an appeal over the heads of the governments to the masses of workmen throughout the world. That was the reason for insisting upon an international conference. The policy followed by the French government aimed, according to its authors, to serve at the same time the interests of the Russian people, whose complete national and economic restoration were desired by the French, and the interests of the foreign creditors. The French government believed that any attempt to obtain immediate and exclusive advantage would not only fail, but would retard the recourse to measures for the general benefit of Russia and of the world, while at the same time it would work unfairly as among the creditor countries. France, it was argued, had shown her sincerity in this latter respect. When the Russian government on October 28 declared its readiness to recognize the foreign debt, it had proposed to France a privileged treatment. France had taken most of the external loans before the war, while England, during the war, had taken for the most part the municipal loans. The French government did not accept the offer of a privileged position to the detriment of England, but declared in its reply that the recognition of the Russian foreign debt must be general, and it blamed the Russian government for overlooking the war debts and the municipal loans. It took the stand that the creditors of Russia would not be paid unless each one conscientiously respected the rights of the other.

As to the restoration of the Russian people to its national and economic life, present conditions were illustrated by the following incident: The head of a large British industrial establishment who had had much experience in Russian affairs addressed on October 12 a letter to the Russian Delegate at London, M. Krassin, after an unsuccessful attempt to operate a factory in Russia. In this he said that Russia was terrorized

by the series of communist organisations of which the most powerful one was the Secret Police. This had rallied around it not only Communists but criminals from Russia and other countries. It had constituted itself prosecutor, judge, jury, and executioner, with power of life and death over its victims, and it had developed in every city and every village a complete system of spies, informers, and *agents provocateurs*. The above summary is a fair illustration of the arguments in support of the attitude of the French as they appeared in the press.

FINANCIAL POLICY. The government insisted on a programme of economy both in the budget and in the administrative personnel. In November the finance committee adopted as the standard for future budgets the gold ruble as before the war. The new state bank was opened at Moscow, November 18. The banks had been nationalized under the Bolshevik programme, Nov. 18, 1918. As a step in the general return to the old economic system, the payment of interest on accounts, may be mentioned, and it was also decided that loans might be made henceforth to corporations and to individuals. The offer of the Russian government, October 20, to recognize the former Russian debt under certain conditions had not brought any important result at the close of the year, France insisting in her policy of nonintercourse until the Soviet government should cease foreign propaganda.

SIBERIA. Steps toward the formation of a new Siberian state were taken during the preceding year when conferences were held, looking to the union of the four governments that had been set up in Siberia. On Jan. 9, 1921, elections for a national assembly were held, resulting in the following distribution among parties: Peasants, 160; Peasant Unionists, 42; Communists, 98; Social Revolutionaries, 16; Buriats, 10; Koreans, 5. This was followed by the setting up of a provisional government under the title of the Far Eastern Republic (Chita), and composed entirely of communist officers. It encountered the opposition of General Semenov who was said to be supported by Japan, but this was denied at Tokyo. The state was on friendly terms with Soviet Russia. It sent a delegation in November to the United States for the purpose of observing the work of the Washington Conference on Disarmament during its discussion of Pacific and Far Eastern questions. See **WAR OF THE NATIONS**.

INTERNAL DISORDERS. Strikes were frequent in the early part of the year, caused for the most part by the shortage of food. In February government employees numbering about 14,000 struck for an increased bread ration, and on February 26 they were joined by the Kronstadt garrison and the sailors from the Baltic fleet. The movement spread and took on the form of a counter-revolution, the agitators demanding the calling of a constituent assembly and the right of free trade or a return to individual enterprise. Conflicts with the government troops resulted, but the movement was put down by March 15. It was described by Lenin as due to a combination of reactionaries in Russia with persons acting on behalf of foreign Powers. The labor unions which in January numbered, according to official figures, about 6,970,000 members of whom 63 per cent were manual laborers

and 30 per cent specialists, including engineers, chemists, etc., showed opposition to the government and caused much alarm to the authorities who declared, February 7, that unless a settlement were reached, the Bolshevik system would disappear. The principal hostile movements in the interior against the Soviet government in the closing months of the year were revolts in the Ukraine and in Eastern Karelia. In the Ukraine uprising occurring in November severe battles were reported in the neighborhood of Kiev. In Karelia which though largely peopled by Finns was left under Russian administration by the terms of the treaty with Finland the inhabitants set up an independent government. This resulted in accusations and disclaimers on the part of the respective governments. The region affected covered an area about 1000 square miles inhabited by a population of about 40,000 according to the Russian accounts which also declared that the army of the insurgents numbered only about 3000. But the insurrection was supported by Finland. This gave offense to the Soviet government which demanded in successive notes that Finland withdraw her support, finally in December insisting that this demand be met and that the Finnish government should cease to aid the insurgents. The December note also demanded the expulsion from Finland of General Savinkoff who had been a member of the Kerensky government and had recently been expelled from Poland. Dissatisfied with the reply from Finland to this note the Soviet government declared that if action were not taken in response to its demands the responsibility for war would rest upon the Finnish government.

ANNIVERSARY OF SOVIET GOVERNMENT. Some simple ceremonies celebrated the 4th anniversary of Bolshevik government in Russia, November 6, 7, and 8. The authorities believed that it was wiser to confine themselves to a simple commemoration instead of making a great display of Red processions and demonstrations which would tend to set revolutionary propaganda in motion. The Moscow government declared that its policy was to win the good will of foreign Powers by such measures as had recently been taken by the Foreign Minister in regard to Russian recognition of her debts abroad and the opening up of the country to foreign business men and journalists. It was hoped that this policy would make it appear abroad that the revolution was over and that economic restoration was approaching. See **SOCIALISM**.

OTHER EVENTS. The All-Russian Congress opened its session at Moscow, December 23. Early in its meetings, Lenin gave notice that the Extraordinary Commission would limit its activities henceforth to the political field. He submitted his plan of economic reform which was approved and the land reform plans were adopted, December 28. On the following day, Trotski accused Poland, Roumania, and Finland of hostile intentions and declared that the Soviet military forces would be ready to repel aggression. He condemned the Washington Conference, saying that one of its first consequences was Japan's attack on the Far Eastern Republic.

RUTGERS COLLEGE. A non-sectarian co-educational institution of the higher learning at

New Brunswick, N. J.; founded in 1766. The enrollment for the fall of 1921 was 1850 and for the summer session of 1921, 634. The faculty numbered 103. The productive funds amounted to \$1,500,000 and the income, \$600,000. The library contained 110,000 volumes. The Horticultural Building was erected during 1920-21. The Ceramics Building was in process of construction. President, Rev. W. H. S. Demarest, D. D., LL.D.

RUTHVEN, WALTER JAMES HORE-RUTHVEN, Eighth Baron. British soldier, died in London, England, February 27. He was born in 1828 (?) and served in his youth in the Crimea. He later served in India and Abyssinia and retired in 1886. Although 76 years old when the great war broke out, he returned to his regiment, the Rifle Brigade, and served as a King's Messenger, making many trips across the Channel.

RYE. Provisional estimates published by the International Institute of Agriculture, Rome, indicated for 21 reporting countries in 1921 a production of over 793,000,000 bu., representing an increase of 37.4 per cent above the total yield for the same countries in the preceding year. The acreage was slightly but not materially larger, so that the increase in production was mainly due to a better yield per acre. While an extended summer drought threatened crops over large parts of Europe and Asia, rye being a fall-sown crop had matured sufficiently to escape serious drought injury.

The production of the leading rye-producing countries was reported as follows: Germany, 260,145,000 bu., Poland, 167,216,000 bu., Czecho-Slovakia, 54,772,000 bu., France, with Alsace-Lorraine, 44,494,000 bu., Sweden, 28,514,000 bu.,

Spain, 27,768,000 bu., Canada, 25,800,000 bu., and Hungary within present limits, 22,093,000 bu. The world's yield in 1914 and 1915 was in round numbers 1,500,000,000 bu. In 1912 and 1913 the former Russian empire produced each year a little over 1,000,000,000 bu. or approximately two-thirds of the world's yield. Germany in prewar years was also a large producer, the average annual production for the 5 years 1909-13 being recorded as 445,220,000 bu. France, with Alsace-Lorraine, for the same period produced an average crop of about 52,000,000 bu. yearly.

The yield of rye in the United States in 1921 according to estimates by the Department of Agriculture was 57,918,000 bu. produced on 4,228,000 acres at an average acre-yield of 13.7 bu. In 1920 the average acre-yield was the same but the area was greater by 181,000 acres. The farm value on Dec. 1, 1921, was 70.2 cts. per bu., and on this basis the total value of the crop amounted to \$40,680,000 bu. In 1920 the corresponding value per bushel was 126.8 cts. and in 1919, 133.1 cts. The leading rye-producing States and their yields in 1920 were as follows: Michigan, 9,702,000 bu., North Dakota, 9,340,000 bu., Minnesota, 8,160,000 bu., Wisconsin, 7,728,000 bu., Indiana, 4,340,000 bu., South Dakota, 4,320,000 bu., Nebraska, 3,722,000 bu., and Illinois, 3,276,000 bu. These States produced about 70 per cent of the total yield. The area sown to rye in the United States in the fall of 1921 was reported as 5,184,000 acres, of which nearly one-third or 1,607,000 acres was in North Dakota. The States next in order of acreage were Minnesota, Michigan, and Wisconsin. The four States together included over 60 per cent of the total acreage reported.

SAFETY AT SEA. During the fiscal year 1920-21 the total number of accidents to American vessels resulting in loss of life was 200, an increase of 8 over the previous year. The total number of lives lost was 330, of which 69 were passengers. Of the lives lost 159 were from suicide, accidental drowning, and other causes beyond the power of the U. S. Steamboat Inspection Service to prevent, leaving a loss of 171 lives as fairly chargeable to accidents, collisions, foundering, etc. There was a decrease of 140 in the number of lives lost as compared with the previous fiscal year. Passengers to the number of 351,720, 890 were carried on vessels required by law to make report of the number of passengers carried. Dividing this number by 69, the total number of passengers lost, shows that 5,097,404 passengers were carried for each passenger lost. There were 826 lives directly saved by means of life-saving appliances required by law.

SHIPWRECKS WITH LOSS OF LIFE. The following disasters coming in the jurisdiction of the U. S. Steamboat Inspection Service resulted in an unusually large loss of life:

Nov. 24, 1920, the steamer *Santa Rita* with the barge *W. J. Pirrie* in tow left Tacoma, Wash., bound for San Francisco, Calif. At 1.10 p. m., Friday, November 26, it became necessary for the *Santa Rita* to cut the *W. J. Pirrie* loose, owing to the heavy seas and south west gale. The barge was driven on the rocks, resulting in the loss of the vessel and crew, consisting of 20 persons.

Oct. 13, 1920, the steamer *Cayo Mambi* left the harbor of Santiago, Cuba. About 6.30 p. m., the auxiliary schooner *P. Heat*, was seen ahead slightly on the port bow, and the bluff of the port bow of the steamer collided with the port quarter of the schooner, resulting in the latter sinking a few minutes after the collision with a loss of 12 lives.

Feb. 26, 1921, off the coast of Panama, the steamship *Steel Inventor*, about 12.20 a. m. collided with the U. S. destroyer *Woolsey*. One man was killed on the destroyer *Woolsey*, and 15 men were reported missing, making a total loss of 16 lives. The destroyer sank shortly after daybreak.

March 7, 1921, latitude 49° 26' N., longitude 11° 14' W., at 9.04 p. m., the steamer *Edgemont* collided with the British steam trawler *Swan*, resulting in the sinking of the *Swan* with 6 of the crew. Five persons were saved.

August 20, 1920, at about 9.20 p. m., the up-bound steamer *Willis L. King*, and the down-bound steamer *Superior City* collided when below Whitefish Point, Lake Superior, and as a result, the *Superior City* sank within three minutes and 29 members of her officers and crew lost their lives.

May 14, 1921, in the vicinity of Whitefish Point, Lake Superior, while the steamer *Zillah* with

barges *Miztec* and *Peshtigo* in tow was running before a northwest snowstorm and heavy seas in an attempt to make shelter under Whitefish Point, the barges became adrift from the steamer, and it was assumed that the barge *Miztec* foundered with the loss of her whole crew, consisting of 6 persons.

Sept. 29, 1920, the steamer *Speedwell* foundered in the Gulf of Mexico during a hurricane. All persons on board were transferred to lifeboats, but 8 died later from exhaustion and privation.

April 11, 1921, the freight steamer *Col. Bowie*, bound from Beaumont, Texas, to Tampico, Mexico, encountered heavy weather which caused leaks to develop, rendering the vessel helpless. Cargo of vessel shifted and she sank at about 2.40 a. m. Seven of the crew were lost.

March 12, 1921, while the motor vessel *Alveta T.*, was delivering men aboard the various vessels tied up in the harbor of New Orleans, La., during a heavy fog, and with 11 passengers aboard, some of the passengers while shifting around and rocking the boat more or less in their hilarity, overturned the same, and 6 men attached to different vessels were drowned.

April 1, 1921, the steamship *Governor*, bound from San Francisco, Calif., to Seattle, Wash., collided with the steamship *West Harland*, at a point approximately 1¼ miles southeast of Point Wilson, at about 12.02 a. m. The *Governor* foundered about 30 minutes later, but in the meantime, the passengers had been transferred to the *West Harland* and later landed at Seattle. Nine lives were lost from the *Governor*.

UNITED STATES STEAMBOAT INSPECTION SERVICE. During the fiscal year ended June 30, 1921, the United States Steamboat Inspection Service inspected and certificated 8095 vessels with a total gross tonnage of 16,231,001, of which 7753 were domestic vessels with a total gross tonnage of 13,139,630, and 342 were foreign passenger steam vessels with a total gross tonnage of 3,091,971. Of the domestic vessels, there were 6437 steam vessels, 716 motor vessels, 15 passenger barges, and 585 seagoing barges. There was an increase of 44 in the total number of vessels inspected, and an increase of 609,602 in the total gross tonnage of vessels inspected as compared with the fiscal year, 1919-20. Letters of approval of designs of boilers, engines, and other operating machinery were granted to 42 steam vessels with a total gross tonnage of 1118. There were inspected for the United States Government 57 hulls and 2100 boilers. There were 2793 reinspections of vessels. Licenses were issued to 25,997 officers of all grades. There were examined for visual defects 8522 applicants for license, of whom 45 were found color-blind or with other visual defects and rejected. Certificates of service were issued to 16,949 able seamen, and 1316 were rejected. Certificates of efficiency were issued to 13,548 lifeboat men, and 1726 were

rejected. Steel plates for the construction of marine boilers to the number of 4752 were inspected at the mills, and a large amount of other boiler material was inspected. There were examined and tested 308,661 new life preservers, of which number 6107 were rejected.

SAFONOV, HENRIETTA. See *MUSIC, Artists, Vocalists.*

ST. CHRISTOPHER. See *ST. KITTS AND NEVIS.*

ST. HELENA. An island of volcanic origin in the South Atlantic twelve miles from the west coast of Africa, belonging to Great Britain. Area, 47 square miles; population (1911) 3520; estimated civil population, Jan. 31, 1920, 3468. Capital, Jamestown.

ST. JOHN'S COLLEGE. An institution of the higher learning at Annapolis, Md.; founded in 1696. The enrollment for the fall of 1921 was 159. The members of the faculty numbered 17, including one addition. The library contained 15,000 volumes. President, Thomas Fell, Ph.D., LL.D.

ST. KITTS AND NEVIS. An administrative division of the Leeward Islands (q. v.), including besides the two islands mentioned, the island of Anguilla. Area of St. Kitts, 65 square miles; and population (1911) 26,283; Nevis, 50 square miles and population (1911) 12,945; Anguilla, 35 square miles and population (1911) 4075. Chief town of St. Kitts, Basseterre (population, 8159); of Nevis, Charlestown (912). The division is under a British administrator with an executive and legislative council. Administrator at the beginning of 1921, Major J. A. Burdon.

ST. LOUIS SYMPHONY ORCHESTRA. See *MUSIC, Orchestras, Novelties.*

ST. LOUIS UNIVERSITY. A Roman Catholic institution of the higher learning at St. Louis, Mo., founded in 1829. The student enrollment in 1921 was 2618 and the faculty numbered 235. President, Rev. William F. Robison, S. J.

ST. LUCIA. One of the Windward Islands in the West Indies; a British colony. Area, 233 square miles; population (1911) 48,637; estimated, Jan. 1, 1920, 54,989. Capital, Castries, a coal station and naval base. On Dec. 31, 1919, there were 52 schools, of which 7 were Protestant and 45 Roman Catholic, with 6390 pupils enrolled. The chief products are: Sugar, lime juice, molasses, and syrup, cocoa, rum, honey, hides, logwood, lime oil, and bay oil. Imports, 1919, £222,769; exports, £431,259. It is under an administrator with a nominated executive and legislative council. Administrator at the beginning of 1921, Lieutenant-Colonel W. B. Davidson-Houston.

ST. PAUL, MINN. See *MUNICIPAL GOVERNMENT.*

ST. PIERRE AND MIQUELON. The principal islands of two groups off the south coast of Newfoundland belonging to France. Total area, 93 square miles, of which 83 were in the Miquelon group; total population, 4652, of whom 4209 were in the Pierre group. The chief industry is cod fishing, the islands being barren rock and unsuited to agriculture. Chief town, St. Pierre which is in regular steamship communication with Halifax and North Sydney.

SAINT-SAËNS, (CHARLES-) CAMILLE. A distinguished French composer, died in Algiers, December 16. He was born in Paris, Oct. 9, 1835. His precocity was such, that before he was three

years old he received from a relative systematic instruction on the piano. At the age of seven he was placed under C. Stamaty, who allowed the boy to make his pianistic début in Paris on May 6, 1846. Two years later he entered the Conservatoire, where he devoted himself to the study of the organ, under Benoist, and of composition, under Halévy. In 1851 he won the first prize for organ, and the following year entered the competition for the Prix de Rome, but without success. A second attempt, in 1864, also failed. From 1853-58 he was organist at St.-Merry, where he laid the foundations for his subsequent fame as one of the world's greatest organists. His masterly improvisations attracted such wide attention, that, when Lefébure-Wély resigned his position at the Madeleine, at the time the most coveted position in Paris, the post was offered to Saint-Saëns. Here he remained till 1877, after which time he never held any official positions, but devoted his entire time to composition and extended concert-tours, appearing as pianist, organist, and conductor of his own works. He visited the United States for the first time in the fall of 1906. On his second visit, in 1915, he came as the representative of the French Government at the Panama Exposition, when he conducted, at San Francisco, a new work, *Hail, California*, written especially for the occasion. In 1916 he made his first tour of South America. During the war he was indefatigable in giving concerts for the benefit of the various war-funds. In fact, despite his age, he continued his activities as pianist, organist, conductor, and composer to the very day of his sudden death. During his life innumerable honors and decorations were showered upon him. As early as 1868 he was made Chevalier of the Legion of Honor, in 1884 Officer, in 1900 Grand-officer, and in 1913 he received the highest honor, the Grand-Croix. In 1881 he was elected member of the Academy. In 1907 he witnessed the unveiling of his own statue in the opera house at Dieppe. At the beginning of his career his great fame as executant rather retarded than helped appreciation of his compositions, especially as he favored the instrumental forms, for which the French at that time had little understanding. Thus it was that he won his first emphatic success as a composer in Germany. But later his countrymen made amends for their earlier indifference by proclaiming him one of their classic masters, even though he was still living. Saint-Saëns' productivity was unusual, his output comprising 168 opus-numbers, the vast majority being works of large dimensions. Of his 13 operas only one, *Samson et Delila* (Weimar, 1877), has become universally known, though *Henry VIII* (Paris, 1883) has always maintained itself in France. His best known, and also finest, works are the four symphonic poems, *Le Rouet d'Omphale*, *Phaëton*, *La Jeunesse d'Hercule*, and *Danse Macabre*. Besides he wrote 3 oratorios (*Noël*, *Le Déluge*, *La Terre Promise*), 3 symphonies, 5 piano-concertos, 3 violin-concertos, 2 cello-concertos, 2 suites, and several overtures for orchestra; a mass, a requiem, cantatas, and psalms for soli, chorus and orchestra; a vast amount of chamber-music; incidental music to 10 plays. All these works testify to the universality of Saint-Saëns' genius and to his marvelous powers of assimilation, which enabled him to reproduce consciously the styles of almost every period from

the 16th century on, excepting modernism, which to him was an abomination. This universality, unfortunately, militated against the development of a decidedly individual style of his own. His numerous books exhibit a finished literary style, keen analytical power and an almost encyclopædic knowledge of the whole field of musical history.

ST. THOMAS. See **SAO THOMÉ AND PRINCE**.

ST. VINCENT. One of the Windward Islands in the West Indies; a colony of Great Britain. Area, about 160 square miles; population in 1911, 41,877; estimated in 1920, 53,210. Capital, Kingstown, with a population of 4300. One-half of the Grenadines are included under its administration, the other half being under that of Grenada. The products include: Arrowroot, rum, sugar, cocoa, spices, and one of the best varieties of sea island cotton in the world. The land has been in the hands of a few proprietors, but latterly the government has disposed of many small holdings in its plan to establish a considerable peasant proprietorship. Administrator and Colonial Secretary at the beginning of 1921, R. Popham Lob.

SAKHALIN. An island off the east coast of Siberia, separated from Japan by the narrow strait of Soya. The part south of the 50th parallel of north latitude belongs to Japan and is called Karafuto; and the part north of that line belongs to Russia and constitutes the province of Sakhalin. Japanese Sakhalin has an area of about 13,148 square miles; with a population in 1920 of 105,765. See **KARAFUTO**. The area of the Russian province is 14,668 square miles; with a population estimated, Jan. 1, 1915, at 34,000.

The strategic importance of the island caused it to figure largely in the discussion of Far Eastern questions, and its future was a matter of great concern to the Far Eastern Republic of Siberia. In 1921 the Japanese were still holding the town of Nikolaievsk in the Russian or northern half of the island. They had seized the place during the war when they undertook to protect the Czecho-Slovak forces in the course of their retreat and the Japanese subjects who were at that time in Siberia. They placed a garrison of about one thousand troops in the town ostensibly for the protection of several hundred Japanese civilians there. At the beginning of 1920 occurred the so-called massacre of Nikolaievsk for which the Japanese and Russian governments each blamed the other. The subject came up again at the time of the Disarmament Conference.

SALOME. See **MUSIC, Opera**.

SALTUS, EDGAR. American author, died, August 1. For many years he was placed among the leading realistic writers of the United States. He was born in New York City, June 8, 1858; educated at St. Paul's School, Concord, N. H., at the Sorbonne, Paris; and at German universities, and graduated at the Columbia Law School in 1880. Among the best known of his early novels were: *Mr. Inoué's Misadventure*; *The Pace that Kills* (1888); and other volumes of fiction dealing with contemporary manners, especially fashionable life. His first published writings were of a biographical and philosophical character and included a volume on *Balsac* (1884); *The Philosophy of Disenchantment* (1885); and *The Anatomy of Negation* (1886). The long list of his novels

includes the following in addition to those mentioned: *The Truth About Tristram Varick* (1888); *Eden* (1888); *A Transaction in Hearts* (1889); *Mary Magdalen* (1892); *Imperial Purple* (1893); *When Dreams Come True* (1895); *Purple and Fine Women* (1903); *The Poms of Satan* (1904); *The Perfume of Eros* (1905); *Historia Amoris* (1906); *The Lords of the Ghostland* (1907); *Daughters of the Rich* (1909); *The Monster* (1913); *Oscar Wilde—An Idler's Impression* (1917); *The Paliser Case* (1919).

SALVADOR. A central American republic on the Pacific coast, to the east of Guatemala. Capital, San Salvador.

AREA AND POPULATION. The estimates of area vary from 8170 to 13,183 square miles; the population was estimated, Jan. 1, 1920, at 1,336,442, of whom about two-thirds were mestizos and about one-sixth Indians. The population of the largest cities has been estimated as follows: San Salvador, 80,100; Santa Ana, 59,817; San Miguel, 30,406; San Vicente, 26,881; Nueva San Salvador, 23,291. The capital was badly damaged by the earthquake and volcanic eruption of June, 1917, and, while its effects were still being repaired, it was visited by another earthquake, April 28, 1919. The movement of population in 1919 was as follows: Births, 50,597; deaths, 31,703; marriages, 3596. Education is free and compulsory. In 1919 the primary schools numbered 971 with 1613 teachers and 51,305 pupils enrolled. The high schools numbered 27, including 2 normal and 3 technical schools; and there was a National University, with faculties of medicine, law, engineering, pharmacy, and dentistry.

PRODUCTION AND COMMERCE. The main occupation is agriculture, and the principal crop is coffee, which is grown on the plateaus and mountain slopes. In 1919 the acreage under coffee was 174,000, with 100,000,000 trees. Other productions are: Cacao, rubber, tobacco, sugar, cheese, and live stock. The forests contain valuable dye woods and hard woods, including: Cedar, mahogany, and walnut. Balsam trees abound and mangrove grows in the swampy places and along the river banks (see preceding **YEAR BOOK**). The mineral resources include: Gold, silver, mercury, and iron. According to a British authority the imports in 1919 were £1,876,025; and the exports, £2,115,521. By far the largest share of the foreign trade is that of the United States, and Great Britain and France come next. In 1919 the chief imports were: Hardware, cottons, drugs, flour, and chemical products; and the chief exports: Coffee, sugar, and indigo. The exports also include: Balsam, silver, hemp, hides, rubber, and henequen. Over half of the coffee exported went to the United States, and 29 per cent, to France.

FINANCE. The budget estimates for 1920-21, according to a British authority were: Revenue, £2,945,234; expenditures, £3,245,516; and the total outstanding debt, Dec. 31, 1920, was £3,655,290. The budget law for the fiscal year from July 1, 1921, to June 30, 1922, estimated the revenues at 13,714,670 colones as follows: Customs duties, imports, 6,158,600 colones, exports, 1,373,800 colones; internal revenue, liquors, 2,930,000 colones, sealed paper and stamps, 582,000 colones; direct taxes, 850,000 colones; sundry revenues, 781,000 colones; services, 943,000

colonies; national property, 96,270 colonos. The expenditures were reckoned at 13,737,209.63 colonos, as follows: National Assembly, 69,905 colonos; Presidency of the Republic, 102,904 colonos; Government Department, 3,690,228.54 colonos; Promotion Department, 1,293,190 colonos; Department of Agriculture, 46,420 colonos; Department of Foreign Relations, 364,264.34 colonos; Department of Justice, 956,772 colonos; Public Instruction, 1,226,963.76 colonos; Treasury, 912,563.60 colonos; Public Credit, 1,000,000 colonos; Public Charity, 664,852 colonos; War and Navy, 3,209,137.39 colonos; General Ministry, 200,000 colonos.

COMMUNICATIONS. In 1919 the vessels entered numbered 329 with a tonnage of 412,172. Railways open for traffic in 1918 had a length of 213 miles, all narrow gauge.

GOVERNMENT. Executive power is vested in the president who acts through a ministry of four members for the following departments: Foreign relations, justice, and instruction; interior, government and agriculture; finance, charities, and public credit; war and marine. Legislative power is vested in a congress of forty-two deputies, elected for one year by universal suffrage. Salvador took part in the formation of the Central American Federation, and became one of its constituent states. (See CENTRAL AMERICAN FEDERATION.) President in 1921, Jorge Melendez.

SALVATION ARMY. This organization was founded by the late Gen. William Booth in 1865 and was first known as The Christian Mission. Its present name was adopted in 1878 and is derived from the fact that its purpose is the "salvation of mankind from all forms of moral, spiritual, and temporal distress." Its government is "military in form and its tactics militant and aggressive." It was incorporated in the State of New York in 1899. It is a religious body and while its primary aims are evangelistic, it conducts extensive social relief. The Army continued in 1921 to perform certain welfare work for the American forces in Germany on a smaller scale. During 1920 the country was divided into three territories, the Eastern Territory with Headquarters in New York City, Central Territory with Headquarters in Chicago, and Western Territory with Headquarters in San Francisco. It was reported that this change had had a very marked effect and that the year of 1921 was the best of its history in the United States in every respect. The enrolled Salvationists in 1920 were 28,586 and in 1921, 35,969, an increase of 7383. Extensive Child Welfare Work is conducted in many institutions throughout the United States. Of these may be mentioned the Lytton Springs Orphanage and Industrial Farm in California. Statistics for the year ending Sept. 30, 1921, gave in the United States the following: 1117 corps and outposts; 3728 officers and cadets; 219,442 indoor meetings with an attendance of 9,020,964; 176,495 outdoor meetings with an attendance of 25,736,792; 80,566 converts; 6525 Life Saving Guard Meetings with an attendance of 101,836; 110,301 Junior Meetings with an attendance of 3,595,231; 12,563 local officers and bandmen. Hotels maintained by the Army comprised 58 for men, 2 for women and 5 young women's boarding homes, with a total accommodation for the year of 6031, 1,553,575 beds and 437,473 meals supplied. Industrial homes numbered 88, where accommo-

tions were provided for 2103; 6807 men were admitted during the year, 1,714,505 meals supplied and 529,437 beds. There were 6 children's homes, with accommodations for 670; 206,600 beds were supplied and 634,123 meals served. There were 19 posts and nurseries and 29 rescue homes and maternity hospitals; there were accommodations for 1708 at the latter; meals supplied totaled 1,460,841 and beds supplied, 491,784. The Army carried on valuable work among the prisons throughout the country in 1921 and undertook to locate missing friends. The international activities of the Army for the year ending December, 1921, are summed up as follows:

Countries and colonies.....	73
Languages in which salvation is preached.....	46
Corps and outposts.....	12,211
Social institutions and agencies.....	1,286
Day schools.....	752
Naval and military homes and hotels.....	35
Officers and cadets—	
Field work.....	15,579
Social work.....	3,897
	19,276
Persons without rank wholly employed.....	5,941
Local officers (senior and young people's).....	74,469
Bandmen (senior).....	26,017
Bandmen (young people's).....	7,419
Songsters.....	30,943
Corps cadets.....	18,846
Number of periodicals published.....	83
Total copies per issue.....	1,461,880

Territorial headquarters of the Army are at 120-130 W. 14th Street, New York City.

SALZBURG. Before the collapse of the Austro-Hungarian empire a crownland of Austria; lying to the east and north of Tirol; and bordered on the north by Germany. Area, 2759 square miles; population (1920), 214,200. In 1913 the population was estimated at 221,304. According to the census of 1910 the Austrian subjects numbered 208,562, nearly all German, and the Catholics formed 98.7 per cent of the total population. Capital, Salsburg, with a population in 1920 of 36,450. It is the seat of a university maintained by the state.

SAMAROV, OLGA. See Music, Artists, Instrumentalists.

SAMOA. A group of islands in the Pacific near latitude 14° south, about 130 miles north of Tonga. They consist of nine islands, aside from islets and rocks, of which the islands east of 171° east longitude have belonged to the United States since Feb. 13, 1900; and the islands to the west of that line, to Germany until after the outbreak of the war in 1914 when they passed under the administration of New Zealand. The area of this latter group is variously estimated at from 990 to 1300 square miles, with a civil population, according to the census of 1917, of 41,128, of whom the whites numbered 1668 (British, 660; Germans, 530; Americans, 236). The main islands are: Upolu, with an area variously given at between 500 and 600 square miles; and Savaii, with an area of about 660 square miles. The chief products are: Copra, cocoa, rubber, sugar, cardamoms. Imports for 1919, £291,368; exports, £532,500. Revenue for the year ending March 31, 1920, £95,022; expenditure, £96,314. The New Zealand mandate dates from Dec. 17, 1920. Under this mandate laws were made for the territory by the governor-general of New Zealand in council, and measures were taken for the establishment of a

legislative council. The civil administration began, May 1, 1920. The name of German Samoa was changed to the Territory of Western Samoa.

The area of the American group is also variously estimated at from 77 to 102 square miles, with a population according to the census of 1920 of 8056. The chief island, Tutuila with an area variously placed at from 55 to 77 square miles, is well wooded and mountainous; and had a population in 1920 of 6185. The schools numbered 69 with 2060 pupils. Four missions are engaged there, namely, the Roman Catholic (French), —Mormon, and the Wesleyan missions, and the London Missionary Society. The chief products are: Copra, and a variety of fruits, including, oranges, grape fruit, citron, and limes. Pago-Pago on the southern coast of the Island of Tutuila is one of the best and safest harbors in the South Seas and an important naval base. It is the only good harbor in the Samoan Islands. The administration is under the naval commandant and governor who is stationed at Pago-Pago, and who has the power of appointment and of framing laws. Commandant and governor in 1921

SAMOS. One of the Anatolian islands, formerly tributary to Turkey, but occupied by Greece during the late war, and administered by a Greek prefect. Area, about 181 square miles; population, estimated in 1913 at 68,949. Capital, Vathy, with a population of about 8000.

SAMPSON, ARCHIBALD, J. Lawyer and diplomat, died at Phoenix, Ariz., December 24. He was formerly minister to Ecuador. He was born near Cadiz, Ohio, June 21, 1839; and served in the Union army during the Civil War. He was admitted to the bar in 1865, and practiced in Missouri and Colorado and after 1893 at Phoenix, Ariz. He was attorney-general of Colorado, 1876-79; and minister to Ecuador, 1897-1907.

SAN ANTONIO FLOOD. See FLOODS AND FLOOD PROTECTION.

SAND AND GRAVEL. The total quantity of sand and gravel produced in 1920 was nearly 78,000,000 tons, or about 7,000,000 tons more than in 1919. The total value increased from about \$46,000,000 to more than \$62,000,000. The production of building sand increased nearly 4,000,000 tons, and the average price per ton the country over rose from 56 to 66 cents. The output of molding sand increased more than 1,000,000 tons and the value more than \$3,000,000. Glass sand, which is rather high priced, rose from an average of \$1.97 a ton in 1919 to \$2.20. The following table includes preliminary estimates for 1920:

SAND AND GRAVEL PRODUCED IN THE UNITED STATES, 1918-20		
Year	Quantity (short tons)	Value
1918.....	61,824,426	\$37,927,079
1919.....	70,576,407	45,951,556
1920.....	77,887,000	62,694,000

SANDERS, HENRY MARTIN. See NECROLOGY.

SANDHURST, WILLIAM MANSFIELD, Viscount OF. British Lord Chamberlain after 1912, died in London, November 2. He was born in 1855, educated at Rugby, entered the Coldstream Guards in 1873 and became Under-Secretary for War in 1886. From 1895 until 1899 he was Governor of Bombay. In 1906 he was a member

of a committee sent to South Africa to report on the subject of representative government.

SANDOR, MATHIAS. Painter, died in 1921. He was born in Hungary, July 10, 1857; but came to the United States and studied at the Art Students' League, New York City, 1885-86. He afterwards studied in Paris. He devoted himself especially to portrait, miniature, and landscape painting; and exhibited at all important exhibitions.

SAO THOMÉ AND PRINCEPE. Two islands belonging to Portugal off the coast of French Equatorial Africa in the Gulf of Guinea. Area, 363 square miles; population in 1914, 58,907, of whom 53,969 were in São Thomé, and of whom 1570 were whites. The soil is volcanic and the surface hilly but the land is fertile. Chief products include: Cacao, coffee, rubber, and cinchona. Imports in 1919, 6,575,206 escudos; exports, 18,759,705 escudos.

SARAWAK. A British protectorate, comprising the northwestern part of the Island of Borneo, with a coast line of 400 miles. Area, about 42,000 square miles; population, estimated at about 600,000, comprising, Malays, Dyaks, Kayans, and other Polynesian tribes, along with Chinese and other settlers. Capital, Kuching, with a population of about 25,000. Exports include: Sago, flour, pepper, rubber, gold, gutta jelutong, and liquid fuel. The trade is chiefly with Singapore. There is a rich supply of coal, and considerable resources also of gold, silver, diamonds, quicksilver, and antimony. Revenue in 1919 was £295,311; and expenditure, £200,883. The government of Sarawak was bestowed by the Sultan of Brunei in 1842 upon the late Sir James Brooke, by whom an agreement was made in 1888 with Great Britain, constituting a protectorate. On the death of Rajah Brooke, he was succeeded by his son, Charles Vyner Brooke, May 17, 1917. Imperial interests are represented by a British agent who is also agent for British North Borneo and high commissioner for Brunei. The agent at the beginning of 1921 was Sir L. N. Guillemard, who was also governor of the Strait Settlements.

SASKATCHEWAN. One of the Prairie Provinces of Canada, lying east of Alberta and west of Manitoba, and extending from Montana and North Dakota to the Northwest Territories. Capital, Regina. Area, 243,382 square miles, exclusive of water; population (1921), 761,390. Population of Regina (1921), 34,432; Moosejaw (1921), 19,184; Saskatoon (1921), 25,743. Lieutenant-Governor in 1921, H. W. Newlands; Prime Minister, W. M. Martin (re-elected, June 9). See CANADA.

SASSULITCH (ZASULICH), VERA. Russian nihilist, died, July 19. She was born in 1851;

and on suspicion of complicity in a revolutionary plot was arrested in 1869, and for several years was sent from place to place in Russia under police surveillance. She was released in 1876, but on Feb. 5, 1878, angered by General Trepoff's order requiring the flogging of a student, she entered the general's office and shot him, but not fatally. At her trial she gave as a reason for her act the necessity of calling the government's attention to the outrage. The jury unanimously acquitted her, and the government was moved by public sentiment to remove Trepoff from office, though it promoted him at the same time to the post of general of cavalry. The supreme court canceled the acquittal on the ground of informality, but in 1880 Sassulitch escaped from the country and for some time lived in Switzerland. In 1905 after the Czar had issued his amnesty, she returned to Russia. She wrote on diverse social, political, and literary subjects and her papers were collected in two volumes, published in 1906.

SAULT STE. MARIE CANALS. See CANALS.

SAUNDERS, EDWARD WATTS. Former Congressman from Virginia died at Rocky Mount, December 16. He was born in Franklin County, Va., Oct. 26, 1860. After an academic education, he studied law in the University of Virginia. He practiced law at Rocky Mount, Va., after 1882; was a member of the Virginia House of Representatives, 1887-1901, and speaker during the last three years of that period; and was judge of the circuit court from 1901-06. He was elected to the Fifty-ninth Congress for an unexpired term, and was regularly reelected, serving in Congress from 1907-21. In politics he was a Democrat.

SAVAGE, Sir GEORGE HENRY. British physician, died in July. For many years he was regarded as a leading authority in psychotherapy. He was born at Brighton, Nov. 12, 1842, and trained in medicine at Guy's Hospital where he became house surgeon. Early in his practice he applied himself to the study of mental disease. After 1872 he was attached to the Bethlehem Royal Hospital, serving as medical officer and then superintendent for seventeen years. While in this position he became one of the best known physicians in London for his skillful dealing with patients suffering from mental disease and his great ability as a teacher, drawing medical students from over seas and having large classes, including many post graduate doctors. He was president of various medical societies and in 1912 became the first president of the section of new psychiatry of the Royal Society of Medicine.

SAVINGS BANKS. See STATE BANKS.

SAXONY. A term applied to the three following divisions of the former German empire: (1) The kingdom (proclaimed a republic, Nov. 9, 1918) which was the third largest constituent state of the empire. Area, 5787 square miles; population, 1910, 4,806,661; December, 1919, 4,670,311. Density, 805.2 per square mile. Principal towns with their populations, December, 1919: Leipzig, 604,380; Dresden, 529,326; Chemnitz, 305,775. The movement of population in 1919 was as follows: Births, 86,422; deaths, 68,892; marriages, 59,001. Common schools at the beginning of 1920 totaled 4183, with an attendance of 857,610. Leipzig is the seat of one

of the largest universities of Germany. In industry Saxony is surpassed only by the leading industrial provinces of Prussia, the chief manufacture being textiles. The leading crops are: Wheat, barley, rye, oats, and potatoes. In 1919 the acreage under cultivation was 2,285,507; and the chief crops with their acreage and yield in metric tons were as follows: Rye, 477,718 acres and 329,270 metric tons; wheat, 149,058, and 129,075; barley, 73,018, and 44,876; oats, 367,173, and 258,816; potatoes, 230,852, and 947,091. The constitution dates from Oct. 26, 1920, and the diet was elected in the following month. It was distributed among the party groups as follows: Majority Socialists, 27; German National party, 20; German People's party, 18; Independent Socialists, 13; Democrats, 8; Communists, 6; Centre, 1. Prime Minister at the beginning of 1921, elected, Dec. 11, 1920, Johann Wilhelm Buok.

(2) The Grand Duchy of Saxony or Saxe-weimar (also proclaimed a republic in November, 1918) united with the new state of Thuringia at the end of 1919 (see THURINGIA).

(3) The province of Saxony in Prussia. Area, 9756 square miles; population, 1919, 3,129,193 (see GERMANY).

SCABIES IN CATTLE AND SHEEP. See VETERINARY MEDICINE.

SCANDINAVIAN LANGUAGES. See PHILOLOGY, MODERN.

SCANDINAVIAN LITERATURE. (Including works published Christmas, 1920, but not Christmas, 1921.)

DANISH. Drama. Otto Rung's *Florian*, which depicts an international type of swindler with a Copenhagen accent, was played with great success. The same is true of Helge Rode's national festive drama *Moderen* (The Mother), which was written for the reunion of South Jutland with Denmark.

Poetry. Danish poetry is at present at a high tide. Kai Fris-Møller's *Indskrifter* (Inscriptions) contains, among other things, translations from the French and English and also old verse forms. It shows an exceptionally keen feeling for rhythm and melody. Valdemar Rørdam's *Over det indiske Hav* (Over the Indian Ocean) gives impressions gathered from a journey to East Asia and relies for its local color partly on the use of Oriental words. Another collection of poems resulting from travels is Hans Hartwig Seedorf's *Syngende Palmer* (Singing Palms), which gives us a series of dreams and fancies. Kai Hoffmann's *Den vide Verden* (The Wide World) combines a feverish desire for activity with a feeling of optimism and resignation.

Fiction. Paul Levin's *Sønner* (The Son) has a tragic tone with an element of the comic. Its effect is due to suggestiveness and vividness rather than to any definite pictures. Henry Söberg's *Den gale Præst* (The Crazy Minister) is evidently based on memories from the author's childhood. It depicts the conflict between pietism and a kind of practical Christianity which seeks its happiness in self-sacrifice. The chief character, a minister, is at the same time sublime and human. Karl Larsen's *Foraar* (Spring) contains pictures from the eighties evidently taken from the author's own youth. The book has an historical value as an interpretation of that period.

History, Literature, etc. An account of the death

of the author, J. P. Jacobsen's *Manes* (Shades) treating of the popular worship among the French was published in incomplete form. *Dansk Musik-historie indtil ca. 1700* (History of Danish Music until about 1700) is a work by Angul Hammerich, the only man who has investigated the earlier history of Danish music. Georg Brandes's latest biography *Michelangelo Buonaroti* shows a good understanding of Michelangelo as a man. The author has known how to bring his extensive knowledge in other fields to bear on his subject.

NORWEGIAN. *Drama and Theatre.* Ingolf Schanche's presentation of Hamlet in the National Theatre was perhaps the best interpretation of Shakespeare ever given in Norway. The English reader will be particularly interested in learning that Ibsen's earlier plays are now available in English translations.

Fiction. Peter Egge's *Inde i fjordene* (Among the Fjords) is a peasant story, as is also Olav Duun's *Storbryllopet* (The Big Wedding). The latter, written in Landsmaal, shows an exceptionally intimate knowledge of peasant life. In *Matilde* Oskar Braaten gives us a deep insight into the life and manner of thought of his characters. Knut Hamsun, who received the Nobel prize for the *Growth of the Soil* wrote *Konens ved vandposten* (The Women at the Well), which however lacks the idealistic tendency of the former work and is in general a disappointment. Katharina Gjesdahl's *Anne Garbens præst* (Anne Garbens Minister) shows a good understanding of ministers as men. In *Kristin Lavransdatter* Sigrid Undset goes back from the present time, which she usually treats, to the fourteenth century. In a large human way she gives us the picture of a girl who goes through all kinds of vicissitudes. Nils Collett Vogt's *Mennesker* (Human Beings) is a collection of short stories written somewhat in the vein of the nineties.

History Literature, etc. Halvdan Koht's *Den amerikanske nasjonen* (The American Nation) is a good source book and fills the need of a work treating of the genesis of the United States. Fredrik Paaasche's *Kong Sverre* (King Sverre) shows independent research. Paaasche differs from other historians in his picture of Sverre, particularly in portraying the latter as knightly and high minded. Gunnar Heiberg's *Norsk teater* (The Norwegian Theatre) shows a good practical acquaintance with the play house, as might be expected from a playwright.

SWEDISH. *Poetry.* The amount of poetry during the year was small. We may mention Ernst Högman's *En liv* (A Life), a collection of poems of good lyrical quality. The best of them is *Stockholmsidyll* (A Stockholm Idyl) which tells a story of love and sacrifice in a simple but impressive way.

Fiction. One of the main traits pervading contemporary Swedish fiction is a serious search after moral, religious, and philosophic truth. Sigfrid Siwertz's *Selambs* (The Selambs) is a family chronicle executed along larger lines than most Swedish novels. It shows how the selfishness of a guardian reacts in a disastrous way on the orphans with whose education he is charged. In Lydia Wahlström's *Sin förs dotter* (Her Father's Daughter) the heroine is hardly drawn with enough clearness. Her father is really the main character of the story and is very well

drawn, though in the case of the other male characters the author shows herself unsympathetic toward the masculine sex. Sven Lidman's *Såsom genom eld* (As through Fire) is a picture of simple religious devotion on the one hand and the cold self-satisfied religion of a formalistic state church on the other. Pär Lagerkvist's *Det eviga leendet* (The Eternal Smile) pictures life after death, but makes no attempt at explaining the meaning of existence. It leaves an impression of vagueness and indefiniteness. When reading Marika Stjernstedt's *Världen och stjärnorna* (The World and the Stars) we are reminded somewhat of Fredrika Bremer. The moral of the book seems to be that the unthinking optimism and longing for a peaceful existence should give way to an intelligent resignation. Henning Berger's *Hjärtat på väggen* (The Heart on the Wall) is a book with impressionistic tendencies. It is full of symbolism and its philosophy of life seems to be that through longing we attain to faith. In *Legend* Martin Koch tells the story of a man who after a life of crime in which he even kills his own son without knowing him, learns that love reaches its real greatness only when purified through sacrifice. The Finnish poet Jacob Tegenren wrote *Rasmus Teel*, a collection of short stories from Österbotten, and Jarl Hemmer, also a Finlander, wrote *Omni Kokko*, which depicts the late civil war in Finland. Among books translated into English may be mentioned Geijerstam's *Book about Little Brother*.

Science, Literature, etc. Sven Lönborg's *Dike och Eros* (Dike and Eros) presents a living picture of the men and powers of the Athens of antiquity. Another work dealing with classical times is Ivar Heikel's *Fron antikens värld* (From the World of Antiquity) which among other things contains the fragments of the Gospel and Revelation of Peter with a scholarly investigation and criticism of these. Among the books treating the romantic period we may note Carl Santesson's *Atterboms ungdomsdikning* (The Early Poems of Atterbom) which goes further than previous works in determining Atterbom's position in Swedish literature, and Fredrik Vetterlund's *Romantik* (Romanticism), which throws new light on many of the problems connected with the Romantic period.

SCHAEFER, WILLIAM CHRIST. Professor of theology, died, April 16. He was born in Berks County, Pa., April 28, 1851; graduated at Franklin and Marshall College, Pa., in 1871; and studied at the Theological Seminary of the Reformed Church at Lancaster, Pa. He was ordained to the ministry of the Reformed Church in 1874, and after holding pastorates at Waynesboro, Pa., and Danville, Pa., he was president of the Palatinate College, Myerstown, Pa., from 1884 to 1891. After 1904 he was professor of new testament science at the Theological Seminary of the Reformed Church. He wrote: *Outlines of the Life of Paul* (1908); *Outline Studies on the Bible, New Testament* (1912); *Catechetical Manual* (1913); *The Supreme Revelation* (1914); *The Greater Task* (1919).

SCHERL, AUGUST. See **NECROLOGY.**

SCHINDEL, S(AMUEL) JOHN BAYARD. Army officer, died, March 11. He was born at Cam-

den, N. J., June 3, 1871; graduated at the United States Military Academy in 1893; and was promoted through the successive grades to the rank of colonel in 1917, and brigadier-general, August 8, 1918. He was in the Santiago campaign in Cuba in 1898 and took part in the battle of San Juan and in the siege of Santiago. He was also in the Philippines from 1899 to 1902. During the late war he was assigned to Camp Meade, Md., in 1918 and to Fort Leavenworth, Kansas, in 1919.

SCHMIDT, ARTHUR P. American publisher, died at Jamaica Plains, Mass., May 5. He was born at Altona, Germany, April 1, 1846. In 1866 he came to the United States, and ten years later established in Boston the music-publishing firm bearing his name. He has the distinction of being the first publisher to issue a large orchestral score by an American composer (J. K. Paine's *Symphony in A*, 1882). He retired in 1916.

SCIENCES, NATIONAL ACADEMY OF. A body of distinguished American scientists whose purpose is to promote scientific research, examination, investigation and report upon any subject of science or art when called upon to do so by any department of the government; incorporated by Act of Congress, March 3, 1863. Two meetings were held in 1921; the Annual Meeting held in Washington, April 25-27 and the Autumn Meeting held in Chicago, November 14-16. At the Annual Meeting papers were read as follows: "Ultimate rational units," by Gilbert N. Lewis; "The quantum law and the Doppler effect," by William Duane; "Preliminary measurements of the effect of high pressures on the thermal conductivities of liquids," by P. W. Bridgman; "The stratification of suspended particles," by C. E. Mendenhall and Max Mason; "Transmission characteristics of the submarine cable," by J. R. Carson and J. J. Gilbert; "Radiation from transmission lines," by J. R. Carson; "Application of the principle of similitude to the hydraulic problem of the surge chamber," by W. F. Durand; "Theories of osmotic pressure," by E. H. Hall; "Metamorphism in meteorites," by G. P. Merrill; "The Island of Tagula, (New Guinea) its satellites and coral reefs," by W. M. Davis; "The shallow seas of Australasia," by W. M. Davis; "On the vibrations of gun-barrels" and "On the problem of steering an automobile around a corner" by A. G. Webster. At the autumn meeting in Chicago numerous scientific papers were read and discussed. Among these may be mentioned: "Life tables for *Drosophila*" by Raymond Pearl and Sylvia L. Parker; "The contrasted types of earth-energy and their relative values" by Thomas C. Chamberlin; "A new theory of the carbonization of coal," by S. W. Parr; "Some physiological actions of saccharin, and their bearing on the use of saccharin in foods," by A. J. Carlson; "The influence of heredity on the incidence of cancer," by Maud Slye; and "The properties of salts as related to Atomic dimensions," by G. L. Clark.

In 1921 there were 198 active members, one honorary member, and thirty-seven foreign

associates. There are fifteen trust funds, totaling \$247,410.52. The Academy publishes an Annual Report prior to its annual meeting, Biographical Memoirs and Scientific Memoirs at regular intervals, and the record of its Proceedings in twelve numbers each year. The officers for 1922 are: Charles D. Walcott, president; Albert A. Michelson, Vice-president; Charles G. Abbot, home secretary; Robert A. Millikan, foreign secretary; and Frederick L. Ransome, treasurer. The office of the home secretary is at the Smithsonian Institution, Washington, D. C.

SCOFIELD, CYRUS INGERSOLL. Clergyman, died, July 24. He was born in Lenawee County, Mich., August 19, 1843; and brought up in Tennessee where he entered the Confederate army as private in the Civil War. He fought in the army of North Virginia under General Lee and won the Confederate cross of honor. After the war he was admitted to the Kansas bar (1869), and served for a year in the Kansas house of representatives. In 1882 he was ordained to the Congregational ministry, and was pastor at Dallas, Texas, from 1882 to 1895. From 1895 to 1902 he was pastor of the Moody Church at Northfield, Mass., and again held his Dallas pastorate from 1902 to 1907. He lectured on Biblical subjects in the United States and in Europe, and wrote: *Rightly Dividing the Word of Truth* (1885); *Addresses on Prophecy* (1900); *The Doctrine of The Holy Spirit* (1906); *Lectures on Galatians* (1907). He was the editor of the *Scofield Reference Bible* (1910); and of the *Bible of 1911* (1911); and the head of the Scofield Correspondence Bible School.

SEDGWICK, WILLIAM THOMPSON. Biologist, died, January 26. He was born at West Hartford, Conn., Dec. 29, 1855; and graduated at Sheffield Scientific School at Yale in 1877, and Johns Hopkins in 1881. After teaching physiological chemistry in the Sheffield Scientific School, he entered the faculty of Johns Hopkins in 1879 where he taught biology. In 1883 he joined the staff of the Massachusetts Institute of Technology where he continued as professor of biology and public health. He was for eight years biologist of the Massachusetts State Board of Health, down to 1896, and after 1897 he was curator of Lowell Institute, Boston. He was a member or officer of the important societies and institutions concerned with his field of work, and wrote: *Principles of Sanitary Science and Public Health* (1902), and collaborated in various other scientific works of importance.

SEISMOLOGY. See EARTHQUAKES.

SELANGOR. See FEDERATED MALAY STATES.

SENEGAL. A French colony in the government-general of French West Africa (q. v.), consisting of four municipal communes, namely, St. Louis, Dakar, Rufisque, and Goree, and of

territories under the direct administration of the government-general. Total area, 74,112 square miles; population, estimated in 1920 at 1,204,113, of whom 4113 were Europeans. Capital, St. Louis, with a population in 1917 of 23,326. Dakar, a fortified naval station, is the seat of the government-general of French West Africa, population (1918) 25,468, of whom 2791 were French. No later figures in respect to foreign trade were available than those given in the preceding YEAR BOOK. The local budget for 1920 was 13,357,085 francs. The colony is represented by one deputy in the French parliament.

SERBIA. A Balkan kingdom which in December, 1918, was proclaimed a part of the new unitary state of the Serbs, Croats, and Slovenes (see JUGO-SLAVIA); bounded by Bulgaria on the east, Albania and Montenegro on the west, and Greece on the south; and separated from Hungary by the Danube and Save rivers. Capital, Belgrade. Area, as estimated in 1920, 42,098 square miles; and population, 4,955,631. Belgrade in 1919 had a population of 120,000. The resources are chiefly agricultural, and include: Wheat, corn, barley, oats, rye, beet roots, fruit, and tobacco. After the armistice Serbia took a leading part in the organization of the new state, and the Serbian king became also the ruler of Jugo-Slavia. King Peter died in 1921 (see PETER KARAGEORGEVITCH) and was succeeded by Alexander (see JUGO-SLAVIA).

SERVIÈRES, ARMAND. French general, died at Mauves, France, in November. He was born in 1843 and took part in the Mexican expedition as a private soldier. He was promoted an officer from the ranks, and served as lieutenant of Zouaves in the Franco-German war after which he served in Africa and then for eleven years in Tongking. His later commands were that of the Algiers Division of the 3rd Army Corps at Rouen and of the 19th Army Corps in Algeria. In August, 1914, he reentered the service as adjunct to the general in command of the troops of North Africa. He was a Grand Cross of the Legion of Honor.

SEVCIK, OTAKAR. See MUSIC, Artist, Instrumentalists.

SEVENTH DAY ADVENTISTS. See ADVENTISTS.

SÉVÉRAC, DÉODAT DE. French composer, died at Ceret, Pyrénées Orientales, in March. He was born at Lauragais, July 20, 1873. In France he was well known as a composer of several operas and incidental music to a number of modern plays. His orchestral works and chamber-music also are highly esteemed.

SEWERAGE AND SEWAGE TREATMENT. Fine screening for preliminary treatment or where a moderate degree of clarification alone is sufficient, continued to receive study, with adoption by some cities. For more complete treatment, screens or else sludge-digestion tanks of the one- or two-story (Inhoff) type continued to serve for clarification, with (2) some forms of oxidizing beds for the removal of decomposable organic matter, and (3), if heavy bacterial reduction were desired, with chlorination as a finishing process. Much interest continued in the activated-sludge process as serving all three of the objects just mentioned, but except for such projects at Milwaukee and Chicago, little was done towards the installation of new activated-sludge plants (see earlier YEAR BOOKS for mention of the two large

plants of this type at Houston and a number of smaller ones elsewhere). At the close of the year, Milwaukee was about to receive bids for completing what will be by far the largest activated-sludge plant in the world. The completion of a similar project at Worcester, England, which would make that place the largest one in England treating all sewage by activation, was halted by local complications. At Manchester and Sheffield, activated-sludge studies and projects were continued, as also at Shanghai, China, where £32,000 was appropriated to continue on a yet larger scale working tests previously begun. Experimented studies of this and other processes were conducted at Milwaukee, by the Sewerage Commission; at Champaign, Ill., by the Illinois Water Survey; and at New Britain, Conn., by the State Stream Pollution Commission. For the third time in the last few years the people of Los Angeles, Calif., voted down a sewerage bond issue, the amount in 1921 being \$12,850,000 for constructing trunk sewers to convey sewage to the Pacific ocean and a sewage treatment plant there (see *Engineering News-Record* June 30, 1921, for outline of project). Subsequently these city and consulting engineers advised a smaller bond issue to carry out a part of the larger project, and to build two good-sized activated-sludge plants to serve portions of the city and to afford working-scale data for future guidance. An adverse decision was rendered by the United States Supreme Court in the long-drawn out suit brought by New York State (nominally, but practically by New York City) for an injunction against the discharge of sewage into New York Bay from the trunk sewer and sewage-treatment works being built by the Passaic Valley Sewerage District for Newark, Paterson, and other communities. The court held that New York had not proved that a nuisance would be created (see *Engineering News-Record*, May 19, 1921, for major part of the opinion).

SHALIAPIN (CHALIAPINE), FEODOR. See MUSIC, Artists, Vocalists, Opera.

SHANTUNG. One of the eighteen provinces of China proper; since the Treaty of Versailles, a subject of dispute between Japan and China. It was one of the questions pertaining to the Far East that was most actively discussed in the closing months of the year at the Disarmament Conference at Washington. See the articles, CHINA; JAPAN; and WAR OF THE NATIONS.

SHEEP. See LIVE STOCK.

SHEPPARD, EDGAR. See NECROLOGY.

SHIPBUILDING. With the world-wide depression in trade shipbuilding suffered along with other industries and along with decreased output in 1921 in practically all the maritime nations there was a general note of uncertainty which influenced the placing of new orders and further activity. This was shown both in the production and amount of tonnage launched as indicated in the accompanying tables but also in the relatively small amount of construction under way on Dec. 31, 1921. This naturally was regrettable as the shipyards of the world never had been better organized for efficient and large scale production and the two million tons of shipping launched in British yards in 1920, for example, was by no means the limit of the industry.

In 1921 this production fell off some 25 per cent. Outside of Great Britain the same general conditions applied and shipyards did not increase

their production appreciably. Taking these countries in 1921 it would appear that there was a decrease from four and a half million tons to less than three and a half millions, but this is accounted for in a decrease of nearly a million and a half tons in large measure by the decline of shipbuilding in the United States where there was a decrease of nearly a million and a half tons.

The German production in 1921 judged by figures exhibited a very large advance, not altogether accounted for by the greatly increased activity in that country but in part explained by the lack of complete returns in 1920. There was a large decrease in Japan, and decreases also in Denmark, Sweden, and Spain; but on the other hand there were increases in Holland, France, Italy, and Norway, so that Continental countries as a whole have maintained their 1920 position, while the United Kingdom, the United States and Japan experienced a serious period of reduced output.

The following tables from the Annual Report of the *Glasgow Herald* from returns secured at the end of the year shows the output of the world's shipyards, for 1921 and 1920:

	1921		1920	
	Vessels	Tons	Vessels	Tons
England.....	466	897,365	690	1,214,319
Scotland.....	313	580,216	446	778,914
Ireland.....	25	118,691	33	147,695
United Kingdom...	804	1,596,272	1,169	2,140,928
Dominions.....	181	153,490	307	287,493
Empire.....	985	1,749,762	1,476	2,428,421
Foreign.....	1,417	3,439,731	1,798	4,518,763
Total.....	2,402	5,189,493	3,274	6,947,184

The United Kingdom had an established lead among the shipbuilding nations as America had dropped definitely to second place after it phenomenal war efforts. Germany was already three years after the close of the war—and from the extraordinary activity of her shipbuilding plants in 1920 and 1921, would in all probability be back in her old position of second within a comparatively short time. The following are the countries whose output in 1921 was over 200,000 tons:

	Vessels	Tons	I. H. P.
United Kingdom.....	804	1,596,272	1,318,788
United States.....	292	1,303,735	1,510,894
Germany.....	241	622,762	369,811
Japan.....	119	424,284	659,185
Holland.....	292	292,586	177,851
France.....	119	223,974	129,135

LLOYD'S ANNUAL SUMMARY OF SHIPBUILDING. This annual report of ships launched during the year affords an authoritative basis of comparison between the different nations of the world and the industry at different epochs. Lloyd's Annual Summary does not include warships and takes into account only merchant vessels of 100 tons gross and upward that were launched, whether they were completed during the year or were still under construction at its close. Lloyd's includes sailing vessels fitted with auxiliary power with steamers or motor vessels according to the type of engine. The annual summary of the mercantile shipbuilding of the world for the calendar year 1921, indicated a total output for the year of 4,341,679 tons. These figures

represented a decrease of 1,520,000 tons as compared with 1920, but they exceeded by more than 1 million tons those for 1913, during which year the prewar world's record output was reached. In 1921 the United Kingdom's percentage of the world's output was practically the same as in the previous year, viz.—35 per cent, but was considerably less than in 1913 when this figure reached 58 per cent.

The great development in the use of the steam turbine is very evident in this summary for during the year under review there were launched 167 vessels of about 1,195,000 tons which were to be fitted with steam turbines. This tonnage represented over 30 per cent of the total world's output of steel steam tonnage, and was an average tonnage of 7155 tons per vessel.

The tonnage of new vessels which were being fitted with internal combustion engines also was steadily increasing. During 1919 such tonnage amounted to about 156,000 tons, and for 1921 about 306,000 tons were launched; this total, however, only equaled about 7¼ per cent of the world's output of steam tonnage for 1921.

On the basis of size or type it was stated that of the 1377 vessels launched in the world during the year, 278 were of between 4000 and 7000 tons, 141 between 7000 and 10,000 tons, and 47 over 10,000 tons each.

During 1921, excluding vessels of less than 1000 tons, 151 vessels of about 1,050,000 tons were launched which were built for the carriage of oil in bulk. Most of these vessels were built on the Isherwood system of longitudinal framing, the total number and tonnage of vessels built on this system during 1921 being 139 of about 1,020,000 tons.

The countries where the largest amounts as tonnage launched recorded during 1921 were of follows:—

	Tons
United Kingdom.....	1,538,052
United States.....	1,006,413
Germany.....	509,064
Holland.....	232,402
Japan.....	227,425
France.....	210,663
Italy.....	164,748

During the four years, 1918–21, the total addition to the world's merchant navies by new construction amounted to nearly 23 million tons, a total considerably higher than the combined output for the nine years 1905–13.

UNITED KINGDOM. The tonnage launched in the United Kingdom during 1921 was 1,538,052 tons, which figures were 517,572 tons lower than the record figures for 1920. The total equals over 35 per cent of the world's output for the year under review.

Of the tonnage launched during the year, 591,870 tons were intended for owners outside the United Kingdom—equal to 38.5 per cent of the total tonnage launched. The tonnage intended for Norwegian owners amounted to 134,555 tons, that for French owners 127,854 tons, and 123,811 tons were for Dutch owners.

SIZE AND TYPE OF BRITISH VESSELS LAUNCHED. The returns show that 103 vessels of between 5000 and 10,000 tons each, and 24 vessels of 10,000 tons and upwards were launched. The following are the six largest:—

Names	Builders	Tons	I. H. P.
Laconia.....	Swan, Hunter, etc.,	19,780	13,500
Windsor Castle	John Brown & Co.	19,000	14,500
Conte Rosso....	Wm. Beardmore & Co.	18,500	21,000
Tuscania.....	Fairfield Shipbuilding Co.	17,250	14,000
Moldavia.....	John Brown & Co.	16,510	13,250
Montelara.....		16,400	13,500

During 1921 70 vessels with a total tonnage of 624,487 tons were launched which were to be fitted with steam turbines, and practically all of them with geared turbines. During the year 28 motor vessels of 102,356 tons were launched, and 11 of them were of 5000 tons and upwards, the largest being of about 9500 tons.

The tonnage launched in England and Wales amounted to 867,600 tons, in Scotland 551,856 tons, and in Ireland 118,596 tons. The leading shipbuilding centres were Glasgow with 358,347 tons, and Newcastle with 354,813 tons.

UNITED STATES. Lloyd's Summary indicates for the United States that the output for the year 1921, viz.—1,006,413 tons, was 1,469,840 tons lower than during 1920, and over 3 million tons less as compared with the record year of 1919.

This decrease was general all over the country. The tonnage launched on the Pacific Coast repre-

sented 55.7 per cent of the output for 1920; at Atlantic and Gulf Ports about 38 per cent and on the Great Lakes less than 9 per cent.

Notwithstanding this great reduction the figures for 1921 still represented nearly 36 per cent of the world's output outside of the United Kingdom.

The total figures for the United States, excluding vessels of less than 1000 tons, comprised 33 vessels of about 228,000 tons to be fitted with steam turbines, and 11 vessels of about 35,000 tons to be fitted with internal combustion engines. Ninety-two steamers for the carriage of oil in bulk were launched with a tonnage of about 690,000 tons; 86 of these vessels, of about 670,000 tons, were built on the Isherwood system of longitudinal framing, and in addition 9 other vessels of about 76,000 tons were also built on this system. The totals comprised 53 steamers, each of between 4000 and 7000 tons; 50 of between 7000 and 10,000 tons, and 18 vessels of 10,000 tons and upwards, including the *S. S. Bethore*, of 15,300 tons, launched by the Bethlehem S. B. Corp., at Sparrow's Point, Md., the largest vessel launched during 1921 outside of Great Britain.

THE WORLD'S SHIPBUILDING

AMERICAN SHIPBUILDING IN 1921. The American Bureau of shipping, the American classification society composed of shipowners, underwriters, and persons prominently identified with maritime commerce, and those prominent in the branches of science appertaining to ship construction and operation reported that more than \$234,000,000 was expended for new vessels constructed in American shipyards during 1921, and a total tonnage of 7,352,071 gross tons turned out.

This construction was despite the slump in shipbuilding all over the world, already referred to, and involved 188 vessels of over 1000 gross tons completed during the year 1921.

Of this number 63 were for U. S. Shipping Board account, 111 for private account American ownership, 9 for British owners, three for Holland owners, 1 for Norwegian and 1 for Honduran. Of the total 1,352,071 gross tons 87,750 gross tons were for foreign ownership, the bulk of which, 58,738 gross tons, were for British interests. With one exception—a 2500-ton ship to sail under the Honduran flag as a passenger and fruit ship—all the foreign tonnage was oil tankers. Orders for these ships had been placed at a time when quick deliveries could not be obtained in foreign yards. In 1921 there were 47 ships of 10,000 gross tons and over launched as compared with 22 in the previous year.

¹ Includes 6 concrete steam vessels of 23,119 gross tons.

² Includes 6 concrete steam vessels of 37,553 gross tons.

³ Includes 1 concrete gas vessel of 1433 gross tons.

⁴ Includes 7 concrete barges of 2112 gross tons.

THE WORLD'S LEADING SHIPBUILDERS. During 1921 there were 16 shipbuilding plants whose output was in excess of 60,000 tons. The leading position as will appear from the following summary from the *Glasgow Herald's* Annual Review of Shipbuilding was taken by the Bethlehem Shipbuilding Corporation with the production of its five yards, and second place by another American establishment. Armstrong, Whitworth & Co., of Newcastle-on-Tyne, were easily highest in the United Kingdom, and it is a remarkable fact that the Tyne had produced the three highest British outputs, while the Clyde came in only once, and that at the bottom of the list:

	Vessels	Tons
Bethlehem S. B. Corp., U. S. A. (5 yards).....	52	247,092
New York Shipbuilding Co.....	11	141,531
Armstrong, Whitworth & Co.....	14	98,390
Kawasaki Dockyard Co., Japan.....	12	96,170
Newport News Shipbuilding Co., U. S. A.....	6	94,302
Palmer's Shipbuilding & Iron Co.....	12	88,570
Mitsubishi Shipbuilding Co., Japan.....	12	85,875
Swan, Hunter & Wigham Richardson (3 yards).....	14	80,401
Bremer Vulkan, Vegesack.....	10	79,850
Sun Shipbuilding Co., U. S. A.....	10	75,658
Federal Shipbuilding Co., U. S. A.....	17	74,214
Moore Shipbuilding Co., U. S. A.....	9	71,534
Merchant Shipbuilding Corp., U. S. A. (2 yards).....	11	69,775
Harland & Wolff, Belfast and Clyde (3 yards).....	8	69,753
Vickers, Ltd.....	7	64,320
Wm. Beardmore & Co.....	7	60,179

BRITISH SHIPBUILDING DISTRICTS. In 1921 within the United Kingdom first place for output among the shipbuilding areas continued to be held by the Clyde, with the North-East Coast rivers and Belfast following. The production everywhere was lower than in the previous year, but apart from the United States and Germany, the Clyde had a tonnage higher than that of any foreign country:

	Vessels	Tons	I. H. P.

SHIPPING. In 1921 there came to a rather abrupt finish the period of inflation and speculation in shipping and foreign trade that arose during the world war and flourished for several years the world over. Economists and historians referred to similar conditions following every great war and so far as America was concerned the series of wars that terminated in 1815 afforded an example which in large measure was repeated. As in those days there was a vast expansion of American shipping. But in the twentieth century the part played by the United States was proportionately greater as the resources of the treasury were used for shipbuilding and shipping without stint. One has to appreciate the sudden and abnormal growth of this great industry to realize the difficulties and the serious nature of the return to normal condition and also to appreciate that such a process could not be effected in a moment but necessarily must be gradual and in-

volve many attendant circumstances. As will appear from the accompanying table the gross tonnage of American ships in the foreign trade from June 30, 1914, to June 30, 1921, increased eleven fold, and of this amount nearly 8,000,000 gross tons was owned by the United States Shipping Board, being built or acquired with the proceeds of taxation and the sale of Liberty bonds. But having this vast amount of shipping available and keeping it employed in 1921 were two different matters. Again, one has recourse to a comparison of statistics for the last year before the war dealing with the entries and clearances in foreign trade at American ports as it is only in that way can the great increase by 1921 be observed.

Gross tonnage of United States documented shipping on June 30, 1914 and 1921:

From the Report of the Commissioner of Navigation				
Domestic trade				
	Foreign trade	Great Lakes	Sea and river	Total
	Gross tons	Gross tons	Gross tons	Gross tons
June 30, 1914...	1,076,152	2,882,922	3,969,614	7,928,688
June 30, 1921...	11,081,690	2,361,166	4,839,280	18,282,136
Increase.....	10,005,538	1,521,756	869,666	10,353,448

¹ Decrease.

Entries and clearances in the foreign trade (expressed in net tons each of 100 cubic feet, available for carrying cargo or passengers), at ports of the United States during the years ended June 30, 1914 and 1921, and the changes which have occurred:

	American Net tons	Foreign Net tons	Total Net tons
Year ended June 30, 1914:			
In trade with North America.....	25,807,974	30,821,192	56,629,166
In trade overseas.....	1,662,729	48,280,091	49,942,820
Total.....	27,470,703	79,101,283	106,571,986
Year ended June 30, 1921:			
In trade with North America.....	46,070,997	25,419,370	71,490,367
In trade overseas.....	21,875,339	44,705,463	66,580,802
Total.....	67,946,336	70,124,833	138,071,169
Changes:			
In trade with North America.....	+20,263,023	-5,401,822	+14,861,201
In trade overseas.....	+20,212,610	-3,574,628	+16,637,982
Total.....	+40,475,633	-8,976,450	+31,499,183

The foreign trade of the United States naturally divides into that with foreign ports of North and Central America and the West Indies and other islands, and that with Europe, Africa, Asia, Australia, the islands of the Pacific and South America. In both of these fields the great gains were apparent not only in the total amount of trade and that done in American vessels. However, a word or two of explanation is in order. Nineteenths of the increase in the American trade with North America during the period under consideration was due to the importation of oil in tank ships from Mexico which increased from 737,000,000 gallons in 1914 to 5,606,000,000 gallons and the clearance of about 6,000,000 net tons of shipping in ballast, almost all American, from United States ports to Mexico. Considering also the overseas trade, it will appear that in the interval from 1914 to 1923 the proportion carried

by American ships increased their proportion from 3 per cent to over 30 per cent or from 1,662,729 tons to 21,875,339 tons while trade carried under foreign flags declined from 48,280,091 to 44,705,463 tons. These figures, dealing as they do with the tonnage entered and cleared rather than with the volume of trade expressed in the money value of exports and imports, subject of course to shifting standards of value, were believed to supply a better criticism of the development of American shipping under the conditions brought about by the World War.

The growth in American tonnage already referred to was one form of the answer of the United States to the destruction of shipping by German submarines, and followed the appropriation of over \$3,000,000,000 by the American Congress. In 1921 these appropriations were virtually exhausted and on June 30, 1921, there remained to be completed only 25 steamships of 214,638 tons of the Shipping Board's building programme and later in the year a number of these were finished (see SHIPBUILDING). (See table, page 656.)

If the shipping of the United States increased during the war it is only fair to consider what happened to that of other nations, and for purpose of further reference the figures of 1907 are also given. These 14 years marked the gradual disappearance of sailing craft and the increase of steel steamships especially in larger units. In 1907 the United States had less than 10 per cent of the world's steel steam tonnage, in 1914 still less than 10 per cent, while in 1921 it had 26 per cent of the world's steel tonnage and 27 per cent of the world total tonnage which is an amount adequate to handle not only 50 per cent of the American

water-borne commerce as it did in 1921 but over 75 per cent of the foreign commerce of the United States and the coasting trade. The loss of Germany's merchant marine and also that of Austria is, of course, obvious.

THE UNITED STATES SHIPPING BOARD. In connection with the expansion of its merchant marine the people of the United States had a brief but expensive experience in government ownership and operation of ocean steamships. This led to the abandonment of this policy which had a trial on a scale never before attempted or even conceived. Naturally much of this development came after the armistice as will appear from the accompanying table. On Dec. 1, 1918, the date available nearest to the armistice, the Shipping Board fleet comprised 541 ships of 2,037,584 gross tons. Of these, nearly half, 229 of 926,061 gross tons, were ships which had been ordered by

¹ Net tonnage.

shipowners before the United States entered the war and were requisitioned, and 50 of 174,114 gross tons in addition were bought from private owners; 47 of 230,778 gross tons were seized German steamers. The fleet ordered and completed by the Shipping Board to that date consisted of 125 steel ships of 461,075 gross tons and 90 wooden ships of 245,556 gross tons. Its growth to July 1, 1921, is indicated in the table.

The number and gross tonnage of U. S. shipping Board and other branches of American Shipping at the beginning of each fiscal year indicated:

The year 1921 witnessed along with an increase in tonnage due to new construction a rapid fall in ship values and a steady decline in ocean freight rates. In 1914 a new cargo steamer it was said could have been purchased for \$35 a deadweight ton; in May, 1919, \$27 a ton was paid for a new 9250 deadweight ton ship figured with exchange at \$3.75 a pound, while in 1921 a new steamer of 5000 tons was sold in July for \$24 a ton, and a larger one, five years old, was sold in September for \$11 a ton. One of the best German built ships turned over to the British government was

REPORT OF COMMISSIONER OF NAVIGATION

July 1—	Shipping Board (1,000 gross or over)		Seagoing Private owners (500 gross or over)		All other		Total	
	No.	Gross tons	No.	Gross tons	No.	Gross tons	No.	Gross tons
1917.....	19	76,180	1,552	3,564,160	24,826	5,230,717	26,397	8,871,037

During the year 1921 a new Shipping Board was formed under the chairmanship of Albert D. Lasker and an early act of the Board was to turn over the operation of ships to the Emergency Fleet Corporation. This organization was reorganized with directors who were experienced in the shipping business and to them were paid high salaries. The corporation straightway sought to put into effect policies of efficiency and economy, and aimed to develop the larger aspect of the situation by establishing broad principles of operation and enforcing more completely the Shipping Act of 1916 and the Merchant Marine Act of 1920, parts of which had never been carried into practice. The Emergency Fleet Corporation not only was seeking a fundamental basis of operation, but it reduced to a minimum the number of companies operating from the same port and withdrew from active operation ships that were incurring large losses. In fact it was stated that at the end of the year only about 300 of the 1500 government-owned steel steamers were in active service.

bought back by the German line for which it was originally built for \$28 a gross ton.

At the end of the year the New York-London service of the U. S. Lines, the Shipping Board's transatlantic passenger fleet, was about to be augmented by the addition of three steamers. The vessels to be added were the *Peninsula State* and the *Lone Star State*, and the *Old North State*, previously operated by the line, but later returned.

All of these ships were among the most modern vessels of American construction. The *Peninsula State* and the *Lone Star State* being of the 535-foot class, of which twenty-three were ordered by the Shipping Board during the war emergency. They were designed to carry approximately 200 cabin and 300 third-class passengers and were equipped with every modern improvement for comfort and speed.

The *Lone Star State* was given a successful trial trip shortly before Christmas and was delivered to the Shipping Board on December 31.

There was a serious decline in freight rates

during the year and berth rates fell off sharply. Thus the berth rate on grain from North Atlantic ports to the United Kingdom fell from 10 shillings a quarter in January to 7 in July, 5 in October, and 4 in December, while the rate on compressed cotton declined from 90 cents per 100 pounds in January to 25 cents by December. Rates on general cargo were better maintained as a result of a liner conference, and the rate of \$1.00 per 100 lbs. from New York to Liverpool of January only fell to 75 cents by December.

Charter rates as for coal from Hampton Roads to Italy ranged from \$6.50 a ton in January to \$4.25 in December, while rates to French Atlantic ports ranged from \$5 to \$4.50.

Mention already has been made of the increased amount of commerce carried on by ships under the American flag in 1921. This was particularly true in the case of import and export trade to the Orient, Australia, India, and Africa. During the first ten months of 1921, the United States exported 2,231,932 long tons of commodities to the Orient, including in this region China, Japan, and the Philippines, and imported 531,754 tons from it. The relative share of this trade carried by American and foreign ships expressed in percentages is shown in the following table for our Atlantic Coast, Gulf Coast, and Pacific Coast, traffic, respectively:

	Imports	Exports	Grand total
Atlantic—			
American	31	41	38
Foreign	69	59	62
Gulf—			
American	..	45	45
Foreign	..	55	55
Pacific—			
American	50	56	55
Foreign	50	44	45

The receipts and shipments at the Pacific Coast accounted for practically half of the American foreign trade with the Orient, and on this trade route American ships carried 50 per cent of the imports, 56 per cent of the exports, and 55 per cent of the total trade. This activity declined in the later months of the year as, while American ships carried 72 per cent of the cargo in January it was but 42 per cent in September and October.

On the other hand, the performance of American ships in the Orient-Atlantic Coast trade, showed improvement after May. In October they carried 52 per cent of the traffic, and for the ten months as a whole 38 per cent.

American trade with Australia amounted for the ten months' period to 530,692 long tons, largely exports. The relative percentages of this trade for ten months carried by American and foreign ships to and from our respective coasts are shown in the following table:

	Imports	Exports	Grand total
Atlantic—			
American	52	15	22
Foreign	48	85	78
Gulf—			
American	..	100	100
Foreign	..	..	..
Pacific—			
American	52	51	51
Foreign	48	49	49

American trade with India for the first ten months of 1921 amounted to 865,340 long tons,

about evenly divided between imports and exports.

The comparative percentages of this trade for ten months carried by American and foreign vessels are shown in the following table for our three shipping coasts, respectively:

	Imports	Exports	Grand total
Atlantic—			
American	16	10	13
Foreign	84	90	87
Gulf—			
American	74	70	72
Foreign	26	30	28
Pacific—			
American	60	48	54
Foreign	40	52	46

The following table gives the relative percentages of United States trade with Africa, leaving out of consideration the northern coast for ten months carried by American and foreign ships between this region and the respective trading coasts of the United States:

	Imports	Exports	Grand total
Atlantic—			
American	30	18	20
Foreign	70	82	80
Gulf—			
American	100	22	38
Foreign	..	78	62
Pacific—			
American	..	63	63
Foreign	..	37	37

Imports and exports for this region amounted to 728,091 long tons, of which 516,897 tons were exports from the Atlantic Coast. On this trade route American ships carried 20 per cent of the cargo moving during the first ten months of 1921.

NEW SHIPPING COMPANIES. The aggregate indicated investment in shipping companies of various descriptions formed during 1921 was \$60,190,000. The total for the year compared with \$585,400,000 recorded for 1920 and reflected very strongly the slump which had affected the shipbuilding and shipping industries as a result of the worldwide business depression. See SHIPBUILDING.

SHIPWRECKS. See SAFETY AT SEA.

SHOES, SHOE INDUSTRY. See BOOTS AND SHOES.

SHOOTING. Nicholas Arie of Kingman, Ariz., the national amateur championship at the Grand American Handicap Tournament held at the South Shore Country Club, Chicago, in August. The Amateur doubles title went to R. A. King of Delta, Colo., after a double shoot-off with Samuel S. Sharman of Salt Lake City, Utah. Fred S. Tomlin of Glassboro, N. J., captured the professional contest at 18 yards, while Arthur Killam of St. Louis, Mo., won the national singles professional championship. The women's singles resulted in a victory for Mrs. Toots Randall of New York City.

The annual matches of the National Rifle Association of America were held at Camp Perry, Ohio. The winners in the principal events were: team match, U. S. Marine Corps; individual, Otho Wiggs, U. S. M. C.; team, pistols, U. S. Marine Corps, A. E. F.; individual, Sergt. J. M. Thomas, U. S. M. C.

In an international free rifle match contested at Lyons, France, the United States won first place with a score of 5015. Switzerland was second with

4993 and France third with 4609. The individual honors fell to Walter R. Stokes, a civilian contestant from Washington, D. C.

SHREWSBURY, EARL OF. CHARLES HENRY JOHN CHETWINDY-TALBOT, EARL OF SHREWSBURY AND EARL OF WATERFORD. British peer, died, May 17. He was known in England as the first person to introduce hansom-cabs fitted with noiseless tires in London and Paris. He was born in London, Nov. 13, 1860, and educated at Eton.

SIAM. A monarchy of southeastern Asia between 6° and 20° S. latitude and 97° and 106° E. longitude; about 1200 miles long from north to south and 480 miles broad. Capital, Bangkok.

AREA AND POPULATION. Area, about 195,000 square miles; population (1915-16), 8,819,686; estimated (1918-19) 8,924,000. Population of Bangkok was estimated at 628,675, of whom 200,000 were Chinese; population of the island of Puket, about 179,600.

PRODUCTION. The chief product is rice. In the fiscal year ending March 31, 1920, the export of rice amounted to 441,039; valued at £10,911,586. Other products are: Cotton, tobacco, peas, corn, sesame, hides, pepper, salt, dried fish, gamboge, and there is a large variety of fruits. Mineral resources are extensive and include: Coal, iron, zinc, tin, tungsten, wolfram, antimony, and manganese. There is a considerable exploitation of tin on the island of Puket. Great improvement in economic conditions was indicated in 1921. This was shown in the return of the rice crops to normal production after two years of failure. In 1919 the rice situation had been so serious that it was necessary to place an embargo on the export of rice and this embargo was not lifted until Jan. 1, 1921.

COMMERCE. The following information was supplied by the United States Bureau of Foreign and Domestic Commerce: Never before did the trade of Siam show such an adverse balance as that indicated by the trade figures for the calendar year 1920. The aggregate value of all imports from foreign countries amounted to 142,249,301 ticals (\$52,760,268), while the totals for the exports reached only 54,609,101 ticals (\$20,254,516), giving a negative trade balance of 87,640,200 ticals (\$32,505,750). This unsatisfactory position was entirely due to the failure of the rice crop for the season of 1919-20 and the subsequent prohibition of its export to foreign countries. The serious results caused by this failure may be judged by the fact that the chief agricultural product of the kingdom is rice and its export forms the main source of wealth to the country, and, in addition, it is the national food. The proportion of the rice exports to all other exports from the kingdom to foreign countries was 100,000,000 ticals worth of rice to 17,000,000 ticals worth of all other exports in 1913, 86,000,000 to 17,000,000 in 1915, 96,000,000 to 20,000,000 in 1916, 103,000,000 to 25,000,000 in 1917, 88,000,000 to 29,000,000 in 1918, 189,000,000 to 45,000,000 in 1919, and 6,000,000 to 48,000,000 in 1920.

COMMUNICATIONS AND FINANCE. Vessels cleared at the Port of Bangkok in 1919-20 numbered 639 of 581,230 tons. The state railways, March 31, 1919, were given at 2376 kilometres (1 kilometre equals 0.621 mile), of which 2215 kilometres were open for traffic. The budget estimates for the fiscal year ending March 31, 1921,

were: Ordinary revenue, \$26,825,000; ordinary expenditure, \$30,388,147. See preceding YEAR BOOK.

GOVERNMENT. Executive power is vested in the king (nominally hereditary) who acts by the advice of a cabinet, made up of the heads of the departments, many of whom have been members of the royal family. There is a legislative council of 40 members, appointed by the crown, including not fewer than 12 ministers of state, but royal assent to legislation is required. The administration is divided into 18 provinces or monthons, of which 17 are each under a lord-lieutenant whose authority is directly derived from the king, and one is a district under the ministry of local government. Formerly the tributary districts were under local chiefs, but the administration has been increasingly centralized. King in 1921, Rama VI, crowned, Dec. 2, 1911. In 1904 about 7800 square miles of Siamese territory passed under the control of France, and in 1907 boundary arrangements were agreed upon by which the French territory of Cambodia gained about 7000 square miles. France also acquired the four ports on the Mekong river to be held on a perpetual lease. Attempts to introduce western civilization have been made during recent years through the assistance of an adviser in foreign affairs (of American nationality); a judicial adviser (British); a legislative adviser (French); and legal advisers of other nationalities. There is also a British financial adviser and many British and European officers in the various departments.

SIBERIA. The northern Asiatic part of Russia. Area, 4,831,882 square miles; population, estimated, Jan. 1, 1915, at 10,377,900, giving a density of 2 per square mile (later estimates placed it at 10,510,200). Chief cities: Irkutsk (population, 129,700); Tomsk (116,664); and Vladivostok (91,464). Nearly 70 per cent of the inhabitants are settled in the agricultural regions of western Siberia. The Great Trans-Siberian Railway, begun in 1891, establishes communication between western Europe and the Pacific coast. According to estimates in 1915 about 75 per cent of the inhabitants were white. After 1918 the Japanese troops occupied portions of the country, having entered it in August of that year especially for the purpose of providing for the evacuation of the Czecho-Slovak forces and opposing the Bolshevik danger. It was understood that this occupation was merely temporary and Japanese officials repeatedly implied that the forces would soon be withdrawn. Nevertheless these troops were still on the ground during the whole of 1921, and the Japanese authorities did not fix the date of their withdrawal, though continuing to promise to withdraw. The United States government protested in May against the Japanese occupation, saying that Japan was avoiding the "scrupulous fulfillment of the assurances given to the Russian people." Japan's attitude implied that it was determined to be the sole judge as to the proper time to withdraw. The subject was under discussion at the time of the Disarmament Conference, in connection with the demand of the Far Eastern Republic (Chita) for recognition. See RUSSIA and WAR OF THE NATIONS.

SIERRA LEONE. A British colony and protectorate on the west coast of Africa with Liberia on the east and French Guinea on the north, including the peninsula which terminates in the

cape of the same name and constitutes Sierra Leone proper. Area, about 4000 square miles; population (1911), 75,572, of whom 702 were whites. The chief town, Freetown, had a population (1911) of 34,090. In addition to the colony there is a protectorate, proclaimed August 21, 1896, and administered under provisions of March 7, 1913, with an area of 27,000 square miles; and a population (1911) of 1,327,560. Chief imports of the colony in 1919 were: Cotton manufactures, coal, tobacco, spirits, and kerosene; and chief exports were: Palm kernels and palm oil, kolo nuts, and ginger. No later statistics for trade and finance were available than those given in the last YEAR BOOK. The tonnage of vessels, entered and cleared, in the foreign trade in 1919 was 2,016,699, of which 1,953,760 were British. The government railway, open from Freetown to Pendembu near the Liberian border was 227½ miles in length and further extension was projected. Governor at the beginning of 1921, R. J. Wilkinson.

SIFTON, ARTHUR LEWIS. See NECROLOGY.

SILESIA. The name of a former division of the Austro-Hungarian monarchy and also of a province of Prussia. The former was a crown-land of Austria, with an area of 1988 square miles and a population, Dec. 31, 1910, of 756,949. After the late war it became a part of the new republic of Czecho-Slovakia (q. v.). The Prussian province of Silesia was the largest division of Prussia, with an area of 15,573 square miles and population (1910) of 5,225,962. After the war Upper Silesia was made the subject of a plebiscite, and the decision was rendered in 1921 (see UPPER SILESIA and POLAND). Measures were being taken under the award of the League of Nations for determining the frontier. In 1920 the area of Lower Silesia in Prussia was given at 10,270 square miles, and of Upper Silesia, at 4998 square miles, and the populations were given in 1919 at 2,987,904 for Lower Silesia, and 2,283,992 for Upper Silesia. See also the articles on WAR OF THE NATIONS in this and preceding YEAR BOOKS.

SILK. The silk industry in 1921 suffered from a number of circumstances peculiar to itself as well as due to the general commercial situation. Reference to the accompanying table of raw silk production will show that the 1920-21 crop was the lowest in a number of years, and that while Europe, especially France and Italy, were returning to normal production, elsewhere in the world there was a marked decline. As also shown in the table over 50 per cent of the raw silk of the world's commerce was produced in Japan, and the condition of the industry there certainly was serious in the latter half of 1920 and 1921. In September, 1920, in view of the rapid decline taking place in values, the average price in July was more than 60 per cent below the quotation for January, the government established a syndicate, the Teikoku Sanshi Kaisha, to support the market by a pegged price at which surplus stocks were supposed to be taken. Furthermore in November of 1920 the filatures, or establishments for reeling the silk from the cocoons, were shut down. An arbitrary price of 1500 yen or about \$6.00 for Sinshiu was fixed and maintained and under such conditions the year 1921 opened. Up to February 15 the syndicate was able to take about 30,000 bales at a time when there were about 75,000 bales in the

market, but with financial assistance and with the authority of the government the standard price was maintained, though at times seriously threatened. In April the Teikoku Sanshi Kaisha was instructed to buy 70,000 bales more until May 31, it being arranged that the money would be raised by two semi-official banks and guaranteed by the government. The scale of prices was maintained for the greater part of the year, but only a normal business was done. Naturally this condition reacted on the silk growers and they were less active, which fact along with the cool summer tended to reduce the output. Accordingly in 1921 there was a cut of some 10 per cent in the crop of spring cocoons and of 16 per cent in the summer and fall cocoon crops. All of this seemed to indicate that before the beginning of the 1921-22 season there would be considerable progress toward the restoration of normal conditions in the raw silk market.

With the price of raw silk mounting towards the end of the year the consumers and particularly the manufacturers were forced to face a serious readjustment, and when raw silk reached \$8.00 a pound there was a question as to how far the buying public would go in the increased prices bound to result. Accordingly with the American public educated to the increased use of silk the manufacturer had to consider most carefully the matter of prices. In 1921 there was a greater demand for and production of silk hosiery and underwear, while there was poor business in broad silk. During the year the most popular dress fabric of silk was Canton Crepe which enjoyed greater favor than georgette. This was being made not only in popular shades of black, navy blue, brown and gray but with Jacquard patterns. In 1921 there was considerable activity in ribbons, in fact the best year ever experienced in this field as not only was there an active demand for the first half of the year but many new uses for ribbons were found.

ARTIFICIAL SILK. The production of artificial silk in the United States in 1921 was estimated at about 20,000,000 lbs., which output was twice that produced in 1920, and may be compared with a total world production of 26,000,000 lbs. in 1914. About 18,000,000 pounds of the 1921 American production came from a single company which put a new plant into operation at Lewistown, Pa., and made plans for doubling the capacity of its older plant at Roanoke, Va. Furthermore this company, the Viscose Co., had acquired a portion of the former U. S. government powder town of Nitro, W. Va., comprising 52 acres and 3 pulp mills, and here it proposed to make its pulp from cotton linters. Another concern, the du Pont Fibersilk Co., began production at its Buffalo plant in July, these works having a capacity of 1,500,000 pounds a year. At Hopewell, Va., the Tubize Artificial Silk Co. of America began to operate in June, 1921, and the product for this second half of the year amounted to over 800,000 pounds. This plant which had a capacity in 1921 of 8000 lbs. a day was to be so developed that it would turn out eventually 30,000 lbs. a day if required. This plant used the Clardonnet, or nitro-cellulose, process as employed by the original Tubize Co. in Belgium where some Americans were trained in order to work as instructors in the new plant. This in 1921 employed about 1500 operators. Still another new company was the Industrial Fibre Co. of Cleveland, Ohio, which towards the

end of the year commenced production for which there was a ready market. There were also several cellulose acetate plants in operation which made a wide range of artificial silk products of special characteristics and uses. Between 30 and 40 per cent of the production of artificial silk is said to go into hosiery, some 30 per cent into other knit goods, and perhaps 40 per cent enters into cloth and miscellaneous uses. The American product was said to be superior to the European and the industry was better organized and more efficient than in Europe. See COTTON; WOOL; TEXTILE MANUFACTURING.

SILVER. The production of silver in the United States in 1921 was estimated at about 50,364,000 ounces as compared with 55,361,000 ounces in 1920. The main sources of supply are indicated in the accompanying table. The silver mines of Nevada during the year fared well as the closing of the copper mines and the depression in the lead and zinc industries (q. v.) reduced the supplies from these sources. While there was a marked decline in price in 1921 as compared with 1920, nevertheless American producers were concerned less with the fluctuations taking place as under the terms of the Pittman Act of April 23, 1918 (see YEAR BOOK for 1919 and 1920, article, *Silver*) they received the fixed price of \$1.00 per ounce for such silver as the government would purchase delivered at the mints, at Denver, San Francisco, or Philadelphia. On this basis the Treasury purchased about 58,563,000 ounces during the year, so that the total amount acquired since May 13, 1920 was 88,570,000 ounces. It would take about two more years to purchase the remaining amount of 119,430,000 ounces provided for under the operation of the act. Naturally with the United States Treasury as a ready purchaser exports of silver declined, amounting to but 44,430,350 ounces for the first 11 months of 1921 as compared with 107,535,300 ounces and 208,426,260 ounces for similar periods in 1920 and 1919, respectively. There was a smaller production in both Canada and Mexico, a condition reflected in the imports into the United States which for 11 months of 1921 was 57,726,767 ounces as compared with 83,434,400 ounces for a corresponding period in 1920.

Refinery Production of Silver in the United States in 1921. The Bureau of the Mint with the cooperation of the U. S. Geological Survey compiled the following preliminary estimate of the production of silver in the United States in the calendar year 1921:

State or territory	Silver ounces and value
Alaska.....	775,885
Alabama.....	4
Arizona.....	2,864,962
California.....	3,460,219
Colorado.....	5,408,272
Georgia.....	3
Idaho.....	6,716,892
Illinois.....	1,800
Maine.....	3
Michigan.....	304,616
Missouri.....	62,000
Montana.....	9,168,011
Nevada.....	6,719,465
New Mexico.....	626,334
North Carolina.....	12
Oregon.....	55,713
South Dakota.....	112,880
Tennessee.....	134,549
Texas.....	544,337
Utah.....	13,233,658
Virginia.....	7

State or territory	Silver ounces and value
Washington.....	141,244
Wyoming.....	103
Philippines.....	34,429
	50,364,389

The value of the silver is fixed at \$1.00 per ounce by the Pittman Act of April 23, 1918, for domestic product. These estimates indicate a decline in the amount of silver produced from that of 1920 amounting to 4,997,184 ounces. The record production was in 1915 when it amounted to 74,961,075 ounces of silver.

IMPORTS AND EXPORTS. The following table shows total imports and exports for 1920 and 1921:

	1921	1920	Decrease
Imports.....	63,242,671	88,080,041	24,817,370
Exports.....	51,575,399	113,616,224	62,040,825
Excess of Imports.....	11,667,272		
Excess of Exports.....		25,566,183	

PRICE. Silver varied in value greatly during 1921 as appears from corresponding table. In New York the low mark of 52½ cents was reached on March 5, while the high price of the year was scored on Oct. 17, of 73½ cents. The average price for the year was above that before the war; for example, 59.79 cents in 1913 and 60.835 cents in 1912, but as in other branches of mining costs had increased in greater proportion.

MONTHLY AVERAGE PRICE OF SILVER

Engineering and Mining Journal (New York)

Month	New York		London		Sterling exchange

New York quotations cents per ounce troy, 999 fine.
London, pence per ounce, sterling silver, 925 fine.

Silver during 1921 continued to be an interesting element in international finance as well as in the currency schemes of the individual nations. The high price of silver in 1919 and 1920 (see YEAR BOOK for these years, article *SILVER*) had led to attempts to melt up currency into bullion and the various governments by legislation and otherwise sought to prevent such action. Nevertheless where the currency was depreciated on account of the vast influx of paper, silver coin naturally passed out of circulation and the governments employed the baser metals, copper, nickel, and aluminum for the subsidiary currency, or else as in the case of Great Britain reduced its fineness from 925 to 500. Germany for example melted up large amounts of coin with silver bullion which was shipped to the United States to be used as collateral for a loan.

In Russia there was a movement, so it was reported, to establish the coinage of silver, while in China and Japan there were both imports and exports. China during the year coined a certain amount of the bullion it had purchased at the previous high prices, while in India with a favorable balance of trade silver was being imported in settlement.

SIMMONS COLLEGE. A non-sectarian institution of the higher learning for women at Boston, Mass.; founded in 1899. The enrollment for the fall of 1921 was as follows: School of Household Economics, 281; School of Secretarial Studies, 580; School of Library Science, 133; School of General Science, 46; School of Social Work, 111; School of Industrial Teaching, 1; School of Public Health Nursing, 107; Graduate Students, 3; total, 1242. The enrollment for the summer session was as follows: School of Household Economics, 75; School of Secretarial Studies, 109; School of Library Science, 57; total, including one duplicate, 230. The faculty contained 121 members including 7 additions. The productive funds amounted to \$2,460,955, and the income to \$94,483. The library contained 33,000 volumes. A campaign for additional endowment was being carried on. President, Henry Lefavour, Ph.D., LL.D.

SIMMONS COLLEGE. An institution of the higher learning at Abilene, Texas; founded in 1891. The enrollment for the fall of 1921 was 963. The faculty numbered 31. President, Jefferson D. Sanderfer, LL.D.

SINDING, CHRISTIAN. See MUSIC, *Artists, Instrumentalists.*

SINN FEIN. See IRELAND.

SKATING. Joe Moore of New York City was crowned international skating champion of 1921 in races held at Lake Placid, N. Y. Moore won the half-mile, mile, and two-mile events. In the three-mile race Roy McWhirter of Chicago established a new world's amateur record of 8 minutes, 45 seconds. The national title was won by Charles Jewtraw of Lake Placid in contests at Saranac Lake. Jewtraw was victor in the 220-yard, 440-yard and 3-mile events, scoring a total of 120 points. Roy McWhirter was second with 90 points. Miss Gladys Robinson of Toronto, Canada, captured the women's international title, while the women's national championship was gained by Miss Elsie Muller of New York City. In the indoor international championships held at Pittsburg, Moore and Miss Robinson were the title winners.

A figure skating tournament was held at Philadelphia, Mrs. Theresa Weld Blanchard of Boston Mass., and Sherwin C. Badger also of Boston winning the senior women's and men's honors respectively. The waltzing and two-step events went to Nathaniel C. Niles and Mrs. Blanchard.

SKIFF, FREDERICK JAMES VOLNEY. Museum director, died, February 24. He was born at Chicopee, Mass., Nov. 5, 1851; went into newspaper work at Lawrence, Kan., in 1870; joined the staff of the *Denver Tribune* in 1877; and became manager of that paper in 1881. He was a member of the Colorado legislature from 1885 to 1886, and commissioner of immigration and statistics for the State in 1889. He became an authority on the resources of the State and was appointed a member of the Chicago World's Exposition

Commission in 1890. After 1894 he was director of the Field Museum of Natural History in Chicago. He was an organizer of exhibits in various important State and other expositions, and was director-in-chief of the Panama-Pacific Exposition at San Francisco in 1915, and United States commissioner-general to the Japanese Exposition in 1917. He received many honors from foreign countries for his services as an expert.

SLAVIC LANGUAGES. See PHILOLOGY, MODERN.

SLAVONIA. See CROATIA AND SLAVONIA.

SLEICHER, JOHN ALBERT. Editor, died, May 5. For twenty-three years he was editor of *Leslie's Weekly*. He was born at Troy, N. Y., Oct. 4, 1848, and was city editor of several Troy papers and manager of the State Associated Press. Later he became editor-in-chief and part owner of the *Albany Evening Journal* and editor-in-chief of the *New York Mail and Express*. In 1889-93 he was Civil Service Commissioner of the State of New York. During the latter part of his life he was editor-in-chief of *Leslie's Weekly* and president of the Leslie-Judge company.

SMALLPOX. Recently studies in the epidemiology of this disease have led to a classification based on the severity of the infection with special regard to the incidence in Africa. An East African type which extends into Asia is especially virulent and vaccination exerts only a restricted preventive power. The failure of vaccination in tropical lands is sometimes due to the impossibility of obtaining fresh virus or to decomposition of virus, but this factor is not mentioned in the present connection. The type of disease which prevails in Western Africa is much milder and it is believed that the relatively mild smallpox which prevails in certain localities of Europe is of this type. The so-called South African type is notably mild and its virulence does not seem to be increased in epidemics. This is evidently the Kaffir pox or *alastrim* which is also found in the West Indies; attempts have often been made to show that it is not smallpox at all. During the war the vaccinated German soldiers who encountered the disease in Poland in virulent form remained entirely immune; they had been revaccinated just before the campaign. When smallpox attacked Vienna in 1915 its victims were almost entirely among unvaccinated subjects or those who had not been vaccinated for years. The Paul method of diagnosis of smallpox from simple pustular affections by vaccinating the cornea of the rabbit has come into use in various parts of the world; and this simple test is able to prevent a smallpox scare with its resulting quarantine and interruption of business. Very recently the positive inoculation of the wattles of the domestic cock has been found of the same value. Under the head of treatment the local application to the entire affected skin of a saturated solution of potassium permanganate has been especially commended. *Il Polidinicco*, practical section, Nov. 21, 1921.

SMITH, FREDERICK H. Capitalist, died 1921. He was born at Buffalo, N. Y., in 1869; and graduated at the De Veaux College. He was an officer in important banks and other corporations in the middle west, and prominent in Republican politics in Illinois. In the campaign of 1908 he was chairman of the finance committee of the Republican National Committee.

SMITH, JEREMIAH. University professor of law, died, September 4. He was born at Exeter, N. H., July 14, 1837, graduated at Harvard in 1856 and was admitted to the bar in 1861. He practiced law at Dover, N. H., 1861-67 and was justice of the supreme court of New Hampshire, 1867-74. He was professor of law at Harvard University 1890-1910 after which he became professor emeritus.

SMITH, MILTON H. Railway president, died, February 20. He was born in Green County, N. Y. Sept. 12, 1836; and entered the railway service as a clerk in the superintendent's office of the Mississippi Central Railway, rose through the various grades on that and other southern roads and became general manager in 1883 and president in 1884 of the Louisville and Nashville Railroad.

SMITH COLLEGE. A non-sectarian institution for the higher education of women at Northampton, Mass.; founded in 1871. The enrollment for the fall of 1921 was 1999. There were 229 members in the faculty. The productive funds amounted to \$3,500,000. The library contained 92,000 volumes. President, William Allan Neilson, Ph.D., LL.D.

SMITHSONIAN INSTITUTE. See **EXPLORATION, North America.**

SMITHSONIAN INSTITUTION. Legally an establishment having as its members the President of the United States, the Vice-President, the Chief Justice, and the President's Cabinet. It is governed by a Board of Regents consisting of the Vice-President, the Chief Justice, three members each of the Senate and House of Representatives, and six citizens of the United States appointed by joint resolution of Congress. It was established by statute in 1846 under the terms of the will of James Smithson of England, who bequeathed his fortune in 1826 to the United States to found an institution "for the increase and diffusion of knowledge among men." The Institution has charge of the National Museum, the National Gallery of Art, the International Exchange Service, the Bureau of American Ethnology, the National Zoological Park, the Astrophysical Observatory, and the United States Regional Bureau for the International Catalogue of Scientific Literature.

The report of the secretary, who is the executive officer of the Institution, showed an income in 1921, including interest on investments and other revenues, bequests, etc., of \$185,621.13. The total permanent fund as of June 30, 1921, was \$1,157,562.05.

One phase of the Institution's work has been the scientific exploration of little-known parts of the earth, as well as field-work in better-known regions. Geological field-work in the Canadian Rockies was continued in 1921 with two main objects in view: (1) the determination of the character and extent of the great interval of non-deposition of sedimentary rock-forming material along the front range of the Rocky Mountains west of Calgary, Alberta; and (2) the clearing up of the relations of the summit and basis of the great Glacier Lake section of 1919 to the geological formation above and below. Work was begun early in July along the Ghost river northeast of Banff, Alberta. In the overthrust of the Rocky Mountain front, great headlands and high buttes have been formed by running water and rivers of

ice. The first of these great cliffs was found to be of lower Middle Cambrian age, and resting on its upper surface there were 285 feet of a yellowish weathering magnesian limestone, representing the interval between the Cambrian below and the Devonian above. During the year Dr. R. S. Baseler, curator of paleontology, National Museum, carried on field work and succeeded in securing two much-desired specimens, one a large well-preserved fossil elephant skull, the other a highly fossiliferous limestone slab of Silurian age quarried out by him near Oxford, Ohio. The latter has long been desired to show the advancement in life from the primitive Cambrian forms to the higher and more complex species of succeeding geological periods. The African expedition, in conjunction with the Universal Film Manufacturing Co., concluded its work shortly after the beginning of the fiscal year. Specimens were turned over to the Museum as follows: 697 mammals (152 from Lake Tanganyika); 575 birds, 206 reptiles, and 193 fishes. These collections are of unusual interest on account of the manner in which they supplement those obtained by other expeditions to Africa. Dr. H. L. Shants of the Department of Agriculture accompanied the expedition with the objects in view of securing live plants of agricultural value for introduction into this country, of studying agricultural methods of both natives and Europeans and of collecting plants for the National Herbarium. Over 1000 botanical specimens were secured for the Museum and about 1600 plants were collected for growth in this country, consisting of forage plants, nut plants, fruits, and vegetables. Charles M. Hoy continued his work of collecting specimens of the fauna of Australia, important for the reason that it is rapidly being exterminated through various causes. Collections consisted of 440 mammals, 570 bird skins, with 24 additional examples in alcohol, and smaller collections of reptiles, amphibians, insects, marine specimens, etc. On the way to the First Pan-Pacific Scientific Congress in Honolulu, Dr. Paul Vartsch, curator of mollusks, made investigation of shipworms at Mare Island, Calif. It was discovered that the mollusk which had caused considerable damage in 1920 was a new species of *Teredo*, which he named *Teredo beachi*. Dr. A. S. Hitchcock, custodian, section of grasses, performed several months' botanical work in the Orient under the auspices of the Department of Agriculture. The purpose of the expedition was (1) to study the grasses of the Philippine Islands to prepare the manuscript on the grasses for a flora of the Islands, and (2) to study the native and cultivated bamboos of the Philippines, Japan, and China, with special reference (1) to their introduction into the United States, and (2) to the publication of a revision of the economic bamboos of the world. There were issued during the year by the Institution and its branches 113 volumes and pamphlets. Of these publications, there were distributed a total of 142,208 copies. They covered practically every branch of science and were distributed to libraries, educational and scientific establishments and interested individuals throughout the world. Accessions to the library of the Institution during the year numbered 11,948 volumes and pamphlets; many of these consisted of publications issued by several foreign countries during the year 1914 to 1920 which had been held awaiting normal trans-

portation facilities. Two new branch libraries were created in 1921: the National Gallery of Art Library, and the Freer Gallery of Art Library.

NATIONAL MUSEUM. As a result of the separation of the National Gallery of Art from it in 1920, there was considerable reorganization of the Museum. As now constituted, it comprises 4 scientific and technical departments, one independent division, with a total of 49 recognized subdivisions. Of the many interesting accessions may be mentioned the following: a collection of rare Mission Indian baskets; a collection of stone fetishes and ancient pottery from Santo Domingo; a collection of Japanese mollusks; a quantity of South American material comprising Bolivian tin and tungsten ores, rare copper minerals from Chile and a series of ores from Argentina; a collection of many beautiful specimens of silks, fur fabrics, plushes and velvets and fabrics used in the construction of aeroplanes by the division of textiles. The total number of specimens acquired during 1921 was 338,120. About 25,000 specimens were sent out in exchange and 6000 distributed as gifts to schools and colleges; the latter consisted of ores and minerals, mollusks, marine invertebrates, fishes, birds, insects, pottery and prehistoric implements.

Looking toward promotion in the administration, development and utilization of the National Gallery of Art, now a separate branch of the Institution, an art commission was formed in 1921. Its function includes the acquisition of material, a study of best methods of exhibition and utilization for instruction. The work of the Freer Gallery of Art consisted in unpacking and checking the large and varied collection of objects turned over to it under the will of Charles L. Freer. The International Exchange Service reported 475,471 packages passing through its service during the year, an increase of 82,099 over the preceding year; the increase was due principally to the reopening of relations with Germany. The packages were classified into parliamentary documents and miscellaneous scientific and literary publications of the United States and foreign countries.

NATIONAL ZO-OLOGICAL PARK. This department has now on exhibition a greater number of animals and species than ever before. The total number of accessions during the year by gifts, births, transfer, purchase and capture was 613, so that less losses by exchange, death, and return of animals on deposit, the number of animals at present is 1545, classified as follows: mammals, 541; birds, 901; reptiles, 103. Considerable repairs and improvements were effected during the year and much needed additional equipment installed in the Park in 1921.

The work of the Astrophysical Observatory consisted in the preparation of manuscript for Volume IV of the *Annals of the Observatory*. The year was marked by the transfer of the solar radiation measurements from Mount Wilson, Calif., to Mount Harqua Hala, Ariz., to secure more perfect weather conditions. Charles D. Walcott, 1743 22nd Street, Washington, D. C. is secretary of the Institution.

SMYRNA. A city and district in Asia Minor which in 1921 was under the military occupation of the Greeks. It is the centre of the fig-raising industry and the tobacco trade, supplying a large part of the Turkish tobacco consumed abroad.

Agriculture has been backward, but the Greeks were endeavoring to introduce new methods and modern machinery, and according to press reports were achieving some success. A plan for agricultural credit was worked out in 1921 by the Greek minister of agriculture.

SMYTH, JULIAN KENNEDY. Clergyman, died, April 5. He was born in New York State in 1856; and was pastor of the Church of New Jerusalem (Swedenborgian), New York, and president of the general convention of the Church of New Jerusalem. He wrote: *Footprints of the Saviour* (1886); *Swedenborg* (1911); *Religion and Life* (1911); *The Heart of the War* (1911); *Christian Certainties of Belief* (1916).

SOCER. See FOOTBALL.

SOCIAL ECONOMICS. See CHILD LABOR; HOUSING; LABOR LEGISLATION; OLD AGE PENSIONS; STRIKES AND LOCKOUTS, etc.; also LITERATURE, AMERICAN AND ENGLISH.

SOCIAL INSURANCE. The most important event of the year in the field of general social insurance was the passage by Congress of the Sheppard-Towner bill providing for Federal-State coöperation in maternity and infancy protection. The law, as summarized in the *American Labor Legislation Review* for December, creates a board of maternity and infant hygiene which is to consist of the Surgeon-General of the United States Public Health Service, the United States Commissioner of Education, and the Chief of the Children's Bureau as the executive officer. For the first year \$480,000 is appropriated, \$10,000 to be given outright to each State; in addition \$1,000,000 is appropriated for division among the States in proportion to their population. For each of the five succeeding years \$240,000 is set aside—\$5000 to be given outright to each State each year and in addition \$1,000,000 annually is appropriated for distribution. The Federal Children's Bureau receives each year \$50,000 for administrative expenses. With the exception of the outright allotments, no State can receive a federal grant without a dollar for dollar appropriation. State child hygiene divisions, where they exist, are to administer the act. When the bill became law on November 23, six States—Delaware, Minnesota, New Hampshire, New Mexico, Pennsylvania, and South Dakota—had already made legislative provision for the immediate acceptance of the aid now extended in the Federal act.

New York State in April passed a law allowing municipal corporations to appropriate money for pre-natal and maternity care, but made no provisions for accepting Federal aid. Indiana passed a law requiring the approval by the commissioner of insurance of all group insurance policies covering employees, and declaring such policies or the proceeds thereof free from attachment, garnishment, or other process. Porto Rico created a savings and loan association covering all regular employees of the government, unless they should signify their desire to do otherwise, within a specified time. Funds are obtained by a monthly deduction of 3 per cent of each employee's salary and by special assessments of 50 cents from all members. The amount so deducted with interest thereon is paid upon the employee's death to his successors. All loans are made on a charge of 6 per cent. There is also provision for disablement compensation unless the individual is pro-

tected under the workmen's compensation law.

FOREIGN; FRANCE. According to information furnished by Mr. Ernest Greenwood, the International Labor Office, at the request of the French government, organized a special arbitration commission for the purpose of arranging the transfer of all social insurance funds accumulated in territories ceded by Germany, such as Alsace-Lorraine to France and Posnania to Poland. Workers in these territories who were insured against sickness, accidents, old age, and invalidity had been paying their contributions for years. If claims under this insurance were to be paid and if pensions were to be continued, Germany must transfer to all insurance bodies the accumulated funds. On March 2, 1921, the French cabinet approved a social insurance bill drafted by the minister of labor, which if passed by the Chamber of Deputies was to provide France with a comprehensive social insurance system for which, had it not been for the annexation of Alsace-Lorraine, its citizens would perhaps have had to wait for decades. When France annexed Alsace-Lorraine she had either to deprive the workers in these provinces of the benefits of the German social insurance system, or extend to all of France the insurance system which hitherto was in force in Alsace-Lorraine. The government decided to follow the latter course. The bill was based on compulsory insurance. All French wage workers and salaried employees as well as small tenant farmers whose annual income does not exceed 10,000 francs (\$1930, par) were compulsorily subject to insurance. Farmers and small independent tradesmen below 30 years of age might insure voluntarily and receive the same benefits. The insurance grants medical aid and pecuniary benefits in case of sickness, birth allowances, pensions for invalids and persons over 60 years of age, and death benefits to survivors. The funds for paying benefits were to be raised through equal contributions of the insured persons and their employers supplemented by state subsidies.

POLAND. A sickness insurance law was enacted in Poland on May 19, 1920. In many respects the provisions of the law are similar to those of the German sickness insurance law. They differ, however, in the following points: In Poland district sick funds are the carriers of sickness insurance. Local sick funds may be established only in cities with more than 50,000 inhabitants. All other sick funds, such as establishment and guild sick funds, are considered as dissolved. New creations of such funds may not take place. The insurance is compulsory for all workers, without regard to their income. Only statutory government officials are exempt from the obligation to insure. Salaried employees in managing positions (directors, managers, etc.) with an annual income in excess of 30,000 marks (\$7,140, par) may, on request, be exempted. For additional information, see **WORKMEN'S COMPENSATION**, and **OLD AGE PENSIONS**.

SOCIAL WORK. A conference of national social agencies on the Coördination of National Social Work was held in Washington, D. C., on April 14, 1921, which was attended by approximately 150 persons representing various national bodies engaged in the promotion of social welfare, including a number of Federal departments. In accordance with recommendations made by the

executive committee of the National Information Bureau (see **CHARITIES**), the delegates ranged themselves into the following functional groups for the consideration of plans looking to greater efficiency, economy, and better coördination of national social work: Health; general child welfare; family welfare; delinquency and correction; community organization; rural social life; racial advance; problems relating to the immigrant; industrial and economic problems.

THE AMERICAN ASSOCIATION FOR ORGANIZING FAMILY SOCIAL WORK. This organization endeavors, as its name implies, to be of service in the development of better standards of social service throughout the land. Under the direction of the executive staff it publishes the monthly magazine, *The Family*, which has a circulation of approximately 1500; the yearly *Directory of Family Social Work Societies*; and occasional pamphlets for educational purposes. The field staff consists of six workers, with headquarters in the following cities: Denver, Chicago, New Bedford, and New York. For the fiscal year ending September 1, the field staff reported 198 visits made to 145 cities, in 13 of which it conducted community surveys; the organization of 6 new societies; the reorganization of 7, and assistance on conducting 11 intercity or regional conferences. The field visits were scattered over 27 States, and the total number of cities advised by correspondence was 362. Six States hitherto untouched have been given incentive toward organized social work, and at the request of the Ohio Council of Family Social Work, intensive work has been undertaken by the Association in that State. This year has also shown an increase in the Association's membership. Sixteen new member societies have been admitted and one society has withdrawn, making a total of 201. The Association headquarters are at 130 East 22nd Street, New York City. Mr. David H. Holbrook is the executive director.

NATIONAL CONFERENCE OF SOCIAL WORK. The 48th annual meeting of the National Conference of Social Work was held in Milwaukee, Wisconsin, June 22-29. It continued its policy of adopting no resolutions even (though three were presented) on such subjects as disarmament, prohibition, and unemployment; believing education rather than propaganda to be the more effective means of promoting better social work. As formerly, each general session was assigned to one of the divisions for the purpose of presenting to the whole body of social workers the latest and most generally applicable discoveries made in the special fields. Some of the addresses were: Does social work promote social progress? Allen T. Burns; Educational ideals and public welfare, L. D. Coffman; What's on the Worker's Mind? Whiting Williams; Our nation's obligation to her children, Julia C. Lathrop. A good idea of the scope and nature of the conference as well as an indication of the trend of social thought in general may be obtained from the following rough enumeration of topics discussed in the divisional meetings.

1. Children. New values in the field of child welfare. The scope and functions of the juvenile court in connection with the rural community, the possibilities of the public school in treating socially handicapped children and preventing juvenile delinquency.
2. Delinquents and Cor-

rection, Social Hygiene, Steps in the prevention of delinquency, the future of the criminal law, legal and social aspects of the morals court. 3. Health. Coöperation and coordination, Activities of the Red Cross, Social significance of child health work, elements in a health programme for children, government departments in their relation to health. 4. Public agencies and institutions. Prisons, state welfare programmes in relation to children, relationship between state and local governments in conducting public welfare service, relation of State to private institutions. 5. The Family. Mothers' pensions, case records, organization in small communities, mental subnormality in family case work, the responsibility of family agencies in times of industrial readjustment. 6. Industrial and Economic Problems. Women's work and wages, child labor, unemployment and its treatment, Housing, negro labor problems. 7. The Local Community. Standards on local community work, social and economic effects of the housing shortage, social revolution taking place in the Orient, the local community in the Far East, recreation systems, the library's relation to community work. 8. Mental Hygiene. Problems of normal childhood and youth, of subnormal children, of maladjusted children, mental hygiene in education, the value of mental hygiene agencies to the community. 9. Organization of social forces. Community organization, endowments—how to wisely leave them, the central council of social agencies, the confidential exchange in small cities, the community trust. 10. Uniting of Native and Foreign-born in America. Present immigration outlook, port problems in Europe and the United States, schooling the immigrant, cultural aspect of immigration (for further information concerning the nature of the National Conference, and its members—see the article in the 1920 YEAR BOOK under CHARITIES).

At the business session of the Conference a change in financial policy was adopted with a view to balancing the receipts and expenses of the organization. Individual members will hereafter be charged two dollars for the book of Proceedings of the Conference. This act, in the words of the president, will put an end to each membership costing the conference more than twice what was paid for it. Also the Conference has launched a campaign for 350 new institutional members. It hopes to cause every reputable social agency to feel as real a responsibility for the Conference as do the individual social workers. The total number of individuals and institutions represented at Milwaukee equaled something more than 1500. The total membership of the National Conference is considerably over 4000.

The National Conference for 1922 was to be held at Providence, R. I., from June 22-29. The officers of the Conference for 1922 are: Robert W. Kelso, president; Sherman C. Kingsley, first vice-president; Mrs. Martha P. Falconer, second vice-president; Gertrude Vaile, third vice-president; Charles W. Folds, treasurer; William H. Parker, secretary (25 E. Ninth St., Cincinnati, Ohio). For further developments in the field of social work, see CHARITIES; COMMUNITY SERVICE; and RED CROSS.

SOCIALISM, THE THIRD INTERNATIONAL. The congress of the Third International was held at Moscow June 17 to July 12. Several hundred

delegates were present from forty-three countries, especially in the East and the Far East, but only the heads of these delegations took part in the proceedings. The Russian Soviets had expected a crushing majority and had no doubt thought they would be able to dictate the conditions to the foreign delegates. As a matter of fact they did retain control and they succeeded in checking the efforts of those who tried to question their programme. The general result was the maintenance of the Soviet doctrine in all its purity. It was held by the dominating party that an iron discipline alone could save the situation. At a secret session the congress found that the situation in Russia was critical and that in France, England, and America, Bolshevik propaganda had not succeeded, while in Sweden and Norway the Communists had barely effected an organization. The only satisfactory results were those in Italy, Germany, and Czecho-Slovakia. In the opening speech by Trotsky, June 17, he admitted these conditions but nevertheless expressed his confidence in the future, basing it on the following reasons: Europe ruined and exploited by France was exposed to the gravest dangers, and excessive prosperity of America and Japan would bring about a violent reaction. Finally the great Powers had a fatal weakness in the question of the colonies. The colonies were in fact the most important element in the revolutionary movement. The English colonies were especially vulnerable and Bolshevik propaganda must be vigorously carried on among them and among all the races of the Far East. Here was a promising field. In the distribution of funds, the larger amounts accordingly were to go to these regions. Italy, Germany, and Czecho-Slovakia were also to receive a fair allowance, but little money was to be wasted on England, America, and France.

As noted in the preceding YEAR BOOK the French Socialists at the Congress of Tours, December 30 voted by 3208 to 1220 to unite with the Third International. The minority professing loyalty to the traditions of the party as represented by the late M. Jaurès met on Jan. 7, 1921, for the purpose of reconstructing the United Socialist party. The Socialist party of Belgium rejected the Third International by a vote of 448,000 to 37,000. A Socialist congress was held at Madrid, April 14, and voted against adherence to the Third International by 8808 to 6025; thereupon the Communists withdrew.

GERMANY. The great annual National Congress of the German Social Democrats, known as the Majority Social Democrats, was held at Goerlitz, September 18-25. The language of its platform was less extreme than that of the Erfurt programme of 1891. Nevertheless it indicated plainly that the ultimate aim was a coöperative commonwealth. The Democrats were ready to take part in parliamentary action and to enter into compromises, as for example with the People's Party. The main features in the Goerlitz platform were as follows: In the first place, there was the usual general indictment of capitalism and all its works. Secondly, it was claimed that the World War had greatly hastened the concentration of industries and capital and had widened the gap of capital and labor. The bourgeois groups of profiteers, speculators, etc., created by the war were condemned and the corruption of public life was said to be increasing. There was further a tendency to super-capitalism, owing to the attempt to domin-

ate international commerce through imperialistic extension of power. The task of the Social Democracy was to point the way to the overthrow of the capitalist system and to the guarding of humanity against war by an international union of the proletariat and the creation of an international system of law. The republican form of government was the best and the Social Democrats were ready to go to the furthest limit in defending the democratic republic and maintaining the principles that had been already applied, but this was not sufficient and it must fight for the control of the state by the people and their paramountcy as an economic force. The capitalist economic system must be progressively changed into a Socialist economic system. The Social Democrats were not fighting for any class privileges but for the abolition of class rule, and land and all natural sources of power were to be withdrawn from capitalist control and placed at the service of the nation. There must be laws against slack cultivation and failure to utilize resources. Among other features of the programme may be mentioned the following: Promotion of the co-operatives for the benefit of all members; equal right to work; security of the right to organize; protection of labor; the eight-hour day in industries especially dangerous; limitation of night work for men and prohibition of it for women and minors; prohibition of all industrial labor for children of school age; equal rights of women in industry; security of the economic rights of public employees; further development of the income, property, and inheritance taxes; right of the nation to succession in case of the more distant degrees of relationship; guarantee of the democratic republic; initiative and referendum in the communities; election of the mayors for short terms; reform of the judicial system in the interest of social justice; all classes of the people to be represented on the bench; co-operation of judges elected by the people; right of the masses of the community to the highest education; complete separation of state and church, the schools to be non-religious; joint education of both sexes by both sexes; international union of the working class upon a democratic basis as the best guarantee of peace; the League of Nations to exclude no people which recognizes its statutes; international protection of all national minorities; reduction of armaments; placing of all colonies and protectorates under the League of Nations; and revision of the Peace Treaty in the sense of economic alleviation and the national right to live.

UNITED STATES. In New York City the cases of Mr. Algernon Lee and Mr. Edward F. Cassidy were decided, and on November 3 they were permitted to take their seats in the Board of Aldermen. In the election of November, 1919, the returns were counted against them although a majority for them was claimed, and charges were made on their behalf that there had been frauds against them. The committee appointed to investigate spent two years in so doing and they were kept from their seats during that period. The committee's final decision indicated a plurality for each. The majority report rendered at the time declared that no fraud had been proved, but the minority report asserted that frauds had been committed and ought not to go unpunished. The minority report also charged that the committee of investigation had taken its action only under compulsion of the courts. On November 15

under instructions from the Attorney-General's office at Washington, the government's case against Mrs. Rose Pastor Stokes was dismissed at Kansas City, where she had been convicted three years before on a charge of unpatriotic speeches and sentenced to ten years' imprisonment. She appealed from this verdict and the appeal was sustained by the United States Circuit Court of Appeals in March, 1920. The charge against her was based on the Espionage Act.

On December 23, the sentences of Eugene V. Debs and twenty-three other political prisoners convicted under the Espionage and other wartime acts were commuted by the President (see **UNITED STATES**).

SOILS. The Secretary of Agriculture, in his report for 1921, calls attention to the pertinent fact that "we have taken up most of our easily cultivated land," and reminds us that if we as a Nation are to continue adequately to feed our rapidly growing population and maintain our standards of living we must practice in earnest those intensive methods of agriculture which produce more per acre at lessened cost, "having in mind constantly the maintenance of the fertility of the soil for the use of the generations to follow us."

While the Secretary recognizes that "the largest increase in production must come not from the addition of new land but from increased yields on land now under the plow," he is not unmindful of the fact that our productive area can be increased to a considerable extent by draining wet lands, irrigating dry lands, and clearing cut-over lands, but, as he points out, this can be done only at considerable expense and should be undertaken only after thorough study of the character and agricultural value of the lands. He has therefore named a committee of representatives of different bureaus of the Department of Agriculture to make a survey of the wet, dry, and cut-over lands of the United States not now utilized for the production of crops "with a view to determining how such lands can be used to increase agricultural production as needed."

A fundamental requirement in any comprehensive and efficient plan of developing agricultural production is a systematic soil survey which accurately inventories the soil resources and records its characteristics and adaptations. The United States is fortunate in having had such a soil survey in progress long enough to have covered a large proportion of the typical soil areas of the country. This survey has mapped in detail and described the characteristics and adaptations of soils over a total area of 575,406 square miles, or 368,259,840 acres. In addition reconnaissance surveys have been made covering 516,286 square miles, or 330,423,040 acres. Typical areas have been surveyed in every State and in Alaska and Porto Rico, covering approximately 950 counties and 50 reconnaissance areas. During the past year 55 surveys in 32 States were under way, the total area covered during the year being 28,104 square miles, or 17,986,560 acres. A special study of the soils of Africa was undertaken during the year.

The purpose and uses of these soil surveys are well set forth in a circular issued during the year by the American Association of Soil Survey Workers, which is made up of men in the United States and Canada who are actively engaged in soil survey work, and in the last (1920) Year Book of the Department. It is shown that the soil survey, as now conducted in this country, provides a complete inventory of the soils much as the Geological Survey inventories the mineral resources, both being fundamental to National development.

The soil maps and the detailed reports accompanying them have proved of great value not only to farmers but also to experiment station and extension workers, schools, land seekers, road engineers, manufacturers, insurance companies, bankers, and others. The maps are made on a standard scale of one inch to the mile and "show not only the different soils but accurately locate all important physical features such as roads, railroads, and streams, as well as towns, schools, churches, and farmsteads." The maps usually cover a county and all soil types are designated by distinct colors. The report accompanying each soil map "fully describes the properties of the soil and subsoil, topography, water supply, and drainage conditions, crop adaptation, general fertility, systems of farming, and methods of soil management followed. There is also included a general discussion of the agricultural development of the county, farm improvements, important products, markets, transportation facilities, and the general condition of the community. In the arid and semiarid portions of the United States, the occurrence and character of soil 'alkali,' ground water relations, irrigation problems, and other important conditions peculiar to such lands are also dealt with." A distant advantage of this soil survey is that it provides a uniform soil classification and permits of a generalized soil map of the whole country, such as is now approaching completion.

The use of the soil survey as a means of determining the agricultural extent and value of tillable lands is being extended in England and other countries, although such work has been interfered with in many European countries which formerly gave much attention to the subject, as for example, Russia, France, and Germany, by the disturbed conditions following the World War. Japan, however, which produces food for 2.5 persons per acre on about 18,000,000 acres of tilled land, has not relaxed in studies along this line.

In the field of scientific investigation on soils the year was marked by increased interest in more effective methods of studying the factors which determine soil fertility and crop adaptation. Notable recent investigations in this field have dealt with composition and variations in the soil solution, nature of the clay colloids of soils and their relation to problems of cultivation, water supply, and plant food, and the ultimate chemical composition and fertilizer requirements of important soil types.

A notable book, based upon the soil survey conducted by the United States Department of Agriculture, which appeared during the year, is *The Soils and Agriculture of the Southern States*, by H. H. Bennett (New York, 1921).

SOIL SURVEYS. See **SOILS**.

SOLDIER TRAINING IN AGRICULTURE. See **AGRICULTURAL EDUCATION**.

SOMALI COAST. See **FRENCH SOMALI COAST**.
SOMALILAND, ITALIAN. See **ITALIAN SOMALILAND**.

SOMALILAND PROTECTORATE. A British protectorate, comprising the Somali coast on the Gulf of Aden, extending from Lahadu to Bandar Ziyada. Area, about 68,000 square miles; population, about 300,000, mostly Mohammedans. The largest towns are: Berbera, with a population of about 30,000; Bulhar, 7300; and Zeyla, 7000. Live stock is the main source of wealth, the inhabitants being nomadic except on the coast. The chief exports are: Skins and hides, cattle and sheep, gum, resins, etc.; and the chief imports are: Textiles, sugar, and dates. The vessels entered in 1919-20 had a tonnage of 48,278, and cleared, 48,913. The region lacks railways, and transport is by camel. The government is administered under the Colonial Office and a local governor and commander-in-chief. Governor at the beginning of 1921, Sir G. F. Archer.

SOMERS, ORLANDO ALLEN. See **NECROLOGY**.

SONNINO, BARON SYDNEY. Formerly Italian Minister of Foreign Affairs, died in December. He was born at Florence in 1847, his mother being an English Protestant. He was brought up as a Protestant and studied at the University of Pisa. From 1867 to 1871 he was employed in the Italian legations of Madrid, Vienna, and Paris. He was several times Minister of Foreign Affairs and held the office of Prime Minister. He held no later political office after the fall of Orlando in 1919. He was much blamed by the French press, being held responsible in large part for the difficulties between France and Italy. He wrote a number of well-known works on economic subjects, winning a reputation at an early age by a book in two volumes on the Peasants of Sicily.

SOUTH, UNIVERSITY OF THE. A Protestant Episcopal educational institution at Sewanee Tenn.; founded in 1857. The enrollment for the fall session of 1921 was 202 and the summer session, 43. There were 26 members in the faculty, of which three were added at the beginning of the fall term. The productive funds amounted to \$1,051,247, and the income to \$201,891. The library contained 39,202 volumes. A new stone dormitory was opened and work on the Sewanee Inn was going on. The science departments (Chemistry, Biology, Physics) were enlarged; new equipment was installed. President, Rt. Rev. Albion W. Knight, D.D.

SOUTH AFRICA, UNION OF. A self-governing British dependency constituted by the South Africa Act of September, 1909, as a legislative union, comprising the provinces of: The Cape of Good Hope; Natal; Transvaal; and the Orange Free State. Area, 473,096, distributed as follows among the provinces: Cape of Good Hope, 276,966; Transvaal, 110,450; Orange Free State, 50,389; Natal, 35,291. Population, 1911, 5,973,394, of whom 4,697,152 were colored; estimated in 1920, 7,305,000 of whom 5,801,000 were colored. The most numerous element in the colored population is the Bantu who were placed at 4,019,006 in 1911. Cape Town is the seat of the legislature, and Pretoria is the seat of the Union administration. Cape Town had a population in 1911 of

161,759, of whom 85,442 were whites; white population in 1918, 99,693. The largest city is Johannesburg in the Transvaal with a population in 1911 of 237,104 of whom 119,953 were whites; white population in 1918, 137,166. Pretoria had a population in 1911 of 57,674, of whom 35,942 were whites; white population in 1918, 41,690. In 1919 the emigrants numbered 24,784 and the immigrants, 27,106. No later figures for public schools were available than those given in the preceding YEAR BOOK. The largest universities in point of numbers are those of Cape Town and Stellenbosch, with enrollments in 1918 of 652 and 548, respectively. Other universities are Rhodes University College, Grahamstown; Grey University College, Bloemfontein; Transvaal University College, Pretoria; Natal University College, Pietermaritzburg; University College of Johannesburg; Huguenot College, Wellington. In 1919 the professors, lecturers, etc., in all the above numbered 270 and the students, 2429.

AGRICULTURE, ETC. Returns of the agricultural and pastoral census taken in South Africa as of April 30, 1920, showed large decreases in certain classes of stock and crops from the census of 1918. These decreases were due chiefly to the severe drought that prevailed throughout the whole of the Union during 1919, and more particularly in the Cape Province, where the losses were the heaviest.

MINERAL PRODUCTION. The production of minerals for 1920 according to preliminary reports was valued at £55,194,204, an increase of £4,352,799 over 1919. The production of gold for the year showed a falling off both in quantity and value. The diamond industry which ranked second among minerals showed a falling off in quantity and an increase in value. The coal-mining industry which ranked third showed an increase in value over 1919 of £1,076,211. The preliminary estimates for 1919-20 were as follows:

South Africa is the most important gold-producing country at the present time. The mining of gold is largely in the hands of British companies and the gold is shipped to London as a commodity. Thus while South Africa was exporting great quantities of gold every year, its currency was still depreciated in terms of the dollar. The South African gold was sold in London to those countries whose exchange was most favorable and the United States being practically the only free gold market, the rate of exchange on New York was the measure of the premium which gold had over South African currency. The disappearance of that premium would deprive the miners of profits and result in the closing of the mines. In 1921 the price of raw gold was steadily declining while the cost of production was increasing. The output per operative was diminishing and the native labor supply was inadequate. Moreover, many of the mines had been sunk very deep and were reported to be approaching exhaustion. Production in ten months of 1921 while only 2 per cent lower than that of 1920 was 10 per cent lower than that of 1913. As to the diamond mines they had already closed down and were still idle in the closing months of the year.

COMMERCE. Total imports and exports for the years 1918-21, inclusive, and the year 1913 are shown in the following table.

TOTAL TRADE, 1913 AND 1918-21			
Year	Imports, £	Exports, £	
1913.....	43,792,000	66,660,000	
1918.....	51,452,000	33,168,000

of the Union of South Africa for the fiscal year ending March 31, 1921, and the budget for the year ending March 31, 1922, clearly showed that during the year the revenue account did not keep up with the expenditures, and that drastic economies and new taxation had to be resorted to to meet the deficit with which the exchequer is faced. The revenue for the year amounted to £29,818,000 against an expenditure of £30,068,000, leaving a deficit of £250,000. This deficit added to the original estimates of expenditures for the year ending March 31, 1922, made a total estimate of £32,521,000. The revenue for the fiscal year 1921-22 was not expected to yield more than £25,815,000, or £8,706,000 less than the estimated expenditure. This deficit was to be met by effecting economies in various government departments to the extent of £4,057,000, while new taxation, was expected to yield £2,425,000.

RAILWAYS. The large and extensive railway systems of the States making up the Union of South Africa are owned and controlled by the government. These government lines in 1921 had a total mileage of 9559, of which there were 4254 miles in the Cape of Good Hope, 1319 miles in the province of Natal, 2644 miles in the Transvaal and 1342 miles in the Orange Free State. There was also a mileage of 1292 in Southwest Africa which was being operated at present by the South African Railways. In addition there were 651 miles of privately owned railways throughout the Union.

GOVERNMENT. Executive power is vested in a Governor-General, appointed by the Crown, who acts with an executive council, chosen by himself. The legislative power is in a parliament, consisting of a senate and a house of assembly, the former having 40 members, of whom 8 are nominated and 32 elected, 8 for each province; and the latter of 134 members, distributed among the provinces as follows: Cape of Good Hope, 51; Transvaal, 49; Natal, 17; Orange Free State, 17, the basis of suffrage being the same as that existing in the provinces at the time of the formation of the Union. The distribution of the seats of the house of assembly among the political groups after the general election of February, 1921 (see below), was as follows: South African Party, 79; Nationalists, 45; Labor Party, 9; Independents, 1. The Governor-General at the beginning of 1921 was Prince Arthur of Connaught, appointed in 1920, and the Prime Minister, General J. C. Smuts. The other members of the ministry were as follows: Interior, Public Health and Education, Patrick Duncan; Mines and Industries, Mr. F. S. Malan; Railways and Harbors, Mr. Jagger; Finance, H. Burton, K. C.; Justice, N. J. de Wet, K. C.; Defense, Colonel H. Ments; Posts and Telegraphs and Public Works, Sir Thomas Watt, K. C. M. G.; Secretary for Agriculture, Sir Thomas Smartt; Minister of Lands, Colonel Reitz.

HISTORY

GENERAL ELECTION. The most important event of the year was the general election on February 8, the issues of which were outlined in the preceding YEAR BOOK. The main point was the decision whether the Union of South Africa should continue as a dominion of the British commonwealth or should be separated from it by

secession. The party of secession or Nationalist party, was headed by General Hertzog while its opponents headed by General Smuts were made up by the Unionists and the South African party. General Smuts made a vigorous and prolonged campaign on behalf of union. There had latterly developed an increasing desire even on the part of the Dutch-speaking element, to check the racial spirit in South African politics. The result of the elections was a complete victory for the party of General Smuts.

THE QUESTION OF SOUTHERN RHODESIA. The terms of the mandate for former German Southwest Africa (q. v.) were published in February and were the subject of continued discussion on account of their bearing on the future of Southern Rhodesia. Early in the year the members of the Legislative Council of Southern Rhodesia requested that self-government should immediately be granted to the province. The Cave Commission at the beginning of the year reported on the amount due from Southern Rhodesia to the British South African Company for its administrative expenditures, fixing the sum at £4,435,225. A committee was appointed in the spring to investigate the question and it reported in May in favor of submitting the matter to popular referendum. The Rhodesian Unionist Association petitioned the Colonial Secretary in July that the terms of Southern Rhodesia's entry into the Union should be ascertained and modified in the referendum as a possible alternative to responsible self-government. General Smuts declared that the government would welcome an offer on the part of Southern Rhodesia to adhere to the Union. A delegation under Sir Charles Coghlan was sent to London from the Legislative Council and spent three months in conference with the Colonial Secretary as to the form of the proposed self-government constitution. Agreement upon a draft constitution was reached in December before the delegates returned to Africa. It was proposed that in accordance with the request of the Rhodesian petitioners a Rhodesian delegation should ascertain from the South African government the terms in which it would agree to the incorporation of Southern Rhodesia as a province of the Union, and that the popular referendum be deferred till these terms were known.

OTHER EVENTS. Among the other events of the year may be mentioned Lord Haig's visit to South Africa with a view to extending the British Empire Service League. General Smuts made a journey to London and endeavored to intervene in the settlement of the Irish question. There was a revolt among the natives known as the Israelitish movement. Sir Edgar Walton was appointed High Commissioner in London. An important anthropological event was the discovery of a prehistoric skull in Northern Rhodesia.

SOUTH AMERICA. See under the various South American countries.

SOUTH AUSTRALIA. A state of the Australian Commonwealth, occupying the central and southern part of the continent; bounded on the north by the Northern Territory, on the west by Western Australia, and on the east by Queensland, New South Wales, and Victoria. Area, 380,070 square miles; population at the census of 1911, 408,558; estimated, June 30, 1920, at 472,432. The above figures do not include the aborigines which, including those in the Northern Territory,

have been placed at over 20,000. The capital and largest city is Adelaide, with a population, including suburbs, in 1919 of 256,660. The movement of population in 1919 was as follows: Births, 11,060; deaths, 5475; marriages, 3855. Infant mortality was among the lowest in the world, being 64.01 per 1000 births. Public schools numbered 945 in 1919, with 75,681 pupils; private schools had 13,209 pupils. The principal crops are: Wheat, hay, oats, and barley. In 1919-20 their production was as follows: Wheat, 14,947,413 bu.; hay, 593,859 tons; barley, 2,339,028 bu.; oats, 1,605,568 bu. The wine output in that year was placed at 5,085,939 gallons. Executive power is vested in a governor, appointed by the Crown, who acts through an executive council or responsible ministry; and legislative power, in a legislative council of 20 members and a house of assembly of 46 members, elected on the basis of universal suffrage. In the elections of 1919 out of a total of 255,529 registered electors, 132,632 were women. Governor at the beginning of 1921, Lieutenant-Colonel W. E. G. A. Weigall; Prime Minister, H. N. Barwell. See AUSTRALIA.

SOUTH CAROLINA. POPULATION. According to the report of the census of 1920, there were 1,683,724 residents in the State, Jan. 1, 1920, as compared with 1,515,400 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	2,022,000	32,959,000	\$ 24,390,000
	1920	1,830,000	34,770,000	40,833,000
Oats.....	1921	338,000	8,112,000	5,922,000
	1920	307,000	7,368,000	7,589,000
Wheat.....	1921	118,000	1,298,000	2,700,000
	1920	107,000	1,177,000	3,001,000
Tobacco.....	1921	80,000	50,400,000	5,544,000
	1920	100,000	65,000,000	9,750,000
Hay.....	1921	402,000	366,000	7,296,000
	1920	366,000	342,000	8,501,000
Peanuts.....	1921	38,000	33,250,000	1,330,000
	1920	31,000	29,450,000	2,356,000
Potatoes.....	1921	30,000	2,550,000	3,825,000
	1920	28,000	2,800,000	5,040,000
Swt. potatoes.....	1921	83,000	7,885,000	7,096,000
	1920	76,000	7,980,000	9,337,000
Sor. syrup.....	1921	21,000	1,890,000	1,285,000
	1920	21,000	2,100,000	2,100,000
Cotton.....	1921	2,593,000	760,000	60,800,00
	1920	2,964,000	1,623,000	117,673,000

¹ Pounds. ² Tons. ³ Gallons. ⁴ Bales.

A comparative summary for the State for 1914 and 1919 follows:

	Census—		Per cent of increase, ¹ 1914-19
	1919	1914	
Number of establishments.....	2,004	1,885	6.3
Persons engaged in manufactures.....	86,350	77,693	11.1
Proprietors and firm members.....	1,664	1,815	-8.3
Salaried employees.....	5,225	3,964	31.8
Wage earners (average number).....	79,461	71,914	10.5
Primary horsepower.....	395,269	340,224	16.2
Capital.....	\$275,804,516	\$203,210,875	84.9
Services.....	73,031,843	29,051,568	151.4
Salaries.....	10,508,729	4,878,467	115.4
Wages.....	62,523,114	24,173,101	158.6
Materials.....	227,986,384	91,006,996	150.5
Value of products.....	381,453,794	138,891,202	174.7
Value added by manufacture (value of products less cost of materials).....	153,467,410	47,882,206	220.5

¹ Minus sign denotes decrease.

FINANCE. Balance on hand, Dec. 31, 1920, \$1,402,021; receipts for the fiscal year 1921, \$12,628,514; expenditures, \$13,258,781; cash balance, Dec. 31, 1921, \$771,754.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Provision for a State board of fisheries, an act to regulate the storage, grading, and marketing of cotton and other non-perishable farm products, and an amendment of laws of 1912 relating to exemptions from jury duty by including female electors in the exempt class.

OFFICERS. Governor, R. A. Cooper; Lieutenant-Governor, Wilson G. Harvey; Secretary of State, W. B. Dove; State Treasurer, S. T. Carter; Comptroller-General, Walter Duncan; Attorney-General, Samuel M. Wolfe.

SOUTH CAROLINA. UNIVERSITY OF. A non-sectarian, co-educational institution at Columbia, S. C.; founded in 1901. The enrollment for the fall of 1921 was 610. There were 40 members in the faculty, including five additions. The productive funds amounted to \$242,855. The library contained 65,000 volumes. Four dormitories were completely overhauled and eight professors' houses built. President, W. S. Currell.

SOUTH DAKOTA. POPULATION. According to the report of the census of 1920, there were 636,547 residents in the State, Jan. 1, 1920, as compared with 583,888 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crops	Year	Acreage	Prod., bu.	Value
Corn.....	1921	3,926,000	125,632,000	\$32,664,000
	1920	3,650,000	109,500,000	45,990,000
Oats.....	1921	2,650,000	58,300,000	11,660,000
	1920	2,219,000	75,446,000	24,897,000
Barley.....	1921	1,019,000	17,323,000	5,024,000
	1920	1,028,000	25,700,000	13,364,000
Wheat.....	1921	2,845,000	25,980,000	22,603,000
	1920	2,930,000	26,920,000	30,958,000
Flaxseed.....	1921	216,000	1,404,000	1,952,000
	1920	220,000	2,200,000	3,630,000
Rye.....	1921	191,000	3,056,000	1,772,000
	1920	205,000	2,768,000	3,017,000
Hay.....	1921	4,470,000	4,158,000	24,091,000
	1920	4,591,000	5,757,000	53,388,000
Potatoes.....	1921	80,000	4,400,000	4,708,000
	1920	75,000	7,950,000	7,712,000

IRRIGATION. The accompanying table issued by the United States Bureau of the Census sum-

marizes irrigation conditions of the State in 1920 Charles S. Whiting, Ellison G. Smith, Frank Anderson and 1910:

	Census of—	
	1920	1910
Number of all farms.....	74,637	77,644
Approximate land area of the state.....	acres. 49,195,520	49,195,520
All land in farms.....	acres. 34,636,491	26,016,892
Improved land in farms.....	acres. 18,199,250	15,827,208
Number of farms irrigated.....	1,198	500
Area irrigated.....	acres. 100,682	63,248
Area enterprises were capable of irrigating.....	acres. 150,914	128,481
Area included in enterprises.....	acres. 188,392	201,628
Per cent irrigated:		
Number of all farms.....	1.6	0.6
Approximate land area of state.....	0.2	0.1
Land in farms.....	0.3	0.2
Improved land in farms.....	0.6	0.4
Excess of area enterprises were capable of irrigating over area irrigated.....	acres. 50,232	65,233
Excess of area included in enterprises over area irrigated.....	acres. 87,700	138,377
Capital invested.....	\$5,465,248	\$3,043,140
Average per acre enterprises were capable of irrigating.....	50.21	23.69
Estimated final cost of existing enterprises.....	5,500,748	3,800,556
Average per acre included in enterprises.....	29.20	18.86
Average cost of operation and maintenance per acre.....	1.26	0.64

MINERAL PRODUCTION. The Homestake mine and mills, at Lead and Deadwood, S. Dak., began the year 1921 with increased activity and in April were working almost at full capacity, according to the United States Geological Survey. From May the operations continued at full capacity throughout the year. In May, 1921, the homestake resumed the payment of dividends, the first since September, 1919. The Trojan mine and mill were in continuous operation throughout the year. The Golden Reward Co. moved the machinery of its cyanidation plant from Deadwood to Terry. Considerable development work was done at other properties during the year. The production of gold in South Dakota for 1921 was \$6,464,000 as compared with \$4,676,470 in 1920, and the production of silver increased from 90,795 ounces to 111,000 ounces. No lead or copper was produced in the State in 1921.

TRANSPORTATION. Total railway mileage was given by the State authorities in 1921 at 4213.88.

FINANCE. Total receipts for year ending June 30, 1921, \$18,587,543; total disbursements, \$13,972,471; cash balance, all funds, July 1, 1921, \$4,615,071. The State bonded indebtedness, Dec. 1, 1921, was \$53,270,000.

LEGISLATION. The legislature convened January 4, and organized with C. S. Amsden, president pro-tem. of the senate; A. B. Blake, secretary; C. O. Berdahl, speaker, and Wright Tarbell, chief clerk, of the house. Four hundred twenty-five laws and resolutions were enacted, but there was little legislation of outstanding importance. Provision was made for loaning money for urban home-building under the rural credits board, the primary law was simplified by amendment, and initiated bills submitted for the establishment of a state bank and for the development of hydro-electric power.

OFFICERS. Governor, W. H. McMaster; Lieutenant-Governor, Carl Gunderson; Secretary of State, C. A. Burkhardt; Auditor, Jay Reeves; Treasurer, W. S. O'Brien; attorney-general, Byron S. Payne; Superintendent of Public Institution, Fred L. Shaw.

JUDICIARY. Supreme Court; Presiding Judge, Samuel C. Polley; Judges: Howard Gates,

SOUTH DAKOTA, STATE COLLEGE OF AGRICULTURE AND MECHANIC ARTS. A co-educational State institution at Brookings, S. D.; founded in 1882. The enrollment for the fall of 1921 was, 654 men and 286 women. The enrollment for the summer session was 289. President, Willis E. Johnson.

SOUTH DAKOTA, UNIVERSITY OF. A co-educational State institution at Vermillion, S. D.; founded in 1882. The enrollment for 1921 was as follows: College of Arts and Sciences, 444; College of Engineering, 64; College of Law, 79; College of Medicine, 80; College of Music, 63; University High School, 61; Correspondence, 104; Summer session, 189; total, not including 50 duplicates, 1034. There were 96 members in the faculty. The income was: State appropriations, \$327,400; local collection and endowment, \$45,000; total, \$372,400. The library contained 45,000 volumes. President, Robert L. Slagle.

SOUTHERN CALIFORNIA, UNIVERSITY OF. A Methodist Episcopal co-educational institution for the higher education, at Los Angeles, Calif.; founded in 1879. The enrollment in 1921 was 4861 and the faculty numbered 273. President, G. F. Bovard, D.D.

SOUTHWEST AFRICA. A protectorate (formerly German) administered by the Union of South Africa. See GERMAN SOUTHWEST AFRICA.

SPAIN. A constitutional monarchy in southwestern Europe, occupying the greater part of the Iberian Peninsula, and separated from France by the Pyrenees. Capital, Madrid.

AREA AND POPULATION. The total area is placed at 194,783, of which 190,050 are on the continent, the remainder comprising the Canary and Balearic Islands (q. v.), and the Spanish possessions on the north and west coast of Africa (see MOROCCO, section *Spanish Morocco*); population in 1910, 19,950,817; estimated, Jan. 1, 1920, 20,783,844. The largest cities with their populations, Jan. 1, 1919, were: Madrid, 652,157; Barcelona, 618,766; Valencia, 245,162. The movement of population in 1919 was as follows: Births, 585,352; deaths, 482,030; marriages, 166,716. The total emigration in 1918 was 36,254, of whom 26,377 were males. The chief countries

of destination were: Argentina, Cuba, Brazil, Mexico, and Uruguay. The latest figures for primary education gave 28,108 public schools and 5669 private schools, with 2,604,308 pupils. For secondary education there were 58 middle class schools with 52,498 pupils. There were 11 universities, namely: Barcelona, Madrid, Granada, Murcia, Salamanca, Oviedo, Seville, Santiago, Valencia, Valladolid, and Saragossa, with a total attendance of 23,586 students.

PRODUCTION. By far the most important interest is agriculture, and the soil is divided among numerous proprietors, subdivision having proceeded rapidly of late years. The following table shows the acreage and production of the principal crops for 1920:

	Area 1920, acres	Yield 1920, cwt.
Wheat.....	10,374,712	75,444,752
Barley.....	4,369,310	39,392,050
Oats.....	1,606,600	10,965,284
Rye.....	1,820,395	14,138,252
Maise.....	1,181,577	14,068,432
Millet.....	4,940	41,796
Mealin.....	107,580	581,760
Rice.....	121,237	5,786,790
Beans.....	489,052	3,670,448
Kidney beans.....	798,435	3,765,424
Peas.....	153,527	844,732
Chick peas.....	567,365	2,798,702
Lentils.....	82,047	505,754
Tares.....	494,185	2,768,692
Vetches.....	164,842	1,148,398

ECONOMIC CONDITIONS. Throughout the year and at its close the business conditions of the country were unsatisfactory. In October the imports were exceeding the exports; the cost of the Moroccan campaign was increasing the financial deficit; strikes were threatening; and prices were rapidly increasing. As to the financial situation, the issue of notes payable in three months, amounting to 1,350,000,000 pesetas was authorized, November 4, bringing these short term notes to a total of 2,706,000,000. This situation was largely due to the cost of the war in Morocco. It appeared inevitable that higher taxes should be imposed. It was estimated that the deficit would exceed 650,000,000 pesetas. As to foreign trade, while exports were remaining stationary, imports were in October showing a considerable increase. For the first nine months of 1921 the imports amounted to 1,010,000,000 pesetas and exports to 567,000,000 pesetas. An increase in the price of foodstuffs was indicated, and the government laid an embargo on foreign wheat to go into effect, November 8. In December the cost of living was still increasing and industrial conditions were disturbed owing to wage disputes in some of the most important industries. There were strikes in the mining and metal industries, on the railways, and in paper mills.

COMMERCE. The total trade for 1919 was as follows: Imports, 650,168,971 pesetas; exports, 987,224,798 pesetas; for 1920, Imports, 1,050,345,014 pesetas; exports, 756,769,286 pesetas.

FINANCE. The budget estimates for the fiscal year 1921-22 are as follows: Revenue 1,976,663,000 pesetas; expenditure 2,550,794,000 pesetas.

The total sum of taxes collected for the fiscal year 1920-21 was 1,862,631,758 pesetas, as compared with 1,618,912,672 pesetas for the corresponding period of the previous fiscal year, an increase of 243,708,086 pesetas.

On Jan. 1, 1921, the public debt amounted to 11,992,949,525 pesetas as compared with 12,026,280,212 pesetas a year previous, 9,421,586,036 pesetas on the same date of 1919, and 9,399,440,855 pesetas on Jan. 1, 1913. That of Jan. 1, 1921, was made up of an external debt of 910,761,400 pesetas and an internal debt of 11,082,188,125 pesetas. The general aspect of government finance shows no signs of amelioration, and higher taxation appeared inevitable. With the military expedition in Morocco costing over 40,000,000 pesetas monthly, the deficit for the year was expected to exceed 650,000,000 pesetas. The deficit of the fiscal year, ending March 31, 1921, amounted to over 800,000,000 pesetas, of which 250,000,000 pesetas were spent in the support of railroads, purchase of wheat by the government, and control and distribution of such products as olive oil and bread. The budget for the fiscal year ending March 31, 1922, as appears from the above estimates carried a deficit item of 574,131,000 pesetas. The revenue estimates showed an increase of 117,920,000 pesetas over the previous year, while the expenditure showed an increase of 147,060,000 pesetas.

SHIPPING. Ocean-borne traffic in and out of Spanish ports had not regained its prewar level, as regards either number of vessels or tons of cargo. During 1913, 12,000 vessels entered Spanish ports with 5,800,000 metric tons of cargo, and 17,500 vessels cleared with 14,900,000 tons. During 1920, total entrances numbered 10,000, with 3,700,000 tons of cargo, while clearances numbered 13,000 with 8,700,000 tons. Combining cargo movements inward and outward, it appeared that 1920 shipping in Spanish ports was only 60 per cent of the amount handled in 1913.

RAILWAYS. The total mileage of the Spanish railways in 1920 was 9430 miles, most of which had a gauge of 5 ft. 5½ in. The lines were operated under concessions similar to those in force on the French railways and these were due to expire within some 25 years. The four principal lines in Spain were: the Northern; the Madrid, Zaragoza & Alicante; the Madrid, Caeres & Portugal, and the Andalusian, all of which serve individual territories with practically no competition.

The statistics for 1920 showed an operating ratio of 77.5 per cent, but on the other hand there was but poor physical condition of the track and equipment. There were nominally some 200 more locomotives in the year 1920, as compared with the year 1913 (2100 in 1913 and 2300 in 1920) but the condition of these locomotives was such as to render the number fit for service no more than in the earlier year.

STATISTICS OF SPANISH RAILWAYS

Five ft. 6 in. (1.674 metre) gauge railway:			
Single track.....	miles	6,773	
Double track.....	miles	243	
Locomotives.....		2,132	
Passenger cars.....		4,803	
Freight cars.....		40,304	
Metre (39.37 inch) gauge railway:			
Single track.....	miles	2,119	
Double track.....	miles	16	
Locomotives.....		626	
Passenger cars.....		1,250	
Freight cars.....		10,230	

During the year there was brought before the Spanish congress a bill for the reorganization of

the railways of the kingdom, but it revoked so much protest that it was abandoned. On October 26 a new bill was prepared, which sought to make the state a partner in railway enterprise by having it advance to all the properties enough financial aid to put them on a sound basis. The bill provided for the management of the railways, by a council of 15 members—6 representing the government, 6 the companies, and 3 the Spanish business interests. It was proposed that this council should fix rates as to provide adequate returns, and net profits would be divided by the stockholders and the government. Perpetual concessions to private companies were to be reduced to a period of 99 years, and the right of the government to take over the roads at the termination of the concession was recognized. Under certain conditions, concessions might revert to the state prior to the termination of the stipulated period, and restrictions as to disposal of railway properties held by individuals were embodied. Points of timely interest were the provisions for regrouping and reclassification of railways with a view to better commercial service and increased strategic value; definite measures for retirement of laborers on pension; and the council's right of establishing or revising the tariff. In the latter case the council should be animated by two considerations: First, the best interests of the company in question; second, the general interest, with a special view to the effect of the new tariff on through rates having to do with two or more lines.

DEFENSE. In 1920 the peace establishment was placed at 216,649. Outside the Spanish peninsula are commands on the coast of Morocco and on the Canary and the Balearic Islands. The total forces in Morocco in 1920 were 60,735, all under the Spanish Commissioner General, in supreme military command of the Spanish Zone. These troops were largely reinforced in 1921 on account of the war in Morocco (q. v.). See NAVAL PROGRESS.

GOVERNMENT. Executive power is vested in a king who acts through a responsible ministry; and legislative power, in the cortes or parliament, consisting of a senate and congress which meet each year. The senate comprises three classes of members: namely, those holding office by their own right; those nominated by the Crown; and those elected by various corporations and the localities, and by the largest taxpayers. The first two classes must not exceed 180, and the third class is fixed at that number. The deputies in the congress number 417, elected on the basis of compulsory voting of all males over the age of 25. The distribution of the parties in the cortes at the beginning of 1921 was as follows: Senate, Conservatives, 90; Liberals, 58; Independents, 18; Regionalists, 6; Catholics and Jaimistas, 5; Reformists, 2; Republicans, 1. Congress, Conservatives, 223; Liberals, 111; Regionalists, 40; Republicans, 16; Catholics and Jaimistas, 8; Independents, 11; Reformists, 8; Socialists, 3. The king in 1921 was Alfonso XIII, born, May 17, 1886. The ministry, constituted, March 13, 1921, was as follows: President of the Council, Manuel Allendesalazar; Minister of Foreign Affairs, Marquis de Lema; Minister of Justice and Worship, Señor Pinies; War, Viscount Eza; Marine, Fernandez Prida; Finance, Manuel Arguelles; The Interior, Count de Bugallal; Public Instruc-

tion, Señor Asparicio; Public Works, Señor Lacierva; Labor, Count Lizarraga.

HISTORY

THE WAR IN MOROCCO. A summary of the chief events of the war will be found in the article Morocco. In September the government established a censorship over the newspapers, forbidding the publication of any other news in regard to the Moroccan campaign than what was contained in the official dispatches. The result of this was to deprive the public of any information in regard to what was actually going on. The censorship applied to foreign correspondence as well as to the Spanish press. The newspapers all complained of these conditions which they characterized as intolerable, but the government remained firm. The Moroccan situation was the main subject of public attention and was sure to be the chief topic of discussion at the opening of the Spanish Parliament, October 15. The ministry in September was occupied with the financial situation, especially in its relation to the Moroccan campaign, and the minister of finance, Señor Cambo in setting forth the situation suggested a number of reforms that would increase the revenue. Another measure under consideration at this time was a plan for the nationalization of the military industries in order to meet the needs of the Spanish army in Morocco at the earliest possible moment. Many large industrial establishments in the various branches of industry placed their factories at the disposal of the minister of war, offering to provide if necessary for an increased output.

CATALONIA. The independent movement in Catalonia aiming at home rule continued to gain strength after the war. Separation was narrowly averted in 1918 after threatening revolts among the people, and in 1919 the Catalans hoped to secure recognition from the League of Nations but were disappointed. The programme of Catalonia, which was adopted in 1916, consisted of a demand for self-government with a parliament elected by and responsible to the Catalan people and an executive power responsible to the parliament; an independent judiciary; official use of the Catalan language; a federative union with Spain which should have charge of foreign relations, the army and navy, etc. The Catalan movement encouraged similar movements in other regions tending toward a federation of the divisions of Spain under a central government with limited powers.

NEW MINISTRY. The prime minister, Señor Dato, was assassinated, March 8. An attempt to form a cabinet under Antonio Maura failed, and a coalition ministry was formed along with the Conservatives under Señor Allende-Salazar as prime minister. It was constituted as follows: Prime minister, Allende-Salazar; foreign affairs, Lema; interior, Bugallal; war, Eza; marine, Prida; finance, Arguelles; public works, Lacierval; public instruction, Aparicio; labor, Elisarraga; justice, Pinies.

COMMERCE RELATIONS. A debate on the rupture of the *modus vivendi* with France occasioned a debate in the Chamber in November, in the course of which the government spokesman declared that the chief cause of the discontent of France was the general increase in the tariffs since the end of November, 1920. He said that

Spanish offers of a new understanding were not accepted by France. Spain had agreed to postpone without any compensation the payment of the debt to her from France of 455,000,000 pesetas. The Finance Minister, M. Cambo, attributed the action of France to a regard for her own interests. He compared the increase of the French tariff to that of the Spanish tariff, saying that the latter was much less, and he insisted upon the necessity of protecting Spanish national industries.

SPANISH LANGUAGE. See PHILOLOGY, MODERN.

SPANISH LITERATURE. The literary activity of Spain for the year has been markedly less voluminous than for several years past. The official figures in the *Bibliografía Española* are: to the end of November, 1265 in 1919, 1371 in 1920, and only 906 this year. But the smaller output, despite the absence of certain outstanding names, seems to be about as interesting as usual.

NECROLOGY. As in several recent years, Spanish letters have paid heavy toll to death, and once more the losses have been more numerous in Spanish America. We lost in May that most brilliant woman writer of the last half of the nineteenth century, Countess Emilia de Pardo Bazán, who in the last years of her life had duplicated the achievement of some of her sisters in earlier centuries by becoming a professor at the University of Madrid.—In September Enrique Menéndez y Pelayo, the distinguished novelist and poet, joined his brother, the late, lamented humanist, Marcelino Menéndez y Pelayo.—Mexico lost one of her chief glories through the death of the Archbishop of Cusareta, Bishop of San Luis de Potosí, Ignacio Montes de Oca, well-known Hellenist, translator of Pindar, and gifted lyric poet.—Honduras suffered greatly in the death of her statesman and diplomat, the lexicographer Alberto Membreño.—Peru also paid heavy toll through her loss of the versatile Javier Prado, former Minister of State, ex-Senator, and at the time of his death Rector of the University of San Marcos and Director of the Peruvian Academy. We of this country share in a very personal sense Peru's loss in this case, since with an enlightened patriotism Javier Prado was for long years a devoted friend and admirer of the United States: a friend who expected great things of us, and who challenged us to them in his book *La Nueva Época y los Destinos Históricos de los Estados Unidos*.

LITERARY CRITICISM of various types is well represented: Homero Seris, *La Colección Cervantina de la Sociedad Hispánica de América: Ediciones de Don Quijote* (appeared too late for inclusion in last year's account, but contains the important discovery of a hitherto unknown edition of 1605 by Cuesta, and probably the second); Miguel Artigas, *Un nuevo poema vor la cuaderna vía*; A. de Santa Cruz, *Crónica del Emperador Carlos V*, vols. 1 and 2 (edited by R. Beltrán y Róspide and A. Blázquez y Delgado Aquilera); M. Menéndez y Pelayo, *Obras completas*, vols. 10 and 11 (ed. by A. Bonilla y San Martín); M. Méndez Bejarano, *Vida y obras de J. M. Blanco y Crespo (Blanco-White)* (awarded a prize by the Spanish Academy); R. Menéndez Pidal, *El Cid en la Historia*; C. Pittollet, *V. Blasco Ibáñez—Sus novelas y la novela de su vida* (Spanish translation by Tulio Moncada); R. Altamira y

Crevea, *Arte y realidad* and *La política de España en América*; E. Gascó Contell, *Blasco Ibáñez y su obra*; Juan de Timoneda, *La oveja perdida* (ed. by A. García Boisa, with introd., notes and glossary); and Gil Vicente, *Auto de la Sibila Casandra conforme a la edición de 1668*, (con prólogo y notas de Álvaro Giráldez).—It is interesting to note that George Borrow's *The Bible in Spain* is being translated into Spanish by Manuel Azafra, and that the third volume has already appeared.—Americans interested in our international relations will probably find much of profit in the following two works: Isidro Fabela, *Los Estados Unidos contra la libertad—Estudios de historia diplomática americana (Cuba, Filipinas, Panamá, Nicaragua, República Dominicana)*; and Luis Araquistain, *El peligro yanqui*.—Lexicographical studies were also of interest: Real Academia Gallega, *Diccionario gallego—castellano*, cuaderno 19; C. Suárez, *Vocabulario cubano* (Suplemento a la 14a ed. del Dic. de la Real Academia); E. C. Guerrero, *Diccionario filológico—Estudio . . . sobre el linqua je venezolano con referencia al de España y al de otros países de la América latina*; G. M. Vergara y Martín, *Materiales para la formación de un vocabulario de pa la bras usadas en Segovia y su tierra y no incluidas en el Dic. de la R. Academia*; and L. Fullana Mira, *Vocabulário ortográfico valenciano—castellano*.

POETRY offered the following among others: Julio J. Casal, *Humildad*; R. Pérez de Ayala, *El sendero andante*; E. Carrière, *Románticas y otros poemas*; César Barja, *Rosas u espinas místicas* (very well received); J. M. Gabriel y Galán (distinguished poet of Extremadura, writing with equal grace in Castilian or in his native dialect), *Obras completas*, vols. 1 and 2; and E. Alberola Serra (the Valencian, author of *Mil y un cantares*), *Mil y un cantares más* (highly praised by the Academy in a memorandum signed by Ricardo León, and published with prologue by F. Rodríguez Marín).—After several years of exile in Spain, and upon his departure for his native Mexico, Ignacio Montes de Oca, Correspondiente of the Spanish Academy, left with the Academy, as a parting gift, a new volume of sonnets, *Sonetos jublares*, which are said to equal in inspiration those of his first volume.

DRAMA seems to have been a little more productive of serious works than was the case a year ago. The Álvarez Quintero brothers maintained their usual high level in quality and quantity: *Ramo de locura*, a lesson on the folly of suicide in unhappy love affairs; *La prisa*, a satire on the hurry of modern life (even in Spain) that prevents access to the deeper joys of life; and their new triumph, *Pasionera*, a study of the sacrifice of a woman's love in the effort to regenerate an unworthy man.—J. López Pinillos (Parmeno) caused much and varied criticism with *Como el humo*, a pessimistic, intensely dramatic study of adultery; his much stronger work, *La tierra*, dealing with the question of the ownership of land, was carried to great success by Matilde Moreno on the stage of the Teatro Español; and his best work for the year, *El caudal de los hijos*, exquisitely performed by María Guerrero and Fernando Díaz de Mendoza, is a lofty conception treating honor as a spiritual inheritance that parents should pass down unsullied to their children.—G. Martínez Sierra's tragicomedia *Don Juan de España* was a great success.—E.

Marquina's *La extraña* is a keen study of expiatory contrition on the part of a woman trying to regain her own self-esteem.—M. Linares Rivas, in *Frente a la vida*, examines the problem of educating the middle classes (especially the girls thereof) to economic efficiency, so that when the father dies they may not have to make a loveless marriage as the only career that offers a livelihood.—R. Martí Orbera's *Entre nieblas* is an interesting play that gives hope of greater things to come.—Others that may be mentioned are: J. M. Acevedo, *La princesita rubia*; F. Acebal, *Los antepasados*; and L. Antón del Olmet, *No es lo mismo and Vida nueva*.

FICTION. José Francés gave us *Sortilegio, El muerto*, and *El mundo se rie* (*La caricatura universal* in 1920.—The edition of the *Obras completas* of several authors advanced by several volumes: E. Gómez Carrillo, vols. 16, 17, 18; Azorín, vols. 22 and 26; A. Palacio Valdés, vols. 8, 9, 10; Fernán Caballero, vols. 12 and 13; L. Antón del Olmet, vols. 1 and 2.—Pío Baroja continued his *Memorias de un hombre de acción* with two volumes: *El escuadrón el Brigante* and *El sabor de la venganza*.—José María Acosta's last novel, *Entre faldas anda el juego*, was a great success, fully equal to his first novel, *Amor loco y amor cuerdo*. As a result, Acosta is hailed as continuing the artistic tradition of Valera, Pereda, and Palacio Valdés.—Other works that may be mentioned are: Alberto Insúa, *Juventina la bella* and *La batalla sentimental*; W. Fernández-Flores, *El espejo irónico*; R. Gómez de la Serna, *El Doctor inversotmil*; A. Hernández Catá, *La voluntad de Dios*; A. Pérez Lugín, *Currito de la Cruz* (2 vols.); R. López de Haro, *Un hombre solo and Batalla de odios*; J. López Pinillos, *Doña Mesalina*; Miguel de Unamuno, *Tres novelas ejemplares y un prólogo*; and M. Linares Rivas, *Mis mejores cuentos* (selections by the author).

ROYAL ACADEMY activities, in the way of reception of new members, were not so great as a year ago. Nevertheless, three members-elect qualified to take possession of their chairs. Julio Cesares, the philologist and critic, succeeded Augusto González Besada. His discourse, *Nuevo concepto del diccionario de la lengua*, pleads for a reworking of the celebrated *Diccionario de ideas afines* (the Spanish equivalent of Roget's *Thesaurus*) by Eduardo Benot.—Manuel Linares Rivas, the dramatist and novelist, succeeded Javier Ugarte, and his discourse was a detailed study of the celebrated and unfortunate Gallegan poet *M. Curros Enríquez*.—Adolfo Bonilla y San Martín, the philosophico-literary historian and critic, succeeded Mariano de Cavia, who died, however, without ever having taken possession of his chair, so that Bonilla y San Martín really succeeded the last occupant of that chair, the poet and archæologist, Juan Menéndez Pidal. The discourse of Bonilla y San Martín was entitled *Las Bacanas, o del origen del teatro*.—The Academy awarded the following prizes: the "Piquer" Prize for 1920, to J. Arzadún for his *Castilla for doña Juana!* and the two pending "Espionosa and Cortina" Prizes to the two dramas *La red.*, by J. López Pinillos, and *El Jayán*, by Concha Espina.

SPIRITUALISTS' ASSOCIATION. NATIONAL. The belief of this association is that "spiritualism is the science, philosophy, and religion of continuous life, based upon the demonstrated fact of communication, by means of mediumship, with

those who live in the spirit world." To expand the movement and organize the numerous local societies, the association was incorporated in 1892. The annual convention for 1921 was held in Detroit, Mich., October 18-22. The association reported to be making rapid progress in gaining influence and strength of subsidiary bodies. It has 24 state associations with about 600,000 members. Each of these subsidiary associations or churches hold regular meetings, attracting large audiences with local ministers or speakers and mediums. Many new organizations came into activity in 1912. There were 500 ministers and about 1200 mediums. The regular attendance is said to be 1,000,000. The National body keeps its president almost constantly visiting and lecturing to the auxiliaries. He also edits *The National Spiritualist*, the official organ of the movement. The main office answers inquiries for information about Spiritualism and solicitations for literature. The sales of books and the demand for their publication has been widespread in the past year.

An advance toward securing a National Temple in Washington was made in 1921 by the payment in full of a prominent building site. During the year a compromise in the action over the bequest of the estate of John L. Jackson of Fort Worth, Texas, was effected by which the National association received \$65,000.

The members of the Board of Trustees are now given a three-year term of office and no changes were made in its membership for 1922. With a substantial increase financially for each branch of its work, high expectations are held for growth during the coming year. The offices of the National Association are: President, George B. Warne, Chicago; Vice-president, Joseph P. Whitwell, St. Paul, Minn.; Secretary, George W. Kates, Washington, D. C.; Treasurer, Cassius L. Stevens, Pittsburg, Pa. The main office of the National Association is at 600 Pennsylvania Ave. S. E., Washington, D. C.

SPITZBERGEN. An archipelago, 500 miles to the north of Norway, including Bear Island. Area, about 25,000 square miles. The principal islands are: Mainland or West Spitzbergen; North East Land; Edge Island; Prince Charles Foreland; and Barents Island. The islands have been much frequented by whalers, seal fishers, and hunters of fur-bearing animals. Rich mineral resources have been discovered, the chief being coal which is found over a wide area and has been worked by British, Norwegian, Swedish, and Russian companies. Other minerals reported are: Copper, zinc, gypsum, asbestos, molybdenum. The Treaty of Versailles placed the archipelago under the sovereignty of Norway. Pursuant to this decision treaties were signed by Norway with the other Powers, Feb. 16 and April 9, 1920. See preceding YEAR BOOK.

SPOFFORD, HARRIET PRESCOTT. Author, died, August 15. She was born at Calais, Maine, April 3, 1835, graduated at the Putnam Free School, Newburyport, Mass., in 1852 and married Richard S. Spofford, a lawyer of Boston in 1865. She wrote many short stories and a long series of novels some of which were widely read. She ranked among the leading women novelists of her time. The list of her writings includes the following: *Sir Rohan's Ghost*; *The Thief in the Night*; *The Marquis of Carabas*; *A Lost Jewel*; *Hester Stanley at St. Mark's*; *Hester Stanley's Friends*;

The Scarlet Poppy; Art Decoration Applied to Furniture; House and Hearth; The Servant Girl Question; Poems; Ballads about Authors; The Amber Gods; Azarian; New England Legends; A Master Spirit; An Inheritance; In Titian's Garden; Four Days of God (1905); The Children of the Valley (1901); The Great Procession (1902); Old Madame; The Maid He Married; Priscilla's Love Story; Old Washington (1906); The Fairy Changeling (1910); The Making of a Fortune (1911).

SPORTS. Articles covering the activities in the various sports during 1921 will be found under such titles as **ATHLETICS, TRACK AND FIELD, BASEBALL, FOOTBALL, RACING, ROWING, TENNIS, YACHTING, etc.**

SPRONCK, MAURICE. French writer and politician, died in December. He first drew attention by a volume on *Literary Artists* dealing with the leading nineteenth-century authors. His work showed a highly analytical spirit, and led to his characterization as a psychological anatomist. He continued in the leading French journals to write important articles on literary criticism, but abandoned this work in a large part for a political career. He was municipal councilor and a deputy in the Chamber, where he was a leading figure in the Nationalist group. In the elections of 1920 or 1921 he was defeated. At the time of his death he was carrying on a chronicle of parliamentary affairs in the French press.

STAMM-RODGERS, Madame ESTELLE. See **NECROLOGY.**

STANCHFIELD, JOHN BARRY. Lawyer, died June 25. He was born at Elmira, N. Y., March 13, 1855; graduated at Amherst College in 1876 and at the Harvard Law School in 1878; and was admitted to the bar in the latter year, and practiced at Elmira until 1900. He was a partner of Senator David Bennett Hill at Elmira from 1878 to 1885, and after that a member of the firm of Reynolds, Stanchfield, and Collin. He was in practice in New York City after 1900. He was prominent in Democratic politics, having been Democratic minority leader in the New York assembly from 1895 to 1896 and Democratic candidate for governor in 1900. He was Democratic nominee for United States Senator in 1901 and a delegate to the Democratic National Convention at Baltimore in 1912.

STANDARD TIME. During the year by an official decree of President Obregon, Mexico adopted standard time, employing the 24-hour system of notation. Clocks were to be arrayed with such faces and the hours were to be counted from 0 to 24 beginning at midnight.

STANDARDS, UNITED STATES BUREAU OF. To come.

STATE BANKS. The following statement issued by the Comptroller of the Currency shows the number of reporting banks other than national, their loans, cash in vaults, deposits, and aggregate resources on June 30, 1920 and 1921, and corresponding items for the same dates for national banks and the totals for all banks, together with a comparison of the resources of national banks, and bank other than national, on June 30, 1916 and 1921.

Comparative statement of the number of banks reporting, loans, cash in vault, total deposits, and aggregate resources of all banks in the United States on dates nearest to June 30 for the years 1920 and 1921

STATISTICAL ASSOCIATION, AMERICAN.

One of the oldest scientific associations in America, having been organized in Boston in 1839. Members of the Association have served nearly every kind of public bureau interested in the collection and analysis of statistical data, and have directed the work of the Federal censuses for the last 50 years. At the present time the Association has a joint advisory committee on the census—three members from the Statistical Association and three from the Economic Association—appointed three years ago at the request of the Director of the Census for the purpose of advising him during the preparation and publication of the 1920 census.

In recent years the Association has become active in the broader field of statistics, such as statistics of industry, and the internal statistics of corporations. Under the auspices of its Committee on Business Research the Association holds occasional dinners, featuring authoritative speakers and giving opportunity for general discussion. Three such meetings were held in New York City during 1921.

The Association held its 83rd annual meeting at Pittsburgh, Pa., December 27-19. The papers and discussion centred around the following topics: Agricultural statistics; population and vital statistics; business research; business forecasting; the national income; and statistics in the service of economics. Of the seven sessions at the annual meeting two were held in common with the American Economic Association. Other associations meeting in Pittsburgh at the same time no doubt for reasons of mutual benefit were: The American Political Science Association; The American Sociological Society; The American Association of University Instructors in Accounting; The American Farm Economics Association; The American Association of University Professors; and The American Association for Labor Legislation.

For thirty years the Association has issued regular publications and complains of having more good papers available than it can afford to print. With the March, 1922, issue the name of the quarterly changes from the *American Statistical Association* to *Journal of the American Statistical Association*. The editor is William F. Ogburn. Officers of the Association for 1922 are: President, William S. Rossiter; Vice-presidents, Louis I. Dublin, Edwin W. Kemmerer, Malcolm C. Rorty; Counsellors, Carrol W. Doten, Wesley C. Mitchell, Walter F. Willcox; Secretary-Treasurer, Robert E. Chaddock (Kent Hall, Columbia University, New York City).

STEAM ENGINES. Notwithstanding the conspicuous development of the steam turbine and water power taking place in 1921, the steam engine was a large and important factor in the

generation of power in the United States. This was shown conspicuously in the Census of the Superpower Survey report of the U. S. Geological Survey where over nine million horsepower capacity of the various industrial enterprises in the superpower zone, exclusive of steam and electric railways and central lighting station loads were analyzed. It was found that of this total two-thirds was privately generated and one-third was purchased. Excluding the central stations from consideration 68 per cent were steam engines, 19 per cent steam turbines, 8.5 per cent water wheels, and 4.5 per cent internal combustion engines.

A large engine-driven generating unit was installed during the year in the plant of the Corn Products Co. in Kansas City. There was a horizontal twin tandem-compound drop-valve engine with two high-pressure cylinders 27 x 54 inches and two low-pressure cylinders 50 x 54 inches driving a 2500-kw. alternating current generator. A certain number of steam engines went into the coal fields to operate large hoists which were equipped with cylindro-conical drums for rapid hoisting. The unaflo engine continued in favor during the year and some 40,000 horsepower of such engines were said to have been sold during the year. It found increased application to municipal and other power plants where there was wide fluctuation of the load and also in connection with heating loads when it could be run condensing in the warmer seasons. The unaflo engine was also being employed in steel mills on account of its sustained economy over a wide range of load and especially to work with a heavy overload. In fact during the year there were installed two 5000 horsepower duplex unaflo engines to drive plate mills. See **BOILERS; STEAM TURBINES.**

STEAM TURBINES. During 1921 there was no increase in the size of steam turbines manufactured or designed, and the former record units with 60,000 kw., three cylinder compound sets of the Westinghouse Co., and the 45,000 kw. single rotor turbine of the General Electric Co. were not surpassed for capacity during the year, though a second unit of the latter type and size was placed in commission at the Connors Creek Station. It seemed to be good practice during the year to install units of 30,000 kw. capacity rather than larger machines, and they were favored on the score of greater flexibility as regards the load at the station and also for the economy of manufacture as considerable numbers having been built it was possible to standardize their design, construction, and operation. In fact during the year the aim of designer and manufacturer was to introduce changes principally with the object of increasing reliability and efficiency of operation. There was involved the use of more and better steel and a more rigid construction in order to

eliminate as much as possible the effects of axial vibration and also the troubles resulting from variation in steam temperatures and volume due to changes in load. In view of the fact that some of the machines built during the war are showing the effects of poor workmanship, more care was being manifested in actual construction, especially in securing better material, while more care also was being used in the actual operation so as to reduce accidents.

The more important new designs of the year included a large turbine with high and low pressure elements in independent casings. The two rotors were supported by individual bearings with thrust bearings to maintain proper location relative to the stationary parts, and they were connected by a flexible coupling. This design was said to be suitable for units up to 30,000 kw. capacity. At the Ford plant at River Rouge near Detroit, a new multi-stage impulse turbine was installed. This was of 3000 kw. capacity and of 40 stages, and acted to drive the blast furnace blowers at the steel works. These machines show high economy but cost more to build and install than the standard types, so they were considered available only where there was a high load factor and also a high fuel test. See STEAM ENGINES; BOILERS; POWER.

STEAMBOAT INSPECTION SERVICE, UNITED STATES. See SAFETY AT SEA.

STEEL. See CHEMISTRY, INDUSTRIAL.

STEIN, Leo. Austrian librettist, died, in Vienna, July 29. He was born in Lemberg, March 25, 1862, and began life as a lawyer. The extraordinary success of Weinberger's *Lachende Erben* (Vienna, 1892), for which Stein had written the libretto, induced him to devote himself entirely to writing libretti for various Viennese composers of light opera. His greatest successes are the books to Lehár's *Merry Widow* (1905) and *Count of Luxemburg* (1909).

STEPHEN, GEORGE (LORD MOUNT STEPHEN). Pioneer in railway building in Canada died at Hatfield, England, November 29. He was born in Banffshire, Scotland, June 5, 1829, the son of a carpenter, and went to Canada in 1850 where he entered the store of his uncle, a cloth merchant in Montreal. He was successful in business and with his savings purchased shares in the Bank of Montreal, of which afterwards he became president. While still young he threw himself into the work of railway development in the west and in association with Donald Smith, afterwards Lord Strathcona, and the late J. J. Hill, acquired the possession of the St. Paul and Pacific railroad, which was carried through from St. Paul to Winnipeg. This prepared the way for the building of the Canadian Pacific. Stephen then applied himself to the Canadian Pacific project and in recognition of his success he was made president of the road. He acquired a large fortune, the greater part of which he distributed among his relatives, when he retired from the railroad work and went to England after 1888. A baronetcy was conferred upon him in 1886, and in 1891 he was raised to the peerage.

STEPHENS, DAVID STUBERT. University president, died, September 1. He was born at Springfield, Ohio, May 12, 1847; and studied at the University of Edinburgh, Scotland, and at Harvard University. He served in the Ohio infantry during the Civil War. In 1880 he was ordained to the

Methodist ministry. He taught logic and philosophy at Adrian College in 1874, and was the editor of the *Methodist Recorder* at Pittsburg, Pa., from 1888 to 1896. After that he was chancellor of Kansas City University. He was a leader in the movement for the union of the churches, and he wrote a number of pamphlets, including *Wesley and The Episcopacy* (1892).

STEVENS INSTITUTE OF TECHNOLOGY. A non-sectarian institution for the technical education of men at Castle Point, Hoboken, N. J.; founded in 1870. The enrollment for the fall of 1921 was 802. There were 57 members in the faculty. The endowment amounted to \$1,570,000 and the income to \$306,000. The library contained 15,500 volumes.

The total amount subscribed to the Graduates' Memorial Fund, inclusive of the \$40,000 for the endowment of four scholarships, in memory of the men of Stevens who died in the service during the World War, was about \$200,000. The larger of the two barracks buildings purchased from the United States government was occupied by the Department of Electrical Engineering. The laboratory space in the main building vacated by this department was assigned to the Department of Physics, thereby more than doubling the floor space for the physics laboratory work. President, Alexander C. Humphreys, M.E., E.D., ScD., LL.D.

STEVENSON, SARA YORKE (MRS. CORNELIUS STEVENSON). Archaeologist and writer, died at Philadelphia, Pa., November 14. She was the first woman lecturer admitted to the staff of Harvard University and was the recipient of many other honors for her work in archaeology and other fields. She was born in Paris, France, Feb. 19, 1847, educated there until 1862 and lived for a time in Mexico. From 1889 to 1903 she was president of the Pennsylvania branch of the Archaeological Institute, assistant curator of the Pennsylvania Museum after 1908, and secretary of the American Exploration Society in 1897. She was in the department of archaeology of the University of Pennsylvania after 1894 and went to Rome in 1897 on a special mission for the department. In 1898 she was engaged in Europe in work for the American Exploration Society. She wrote *Maximilian in Mexico*, and many articles and reports on Egyptology and other archaeological subjects, and edited the *Public Ledger* after 1908.

STODDART, JOSEPH M. See NECROLOGY.

STONE, WINTHROP ELLSWORTH. President of Purdue University, died at Mt. Eon, Alberta, July 16. He was born at Chesterfield, N. H., June 12, 1862; graduated at the Massachusetts Agricultural College in 1882; and studied in Germany. He was assistant chemist at the Massachusetts Experiment Station from 1884 to 1886; chemist at the Tennessee Experiment Station from 1888 to 1889; and professor of chemistry at Purdue University from 1889 to 1900, after which he was president. He was an excellent college executive and well known for his numerous researches in carbohydrates and other departments of chemistry. He was an active member of Alpine clubs of Canada and the United States. He and his wife lost their lives in mountain climbing, being overtaken by a snowstorm.

STOREY, JOHN. See NECROLOGY.

STORY, DOUGLAS. British author, died July 10. He was born at Edinburgh, Scotland, Dec. 31, 1872, and educated at the University of Edinburgh. During the South African war he was war correspondent of the *Daily Mail* and during the Russo-Japanese war, 1904-05, war correspondent with the Russians for the *Daily Express*. After that he was successively special correspondent for the *New York Herald* in Canada, the *New York Tribune* in Egypt, the Far East, Russia, and South Africa, and special correspondent for various syndicated newspapers and editor of papers in London, New York, South Africa, and the Far East. He was Shipping Controller of the Bureau of Information in the government of Bengal. He wrote *Ten Miles from Anywhere* (1895); *Adrift of the Day* (1902); *The Campaign with Kuropatkin* (1904); *Tomorrow in the East* (1907). *The Campaign with Kuropatkin* gives a full account of Kuropatkin's connection with the Russo-Japanese war.

STOVER, MARTIN LUTHER. See NECROLOGY.

STOWELL, CALVIN LLEWELLYN. Financier, died in 1921. He was born at Ansonia, Pa., August 28, 1854; was privately educated; and went into the banking business at Buffalo, N. Y., but removed to Rochester, N. Y., in 1875, where he rose to the position of director or president of many important corporations of banking, navigation, fire insurance, etc. He wrote extensively for the periodical press and published the following volumes: *Christian Knighthood*; *Stories of Abraham Lincoln*; *Constantine the Great*; *Trips to the West Indies*; *Flotsam and Jetsam*; *Idiosyncrasies of Great Men*; etc.

STRAIT SETTLEMENTS. A British crown colony in Malaysia, comprising, Singapore, Penang, and Malacca. Total population, estimated in 1919, 846,083, of whom 555,298 were males. The area and population of each island were as follows: Singapore, 217 square miles, with a population of 387,336; Penang (including Province Wellesley), 280 square miles, with a population of 153,008. Under the administration of the Strait Settlements are: The Cocos or Keeling Islands; Christmas Island; and the colony of Labuan. The chief city and one of the most important ports of the east is Singapore, which contains the greater part of the population of the island of Singapore. The predominant element is the Chinese who make up the bulk of the population. Attendance at the schools maintained or aided by the government in 1918 was 26,534. The chief interest is commerce. No later figures for trade were available than those given in the preceding YEAR BOOK. In 1919 the tonnage of merchant vessels, entered and cleared, exclusive of native craft, was 18,885,183, of which, British was 10,081,120; Japanese, 4,102,800; and Dutch, 2,348,999. The tonnage of native and small craft, entered and cleared, was 2,566,091. Governor at the beginning of 1921, Sir Laurence N. Guillemard.

STRANG, WILLIAM. British painter, died, April 13. He was born at Dumbarton, Feb. 13, 1859, and educated there and at University College, London. After 1875 he studied and worked in London and he won the silver medal for etching at the Paris International Exhibition in 1889; also the first-class gold medal for painting at the International Exhibition at Dresden, 1897. He published *The Earth Fiend*; *Death and*

the Plowman's Wife, and etchings illustrating Kipling's works and Don Quixote.

STRAUSS, RICHARD. See MUSIC, *Artists Instrumentalists, Opera*.

STREET RAILWAYS. See MUNICIPAL GOVERNMENT.

STRIKES AND LOCKOUTS. Official data for strikes and lockouts in the United States during the calendar year 1920 were not complete in time for publication in the preceding YEAR BOOK, and are therefore presented here as compiled by the Department of Labor.

	1916	1917	1918	1919	1920
Strikes.....	3,681	4,324	3,248	3,444	3,109
Average duration, days.....	22	18	17	34	38
Lockouts.....	108	126	105	125	58
Average duration, days.....	64	56	19	38	69

The number of strikes in 1920 was less than in any of the four preceding years. This reduction was due to a lessening of strike activity during the last quarter of the year. During the first six months of the year more strikes occurred than during the first six months of 1918 or 1919, and more than twice as many occurred in the first half of 1920 as occurred in the last. This seems to have been due to the slowing down of the mills during the summer, followed by the shutdowns in the fall and a realization that a strike might result in no benefit to the laboring men, but, on the other hand, might probably be exactly what the employers desired.

There were few distinctly large strikes during the year 1920 as compared with the year 1919, when over 1,000,000 men were involved in three strikes alone. There were but few cases where violence was resorted to sufficiently to attract more than local attention. Aside from the series of so-called outlaw strikes of railroad switchmen and yardmen, involving in all some 500,000 men, and reappearing intermittently through a period of five months, the largest number of persons involved in any one strike was 100,000. This compares with 60,000 in 1918, 40,000 in 1917, 60,000 in 1918, and 435,000 in 1919.

The strike involving the largest number of persons was that of anthracite miners in September. Other large strikes were those of 65,000 clothing workers in New York City in December, 60,000 miners in Illinois in July, 50,000 sugar workers in Porto Rico in February, 30,000 timber workers in the Northwest and 25,000 miners in Indiana, both in June. Several large strikes occurred among the miners; 3000 struck in the eastern part of Ohio in April and 5000 in the southern part in September, 11,000 in Iowa in March, 6000 in Kentucky in September, 28,000 in Alabama in September, and 25,000 in Missouri in the summer. In the building trades there were several large strikes: 4000 carpenters in Chicago, 2500 in New York City in July and the same number in Cincinnati in March, 10,000 in Philadelphia and vicinity in May, 4000 in Pittsburgh, 13,000 painters in New York City in September, and 2500 building laborers in Rochester, N. Y., in April, with general building trades strikes in South Bend, Troy, Syracuse, Dallas, Detroit, and St. Paul. At various points along the Atlantic coast 20,000 longshoremen struck in March, 4000 in Philadelphia in May,

and 8000 in Porto Rico in April, while 4500 stevedores struck in California in September.

In the textile industries 20,000 mill operatives struck in New Bedford and Fall River in March, 5000 knit goods workers in New York City in August, 2500 silk workers in Paterson in the summer, and 3000 in Jersey City in December. A few street railway strikes occurred: 8000 men in Brooklyn in August, 1100 in Atlanta in March, 3000 in Chicago and 3000 in New Orleans in July. Other strikes were those of 15,000 brass workers in Waterbury, Conn., in July, 6000 municipal employees in Chicago in the spring, 3000 express clerks at the railroad stations in Chicago in March, 3000 employees at the Baltimore Dry Docks in February, 5000 silver miners in Montana in April, 5000 sugar planters in Hawaii in the spring, 6000 cigar makers at Tampa in April, 8000 machinists in Cincinnati in May, 5000 iron and steel workers in Reading, Pa., in July, and 13,000 barbers and 10,000 fur workers in New York City in May.

The largest number of disputes occurred in the leading manufacturing States—New York, Massachusetts, Illinois, Pennsylvania, and Ohio—more than one-half the strikes being in these States. The largest number of strikes, as usual, was in New York City, 312, followed by Chicago, with 125; Philadelphia, with 57; and Boston, with 51.

In 1917 the number of unauthorized strikes of which the bureau has information was 72, and in 1918, 58. In 1919 the number was 125, involving 1,053,256 strikers, and in 1920 the number was 251, involving 850,837.

Chicago came second with 41; then Philadelphia, having 38; Boston, 29; Rochester, 22; and seven cities—Detroit, St. Louis, Baltimore, Cleveland, San Francisco, Seattle, New Orleans—with from 10 to 16 disturbances apiece.

In a classification of strikes and lockouts by industries the building trades lead with 454; other industries with high figures are: Printing and publishing, 300; metal trades, 164; clothing, 113; textiles, 73; bakers, 67; miners, 39.

Of the 561 strikes and lockouts ending during the first half of the year the outcome in 175 instances was in favor of the employers, in 175 it was in favor of the employees, in 118 it was a compromise, in 34 cases there was a return to work pending arbitration, and in 79 cases no report was made.

While there are no figures showing the total number of persons involved in the 1621 strikes and lockouts the figures for the few strikes involving large numbers of workers are: 140,000 marine workers, affecting 3690 ships and extending from Portland, Me., to Seattle, Wash.; 40,000 waist makers in 2100 New York City shops; 30,000 workers in the Chicago building trades strike; 27,500 workers in the building trades strike of Cleveland; 12,000 paper makers in the United States; 10,000 building trades workers in San Francisco, 10,000 building trades workers in Boston; 10,000 children's dressmakers in New York City; 10,000 expressmen, teamsters, etc., in New York City; 9353 coal miners, collectively, involved in three Pennsylvania strikes; 9000 textile workers in Charlotte, N. C., and vicinity.

RESULTS OF STRIKES AND LOCKOUTS ENDING IN EACH YEAR, 1916 TO 1920

Result	1916	Strikes ending in—				Lockouts ending in—			
		1917	1918	1919	1920	1917	1918	1919	1920
In favor of employers.....	727	382	459	661	633	21	13	6	19
In favor of employees.....	733	614	612	565	360	16	17	15	16
Compromised.....	766	699	674	785	429	11	21	17	11
Employees returned pending arbitration.....	70	131	199	45	59	3	6	5	3
Not reported.....	99	190	190	36	197	2	1	21	21
Total.....	2,395	2,016	2,134	2,092	1,678	53	58	64	70

Some of the strikes especially attracting public attention were those in the transportation and coal industries. The Alabama coal strike which had been officially called in September, 1920, was finally submitted to Governor Kilby for settlement. Both sides agreed, in March, to abide by the decision to be made by the Governor on the basis of the report of a commission of investigation. The Governor found that the miners had no grievances as to living conditions, hours of work, or wages and recommended: (a) that the operators, as a means to promote peace and harmony, reemploy the strikers as fast as places could be found for them without displacing the men who were then at work; (b) that the organization of the United Mine Workers of America support the unemployed until they could find employment. For the disturbances in the coal fields of West Virginia, see UNITED STATES.

STRIKES AND LOCKOUTS IN 1921. Returns for the last six months are not yet available. Preliminary figures for the first six months as compiled by the Department of Labor show 1584 strikes and 37 lockouts as compared with 1770 strikes and 26 lockouts for the same period in 1920. During these months New York City was the greatest storm centre, with 82 disturbances;

Others that involved large numbers of workers are the strikes of 4500 clothing workers in Philadelphia, 4000 dock carpenters in New York City, 3300 shoe workers in Manchester and Nashua, N. H., 4000 silk workers in New Jersey, 2300 miners in Washington, 3000 tailors in and near New York City, 2200 tapestry workers in Connecticut, 2000 leather workers in Peabody, 1500 employees of the Atlanta, Birmingham & Atlantic Railroad, 1300 packing-house workers in Chicago, and 1500 tobacco workers in Porto Rico.

The total days lost in strikes and lockouts from January through June for the 403 reporting, was 21,257. The average duration of these was about 47 days. The average duration of strikes lasting less than 90 days was 22 days.

On June 1 the long labor struggle which since December 8 had paralyzed the clothing industry in New York came to an end. The strike was estimated to have caused a loss of \$100,000,000 in production and \$30,000,000 in wages. The cause of the trouble was the refusal of certain manufactureres to abide by the system of joint government in force in the industry. On Dec. 2, 1920, the manufacturers announced that they would put into effect individual bargaining, wage-reductions, and piece work, and would insist upon

the unlimited right to discharge employees. The two main issues were recognition of the union and joint industrial government. During the course of the trouble the Amalgamated Clothing Workers were accused of excessive radicalism and bolshevism. Numerous injunction suits were filed by manufacturers. Finally a settlement was reached upon the basis of the agreement drawn up last November by Sidney Hillman, president of the Amalgamated. The wage-reduction amounted to 15 per cent.

The Cleveland building-trades controversy was ended in June, when both parties accepted the award of arbitrators representing the public, which amounted to a wage-cut of 17 per cent. The strike involving 140,000 marine workers which began May 1 ended June 13 with a 15 per cent wage-reduction.

GREAT BRITAIN. Coal Miners' Strike. It is estimated by the *Monthly Labor Review* that in the entire history of labor disputes probably no strike has had more far-reaching or more disastrous effects than the recent coal strike, lasting from April 1, 1921, to June 27, which crippled transportation, reduced foreign trade, and virtually paralyzed the industrial life of the nation. The immediate cause of this stoppage of coal production was the announcement of the Government's decision that decontrol of the mining industry would become effective March 31, 1921, instead of on August 31, 1921, as originally provided under the law.

Before the war the miners' wages were admittedly too low, but under Government management substantial increases had been secured through the Sankey award of 1919 and the agreement of November, 1920, which brought wages in the mining industry up 163 per cent above prewar wages. Prior to 1914 miners' wages had been greater in some districts than in others, owing to differences in the operating conditions of the various mines. To average up these differences and thereby obtain the largest possible production during the war all the earnings of the industry had been pooled, and the miners were paid on a uniform scale throughout the country, the prosperous districts thus making up the deficits of the poorer ones. Decontrol meant a return to the unsatisfactory system of district wage scales.

Every effort was made to avert an actual stoppage of work. The miners referred the whole matter back to the district organizations to see if they were willing to temporarily abandon the policy of the national wages board and national profits pool and allow their representatives to proceed with negotiations on the district basis. Returns showed an overwhelming majority opposed to such a procedure.

On March 30 the representatives of both the miners and the owners admitted their inability to reach an agreement. Meantime each side had submitted a statement of its position to the Government. Notices were posted by the owners ending the miners' employment under the old contracts and new offers at the reduced rates were made. Orders directing the miners not to renew their contracts at rates lower than the existing wages went out to every mine and plant regardless of occupation, and on April 1 practically all of the miners, including a large number of engineers and pumpmen, did not report for work.

Following this breakdown in negotiations, the

triple alliance decided to support the miners by a strike on the night of April 15. Other trade-unions, especially the electrical workers, pledged sympathetic strikes. Intensive preparations were made by coöperative societies, relief committees, and the Government to meet the impending crisis. Meanwhile Mr. Hodges, the miners' spokesman, offered a possible solution of the deadlock. But the miners' federation refused to support their leader; whereupon the triple alliance at once called off its general strike. Mr. Hodges sent in his resignation, which was not accepted by the miners. It was reported that the motion to accept his suggested terms was lost by only one vote.

The lack of solidarity in the ranks of the triple alliance was admittedly a blow to the labor movement. The miners felt that they had been "disgracefully deserted"; but while they had given trade-unionists and the people generally the idea that they were combating impossible wage-reductions, and in this they had widespread public sympathy, they refused to discuss wages with the owners. As a result the belief became general that the miners' strike was being conducted for the political rather economic ends, so the triple alliance, which was ready to strike against the reduction of miners' wages, but was not willing to throw the nation into chaos for the miners' political demands, withdrew its support.

Many proposals for settlement were made and rejected before the men finally accepted terms substantially better than those offered in March. While no permanent subsidy has been granted the industry the Government renewed for a temporary period its grant of £10,000,000 (\$48,665,000 par) to assist the poorer districts. The district boards will be assisted in the adjustment of wages by a national board composed of an equal number of representatives of both sides having an independent chairman.

Though the miners were defeated upon the issue of the national wages pool, they obtained a profit-sharing system which, as the *Economist* (London) points out, is wide in its scope and more hopeful in its possible effects than any other yet devised for a great industry. Moreover, their loyalty, self-sacrifice, discipline, and law-abiding quietness "have commanded the sincere respect of all classes in the country."

As has been said the effects of the coal strike were terribly far-reaching. Many industries were forced to shorten their hours of labor and many others were forced to suspend operations altogether. This was especially true in the iron and steel and pottery trades, which depend upon a daily supply of coal. These plants closed in ever-increasing numbers. Conditions became so bad with the workers out of employment that in May 8000 meals a day were furnished children of the pottery employees at Stoke-on-Trent.

The production of pig iron in May, 1921, according to a statement of the National Federation of Iron and Steel Manufacturers, amounted to 13,600 tons as compared with 60,300 in April, 1921, and 739,000 in May, 1920. The production of steel ingots and castings amounted to 5600 tons in May, 1921, as compared with 70,600 in the previous month, and 846,000 a year ago. Great blast furnaces were damped down and some of them have been blown out permanently.

It was reported in Parliament on July 5 that the

cost of the Government measures taken with the coal stoppage, including the subsidy, was £18,-885,000 (\$91,757,858, par).

During the first weeks of the strike railway services were greatly curtailed, but there was a very considerable improvement in this respect during the latter part of the strike, owing to a freer movement of coal and the use of oil for fuel. A semiofficial statement says that the strike caused a deficit averaging £9,500,000 (\$46,231,750, par) monthly on the working railways still under Government control.

Manufacturers were not as a rule as seriously affected as the industries mentioned. Falling markets at the beginning of the strike led to an accumulation of stock. The manufacturers were thus able to get rid of surplus goods, and they managed to keep up the limited demand by working their plants on part time. Ordinarily they had greater stocks of coal on hand, and as their supply diminished they gradually reduced the hours of working time. The workmen in these cases naturally felt the pinch of the strike much more keenly than did the employers.

COTTON TEXTILE STRIKE. Another large strike, though not as severe in its effects, was that in the cotton textile industry, lasting from June 6, 1921, to June 24. According to the final terms a 70 per cent reduction on standard list rates—equal to 4s. 5d. (\$1.07) on the pound (\$4.87)—was agreed to.

As a consequence of the strike practically all the cotton mills were closed, 60,000,000 spindles and 800,000 power looms being idle. Through the excessive unemployment which has existed in the cotton trade for some time and the strike, 500,000 operatives were affected. The owners' position was more favorable, since the closing down of the industry gave them opportunity to dispose of surplus stocks and tided them over difficulties arising from the prolonged coal strike. For additional information, see **LABOR, ARBITRATION AND CONCILIATION; GREAT BRITAIN.**

STRONG, AUGUSTUS HOPKINS. Theologian and college president, died at Pasadena, Calif., November 29. From 1872 to 1912 he was president of the Rochester Theological Seminary and after that president emeritus. He was born, August 3, 1836, graduated at Yale, in 1857 and Rochester Theological Seminary in 1859. He then passed two years in Europe. On his return he was ordained to the Baptist ministry, and held pastorates at Haverhill, Mass., and Cleveland, Ohio. He became president and professor of systematic theology at Rochester Theological Seminary in 1872. In 1892-95 he was president of the American Baptist Missionary Union, and in 1905-10 president of the general convention of Baptists of North America. He wrote *Systematic Theology* (1886); *Philosophy and Religion* (1888); *The Great Poets and their Theology* (1897); *Christ in Creation and Ethical Monism* (1899); *American Poets and their Theology* (1917); *A Tour of the Missions* (1918); besides volumes of miscellany, and collections of lectures.

STYRIA. A crownland of Austria before the fall of the Austro-Hungarian empire, of which after the arrangements following the war the greater part was retained in the new republic of Austria. Area before the war, 8,662 square miles; population, Dec. 31, 1910, 1,441,157. Area and population according to the census of

Jan. 31, 1920, 6317 square miles and 957,509, respectively. According to the census of Dec. 31, 1910, 70.1 per cent spoke German; 29.37, Slovenian. Capital, Graz, with a population, Jan. 31, 1920, of 157,032.

SUBMARINE BOATS. See **BATTLESHIPS AND OTHER WAR VESSELS.**

SUBWAY SYSTEMS. See **RAPID TRANSIT.**

SUDAN, ANGLO-EGYPTIAN. An African territory under British authority, lying between Egypt and Uganda, and extending from the Red sea to the limits of Wadai in Central Africa. Capital, Khartum. Area, including subject territory, about 1,041,400 square miles; population, estimated in 1917 at 3,400,000. The chief towns are: Khartum (23,083); Omdurman (50,429); Khartum North (15,973). The region is the chief source of the world's supply of ivory and gum arabic, and in certain parts Egyptian cotton has been raised with success. Of late years the cattle trade has largely developed. In 1919 the imports were valued at £E4,805,745; and the exports £E2,740,759. Revenue and expenditure according to the budget estimates of 1920 balanced at £E3,500,000. Total length of the railways, about 1500 square miles, including the line from Cairo via Khartum to El Obeid; and the Nile and Red Sea Railway from Port Sudan to the mouth of the Atbara river. Governor-General and Sirdar at the beginning of 1921, Major-General Sir L. O. F. Stack.

SUGAR. The break in prices brought disaster to the sugar industry, with heavy losses and the passage of dividends to most of the leading sugar companies. Raw sugar went down to a low price that has not been reached in many years. The condition of the industry was especially serious in Cuba. The financial stringency and the unsettled conditions of that country which prevented proper cultivation and cleaning of fields made the ultimate size of the crop uncertain, as some of the mills were prevented from grinding. There was some agitation among Cuban growers for a decreased crop another year, by voluntary or governmental action.

In the United States the growing and harvesting season was unusually favorable. In Europe, although early prospects were quite bright for an increased production, dry weather interfered and the increase was reported as less than 10 per cent. The area planted in France was 20 per cent larger than in 1920, but the sugar production was estimated at 20,000 tons less than in 1920. Germany, the largest producer, showed a gain of about 175,000 tons, but Czecho-Slovakia, the second largest producer, showed a falling off of some 55,000 tons. The beet sugar production of Europe has reached only a little over half what it was before the war.

The world sugar crop of 1921-22 was estimated by Willett and Gray at 16,466,000 short tons, compared with the final figures for 1920-21 of 16,565,600 tons, a falling off of nearly 100,000 tons. Of the total crop as estimated, 11,503,500 tons was from cane and 4,962,500 tons from beets. In 1913 the world crop of sugar was about 18,600,000 tons, so that there is a shortage of some 2,000,000 tons compared with the prewar production.

The estimated production of cane sugar in the United States was 1,121,000 tons (including Louisiana and Texas, 241,000; Porto Rico, 395,000; Hawaii, 480,000, and Virgin Islands, 5000), and of

beet sugar, 900,000 tons. Other principal producers of cane sugar were: Cuba, 3,500,000; British West Indies, 145,500; French West Indies, 52,000; San Domingo, 250,000; Mexico, 110,000; Central America, 37,000; South America, 873,000; British India, 2,200,000; Java, 1,626,650; Formosa and Japan, 425,000. Philippine Islands, 276,000; Australia and Fiji Islands, 354,000; Africa, 525,000. The total beet sugar crop of Europe was placed at 4,039,500 tons. Canada showed a small decline.

The sugar consumption in the United States in 1921 amounted to 90 lbs. per capita, an increase of nearly 3 lbs. compared with 1920, and of more than that amount since 1912. It was 16 lbs. greater than in 1918, which year marked the low point of the war period. In France the duty on sugar was raised from 200 to 500 francs a ton, the consumer being required to pay (with the excise tax) a tax of 1000 francs a ton.

SUNDAY SCHOOL UNION, AMERICAN. A body organized in 1817 as the Sunday and Adult school Union with the object of establishing and maintaining Sunday schools and of publishing and circulating moral and religious publications. Seven years later the name was changed to the American Sunday School Union. It is a volunteer association composed of members of different denominations aimed chiefly at teaching Christian truths to the young. Its missionaries are sustained by the contributions of individuals, churches, and Sunday schools. For the year to March 1, 1921, statistics as given in the one hundred and fourth Annual Report, 971 schools were organized, 560 reorganized, 3042 schools aided, 181,316 visits made to families, 19,293 sermons and addresses delivered, 7990 persons brought into existing schools 5312 professed conversions, 234 prayer meetings established, 157 Young People's Societies formed, 179 preaching stations opened, 25 churches organized and 18 churches built. The value of books and periodicals sold was \$26,086.38 and of those given away, \$3387.23. The total number of books, booklets, maps, charts and other Sunday school requisites issued has been 164,550. Books given to Christian workers, theological students and others, number 578; distributions for use by soldiers and sailors, 19,457; and the combined circulation 11 different Sunday school periodicals, for officers, teachers, and scholars of all grades, 1,689,451.

Of the important features of the year may be mentioned the World's Sunday School Convention held in Tokyo, Japan, during October, where it was reported that the total enrollment in the Sunday schools of the world was 30,296,531, two-thirds of which are found in North America. The society issues regularly eleven different periodicals adapted to different grades of pupils and representing different phases of Sunday School work. The largest is the *Sunday School World*. Two books were issued: *Belligerent Peter*, by Dr. David De Forest Burrell, and *They Also Serve* by Miss Alice Forman Wyckoff. Educational work is conducted by means of Teacher Training classes; there were 636 students enrolled during the year, a considerable gain over the previous year. The society still has urgent need for men to carry on its missionary work in rural districts.

The officers for 1921 were: President, Martin

Luther Finckel; Recording Secretary, William H. Hirst; Treasurer, John E. Stevenson; and Educational Adviser, George A. Barton. National headquarters are maintained at 1816 Chestnut Street, Philadelphia, Pa.

SUPERPOWER SURVEY. See POWER.

SURGERY. There have been no startling innovations in civil surgical practice since the recent war, and years before the latter operative technique appeared to have nearly reached its peak. Study is and has been directed largely to minimising the risk of operative death by overcoming or preventing shock and the consequences of hemorrhage and the anesthetics. In many cases the elaborate techniques developed before the war had to be abandoned for simpler and more extemporaneous procedures, especially in surgery of the chest. A study of contemporary operative surgery will often show that the brilliant results are the work of comparatively few men, based on extraordinary experience and completeness of equipment and secondary personnel. True progress in surgery would mean that the obscure provincial surgeon is able to duplicate the success of the few of most repute. In rare instances he does, and much may depend on the personal equation and individual outlook. The most skillful and experienced operator who takes the widest operative chances may at first sight appear as a bungler beside the less expert who plays safe. Any surgeon who points to his low operative mortality is expected to state his per cent of operability. The lower the mortality as a rule, the lower the operability. If a surgeon operates on 75 per cent of all who appear before him and shows a mortality of 5 per cent following operations he will probably be of more value to his community than the surgeon who had no death during a given year but whose operability was less than 50 per cent. Naturally emergency operations are not included in statistics, or are deducted from the totals in calculating percentages. In the very best work we see both high operability and low death rate, although when a case is technically inoperable operation is refused outright or limited to a makeshift procedure which does not enter into statistics. But while operative surgery is a grand institution for the individual it is making little headway against the national mortality. This is shown by statistics, for 85,000 people died of malignant tumors in the United States in the year 1920 which was a considerable increase over 1919, more than could be explained by increase of population. The total number of deaths in 1920 for appendicitis should have been nearly 16,000, this figure also representing an increase. The other great causes of death are medical rather than surgical. The large figures of cancer and appendix deaths must not be charged up to defects in surgical technique, for in a very large number of the cancer cases the disease was either inoperable from the start or had become so from neglect, and in the case of appendicitis it often happens that the symptoms are vague and that the surgeon is called in only at the last moment, while many patients will not consent to operation. Nevertheless it is difficult to comprehend the failure of surgery to check the advancing mortality, which can only be explained by increasing incidence of these diseases or possibly in part through indirect antisurgical propaganda on the part of cults and isms of various kinds. The public is certainly not becoming more fatalistic or skeptical.

SURVEYING. See AERONAUTICS.

SWARTHMORE COLLEGE. A non-sectarian co-educational institution at Swarthmore, Pa.; founded in 1869. The enrollment for the fall session of 1921 was 510. There were 44 members in the faculty. The productive funds amounted to \$3,000,000. The library contained 40,000 volumes. The athletic field and fence were completed. President, Frank Aydelotte.

SWAZILAND. A British protectorate in South Africa, situated in the southeast corner of the Transvaal, and north of Zululand; formerly under the administration of the South African Republic, but latterly directly controlled by the British government. Area, 6678 square miles; population, estimated in 1914 at 107,117; European population, estimated in 1920 at about 1800. The seat of the government is at Moabane. The chief products are: Corn, tobacco, millet, peanuts, and vegetables. Cotton-growing has been attempted. Rich mineral resources are reported, but have not been developed with the exception of tin. The protectorate is under the high commissioner of South Africa and a resident commissioner. Resident commissioner at the beginning of 1921, D. Honey.

SWEDEN. A kingdom in the extreme north-western part of Europe occupying the eastern and larger part of the Scandinavian peninsula. Capital, Stockholm.

AREA AND POPULATION. Area, 173,035 square miles; population, Dec. 31, 1910, 5,522,403; Dec. 31, 1919, 5,847,037. The population is wholly Swedish with the exception (census of 1910) of 25,290 Finns, 7138 Lapps, and a few thousand others. The movement of population in 1919 was as follows: Births, 114,505; deaths, 84,247; marriages, 40,327. The immigrants in that year numbered 7809; the emigrants, 7337, of whom 3777 came to the United States. The chief towns with their population at the beginning of 1920 were: Stockholm, 415,201; Göteborg, 200,577; Malmö, 111,931.

AGRICULTURE. The number of farms under cultivation in 1919 was 423,758, of which 120,788 were of two hectares or less; 270,511 of 2 to 20 hectares; and 34,883 above 100 hectares.

The crops for 1920 and the estimates for 1921 were as follows:

Crop	1921,	1920,
	metric tons	metric tons
Wheat.....	342,000	287,000
Rye.....	724,000	588,000
Barley.....	257,000	240,000
Oats.....	981,000	1,025,000
Manoom.....	440,000	449,000
Potatoes.....	1,698,000	1,678,000
Sugar beets.....	1,437,000	1,039,000
Hay.....	4,153,000	5,307,000

The large wheat crop harvested caused much agitation for higher tariff protection against the importation of foreign flour, as it was claimed that in spite of the price difference of approximately 15 crowns per 100 kilos in favor of domestic flour, Swedish bakers continued to favor the American product, claiming that it is of superior quality.

ECONOMIC CONDITIONS. There was only a slow approach to normal conditions during 1921, Swe-

den suffering the same depression that prevailed in the other Scandinavian countries. Nevertheless, there was a steady improvement in the trade balance, a rapid decrease of prices, a stable exchange market and an improvement of the financial situation. The exchange value of the Swedish crown did not suffer the violent fluctuations that prevailed in the other Scandinavian countries. It remained fairly steady around 23 to 26 cents to the crown (par, 28.8). The industrial depression which continued down to the close of the year showed itself especially in the increasing number of unemployed who, according to an estimate at the end of the year, numbered more than 150,000. Wage agreements affecting about 300,000 workers were to expire Jan. 1, 1922, and at a conference between workmen and employers on December 15, the latter demanded a radical cut in wages ranging from 25 to 45 per cent of the existing scale while the workmen opposed an increase until the retail price index should become lower. At the close of the year most of the important Swedish industries were running only on half or part time. On Feb. 15, 1921, 22 factories had closed down. The number steadily increased during the year and by October 1, 68 had closed. Severe curtailment of output occurred in the engineering industry, shipbuilding and electrical industries, and the production of steel and iron was low, and the number of unemployed in the autumn was the largest as yet reached, being from 70,000 to 80,000. Soviet agents were buying grain in large quantities throughout the country in spite of the efforts of the authorities to cut down this trade. The trial of Bolshevik conspirators was going on at Stockholm in the autumn.

At the close of the year there seemed prospect of a better business condition, owing to the improved exchange situation as indicated by the approach of Swedish money almost to par with the American dollar. It seemed probable that foreign trade would revive and especially trade with the United States. In December the government continued the dispensation of the Imperial Bank from redeeming bank notes until March 31, 1922. At that time the Soviet gold in Sweden was placed at 500,000,000 to 600,000,000 kroners of which the Swedish mint had melted down an amount valued at \$31,200,000. As to trade with Russia and the Baltic states, it was still inactive at the close of the year and the negotiations for renewed commerce with the Soviet government were proceeding slowly.

COMMERCE. Estimates of foreign trade in round numbers for 1920 were as follows: Imports, \$903,960,000; exports, \$679,110,000. The following table shows the leading imports for 1919:

	Imports 1919, kroner	Exports 1919, kroner
Textile manufactures.....	331,147,000	16,982,000
Corn and flour.....	112,757,000	5,931,000
Colonial wares.....	175,133,000	1,503,000
Raw textile material and yarn.....	195,205,000	3,340,000
Minerals, of imports mostly coal.....	384,954,000	65,363,000
Metal goods, machinery, &c.....	234,363,000	288,846,000
Live animals and animal food.....	281,617,000	44,232,000
Hair, hides, and other animal products.....	131,870,000	22,376,000
Metals, raw and partly wrought.....	104,568,000	140,703,000
Timber, wrought and unwrought.....	23,122,000	443,570,000
Wood pulp, paper, and paper manufactures.....	13,949,000	388,019,000
Other articles.....	545,285,000	155,234,000
Total.....	2,533,968,000	1,575,697,000

FINANCE. The budget for 1921 totaled 1,000,300,000 kroner, an increase of 225,000,000 over the preceding year. It showed a deficit of about 272,000,000 crowns, covered in part by loans and in part by the use of capital assets. At the close of the year the details of the budget for 1922 were not worked out but it was reported as balancing at 902,000,000 crowns. The national debt which in 1913 amounted to 648,000,000 crowns increased during the year and in 1920 stood at 1,557,000,000 crowns. It had been reduced by Oct. 1, 1921, to 1,427,000,000 crowns of which 1,367,000,000 crowns were funded and the rest floating debt.

SHIPPING. At the end of 1921 the Swedish merchant marine had a total tonnage of 1,090,000 as compared with 1,100,000, Jan. 1, 1921.

RAILWAYS. The mileage open for traffic in 1921 was about 9500. The railway situation in Sweden in 1921 in large measure paralleled that in other European countries. The state railway system of Sweden in 1921 included about 3425 miles of line, which was about one-half of the standard gauge mileage and about 38 per cent of the total mileage. In 1921 expenses had increased and also rates, so that freight rates were from 100 per cent to 250 per cent higher than the 1913 rates, though they were reduced lower than those in force in 1920 by about 50 to 100 per cent of the prewar rates. These reductions with the decrease of materials would, it was thought, meet expenses in 1922.

GOVERNMENT. Executive power is vested in the king, who acts with the advice of the council of state, a responsible ministry. Legislative power is in a diet or parliament of two chambers of which the lower is elected by universal (male and female) suffrage. Members of the lower house were distributed among the party groups at the beginning of 1921 as follows: Socialists, 75; Moderates, 90; Liberals, 47; Agrarian parties, 29; Socialist Left, 7; of no party, 2. Upper house: Socialists, 49; Liberals, 41; Moderates, 37; Agrarian parties, 19; Socialist Left, 4. The Ministry as constituted, February 23, was as follows: Minister of State (Premier), Oskar F. von Sydow; Foreign Affairs, Count H. Wrangel; Justice, B. Ekeberg; Defense, General C. G. W. Hammarstiöld; Social Affairs, H. Elmquist; Communications, Walter Murray; Commerce, G. Malm; Finance, K. J. Beskow; Education and Ecclesiastical Affairs, B. Bergqvist; Agriculture, N. Hansson; without Portfolio, K. Dahlberg and M. Ericsson.

HISTORY

CABINET CHANGES. The policy of the government was laid down at the opening of the parliament in the middle of January. It included: Adherence to the League of Nations; the necessity of maintaining the country's means of defense; strict economy both in public and in private finances in order to meet the financial crisis; social reform; labor legislation; and tariff revision. The de Geer ministry, having lost the support of parliament, resigned in February and a new cabinet was formed under M. von Sydow who retained all of the old ministry with the exception of the minister of finance who was replaced by M. Beskow. Later, however, the minister of defense resigned office in May after parliament had refused his proposal of 225 days of military service and had fixed the period at 165 days. There was much complaint in Sweden at the

decision of the special commission appointed by the League of Nations which turned over the Åland Islands (see below) to Finland. The elections for Parliament gave the Social Democratic party a large plurality, political opinion having gravitated toward the Left after the danger from the extremists appeared to be removed. The result of this change was the overthrow early in October of the ministry under Oscar von Sydow, and the appointment as prime minister for the second time, of Hjalmar Branting. The new ministry was constituted as follows: Premier and Foreign Minister, Hjalmar Branting; Justice, A. Ackerman; Defense, Per Albin Hansson; Finance, Fredrik Thorsson; Interior, Herman Lindquist; Commerce, A. Orne; Public Works, C. E. Svensson; Culture, Olof Sjöström; Agriculture, S. Linders. Of the above members M. M. Hansson, Thorsson, and Svensson had held respectively the portfolios of Justice, Finance, and the Interior in the former Branting cabinet; and M. Lindquist had been Speaker of the Lower House of Parliament and served in 1919 as a delegate to the International Labor Congress at Washington. The coming into power of a Socialist ministry was taken by some as one of the causes of depression in business. According to the reports in the press, Swedish shipowners had latterly turned over to Germany vessels amounting to 55,000 tons and Germany had applied for the transfer of 30,000 tons more of Swedish shipping.

THE ÅLAND ISLANDS. As noted in the article, **WAR OF THE NATIONS**, the Åland Islands were placed on a neutral basis according to the decision of the League of Nations at Geneva, Oct. 22, signed by ten Powers. On Nov. 17 the Swedish foreign minister, Hjalmar Branting, received a note from the Russian foreign minister declaring that the Åland question could not be settled without consulting Russia, and that Sweden's signature of the agreement was a hostile act and in violation of the agreements between Sweden and the Soviet government. See **NAVAL PROGRESS**.

SWEDENBORGIANS. See **NEW JERUSALEM**, **CHURCH OF**.

SWEDISH LANGUAGE. See **PHILOLOGY**.

SWEDISH LITERATURE. See **SCANDINAVIAN LITERATURE**.

SWIMMING. This branch of sport scored an amazing success in 1921, particularly in the United States, where a veritable host of competitions was held. New records were a common occurrence, representatives of both sexes sharing in their establishment. Among the men the leaders were John Weissmuller and Norman Ross of the Illinois A. C., Warren and Pua Kealoha of Honolulu and Stephen Ruddy of the New York A. C. Weissmuller, a youth of seventeen, numbered among his achievements: 100 yards, free style, in a 60-foot pool (52 3-5 seconds); 150 yards, free style, in a 75-foot pool (1 minute 27 2-5 seconds). Pua Kealoha equaled the world's mark of 53 seconds for the 100 yards straightaway in open water. Ross swam 440 yards in 5 minutes, 3 4-5 seconds and one mile in 22 minutes, 38 1-5 seconds, performing both feats in a 60-foot pool. Ruddy lowered the breast stroke record for 220 yards to 3 minutes. Warren Kealoha reduced back stroke figures for the 100 and 150 yards respectively to 1 minute, 6 seconds and 1 minute, 47 2-5 seconds.

The women stars of the year were Miss Ethelda

Bleibtrey, Mrs. Charlotte Boyle Clune, Miss Sibyl Bauer, and Miss Gertrude Ederle, the latter a fourteen-year old girl. Miss Bleibtrey swam 100 yards in 1 minute, 3 2-5 seconds, Mrs. Clune covered 220 yards in 2 minutes 47 2-5 seconds, and Miss Bauer set new world's records for the 100 and 150 yards, back stroke, of 1 minute, 16 seconds and 2 minutes, 6 4-5 seconds, respectively.

The senior outdoor championships of the Amateur Athletic Union were held at various cities during the year. The winners in the principal events were: 100 yards, Pua Kealoha; 220 yards, John Weissmuller; 440 yards, Ludy Langer; 880 yards, Ludy Langer; high diving, Clarence Pinkston. The women's outdoor championships resulted as follows: 50, 100, 440 and 880 yards, Miss Ethelda Bleibtrey; one mile, Miss Thelma Darby; high and fancy diving, Miss Helen Meany; long distance swimming, Miss Ethelda Bleibtrey.

The winners in the senior indoor championships were: 100, 220, and 500 yards, Norman Ross, fancy diving, Clarence Pinkston. The Illinois A. C. won the 400-yard relay event and also triumphed in the water polo tournament.

Yale University won the intercollegiate championship, while Princeton University was supreme at water polo, making a clean sweep of its eight matches. Northwestern University captured the Western Conference title, but the honors at water polo went to the University of Illinois.

Henry Sullivan of Lowell, Mass., failed in four attempts to swim the English Channel.

SWINE. See LIVE STOCK.

SWINE ERYSIPELAS. See VETERINARY MEDICINE.

SWITZERLAND. A federal republic of Central Europe, comprising within its limits the highest of the Alps and the Jura mountains; divided into twenty-two cantons of which three are in turn divided into demi-cantons each. The capital is Berne.

AREA AND POPULATION. The total area is 15,976 square miles; total population, Dec. 1, 1920, 3,861,508. The following table shows area and population by cantons at the censuses of Dec. 1, 1910, and Dec. 1, 1920:

Canton	Area, sq. mi.	Population	
		Dec. 1, 1910	Dec. 1, 1920
Zurich.....	668	503,915	535,634
Berne.....	2,657	645,877	669,966
Lucerne.....	579	167,223	176,189

Thurgau.....	381	134,917	135,153
Ticino (Tessin).....	1,088	156,166	153,457
Vaud.....	1,244	317,457	315,326
Valais (Wallis) (1815).....	2,027	128,381	128,274
Neuchâtel.....	312	133,061	130,671
Geneva.....	108	154,906	170,332
Total.....	15,976	3,753,293	3,861,508

The populations of the principalities at the census of Dec. 1, 1920, were as follows: Zurich,

206,120; Basel, 135,385; Berne, 103,986; Saint Gall, 69,733; Lausanne, 67,858; Geneva, 55,738; Lucerne, 43,696.

Protestants, according to the census of Dec. 1, 1920, numbered 2,218,589 and Roman Catholics, 1,586,826.

In 1918 primary schools numbered 4229 with 13,371 teachers and 555,353 pupils. There are seven universities with faculties of law, medicine, philosophy and science, and theology; totals of students and teaching staffs, respectively, in 1918 as follows: Zurich, teaching staff, 163, and students, 1825; Berne, 162 and 1787; Geneva, 155 and 1086; Basel, 130 and 1070; Lausanne, 108 and 999; Fribourg, 72 and 535; Neuchâtel, 67 and 199.

ECONOMIC CONDITIONS. In the late summer a serious condition of unemployment was reported along with a heavy falling off of exports and production. The remedies applied by the Federal Council were of no avail. These consisted in limitation of the imports and a new customs tariff, but they both seemed to aggravate rather than reduce the difficulties. It was proposed that a bonus on exports should be granted by a special national bank issue so contrived as not to run the risk of inflation. Serious unemployment developed during the year and the number of men out of work was placed in the autumn at 135,000. There was a long period of depression in the watch-making industry and 32,000 watch-makers were completely or partially employed. Among measures affecting business under consideration in the autumn was a proposal to change the constitution by a clause permitting factory owners and railway companies to request employees to work 54 hours a week, the new 8-hour working day having greatly deranged conditions in the railroads and factories; also a proposal to abolish the federal war profits tax.

COMMERCE. The total imports in 1920 were \$712,777,052 and the total exports, \$550,553,435.

FINANCE. Budget estimates for 1922 were: Revenue, 422,170,000 francs; expenditure, 522,070,000; deficit, 99,999,000 francs, an improvement of the budget for 1921 which showed: Revenue, 384,582,000 francs; expenditure, 517,847,000; deficit, 133,265,000 francs.

RAILWAYS. In 1921 in Switzerland, as elsewhere in Europe, the railways were experiencing difficult conditions, the majority of which were economic and due to circumstances following the war. On account of the high rate of exchange for Swiss money, neighboring countries were boycotting the Swiss routes for through traffic to escape paying the premiums required. The tourist business in Switzerland for various and obvious reasons had decreased materially, though hopes were entertained of its improvement. Unlike other European countries, however, Switzerland had not fallen behind in her maintenance of roadbed and equipment and these were in excellent condition, while the far-sighted policy of electrification previously adopted was being advanced as rapidly as possible.

GOVERNMENT. Executive and legislative are vested in a parliament of two chambers, namely, the state council and the national council, the former of 44 members, two chosen from each canton, and the latter of 189 representatives elected directly by the people. Executive authority is delegated by a federal council of seven members elected for three years by the federal assembly, that is, by both houses of parliament

united, which also elects the president of the confederation. President of the Confederation in 1921, Edmund Schultheiss; vice-president of the federal council, Dr. Robert Haab.

HISTORY. In the summer an accord was reached between France and Switzerland in the matter of the zones, which had caused some misunderstanding on both sides of the frontier. On May 12 the Swiss minister in France in recalling the age-long friendship between the two Powers, expressed his satisfaction and that of his country at being able to unite French families which had been broken up as a result of the system of internment in Switzerland. Within three years the right to visit about 6440 interned persons in Switzerland had been accorded to the French families. As to the manner in which the French soldiers interned in Switzerland had conducted themselves, the Swiss minister declared that his countrymen had learned to esteem them and sympathize with them.

THE PRESIDENT. At the close of the year the Swiss Federal Assembly, by a vote of 154 to 163, elected M. Robert Haab President of the Confederation to succeed M. Motta, who retained charge of the political department.

SYRACUSE, N. Y. See **GARBAGE AND REFUSE DISPOSAL.**

SYRACUSE UNIVERSITY. A non-sectarian co-educational institution of the higher learning at Syracuse, N. Y.; founded in 1870. The enrollment for the fall of 1921 was as follows: Liberal Arts College, 1379; Engineering, 333; Law, 205; Medicine, 186; Graduate School (estimated), 215; Agriculture, 104; Business Administration, 1063; Fine Arts, 726; Teachers College, 141; Forestry, 341; Public and Dramatic Art (estimated) 107; Library Economy, 44; Home Economics, 230; Nursing, 74; total, not including duplicates, 4723; for the summer session, 460; Extension students, 734; grand total, 5917. There were 450 members in the faculty including 14 additions since last year. The library contained 110,832 volumes and 43,000 pamphlets. President, James R. Day, D.C.L., LL.D.

SYRIA. A former province of the Turkish empire in Asia Minor comprising the region between the Euphrates river and the Syrian desert on the east, and the Mediterranean sea on the west, and extending from the Alma Dagh Mountains on the south to Egypt on the south; recognized in 1920 as an independent state under a mandatory power, the mandate being bestowed on France at the Supreme Council of the Allied Powers at San Remo, April 25, 1920. Area of territory under the French mandate estimated at about 60,000 square miles with a population of about 3,000,000, who are mainly Sunnite Mohammedans. The region was divided under the French into four governments as follows: Government of Aleppo from the Euphrates region to the Mediterranean; Great Lebanon extending from Tripoli to Palestine; Damascus, including Damascus, Hama, Hems, and the Hauran; and the country of Mount Arisarieh. Chief cities with estimates of population: Damascus, 250,000; Aleppo, 250,000; Beirut, 180,000; Hems, Hama, and Aintat, each between 60,000 and 80,000.

PRODUCTION. The chief occupation is agriculture, but resources have not been fully developed. Industry is restricted by the lack of raw materials as well as by the inclination of the inhabitants to

commerce. Latterly there has been a considerable development of the weaving industry.

COMMERCE. Previous to the war, exports averaged 60,000,000 francs and imports, 124,000,000 francs. After the war exports declined owing to the lack of labor and modern machinery in agriculture. The chief exports are: Wool, hides, cereals, native art wares, vegetable oils, fruits, nuts, wines, tobacco, and licorice. Figures for total imports were not available. The average annual imports of cotton goods before the war were valued at 45,000,000 francs; of woolen goods, 12,000,000 francs; silks and velvets, 25,000,000 francs; iron and steel for construction, 7,500,000 francs; canned goods and wines, 8,000,000 francs; chemicals and dye products, 5,000,000 francs.

HISTORY

THE ORGANIZATION UNDER THE FRENCH MANDATE. In January the French Prime Minister M. Leygues declared before the French Chamber the intention of France to retain permanently all of Syria. French policy in Syria, as set forth by the government, looked to the admission of the native population into the administration to the greatest possible degree and a corresponding limitation of French activity. Complaint was made, however, that the number of French officials in Syria was excessive. This was in part explained by the difficulty of setting up machinery of government. The fundamental principle of the Syrian state was self-government on the part of the different regions that composed it, namely, the Libanus, the territory of Alaouites, and of the Druses and the states of Aleppo and Damascus, each of which had to have an independent constitution subject to some kind of federal control. Each state was to preserve its traditional liberties and elect its own executive and legislature. Owing to the separatist tendencies of the population there was much difficulty in setting up a federal government. Many plans were proposed ranging from a pure confederation of the Syrian states to a sort of dual government which divided the Syrian populations from those of the Libanus. The general tendency, however, was toward a system based on agreements among the states through the intervention of France, having to do mainly with matters of legislation, customs, and finance. As soon as these questions were settled it was planned to set up at Beirut a sort of permanent diet, consisting of a small number of delegates elected from each state, which would have control over the general interests of the country. The tendency in short was toward the least possible centralization.

CILICIA. According to press dispatches, December 2, an agreement was reached between the Angora government and the Franklin-Bouillon Mission in respect to the necessary guarantees for the Christian population of Cilicia. These included the abrogation of the law levying 40 per cent on the property of the inhabitants during the campaign of Sakaria; the postponement of military conscriptions; the creation of a mixed Franco-Turkish commission, including representatives from the communes of Cilicia to safeguard property; complete liberty of person and property; immediate and complete amnesty.

T

TAGLIAPIETRA, GIOVANNI. Italian baritone, died in New York, April 11. He was born in Venice about 1850. After his debut at Florence he sang in Paris and London, and in the eighties was a prime favorite with the New York public. His first wife was the famous pianist Teresa Carreño.

TAHITI. See OCEANIA, FRENCH ESTABLISHMENTS IN.

TAIWAN. Official name of FORMOSA (q. v.).

TALAAT PASHA. See NECROLOGY and TURKEY.

TALC AND SOAPSTONE. The United States is by far the greatest producer of talc and soapstone, and it consumes even more than it produces. In 1919 it produced 68 per cent of the world's supply and consumed 79 per cent. The production of talc and soapstone in 1920 exceeded that in any previous year both in quantity and in value, according to the United States Geological Survey. The sales in 1920 amounted to 224,290 short tons, valued at \$3,090,265, an increase in 1920 over 1919 of 21 per cent in quantity and 31 per cent in value. The quantity exceeded by 2 per cent that of 1917, the previous record-quantity year, and the value exceeded by 15 per cent that of 1918, the previous record-value year. The quantity of talc reported to the Geological Survey as ground was 178,505 tons, valued at \$2,142,894, or 18 per cent more than in 1919. The value of the ground talc was the highest on record, exceeding that for 1919 by 34 per cent and that for 1918, the previous record-value year, by 15 per cent. The average price of ground talc in 1920 was the highest on record, namely, \$12 per short ton, which may be compared with \$10.55 in 1918 and 1919 and \$8.42 in the prewar year 1913. The manufactured soapstone sold amounted to 19,707 tons, valued at \$709,400, not the highest annual output recorded, but the highest annual value. Vermont led the other States in production, with 86,489 short tons, or 39 per cent of the total quantity, valued at \$816,794. New York led in the value of talc produced, but was second in quantity, with 30 per cent of the total, 68,168 tons, valued at \$977,228.

TANGANYIKA TERRITORY. A colony under British occupation, formerly GERMAN EAST AFRICA. Evacuation of the German forces was complete by the beginning of 1919 when the whole colony passed under British and Belgian administration. It was one of the mandate territories under the League of Nations and was divided into British and Belgian spheres, the Belgian sphere including the provinces of Ruanda and Urundi on the borders of Lake Tanganyika with headquarters at Kigali. The headquarters of the British sphere is at Dar-es Salaam. According to the decree of July 22, 1920, the head of the local government was to be a governor aided by an executive council of nominated members. Area, estimated at 384,180 square miles, with a coast line of about 620 miles; population, Jan. 1, 1913,

about 3,500,000, chiefly of mixed Bantu stock. The country is extremely fertile and affords possibilities of extensive production of raw materials, but labor is limited. Its natural products include: Corn, cotton, hides and skins, oil nut, sisal, copper, coffee, etc.; and those which enter into the export trade are: Sisal, cotton, hides and skins, copper, coffee, and nuts. The minerals include copper, lead, silver, mercury, graphite, and asbestos. The forests contain an abundance of valuable wood, including cedar, mahogany, and teak. Commerce for the year ending May 31, 1920, was as follows: Exports, 19,940,156 rupees; imports, 17,376,405 rupees. A large proportion of the trade is with Zanzibar. The chief items among the imports are: Cotton piece goods, rice, tobacco products, wines, and liquors. The link in the Cape-to-Cairo railroad was completed as far as Salisbury, Rhodesia, whence a branch runs to Beira. On the south it had reached as far as Sennar on the Blue Nile. In 1921 work was begun on the bridge across the Zambesia river at Chinde, which was to open trade with Tanganyika Territory, and Lake Nyassa. Governor and commander-in-chief at the beginning of 1921, Sir H. A. Byatt.

TARIFF. See UNITED STATES and AGRICULTURAL LEGISLATION.

TASMANIA. A state in the Commonwealth of Australia, consisting of the island of Tasmania and several small islands. Area including the island of Macquarie 26,216 square miles; estimated population, June 30, 1920, 216,643, as compared with 191,211 in 1911. Capital, Hobart, with a population, including suburbs, estimated in June, 1920, at 50,000. The production of the principal crops in bushels in 1919-20 was: Oats, 1,242,258; peas, 300,545; wheat, 213,589. The fruit industry is considerable, the production in that year being 2,866,813 bushels. Live stock in 1920 were as follows: Sheep, 1,781,425; cattle, 214,442; horses, 39,452; pigs, 35,530. No later figures for imports and exports were available than those given in the preceding YEAR BOOK for 1918-19, when they were, respectively, £608,786 and £1,002,093. The budget for 1919-20 was: Revenue, £1,815,031; expenditure, £1,828,301. The railway mileage, June 30, 1919, was about 747 of which 601 were state-owned. The executive power is in a governor or administrator, appointed by the Crown; and the legislative power, in a legislative council and a house of assembly, elected for six years and three years, respectively. Governor at the beginning of 1921, Sir W. L. Allardye; Prime Minister, Sir W. H. Lee. See AUSTRALIA.

TAUSSIG, EDWARD DAVID. Naval officer, died at Newport, R. I., January 29. He was born at St. Louis, Mo., Nov. 20, 1847; graduated at the United States Military Academy in 1867; and had risen through the successive grades to the rank of rear-admiral, May 15, 1908. He distinguished himself in his early career for services during the earthquake at Arica under Commander Gillis. He was in command of the *Bennington* during the

Spanish-American war and took possession of Wake Island. He also assumed control over the island of Guam, Feb. 1, 1899. He served afterwards in the Philippines and in North China. He was subsequently in command of the navy yards at Washington, Boston, Pensacola, New York, and finally at Norfolk (1907). He also served as commanding officer on the *Enterprise*, the *Independence*, and the *Indiana*. He retired, Nov. 20, 1909.

TAYLOR, BERT LESTON. Author, died, March 19. He was best known for his column in the *Chicago Daily Tribune*, entitled, "A Line O' Type or Two." He was born at Goshen, Mass., Nov. 13, 1866; and educated at the College of the City of New York. The newspaper feature above mentioned was widely quoted during many years and its success inspired a host of imitators and led to the adoption of similar features in the pages of many leading newspapers throughout the country. He published the following volumes: *The Well in the Wood* (1904); *The Charlattans* (1906); *A Line O' Verse or Two* (1911); *The Pipesmoke Carry* (1912); *Molley Measures* (1913), etc.

TAYLOR, CHARLES HENRY. Journalist, died at Boston, Mass., June 22. He was owner of the *Boston Globe*. He was born at Boston, Mass., July 14, 1846; and educated in the public schools. He became a printer and reporter on the *Boston Traveler*. He was a member of the Massachusetts house of representatives in 1872 and clerk of the house in 1873. He had meanwhile served in the Civil War in a Massachusetts regiment and was wounded at Fort Hudson, La., June 13, 1863. After 1873 he was editor and manager of the *Boston Globe*.

TAYLOR, (FRANK) WALTER. Artist, died in 1921. He was born at Philadelphia, Pa., March 8, 1874; studied art in Paris; and established a studio in Philadelphia in 1898. He received the medal of honor at the Panama Exposition of 1915. Besides illustrating various books he was the author of many short stories in the leading magazines.

TAYLOR, SAMUEL MITCHELL. Former Congressman, died at Washington, D. C., September 13. He was born in Itawamba County, Miss., May 25, 1852; and after a common school education and study of the law, began practice at Tupelo, Miss., in 1876. He was elected to the Mississippi house of representatives in 1879, but removed to Arkansas in 1887 and was prosecuting attorney there for the eleventh judicial district of Arkansas from 1889 to 1895. He was a member of Congress from Arkansas from 1913 to 1921.

TEACHERS. See EDUCATION.

TELEPHONY. The year was marked by gratifying improvement in telephone service. The demoralization of the operating personnel, that had been so marked for two years following the war, was superseded by prompt, efficient service and greater facility in obtaining station instruments desired by new subscribers. Business and industrial depression had but little effect on the amount of activity demanded of the telephone companies. In fact, the slack period of business gave these companies an opportunity to make certain extensions and improvements which, when completed, will put them in excellent condition to handle the inevitably increased volume of traffic that will come in the near future. Lines were extended, new central offices built and

equipped and the manufacture of new apparatus actively carried on.

As illustrating the importance of the telephone in our national life, certain statistics given in the latest report of the American Telephone and Telegraph Company (Bell system) are of interest. On Dec. 31, 1921, there were 13,380,000 owned and operated stations in the Bell system; nearly two-thirds of all the telephones in the world; and during the year 1921, 778,284 telephones were added to the system. To show further the significance of these figures, the report states that in the year 1900, there was one Bell Telephone station to every 90 persons in the United States; while in 1921, there was one to every 8 persons. It must be noted, too, that during this period, the population of the United States increased 45 per cent and general volume of business increased 100 per cent; but the number of telephones in use increased 900 per cent. In actual figures, from 1,350,000 to almost 14,000,000.

In 1921, the Bell System had an operating revenue amounting to \$497,088,233, which was greater than that for 1920 by \$47,646,118. Total operating expenses were \$363,687,283, an increase of \$17,867,666 over that item in 1920. There was a large increase in the number of stockholders of the American Telephone and Telegraph Company during the year, the total as of Dec. 31, 1921, being 186,342, an increase of 46,894 over the previous year. It is significant, also, that there were more women shareholders than men and that 25,700 employees of the Bell System were owners of stock.

The engineering departments of the various radio companies were working in close coöperation with the telephone companies, to their common advantage. As mentioned in the 1920 YEAR BOOK (see WIRELESS TELEGRAPHY and TELEPHONY), radio conversations had been carried on between shore stations and Santa Catalina Island, thirty miles off the California Coast. Upon the completion of the submarine cable between Havana, Cuba, and Key West, Fla., it became possible to converse successfully over the land lines from Florida to California and thence by radio to Catalina: a total distance of 5500 miles. A notable achievement, particularly when it is realized that each form of speech transmission, through submarine cable, then over a wire circuit and then by radio through space, involves peculiar, characteristic difficulties; yet the persons speaking may not be aware that they are conversing in any other than the usual manner over a short wire circuit. Three cables were laid between Cuba and Florida and constitute the longest deep-sea telephone cables in the world. Each cable can transmit simultaneously one telephone conversation and eight telegraph messages. In addition to the great facility of communication provided by them, the element of secrecy, as contrasted with radio between two countries has a certain strategic value.

The installation of "machine switching," in place of manually operated boards in central exchanges proceeded satisfactorily in a number of cities. It was realized, however, that its growth must be gradual, not only on account of the unfamiliarity of the public with "dial" instruments, but also because the machines themselves are so delicately constructed and of such complication that a specially trained force of main-

tainers are required. The Company maintained a training school for men whom it was fitting for such positions and was thus insuring the mechanical success of the new system.

TELMANYI, EMIL. See *MUSIC, Artists, Instrumentalists.*

TEMPLE UNIVERSITY. A co-educational institution of higher learning supported by the State at Philadelphia, Pa.; founded in 1884. The enrollment for the fall of 1921 was as follows: College of Liberal Arts and Sciences, 530; Teachers College, 1514; School of Theology, 42; School of Law, 233; School of Medicine, 87; School of Dentistry, 341; School of Pharmacy, 293; Schools of Chiropody, 65; School of Commerce, 1831; School of Music, 199; University High School, 616; Vocational Students, 841; Training School for Nurses, 46; total, 6638. For the summer session of 1921 the enrollment was as follows: College of Liberal Arts and Sciences, 42; Teachers College, 105; School of Commerce, 108; School of Music, 218; University High School, 155; total, 628. There were 386 members in the faculty including 9 additions. The library contained 17,735 volumes. President, Russell H. Conwell, D.D., LL.D.

TENNESSEE. POPULATION. According to the report of the census of 1920, there were 2,337,885 residents in the State, Jan. 1, 1920, as compared with 2,184,789.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn	1921	3,516,000	90,713,000	\$47,171,000
	1920	3,511,000	98,308,000	85,528,000
Oats	1921	260,000	5,330,000	2,558,000
	1920	250,000	4,950,000	3,816,000
Wheat	1921	450,000	4,500,000	5,400,000
	1920	424,000	4,028,000	7,855,000
Tobacco	1921	105,000	178,750,000	15,750,000
	1920	130,000	194,900,000	18,980,000
Hay	1921	1,379,000	11,588,000	24,351,000
	1920	1,406,000	11,794,000	36,644,000
Potatoes	1921	35,000	1,820,000	3,003,000
	1920	35,000	2,905,000	4,648,000
Swt. potatoes	1921	44,000	4,400,000	4,180,000
	1920	42,000	4,284,000	5,268,000
Sor. syrup	1921	42,000	4,032,000	2,376,000
	1920	47,000	4,230,000	4,272,000
Cotton	1921	707,000	340,000	27,200,000
	1920	840,000	325,000	21,131,000

¹ Pounds. ² Tons. ³ Gallons. ⁴ Bales.

CHARITIES AND CORRECTIONS. The State institutions include: Tennessee Girls' Vocational School, Tullahoma; Eastern Hospital for the Insane, Knoxville; Central Hospital for the Insane, Nashville; Western Hospital for the Insane, Bolivar; Home for Confederate Veterans, Nashville; Main Prison, Nashville; Brushy Mountain Prison, Petros. The State was building the Tennessee Home and Training School for Feeble-Minded Persons, Nashville, as provided by act of the legislature in 1919, and provision was made for a Vocational School for Colored Girls.

OFFICERS. Governor, H. A. Taylor; Secretary of State, Ernest N. Haston; Treasurer, Hill McAllister; Controller, John B. Thomason; Adjutant-General, Phillip I. Brumit; Superintendent of Public Instruction, John B. Brown; Attorney-General, Frank M. Thompson.

JUDICIARY. Supreme Court: Chief Justice, D. L. Lansden; Associate Justices; Grafton

Green, Frank P. Hall, Collin P. McKinney, N. L. Bachman.

TENNESSEE, UNIVERSITY OF. A non-sectarian co-educational institution of higher learning at Knoxville, Tenn.; founded in 1794. The enrollment for the fall of 1921 was 1995. There were 182 members in the faculty of which 8 were new. The productive funds amounted to \$425,000 and the income to \$678,795. The library contained 42,741 volumes. Ayres Hall (liberal arts building) and Agricultural Building were completed at a cost of \$700,000. President, Harcourt A. Morgan, B.S.A., LL.D.

TENNIS. The United States players successfully defended the Davis Cup, emblematic of the world's tennis championship, in 1921, and one of their number, William T. Tilden, 2nd, of Philadelphia, carried off the world's individual title both on hard and turf courts. Among the women exponents of the game Mrs. Molla Bjurstedt Mallory of the United States regained her laurels through her defeat of Mlle. Suzanne Lenglen of France, who had swept all before her the previous year. The brilliant showing made by Vincent Richards, a young Fordham College student, was another notable feature of 1921.

The Japanese team consisting of Ichiya Kumagai and Zeno Shimidzu won the right to challenge the United States team, Tilden, William M. Johnston, R. Norris Williams and Watson M. Washburn—for the Davis Cup, following the Nippon players' victories over the Philippine Islands, Belgium, and Australasia in the preliminary rounds. Other preliminary matches resulted in Great Britain's defeat of Spain, Belgium's defeat of Czecho-Slovakia, and Australasia's defeat of Great Britain, Canada, and Denmark.

A complete summary of the Davis Cup matches follows: First Round—*Great Britain vs. Spain*—R. Lycett (G. B.) defeated M. Alonso (S.) 6-4, 6-2, 6-4; F. G. Lowe (G. B.) defeated Count de Gomar (S.) 6-3, 4-6, 6-1, 6-0; Lycett (G. B.) defeated de Gomar (S.) in straight sets; Alonso (S.) defeated Lowe (G. B.) 8-6, 6-1, 8-6; M. Woosnam and R. Lycett (G. B.) defeated Alonso and de Gomar (S.) 2-8, 10-8, 6-2, 6-2. *Belgium vs. Czecho-Slovakia*—M. Lammens (B.) defeated M. Ardeit (C. S.) 6-3, 6-2, 4-6, 6-1; M. Zemla (C. S.) defeated M. Washer (B.) 4-6, 6-3, 9-7, 2-6, 6-2; Washer (B.) defeated Ardeit (C. S.) 4-6, 7-5, 7-5, 6-3; Zemla (C. S.) defeated Lammens (B.) 6-2, 6-4, 6-2; Washer and Lammens (B.) defeated Zemla and Just (C. S.) 4-6, 3-6, 8-6, 6-4, 6-0. *Australasia vs. Canada*—J. O. Anderson (A.) defeated E. M. Lafambois (C.) 4-6, 7-5, 6-0, 6-2; J. B. Hawkes (A.) defeated P. Bennett (C.) 8-6, 6-4, 7-5; C. V. Todd (A.) defeated Lafambois (C.) 6-2, 6-3, 6-8, 6-2; Anderson (A.) defeated Bennett (C.) 6-3, 6-0, 6-2; Anderson and Todd (A.) defeated Bennett and G. D. Holmes (C.) 6-2, 6-3, 6-1. *Japan vs. Philippine Islands*—Japan won by default.

Second Round—*Australasia vs. Great Britain*—Anderson (A.) defeated Woosnam (G. B.) 4-6, 6-2, 6-4, 6-4; Lowe (G. B.) defeated Hawkes (A.) 6-4, 6-4, 6-1; Anderson (A.) defeated Lowe (G. B.) 6-2, 6-3, 3-6, 6-2; Woosnam (G. B.) defeated Hawkes (A.) 6-3, 0-6, 7-9, 6-2, 6-3; Anderson and Todd (A.) defeated Woosnam and Turnbull (G. B.) 4-6, 9-7, 6-2, 6-4. *India vs. France*—Samajueilh (F.) defeated Jacobs (I.) 6-3, 8-6, 9-7; Sleem (I.) defeated Laurentz (F.)

4-6, 6-2, 3-6, 6-2, 6-0; Sleem (I.) defeated Sama-jueilh (F.) 6-1, 6-3, 6-3; Fyzee and Dean (I.) defeated Laurentz and Brugnion (F.) 6-1, 5-7, 2-6, 6-2, 6-4. *Denmark vs. Argentina*—Denmark won by default. *Japan vs. Belgium*—Japan won by default.

Semi-Final Round—Australasia vs. Denmark—Anderson (A.) defeated Tegner (D.) 6-0, 6-2, 6-1; Peach (A.) defeated Ingerslev (D.) 3-6, 6-2, 6-0, 3-6, 6-2; Anderson (A.) defeated Ingerslev (D.) 6-0, 6-1, 7-5; Peach (A.) defeated Tegner (D.) 7-5, 6-2, 6-4; Anderson and Todd (A.) defeated Tegner and Henrickson (D.) 6-3, 6-3, 6-2; *Japan vs. India*—Kumagae (J.) defeated Sleem (I.) 9-7, 6-1, 6-1, Shimidzu (J.) defeated Fyzee (I.) 6-2, 6-1, 9-7; Kumagae (J.) defeated Fyzee (I.) 3-6, 6-3, 6-3, 9-7; Shimidzu (J.) defeated Sleem (I.) 7-5, 2-6, 6-0, 6-2; Kumagae and Shimidzu (J.) defeated Fyzee and Dean (I.) 6-1, 6-1, 2-6, 2-6, 6-0.

Final Round—Japan vs. Australasia—Shimidzu (J.) defeated Anderson (A.) 6-4, 7-5, 6-4; Kumagae (J.) defeated Hawkes (A.) 3-6, 2-6, 8-6, 6-2, 6-3; Kumagae (J.) defeated Anderson (A.) 3-6, 7-5, 2-6, 6-2, 6-1; Shimidzu (J.) defeated Hawkes (A.) 4-6, 6-3, 6-2, 6-2, Todd and Anderson (A.) defeated Shimidzu and Kumagae (J.) 4-6, 6-3, 6-2, 6-2.

Challenge Round—United States vs. Japan—Johnston (U. S.) defeated Kumagae (J.) 6-3, 6-4, 6-2; Tilden (U. S.) defeated Shimidzu (J.) 5-7, 4-6, 7-5, 6-2, 6-1; Johnston (U. S.) defeated Shimidzu (J.) 6-3, 5-7, 6-2, 6-4; Tilden (U. S.) defeated Kumagae (J.) 9-7, 6-4, 6-1; Williams and Washburn (U. S.) defeated Kumagae and Shimidzu (J.) 6-2, 7-5, 4-6, 7-5.

The winners of the various national tournaments held in the United States during 1921 were:

Singles, William T. Tilden, 2nd; doubles, Tilden and Vincent Richards; clay court singles, W. T. Hayes; clay court doubles, Hayes and C. B. Herd; indoor singles, Frank Anderson; indoor doubles, Richards and S. H. Voshell; women's singles, Mrs. Molla Bjurstedt Mallory; doubles,

William T. Tilden, 2nd, won the English singles championship for the second successive year, defeating R. Norton of South Africa in the final round by a score of 4-6, 2-6, 6-1, 6-0, 7-5. The English doubles were won by R. Lycett and M. Woosnam. Mlle. Suzanne Lenglen was victorious in the women's singles and with Miss Elizabeth Ryan of California captured the English women's doubles.

TEXAS. POPULATION. According to the report of the census of 1920, there were 4,663,228 residents in the State, Jan. 1, 1920, as compared with 3,896,542 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	6,227,000	156,920,000	\$ 84,737,000
	1920	5,487,000	142,662,000	119,836,000
Wheat.....	1921	2,081,000	20,810,000	20,810,000
	1920	1,583,000	20,579,000	35,396,000
Oats.....	1921	1,865,000	33,570,000	13,092,000
	1920	1,490,000	32,780,000	21,635,000
Hay.....	1921	842,000	1,105,000	10,806,000
	1920	750,000	1,991,000	13,620,000
Peanuts.....	1921	195,000	123,825,000	4,210,000
	1920	174,000	125,280,000	7,517,000
Rice.....	1921	155,000	5,596,000	5,652,000
	1920	281,000	9,554,000	11,942,000
Potatoes.....	1921	37,000	2,072,000	3,937,000

Average cost of operation and maintenance per acre.....	6.92	3.25

¹ Not reported in 1910.

Miss M. Browne and Mrs. L. R. Williams; women's indoor singles, Mrs. Molla Bjurstedt Mallory; doubles, Mrs. Wightman and Miss Zinderstein.

MINERAL PRODUCTION. Metal mines in Texas produced 544,000 ounces of silver in 1921 as compared with 511,401 ounces in 1920. The principal producing mine was the Presidio mine, at Shafter,

which was operated steadily throughout the year. A very small quantity of gold was also obtained from Texas ores in 1921, but no lead or copper, according to the United States Geological Survey.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Texas was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table gives a comparative summary for 1919 and 1914:

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	5,724	5,084	12.6
Persons engaged in manufactures.....	131,389	91,114	44.2
Proprietors and firm members.....	5,393	4,787	12.7
Salaried employees.....	18,276	11,474	59.3
Wage earners (average number).....	107,720	74,853	43.9
Primary horsepower.....	441,942	335,791	31.6
Capital.....	\$588,797,000	\$283,544,000	107.7
Services.....	147,908,000	59,179,000	149.9
Salaries.....	31,565,000	14,358,000	119.8
Wages.....	116,343,000	44,821,000	159.6
Materials.....	701,171,000	253,144,000	177.0
Value of products.....	999,996,000	361,279,000	176.8
Value added by manufacture (value of products less cost of materials).....	298,825,000	108,135,000	176.3

CHARITIES AND CORRECTIONS. The name, location, and population of the respective State institutions were as follows: Texas School for the Blind, Austin, 230; Texas School for the Deaf, Austin, 473; Deaf and Dumb and Blind Institute for Colored Youths, Austin, 183; State Orphans' Home, Corsicana, 424; Texas Confederate Home, Austin, 441; Confederate Woman's Home, Austin, 102; State Tuberculosis Sanatorium, Carlsbad, 1047; State Juvenile Training School, Gatesville, 956; Girls' Training School, Gainesville, 71; State Epileptic Colony, Abilene, 616; State Colony for Feeble-Minded, Austin, 128; State Lunatic Asylum, Austin, 1740; Pasteur Institute, Austin, 385; North Texas Hospital for Insane, Terrell, 1866; Southwestern Insane Asylum, San Antonio, 2031; East Texas Hospital for Insane, Rusk, 611; State Penitentiary, Huntsville, 2700.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Provision against deceptive advertisements relating to goods or services offered to the public; amendment facilitating the enforcement of the law relating to the rights and disabilities of aliens; provision for the sanitation of bakeries and the insurance of purity of their products; regulation of the business of barbers, hairdressers, etc.; provision for prophylactic treatment of the eyes of the newly born; amendment designed to make more effective provisions of existing law in respect to the conservation of the State's natural resources; provision for the organization of coöperative marketing associations; authorization of international trading corporations under the laws of the State; proposed constitutional amendment restricting suffrage to native born or naturalized citizens, and permitting the legislature to authorize absentee voting; provision against the employment of persons having con-

tagious diseases in hotels, restaurants, etc.; requiring persons or associations conducting institutions for the care of infants and the sick to obtain a license from the State Board of Health; requiring live stock commission merchants to give bond; providing method by which cities of less than 5000 may adopt commission form of government; proposed constitutional amendment for the purpose of granting pensions to confederate soldiers and sailors and their widows; provision against soliciting or receiving money for alleged service in securing a "preference" from any common carrier; extending the zoning privilege to cities under 5000.

OFFICERS. Governor, Pat M. Neff; Lieutenant-Governor, Lynch Davidson; Secretary of State, S. L. Staples; Controller, Lon A. Smith; Treasurer, Jno. W. Baker; Attorney-General, C. M. Cureton; Superintendent of Public Instruction, Miss A. W. Blanton; Adjutant-General, Thomas D. Barton.

JUDICIARY. SUPREME COURT. Chief Justice, Nelson Phillips; Associate Justices: T. B. Greenwood, William Pierson.

TEXAS, UNIVERSITY OF. A co-educational State institution at Austin, Texas; founded in 1881. The main university is at Austin but the medical branch is at Galveston and the College of Mines is at El Paso. The enrollment for the fall of 1921 was 4470 and for the summer session was 2558. The faculty numbered 332. The endowment consisted of 2,000,000 acres of semiarid grazing lands. The income amounted to \$271,683. The library contained 194,400 volumes. President, Robert E. Vinson, D.D., LL.D.

TEXTILE MANUFACTURING. The textile industry in the United States during 1921 had participated in the general process of deflation and had made notable advances in this direction, but at the end of the year it faced two serious conditions for which the solution then had not been reached. First, there was the matter of wages as reductions had not been on a scale demanded in view of the general decline in values and prices, and in the second place there was the question of the tariff which was under discussion in the Congress as a bill was being prepared for enactment and hearings were being held.

CENSUS OF TEXTILES MANUFACTURES. The Census of Manufactures for 1919 was being prepared for publication during 1921 and at the end of the year there was available certain advance information of considerable interest in connection with the textile industry. Of course 1919 was an abnormal year, but it did serve as a

rest point in comparison with the material tabulated for the industrial census taken in 1914, 1909, and earlier years. The changes in these five-year periods reflect general transformations within the industry as well as in commercial conditions. The 1919 Census was said to mark a period of replacing old equipment with new and the introduction of modern machinery, plant, and methods. Along with this went a decrease in working hours and other economic changes.

TEXTILE MILL CONSTRUCTION. Naturally a decline in the number of new textile mills built in 1921 was to be expected in view of commercial and industrial conditions, but the decrease was less than what might have been anticipated and was explained by the fact that there was not the over expansion in textile mills and manufacturing during the war such as characterized other industries. In the process of deflation and readjustment in the textile world generally, the industrial conditions seemed to clear somewhat and millowners were considering what additions and extension were necessary and which they had hesitated to make on the score of high material and construction costs. At the end of the year active preparations were being made to put such work under way as soon as conditions were advantageous.

According to the carefully compiled construction summary of the *Textile World*, which is abstracted herewith as usual, the record of new mill units and important enlargements in 1921 did not convey the whole story of growth during the year 1921. There was besides new construction a tremendous amount of new machinery installed in established mills to replace old equipment, which does not show in the reports of mill construction.

COMPARISON OF NEW MILL CONSTRUCTION OF
LAST TEN YEARS.

	1921	1920	1919	1918	1917	1916
Cotton.....	46	89	74	29	52	51
Wool.....	36	30	54	24	24	23
Knitting.....	103	59	84	120	97	113
Silk.....	31	71	61	49	86	60
Miscellaneous.....	26	15	16	27	38	33
	242	264	289	249	297	280

	1915	1914	1913	1912
Cotton.....	24	26	27	37
Wool.....	19	21	24	24
Knitting.....	111	110	142	122
Silk.....	25	51	54	46
Miscellaneous.....	40	37	80	36
	212	245	277	265

As appears from the accompanying tabulation the number of new manufacturing units added to the textile industry at large during 1921 was in excess of 240. In wool goods mills, knitting plants and miscellaneous concerns, the last made up largely of dyeing and finishing works, the projects undertaken outnumbered those recorded during 1920. In cotton and silk mills the figures for 1921 show a falling off. The products of the knitting trade, particularly hosiery, jersey cloth and various forms of knitted outerwear, were in generous demand and the expansion of this branch of the industry seemed to have been a direct answer to the call made upon it.

When grouping the mill construction in accordance with the various sections of the country,

the *Textile World* makes the comment that the New England States showed the greatest fresh development of the wool goods industry, the Southern States the greatest expansion of the cotton goods industry, the middle Atlantic States (covering chiefly New York, New Jersey, and Pennsylvania) the greatest growth in new knit, silk, and miscellaneous mills.

Another feature of the year was the development of chains of mills in the knitting field. In the silk industry the branch mill idea has continued to grow, as was evidenced by the development of the industry in parts of Pennsylvania. Shortage of labor in some of the older and more intensively developed industrial centres led manufacturers to new fields for the extension of their businesses. This fact was shown in the knit underwear trade in upper New York State. A number of these mills established branches in towns adjacent to the parent plants. In several of these finishing only was undertaken.

On the artificial silk end of the industry there was building activity as follows: American Cellulose & Chemical Manufacturing Company, Cumberland, Md.; du Pont Fibersilk Company, Buffalo, N. Y.; Cellulose Company, Chester, Pa.; and new units of the Viscose Co. at Lewiston, Pa., and Roanoke, Va.

The general classification of miscellaneous mills includes a few flax, hemp, and asbestos concerns, but covers for the most part dyeing and finishing companies. The greatest number of new plants of this latter class are to be found in Pennsylvania.

The *Textile World* also called attention to the fact that during the year there were a number of notable mill amalgamations. The Standard-Coosa-Thatcher Co., was formed late in the year, bringing into one organization three companies already allied in management. These were the Standard Processing Company and the Thatcher Spinning Company, Inc., Chattanooga, Tenn., and the Coosa Manufacturing Company, Piedmont, Ala. The formation of the Corticelli Silk Company marked the amalgamation of the Brainerd & Armstrong Co., New London, Conn., and the Nonotuck Silk Company, Northampton, Mass.

The merger of two prominent hosiery concerns, the Scott-Kitsmiller Co., Inc., and Wm. F. Taubel, Inc., brought into being the Taubel-Scott-Kitsmiller Co., with a capital of \$9,000,000. At the time of the merger this brought under one management twenty-nine hosiery mills. The number has since been increased by the erection of additional branch plants. Another amalgamation in the knitting fields was that of the Mayor Mills of Winston-Salem, N. C., and the Washington Mills, under the name Washington Mills.

IMPORTS AND EXPORTS. It is necessary in considering the imports and exports during the year 1921 and comparing them with earlier years to bear in mind that the values had changed materially and that quantities rather than total values formed a more satisfactory basis of comparison. This is illustrated by the statement that in 1921 imports of cotton manufactures decreased 37.8 per cent in 1921 in value, yet quantity of cloths expressed in square yards fell off only 24.4 per cent. On the other hand, imports of laces and embroideries, expressed in yards, increased 28.6 per cent, and the quantity of gloves and stockings in dozen pairs increased 266.5 per cent.

The statistics as published show that the total imports of woolen manufactures decreased 11.8 per cent, while the quantity of cloths and dress goods expressed in square yards decreased almost the same amount, or 12 per cent. On the other hand, there was an increase in pounds of yarn imported of 59 per cent, while the quantity of tops imported showed the enormous increase of 1179 per cent.

As still further bringing out this point reference may be made to the fact that the total value of cotton manufactures exported from the United States during 1921 decreased 70 per cent, but the decrease in yards of cloths exported was only 32 per cent, and in pounds of yarn exported 40.6 per cent. The decrease in total exports of wool manufactures during the year was 77.7 per cent, while cloths and dress goods in yards decreased 72 per cent.

THACH, C. C. See NECROLOGY.

THAYER, ABBOTT HANDERSON. American figure, landscape, and portrait painter, died at Dublin, N. H., May 29. He was born at Boston, Mass., August 12, 1849; and studied art in Paris, mainly under Gerome. He was celebrated for his ideal figure composition, his favorite subject being a young female figure. Good examples of his work are: "A Young Woman" in the Metropolitan Museum; "Caritas" in the Boston Museum; "Winged Figure" in the Albright Art Gallery of Buffalo; and "A Virgin" in the National Gallery at Washington. He was one of the early contributors to the knowledge of protective coloration of animals.

THEOSOPHICAL SOCIETY. This society was founded in 1875 by Madam H. P. Blavatsky and Colonel H. S. Olcott, in New York City to form a nucleus of the Universal Brotherhood of Humanity without distinction of race, creed, sex, caste, or color. Later world headquarters were established at Adyar, Madras, India. It is a world-wide organization and presents a synthesis of the underlying principles of all religions. Its purpose is to encourage a study of comparative religion, philosophy, and science and to investigate unexplained laws of nature and of powers latent in man. It endeavors to explain the origin, the evolution, and the destiny of the human race. Works by its authors may be found under the names of H. P. Blavatsky, Anne Besant, C. W. Leadbeater, C. Jinarajadasa, A. P. Sinnett, I. S. Cooper, and L. W. Rogers. In 1921 the society had in the United States a total of 212 lodges with an active membership of 7651. Officers are: International President, Anne Besant; National President, Mrs. L. W. Rogers; Secretary, Mrs. Betsey Jewett. H. Pearl Martin is National Secretary. Headquarters for the American Section of the Theosophical Society are at 645 Wrightwood Avenue, Chicago, Ill.

THOMA, LUDWIG. See NECROLOGY.

THOMAS, EARL DENISON. Army officer, died, February 17. He was born at McHenry, Ill., Jan. 4, 1847; graduated at the United States Military Academy in 1869, having already served in the Civil War, first as private and later as sergeant-major of the Eighth Illinois cavalry. After graduating from West Point he rose through the successive grades to the rank of brigadier-general, April 18, 1907, and retired, Jan. 4, 1911. He was brevetted for gallantry in Indian fights in Nebraska and Arizona. He served in Porto Rico, the

Philippine Islands, and Cuba during the Spanish-American war, and was in charge of the province of Pinar del Rio, Cuba, from 1906 to 1907, in command of the department of Colorado from 1907 to 1911, and in charge of operations during the troubles on the border of Arizona and New Mexico in 1910.

THOMPSON, GEORGE WALLACE. Judge, died, February 6. He was born at St. Mary's, Ont., August 9, 1850; and graduated at Toronto University in 1870. He came to the United States, and was admitted to the Iowa bar in 1875, but removed to Galesboro, Ill., in 1877. In 1897 he was made judge of the circuit court in the ninth circuit of Illinois, and was judge of the appellate court from 1916 to 1918.

THURINGIA. A federal state created under the new German Republic at the beginning of 1920, including the following divisions: Saxe-Weimar-Eisenach, Saxe-Meiningen, Saxe-Altenburg, Gotha, Reuss, Schwarzburg-Sondershausen, and Schwarzburg-Rudolstadt. Area, 4546 square miles; population, Oct. 8, 1919, 1,511,876. Capital, Weimar, with a population in 1919 of 37,237. Other cities: Gera, 73,641; Gotha, 41,465; Jena, 48,504; Eisenach, 39,229. The constitution was under consideration in 1920 and adopted March 11, 1921. President of the State Council in 1921, Dr. A. Paulsen.

TIBET. An extensive region forming a dependency of China, reaching from the Pamirs to the east between the Himalayas and Kwen-lun mountains to the frontiers of China. Area, estimated at 463,200 square miles; estimates of population vary from 1,500,000 to 6,000,000, a probable estimate being about 2,000,000. Capital, Lhasa, with a population of from 15,000 to 20,000. Agriculture is carried on in certain parts, but the methods are primitive and a large part of the country is in the pastoral stage. The industries of wool-spinning, weaving, and knitting are important. Among the minerals worked are gold, borax, and salt. Trade is chiefly with India and China. In 1919-20 imports from India were, £214,000; exports to India, £438,000.

TIMBER. See FORESTRY.

TIN. Inasmuch as the greater part of the world's tin supply comes from the far east it is inevitable that its production and marketing should be attended by various international as well as local influences, of which exchange is not the least. In 1921 there was not the wild and exciting market of the previous year, but there were wide fluctuations as appear in the accompanying table, the high price being in January and the low of the year being reached on March 9, in London, and on August 25 in New York. One reason for the decline during the year was that the government of the Straits Settlements had fixed a price of £229 f.o.b. Singapore at which it would maintain the value. This "pegging" process, however, did not avail and as the price fell the government withdrew its support so that the market receded to its low point in March. The attempt to maintain the price of tin artificially was in large measure due to the desire to keep the mines busy and especially the imported coolie labor at work, as shutting down, it was feared, would lead to starvation and riots which in a country sparsely settled and not well policed would have threatened serious consequences. Furthermore, it was feared that shutting down the mines

would lead to the ruin of the industry beyond its immediate recovery. However, the government of the Federated Malay States accumulated about 10,000 tons of tin, issuing some \$10,000,000 in bonds against it, and the carrying of the metal was a serious undertaking for the colony which was suffering a general depression in 1921. The same general policy prevailed in the Dutch East Indies and here some 5000 or 6000 tons were held in Java awaiting liquidation. The island of Banca had produced up to the end of September 1000 tons more than in 1920, but the shipments were 3000 tons less. In Hong Kong there was said to be in warehouses 4000 tons at the end of the year. In Bolivia production decreased and the shipments to the U. S. for the year would only amount to about 15,000 tons instead of the usual 30,000 tons or thereabouts.

farm value of the 1921 crop on this basis was considerably less than half that of 1919—\$207,570,000, as compared with \$570,868,000 in 1919. Kentucky continued to be the largest producer, followed by North Carolina, Virginia, and Tennessee.

The 1920 internal revenue receipts from tobacco were the largest ever collected—\$295,809,355.44. The receipts from all tobacco taxes during the fiscal year 1921 were \$255,219,385.49, a decrease of \$40,589,969.95, or 13.72 per cent compared with 1920. These receipts represented 5.5 per cent of the total internal revenue receipts from all sources, or approximately the same as in 1920. The greatest decrease in receipts was on account of manufactured chewing and smoking tobacco, snuff, cigarettes, and large cigars. Of the total taxes collected 53 per cent was from cigarettes, 23 per

TIROL. An Alpine region which before the downfall of the Austro-Hungarian monarchy was a crownland of Austria. Area, 10,302 square miles; population, Dec. 31, 1920, 946,613. The northern portion was included in the new Austrian republic. Area, 4782 square miles; and population in 1920, 306,485.

TOBACCO. The acreage reported in 1921 was nearly a half million acres less than in the two preceding years. The yield was smaller than in 1920, and this with the diminished acreage brought the estimated production down to 1,117,682,000 lbs. This compares with 1,582,225,000 lbs. in 1920, and 1,465,481,000 lbs. in 1919. The average net price per pound has declined from 39 c. in 1919 and 21.2 c. in 1920, to 18.6 c. in 1921. The total

cent from manufactured smoking and chewing tobacco, 20 per cent from cigars, and 2 per cent from snuff. The receipts per capita from this source in 1921 were \$2.36, compared with \$2.78 in 1920, \$1.93 in 1919, and \$1.48 in 1918, previous to which the receipts were less than one dollar per capita.

The Kentucky Experiment Station reported (Bul. 329) studies of the cost of tobacco production in the Burley and dark tobacco areas of the State. In the Burley districts the cost per pound varied from 15 c. to 81 c., averaging about 28 c., and with 90 per cent grown at 31 c. or less. In the dark district the cost per pound varied from 9 c. to 38 c., averaging 17.2 c. and with over 90 per cent produced at 23 c. or less. The man labor constituted 40 to 50 per cent of the cost.

TOBACCO DISEASES. See BOTANY.**TOBAGO.** See TRINIDAD AND TOBAGO.

TOGO. Formerly a German colony in West Africa, constituting a protectorate and situated on the coast between Dahomey and the Gold Coast; after the war divided administratively between France and Great Britain. Total area, 33,659 square miles; colored population (1913), 1,031,978; European population, estimated in 1918 at 110. The eastern part allotted to France has an area of 21,893 square miles; the British part, making up about one-third of the territory, borders the Gold Coast. The soil is fertile. The chief products that enter into the export trade are: Copra, cocoa, and palm oil. It is populated chiefly by negroes of the Ewe race. In 1919

France had 21.3 per cent, and England, 64.7 per cent of the foreign trade. No later figures for trade were available than those given in the preceding YEAR BOOK. Rich mineral resources have been reported, especially iron ore. The coast line is 434 miles, all of which is contained in the French portion. British Togoland has an area of about 12,500 square miles. There are considerable plantations of coffee, cocoa, kola, and palms; and the cultivation of cotton has been attempted. Native industries include weaving, pottery, straw plaiting, etc. The foreign trade in 1919 was as follows: Imports, £665,332; exports, £850,744. Administrator of British Togoland at the beginning of 1921, Major F. W. F. Jackson; Commissioner of French Togoland, M. Woelfel.

TOLEDO, UNIVERSITY OF. An institution of the higher learning at Toledo, Ohio; founded in 1872. The enrollment for the fall of 1921 was 1502 and for the summer session, 163. There were 32 full time members in the faculty and 23 part time members. The productive funds amounted to \$175,000. The library contained 11,000 volumes. A new Science Building was completed at a cost of \$310,000. President, Dr. A. M. Stowe.

TONGA or the FRIENDLY ISLANDS. Three groups of islands together with small outlying islands in the Pacific ocean between 15° and 23° 30' S. latitude and 173° and 177° W. longitude, lying to the east of Fiji; constituted a British protectorate, May 19, 1900. Total area, about 385 square miles; population, estimated in 1919 at 23,562, of whom 22,689 were Tongans and 380 Europeans. The natives have been Christianized, and the Free Church of Tonga has about 16,000 members, the rest being divided between the Wesleyan Methodists and the Roman Catholics. In 1919 there were 64 public primary schools, with 2742 pupils enrolled. Copra is almost the exclusive commercial product. The authority of the king and native chiefs was respected by the British, and the ruling queen at the beginning of 1921 was Solate, who succeeded, April 29, 1918. British High Commissioner in 1921, Cecil Hunter Rodwell.

TONGKING. A French protectorate in Indo-China, acquired in 1884, and comprising the northern, main division of the colony of French Indo-China, south of the Chinese provinces of Kwansi and Yunnan. Capital, Hanoi, which is also the capital of French Indo-China. The population in 1919 was given at 6,470,250, of whom 6875 were Europeans (exclusive of the military); the population of Hanoi was 109,500. The chief product is rice of which the crop in 1919 was 186,685 tons, valued at 117,045,000 francs. Vessels entered and cleared in 1919 were 588 of 711,961 tons.

TORONTO, ONT. See MUNICIPAL GOVERNMENT.

TORONTO, UNIVERSITY OF. A Canadian institution of the higher learning at Toronto, Canada; supported by the provincial government; founded in 1827. The enrollment for the fall of 1921 was as follows: Arts, 2376; Graduate, 185; Medicine, 1069; Applied Science, 800; Education, 143; Forestry, 62; Music, 21; Social Service, 289; Public Health Nursing, 41; total, 4986. There were 559 members in the faculty. The library contained 168,418 volumes. The income for the session of 1920-21 amounted to \$2,202,202. President, Sir Robert Falconer, K. C. M. G., JLL.D.

TOWNSEND, JAMES BLISS. Editor and art critic, died, March 10. He was born in New York City, Sept. 30, 1855, graduated at Princeton in 1878 and joined the editorial staff of the New York *Tribune* in that year. He was art editor of the New York *World*, 1881-87; art critic of the New York *Times*, 1894-1900, and art writer on the *Herald*, 1902-07. He was also prominent in politics and took an active part in the New York State campaigns, 1892 and 1896. He was art director of the Charleston Exposition, 1901-02. He wrote *Random Fancies; Sonnets and Translations* (1901) besides his voluminous contributions to the periodical press.

TRADE UNIONS. The International Labor Office at Geneva issued a table illustrating by statistics the growth of trade unionism in the different countries of the world during the decade ending in 1919. From this and the *Labor Review* the following facts are compiled. The table covers all the important countries of the world with the exception of Russia, for which no figures are available, and China, Japan, and India, where trade unionism is little developed. But it should be borne in mind that the definition of a trade union differs from country to country, and associations which in one country are termed trade unions are not so termed in another country. Where it has been possible the membership for 1920 and 1921 has been added to the table; numbers are given in thousands.

Country	1910	1918	1919	1920	1921
Australia.....	302	582	628		
Austria.....	200	295	772

United States of America	2,100	4,000	5,607		

¹ Figures not available.

From this table it will be seen that the trade-union membership in the 20 countries at the end of 1919 was three times as large as that at the end of 1910. A small part of the increase is due to the greater completeness of the returns and another small part (probably about 10 per cent) to the natural growth of population, but even allowing for these two factors there has been an enormous growth in trade unionism among the workers. The growth is common to all countries.

Of the total membership of 32,680,000 in 1919, it is interesting to note that for 5 of the 20 countries included, namely, Great Britain, Germany,

the United States, France, and Italy, the total trade-union membership amounted to nearly 27 million, leaving about 5½ million for the remaining 15 countries.

UNITED STATES. During the year there was a widespread movement among employers for the open shop. The following summary of the situation is taken from the *Political Science Quarterly*:

Ever since prices began to decline in the summer of 1920, and it appeared that a period of depression was at hand, groups of employers have been conducting a campaign for the "open shop." The National Conference of State Manufacturers held in Chicago in January adopted a resolution stating that it is "fundamental in this country that all law-abiding citizens or residents thereof have the right to work when they please, for whom they please, and on whatever terms are mutually agreed upon between employee and employer, and without interference or discrimination on the part of others." Labor leaders have claimed that the open-shop propaganda was in reality an attempt of reactionary employers to rid themselves of the necessity of having dealings with organized labor and that instead of favoring a shop in which there is no discrimination against union or non-union men they were actually seeking to establish a system under which only non-union men could find employment. At a conference of the leaders of more than one hundred international unions held in Washington in February the following resolution was adopted: "Reactionary employers have joined their might in a campaign which they are pleased to call a campaign for the 'open shop' which they have been waging vigorously since the signing of the Armistice. Compelled by pressure of public opinion to accept labor's coöperation during the war when the utmost conservation of productive energy was necessary to the life of the nation, they cast off all pretense immediately upon the passing of the emergency. This entire campaign on the part of the combined reactionary employers is in no sense a campaign for the 'open shop.' No matter what definition may be given to that term, the campaign is distinctly and solely one for a shop that shall be closed against union workmen. It is primarily a campaign disguised under the name of an 'open shop' campaign designed to destroy trade unions and to break down and eliminate the whole principle of collective bargaining which has for years been accepted by the highest industrial authorities and by the American people as a principle based upon justice and established permanently in our industrial life."

For further information on the trade union movement in the U. S. see **LABOR, AMERICAN FEDERATION OF.**

FOREIGN. Four international trades-union congresses were reported for the year. 1. The ninth international congress of the metal workers' federation was held at Lucerne, Switzerland, August 8-14. There were 62 delegates present representing 15 nations and approximately 3,280,000 workers. 2. The international federation of non-manual workers met in Vienna, August 10-12, with delegates from 11 European countries present. 3. The international congress of intellectual workers met in Brussels on August 20. 4. The national federations affiliated to the International Secretariat of Stone Workers held their first international congress since 1913 at Innsbruck, August 21-23, with 8 countries represented.

BELGIUM. A great victory for the Belgian working class took place in the Spring of 1921 when article 310 of the Belgian Penal Code was rescinded; this article had long been a serious obstacle in the development of trade association and in the effective use of the strike.

GREAT BRITAIN. The 53d Annual Trades-Union Congress of the United Kingdom was held at Cardiff, September 5 to 10, with 823 delegates present representing 6,389,123 members, a decrease of more than 100,000 from the membership represented at the 1920 congress. The main subject for discussion was the question of unemployment, and a composite resolution embodying

the main points of the many resolutions on the agenda was carried unanimously. On the ground that it is the duty of the State to provide work or adequate maintenance for every willing worker, the resolution asked that Parliament should immediately be summoned to introduce schemes of work and to remove the inequalities of rating in the London area. Coöperation of the new general council with the political side of the labor movement in order to secure these objects was ordered by the resolution. A resolution indorsing the coming Washington conference on the limitation of armaments was passed. The congress also expressed sympathy with the Russian people, and the general council was authorized "to use the whole power of organized British labor" to prevail upon the Government to furnish them with medical supplies, raw materials, and money credits.

TRANSVAAL. See **SOUTH AFRICA, UNION OF.**
TRANSYLVANIA. A part of the crownland of Hungary until the closing months of 1918 when it was taken over by Roumania; formally annexed by royal decree, Jan. 11, 1919, Roumanian possession being recognised by the Treaty of Versailles. Area, 22,312 square miles; population, Dec. 31, 1910, 2,673,367. At the beginning of 1921 Transylvania was represented by 45 senators in the Roumanian upper house and 112 deputies in the lower house.

TRAVEL. See **LITERATURE, ENGLISH AND AMERICAN.**

TREDWELL, DANIEL M. Lawyer and business man, died at Brooklyn, N. Y., November 10. He was one of the oldest of Brooklyn's well-known business men. He was born at Hempstead, L. I., July 26, 1826, graduated at the Columbia Law School in 1851 and after reporting for a newspaper for a short time was connected with the office of clerk of the Supreme Court of New York and continued in that capacity until 1894. During the last ten years of his life, he was an active officer of the Home Title Insurance Company of Brooklyn, and at one time he was President of the United States Title Company. He was a member of various learned societies and a prominent Free Mason. Among his writings may be mentioned *Literature of the Civil War*; *Nomads of the Sea*; volumes of reminiscences and history pertaining to Long Island and various works of a scientific character.

TRICHINIASIS. The disease caused by the pork worm was once believed to be very rare and practically fatal after long invalidism. At present we know that this applies only to very severe forms of the disease for the latter is so common that about 1 per cent of all human bodies show evidences of the pork worm, usually very slight. About 2 per cent of all hogs are trichinous and attempts of the Federal Bureau of Animal Industry to inspect all killed hogs were abandoned many years ago. At present it violates the provisions of interstate commerce to distribute ready-to-eat food articles which contain raw pork. In addition state and municipal governments seek to proceed along federal lines in protecting the public. The latter are repeatedly warned to eat no raw pork, and medical men are compelled to report all new cases of trichiniasis. In New York City raw pork is eaten rather freely as pork roll in the winter and in warm weather as summer sausage; while raw smoked pork is consumed as ham. As

already implied the average case of infection is mild and easily overlooked, while the more severe cases simulate other diseases as rheumatism and even typhoid fever, or ordinary diarrhea. A case of the disease was reported in Brooklyn last November (*Weekly Bulletin of the Department of Health*, for Dec. 31, 1921). The patient was a woman of 45 who showed the full picture of the severe form of the disease. She had eaten some suspicious bologna sausage. No other case has been reported and examination of specimens of the sausage failed to discover pork worms. The pork came from a meat plant which has regular Federal inspection.

TRIESTE. Before the disruption of the Austro-Hungarian empire a crownland of Austria, consisting of the Mediterranean port of Trieste and surrounding region; occupied by Italy after the war and retained by her in accordance with the peace settlement. The population in 1919 was estimated at 190,013.

TRINIDAD AND TOBAGO. A British colony in the West Indies, consisting of the island of Trinidad, with an area of 1860 square miles, lying immediately north of the mouth of the Orinoco river; and the island of Tobago, with an area of 114 square miles. Total population, estimated, Dec. 31, 1919, 386,907. Capital, Port of Spain, with a population of 69,796. Most of the inhabitants are West Indians of African descent, the rest being East Indians, whose number was estimated at 129,300, and a few Chinese. The whites are English, Spanish, French, and Portuguese. In 1919 there were 219 elementary schools with 48,481 pupils enrolled. Of the total area, 377,400 acres were under cultivation in 1919. One of the noted features of Trinidad is the large asphalt lake. The revenue from asphalt in 1919 was \$29,791. There is a considerable output of petroleum. No latter figures for commerce were available than those given in the preceding YEAR BOOK for 1919 when the chief exports were, in order of value: Cocoa, sugar, coconuts, petroleum fuel, and crude petroleum. The share of the United States in the foreign trade considerably exceeded that of any other country. One of the chief commercial developments of recent years has been the increase of petroleum production which has far outstripped that of asphalt. The budget for 1919 was as follows: Revenue, £1,342,884; expenditure, £1,309,407. The railway on the island of Trinidad has a length of 124 miles. Vessels entered and cleared in 1919 numbered 4216 of 2,255,793 tons, of which 1,522,723 were British. In Tobago latterly there has been a development of the rubber, cotton, tobacco, and cacao industries. Governor at the beginning of 1921, Lieutenant-Colonel Sir J. R. Chancellor.

TRINITY COLLEGE. An institution for the education of men at Hartford, Conn.; founded in 1845. The enrollment for the fall of 1921 was 255. There were 25 active members in the faculty, 2 on leave, and 4 new. The productive funds amounted to \$1,750,000 and the income to \$130,000. The library contained 85,000 volumes. The Chemical Laboratory was rebuilt. President, Remsen Brinckerhoff Ogilby.

TRIPOLI. See LIBYA.

TRØLS-LUND, TRØLS FREDERIK. Danish historian, died, February 12. He was born at Copenhagen in 1840; and graduated at the University of Copenhagen in 1871. He was professor

at the military school at Frederiksborg from 1874 to 1900. Among his publications is a valuable work on Scandinavian history in fourteen volumes (1879-1901) which dealt with the history of Denmark and Norway at the end of the sixteenth century. His other writings also deal with various periods or aspects of Scandinavian history, and they are all marked by extraordinary vigor of style. In recognition of his gifts as an historian, he received one-quarter of the Nobel Prize in literature for 1915.

TROTTLING. See RACING.

TUBERCULOSIS. The plan for feeding the victim of pulmonary tuberculosis has recently been considerably modified. The forced feeding of some years ago through which a patient was forced to consume as high as 7000 food units daily has been largely abandoned and 3000 units is not exceeded, which amount in itself is sufficient to nourish a healthy man doing a moderate amount of work. To be more exact, 50 calories for every kilogramme of body weight is the standard—thus if a young woman who is tuberculous weighs 120 lbs. or 54 1-2 kilos her daily diet should comprise 2745 food units. Some physicians have maintained the weights of the patients and have even seen them gain on a much smaller allowance, even as low as 35 units per kilogramme. For many years it has been the custom to allow these patients more animal food than is required by the healthy, and especially have they been urged to take fatty foods. At present the bulk of the ration is starchy food, and both albumin and fat are given in relatively small quantities. The proportions are about as follows: albumin, 100 gms.; fat, 80 gms. and starches or sugars, 500 gms. We have learned that with albumin quality and not quantity counts. The choice of animal foods favors those which contain certain components necessary to the welfare of the organism to maintain growth and repair and furnish certain secretions. Gelatine fails to nourish alone because it contains no tyrosine nor tryptophan, but if combined with an albuminous substance which does contain them it can serve as nutritious food. Among the starchy foods necessary are green vegetables which contain mineral matter and vitamins. Fats are useful largely because they contain certain vitamins. Generally speaking all foods should when possible be fresh and uncooked—this is readily possible with milk and butter, eggs, fruits, etc. Meat is often given uncooked or underdone. At present water is the only liquid recommended for beverage purposes. Cawadias of Athens in *La Presse Médicale* for Nov. 26, 1921. See VETERINARY MEDICINE.

TUCKER, JOHN FRANCIS. Lawyer and author, died, February 28. He was Governor of the Society of Arts and Sciences. He was born in New York City, Feb. 25, 1871, was educated in the public schools and graduated at the New York University Law School in 1893. After a post-graduate course at the University of Pennsylvania and travels in Europe he was admitted to the New York bar in 1894. In 1895-98 he was editor of the *University Law Review* having previously been associated with the late Austin Abbott in editorial work. He wrote *The Story of Washington Square* (1895); *The Power Political* (1899); *Collected Short Stories* (1905); and a play produced in London in 1899 entitled *Husbands by Purchase*.

TUFTS COLLEGE. A Universalist co-educational institution at Tufts College, Mass.; founded in 1885. The enrollment for the fall of 1921 was as follows: School of Liberal Arts, 260; Jackson College for Women, 180; Engineering School, 345; Bromfield-Pearson School, 17; Crane Theological School, 17; Graduate School, 21; Two-year and one-year pre-dental course, 375; Medical School, 448; Dental School, 436; total, not including duplicates, 2092. There were 371 members in the faculty. The endowment was \$3,500,000. Important gifts amounted to \$250,000. The library contained 83,858. President, John Albert Cousens, A.B.

TULANE UNIVERSITY OF LOUISIANA. A co-educational State institution of the higher learning at New Orleans, La.; founded in 1834. The enrollment for the fall of 1921 was as follows: College of Arts and Sciences, 325; College of Engineering, 213; H. Sophie Newcomb College, 588; Faculty of Graduate studies, 50; College of Law, 81; School of Medicine, 344; Graduate School of Medicine, 52; School of Dentistry, 167; School of Pharmacy, 69; College of Commerce, 453; Courses for Teachers, 152; Correspondence Courses, 4; total, not including duplicates, 2405. The enrollment for the summer schools was 1474. The faculty numbered 368. Total endowment amounted to \$6,368,817 and the income to \$691,121. President, A. B. Dinwiddie, LL.D.

TUNIS. A French protectorate on the Mediterranean coast east of Algeria, known as the Regency of Tunis; bounded on the south by the Desert of Sahara. Capital, Tunis. Area, estimated at from 50,000 to 64,600 square miles; population, estimated in 1920 at about 1,940,000, an uncertain estimate, however, unchanged since 1914, for no proper census had been taken for the Moslems and Jews. The majority of the inhabitants are Bedouin Arabs and Kabyles (estimated at 1,739,744 in 1919). The European population in 1921 was as follows: French, 54,477; Italians, 84,819; Maltese, 13,509. The French had increased since the last census (1911) by 8433. The city of Tunis had a population of 67,129 Moslems, 44,237 Italians, 26,491 Jews, 17,875 French, and 5986 Maltese. The majority of the people are Mohammedans. The Roman Catholics were estimated at about 35,000. According to the latest available figures for education there were about 313 public schools, 8 lycées, and 27 schools, with about 42,497 pupils, of whom 10,302 were French; 11,552, Mohammedans; 9249 Jews; 9133 Italians. A feature of the educational system that was causing some concern in 1921 was the comparatively small number of French teachers on the staffs of the schools. In that year no Frenchmen competed for the positions of teachers, all the places being applied for by natives. The chief sources of wealth are agriculture and mining, but latterly foreign trade has become increasingly important under French direction. The chief agricultural products are: Wheat, barley, and other cereals; olives, grapes, dates, and other fruits; palm products; and wine and olive oil. No later figures for these crops were available than those given in the preceding YEAR BOOK. Most of the cultivable land is held in large estates. Production of the mines has steadily increased in recent years. The output of the chief minerals worked in 1919 was as

follows: Iron, 360,453 tons; phosphate of lime, 815,385 tons; lead, 13,455 tons; zinc, 6185 tons; manganese, 1313, tons. Native industries include wool weaving, carpet weaving, saddle making, spinning, etc.

In 1919 the vessels entered numbered 8615 of 1,614,355 tons; cleared, 8471 of 1,587,977 tons. The railway mileage, Jan. 1, 1920, was 1044. Bey of Tunis at the beginning of 1921, Sidi Mohammed, who succeeded, May 12, 1906; French Resident General, Lucien Saint.

HISTORY. On November 8, a decree was issued in regard to the naturalization of foreigners in Tunis. This provided that every one born in the country of whom one of the parents was born there should be accounted a French national. In 1896 the privilege of indefinitely retaining their own nationality was guaranteed to the Italians who settled in Tunis. This arrangement was terminated in 1919 by the French government, but on the condition that its effects should remain until it was replaced by another arrangement, and this status was regularly renewed for periods of three months. The decree of November 8 did not apply to the Italians privileged under this arrangement of 1896 thus prolonged. But in the latter part of the year the Italian press attacked the new decree which they characterized as conceived in a hostile spirit. They argued that France did not have the right to regard the Italians of Tunis as ordinary colonists since they had arrived in the country before the French control was established. To this the French replied that while there might have been Italian immigration before the French protectorate was set up, their prosperity and increase were due exclusively to that protectorate. The French admitted that Italian manual labor had largely contributed to the economic progress of Tunis, but they would not admit that the overflow of the Italian population into a French protectorate constituted any definite claim on the French government. The Italians had come there because French capital had built railways and roads, and had provided the means for their profitable employment. The subject was of some importance in connection with the movement in certain industrial quarters in France and in Italy for enlarging the scope of the agreement between the two governments in respect to the phosphates of Tunis. The principle of the agreement proposed was that in return for a certain proportion of Italian manual labor a certain percentage of production was reserved to Italy. In 1918 the Italian government had demanded more than that, claiming a right of joint ownership in those enterprises to which Italian manual labor had contributed. This principle had been rejected by France.

TUNNELS. In 1921 the limited amount of new railway construction and improvement of the right-of-way rather restricted tunnel construction. The same held true also for Urban and interurban railways, while the number of new aqueducts was also small including, however, the Shandaken tunnel of the New York water supply in the Catskill region and the Hetch Hetchy aqueduct of the San Francisco water supply. Naturally in the various schemes for the development of the Port of New York, about which there was so much controversy and discussion, tunnels figured; the plans of the Port Authority proposing

a tunnel from Greenville to Brooklyn while the plan of the Board of Estimate a tunnel from Staten Island to Bay Ridge under the Narrows. There was also the Hudson River Velicular Tunnel on which active work was largely held up by a disagreement in the joint commission.

VIRGINIAN RAILWAY TUNNEL IMPROVEMENT. An important feature of the double-tracking of the Elmore-Clark's Gap section was the widening of the tunnels, which by the end of 1921 was practically completed. The widening of the tunnels rather than the driving of new bores was determined by various considerations, especially the fact that in two instances the portals were approached by viaducts which could be strengthened rather than reconstructed. The work involved the widening of five tunnels whose length varied from 347 feet to 1252 feet, and had to be done without interrupting traffic. There was employed to protect roadbed and traffic a sectional shield which could be advanced as the work progressed. The old tunnels which were timber lined had a clear width inside of 18 feet and an overhead clearance of 21 feet 6 inches from the top of the rail, while the section enlarged to double-track size had a clear width on curves of 32 feet and on tangents of 30 feet 6 inches with an overhead clearance of about 24 feet from the top of the rail. The design of the widened tunnel was a three-centred arch of reinforced concrete with a minimum thickness of 2 feet 2 inches, backed up with a timber lining consisting of 12 x 12 inch posts supporting 12 x 12 inch ribs and inclosed by 3-inch lagging on the sides and 4-inch lagging over the top. The method followed was to mount a series of steel arches protecting the track for a distance of about 60 feet and then excavating a heading of the double track width which was driven through the entire length of the tunnel before the bench was removed. A two-foot section on one side of the old arch, approximately 18 feet on the second track side, and the enlarged section above, all were removed simultaneously. The tunnels were all lined with concrete reinforced with 7/8 inch rods placed both vertically and horizontally.

RECONSTRUCTION OF TEHACHAPI TUNNELS. The Southern Pacific R. R. during the year completed the enlarging and lining with concrete of the tunnels on its line over the Tehachapi mountains in California. The cost of this work, which had been in progress for some five years, was about \$1,000,000. This extensive undertaking was carried out without delay to trains, despite the fact that the 48 miles of track between Bakersfield and Tehachapi, was claimed by Southern Pacific officials, to be the busiest single-track line in the United States, serving, as it did, as a main trunk line for both the Southern Pacific and the Santa Fe systems. It had been the policy of the Southern Pacific to line with concrete as many as possible of its tunnels, especially those where there was no question as to permanence or location. In many cases enlargement was carried in on this connection and this was true of the eighteen tunnels on the Tehachapi grade, which before 1916 were all of small bore and were lined with timber, except for about 1000 ft. which were in solid rock. In the policy of repair and enlargement adopted concrete-lined tunnels with a minimum width of 16 ft. on tangent and 17 ft. on curves and an overhead clearance of 22 ft. were decided upon.

Two of the tunnels in this region were eliminated by relocation, as the change of line and excavation of open cuts was found more economical, and the others were enlarged and concreted to standard dimensions and type.

CONNAUGHT TUNNEL LINED. The five-mile tunnel of the Canadian Pacific Railway at Glacier, B. C., through the Selkirk Mountains, opened for traffic in December, 1916, was being completely lined with concrete during the year, the work being carried on without interference with traffic over the double-track line. An elaborate system of air compressor and mixers motor driven was arranged on two 75-ton flat cars which were coupled together so that one complete form, or 21 feet 6 inches of tunnel, could be blown without going outside for recharging. An elaborate power plant at the portal was connected by a transmission line and a 27-ton gasoline locomotive was used to move the plant cars in and out of the tunnel. The concrete was blown into collapsible forms in sections of 21 feet 6 inches so that this amount of tunnel could be completed at one setting, the rule being to finish one section each day. The forms were designed to clear all traffic.

ELK ROCK TUNNEL. The Southern Pacific Co. for its electrified suburban Newburg Branch south of Portland, Ore., decided to build a 1400 ft. single track tunnel through solid rock in order to secure increased safety and ease of operation, where the line followed around the base of the Cliff at Elk Rock on the west side of the Willamette river. Here there had been a trestle over 700 feet long and there was considerable danger from falling rock. A number of plans were considered including detours, a fill in the river, timber sheds, a three-span bridge, concreting the face of the cliff, etc., but the tunnel was adopted in preference on account of its low maintenance cost. The contract for this tunnel was let on a bid of \$228,000.

PITTSBURG TUNNEL. During the year the Liberty Tunnels forming a two-roadway street through the South Hills at Pittsburgh, Pa., were advancing at a rate of 10 feet per day or from 250 to 260 feet per month in each tube. These tunnels, described in the YEAR BOOK for 1920, were being constructed by full section face work and steam shovel mucking. The plan followed was to drill the face and blast out the rock in two sections, an upper or arch section, and a very short bench, about ten feet behind. As the material was blasted it was removed by a steam shovel. The timbering followed immediately in a single arch roof arrangement which was then lined with concrete, the lining being kept usually within 100 or 150 feet of the face.

SHANDAKEN TUNNEL. Active progress was made during the year in driving the 18-mile Shandaken Tunnel of the Catskill aqueduct, which was being built under the direction of the Board of Water Supply of the City of New York, to convey water from the Schoharie river underneath the intervening Catskill Hills into the Ashokan reservoir, within the Esopus watershed, whence it will pass with water from other sources through the Catskill aqueduct.

During the summer this work was progressing both north and south from six shafts, and in five of the twelve headings permanent roof support was required. During the month of August, it was stated 5030 lin. ft. of completed tunnel,

about 12 ft. wide and 14 ft. high, was excavated, the maximum progress being in the north heading at shaft 3, where 591 lin. ft. was excavated with two drilling and two mucking shifts. The excavation amounted to about 6 cu. yd. per linear foot of tunnel.

HETCH HETCHY TUNNEL. Progress was made during the year on the Hetch Hetchy tunnel of the San Francisco water supply system, and judging from the rate of advance it was estimated that the tunnel driving would be completed by March 1923, as on Nov. 1, 1921, a total of 45,073 feet had been driven, leaving approximately 50,000 feet more to be done. In October, 1921, a record was made when the 10 headings of the mountain division tunnels were driven a total of 4060 ft., which is the highest monthly progress yet made on the project. In the total of 679 shifts worked in October the average heading advance was 5.98 ft. The number of drill holes in each round varied from 25 in altered slate and schist to 50 in monolithic granite.

PROPOSED RULES FOR TUNNEL AND COMPRESSED AIR WORK. The Industrial Board of the New York State Department of Labor conducted hearings on proposed rules relating to tunnel construction and work in compressed air, at Buffalo, Rochester, Syracuse, and in New York City late in the year.

PROPOSED WORKING PERIODS IN COMPRESSED AIR IN NEW YORK

Air pressure, lb. per sq. in.	Total length of working period, hours	Number of periods in compressed air	Length of each period, hours	Rest interval between work periods, hours
0-21.....	8	2	...	$\frac{1}{2}$
21-30.....	6	2	3	1
30-35.....	4	2	2	2
35-40.....	3	2	$1\frac{1}{2}$	3
40-45.....	2	2	1	4
45-50.....	$1\frac{1}{2}$	2	$\frac{1}{2}$	5

The proposed hours of labor in compressed air are shown in the accompanying table, while other features of the rules relate to permissible periods of decompression, wash and rest rooms, sanitation and ventilation, medical attendance, and other subjects. Rules covering the transportation, storage, and use of explosives were proposed in considerable detail.

HUDSON RIVER VEHICLE TUNNEL. Disagreements between the New York and the New Jersey commissions, concerned with the construction of a vehicle tunnel under the Hudson river, resulted in a deadlock, so that little was accomplished during the year.

Both commissions approved an agreement with the Erie R. R. involving the site of the ventilating shafts on the Jersey side.

The bids for the construction of the Jersey shafts were rejected, and the plan was to include the Jersey shafts in the main tunnel contract. Furthermore, Clifford M. Holland, chief engineer, was authorized to have printed the contract and specifications for the under-river tunnel, the main portion of the project, so that the contract could be let in the following year.

Much of the trouble was due to the fact that the board of consulting engineers was summarily "dismissed" by the New Jersey commission, without the concurrence of the New York commission, and an appeal to the courts was to be

made by the "dismissed" engineers. The New Jersey Interstate Bridge and Tunnel Commission, at a meeting held November 29, authorized a bond issue of \$15,000,000 to cover expenditures during 1922 for the Hudson river vehicular tunnel and the Delaware river bridge at Camden. According to the estimates of Clifford M. Holland, chief engineer of the vehicular tunnel, that project would require \$12,793,000.

The commission also authorized the beginning of negotiations to acquire land on the Jersey side for the installation of the tunnel construction plant.

N. Y. HARBOR TUNNEL. To develop the plans evolved by the Board of Estimate of the City of New York for a projected freight and passenger tunnel under New York Harbor between Staten Island and Brooklyn, Jesse B. Snow was appointed as tunnel engineer at a salary of \$12,000 a year, Col. W. J. Wilgus and John F. Sullivan as consulting engineers, each at a salary of \$10,000 a year. Arthur S. Tuttle, chief engineer of the Board of Estimate, was to be in general direction of the tunnel project.

In becoming the engineering head of the proposed tunnel, Mr. Snow relinquished his work as principal assistant to Clifford B. Holland, chief engineer to the New York-New Jersey Tunnel Commissions on the Hudson river vehicular tubes.

SECOND SIMPLON TUNNEL. The second Simplon tunnel advanced to completion during the year by rapid stages. At the end of April the length of completed and fully lined tunnel was 19,408 m., out of a total length portal to portal of 19,825 m., while the entire excavation was completed September 13. This second tunnel was built by enlargement of the pioneer or ventilation heading driven parallel to the first tunnel when the latter was constructed. Naturally the enterprise was delayed by conditions during and subsequent to the war, but the second tunnel was virtually ready for traffic the end of the year.

PROPOSED THAMES TUNNEL. During the year it was reported that parliamentary sanction was being sought by a private company for the construction of a tunnel at the mouth of the Thames to connect the north and south banks. This project aimed to solve the difficulty due to the fact that a substantial amount of shipping was berthed in Tilbury Docks on the north side with freight consigned to Gravesend which is on the south. This made it necessary for such freight to travel to Gravesend via London, a distance of nearly sixty miles, notwithstanding the fact that Tilbury and Gravesend were in such close proximity. The scheme for the tunnel developed extensive support throughout the country, and commercial interests were urging its early commencement.

TURBINES. See **WATER WHEELS AND TURBINES**; **STEAM TURBINES**.

TURKESTAN. A division of Russia in Central Asia, comprising the provinces of Samarkand, Ferghana, Syr-Darya, and Semirychensk; with a total area of 420,807 square miles; and a population, estimated, Jan. 1, 1915, at 6,684,400. Chief towns: Tashkent, 271,650; Kokand, 113,700; and Omsk, 129,422. Turkestan is also the name of a dependency of China lying to the north of Tibet which forms a part of the so-called New Dominion or Sin-King.

TURKEY. Formerly the Ottoman empire. A country of Asia Minor bordering the eastern shore of the Mediterranean; limits still indeterminate at the close of the year (see below).

AREA AND POPULATION. Before the war Turkey was made up of: (1) Turkey in Europe which had been greatly reduced by the Balkan wars from an area of 65,350 square miles to 10,382 square miles, and from a population of 6,130,200 to 1,891,000. (2) Turkey in Asia, including, Anatolia, Arabia, Kurdistan, Mesopotamia, Palestine, and Syria. (3) Certain islands in the Mediterranean. The Asiatic dominion before the late war had an area of 602,842 square miles and a population of 18,892,900. Under the Treaty of Sèvres, August 10, 1920, as noted in the preceding YEAR BOOK, Turkey would have been reduced by 438,750 square miles of territory, and about 12,000,000 in population, but the treaty was not ratified and after being somewhat modified in favor of Turkey in March, 1921, it remained a dead letter; and owing to the war with the Greeks in Asia Minor, the separate treaty of France with the Angora government and other events, noted below under *History* and in the article, *WAR OF THE NATIONS*, the boundaries of Turkey were still indeterminate at the close of the year. The chief towns of the former Ottoman empire with their estimated populations were as follows: Constantinople, 1,000,000; Smyrna, 375,000; Damascus, 250,000; Aleppo, 259,000; Bagdad, 225,000.

PRODUCTION. The soil for the most part is fertile, and the interests are chiefly agricultural, but the methods are primitive. The chief products are: Cereals of all kinds, tobacco, coffee, cotton, madder, gums, opium, and a great variety of fruits and nuts. The production of wheat in 1919 was 2,453,680,000 kilos; of barley, 1,669,820,000 kilos; tobacco was cultivated on an area of 59,943 acres. Live stock was as follows: Cattle, 4,118,000; horses, 630,000; mules, 85,000; asses, 825,000; goats, 2,065,000; in each case a great falling off from the figures of 1913. The Asia Minor provinces are rich in minerals which, however, have been little worked. Industries are carried on by primitive methods.

COMMERCE. Since Turkey is primarily an agricultural and stock-raising country, the foreign trade has not been important and it amounted to very little after the armistice. The imports exceeded the exports in 1919 and 1920 by about three to one. Trade has been hindered by the lack of transport facilities which are the country's chief needs.

FINANCE. Budget figures for three years follow:

	1918-17 £T	1917-18 £T	1918-19 £T
Revenue.....	25,612,572	23,584,165	34,016,698
Expenditure.....	39,724,720	53,304,511	51,969,711

After the budget of 1918-19, noted in the above table, no regular budget was voted, the whole financial system having fallen into utter confusion after the armistice, and on Oct. 1, 1920, the Allied Powers established a provisional system of control through delegates in the public debt administration. The Angora government (de facto) issued budget estimates for 1921 as follows: Revenue, £T79,333,440; expenditure,

£T86,519,650. The total debt was placed, August 31, 1919 at £T465,673,338 of which £T234,155,138 represented war issues and the last external debt. Toward the close of the year the further depreciation of the Turkish pound accentuated the already acute commercial situation in Constantinople. On October 5 the Turkish pound dropped to 53¾ cents. During the week ending October 22 it continued to depreciate until the low level of 41¾ cents was reached—that is, one dollar was equivalent to 237 piasters. The pound sterling reached the high level of 915 piasters, the highest since 1878, when it required 1080 Turkish piasters to buy one pound sterling. Despite charges to the effect that the depreciation of the Turkish currency in relation to the dollar and pound sterling was caused by speculation, an analysis of the Turkish trade statistics for 1919, 1920, and the first eight months of 1921 showed conclusively that speculation was not the primary cause. The principal reason for the further depreciation of the Turkish pound may be charged to the adverse trade balance existing since the armistice. The lack of demand for Turkish pounds abroad and the increasing demand in Constantinople for dollars and the pound sterling could result only in the fall of the Turkish pound. The Turkish Minister of Finance suggested the following remedies: (1) The establishment of a consortium of banks; (2) the declaration of a moratorium for a certain time; (3) diminution of the commission given by banks to their exchange brokers; and (4) limiting the sale of credits in the currency of the countries from which Turkey gets most of its imports to the Imperial Ottoman Bank. The Minister of Commerce suggested a plan to encourage importations from Roumania, Bulgaria, and other countries whose currency was more nearly equal to the Turkish pound and discouraging further purchases, so far as possible, from the United States and England.

GOVERNMENT. The Sultan in 1921 was Mohammed VI who succeeded, July 3, 1918; and the ministry at Constantinople in 1921 was constituted as follows: Grand Vizier, Tewfik Pasha; Sheik-ul-Islam, Nouri Efendi; Foreign Affairs, Sefa Bey; Justice, Arif Hikmet Pasha; War, General Zia Pasha; Finance, Abdullah Bey (Acting); Public Instruction, Rashid Bey; Public Works, Abdullah Bey; Commerce and Agriculture, Hussem Kiazim Bey. Real power had passed from Constantinople in 1921 to the Nationalist government at Angora, as noted in the succeeding paragraphs on *History*.

HISTORY

WAR IN ASIA MINOR: FIRST GREEK OFFENSIVE.

The chief event of the year was the war between the Greeks and the Turkish Nationalists. In 1919 and 1920, the Greek army was occupying the coast regions of Asia Minor which were afterwards assigned to them by the Treaty of Sèvres. This treaty in 1921, became a dead letter as noted above and the Turks had at no time accepted the assignment of any territory whatsoever in Anatolia to the Greeks. Hence the Greeks had either to give up all the claims that had been made by the Venizelos government including those which had been conceded by the Allies, or else fight on their behalf. The fact that the campaign was conducted in the heart of Anatolia did not necessarily

indicate the Greek intention to conquer that region. They fought there because that was where they found the Turkish army. In the spring of 1919 the Greeks occupied Smyrna, and in 1920 the Venizelist general of the Greek army established himself in strong positions after a successful campaign. King Constantine lost his former Allies and he imperiled his military success by dismissing the experienced Venizelist generals. The principal events in the spring were in their chronological order as follows: Within the first two weeks of January the Nationalist leader of the Turks, Mustapha Kemal Pasha, with headquarters at Angora, 215 miles south of Constantinople, made an attack on the Greeks along the Smyrna front, at the same time that Turkish forces moved against the French front in Cilicia. The first Greek offensive began, March 24, under General Papoulas when two groups of the Greek forces advanced for the purpose of reaching, respectively, Afium-Karahissar and Eskishehr, destroying at the same time the railways in the region. Both groups reached the points aimed at, March 28 and March 30, but owing to the failure of the centre to advance and thus connect the two divisions, the operation was unsuccessful. The Greeks lost Eskishehr (April 2) and fell back to Oushak and Brusa, losing about 4000 men in killed and wounded and inflicting about the same or a greater loss upon the Turks, of whom, moreover, they were reported to have taken 6000 prisoners before Afium-Karahissar in a counter-attack on April 14. The Turks retained control of the railways. According to the accounts in the press the moral advantage appeared to rest with them. The Greek general now determined on measures to make amends for this reverse. He had about 150,000 men in the field, but in May the number was increased by the addition of three new classes to about 198,000 men and at the same time an additional force was called to the colors in Thrace which along with the quota from Smyrna brought the total to about 233,000. Still other classes were called until the army in the field reached approximately 300,000 while in reserve there were about 100,000.

SECOND GREEK OFFENSIVE. The second offensive began on June 10 from Brusa and Oushak in the south and aimed respectively at Kutaia, Afium-Karahissar, and Eskishehr. Other forces advanced from Bithynia and succeeded in occupying several Turkish positions about 20 miles to the east of Kutaia. At the same time the column starting from Oushak advanced in the neighborhood of Kutaia which was therefore between two forces of the Greeks. The battle at this point was the first great engagement. The Greeks surrounded the Turks on three sides and tried to prevent their escape to Eskishehr. Five Greek divisions were engaged in carrying out this encircling movement and the attack was made with great rapidity. The counter-attacks of the Turks were at once repulsed and the Turks were driven back after a bloody battle before Kutaia, July 16-17, but the Turks still had the railway open to them at Eskishehr and succeeded in escaping after the battle. The Greeks followed them, systematically fighting their way on both sides of the railway, while the northern group of the Greek forces fought its way down from Brusa, routing a force of 5000 Turks at Biledjik where they took a large number of prisoners. The

two Greek divisions met at Eskishehr, where they encountered a fierce Turkish counter-attack, but owing to the excellent artillery work of the Greeks it was held in check and the Greeks advancing captured the Turkish position and entered Eskishehr, July 21.

THIRD GREEK OFFENSIVE. The Greeks made sure of their positions and established their communications. Many of the Turkish troops deserted and the Greek general declared that their army had been destroyed. On August 15 the Greeks were occupying a line seventy miles east of Eskishehr. They began a forward movement on that date, placed three columns on the march, and came into conflict with the Turks, August 18, at a point forty-three miles southwest of Angora. Reports of the losses on each side were conflicting. The Greek campaign had for its objective the Sakharra river and it was carried on with great vigor, dispersing the flank attacks of the Turks and finally turning the Sakharra line, August 23-September 2.

The operations of the Greeks down to this time were remarkably successful, but the Turks tried to minimize their reverses and the reports of the two sides were contradictory. The Greeks contented themselves for a time with an energetic defense of the positions they had gained on the east bank of the Sakharra. The Turks sought to produce the impression that they had checked the Greek advance which was aiming at Angora. Nevertheless the Greeks had certainly succeeded in driving back the Nationalists beyond the Sakharra river. There were rumors at this time of a peace more on the part of Greece, but it did not seem likely that the Turkish Nationalists would grant the Greeks demands. They had in fact declared through Kemal that they considered Eastern Thrace inseparable from Turkey and that they would carry on the war for years if necessary to drive the Greeks out of Asia Minor. They held out for the return of Smyrna and Eastern Thrace to Turkey.

Early in September, however, the Turks rallied and in a ten days' battle routed the Greeks who had been exhausted by their continuous marching and their long battles. It was said that if the Turks had not run out of supplies they would have destroyed the Greek army which fell back to the lines in front of Eskishehr and Afium-Karahissar. The Greeks now began a retreat in the course of which they were said to have lost 25,000 men and the Turks over 50,000 men. This movement continued until September 25, when the Greeks reached the old Turkish line from Brusa to the south by way of Eskishehr and Afium-Karahissar. It was given out by the Greek government at this time that the military operations for the season were completed; but within five days the Turks made a counter-attack with a force placed at about 60,000 men and after a battle of nine days were defeated with heavy loss. This gave great encouragement to the Greeks, but meanwhile the Turks seemed not to be disturbed by their reverses and even to be reporting them as successes. At the very moment that the last unsuccessful attack was beginning Kemal was invested at Angora with the office of marshal and hailed as victorious. On September 25 the Greek High Commissioner in Smyrna published a programme which indicated Greek administration of the old Smyrna zone, although the zone had been

bestowed on Greece provisionally as a mandatory power under the treaty of Sèvres; and at the same time it was announced by the Greek minister of war that the government intended to declare the annexation to Greece of the territory occupied by Greek troops. At the close of the year, according to press reports, the Greeks had about 40,000 effective troops holding the lines in front of Afium-Karahissar, while the Turks could muster about 50,000, and the prevailing view was that fighting would not be resumed till spring. Many reports of massacres were published, according to which Turkish brigands massacred Christians and Christian brigands massacred Turks, the reports varying with the sympathies or interests of the reporters, but seeming to indicate that while the Greeks were guilty of occasional butcheries of the civil population the Turkish atrocities were more systematic and on a larger scale.

THE GREEK GOVERNMENT AND THE WAR. On October 15, the Gounaris government received a vote of confidence by a large majority, the supporters of Venizelos being too weak to offer any effective opposition. The situation in Asia Minor as outlined at that time by the prime minister, was as follows: The Greek forces according to him occupied six times as much territory as had been allotted to Greece by the treaty of Sèvres. This treaty had bestowed upon Greece 16,000 square kilometres and the Greeks were occupying in October about 100,000 square kilometres. The recent occupation of the Bagdad railway following the Greek victory of Eakishehr, had given the Greek forces a united front and decided them to advance against Angora. The recent retreat of the Greek army had been deliberately undertaken and had been carried out without disturbance, although the Turks sent out many false reports indicating that they had driven back their enemy. By October 15 Greece was in possession, according to the prime minister, of all the railway communications, whereas what was left of the enemy forces had been pushed back to a point far from the Greek lines and had been deprived of the means of communication and of provisioning. The international situation was still highly complicated. The state of war between Turkey and Greece had continued without regard to the armistice between Turkey and the Entente. The Turks had paid no attention to the terms of the armistice any more than they had to the terms of the Treaty of Sèvres. The situation was thus abnormal and Turkey was really at war with the Powers with which she had signed the armistice. Furthermore, the real centre of government in Turkey had shifted. It was evident that the government at Constantinople was a mere shadow and that the Nationalists under Kemal held at present the actual control. The prime minister declared that he would negotiate on behalf of Greece on the basis of the status quo which was far more advantageous to Greece than it had been at the time of the Treaty of Sèvres. The vote of confidence in detail was as follows. Out of 312 members of the Assembly, 218 voted for the ministry without reserve; 19 voted for it with reservations, while the Venizelists to the number of 71 withdrew from the Chamber.

THE ANGORA GOVERNMENT. The remarkable success of the Nationalists during the last two years brought Mustapha Kemal Paasha into prominence as among the greatest leaders in the Near East. He had been sent out from Constanti-

nople in 1919 as an inspector in the northern military district of Anatolia. When the Greeks occupied Smyrna, May 15, 1919, he collected a mob of patriots and refugees which formed the nucleus of the Nationalist army. Surrounded by enemies on all sides this small Nationalist force held its own and steadily increased in numbers. From the first he met with some favor with the French and from the Italians, but was opposed by the British. His campaigns against the Armenians of the Erivan Republic was successful, and by the end of 1920 his army had become a considerable force and his headquarters at Angora were the real centre of authority in Turkey. The government consisted of a single chamber of 350 elected deputies, known as the Grand National Assembly and representing all the divisions of the old empire except Syria, Egypt, the Arabian peninsula and the Basra and Bagdad provinces of Mesopotamia. But it was recognized that the old empire was really lost and the National assembly was considered as representing only Thrace, Constantinople, Smyrna, the Adana Plain, and the Mosul province of Mesopotamia, along with certain regions now held by foreign Powers which it was hoped would be restored to Turkey. The deputies were subject to the Sultan at Constantinople and the Assembly contributed to his civil list. In 1921 the contribution amounted to £1,551,012, but in 1921 the Assembly declared that it could not recognize any government at Constantinople. It elected its own president and ministry, the president having no veto and the ministry being responsible to the Assembly. The cabinet consisted of ministers for the following departments: Land and sea defense; revenue; audit; interior; posts and telegraphs; commerce and industries; public health; justice, education, and transport; and sacred law. Kemal held the office of president which roughly corresponds to that of grand vizier in the old government at Constantinople. The attempt to induce him to accept a dictatorship in 1920 was unsuccessful and he retained the office of president in 1921. He was born in 1882, educated at the War College in Constantinople and traveled widely in Europe. During the Young Turk movement he was one of the leaders and he held out for the cause after its defeat. At the time of the armistice he was generally regarded as the strongest man in Turkey. The policy of the new Nationalist government has included the following features: In the first place it abrogated the capitulations which the Turkish government had decreed soon after the war began. These granted immunity to foreign residents and tended to cover all manner of abuses. On January 24 the Angora Assembly formulated a new legal system re-dividing the country into administrative units, which took over many of the functions formerly discharged by the central government. The powers remaining to the general legislature include the administration of foreign and domestic affairs, and the army. The entire system rested on universal suffrage without any discrimination as among Christians, Jew and Moslems.

As to the actual results of the administration of the Nationalist government they were somewhat indefinite. Aside from having fought a successful defensive war, it seemed not to have made any especial progress in government. It had, however, made itself the real power in the Turkish state though nominally regarded as a rebel government

by the authorities at Constantinople. The orders of the government were respected throughout Turkey while those of Constantinople had no force. There were signs that the Constantinople authorities really acquiesced in this state of affairs and on certain occasions they worked in harmony with the Angora government. As to relations with foreign Powers, the Angora government was on friendly terms with France and Italy and receiving their diplomatic support. Moreover, it had entered into an alliance with Bolshevik Russia and the Caucasus republics. In theory the National Assembly was the head of the state, both executive and legislative, but in the crisis of the Greek war, during the summer, the Assembly made Mustapha Kemal dictator and afterwards extended his term to January. A social reform programme was developed on paper, but in the disturbed conditions of the year it was not put into effect. The important point was the relations of the subject races in Turkey. Mustapha Kemal had been a leading member of the Young Turk party and he still cherished its ideals. These included the transformation of Turkey into a true national state in which citizens must think politically as Turks whatever their racial or religious differences. The policy of the Angora government in this respect involved theoretically the protection of the minorities of different race or religion. It recognized the principle of cultural autonomy and professed to give the racial and religious minorities the same protection that had been accorded under the Treaty of Versailles to these minorities in the states of eastern Europe. The national pact which lays down these principles refers to Anatolia and Thrace as "the part of the empire, peopled by a Mussulman and Ottoman majority united by religion, race, and origin, whose different elements nourished toward each other, sentiments of consideration and of reciprocal devotion." As parts of the regions included under this description contained Greeks, Armenians and others, who had suffered from Turkish massacres, the situation seemed less harmonious than the words implied and it was believed that the Turkish authority would be enforced without mercy as it had been in the past, if there was any attempt at resistance. The opponents of the Nationalist government argued that its intense nationalism would lead inevitably to cruelties toward the subject races in the future; in other words, that it would be based, as it had been in the past, on enforcement by massacre.

FOREIGN RELATIONS. On February 5 Kemal declared that his government was the true government of Turkey, and in this he was supported by French and Italian influence. Both France and Italy favored recognition, but Great Britain was opposed. In March secret treaties were formed by France and Italy with the Angora government. The Nationalists were also on good terms with Soviet Russia with which, on March 16, a treaty was signed at Moscow, whereby Russia was to recognize Constantinople as the capital. Other terms were: The abandonment of Batum to Georgia by the Turks, and recognition of its autonomy; the division of Armenia among Georgia, Azerbaijan, and Turkey. The Russian and Turkish governments each demanded an international arrangement in respect to the territories bordering on the Black sea and the Straits. Treaties were also formed with the

Caucasus republics under Bolshevik control. There was a report which, however, was not substantiated though frequently credited, that the Turks had received \$5,000,000 in gold from the Bolsheviks. The alliance with Russia brought them effective aid in the matter of war material, while the alliance with the Caucasus republics strengthened them against possible aggression from the western Powers. More important was the treaty with France described in the following paragraph.

TREATY WITH FRANCE. On October 30 the French government ratified a treaty with the Turkish Nationalists at Angora, which provided for a state of peace and for economic coöperation between the two governments. According to the agreement France was to withdraw from Cilicia in return for various economic advantages, including the operation of the Bagdad railroad from the sea to the Tigris river and certain important mineral concessions. This agreement was significant as showing the friendship of France for the Nationalists and recognising the government at Angora as the ruling power of Turkey. It had been ratified at Angora before it was submitted to Paris. Further details of the agreement were as follows: Exchange of prisoners; amnesty for political offenders; an understanding that Turkey should guarantee the protection of minorities; establishment of a mixed commission to draft customs regulations between Turkey and Syria. In the letter from Kemal Pasha addressed to the French government on this occasion, the desire was expressed that French specialists be supplied to the Turkish technical schools. France held Syria under the mandate of the League of Nations and the boundaries between Turkey and Syria were laid down in the Treaty of Sèvres, which treaty was subsequently disregarded. From the end of the war France had occupied Cilicia, claiming it as a zone of influence and there were frequent conflicts between the French and the Turks over the region. There had been criticism in France of this policy as wasteful, and it was decided that the attempt to keep Cilicia was not worth the sacrifice that France would have to make. About 15,000 French troops had been latterly engaged there, and would be set free as a result of the above agreement. The treaty was hailed in France as a victory over British diplomacy which had hitherto, according to the French, had the upper hand. In the Near East France had lost Mosul and in the division of Turkey England had received by far the greatest share; the British also held the leading place in Constantinople. The attitude of the British toward the French treaty was illustrated by Lord Curzon's complaint that France had stolen a march on her Allies. See **WAR OF THE NATIONS.**

FRENCH AND BRITISH ATTITUDE. The elections of 1920 showed that the Greeks preferred their former king to M. Venizelos. In France the criticism of Greece on the ground of this preference and the hatred of Constantine were exceedingly bitter. In England there was no such general resentment against the course that Greece had taken. It was there generally understood that the departure of Venizelos did not mean that Greece had renounced her national ambitions. In this respect the British government was more clear-sighted than the French, for the Greeks continued their forward policy in Asia Minor.

As to the outcome of the war between Greece and Turkey British and French opinion was divided, the former inclining to the side of the Greeks, who it was believed would conquer, and the latter favoring the Turks. In Great Britain it was thought that a Greek victory would bring a clear and righteous solution of the Far Eastern question. The British had perhaps hoped that the question of Constantinople would be so regulated at Angora as to satisfy at the same time the nationalism of the Greeks and the British desire to control indirectly the Straits of Dardanelle. But the year passed without a military decision in favor of the Greeks, and Greece was obliged to give up the hope of settling the question on her own terms with the support of England. The British press began now to complain of the mistaken policy followed by the government, saying that the support that had been rendered to Greece was causing great embarrassment in various parts of the empire; that, for example, it had been the occasion of the disorders of the Malabar region in India and that among the Moslems generally the British attitude toward Greece had aroused the bitterest resentment and had endangered British authority in the Indies, Afghanistan, and other parts of the East. The British government was blamed because instead of renewing the bonds of friendship with the Turks after the war, it had preferred to enter into the Treaty of Sèvres and to ally itself with King Constantine. Thus in certain quarters, British opinion inclined to the same side as the French which had ever since the war been sympathetic toward the Turks. Among French writers in 1921 the most amiable tone was employed in respect to the Turks and it was said that the war-like ideals of France were traditionally in harmony with the generous spirit of this essentially military people. There was much sentimental writing on this subject on the part of the French, but at the basis of it was of course the belief that supporting Turkey was to the best interests of France in the Near East. At the end of the year, however, the French policy in respect to the Treaty of Angora seemed likely to be modified on the overthrow of the Briand ministry in December as the new prime minister, Raymond Poincaré, had accepted certain of the British criticisms of it, and disapproved it on the ground that it divided Allied Policy and that France was not justified in conceding to the Nationalists territories of which she had only a mandate. After the withdrawal of French troops began, November 28 the Christian minorities in Cilicia were reported to have suffered a series of savage outrages from the Turks. Many Greeks and Armenians withdrew at the same time as the French, but a considerable number remained and these petitioned the British and French governments and the League of Nations for relief from famine and for aid in removal to some other country.

The British prime minister, Mr. Lloyd George, set forth the question of Turkey, Greece, and the Treaty of Sèvres, August 16. He said that it would have been better if, in accordance with the advice of Venizelos, the prime minister of Greece, the insurrection of the Nationalists in Turkey had been dealt with at once. It would have been possible then to suppress it, but now it was too late to use force for the purpose of bringing the Nationalists and the Greeks to terms, and they must be left to fight it out. As to the com-

plaint that the matter had never been referred to the League of Nations, it was unfounded, for the League of Nations would only have had such means of dealing with it as the Allies could have placed at its disposal, and none of the Allies would have been ready to send an army into the country pending a decision. The war would have this advantage, in that it would bring both sides to a realization of its cost. On each side there had been over-confidence.

IRAQ. A new division was constituted in 1921 out of the vilayets of Basra and Bagdad together with a section of Mosul, with an area of about 140 square miles and a population of about 2,000,000. This new state was placed under the rule of the Emir Feisal, or Faisal, third son of the King of the Hedjaz, who had been nominated by Lord Allenby at a conference at Cairo. The crowning of Feisal as King of Irak took place at Bagdad, August 23, in the presence of the British High Commissioner for Mesopotamia and Mohammedan representatives, and was followed by a personal message of congratulations from King George of England. Feisal was born in the Hedjaz, 1885, studied at Constantinople, and became afterwards a member of the Turkish Chamber of Deputies and a leader of the Arab Nationalist party at Damascus. He was obliged by Djemal Pasha to accompany him when he was appointed Governor of Syria at the time when Turkey was about to side with Germany. During the war he was virtually a prisoner. He was taken into the confidence of Colonel Lawrence, when the latter negotiated with Hussein concerning the setting up of a new kingdom of the Hedjaz, and after the war Feisal was elected King of Syria by the Arab congress at Damascus. Then followed the trouble with the French which resulted in his being driven out by Gen. Gouraud, the French High Commissioner. (See preceding YEAR BOOK.) Feisal presented his case at Rome and London where he passed much of the time between December, 1920, and April, 1921. The British secured his support for their projects in Mesopotamia, and he undertook to make good his claim there by putting down Arab disturbances. He arrived at Basra, June 23, and began his campaign which resulted in his choice as ruler of the new state of Irak.

SITUATION AT THE CLOSE OF THE YEAR. The state of war with Greece still continued at the close of the year. Difficulties with the Bolsheviks in the rear of the Turkish forces were reported, and through the assistance of the Kurds arms were said to be supplied by Russia for the purpose of setting up a new state on the Black sea. The aggression of the Bolsheviks was attributed to the transfer to France in the Angora treaty of economic concessions that had already been granted to the Soviet government. The problem of peace in the Near East was under discussion among the Allies at the close of the year and was one of the subjects to come before the approaching conferences.

DEATH OF TALAAT PASHA. Former Grand Vizier and leader of the Young Turks was assassinated by an Armenian student, March 15, in Berlin where Talaat was engaged in the interest of the Turkish Nationalists. Owing to his association with the Armenian massacres during the war, the publication of his memoirs after his death caused a great sensation, especially in Turkey. They outlined the relations with Germany during Turkey's international isolation after the Balkan

wars, culminating, according to his narrative, in a definite alliance with Germany in the summer of 1914; and they gave instances of the pressure brought by Germany which forced Turkey much against her will into the conflict. As to the treatment of the Armenians the published portions of his memoirs admitted many abuses and atrocities, but placed the chief blame on the Armenians themselves on the ground that armed by Russia bodies of Armenian bandits, supported and encouraged by the civil population, attacked the Turks in the rear. "Every Armenian church it was later discovered was a depot of ammunition. In this disloyalty they killed more than 300,000 Mohammedans."

TUSKEGEE NORMAL AND INDUSTRIAL INSTITUTE. A non-sectarian, co-educational normal, and industrial institution for the higher education of negroes at Tuskegee Institute, Ala.; founded by Booker T. Washington in 1881. The enrollment for the fall of 1921 was 1918 and for the summer session, 660. There were 238 members in the faculty. President, Robert Russa Moton, LL.D.

TUSTIN, ERNEST LEIGH. Lawyer and city official, died at Baltimore, Md., December 19. At the time of his death he was Director of Public Welfare in Philadelphia. He was born at Lewisburg, Pa., Dec. 20, 1862, graduated at Bucknell University in 1884 and was admitted to the bar in 1886. He practiced at Philadelphia after 1887.

From 1905 to 1912 he was a member of the Pennsylvania senate. He held in succession important offices in the city's public and private institutions.

TYPHOID FEVER. Owing to an oversight the articles on **TYPHOID** and **TYPHUS FEVER** in the **YEAR BOOK** for 1920 were run together, through the omission of the title of the second article. The latter really begins with the paragraph in the second column on page 681 in which the opening sentence is "In an editorial article in the *Medical Record*, etc.;" and all of the text from this point on refers to typhus fever only.

In the province of typhoid fever there is nothing special to report for 1921. In a letter from Dr. John Dill Robertson, Commissioner of Health of the City of Chicago, it is stated that the diagnosis of this disease is made by physicians without recourse to serological or bacteriological tests—that is, these tests are not obligatory in reporting the case. The theoretical result of this omission should be to include a number of cases which are not technically typhoid, and thus add to the alleged typhoid incidence. But as a matter of fact Chicago has less typhoid than New York. The very low typhoid incidence in Chicago—but 31 cases in 1919—gave rise to the belief that serological and bacteriological tests, by excluding doubtful cases, was partly responsible. The letter of the commissioner shows that this does not follow: had these tests been made the incidence might have been still lower.

U

UBANGI-SHARI. See FRENCH EQUATORIAL AFRICA.

UGANDA PROTECTORATE. A British protectorate in East Africa, to the north of the former German colony of German East Africa (now Tanganyika). Total area, 110,300, including 16,377 square miles of water; population, March 31, 1919, estimated at 3,318,217, all natives with the exception of about 3500 Asiatics and 847 Europeans. The chief product is cotton, which is grown almost entirely by natives. The area under cotton in 1920 was estimated at 155,000 acres. Other products include: Coffee, cocoa, Para rubber, and oil seeds. Total exports, 1919-20, £1,828,537. The chief exports were: Cotton which far exceeded any of the others; coffee, oil seeds, rubber, hides and skins, etc. Budget for 1919-20: Revenue, £495,548; expenditure, £465,117. Governor and Commander-in-Chief at the beginning of 1921, Sir R. T. Coryndon.

UKRAINE. A portion of Russia known as Little Russia, comprising for the most part the former Russian provinces of Podolia, Volhynia, Kiev, Poltava, Chernygov, Kharkov, and Ekaterinoslav, together with parts of the adjoining provinces. Additional regions are claimed by the Ukrainian government. Total area including portions claimed, 498,100; total population, 46,000,000 of whom 32,662,000 were classed as Ukrainians; 5,376,800, Russians; 3,795,760, Jews; 2,079,500, Poles. As to religious denominations the great mass belong to the Ukrainian Orthodox Church. The independence of Russian Ukraine was proclaimed, Nov. 21, 1917, and of Austrian Ukraine, Nov. 19, 1918. A provisional government consisting of a directory of five members was established, Dec. 14, 1918, which with a ministerial cabinet of fourteen members was to remain in authority until a parliament representing the whole people was elected. Austrian and Russian Ukraine were united, Jan. 3, 1919. In that year the Allied Powers recognized Ukraine's independence. A Soviet form of government was established in 1920. Soviet Russia and Poland both agreed to recognize the independence of Ukraine in the treaty of Riga, March 19, 1921.

UNEMPLOYMENT. The severe unemployment which began in the fall of 1920 has continued through 1921 and was scheduled to reach its maximum intensity in January and February of 1922. Taking the figures of the Bureau of Labor Statistics for April, 1921, as fairly representative of the volume of employment in 13 manufacturing industries and in bituminous coal mining for 1921 as compared with 1920 we see that the largest decreases, 41.9 per cent and 40.9 per cent respectively, occurred in the automobile and leather industries. Iron and steel showed a decrease of 36.2 per cent and hosiery and underwear a decrease of 32.2 per cent. The smallest decrease, 0.4 per cent appeared in cotton-manufacturing.

While unemployment varied from month to month and there are no final figures on the subject, it was estimated at the President's Conference in October that from 3,500,000-5,000,000 persons were out of work, more than 800,000 of whom were ex-soldiers. The outstanding official developments of the year towards the solution of this serious problem were not legislative—California's law arranging for such extension of public works as will provide the maximum of employment in times of extraordinary unemployment, and Wisconsin's and Pennsylvania's attempted laws for unemployment compensation representing the only constructive legislative proposals, unless the laws in Illinois, North Dakota, and North Carolina creating free employment service be included. The important development of the year was the President's Conference on Unemployment which set unemployment before the country in an official way as primarily a problem of industry. Secretary of Commerce Hoover, chairman of the conference, names 13 concrete results already apparent since that body adjourned in October. They are:

1. Public opinion, for the first time in American history, has been focused on unemployment.
2. Municipal committees are organized for the first time on a nation-wide scale to relieve it.
3. A national clearing house is ready to assist the municipalities, with district representatives in the field.
4. Industry is assuming a share of its responsibility to the unemployed.
5. Municipal bond sales for public works have broken all previous records.
6. Congress has inaugurated important public works (amounting to \$150,000,000 for highway improvement alone).
7. A large appropriation for the United States Employment Service is before Congress.
8. A variety of other measures have been introduced in Congress to carry out the recommendations of the Conference, such as Senator Kenyon's bill for long-range planning of public works.
9. Impetus is being given public education as to the nature of the problem of unemployment.
10. A scientific basis for future research is now being laid.
11. The construction industries are being organized nationally and locally under public direction, as, for example, in St. Louis.
12. In other notoriously seasonal and intermittent industries, such as the soft coal industry, stabilization studies are being planned.
13. A thorough investigation of methods for controlling the business cycle is in progress.

The Conference is now in touch with all cities of the United States of more than 20,000 population and 19 regional directors cover practically the entire Union. They report regularly to Col. Arthur Woods, Chairman of the Emergency Committee, which has been on the job in Washington since the Conference adjourned.

Although municipal programmes for emergency relief are necessary measures, and although the development of public works is a much favored means of alleviating unemployment, an increasing number are turning towards the stabilization of employment as the cure for unemployment, and to this end are advocating some form of the unemployment insurance which obtains in many European countries. In this connection J. S. Gibson, president of the Waterfront Em-

ployers' Union of Seattle, and an employer's representative at the President's conference, says: "What is needed in modern industry is not 'captains of industry' but 'statesmen in industry' who are equal to the task of stabilizing modern industrial life. Failing in this, industry will be called upon to bear the cost of unemployment through insurance, just as it has but recently assumed the responsibility for industrial accidents." Professor J. R. Commons of the University of Wisconsin states the case in this way: "For the sake of capitalism, capitalists should look ahead and assume legal responsibility for security of jobs equivalent to their legal responsibility for security of investments." At the annual convention of the A. F. of L. in June a resolution recommending the National enactment of unemployment benefits was proposed and defended at some length although finally amended out of the resolution.

FOREIGN. In the course of the year almost every country gave evidence of excessive unemployment. The industrial depression was felt not only on the Continent and in Great Britain, but in Japan and such remote countries as Finland and Iceland. Since unemployment has been especially acute in Great Britain and Italy, European generalizations will not particularly apply to these two countries, but in the main the Bureau of Labor Statistics expressed in October the opinion that the high level of unemployment had been reached in most countries and that a slight improvement in the industrial situation was slowly setting in throughout the world.

In response to repeated demands a law was passed in Italy for the alleviation of unemployment by increased loans and grants for the acceleration of existing and the inauguration of new public works. The law authorizes greatly increased expenditure by the Ministry of Public Works on various engineering projects, including 61,000,000 lire (\$11,773,000, par) for bridges and roads, 78,000,000 lire (\$15,054,000, par) for hydraulic works, and 60,000,000 lire (\$11,580,000, par) for harbor and coast works. Two special extraordinary grants are also authorized, viz., 300,000,000 lire (\$57,900,000, par) for the construction of the Predil railway from Trieste to Cividale, and Creda to Tervio, and 60,000,000 lire (\$11,580,000, par) for alterations to the Val Sugana line from the former Austrian frontier. All these sums are, however, to be spread over a series of years, but 100,000,000 lire (\$19,300,000, par) will be provided during the fiscal year 1921-22. See GREAT BRITAIN and ITALY.

UNION COLLEGE. A non-sectarian institution for the education of men at Schenectady, N. Y.; founded in 1795. The enrollment for the fall of 1921 was 678 and 124 in the extension courses. There were 56 members in the faculty and 6 lecturers. The endowment for the year amounted to \$1,797,114 and the income to \$273,725. The library contained 53,000 volumes. President, Charles Alexander Richmond.

UNITARIAN CHURCH. The government of this denomination is under the American Unitarian Association. In its List of Churches there are 452, of which 406 were active in 1921. Incomplete statistics show the following: 291 churches reported a constituency of 74,652; 258 churches

reported a membership of 32,695, of which 3755 were additions in 1921. In 229 churches reporting there were 13,532 pupils in Church Schools and officers and teachers numbering 1648. Ministers with salaries were 261 and ministers in the Fellowship 505. The chief Unitarian periodical is *The Christian Register*. Other periodicals of the denomination are *The Beacon*, *The Pacific Unitarian*, and *Unitarian Word and Work*. Five religious tracts on denominational subjects were also published in 1921. Three academies are maintained and three divinity schools, of which the Divinity School of Harvard University, Cambridge, Mass., is the largest. Churches as well as missionaries are maintained in Africa, Australia, Great Britain, New Zealand, Tasmania, Denmark, Norway, Sweden, Iceland, Japan, Palestine, India, Holland, Switzerland, Belgium, France, Bulgaria, Egypt, Germany, Italy, Jamaica, Russia, China, and Brazil. Home missionary work is carried on among the American Indians in the United States. The Ninety-sixth Annual Meeting of the American Unitarian Association was held in Boston, Mass., May 24, 1921. Samuel A. Eliot is President and Louis C. Cornish, Secretary. Denominational headquarters are at 25 Beacon Street, Boston, Mass.

UNITED BRETHREN IN CHRIST. Phillip W. Otterbein, a missionary of the German Reformed Church, founded this denomination in 1768. It consists of two branches, the Church of the United Brethren in Christ and the Church of the United Brethren in Christ (Old Constitution). Statistics for both branches in 1921 showed a total membership of 367,934, churches 3724, and total valuation of church property \$14,494,975.

In 1919 (the latest statistics available) there were in the United Brethren in Christ, which is the larger branch, 347,981 church members, 2403 ministers, 3498 churches, 3223 Sunday schools with an enrollment of 410,149, 1219 parsonages, 2367 Young People's Societies having a membership of 98,562. In 1920 the church conducted The United Enlistment Movement which proved very successful and aroused much enthusiasm for the continuance of the church work. Of the seven colleges and theological seminaries maintained, the Otterbein University at Westerville, Ohio, may be mentioned. More important of the periodicals of the denomination, are *The Religious Telescope* and *The Watchword*, published at the publishing house at Dayton, Ohio.

The smaller branch of the church, the Old Constitution Church, in 1919 had about 20,000 communicants. It maintains three colleges and publishes *The Christian Conservator* at Ubee, Ind.

UNITED PRESBYTERIAN CHURCH OF NORTH AMERICA. This denomination is the strongest in the Middle West. In 1919 there was inaugurated the "New World Movement" to secure "the dedication of life, the enlistment of prayer, and the necessary funds to occupy and evangelize the fields and equip and endow the educational and missionary work under the control of the denomination at home and abroad according to the necessities of the present and immediate future." The church is composed of 13 synods and 70 presbyteries. In 1921 the ministers numbered 962, licentiate, 21, and congregations, 937. There were 986 church buildings with a valuation of \$13,543,213. Total contributions

for 1921 amounted to \$6,537,525, or an average of \$40.72 per member. The latest statistics for Sunday schools (May, 1919) showed 962 and 840 Young People's Societies. In 1920 the average salary of pastors was \$1772. Dr. W. M. Anderson is moderator of the church and D. F. McGill is the stated clerk with headquarters at 317 Home Ave., Bellevue, Pa.

UNITED STATES. POPULATION. The total population of continental United States as enumerated at the last census was 105,710,620. It comprised 94,820,915 white persons, 10,463,131 Negroes, and 426,574 Indians, Chinese, Japanese, etc. Of the white persons, 81,108,161 were natives and 13,712,754 were foreign born; and of the natives, 58,421,957 were born of native parents, 15,694,539 of foreign parents, and 6,991,665 were of mixed parentage—that is, having one parent native and the other foreign born. The corresponding figures for 1910 were as follows: Total population, 91,972,266; white, 81,731,957; Negro, 9,827,763; Indian, Chinese, Japanese, etc., 412,546; native white, 68,386,412; foreign-born white, 13,345,545; native white of native parentage, 49,488,575; native white of foreign parentage, 12,916,311; native white of mixed parentage, 5,981,526.

The increases between 1910 and 1920 in the total population and each class of population were as follows: Total, 13,738,354, or 14.9 per cent; white, 13,088,958, or 16 per cent; Negro, 635,368, or 6.5 per cent; Indian, Chinese, Japanese, etc., 14,028, or 3.4 per cent; native white, 12,721,749, or 18.6 per cent; foreign-born white, 367,209, or 2.8 per cent; native white of native parentage, 8,933,382, or 18.1 per cent; native white of foreign parentage, 2,778,228, or 21.5 per cent; and native white of mixed parentage, 1,010,139, or 16.9 per cent.

All these rates of increase except that for the Negro population were influenced directly or indirectly by immigration. The native white population of native parentage is recruited partly by births in the families of native whites of foreign or mixed parentage; the native white population of foreign or mixed parentage is recruited wholly by births in families where one or both parents are foreign born; and the foreign-born population is recruited wholly by immigration. The natural increase in the white population, due solely to excess of births over deaths, was probably at the rate of about 11 or 12 per cent during the decade.

The increase of only 367,209 in the foreign-born white population must not be understood as signifying a total immigration of only that number during the decade. The net increase is the resultant of three factors, namely, immigration, emigration of foreign-born whites, and deaths of foreign-born whites; and the gain through immigration exceeded by 367,000 the combined loss through emigration and death.

The white population formed 89.7 per cent of the total in 1920, as against 88.9 per cent in 1910; the native white population, 76.7 per cent in 1920 and 74.4 per cent in 1910; the native white population of native parentage, 55.3 per cent in 1920 and 53.8 per cent in 1910; the native white population of foreign parentage, 14.8 per cent in 1920 and 14 per cent in 1910; the native white population of mixed parentage, 6.6 per cent in 1920 and 6.5 per cent in 1910; and the foreign-born white

population, 13 per cent in 1920 and 14.5 per cent in 1910.

The native white population of native parentage increased between 1910 and 1920 in every State except New Hampshire and Vermont; the native white population of foreign parentage showed gains in every State except Iowa, Missouri, South Dakota, Nebraska, Kansas, Kentucky, Tennessee, Louisiana, and Nevada; and the native white population of mixed parentage increased in every State except Missouri, Kentucky, Tennessee, Mississippi, Louisiana, and Nevada.

AGRICULTURE. The detailed discussion under the title **AGRICULTURE** covers the general statistics for agricultural production in the United States and its dependencies. Special articles are carried on CORN, COTTON, WHEAT, RYE, BARLEY, HAY, POTATOES etc. See also in connection with agriculture in the United States the following articles: **AGRICULTURAL EDUCATION; AGRICULTURAL EXPERIMENT STATIONS; AGRICULTURAL EXTENSION WORK; AGRICULTURAL LEGISLATION; DAIRYING; FERTILIZERS; FOOD AND NUTRITION; HORTICULTURE; LIVE STOCK; SOILS; AGRICULTURE, UNITED STATES DEPARTMENT OF; FORESTRY, etc.** The articles on the individual States and territories contain paragraphs which give the area, production, and value of the more important crops in 1921.

MANUFACTURES. All the leading manufacturing industries in the United States are treated under separate titles such as **AUTOMOBILES; BOOTS AND SHOES; IRON AND STEEL; PAPER; RUBBER; SHIPBUILDING; SILK; TEXTILE INDUSTRY, etc.** For engineering works see articles on **BRIDGES; CANALS; PORTS AND HARBORS; SHIPBUILDING, etc.**

MINERAL PRODUCTION. For the latest available official figures of mineral production, see the article **MINERAL PRODUCTION**. Separate articles will be found on the more important minerals mined in the United States; see **COAL; COPPER; GOLD; IRON AND STEEL; LEAD; PLATINUM; SILVER, etc.** The articles on the individual States also contain paragraphs on *Mineral Production* where there were mining activities of note.

EDUCATION. For information relating to education see the articles on **EDUCATION in the UNITED STATES and UNIVERSITIES and COLLEGES**. Under separate headings will be found articles on the most important universities and colleges such as **HARVARD, YALE, PRINCETON, CHICAGO UNIVERSITY, COLUMBIA, etc.**

RELIGION. Statistics and other information relating to the various denominations will be found under the several heads of such denominations, for example, **BAPTISTS; CONGREGATIONALISTS; PRESBYTERIAN CHURCHES; METHODISTS; ROMAN CATHOLICS; PROTESTANT EPISCOPAL CHURCH, etc.**

OUTLYING POSSESSIONS. For the outlying possessions of the United States, see the articles, **ALASKA; GUAM; HAWAII; PHILIPPINES; PORTO RICO; and for other countries with which the United States government has been in close administration relation, see CUBA, DOMINICAN REPUBLIC; HAITI.**

FOREIGN COMMERCE. There are given below the total values of imports and exports of merchandise by grand divisions and principal countries for the 12 months ending December, 1920 and 1921.

Grand divisions and countries	12 months ended December—	
	1921	1920

Total exports.....	\$4,485,122,696	\$8,228,016,307

Lower prices rather than diminished quantities, were responsible for the three billion dollars decline in the value of American foreign trade during the last fiscal year, as compared with the fiscal year immediately preceding. According to the Director of the Bureau of Foreign Commerce, a compilation of exported commodities, reduced, so far as possible, to a quantity basis, showed weight increases of 34 per cent for the groups of raw materials and of 37 per cent for foodstuffs in 1921 over 1920, with a decrease of 4 per cent for such partly or wholly manufactured articles as could be shown in weight. Moreover, the final totals in this compilation, which included articles forming 69 per cent of the value of domestic exports in 1921, indicated that the exports of these goods increased 23 per cent in quantity over the amounts sold last year, though their value decreased 19 per cent. The world-wide exchange situation, revived competition in foreign markets, and decreased demand for American raw materials on the part of Europe, combined with a drastic cut in American imports of raw materials are the principal factors contributing to the lower foreign-trade totals.

SHIPPING. For statistics and other information in respect to the shipping of the United States during the year, see the articles SHIPPING and SHIPBUILDING.

CONDITION OF THE TREASURY JUNE 30, 1921. The public debt of the United States at the close of the fiscal year 1921 is set forth in detail in the accompanying table:

CONDITION OF THE TREASURY

Interest-bearing debt:	
Loan of 1925, 4 per cent.....	\$ 118,489,900.00
Consols of 1930, 2 per cent.....	599,724,050.00

Deposits for—	
Redemption of Federal reserve notes (5 per cent fund, gold).....	259,178,087.04
Redemption of Federal reserve bank notes (5 per cent fund).....	9,442,096.55
Retirement of additional circulating notes, act of May 30, 1908.....	67,560.00
Miscellaneous redemption accounts.....	4,795,176.84
	\$380,967,062.77

Balance in the Treasury June 30, 1921, as per statement of the public debt of the United States Government.....

\$532,898,329.77

For receipts and expenditures and the state of the public debt, see the article FINANCIAL REVIEW, paragraphs on *Government Finances*.

THE FIRST BUDGET. The President introduced the budget under the new budget system with a message to Congress, December 5. The table at bottom of page summarizes its details.

The introduction of the new budget system was the result of ten years of active work, beginning with President Taft's attempt to provide for executive control over national expenditures. The law approved June 10 providing for a national budget system and an independent audit of government accounts was hastened by the confused condition of the national finances resulting from the war. The new Bureau of the Budget created by the act had already done much during the few months that remained of the year toward improving the methods of the spending departments of the government and effecting economies. The saving in expenditures resulting from these efforts would be, according to the estimates, about \$582,000,000 for the fiscal year ending June 30, 1922. The estimates for the following fiscal year, ending June 30, 1923, were nearly \$1,000,000,000 less than those offered by the Secretary of the Treasury, August 4, 1921. The new system, however, was simply a step toward a genuine executive budget system, and, if it were to have that result, radical changes must still be made, but, according to some, they could not be introduced without an amendment to the constitution. The essential element of the budget system is that income and expenses are presented as a whole and considered in relation to each other. For purposes of comparison similar statements running back for a term of years must be considered. In the United States where the transactions of the government are complicated and very numerous this information had never been fully obtained. Appropriations in Congress being in the hands of

BUDGET SUMMARY

(Exclusive of postal revenues and postal expenditures paid from postal revenues)

	1923, Estimated	1922, Estimated	1921, Actual
Total receipts.....	\$3,338,182,750	\$3,943,453,663	\$5,624,932,960.91
Total expenditures, including reduction in principal of public debt.....	3,505,754,727	3,967,922,366	5,538,040,689.30
Excess of expenditures.....	\$167,571,977	\$24,468,703	
Excess of receipts.....			\$86,892,271.61

many separate committees in each House and being without executive control, there were practically no means of providing the information required under a genuine budget system. The machinery outlined in another paragraph, including the Bureau of the Budget, an independent audit department under a controller-general and a general accounting office, was established for the purpose of securing the necessary data. The criticism of the old system was that it lacked the elements of coördination and responsibility. The government did not retain control even of its ordinary routine business; and the civil departments were run without any general supervision. Before the close of the year the Bureau of the Budget had established a large number of co-ordinating agencies, including the following:

(1) A Federal Purchasing Board, on which the chief purchasing officer of each department serves with a chief coördinator as chairman named by the President;

(2) A Federal Liquidation Board, coördinating sales under a unified plan of large surplus stocks of the various departments of the government;

(3) A Corps Area Organization, corresponding to the nine Army Corps Areas, to provide for interdepartmental transfers and exchange of supplies in connection with either purchases or sales and operating together with the Purchasing and Liquidation Boards at Washington to handle properly the entire purchase and supply situation;

(4) A Surveyor General of Real Estate, to handle property owned by the United States and leases of property required for Government business and to assign and reassign spaces to the various departments, bureaus, or offices;

(5) A Federal Motor Transportation Agent, to coördinate motor transportation;

(6) A Federal Traffic Board, to coördinate and classify articles shipped by the Government and the business involved in the Government's annual transportation bill, which now amounts to \$200,000,000;

(7) A Federal Board of Hospitalization, for which now more than \$256,000,000 is being spent and in which the United States is feeding and housing about 500,000 persons;

(8) A Federal Specification Board, for the standardisation of specifications; and

(9) An Interdepartmental Board of Contracts and Adjustments.

ARMY AND NAVY. The Army and Navy are treated in the separate articles **MILITARY PROGRESS** and **NAVAL PROGRESS**. See also the titles **AERONAUTICS**; **SHIPBUILDING**; **SHIPPING**, etc.

POST OFFICE. The revenue of the Postal Service for the fiscal year ended June 30, 1921, including the fees from money-order and profits from postal-savings business, amounted to \$463,491,274.70. This was an increase of \$26,341,062.37 over the receipts for the preceding fiscal year, which were \$437,150,212.33. The rate of increase of receipts for 1921 over 1920 was 6.02 per cent, as compared with an increase in 1920 over 1919 of 19.81 per cent. The audited expenditures for the year were \$620,993,673.65, an increase over the preceding year of \$166,671,064.44, the rate of increase being 36.68 per cent. The audited expenditures for the fiscal year were therefore in excess of the revenues in the sum of \$157,502,398.95, to which should be added losses of postal funds by fire, burglary, and other causes, amount-

ing to \$15,289.16, making the total audited deficiency in postal revenues for the fiscal year \$157,517,688.11.

Service over all air mail lines in operation was uniformly good as is attested by the percentage of performance for the entire year, which was 85.96 per cent. When it is taken into consideration that the transcontinental flights were made daily over the wide ranges of the Allegheny Mountains and also over the barren and rugged expanse of the Rocky and Sierra Mountains and that it requires a considerable space of time for pilots to get acquainted with the territory over which they fly before giving dependable service, this performance was remarkable. There were 1,120,852 pounds of mail carried and 1,770,658 miles traveled during the year over all lines, at an operating cost of \$1,466,009.61. The operating cost during this period averaged 85 cents per mile on an average carrying capacity of 400 pounds per plane. After May 1 the air mail service was reorganized and improved with a material reduction in operating costs.

During the fiscal year 1921 government-owned motor-vehicle service was extended to 42 additional cities in lieu of contract service, making a total of 262 cities where government-owned motor-vehicle service was in operation, wholly or in part, involving the use of motor trucks of various capacities, from $\frac{1}{4}$ to 5 tons, and necessitating the employment of 4154 supervisory officials, clerks, mechanics, chauffeurs, and garagemen in connection with their operation and maintenance. The expenditure for this class of service during the fiscal year was \$11,777,842, being an increase of \$2,974,688 over that for the preceding year.

Approximately 90 per cent of the weight of all the mails is carried on the railroads and of this a large part is distributed or handled by the Railway Mail Service en route. There were in operation 219,709 miles of railway post-office service, with 274,165,856 miles of annual travel during the fiscal year. There was steady improvement in the resumption of service with the countries of the Postal Union since its interruption during the World War. Trans-Atlantic sailings were made with more regularity during the fiscal year; considerable improvement in the resumption and regularity of scheduled sailings in the trans-Pacific service, and conditions for the Central and Southern American service have improved. Considerable advance was made in the restoration of the sea post service, and the international parcel-post service has been extended. Parcel-post conventions were concluded during the year with Spain, Indo-China, Persia, the Straits Settlements, French Cameroon, Latvia, Finland, Kingdom of the Serbs, Croats and Slovenes, and the Fiji Islands. Parcel-post service, which had been suspended during the war period, was resumed with Germany, Austria, and Hungary. On Sept. 13, 1921, parcel-post service was inaugurated with Russia, via England. There were (1921) in effect conventions with 93 countries, and 95 points tributary thereto were provided with parcel-post service. The weight of parcel-post mail dispatched from the United States during the year was approximately 36,716,396 pounds, an increase of about 10 per cent over the previous year.

The balance to the credit of depositors in postal savings on June 30, 1921, was \$152,389,903, as compared with \$157,276,322 on deposit June 30,

1920. This was a reduction in net deposit of \$24,438,621 from the maximum amount held during March, 1919. The failure of postal savings to function as contemplated by its proponents was directly attributable to the facts that interest rate paid depositors was not high enough to make it attractive, that the maximum amount that could be deposited to one's credit was too low, that there was no provision for joint and trustee accounts, and, finally, that little or no sustained and consistent effort had been made to advertise the service and arouse the desire among people apprehensive of savings banks to save by depositing their money in postal savings; also that depositors had been treated unfairly in the nonpayment of interest unless the deposit was left a full year.

PENSIONS. The amount disbursed in the payment of pensions for the year was \$258,715,842, as against \$213,295,314 for the preceding year. The amount appropriated for the payment of pensions for the fiscal year 1921 was \$279,000,000, as against \$215,000,000 for the preceding year. The pensioners residing in foreign countries in 1921 numbered 3233 and received in pensions the sum of \$1,342,022. There were on the roll at the end of the fiscal year 566,053, a net loss of 26,137 from the total of 592,190 on the roll at the beginning of the year. The number of Civil War soldiers on the roll June 30, 1920, was 243,520, and on June 30, 1921, 218,775, showing a decrease of 24,745. The number of deaths of Civil War soldiers in 1921 was 24,775, as against 27,871 in 1920. The number of Civil War widows, minor children, and dependents on the roll June 30, 1920, was 290,209, and on June 30, 1921, 281,327, showing a decrease of 8882. The deaths of widows, minor children, and dependents in 1921 numbered 20,338, as against 21,752 in 1920. Of the War of 1812, there were surviving on June 30, 1921, 64 widows. Of the War with Mexico, there were on the roll June 30, 1921, 109 survivors and 2135 widows. Of the Indian wars from 1817 to 1891, there were on the roll June 30, 1921, 3784 survivors and 2569 widows. Of the War with Spain, there were on the roll under the provisions of the general laws 19,370 soldiers and 3471 widows, minor children, and dependents; under the act of July 16, 1918, 4745 widows and minor children; and under the act of June 5, 1920, 11,606 soldiers, a total of 39,282 War with Spain pensioners. By classes the roll showed on June 30, 1921, 267,629 soldiers, 290,955 widows, 2163 minor children, 919 helpless children, 4285 dependents, and 102 nurses.

PATENTS. The total number of applications filed jumped from 75,657 in the fiscal year 1919 to 107,656 in the fiscal year just closed, an increase of 43 per cent in two years. On June 30, 1919, the number of applications for patents awaiting action amounted to 17,735; on June 30, 1921, that number jumped to 49,334, creating a condition unprecedented in the history of the Patent Office. The average new case in 1921 was reached for first action in about 7 or 8 months, the normal period being 1 month. Legislation was pending in Congress which, if effected, would bring the condition back to normal. The number of patents granted and trade-marks, prints, and labels registered was 53,817, an increase of 6408 over the preceding fiscal year and 10,464 over the fiscal year 1919. The receipts of money for the year

were \$2,712,119.69, being an increase of \$96,422.36 over the preceding fiscal year and \$598,769.52 over the fiscal year 1919. The net surplus for the fiscal year was \$71,745.73, making a total of profit to the government out of the Patent Office to date of \$8,376,769.29.

EMBASSIES AND LEGATIONS TO THE UNITED STATES:

Argentina—Tomas A. Le Breton, Ambassador extraordinary and minister plenipotentiary.
Belgium—Baron E. de Cartier de Marchienne, Ambassador extraordinary and minister plenipotentiary.
Bolivia—Adolfo Ballivian, Envoy extraordinary and minister plenipotentiary.
Brasil—Augusto Cochran de Alencar, Ambassador extraordinary and minister plenipotentiary.
Bulgaria—Stephan Panaretov, Envoy extraordinary and minister plenipotentiary.
Chile—Don Beltran Mathieu, Ambassador extraordinary and minister plenipotentiary.
China—Sao-Ke Alfred See, Envoy extraordinary and minister plenipotentiary.

 Uruguay—_____, Envoy extraordinary and minister plenipotentiary.
 Venezuela—Willis C. Cook, Envoy extraordinary and minister plenipotentiary.

CONGRESS

SIXTY-SIXTH CONGRESS. The final session of the Sixty-Sixth Congress was held, December 6-March 4. The principal features of the session

after January 1 were as follows: President Wilson on January 3 vetoed the measure of Congress reviving the War Finance Corporation, but it was passed over the President's veto. All the regular appropriation bills with one exception were passed during the session, the exception being the bill making an appropriation for the navy, which was held up in the Senate by the opposition of Senator Borah and others to the present naval programme. The army appropriation bill passed in the latter part of the session was vetoed by the President on the ground that the reduction in military strength was extreme. The bill appropriated \$346,703,907 and provided for an army of 156,666 men. The President approved, February 28, the Winslow-Townsend amendment to the Transportation Act, authorizing the payment to the railroads of about \$370,000,000 in advance of a final accounting, in view of the guarantee of earnings provided in the Transportation act. He signed, February 28, the bill providing for the return by the Alien Property Custodian of the property seized during the war which belonged to women citizens of the United States and the Allied countries who had married enemy subjects before the declaration of war. He vetoed, March 3, the Fordney Emergency Tariff bill, levying high duties on imported agricultural products, and the House failed to obtain the necessary two-thirds majority when it endeavored to pass it over the President's veto. The President also vetoed the immigration measure which limited the number of immigrants to 3 per cent of the number of foreigners of each nationality that were in the United States at the time of the 1910 census. The House voted against the increase of its membership from 435 to 483 as provided in the reapportionment bill reported by the census committee. The vote was 276 to 77. The ratio on the basis of the new census was 1 to every 242,267.

SIXTY-SEVENTH CONGRESS (SPECIAL SESSION). The first session of the Sixty-Seventh Congress was specially convoked by President Harding, April 11. Frederick H. Gillett (Republican) of Massachusetts was reelected speaker. The Democrats voted for Claude Kitchin who became the minority leader. In the President's message, April 12, the leading points were: Necessity of economy in expenditures; adoption of a national budget system; reform of internal tax measures; and abolition of the excess profits tax; emergency tariff legislation; protection of agricultural interests; reduction of railway costs of operation in order that rates might be reduced; intention of the United States to establish a great merchant marine; need of a bureau of aeronautics; the need of Congressional action against lynching; refusal of the United States to take part in the existing League of Nations; recommendation that Congress should pass a resolution, declaring peace with the Central Powers. The immigration bill vetoed by President Wilson was passed by the House, April 22, and by the Senate with amendments, May 3, and signed by the President, May 19. This contained the provision above mentioned, limiting immigrants of any nationality during the fiscal year to 3 per cent of the number of that nationality in the United States at the census of 1910, and further provided that not more than 20 per cent of any nationality admissible during any fiscal year should be admitted during

any single month. Rules and regulations for the application of the act were to be prescribed by the Commissioner-general of immigration with the approval of the Secretary of Labor (see IMMIGRATION AND EMIGRATION). The Emergency Tariff bill was passed by the House, April 15 (269 to 112), and by the Senate with amendments, May 11 (63 to 28), and approved by the President, May 27. Its chief purpose was to protect agricultural products from foreign competition, and it included stringent provision against the dumping of these products on the market at prices lower than those prevailing abroad. As between the value in the foreign market and the export value at the port of entry, the duties were to be based on whichever was the higher. Among the rates prescribed were the following: Wheat, 35 cents a bushel; corn, 15 cents a bushel; beans, 2 cents a pound; peanuts, 3 cents a pound; cotton, 7 cents a pound; cattle 30 per cent ad valorem; fresh meats, 2 cents a pound; wool, 15 cents to 45 cents a pound; butter, 6 cents a pound; cheese, 23 cents a pound. A budget law following the same general lines as the bill vetoed in 1920 by President Wilson was finally enacted, the Senate measure passing, April 26; the House measure, May 5, and a conference measure being accepted by both Houses, May 26-27, and signed by the President, June 10. This provided for a budget bureau in the treasury department headed by a director with a salary of \$10,000 a year and an assistant-director with a salary of \$7500, both appointed by the President. The budget bureau under the President's direction was to prepare the budget, and was also empowered to gather and revise the estimates of the civil departments (see above under *The First Budget*). The navy appropriation bill which had failed to pass the Senate in the previous session, passed the House again, April 28, by a vote of 212 to 15, and passed the Senate with amendments, June 1, by a vote of 54 to 17. The House measure carried an appropriation of \$396,000,000. The Senate measure added to this about \$15,000,000 for the pay of the navy personnel. To the Senate bill was added an amendment by Senator Borah which provided for an international conference on armament. This marked the beginning of the movement which resulted in the calling of the disarmament conference at Washington (see WAR OF THE NATIONS). The amendment was as follows:

"That the President is authorized and requested to invite the governments of Great Britain and Japan to send representatives to a conference, which shall be charged with the duty of promptly entering into an understanding or agreement by which the naval expenditures and building programmes of each of said governments, to wit, the United States, Great Britain and Japan, shall be substantially reduced annually during the next five years to such an extent and upon such terms as may be agreed upon, which understanding or agreement is to be reported to the respective governments for approval."

The Senate measure as finally adopted carried appropriations amounting to \$494,000,000, but, after the bill was in conference, this was cut down to \$417,000,000. It was approved by both Houses, July 11, and by the President, July 12. The army appropriation bill passed the House, May 10, by a vote of 241 to 23, carrying appropriations amounting to \$331,000,000, and providing for an army of 150,000 men. It was passed by the Senate, June 8; the conference report on it was agreed to by the House, June 17, and by the Senate, June 22; and the bill was signed by the

President, June 30. Pursuant to the President's recommendation, the Senate voted by 49 to 23 on April 30 the Knox resolution which declared the state of war between the United States and Germany and Austria-Hungary at an end, and repealed the original declaration of war. The House on June 13 adopted by a vote of 305 to 61 the Porter substitute resolution, declaring the war at an end, but not repealing the declaration of war. A compromise in conference was accepted by the House, June 30, and by the Senate, July 1, and was signed by the President, July 2. It declared the state of war at an end, and read in part as follows:

"That in making this declaration, and as a part of it, there are expressly reserved to the United States of America and its nationals any and all rights, privileges, indemnities, reparations, or advantages, together with the right to enforce the same, to which it or they have become entitled under the terms of the armistice signed November 11, 1918, or any extensions or modifications thereof; or which were acquired by or are in possession of the United States of America by reason of its participation in the war or to which its nationals have thereby become rightfully entitled; or which, under the treaty of Versailles, have been stipulated for its or their benefit; or to which it is entitled as one of the principal allied and associated powers; or to which it is entitled by virtue of any Act or Acts of Congress; or otherwise." See below under *Treaty with Germany*.

It also provided that German property taken over by the United States should be retained by the United States, except as provided otherwise by law, until the German government had taken suitable measures for satisfying the claims of Americans. Other parts of the Republican programme that were carried out were: The ratification of the \$25,000,000 Colombian treaty; Federal aid to the States in the building of roads; appropriating \$75,000,000 and providing for Federal coöperation; the Maternity bill (see MATERNITY PROTECTION); reorganization of relief agencies for veterans of the war; the Packers' bill regulating commerce in live stock, poultry, eggs and dairy products, and supplying the Secretary of Agriculture with power and means to prevent abuses; Measures intended but not accomplished included various ones for reconstruction, such as, measures for the relief of the railways, and adjustment of the foreign war debt. The Borah bill for exempting American coastwise shipping from Panama Canal tolls passed the Senate, but was held up in the House at the President's request, in the hope that diplomatic arrangements for the modification of the Hay-Pauncefote Treaty might be made.

The special session ended, November 23, the chief purposes for which it had been called was the enactment of laws revising the tariff and the taxes. It was pointed out by Republican leaders that a substantial measure of success had been obtained in respect to the taxes since the tax burdens would be reduced for the current year by \$17,000,000, and under the new tax law beginning January 1, there would be a reduction during the year of \$835,000,000; and they referred to the removal of various petty burdens, such as the collection of taxes on soda water, ice cream cones, pills, parcel post, etc. The following measures passed during the special session were those chiefly emphasized in the press: The Revenue act of 1921; the Budget act; the Emergency Tariff act; the Peace Resolution; the Veterans' Bureau act; the Immigration Restriction act; the Volstead 8 Anti-Beer act; the \$25,000,000 Farm Loan act; the 1922 Naval Appropriation act; the 1922 Army Appropriation act; the Grain Futures act; the

SENATORS AND REPRESENTATIVES PROMINENT IN 1921

'Packers' act; the War Finance Agricultural Loan act; the Federal Highway act; the Maternity act; the Act for the Apportionment of Waters of the Colorado River; legislation and appropriation for the Shipping Board; the Edge Export act; the Cable Control act; the Indian Bureau act.

The special session ended without taking complete action on the tariff; the railway funding question; the question of refunding the foreign debt; the Alaskan railway appropriation; or the measure pertaining to "truth in fabric."

The Agricultural Bloc, the main feature of the special session, was the organization of a strong body of dissidents in the Republican party, representing mainly the West, which opposed the revenue bill and necessitated changes unacceptable to the party leaders. This element rejected the President's recommendation of a reduction of surtaxes to 32 per cent. The opposition showed itself first in the Senate and then developed in the House, and before the session had ended, it had gained new adherents, and held the balance of power. It was opposed to the projected tariff measure and threatened to make radical changes in it, as in the case of the revenue bill. The Republicans had planned in the special session to reduce the war revenue taxes in such a way as to encourage capital to invest itself in production. This programme was not carried out in the manner intended. Another effect of this Republican opposition representing western farm interests, was to be seen in various measures which mainly concerned the West, including the temporary regulation of grain markets, Federal inspection and control of the meat packing industries, and an extension of a credit of a billion dollars for the exportation of farm productions. See the article AGRICULTURAL LEGISLATION and AGRICULTURE. See also RAILWAYS; ROADS AND PAVEMENTS.

SIXTY-SEVENTH CONGRESS (REGULAR SESSION). The first regular session of the Sixty-Seventh Congress was opened, December 5, and received from the President in joint session the first budget under the new law. This showed a deficit of \$167,571,977 under the new tax bill estimate. On December 6 the President delivered his annual message which included among other features: A recommendation of an early refunding of the foreign debts; the regulation of non-taxable securities; measures for the relief of the Russian famine; cooperative agricultural relief; and a tariff which should be flexible in character.

SENATE RECORD. December 6. The Senate voted to turn over to the American Relief Administration the surplus war material for use in European famine relief.

December 8. A resolution was passed for the investigation of the dye industry and lobby. The Senate committee appointed to investigate the charges made by Senator Watson in respect to illegal executions of Americans in France, received testimony to the effect that only eleven men under death sentences were executed.

December 12. The first deficiency bill was passed, carrying \$106,800,000, an increase of \$3,000,000 over the House measure. An attack was opened by Senator Borah against the proceedings of the Disarmament Conference, especially as regards the Four-Power treaty, on the ground that the United States was committed to the use of force and to the legalisation of submarines and poison gas. An administration measure to establish a Bureau of Civil Aviation in the Department of Commerce for the purpose of encouraging and regulating aviation was introduced by Mr. Wadsworth of New York. The first deficiency bill of \$106,800,000 with \$3,000,000 added to the House figures was passed.

HOUSE RECORD. December 10. A bill appropriating \$10,000,000 for the purchase of 10,000,000 bushels of corn and 1,000,000 bushels of seed grain for the relief of the Russian famine was introduced by Mr. Fordney. A bill pro-

viding for the appointment of 22 new Federal judges was passed by a vote of 197 to 90.

December 14. The House bill for the relief of the Russian famine (\$20,000,000) doubled the appropriation voted by the Senate.

STATE DELEGATIONS

[Republicans in roman; Democrats in italics; Socialist in small caps; Republican and Progressive in roman with *.]

ALABAMA.—SENATORS: *Oscar W. Underwood, J. Thomas Heflin.* REPRESENTATIVES (Democrats, 10): *John McDuffie, John R. Tyson, Henry B. Steagall, Lamar Jeffers, William B. Bowling, William B. Oliver, Lilius B. Rainey, Edward B. Almon, George Huddleston, William B. Bankhead.*

NEW YORK.—SENATORS: James W. Wadsworth, Jr., William M. Calder. REPRESENTATIVES (Republicans, 33; Democrats, 9; Socialist, 1): Frederick C. Hicks, John J. Kindred, John Kissel, Thomas H. Cullen, Ardolph L. Kline, Warren I. Lee, Michael J. Hogan, Charles G. Bond, Andrew N. Petersen, Lester D. Volk, Daniel J. Riordan, MEYER LONDON, Christopher D. Sullivan, Nathan D. Perlman, Thomas J. Ryan, W. Bourke Cockran, Ogden L. Mills, John F. Carey, Walter M. Chandler, Isaac Siegel, Martin C. Ansoorge, Anthony J. Griffin, Albert B. Rosedale, Benjamin L. Fairchild, James W. Husted, Hamilton Fish, Jr., Charles B. Ward, Peter G. Ten Eyck, James S. Parker, Frank Crowther, Bertrand H. Snell, Luther W. Mott, Homer P. Snyder, John D. Clarke, Walter W. Magee, Norman J. Gould, Alanson B. Houghton, Thomas B. Dunn, Archie D. Sanders, S. Wallace Dempsey, Clarence MacGregor, James M. Mead, Daniel A. Reed.

NORTH CAROLINA.—SENATORS: Furnifold M. Simmons, Lee S. Overman. REPRESENTATIVES (Democrats, 10): Hallett S. Ward, Claude Kitchin, Samuel M. Brinson, Edward W. Pou, Charles M. Stedman, Homer L. Lyon, William C. Hammer, Robert L. Doughton, Alfred L. Bulwinkle, Zebulon Weaver.

NORTH DAKOTA.—SENATORS: Porter J. McCumber, Edwin F. Ladd. REPRESENTATIVES (Republicans, 5): Olger B. Burnetts, George M. Young, James H. Sinclair.

OHIO.—SENATORS: Atlee Pomerene, Frank B. Willis. REPRESENTATIVES (Republicans, 22): Nicholas Longworth, A. E. B. Stephens, Roy G. Fitzgerald, John L. Cable, Charles J. Thompson, Charles C. Kearns, Simeon D. Fess, R. Clint Cole, William W. Chalmers, Israel M. Foster, Edwin D. Ricketta, John C. Speaks, James T. Begg, Charles L. Knight, C. Ellis Moore, Joseph H. Himes, Wm. M. Morgan, Frank Murphy, John G. Cooper, Miner G. Norton, Harry C. Gahn, Theodore E. Burton.

OKLAHOMA.—SENATORS: Robert L. Owen, John W. Harrel. REPRESENTATIVES (Republicans, 5; Democrats, 3): Thomas A. Chandler, Alice M. Robertson, Charles D. Carter, J. C. Pringle, F. B. Swanik, L. M. Gensman, James V. McClinic, Manuel Herrick.

OREGON.—SENATORS: Charles L. McNary, Robert N.

Stanfield. REPRESENTATIVES (Republicans, 3): Willis C. Hawley, Nicholas J. Sindott, Clifton N. McArthur.

PENNSYLVANIA.—SENATORS: Boies Penrose, William E. Crow. REPRESENTATIVES (Republicans, 35; Democrat, 1): At large, William J. Burke, Thomas S. Crago, Joseph McLaughlin, Anderson H. Walters. William S. Vane, George B. Graham, Harry C. Ransley, George W. Edmonds, James J. Connolly, George P. Darrow, Thomas S. Butler, Henry W. Watson, W. W. Griest, Charles R. Connell, Clarence D. Coughlin, John Reber, Fred B. Gerner, Louis T. McFadden, Edgar R. Kiess, I. Clinton Kline, Benjamin K. Focht, Aaron S. Kreider, John M. Rose, Edward S. Brooks, Evan J. Jones, Adam M. Wyant, Samuel A. Kendall, Henry W. Temple, Milton W. Shreve, William H. Kirkpatrick, Nathan L. Strong, Harris J. Bixler, Stephen G. Porter, M. Clyde Kelly, John M. Morin, Guy E. Campbell.

RHODE ISLAND.—SENATORS: LeBaron B. Colt, Peter G. Gerry. REPRESENTATIVES (Republicans, 3): Clark Burdick, Walter R. Stines, Ambrose Kennedy.

SOUTH CAROLINA.—SENATORS: Ellison D. Smith, Nathaniel B. Dial. REPRESENTATIVES (Democrat, 7): W. Turner Logan, James F. Byrnes, Fred H. Dominick, John J. McSwain, William F. Stevenson, Philip H. Stoll, Hampton P. Fulmer.

SOUTH DAKOTA.—SENATORS: Thomas Sterling, Peter Norbeck. REPRESENTATIVES (Republicans, 3): Charles A. Christopherson, Royal C. Johnson, William Williamson.

TENNESSEE.—SENATORS: John K. Shields, Kenneth McKellar. REPRESENTATIVES (Republicans, 5; Democrats, 5): B. Carroll Reese, J. Will Taylor, Joe Brown, Wynne F. Clouse, Edwin L. Davis, Joseph W. Byrns, Lemuel P. Padgett, Lon A. Scott, Finis J. Garrett, Hubert F. Fisher.

TEXAS.—SENATORS: Charles A. Culberson, Morris Sheppard. REPRESENTATIVES (Republican, 1; Democrats, 17): Eugene Black, John C. Box, Morgan G. Sanders, Sam Rayburn, Hutton W. Sumners, Rufus Hardy, Clay Stone Briggs, David E. Garrett, Joseph J. Mansfield, James P. Buchanan, Tom Connolly, Fritz G. Lanham, Lucian W. Parrish, Harry M. Wursbach, John N. Garner, C. B. Hudspeth, Thomas L. Blanton, Marvin Jones.

UTAH.—SENATORS: Reed Smoot, William H. King. REPRESENTATIVES (Republicans, 2): Don B. Colton, Elmer O. Leatherwood.

VERMONT.—SENATORS: William P. Dillingham, Carroll S. Page. REPRESENTATIVES (Republicans, 2): Frank L. Greene, Porter H. Dale.

VIRGINIA.—SENATORS: Claude A. Swanson, Carter Glass. REPRESENTATIVES (Republican, 1; Democrats, 9): Schuyler Otis Bland, Joseph T. Deal, Andrew J. Montague, Patrick H. Drewry, J. M. Hooker, James P. Woods, Thomas W. Harrison, R. Walton Moore, C. Bascom Slemp, Henry D. Flood.

WASHINGTON.—SENATORS: Wesley L. Jones, Miles Poindexter. REPRESENTATIVES (Republicans, 5): John F. Miller, Lindley H. Hadley, Albert Johnson, John W. Summers, J. Stanley Webster.

WEST VIRGINIA.—SENATORS: Howard Sutherland, Davis Elkins. REPRESENTATIVES (Republicans, 6): Benjamin L. Rosenbloom, George M. Bowers, Stuart F. Reed, Harry C. Woodyard, Wells Goodkykoonts, Leonard S. Echols.

WISCONSIN.—SENATORS: Robert M. La Follette, Irvine L. Lenroot. REPRESENTATIVES (Republicans, 11): Henry Allen Cooper, Edward Voigt, John M. Nelson, John C. Kleckas, William H. Stafford, Florian Lampert, J. D. Beck, Edward E. Browne, David G. Classon, James A. Frear, Adolphus P. Nelson.

WYOMING.—SENATORS: Francis E. Warren, John B. Kendrick. REPRESENTATIVE (Republican, 1): At large, Frank W. Mondell.

ALASKA.—Dan A. Sutherland.

HAWAII.—J. Kuhio Kalaniana'ole.

PHILIPPINES.—Jaime C. De Veyra, Isauro Gabaldon.

PORTO RICO.—Felix Cordova Davila.

ADMINISTRATION

THE INAUGURATION. The President was inaugurated on March 4. In his inaugural address he emphasized mainly the need of a return to normal conditions; and of maintaining a policy that would keep the United States from being entangled in European affairs, saying that the inherited policy in this respect had proved itself wise, and adapted to the material and spiritual

progress of the republic. The United States was confident of its ability to work out its own destiny, and did not seek any part in directing the destiny of the Old World. "We do not mean to be entangled. We will accept no responsibility except as our own conscience and judgment in each instance may determine."

CABINET. The following members of the cabinet were nominated and promptly confirmed by the Senate in special session: Secretary of State, Charles Evans Hughes of New York; Secretary of the Treasury, Andrew W. Mellon of Pennsylvania; Secretary of War, John W. Weeks of Massachusetts; Secretary of the Navy, Edwin Denby of Michigan; Secretary of Commerce, Herbert C. Hoover of California; Secretary of Labor, James J. Davis of Indiana; Secretary of Agriculture, Henry C. Wallace of Iowa; Secretary of the Interior, Albert B. Fall of New Mexico; Attorney-General, Harry M. Daugherty of Ohio; Postmaster-General, Will H. Hays of Indiana.

DIPLOMATIC SERVICE. The following diplomatic appointments were made early in the administration, and confirmed by the Senate: Ambassador to Great Britain, George Harvey; Ambassador to France, Myron T. Herrick; Ambassador to Italy, Richard Washburn Child; Minister to Chile, William M. Collier; Minister to China, Jacob Gould Schurman; minister to Roumania, Peter Augustus Jay; Minister to Salvador, Montgomery Schuyler. A new regulation was announced, March 24, requiring the dismissal from the diplomatic service of all non-American attachés. In the autumn eight new diplomatic appointments were made, namely, Lewis Einstein of New York, Minister to Czecho-Slovakia; Edward E. Brodie of Oregon, Minister to Siam; Charles L. Kagey of Kansas, Minister to Finland; Roy Davis of Missouri, Minister to Guatemala; Charles S. Wilson of Maine, Minister to Bulgaria; Dr. John Glover South of Kentucky, Minister to Panama; John E. Ramer of Colorado, Minister to Nicaragua; Willis C. Cook of South Dakota, Minister to Venezuela. See above under *Embassies and Legations of the United States*.

UNITED STATES SHIPPING BOARD. The special House Committee appointed to investigate the activities of the United States Shipping Board made its report, March 2. In this it was recommended that the duties of the Shipping Board should be transferred to an executive department. As to the work of the Board as a whole, the Committee commended it, saying that in respect to the number of ships built and the time within which they were delivered, it was the most remarkable achievement in shipbuilding ever accomplished. While the Committee reported a certain amount of waste, it believed this was due to war conditions. The committee recommended that the surplus ships should be sold without delay. See SHIPPING.

RAILROAD LABOR BOARD. On April 14 the Railroad Labor Board ordered the abrogation of the labor agreements which defined the working conditions on the railroads that had been under Federal control. This decision involved the reference of disputes over rules and working conditions to a conference between each road and its employees. In arguments before the Railroad Labor Board presented by the railroad unions on the one hand and the operators on the other it was charged by the former that the roads had suffered

serious loss owing to poor equipment and extravagant management, while the latter claimed that the bad financial conditions of the roads was due to the large increases in wages. The Railroad Labor Board decided on June 1 to order a reduction in wages by an average of 12 per cent to go into effect July 1. This affected thirty-one labor organizations in the employ of over one hundred railroads, and was said to reduce the annual pay rolls of the roads by about \$400,000,000. See RAILWAYS.

TREATY WITH GERMANY. For an account of the disputes over the question of a separate treaty with the Central Powers, see preceding issues of the YEAR BOOK. The long-standing discussion of this subject brought out strenuous opposition in both political parties to a separate peace with Germany, which was held to be an act of infidelity to the Allies. These objections, however, gradually disappeared and in August the treaty was framed and submitted to Germany. It was signed at Berlin August 25, the American representative being Mr. Ellis Loring Dresel. The text of the treaty was then made public. It was not long because it was based on other documents to which it referred, namely, the armistice of Nov. 11, 1918, the Treaty of Versailles, June 28, 1919, and the joint resolution declaring the end of the war, passed by Congress and approved by President Harding, July 2, 1921. The last-named resolution expressly reserved to the United States and its citizens whatever rights or advantages had been accorded to them by the armistice, by the Versailles Treaty, or as the result of the war. Germany accepted in the treaty the reservations of this joint resolution and the applications of the sections or paragraphs of the Versailles Treaty to which reference is made. The treaty declares that the United States is not bound by any of the provisions of the Versailles Treaty that relate to the League of Nations, or committed by any subsequent actions of the League unless the United States should expressly give its assent; and that while the United States was privileged to take part in the work of the Reparations Commission, it was under no obligations to do so. The treaty was signed just after the beginning of the recess of Congress which ended September 21.

THE SIMS CONTROVERSY. The history of the dispute arising from the charges made by Admiral Sims against the policy of the Navy Department during the war was recounted in the last YEAR BOOK. The testimony taken in the various hearings before the Senate Naval Committee was voluminous and the decision was not rendered until July, 1921. There were majority and minority reports expressing opposed views. The majority report censured severely the former Secretary of the Navy, Mr. Daniels, ex-President Wilson, and Admiral Benson, former chairman of the United States Shipping Board. As to Admiral Sims' principal charge that administrative delays caused the loss of half a million lives and fifteen billion dollars, the majority report said that it was impossible to escape the conclusion that but for these delays the American Expeditionary Forces might have won the victory earlier than they did. The report further declared that the administration had not as its principal motive after the entry of the United States into the war the execution of every measure possible toward winning the victory, but rather concerned itself

with the future of the United States apart from the Allies in case the Allies should be defeated. The minority report pronounced Admiral Sims' charge monstrous and without foundation, saying that the evidence proved that the American army had been transported as fast as it was ready. It admitted that a few charges appeared to be justified, but that they were so trivial as compared with the vast work carried out by the navy during the war as hardly to deserve consideration.

WEST VIRGINIA LABOR DISTURBANCES. For two years the efforts to unionize the coal fields in Mingo county, West Virginia, had caused a bitter struggle between operators and miners. On August 20 the miners and their supporters gathered in the neighboring counties for the avowed purpose of entering Mingo county and obliging the men to join the unions. They were reported to be armed, and the number was placed as high as 10,000. The operators on their side were supported by bands of hired detectives. Shooting affrays occurred, and the counties of Kanawha, Boone, Fayette, and Logan were in a state of disturbance as well as Mingo. State and citizen forces were hastily got together to oppose the miners, and finally the danger became so threatening that the governor called on the Federal government for help. President Harding issued a proclamation, August 30, ordering the insurgents to disperse by noon, September 1. The order was disregarded. But a small body of Federal troops having been sent into the disturbed area, the trouble subsided instantly and with practically no resistance. By September 10, peace was fully restored, and a number of the troops had been ordered back to their quarters.

STATE BONUS ACTS. On August 31 the New York State Bonus Act was declared unconstitutional by the State Court of Appeals. New York was the first State to take this course. In nine States bond issues had been sold amounting to \$69,500,000, and in eight other State issues of \$191,500,000 were awaiting public approval before going into effect. In twenty-one other States laws were pending which provided for issues amounting to \$370,939,200.

UNEMPLOYMENT CONFERENCE. The conference on unemployment began its sessions at Washington, September 26, with a brief address of the President who then turned the proceedings over to Secretary Hoover. After deliberations, the meeting recommended on September 30 an emergency programme for immediate relief of the unemployed, who were estimated at between 3,500,000 and 5,000,000. The chief points in it were that private houses, offices, etc., should have their repairs, alterations, and cleaning done during the winter; that the municipalities should undertake public works to the greatest extent possible in the circumstances and on this point it was taken as a sign that circumstances were favorable to this course; that a larger amount of municipal bonds, namely, \$700,000,000, had been sold in 1921 than ever before. It was further recommended that each governor should unite all the State agencies and to do his utmost to expedite such public works as could, with advantage, be carried out. That the Federal authorities should also do so; that a Congressional appropriation for roads, together with State appropriations already made, should be employed for this purpose; that immediate relief could best be offered in the construction

industry which had been artificially restricted during and since the war. Besides these recommendations for immediate emergency, a programme was to be formulated, October 11, containing the following chief features: Readjustment of railway rates on a fairer basis; speedy completion of the tax bill with its reduction of taxes; settlement of tariff questions and of the financial relation between the government and the railways; limitation of world armament; stabilization of exchange; measures for the elimination of waste; measures for hastening the recovery of industry; and many other recommendations of this general nature.

PANAMA TOLLS. The Borah bill which gave the American coastwise shipping the right of free passage through the Canal was passed by the Senate, October 10, by a vote of 47 to 37, after a final debate of five hours. The bill was attacked on the floor by the Republican leader, Senator Lodge, while the Democratic leader, Senator Underwood, supported it. The vote broke through party lines, 35 Republicans and 12 Democrats voting for it and 20 Democrats and 17 Republicans voting against it. It was attacked on the ground that it was an unwise and unsound policy and that although it might be technically legal it was a sign of bad faith. On the other hand its supporters held that its purposes were chiefly domestic in character and were therefore not the concern of other nations.

WAR TIME LEGISLATION. The question of the ultimate disposal of German property was discussed at a meeting between President Harding and the Alien Property Custodian. The latter said that according to the peace treaty with Germany property now in the hands of the custodian would be held until provision was made by Germany and Austria for satisfying the claims of American citizens against those governments before the entry of the United States into the war. The largest single group of claims arose from the sinking of the *Lusitania*. The property involved consisted of industrial establishments which were being operated under the Custodian and also of many millions of dollars' worth of securities which, however, on account of the state of the market were at a low figure. The treaty with Germany also affected various other war and emergency measures and in the summer time a report on the subject was in progress. There were still various war time laws and resolutions which had not been repealed and the situation in this respect was confused. See above under *Congress*.

RAILROAD STRIKE. The threat of a railroad strike in October caused consternation throughout the country and was the main subject of discussion during the month, but on October 27 the heads of the unions canceled the strike orders after a conference in Chicago between the union leaders and the Railway Labor Board.

THE REVENUE BILL. The Senate passed the Revenue bill, November 8, which then went to a conference committee of the Senate and the House for the harmonizing of the differences between it and the House measure. The Senate bill repealed the excess profits tax and all transport taxes, beginning from Jan. 1, 1922, and reduced surtax rates on individual incomes, fixing the maximum at 50 per cent instead of 65 per cent. It contained a novel feature in a graded tax on all gifts of money or property in excess of \$20,000.

TWO REPUBLICAN LEADERS WHO DIED IN 1921

© U. & U.

SENATOR PHILANDER KNOX

The attempt to provide for a soldiers' bonus failed, as did also a proposal made by Senator Smoot for a 3 per cent manufacturer's levy, a 10 per cent corporation tax, a 32 per cent maximum individual surtax rate, and tax on capital stock. Among the specific features of the Senate bill was the repeal of taxes on parcel post packages, toilet articles, proprietary medicines, insurance premiums, moving picture films, ice cream, chewing gum, sporting goods, etc. On incomes of \$5000 or less the exemption was increased by \$500 for the head of the family and \$200 for each dependent. The corporation income tax and the taxes on large estates and medicinal liquors were increased from 10 per cent to 15 per cent. The reduction of income taxes by the Senate measure was criticised as insufficient and as not preventing wealthy citizens from taking shelter in securities that were exempt from taxation. So far as the higher incomes were concerned, it reduced the existing tax of \$170 on incomes of \$6000 to \$160; the existing tax of \$590 on incomes of \$10,000 to \$520; the existing tax of \$2880 on incomes of \$25,000 to \$2560; the existing tax of \$31,190 on incomes of \$100,000 to \$30,140, etc.

NOVEMBER ELECTIONS. The general result of the elections indicated a favorable attitude toward the administration whose strength appeared to be greater than the year before. The contests were mainly local and the most conspicuous one was that of the municipal election in New York City. See **NEW YORK**. In Kentucky where State elections were held the Democrats returned majorities in both branches of the new legislature. In Virginia the campaign for governor resulted in the victory of Mr. E. Lee Trinkle, the Democratic candidate. In Maryland the Democrats elected the legislature and a State Controller and carried the city of Baltimore. In New Jersey the Republicans gained strong majorities in both houses of the legislature. A significant municipal election was that of Cleveland which resulted in a majority for the city manager form of government. (See **MUNICIPAL GOVERNMENT**.) In Ohio the voters authorized a bonus of \$25,000,000 for ex-service men. In the western States the most important change occurred in North Dakota, which had hitherto been under control of the Non-Partisan League. See **NORTH DAKOTA**.

POLITICAL AMNESTY. It was learned on December 23 that the President had commuted the sentences of twenty-four political prisoners, including Eugene V. Debs, who had been convicted under the Espionage and other wartime acts and served sentences in prison. The case of Debs was a matter of national interest and wide discussion involving sharp differences of opinion. There was no question of his technical guilt under the law for he had purposely obstructed the draft and had admitted so doing in his trial, but he had never advocated the violent measures or taken the extreme courses that many others had done. About one-third of the prisoners belonged to the I. W. W. The Debs' case may be briefly summarized as follows: He made a speech at Canton, Ohio, June 16, 1918, which was interpreted as a direct attempt to interfere with recruiting. He offered no evidence in his own defense, but sought to justify his action on principle. His friends began measures on his behalf from the first. His case was carried to the Supreme Court, and a conviction on one count was affirmed, March 10,

1919. An attempt to secure a rehearing in April failed. After that the friends of Debs made frequent appeals to President Wilson, but in vain. Attorney-General Palmer toward the end of the Wilson term appealed to the President for the pardon of Debs, but the latter again refused. Renewed efforts were made on Debs' behalf after President Harding assumed office. Debs was called to Washington soon afterwards for a conference with the Attorney-General. His conduct in prison won him the praise of the prison warden, and he was described as a model prisoner and an influence for good. He had been placed first at the Moundsville prison in West Virginia, but after two months was transferred to the Atlanta Penitentiary. For an account of the Disarmament Conference and the relations of the United States with Foreign Powers, see **WAR OF THE NATIONS**. See also **HARTI**; **DOMINICAN REPUBLIC**; **MEXICO**.

UNITED STATES MILITARY ACADEMY. A government institution for the practical and theoretical training of cadets for the military service of the United States; situated at West Point, N. Y.; opened in 1802. At the beginning of the academic year, Sept. 1, 1921, the total number of cadets at the Academy was 1263, divided as follows:

First Class, 103; Second Class, 297; Third Class, 453; Fourth Class, 410. The commissioned personnel (faculty) totaled 197. The library contained about 108,000 volumes. The Academy being a component part of the Regular Army of the United States is maintained entirely by Army appropriations. The amount appropriated by Congress in the Military Academy Bill, covering the period from July 1, 1921, to June 30, 1922, was \$2,357,259.80. The Superintendent repeated his recommendation of the preceding year that the corps of cadets be expanded to a strength of 2500 and submitted plans and estimates for the necessary construction, of which the cost was estimated at \$6,000,000. He pointed out that "the basic idea which led to the foundation of the Military Academy was the desire to have a nucleus to train the great body of our citizens in time of emergency rather than to be forced to keep large bodies of men continually under arms. Over a century ago, with a population of scarcely more than five millions of people, the American government authorized a cadet corps of over two hundred and fifty. To-day with that population increased twenty fold the number of cadets in training is scarcely four times the original number authorized. With the passage of time the splendid nucleus of veterans of the World War will go, and a wise policy should be prepared to fill the gaps as they occur. The larger the number of men throughout the country educated for war the smaller need be the actual number held in continuous readiness." Superintendent in 1921, Brigadier-General Douglas MacArthur.

UNITED STATES NAVAL ACADEMY. A school for the training and education of naval cadets at Annapolis, Md.; founded in 1845. The students at the academy are styled midshipmen, and under the present law each Senator, Representative, and Delegate in Congress is allowed five appointments. Five appointments are also allowed from the District of Columbia, and fifteen each year from the United States at large, which are made by the President. The law also authorizes the appointment of one hundred

enlisted men each year by the Secretary of the Navy, who are selected from the Regular Navy and Marine Corps as a result of competitive examination. The number of midshipmen, by classes at the Naval Academy, Oct. 1, 1921, the beginning of the academic year 1921-22, were as follows: First Class, 546; Second Class, 451; Third Class, 671; Fourth Class, 759; total, 2427. On Oct. 1, 1921, there were 314 officers and instructors in the various academic departments. The library contained about 60,000 volumes. Superintendent, Rear-Admiral Henry B. Wilson, United States Navy, who assumed command, July 5, 1921.

UNIVERSALISTS. In 1921 this denomination had a church membership of 60,000, and Sunday school enrollment of 40,000. The active ministers of the church numbered 320 and church organizations 650. Last year the denomination celebrated its 150th anniversary of the founding of the Universalist Church in America at Good Luck, N. J. The year 1921 was marked by a considerable increase in members as result of "The Murray Anniversary Crusade" commenced in 1919 to double the membership of the preaching and teaching of many other churches. The church conducts extensive missionary work in Japan and an increase in contributions of 93 per cent for this work was reported in 1921. The amount spent for missions there was \$30,317.30, and for home missions, \$25,845.71. A building to be used as a new home for missionaries in Tokyo, Japan, was dedicated during the year. Home missionary work is being done in the West and South where there are few Universalist churches at the present time. The Women's National Missionary Association of the denomination unites the women in both Home and Foreign Missions. Theological schools are maintained as follows: Crane Theological School, Tufts College, Mass., Canton Theological School, St. Lawrence University, Canton, N. Y., and Ryder Divinity School, Chicago, Ill. Educational work is conducted at secondary schools as follows: Dean Academy, Franklin, Mass., Goddard Seminary, Barre, Vt., Westbrook Seminary, Portland Maine, and a school for negroes at Suffolk, Va. Headquarters for the denomination are maintained at 176 Newbury Street, Boston, Mass., Rev. Roger F. Etz is Secretary.

UNIVERSITIES AND COLLEGES. The United States Bureau of Education announced that the attendance at universities, colleges, and professional schools for 1920-21 reached 450,000. This was a gain of 36 per cent over the attendance in 1917-18. Foreign students in American colleges during 1920-21 numbered 6900. China led with 1443 students, and Canada was second with 1294. Other countries were as follows: Japan, 525; South American countries, 563; Russia, 290; and India, 235. Complete data for 1921-22 regarding attendance in colleges and universities were not available for all of the institutions. Raymond Welters, Secretary of the American Society of College Registrars, reported the registration figures for certain institutions. The detailed reports received from 30 typical universities indicated an increase in enrollment over the previous year. The gain in attendance during the past five years was 55 per cent. It was estimated that the increase in colleges had been about the same. The accompanying table shows the attendance of full-time students and of

students in residence on Nov. 1, 1921, in 25 universities; the rank of universities in point of enrollment is also indicated.

University	Regular students, full-time	Rank	Students, all resident	Rank
California	11,505	1	17,909	2
Columbia	9,793	2	26,006	1
Michigan	9,227	3	10,527	8

New York Univ.	..	..	11,514	6

Registration facts indicated that the Massachusetts Institute of Technology with an enrollment of 3505 led in engineering students. The largest law schools were Harvard, 999; Columbia, 643; California, 431; Michigan, 375; Texas, 323. The largest schools of medicine were Michigan, 609; Harvard, 472; Northwestern, 460; Pennsylvania, 438; Tulane University, 381. The largest schools of journalism were Wisconsin, 259; Missouri, 218; Columbia, 138. There were decreases in enrollment in agricultural colleges, departments of architecture, schools of dentistry, and schools veterinary medicine. Attendance at summer schools for 1921 showed a gain of 32 per cent over that for 1920. The total in 241 universities and degree-granting colleges for 1921 was 147,032. The ten largest summer schools were as follows: Columbia, 11,809; California, 7864; Chicago, 6458; Wisconsin, 4547; College of City of New York, 3300; Colorado, 3264; Michigan, 2797; Cornell, 2739; Minnesota, 2687; Texas, 2588.

The increase in students was causing various institutions to consider measures for limiting attendance. Vassar announced that registration was limited to 1000 and that the registration books were closed until the Fall of 1927. Princeton announced plans to limit its students to 2000. Other institutions also announced plans to limit enrollments and in some few cases there was an increase in entrance requirements, and a raising of standards. It is significant that, in general, the institutions were considering the question from the educational rather than from the financial side. The remarkable response that had been given to the call for endowments seem to indicate that the financial part could be met, but the lack of trained instructors, and the various problems involved in the management of large student bodies were not so easily settled. There were reports of single college classes having 1000 students, while classes of 300 to 500 in summer schools were common. How such classes might be managed so as to furnish real instruction to the

individual student was a problem that had not been successfully solved.

One of the most interesting developments in college financing is found at Goucher College, Baltimore. The reports of the institution indicated that in 1914 the cost of instruction was \$700 per student while the tuition charge was \$150. The tuition fees were raised to \$225 and a consistent long term economy campaign was conducted. The per capita cost of instruction at the close of the year was now \$226.37. The President of the institution attributed this accomplishment to the reduction of overhead expenses of administration. He said, "This record has not been made at the expense of the Faculty. The highest salary paid our teachers is 100 per cent higher than in 1914, and the average salary, now \$3,300 is 65 per cent higher."

THE CARNEGIE FOUNDATION FOR THE ADVANCEMENT OF TEACHING. The Fifteenth Annual Report of the President and Treasurer shows that during the fifteen years of its existence the Carnegie Foundation distributed \$7,964,399 in retiring allowances and pensions to 909 persons. There were operative 356 retiring allowances and 199 widows' pensions, 57 of which were granted during the year, entailing an annual expenditure of \$870,870. The average retiring allowance paid was \$1568. The total resources of the Carnegie Foundation amounted at the close of 1921 to \$24,628,000, of which \$15,192,000 belonged to the permanent general endowment, \$7,571,000 to a reserve fund to be spent in the retirement during the next sixty years of teachers now in associated institutions, \$1,250,000 to the endowment of the Division of Educational Inquiry, and \$390,000 to a reserve fund to be expended in aiding universities and colleges to adopt the new plan of contractual annuities.

The teachers' Insurance and Annuity Association of America, which was established by the Foundation, through a gift of \$1,000,000 to provide insurance and annuity protection for college teachers without overhead charges, had written 653 insurance policies covering \$3,356,747 of insurance and 554 annuity contracts providing \$624,398 annual income at retirement. The report stated that a study was being made with a view to furnishing contractual disability protection. The question of placing insurance without the solicitation of agents and of providing annuities for children were considered. The report contains a list of law schools in the United States classified according to length of course, hours of instruction and entrance requirements. Announcement is also made of the Fourteenth Bulletin of the Division of Educational Inquiry.

The Foundation issued the Fifteenth Bulletin entitled "Training for the Public Profession of the Law." In this study considerable attention is given to the historical development of legal education. It is held that a scheme of professional organization built upon the notion peculiar to this country and to Germany that legal practitioners constitute and ought to constitute a single undivided profession or so-called "bar," irrespective of the different types of training that they have received or the different branches of professional activity in which they are engaged, is a legalistic fiction. The perpetuation of this tradition, in the face of the diversity among law schools and among lawyers that has actually arisen, both works injury

to the schools themselves and hinders the development of bar admission rules that shall prevent incompetents from entering the profession. It is held that the practice of law is a public or political function and says that the practice of other learned professions, such as medicine, is not, and historically it has always been so regarded. The problem of the training and testing of lawyers forms thus a subordinate part of the broad problem of the method of recruiting the civil service, and being a public profession it must be kept accessible to the people. Over half of the existing law schools, including over half of the aggregate number of law school students, offer instruction during the late afternoon or at night. This movement to make law study possible for self-supporting students of average ability is justified on political grounds. The existing grave deficiencies of these schools are largely attributable to the fact that many of the best institutions and best law teachers, influenced by the theory of a unitary bar, regard part-time education as inherently evil. The text ends with a frank acknowledgment of the fact that, as a matter of legalistic tradition, the conception of a unitary bar is too deeply implanted in this country to be soon overturned. As a step toward securing professional and popular recognition of vital distinctions among different types of lawyers, the suggestion is made that in the case of younger applicants for admission to bar associations, the requirements for membership might well be based upon the requirements for graduation already in force in the more advanced group of law schools.

AMERICAN COUNCIL ON EDUCATION. The American Council on Education is the central organization in which the greatest national educational associations are represented. Its general object is to promote and carry out co-operative action in matters of common interest to the associations and to the institutions composing them. It has three classes of members, constituent, associate, and institutional. The constituent members are sixteen national educational associations. Each is represented by three delegates who vote as a unit at meetings of the Council through a designated person. Associate members are educational or scientific organizations having interests related to the work of the Council. Associate members may send one representative each to the meetings of the Council without right to vote. Institutional members are colleges, universities, professional, and technical schools, contributing not less than \$100 a year to the treasury of the Council. Each may be represented by one delegate at meetings of the Council without right to vote. In February, 1921, there were 16 constituent members, 12 associate members, and 122 institutional members. The budget for 1922 provides for the expenditure of \$27,117.61. Among the projects which have received attention on the part of the various committees of the Council are: Federal legislation, international educational relations, education for citizenship, the training of women for public service, the college of liberal arts, and standardization. The Council has been instrumental in bringing about an investigation of the cost of education and of public resources available to support it. The headquarters of the Council are at 818 Connecticut Avenue, Washington, D. C.

GENERAL EDUCATION BOARD. The Annual

Report of the General Education Board, for the year ending June 30, 1921, shows that the total of Mr. John D. Rockefeller's gifts to the Board were \$126,788,094. The capital funds held by the Board amount to \$84,655,652. It appears that in addition to the annual income not less than 33 per cent of its capital has been spent by the Board. On Dec. 18, 1919, Mr. Rockefeller gave \$50,000,000 for the purpose of increasing the salaries of instructors in colleges and universities. The Board has aided 191 institutions by grants totaling \$26,327,000 for whites and \$1,225,000 for negroes. The Report calls attention to the fact that the value of Mr. Rockefeller's gift at present market prices is considerably less than the value of the securities at the time they were presented. "A safe margin must at all times be preserved. The extent to which further gifts can be made will depend upon the sum which can ultimately be realized from the sale of securities." From the general funds the Board appropriated \$1,276,666 to 11 institutions. Since its establishment the Board has aided 207 institutions with appropriations totaling \$48,665,639.06. These institutions have been required to raise \$169,413,004.35. The appropriations for medical schools totaled \$11,936,634.68 for the year. Chief among the items is \$1,000,000 to Columbia University, \$3,000,000 to Johns Hopkins University, and \$5,272,500 to Vanderbilt University. The Board conducted surveys of Public Education in North Carolina and Kentucky. The sum of \$60,000 has also been appropriated to the American Classical League to defray the expenses of a study of classical teaching in the United States.

GIFTS AND BENEFACTIONS. Among the gifts and benefactions to colleges and universities during 1921 were the following: Mrs. Eleanor Alms bequeathed a \$200,000 building to the University of Cincinnati. Dr. William Fletcher King, who was for over forty years its president, bequeathed his entire fortune of \$200,000 to Cornell College, Iowa. Colorado College received a gift of \$100,000 from the estate of Henry R. Wolcott of Denver. Sanford H. Steele bequeathed \$250,000 to Dartmouth for a memorial building to his brother Benjamin H. Steele. Jonathan M. Parmenter left a trust fund of over \$250,000 to establish scholarships in Harvard College. A bequest of \$200,000 to Harvard for the investigation of the origin and cure of cancer was contained in the will of Hiram F. Mills. The Rockefeller Foundation gave \$1,785,000 to Harvard to establish a School of Public Health. Lewis J. Emery offered Hillsdale College \$100,000 on condition that they raise \$500,000 in addition. Massachusetts Institute of Technology is to receive \$1,000,000 and Wellesley College \$500,000 from the estate of Francis Appleton Foster. New York University received a gift of \$150,000 in memory of Dr. A. Alexander Smith from Mrs. Helen Hartley Jenkins. New York University also received \$200,000 from the Carnegie Corporation upon condition that \$800,000 more be raised. A. W. Mellon and his brother R. B. Mellon gave to the University of Pittsburg a plot of land costing \$1,500,000. By the will of Miss Helen Massey the University of Pennsylvania receives the sum of \$500,000 for salaries. Moses Taylor Pyne bequeathed property valued at \$100,000 to Princeton University. R. T. Miller, Jr., gave \$100,000 to Rochester University to establish a loan and scholarship fund. The

University of Redlands received about \$125,000 from the late A. T. Currier of Pomona, Calif. Vanderbilt University received \$3,000,000, the General Education Board and the Carnegie Corporation each giving half. Mr. Edward S. Harkness gave \$100,000 to the Vassar College Salary Endowment Fund. By the will of Rev. Dr. Henry M. Sanders, Vassar College received \$150,000. He also left smaller gifts to other colleges. Mr. Samuel Mather gave \$500,000 to the Medical School of Western Reserve University. Yale University received \$300,000 from William H. Sage for the erection of a Forest Building in memory of his son. Yale University also received \$150,000 in securities, given anonymously, for the Department of Health and from the late Richard M. Colgate, \$100,000 for instruction in the freshman year.

CHANGES IN ORGANIZATION. Several colleges were giving attention to the unusually capable student. Usually such students are able to complete the regular college course in less than four years but they have taken the same work that is offered to the less capable. Barnard College offered a special honors course. According to an announcement from the College this was "an effort to provide for the very ablest students an opportunity to do the best work of which they are capable, and, to that end, to relieve them of a good deal of the ordinary routine of college and some prescribed courses. "Students will not be admitted to the new course until they have demonstrated that they have unusual ability. Ordinarily, they will enter it at the beginning of the sophomore year or of the junior year. "Students in this course are required to take at least four years of college work before receiving the degree of Bachelor of Arts. They may, however, substitute for the usual requirement of 120 points a course of special study in a single subject or a group of related subjects. "We intend this Special Honors Course only for students who know their own minds and who definitely wish to become scholars in a certain field. They will be allowed a much greater chance for specialization than the ordinary student, but we do not think that they will develop into narrow-minded specialists." Smith College announced a similar plan to go into effect in the Spring of 1922. During the past two years Columbia College has been using a new type of examination in one of the courses prescribed for freshmen. This course in Contemporary Civilization is a composite course given by various instructors. The examination is composed of a large number of statements and consists of three parts. In Part I the student is required to indicate whether the statement is true or false. In Part II words are omitted from the statements and the student is required to supply the appropriate word. In Part III the statements include several words or phrases from which the student is required to select the word or phrase that will make the statement most sensible and true. The college authorities state that "this new type of examination is still in the experimental stage. There is no attempt being made to foist it either on students or professors. Interest in it is increasing, and the tests to be given this year are at the request of the instructors in the various subjects, who have worked out the series of questions."

THE INTERCOLLEGIATE LIBERAL LEAGUE. In April, 1921, representatives of twenty-seven

institutions met at Howard University and organized the Intercollegiate Liberal League. The announced purpose is "to bring about the fair and open-minded consideration of social, industrial, political and international questions by groups of college students." "The organization will espouse no creed or principle other than that of complete freedom of assembly and discussion in the college."

UNIVERSITY CENTRE OF RESEARCH IN WASHINGTON. As stated in the articles of organization "the purpose of the University Centre of Research in Washington shall be to promote and facilitate research in archives, libraries and other collections located in the District of Columbia on the part of students in the graduate departments of American and Foreign universities and of others." The activities of the University Centre have for the present been limited to the fields of History, Political Science, Economics, and Statistics, and International Law and Diplomacy. It is expected that later there will be opportunity for investigators in all fields of learning. The University Centre is not an institution in the ordinary sense of the word. It is rather an organization for the purpose of rendering aid, especially information respecting the location of desired material, to investigators in certain fields. There is no charge for the services of the University Centre. The President of the organization is Leo S. Rowe, Ph. D., LL. D., Director General of the Pan-American Union. The Secretary is Samuel P. Capen, Ph. D., LL. D., L. H. D., Director of the American Council on Education.

NEW PRESIDENTS. During the year 1921 many colleges and universities elected new administrators and many are still without governing officials. The following new presidents were elected: Dr. P. P. Claxton, formerly United States Commissioner of Education, became Provost of the University of Alabama. Dr. John W. Laird was chosen president of Albion College. Rev. Fred W. Hickson was inaugurated president of Alleghany College. The Rev. James M. Thorburn, Jr., D. D., was elected to the presidency of Beaver College for Women. Dr. Guy E. Snively became president of Birmingham Southern College. Dr. F. S. Harris was elected president of Brigham Young University. Robert Judson Aley, president of University of Maine for the last eleven years, was elected president of Butler College. Joseph A. Serena succeeds W. S. Dearth as head of Cape Girardeau Normal College. Dr. William Arthur Ganfield has accepted the presidency of Carroll College. Dr. Arlo Ayres Brison is the new president of the University of Chattanooga. Dr. Harry Gage became president of Coe College. Rev. Edward D. Howard became the new president of Columbia College, Iowa. Dr. Livingston Farrand was made president of Cornell University. Dr. K. G. Matheson accepted the presidency of Drexel Institute. Dr. George Shannon McCune was elected president of Huron College. Dr. David Kinley was formally installed president of the University of Illinois. Dr. C. A. Gilbert was made president of Marionville College. David Friday was elected president of Michigan Agricultural College. P. D. Moody was made president of Middlebury College. Miss Lucia Briggs was elected president of Milwaukee-Downes College. Dr. Charles H. Clapp became the new president of the Uni-

versity of Montana. Dr. John Lee Coulter was made president of North Dakota Agricultural College. Dr. Frank P. Graves was made president of the University of New York State and Commissioner of Education. Dr. Elmer B. Bryan was elected president of Ohio University at Athens. Major General Leonard Wood was made provost of the University of Pennsylvania. Dr. John M. Thomas became the new president of Pennsylvania State College. Dr. J. D. Smith was elected president of Port Arthur College. The Rev. William D. Noon was appointed president of Providence College. Dr. Richard F. Scholz was elected president of Reed College. John L. Alger was installed president of Rhode Island College of Education. President R. B. Von Kleinsmid of University of Arizona was elected president of the University of Southern California. Professor Frank Aydelotte was elected president of Swarthmore College. Charles W. Flint was made president of Syracuse University. President Cousens is the new head of Tufts College. The Rev. J. P. Van Horn, D. D., was elected to the presidency of Upper Iowa University. Dr. J. A. C. Chandler was made the new president of William and Mary's College. James Rowland Angell was made president of Yale University.

MEDICAL EDUCATION. During 1921 there were remarkable developments in the direction of better provisions for medical education. A plan of coöperation between Columbia University and the Presbyterian Hospital was approved by both institutions in February, 1921. By the terms of this agreement Columbia University was to raise \$3,000,000 for the construction of new buildings. This condition was met by the receipt of pledges of \$1,000,000 each from the General Education Board, the Rockefeller Foundation, and the Carnegie Corporation. Mrs. Stephen V. Hartness made available for the Medical School and Presbyterian Hospital a plot between 165th and 168th Streets, Broadway and Fort Washington Avenue, New York City, valued at \$2,000,000. Mr. Edward S. Hartness contributed \$1,000,000 and there was added the legacy of the late Joseph R. De Lamar amounting to \$5,500,000. It was estimated that at least \$15,000,000 would be needed to proceed with the project. Of this amount \$12,000,000 had been assured. The Johns Hopkins University and Hospital has undertaken to enlarge its facilities, particularly in the clinical branches. The proposed expansion will give a hospital with 950 beds which will be so assigned as to contribute to teaching. The building will cost about \$3,500,000 and the endowment will require \$4,600,000, a total of \$8,000,000 which the University is now endeavoring to raise. Vanderbilt University at Nashville, Tenn., was building a new medical college, for which purpose it had in excess of \$8,000,000. Yale University was conducting a campaign to raise \$3,000,000 additional endowment for the Medical School.

RHODES SCHOLARS. The system of Rhodes scholarships was founded by the will of Cecil John Rhodes. Provision was made for supporting at Oxford University, for a period of three years each, about 176 selected scholars. The United States is entitled to send two students from each State. Candidates must be between 19 and 25 years and have completed at least two years of college work. The will outlines the

bases of selection as scholarship, character, interest in out-of-door sports and interest in one's fellows, and capacities for leadership. During 1921 four hundred and seven American college and university men were applicants for appointment. Thirty-two were appointed. The Alumni Association of the Rhodes Scholars completed a survey of the work of the American Rhodes Scholars who were in attendance from 1904 to 1914. The report shows that 351 men were appointed during this period. The occupations of 301 of these are classified as follows:

Education	141
Law	72
Business	38
Social and Religious Work	23
Government Service	15
Graduate Students	10
Scientific Work	10
Literary and Editorial	8
Medical	7
Miscellaneous	4

The *American Oxonian*, the official magazine of the Alumni Association presented a statistical study of the records of the scholars compiled by Professor R. W. Burgess of Brown University. More than 500 American Rhodes Scholars have been appointed. These have represented 172 American universities and colleges, only 39 of which were represented by as many as 5 scholars. Only 14 per cent of the scholars had less than a full college course, while 19 per cent had graduate work. "Americans succeed best at Oxford in those subjects of study which are not based on previous preparation, while the record of English students is exactly the other way."

UNIVERSITY CENTRE OF RESEARCH (WASHINGTON). See **UNIVERSITIES AND COLLEGES**.

UPPER AUSTRIA. Before the downfall of the Austro-Hungarian empire a crownland of Austria; after the establishment of the new republic of Austria, a constituent province of that state. Area, 4626 square miles; population (1911), 853,006, of whom 843,146 were Austrian subjects; population according to the census of 1920, 858,795. Capital, Linz.

UPPER SENEGAL AND NIGER. A constituent colony of the government-general of French West Africa whose name was changed by the decree of Dec. 4, 1920, to French Sudan. See **FRENCH WEST AFRICA**.

UPPER SILESIA. The territory long in dispute between Poland and Germany of which the destination was decided by plebiscite under the terms of the Treaty of Versailles as noted in the preceding **YEAR BOOK**; and whose boundaries were ultimately fixed by a decision of the League of Nations in October, afterwards confirmed by the Supreme Council of the Allied Powers. The total area of the plebiscite territory, which did not include quite all of Upper Silesia, was about 4100 square miles, or somewhat less than the State of Connecticut; and the population in 1919 was about 2,600,000. The importance of the region is due to the rich coal and zinc resources, and the highly developed iron and steel industries. Upper Silesia in the German empire produced about one-quarter of the total coal output of Germany. In general the decision assigned to Poland about three-quarters of the plebiscite area, comprising nearly one-half of the population, all the zinc mines and works, three-quarters of

the coal production, and at least half of the steel works as measured by capacity. The new boundary runs from Oderberg in the south along the Oder river, northwest to a point a little below Ratibor, thence northeast to Beuthen, which city it leaves to Germany, then northeast to a point west of Lublinitz, and finally northeast again until it intersects the Polish border. The great bulk of mining and manufacturing industries is concentrated in a small area commonly known as the Industrial District or the Industrial Triangle, comprising the counties of Kattowitz, Beuthen, and Zabrze, the southern part of the county of Tarnowitz, the city and district of Königshütte, and the city of Gleiwitz. This region contains four-fifths of the present coal production, and nearly all the metallurgical plants; and nearly half of the population of the plebiscite area. Of this region Poland received half of Zabrze, all of Kattowitz, and a little more than half of the counties of Beuthen and Königshütte. North of this triangle Poland received the greater part of the county of Tarnowitz, a small corner of Tost-Gleiwitz, and about two-thirds of Lublinitz, including the city. Poland secured of the total area about 1300 square miles or 31 per cent, and Germany, about 2800 square miles; of the population, Poland secured about 900,000 or 47 per cent. In the plebiscite area as a whole 59.6 per cent of the votes had been cast for Germany and 40.4 per cent for Poland. But the county of Leobeschütz was known to be almost exclusively German, and yet was allowed to take part in the voting because, if the territory went to Poland, it would be surrounded exclusively by Polish and Czech lands. Leaving out Leobeschütz 42.7 per cent of the votes would represent Poland's share. The vote of the plebiscite showed these three general results: In the large area of the west and northwest, five-sixths of the votes were for Germany, and a majority was cast for Germany in nearly every commune. This had been conceded by the Poles to Germany from the beginning, and it was allotted to her by the decision. In the two southern counties of Rybnik and Pless the Poles had a large majority, distributed more or less evenly, 70 per cent of the total vote being for Poland. These regions were assigned to Poland, except the northwest corner of Rybnik. Finally in the central and eastern area which includes the Industrial Triangle and makes up about two-fifths of the total plebiscite area and over three-fifths of the population, the vote was close, about 53 per cent for Germany and 48 per cent for Poland. The Germans had a large majority in the cities, while the Poles were generally in the majority in the agricultural districts and mining villages. As regards the territory, Poland received much the smaller share, that is to say, only about three-tenths of the area, but as regards the population, she received about 53 per cent, for the greater share of the densely populated industrial districts went to her. In the territory allotted to Poland about 510,000 votes were cast of which 285,000 were for Poland and 222,000 for Germany, whereas in the territory allotted to Germany there were 667,000 votes cast, of which 480,000 were for Germany and 195,000 for Poland. The discontent of Germany with the decision and the other political aspects of the situation are discussed elsewhere. See the articles, **WAR OF THE NATIONS**, **GERMANY**, **POLAND**, etc.

Among the economic aspects the following points may be noted: In general Poland acquired a much larger share of the mineral wealth and manufacturing industries, while Germany retained the great bulk of agricultural and forest land. The industrial importance of Upper Silesia is based chiefly on its coal deposits. Among the various estimates of coal resources that of the Upper Silesian Union of Mines and Furnaces reckoned a coal reserve at a depth down to 2000 metres at 166,000,000,000 metric tons, of which 114,000,000,000 were believed to be workable; down to a depth of 1000 metres, the figures were 86,000,000,000 and 60,000,000,000, respectively. The value of the coal output of Upper Silesia before the war was about \$75,000,000 annually. About one-third of it found a market in Germany where it was consumed, especially in the metallurgical industries. In the present territory of Poland, exclusive of Upper Silesia, the prewar production (1913) of black coal was about 9,000,000 tons. This was less than one-third of the production in the portion of Upper Silesia allotted to Poland. As to iron ore, the total amount used by the blast furnaces of Upper Silesia in 1913 was 1,000,095,000 tons, of which 170,000 tons were supplied by Upper Silesia. The production of pig iron in Upper Silesia was 995,000 tons. These figures do not represent a large part of the total German output, but they represent a great increase in Polish iron resources. The same is true of the steel industry. In acquiring practically all the zinc and lead industries, Poland greatly profited. The production in Upper Silesia of raw zinc in 1912 represented one-sixth of the world's production. In Upper Silesia the production of lead before the war amounted to about \$3,500,000 annually. The following summary of the temporary economic measures prescribed by the League of Nations is supplied by the United States Bureau of Foreign and Domestic Commerce in 1921:

As regards railroads formerly operated by the German government, it was provided that there should be organized for a period of fifteen years a system of joint operation. The rates were to be uniform, and any special rates in force between German territory and any place in the plebiscite territory would apply to the whole of the plebiscite territory. Merchandise of the same kind from or to Poland or Germany, or any other country, should enjoy the benefit of any special rates in force in the plebiscite territory. Profits or deficits of the joint railway system were to be divided between the two countries according to the length of the tracks, and the importance of the traffic within each.

In the absence of a special agreement between the two countries, the existing systems of water supply should be continued. There should be constituted a reciprocal easement to that effect, and water from sources passing into Polish hands should be available for all Upper Silesia on equitable terms. Inasmuch as the population of the industrial district is very dense, the consumption of water for both household and industrial purposes is extremely large, and available supplies of water are decidedly limited, these provisions are of much practical importance. The most important electric plant, located at Chorzow adjoining Königshütte, was to remain in operation as a private enterprise for at least three years,

after which the Polish State had the privilege of buying it out. The present company must furnish electricity to all parts of the territory on equal terms.

A very important provision of the decision was that the German mark was to continue as the legal tender in the plebiscite territory for fifteen years, unless the two Governments by common accord agreed to a change before that time; in the event that they could not agree and if a change became necessary, the Mixed Commission should set the date. This commission was to consist of an equal number of Poles and Germans with a president of another nationality.

The German and Polish customs laws and rates were to apply forthwith to the new frontier, with certain important exceptions. For a period of fifteen years the natural products of either zone of the plebiscite territory destined for consumption in the other zone should cross the frontier duty free. For the same period of time the crude, partly prepared, and partly manufactured products made in industrial establishments of either zone and intended for transformation in industrial establishments of the other zone and for subsequent reimportation into the country of origin, were to be duty free. In addition, for a period of three years, the natural or manufactured products of the Polish zone of the plebiscite territory must be received in all German territory without duty. The export regulations of the two countries must, for a period of fifteen years, undertake to facilitate export from their respective territories of such products as are indispensable to the industry of either zone of the plebiscite territory.

In accordance with Article 90 of the Treaty of Versailles, Poland is bound to permit for a period of fifteen years the export into Germany of any products of the mines of the Polish zone of the plebiscite territory.

On the other hand, Germany is bound for the same period to permit the export, not to Poland as a whole but to the Polish zone of the plebiscite territory, of mine products of its territory (not merely of its zone in Upper Silesia), the quantity of such products to be reckoned according to the average of exchanges from 1911 to 1913.

For 15 years any inhabitant having his domicile or occupation in the plebiscite territory should be given free of charge a circulation card enabling him to cross the border without further formality.

Both countries were required to recognize the rights and privileges granted before the date of partition to persons or corporations within the territory allotted to a continuance of the operation. There were various other provisions with regard to syndicates of employers and employees, social insurance, postal insurance, rights of nationality and domicile, and protection of minorities.

URUGUAY. A South American republic, bounded by Brazil, Argentina, and Bolivia. Capital, Montevideo.

AREA, POPULATION, ETC. Area, 72,153 square miles; population, Dec. 31, 1919, 1,462,887, giving a density per square mile of 19.2. Population in 1908 was 1,042,680, of whom 181,222 were foreigners, 62,357 being Italians and 54,885, Spanish. The population of Montevideo, March 1, 1921, was 362,880. Among the other large cities are: Salto, about 30,000; Paysandu, 26,000; Mercedes, 23,000. The movement of population in 1919 was as follows: Births, 39,307; deaths,

18,904; marriages, 7532. In 1919 the immigrants numbered 158,186 and the emigrants, 145,287, in each case a falling off from the year before. Of the immigrants 10,778 were Spanish; 5079, Italian; 5562, Brazilian; 3741, English; 2331, French; 1678, German. In 1919 the registered pupils in the public primary schools numbered 106,905. During the year 1920 there were 6060 pupils in attendance at the secondary schools, including the new evening schools. In 1910 the total attendance was 1755.

PRODUCTION. The following figures for agricultural production in 1920 were supplied by the *Pan American Union*: In 1920, 199,893 hectares were sown to corn, from which the crop was 119,942,059 kilos; to sorghum, 60 hectares, crop, 119,250 kilos; to alfalfa, 8010 hectares, crop, 19,952,052 kilos; to peanuts, 615 hectares, crop, 430,474 kilos; to black beans, 11,738 hectares, crop, 4,392,218 kilos; to potatoes, 3589 hectares, crop, 4,086,789 kilos; and to sweet potatoes, 9344 hectares, crop, 31,263,962 kilos. The 1921 wheat crop totaled 211,419 tons, of which 17,897 tons were exported almost immediately. The annual consumption, including seed, was estimated at 180,000 tons, leaving a surplus of only 13,522 tons. The national administration reported in July that the stock of wheat and flour would probably be exhausted by the end of August and restrictive measures were considered necessary in order to conserve these commodities for local consumption. Generally speaking, the situation in Uruguay was similar to that in Argentina, in that it was one of waiting for the other countries to become purchasers of pastoral and agricultural products. Crop conditions bade fair to be at least normal. That country suffered no serious political or labor disturbances during the year 1921 and stable financial conditions went far toward helping it over the general depression. According to the latest available figures the industrial establishments of the country numbered 3704, employing 36,872 workmen.

COMMERCE. The total imports and exports by countries in 1920 were 48,164,912 pesos and 80,751,720 pesos respectively.

FINANCE. The government reported a considerable budget deficit for the fiscal year 1920-21. Sums paid out, or owing, reached 40,731,882 pesos (1 gold peso equals \$1.034 United States currency), while the revenue for the same period amounted to only 37,523,323 pesos, leaving a deficit of 3,208,559 pesos. This would have been in the neighborhood of 5,000,000 pesos if the government had not received as extraordinary resources 1,772,227 pesos, arising from surpluses of the previous year and from the service fund of the consolidated debt. Out of the American loan of \$7,500,000 the sum of 2,351,387 pesos was applied to canceling the debt in current account with the Bank of the Republic. The amount to be provided for immediately, therefore, was reduced to 857,172 pesos. The principal causes for the 1920-21 deficit were the heavy decline in customs revenue, especially with regard to exportation; and the high figure of the budgetary expenses which for some years have been excessive as compared with the revenue. An additional expense to the amount of 2,105,868 pesos was the result of the additional cost of supplies for the government.

The budget estimates for the fiscal year 1921-22

called for the expenditure of 43,253,497 pesos. The national revenue for the year, however, was calculated at only 36,535,475 pesos, leaving a deficit of 6,718,021 pesos. The principal items of national income for this period were the customs duties, surtaxes on imports, and the usual excise taxes.

GOVERNMENT. The constitution as amended, Jan. 3, 1918, came into force, March 1, 1919. (See *YEAR BOOK* for 1919.) Executive power is in a president and a national administrative council, the former elected for four years by direct popular vote, and the latter comprising 9 members, 6 of the majority party and 3 of the largest minority. The president retains control over the departments of foreign affairs, interior, and war and marine, appointing the ministers of these departments. The council controls the other departments and appoints their ministers, namely: Finance, public works, industry, and education. President of the republic in 1921, Dr. Baltasar Brum; president of the administrative council, Dr. Feliciano Viera. The bill providing for votes for women and their legal equality with men was sent by President Brum to Congress.

UTAH. POPULATION. According to the report of the census of 1920, there were 449,396 residents in the State, Jan. 1, 1920, as compared with 373,351 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acres	Prod., bu.	Value
Corn.....	1921	21,000	517,000	\$393,000
	1920	24,000	526,000	789,000
Wheat.....	1921	276,000	6,299,000	4,725,000
	1920	273,000	5,331,000	8,156,000
Oats.....	1921	79,000	2,876,000	1,064,000
	1920	77,000	2,603,000	2,082,000
Hay.....	1921	540,000	1,342,000	8,628,000
	1920	511,000	1,266,000	16,760,000
Potatoes.....	1921	15,000	2,415,000	2,052,000
	1920	16,000	3,024,000	2,419,000

¹ Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, and lead produced from mines in Utah in 1921, according to the United States Geological Survey, was about \$22,595,000, a decrease from \$49,744,334 in 1920. The output of all metals was decidedly less than that of 1920, and the output of copper was less than one-third that of 1920. The mine production of gold decreased from \$2,014,556 in 1920 to about \$1,794,000 in 1921. The gold produced from copper ore was decidedly less, and the producers of siliceous ores containing gold and silver suffered from excessive costs and smelter restrictions. The mine output of silver decreased from 13,106,976 ounces in 1920 to about 12,366,000 ounces in 1921. The decrease in silver was especially noticeable at Bingham, Park City, and Ophir. The output from the Tintic district, however, was more than upheld. The Chief Consolidated mine, at Eureka, continued to be the largest producer of silver in the State, and the Tintic Standard followed closely. The mine production of copper decreased from 116,931,238 pounds in 1920 to about 34,534,000 pounds in 1921, and the value decreased from \$21,515,348 to about \$4,354,000. The mine output of lead decreased from 140,838,113 pounds in 1920 to about 89,782,000 pounds

in 1921. The value of the output decreased from \$11,267,049 to about \$4,130,000. As the average price of lead was about 4.60 cents a pound, it was not profitable to ship lead ore unless it contained much silver. The mine output of recoverable zinc in 1920 was 8,157,739 pounds, but market conditions prevented shipments of zinc ore or concentrate in 1921. It was not profitable to ship zinc ore to eastern plants on account of the high freight rates and decreased price of the metal. In 1921 the mines in Utah produced about 1,970,000 tons of ore, a decrease from 6,800,180 tons in 1920. Of this total the Bingham district produced about 1,485,000 tons as compared with 6,067,180 tons in 1920. The estimated production of the district was 47,052 ounces of gold, 1,059,700 ounces of silver, 28,349,000 pounds of copper, and 24,000,000 pounds of lead.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Revision and codification of laws relating to live stock, crops, etc., and creation of State board of agriculture and office of commissioner of agriculture; prohibiting sale of cigarettes and cigarette papers and making it unlawful to smoke in certain inclosed public places; prohibiting of sectarian teaching in the district schools; regulation of the traffic in eggs; provisions against fraud in the sale of securities; measures for the promotion of water conservation; regulation of the practice of medicine and surgery in all their branches; provision for sanitary inspection of premises of physicians, dentists, barbers, and druggists;

creation of a State welfare commission, regulation of real estate business.

OFFICERS. Governor, Charles R. Mabey; Secretary of State, H. E. Crockett; Auditor, Mark Tuttle; Treasurer, W. D. Sutton; Attorney-General, Harvey H. Cluff; Superintendent Public Instruction, C. N. Jensen.

JUDICIARY. Supreme Court: Chief Justice E. E. Corfman; Justices: Albert J. Weber, Valentine Gideon, Samuel R. Thurman, J. E. Frick.

UTAH, UNIVERSITY OF. A co-educational State institution at Salt Lake City, Utah; founded in 1850. The enrollment for the fall of 1921 was as follows: Graduates, 45; Arts and Sciences, 495; Education, 551; Mines and Engineering, 374; Medicine, 191; Law, 98; Commerce and Finance, 405; Unclassified Vocational Government Men, 162; Secondary Training, 97; total, 2418. The enrollment for the summer session was 1281. There were 153 members in the faculty with 23 additions during the past year. The enrollment during the term was about 20 per cent greater than the entire enrollment of 1920, and was the largest in the history of the institution. The budget for the year was \$433,621. The library contained 64,000 bound volumes.

The R. O. T. C. (Reserve Officers' Training Corps) stables and gun sheds were completed during the year, and a shipment of horses was received for use by the men in training. President, Dr. George Thomas, A.B., A.M., Ph.D., was appointed President and took office July 1, 1921, Dr. John A. Widtsoe having resigned.

VACCINATION. See **SMALLPOX.**
VALENCIAN DIALECT. See **PHILOLOGY, MODERN.**

VANDERBILT UNIVERSITY. A Methodist-Episcopal co-educational institution at Nashville, Tenn.; founded in 1873. The enrollment for the fall of 1921 was 1208. There were 165 members in the faculty. The productive funds of the institution amounted to \$3,400,000 and the income to about \$250,000. The library contained 80,000 volumes. Chancellor, J. H. Kirkland.

VANN, IRVING GOODWIN. Judge, died, March 22. He was born at Ulysses, N. Y., Jan. 3, 1842; graduated at Yale in 1863 and at the Albany Law School in 1865, in which year he began the practice of law at Syracuse. He was mayor of Syracuse in 1879; justice of the supreme court of the State from 1882 to 1896; and judge of the court of appeals until Jan. 1, 1913, when he retired. He was a lecturer at the law schools of Albany, Syracuse, and Cornell University.

VAN SYCKEL, BENNETT. Judge, died at Trenton, N. J., December 19. He was born at Bethlehem, N. J., April 17, 1830, entered Princeton University at the age of thirteen and graduated in 1846 at the age of sixteen. For thirty-five years he was a member of the supreme court of New Jersey. In 1911 he was appointed to the commission which was created to study the question of the Morris Canal, and which reported against the taking over of the canal by the State. He also assisted in drafting the legislation for New Jersey for the restraint of the power of trusts. At the time of his death he was the oldest alumnus of Princeton University.

VARADY, ROSZI. See **MUSIC, Artists, Instrumentalists.**

VASSAR COLLEGE. A non-sectarian institution of the higher learning for women at Poughkeepsie, N. Y.; founded in 1861. The enrollment for the fall of 1921 was 1143. There were 147 members in the faculty. The productive funds amounted to \$3,332,900 and the income to \$164,000. The library contained 112,679 volumes. A bequest for a Physics Building was received. President, Henry Noble MacCracken, Ph.D., LL.D.

VAZOF, IVAN. Bulgarian poet and novelist, died, September 22. Funeral honors almost equal to those bestowed on royalty were accorded to him and eulogies were pronounced upon him by government officials. He was born in 1850. Among his novels the following have been translated into English; *Under the Yoke*, and *Virgin Soil*.

VEAL. See **LIVE STOCK.**

VECSEY, FERENC. See **MUSIC, Artists, Instrumentalists.**

VEGETABLES. See **HORTICULTURE.**

VENEZUELA. A South American republic on the northern coast, bounded on the east by British Guiana and on the south by Colombia. Capital, Caracas.

AREA, POPULATION, ETC. The area is estimated at 398,594 square miles; population, estimated, Dec. 31, 1918, at 2,852,614, giving a density of seven persons to the square mile. Important cities with their estimated populations are as follows: Caracas, 86,880; Valencia, 54,387; Maracaibo, about 50,000. The movement of population in 1919 was as follows: Births, 83,055; deaths, 62,019; marriages, 17,170. The immigrants in the year were 12,433; emigrants, 12,879. Primary education is free and nominally compulsory from the age of seven, but the obligation is often neglected. Since 1915 it has been required that all pupils, including those in elementary schools, pass a state examination. For higher education there were the universities of Merida, Los Andes, and Caracas, but the last named was closed in 1912. Measures have latterly been taken for the improvement of higher education. The expenditure for education in 1920-21 was 4,328,181 bolivars.

PRODUCTION. About one-fifth of the people are engaged in agriculture, and the chief industry is the production of coffee. Other products are: Cocoa, sugar cane, corn, cotton, vegetables, rubber, vanilla, tonka beans, and copaiba. Live stock according to the latest available figures were as follows: Oxen, 2,004,257; goats, 1,667,272; pigs, 1,618,214; asses, 312,810; horses, 191,079; sheep, 176,668; mules, 89,186. Cattle-raising is important but the number has not increased to the extent that might be expected. In 1839 the estimated number was 1,671,881 and in 1920 2,237,945. Among the reasons given for this small increase was the lack of water in the dry season. The minister of public works has latterly attempted to relieve this condition by the building of a large reinforced concrete dam of the waters of the Guarido river and has undertaken the digging of wells on a large scale. There is abundant mineral wealth, and gold is one of the chief mining industries. It is exploited in the region to the southeast of Ciudad Bolivar and the output in 1918-19 was 760,000 grammes. Copper and coal are also worked, and the petroleum production has latterly developed. Asphalt is obtained from the Lake Bermudez region.

COMMERCE. The chief domestic exports in 1918 in order of value were: Coffee, by far the greatest item; cocoa; hides; rubber and balata; gold and cattle. The following table from the *Statesman's Year Book* of 1921 shows the distribution of the foreign trade by countries for two years:

	Imports		Exports	
	1917-18	1918-19	1917-18	1918-19
	£	£	£	£
United States.....	2,109,060	3,646,157	1,970,637	4,361,357
United Kingdom....	772,561	1,094,951	522,911	582,437
Spain.....	154,623	171,358	363,293	742,860
France.....	153,952	108,149	323,681	2,200,756
Netherlands.....		3,349	115,706	204,958
Italy.....	55,983	46,609	59,825	56,241

COMMUNICATIONS. Vessels entered in 1918-19 numbered 819 of 643,297 tons. The total length of the railways in 1920 was given at 1039 kilometres. For distribution among the lines, see preceding YEAR BOOK.

FINANCE. The following table shows the principal items of the budget for the fiscal year ending June 30, 1921:

Items	Revenue, bolivars
Customs.....	14,000,000
30 per cent contribution.....	4,410,000
Tax of 25 per cent on import duties.....	3,675,000
Transit tax.....	400,000
Liquor tax.....	7,500,000
Tobacco.....	8,600,000
Salt revenue.....	6,700,000
Stamps.....	6,500,000
Other revenue.....	7,827,000
Total.....	59,612,000

Items	Expenditure, bolivars
Department of Interior.....	12,166,529
Department of Foreign Affairs.....	1,927,203
Department of Finance.....	16,889,308
Department of War and Navy.....	11,101,520
Department of Internal Development.....	5,300,509
Department of Public Works.....	6,246,420
Department of Public Instruction.....	4,328,182
Budget rectifications.....	518,429
Total.....	58,538,600

The public debt, Dec. 31, 1920, was as follows: Internal debt, 45,175,169 bolivars; registered debt, 2,447,755 bolivars; foreign debt, 84,004,427 bolivars: total, 131,627,351 bolivars.

GOVERNMENT. Executive power is in the president who has a cabinet of seven members; and legislative power, in a congress of two houses, namely, the senate of forty members, elected for three years; and the chamber of deputies who are chosen by direct election for three years in the proportion of one to every 35,000 inhabitants in each state and one more if there is an excess of 15,000. President in 1921, General Juan Vicente Gomez.

VERMONT. POPULATION. According to the report of the census of 1920, there were 352,428 residents in the State, Jan. 1, 1920, as compared with 355,956 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	82,000	4,510,000	\$ 3,428,000
	1920	81,000	3,897,000	4,797,000
Oats.....	1921	81,000	2,673,000	1,577,000
	1920	81,000	2,835,000	2,126,000
Hay.....	1921	913,000	1,958,000	21,024,000
	1920	927,000	1,247,000	28,642,000
Potatoes.....	1921	25,000	3,750,000	3,900,000
	1920	27,000	3,510,000	4,388,000

¹ Tons.

TRANSPORTATION. The latest figures available gave the total mileage for railroads as 1073 miles and 128 miles of electric roads. The carriers of the State are under the control of the Public Service Commission, which is made up of three appointive members. There was no appreciable amount of railroad construction during the year.

FINANCE. Cash on hand and in banks, July 1,

1920, \$1,965,122; receipts during fiscal year, \$5,105,039; disbursements, \$5,047,229; cash on hand and in banks, June 30, 1921, \$2,022,932.

EDUCATION. The enrollment in 1921 was 61,797; average daily attendance, 51,142; number of teachers, 2935; total of teachers' salaries, \$2,260,031.56; total expenses for educational purposes, \$12,628,034.59.

STATE INSTITUTIONS. The State institutions with latest available figures for population are as follows: House of Correction for Women, Rutland, 17; House of Correction for Men, Windsor, 93; State Prison for Women, Rutland, 19; State Prison for Men, Windsor, 197; Industrial School, Vergennes, 248; School for Feeble-minded, Brandon, 122; Hospital for Insane, Waterbury, 766.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Provision for planning commissions in cities, towns, and villages; amendment of direct primary law and providing that voters shall declare their party affiliations; repeal of Presidential primaries; prohibition of advertisements pertaining to venereal disease or certain sex disorders; provision for supervision and regulation of workmen's compensation insurance; requiring license and tax for bill board advertising; provision that State party committees be composed half of women and half of men; provision for annual purchase of State forests; provision that no person shall be debarred from public office on account of sex.

OFFICERS. Governor, James Hartness; Lieutenant-Governor, Abram W. Foote; Treasurer, Walter F. Scott; Secretary of State, Harry H. Black; Auditor, Benjamin Gates; Attorney-General, Frank C. Archibald; Commissioner of Education, Clarence H. Dempsey.

JUDICIARY. Supreme Court: Chief Justice, John H. Watson; Associate Justices: George M. Powers, William H. Taylor, Willard W. Miles, Leighton P. Slack.

VERMONT, UNIVERSITY OF. A co-educational State institution at Burlington, Vt.; founded in 1791. The enrollment for the fall of 1921 was as follows: Colleges of Arts and Sciences, 582; Medicine, 117; Engineering, 192; Agriculture, 145; total, 1036. The enrollment for the summer session of 1921 was 552. There were 135 members in the faculty. Endowment funds, not including funds invested for income in dormitories, amounted to \$819,786, and the income, from private endowment funds only to \$45,831. The total receipts for the year 1920-21 were \$649,245. The library contained 107,236 bound volumes and 39,000 pamphlets. President, Guy Winfred Bailey, A.B., LL.D.

VETERINARY MEDICINE. The fifty-eighth annual meeting of the American Veterinary Medical Association was held at Denver, Colo., from September 5 to 9. Dr. A. T. Kinsley of Kansas City was elected President; Dr. M. Jacob of Knoxville, Tenn., Treasurer; Dr. N. S. Mayo of Chicago was re-elected Secretary; and Dr. J. R. Mohler of Washington, D. C., Editor of the Journal. The Live Stock Sanitary Association held its twenty-fifth annual meeting at Chicago, Ill., November 28-30, at which Dr. T. E. Munce of Harrisburg, Pa., was elected President and Dr. O. E. Dyson of Chicago, Secretary and Treasurer. The third conference of State and National Research Workers on Animal Diseases

was held at Chicago, November 26, at which Dr. C. H. Stange of Ames, Iowa, was elected Chairman and Dr. R. A. Whiting of Lafayette, Ind., Secretary.

VETERINARY EDUCATION. The number of accredited veterinary colleges in the United States was 16, the same as the preceding year, and 10 foreign veterinary colleges, or one more. The total number of freshmen enrolled in all colleges for the session beginning in the fall of 1920 was 182, as compared with 352 for the preceding year. The total enrollment at all veterinary colleges was 965, against 1265 for the preceding school year, and the number of graduates 277, compared with 371 in 1920. The decline of 170, or nearly 50 per cent in the number of freshmen enrolling during the year, is thought to have been due in part to the increased educational requirements.

NECROLOGY. With the death on May 10 of Dr. James Law, Professor Emeritus at the New York State Veterinary College since 1908, at the age of 83 years, the profession lost one of its oldest and most respected members. Dr. Law held the chair of veterinary science at Cornell University from 1868 until his appointment in 1896 as Director of the newly founded and endowed New York State Veterinary College. As a teacher and writer he was one of the most eminent of those who have contributed to the development of veterinary education in this country. His most important writing is the *Textbook of Veterinary Medicine*, in five volumes, now in its second edition. The death of Dr. W. Horace Hoskins, Dean of the New York State Veterinary College at New York University since 1917, on August 10, at the age of 61 years, removed another of the leaders in veterinary education. The death of Dr. Edward Wallace Hoar, at Cork, Ireland, took place on November 26, at the age of 57 years. He was well known for his contributions to veterinary literature, of which the most notable are *Veterinary Therapeutics*, now in its third edition, and a *System of Veterinary Medicine* in two volumes. Dr. Victor A. Norgaard, a graduate of the Royal Veterinary College at Copenhagen, Denmark, died Nov. 16, 1920, at the age of 53. Dr. Norgaard was appointed Chief of the Pathological Division of the Federal Bureau of Animal Industry in 1896, and became territorial veterinarian of Hawaii in 1905. Dr. E. A. A. Grange, Principal Emeritus of the Ontario Veterinary College, died July 25. Dr. Jacob Albrechtsen, famous as a specialist on sterility of farm animals, died at Copenhagen, Denmark, September 11, at the age of 61.

APPROPRIATIONS. The Agricultural Appropriation Act, approved March 3, included \$1,978,800 for the investigation of tuberculosis of animals, its control, eradication, etc., of which \$1,000,000 was for the payment of indemnities. An additional sum of \$600,000 for payment of indemnities was appropriated by Congress in the deficiency bill approved by the President on December 15. The amount appropriated for hog cholera work for the fiscal year beginning July 1 was increased to \$510,000, which included \$195,000 for regulation work under the Biologic Products Act of 1913. The sum of \$50,000, or a decrease of \$15,200, was appropriated for dourine eradication work, and for cattle tick eradication work \$660,000, or a decrease of \$21,160. An emergency appropriation of \$50,000 was again made available for use in

combating possible outbreaks of disease, such as foot-and-mouth disease, rinderpest, etc.

BOVINE TUBERCULOSIS ERADICATION. The work of eradicating tuberculosis of live stock under the accredited herd plan went forward rapidly, 8201 herds containing 193,620 cattle having been officially accredited at the end of the fiscal year (June 30), or more than twice the number at the same time the preceding year. The herds tested once without showing any reactors numbered 49,814 and contained 643,233 cattle, or approximately three times as many as the preceding year. Operations were extended to Colorado and Arizona, making a total of 47 States and the Territory of Hawaii that are actively participating in the campaign. The progress in area work, which consists in the testing of all cattle within a definite area, usually a county, likewise was rapid, 10 entire counties having completed one or more official tests of all their cattle by June 30, and 49 others entered upon active area campaigns. In 25 additional counties plans were being made to begin the work. It was found that 11.83 per cent of the hogs slaughtered under Federal inspection for the 9 months ended March 31 were infected with tuberculosis. Ninety-six per cent of the tuberculosis in swine in the Middle West was found to be traceable to feeding the hogs on unsterilized skim milk or dairy by-products, or allowing them to follow dairy or feeder cattle. A continuation of the studies of a local glandular tuberculosis of hogs resulted in definitely determining the cause of the disease to be a true avian type of the tubercle bacillus.

CATTLE TICK ERADICATION. The eradication work conducted by the Federal Bureau of Animal Industry, in cooperation with State and local officials and live-stock owners, resulted in the release of 32,171 square miles from quarantine in the States of Alabama, Georgia, Louisiana, North Carolina, Oklahoma, and Texas, during the fiscal year ended June 30. An additional area of 29,563 square miles in Texas, Georgia, Louisiana, and North Carolina was released from Federal quarantine for the cattle tick on December 10. With this addition there has been released 72 per cent of the whole area originally placed under quarantine, leaving 206,015 square miles in the various infested regions still under government regulation. Lack of local funds and local conditions made it necessary during the year to re-quarantine a number of areas.

HOG CHOLERA. In the hog cholera control work a reduction in the funds appropriated for the work from \$446,865 in 1920 to \$192,200 for the fiscal year ended June 30, 1921, necessitated a curtailment in the force of veterinarians from 140 to 54. The work was directed especially at preventing the spread of infection from primary outbreaks, with a view to saving as many hogs as possible. The mortality from the disease was 39.3 per thousand, a slight decrease from the preceding year.

DOURINE ERADICATION. Good progress was made in the work of eradicating dourine, no new cases having been found in North Dakota, South Dakota, or Wyoming. A small number of diseased animals was discovered in Montana, and some further work remains to be done in that State and also in New Mexico. In Arizona, where more than 80 per cent of the affected animals were found, satisfactory progress was

made. The complement-fixation test was made of 22,855 samples of blood serum, of which 515 or 2.2 per cent gave positive reactions.

ERYSIPELAS OF SWINE. Investigations reported upon by G. T. Creech have shown conclusively that the affection urticaria, or "diamond skin disease," existing in the United States is caused by a type of *Bacillus erysipelatis suis*, the causative agent of swine erysipelas, and should be classed as a chronic form of that disease.

RINDERPEST. An epizootic among cattle in São Paulo, Brazil, was determined on March 5 to be rinderpest, this being the first time the disease has occurred upon the American continent. Control measures were promptly applied, and the last official report of a case was made on May 23, after approximately 600 head had died and some 1000 been slaughtered. All restrictions on transit of animals was removed by the Government on August 26.

FOOT-AND-MOUTH DISEASE. Outbreaks of this disease occurred in England and were traced to cattle shipped from Ireland. The investigations of Sir Stewart Stockman as to the source of the invasions of Great Britain by this disease, of which there have been 65 or more in the last 20 years, indicate that the virus may be carried by the air. Its occurrence in Europe was quite general and the cause of great loss, particularly in Italy, Switzerland, France, and Germany. Investigations by P. Serena and F. Kuoni with trypan blue indicate that chemotherapy is destined to play an important rôle in its combat.

FORAGE POISONING AND BOTULISM. In investigations in Michigan, Z. Northrup Wyant found an organism that resembles *Bacillus botulinus*, both morphologically and culturally, in 6 of 11 samples of silage that had caused forage poisoning in live stock. The toxin from the culture isolated from one of the samples of silage caused the death of experimental animals. Graham and Schwarze at the University of Illinois isolated an anaerobic bacillus biologically resembling *B. botulinus* from corn silage on a farm where the herd had developed symptoms of forage poisoning and a number had died.

CHICKEN POX CONTROL CAMPAIGN. A campaign for the control of chicken pox in fowls was commenced July 1 by the New Jersey Agricultural Experiment Stations in coöperation with Squibbs Laboratories, the vaccine being supplied at cost to all who apply for it.

SHEEP AND CATTLE SCABIES. In the eradication work with scabies of sheep 22,114,154 inspections were made and 8,273,450 dippings supervised. The affection was found to be quite prevalent in California, Nevada, Wyoming, and Colorado. In the coöperative eradication of scabies of cattle 2,797,001 inspections were made and 1,073,696 dippings supervised.

PARASITE INVESTIGATIONS. It was found that monthly treatment of sheep with a 1 per cent solution of copper sulphate makes it possible to rear lambs to marketable age without losses from stomach-worm infestation. The treatment has a beneficial effect upon the ewes as well as upon the lambs. Experiments by B. H. Ransom and his associates have shown that by taking special precautions to prevent round-worm infestation of young pigs until they reach the age of four months much loss can be prevented. Further studies by these investigators have shown that

the path of migration of *Ascaris* larvæ from the intestines to the lungs is by way of the circulating blood and lymph, also that some of the larvæ may be returned to the heart from the lungs and that then they may be carried to various parts of the body in the systemic circulation.

Carbon tetrachlorid was found, in experiments by M. C. Hall, to be highly efficacious in the removal of hookworms from dogs, also in the removal of ascarids from dogs and the large strongyles from horses. The hookworm of common occurrence in American foxes was found to be identical with the common European dog hookworm, *Uncinaria stenocephala*. It has not as yet become established among dogs in the United States, where *Ancylostoma caninum* is the common species. A gapeworm occurring in cattle in Porto Rico was found to be *Syngamus laryngeus*, hitherto known only in the Orient, or a closely related species. Work by B. Schwartz shows that certain nematodes of the family Strongylidae, including *Ascaris lumbricoides*, contain substances physiologically related to hirudin and snake venom, that inhibit coagulation of blood to a marked degree. Thus the injection of their secretions into the intestinal mucosa by certain biting nematodes results in minute hemorrhages and may be of etiological importance.

The turkey was found by Ransom to be the natural host of the gapeworm of fowls, and apparently the chief agent in the spread of gapeworm to new localities and the principal source of infection to the soil on poultry farms where gapes is prevalent.

STOCK POISONING PLANTS. In investigations by C. D. Marsh and his associates, several species of milkweed occurring on the Western range were found to be important sources of loss, particularly of sheep. Similar conclusions were arrived at in investigations by C. E. Fleming and his associates. Other poisonous plants reported upon include the coffee bean in Texas; "yerba manza" in New Mexico and Arizona; western sneezeweed, which causes "spewing sickness" of sheep on the range; and the rayless goldenrod, which causes "alkali disease" or milksickness.

BIBLIOGRAPHY. Among the new works published are the following: E. T. Baker, *Sheep Diseases* (Chicago, 1920, 2nd ed., rev. and enl.); A. Bouquet and L. Nègre, *Lymphangite Epizootique des Solipèdes, Contribution à l'Étude des Mycoses* (Paris, 1920); J. Bordet, *Traité de l'Immunité dans les Maladies Infectieuses* (Paris, 1920); W. G. MacCallum, *A Textbook of Pathology*, (Philadelphia and London, 1920, 2nd ed., rev.); W. J. MacNeal, *Pathogenic Microorganisms* (Philadelphia, 1920, 2nd ed., rev. and enl.); B. Williams, *The Diseases of the Genital Organs of Domestic Animals* (Ithaca, N. Y., 1920).

VICTORIA. A state of the Commonwealth of Australia in the southeastern part of the continent; next to Tasmania the smallest of the

Australian states. Capital, Melbourne. Area, 87,884 square miles; population, estimated, Jan. 1, 1920, 1,495,938. More than three-fifths of the total population are urban, namely, 961,888. The capital, Melbourne, which is also the capital of the Commonwealth pending the completion of the new capital at Yass-Canberra, had a population, including suburbs, Jan. 1, 1920, of 743,000. Other cities with population estimates of that date are: Ballarat, 39,840; Bendigo, 34,780; Geelong, 34,270. In 1919 the movement of population was as follows: Births, 31,621; deaths, 19,370; marriages, 11,706. The immigration by sea in 1919 was 33,621 and the emigration, 37,099, both exclusive of the Australian expeditionary forces. Executive power is vested in a governor who acts through a responsible ministry; and legislative power, in a parliament of 2 houses, namely, the upper house with 34 members elected for 6 years, and the lower house with 65 members elected for 3 years unless sooner dissolved. Governor in 1921, Lord Stradbroke; Prime Minister, H. S. W. Lawson.

VILLEGAS Y DECORDERO, José. Art director of Spain, died at Madrid, November 11.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Virginia was issued by the Bureau of the Census. The figures are preliminary and subject to such change and correction as may be found necessary from a further examination of the reports.

The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The accompanying table gives a comparative summary for the State in 1919 and 1914:

	1919	Census— 1914	Per cent of increase, ¹ 1914-19
Number of establishments.....	5,603	5,508	1.7
Persons engaged in manufactures.....	139,197	118,109	17.8
Proprietors and firm members.....	5,900	6,125	-3.7
Salaried employees.....	13,929	9,164	52.0
Wage earners (average number).....	119,368	102,820	16.1
Primary horsepower.....	419,019	337,567	24.1
Capital.....	\$464,517,000	\$261,501,000	77.6
Services.....	146,030,000	56,118,000	160.2
Salaries.....	25,925,000	11,245,000	130.5
Wages.....	120,105,000	44,873,000	167.6
Materials.....	372,041,000	155,320,000	139.5
Value of products.....	641,810,000	264,039,000	143.1
Value added by manufacture (value of products less cost of materials).....	269,769,000	108,719,000	148.1

¹ A minus sign (—) denotes decrease.

He was born at Seville in 1848 and became widely known throughout European art circles. He was at one time director of the Prado Museum and President of the section of painting of the Royal Academy of Fine Arts.

VILNA. See LITHUANIA; and WAR OF THE NATIONS.

VIRGIL, ALMON K. See NECROLOGY.

VIRGINIA. POPULATION. According to the report of the census of 1920, there were 2,309,187 residents in the State, Jan. 1, 1920, as compared with 2,061,612 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	1,904,000	47,600,000	\$32,844,000
	1920	1,884,000	56,520,000	56,520,000
Oats.....	1921	163,000	3,342,000	1,872,000
	1920	148,000	3,241,000	2,625,000
Wheat.....	1921	847,000	8,301,000	9,629,000
	1920	892,000	11,150,000	20,070,000
Rye.....	1921	38,000	418,000	397,000

Tobacco.....	1921	167,000	¹ 91,850,000	18,829,000
	1920	246,000	¹ 179,580,000	43,099,000
Hay.....	1921	942,000	¹ 939,000	16,591,000
	1920	925,000	¹ 1,202,000	28,127,000

OFFICERS. Governor, Westmoreland Davis; Lieutenant-Governor, B. F. Buchanan; Secretary of State, B. O. James; State Treasurer, Chas. A. Johnston; State Auditor, C. Lee Moore; Attorney-General, Jo. Lane Stern.

VIRGINIA, UNIVERSITY OF. A non-sectarian institution of the higher learning at Charlottesville, Va.; founded in 1825. The total enrollment in 1921 was 3546, and the faculty numbered 100. President, Edwin A. Alderman, LL.D.

VIRGIN ISLANDS. A group of small islands east of Porto Rico, part of which belong to the British colony of the Leeward Islands (q. v.), and part to the United States. The latter were purchased from Denmark by the United States government for \$25,000,000 by treaty, proclaimed Jan. 25, 1917, and were formerly known as the Danish West Indies. The largest island of the group is St. Croix, about 85 square miles. St. Thomas contains about 30 square miles and St. Johns, about 20, and there are besides some 50 small islands, for the most part unnamed and uninhabited. Population at the census of 1920, 26,051 as compared with 27,086 in 1911 and with 38,231 in 1860. In 1917 about 80 per cent were negroes; 7.4 per cent, whites; and the remainder of mixed blood. In that year 14,901 were on the

island of St. Croix, and 10,191, on St. Thomas. The larger part of the trade has been with the United States. Captain S. E. W. Kittelle was appointed governor, March 28.

VITAL STATISTICS. The Department of Commerce, through the Bureau of the Census, announced, in December, 1921, that in the year 1920 there were 1,508,874 births reported within the birth registration area, which includes 23 States and the District of Columbia, the estimated population of this area on July 1, 1920, being 63,659,441 or 59.8 per cent of the total population of the United States. The birth rate was therefore 23.7 per 1000 population, which is considerably higher than the rate (22.3) for the previous year, but is below the rate (25) for 1916, which may be looked on as a more normal year, as it preceded the influenza epidemic and the entrance of the United States into the war.

The highest birth rate for whites was in North Carolina with 31.7 per 1000, and the lowest in California with 18.3. The highest figures for the combined dark races are found in California and Washington, where they reach nearly 40 per 1000. Under "dark races" are included the red Indian and the yellow Asiatic races. The negro birth rate in some of the more northerly States as Kansas and Kentucky is lower than any white figures, while in Virginia and the Carolinas (the only Southern States in the registration area) it differs but little from that of the whites, and this is true of a number of Northern States.

On October 22 last the Department of Commerce of the Bureau of the Census announced that the number of deaths in the registration area of the United States during the year 1920 was 1,142,578, which represents a death rate of 13.1 per 1000 population as compared with 12.9 in 1919, this being the lowest figure recorded since the establishment of the registration area in 1900.

The death registration area is considerably larger than the area for birth registration, since it comprises 34 States, the District of Columbia and 16 cities in nonregistration States. The total estimated population of this area on July 1, 1920, was 87,486,713, or 82.2 per cent of the estimated population of the United States.

During 1920 the State of Nebraska was added to the registration area so that at present the only States not in the latter are Alabama, Arizona, Arkansas, Georgia, Idaho, Iowa, Nevada, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, West Virginia, and Wyoming. The figures for Hawaii, which represent registration territory, are not included with the continental figures.

In regard to individual causes of death the mortality from pneumonia increased from 123.5 per 100,000 in 1919 to 137.3 in 1920; chronic heart disease showed an increase from 131 per 100,000 in 1919 to 141.9 in 1920 and cancer increased in the same interval from 80.5 to 83. Other diseases showing an increase comprise whooping cough, measles, cerebral hemorrhage, congenital debility and malformations, puerperal fever, scarlet fever, and appendicitis.

A marked decrease of mortality was shown in tuberculosis which was 114.2 in 1920 as compared with 125.6 in 1919; also in influenza—71 in 1920 as against 98 the year before. The death rate for suicide declined over 1919, and this is also true of the rates for typhoid fever and accidental drowning.

The high infant mortality still "challenges the national conscience," to use the language of the special report of the Children's Bureau of the U. S. Department of Labor which was released for publication in June, 1921. During the year 1919 in the United States, one mother died for every 135 babies born and every eleventh baby born died before it was a year old. Six countries have a lower infant mortality than the United States and 16 in a group of 17 a lower maternal mortality. In fact the figure for the States is almost the highest recorded and is steadily growing larger, despite the fact that other countries are showing constant improvement in their statistics. Our increase in childbirth mortality which was only 6.1 per 1000 in 1915 has risen steadily to 7.4 in 1919.

Experience has shown that thousands of deaths of both mothers and children could be prevented every year by public measures for the protection of maternity and infancy. In New York City, among 4496 mothers who were supervised by the New York Maternity Centre Association before and after the birth of their babies, the maternal mortality rate was less than one-third the rate of the United States, and the rate for deaths in early infancy was less than half that for the city as a whole. In other cities of the United States and in foreign countries, the institution of infant welfare measures has been followed by greatly decreased death rates.

Measures which have proved successful in preventing this waste of life among mothers and babies include the following: prompt and accurate birth registration, health centres, public health nurses, special clinics, trained attendance at childbirth, adequate hospital service, education of the mother in maternity and child hygiene and education of the general public in the significance of and necessity for maternal and infant health.

MARRIAGE STATE. In the Bulletin which covers this subject, released by the Bureau of the Census of the Department of Commerce on Jan. 26, 1922, the figures pertain to the first day of January, 1920. At that period there were in the United States 53,900,431 males of whom 36,920,663 were men and boys over the age of 15 years. Of the latter number 12,967,565 were single, 21,849,266 were married, 1,758,308 were widowed and 235,284 divorced. For the remaining 110,240 the marital condition was not ascertained by the enumerators. The total number of females for the same period was 51,810,189, including 35,177,515 women and girls 15 years and upwards of age. Of the latter number 9,616,902 were single, 21,318,933 were married, 3,917,625 were widowed, and 273,304 divorced. Of the remaining 50,751 the marriage state was not ascertained by the enumerators. The excess of married men over married women which amounts to 530,333 was due principally to the large number of foreign men in the country who had left their wives in the home countries. The figures on divorced people have no connection with the actual number of these individuals but simply show that these divorcees and divorcees had not remarried at the date of the census. Comparison of 1920 with 1910 shows that the single population was greater in the latter year, the married population showing an increase in 1920 which was considerably in excess of the decrease of single men. In women the decrease in the single population was greater than the increase of the

married, for the decade. There were more widows and more divorcees in 1920. These and other figures are in part explicable by the earlier age at which women marry and their greater longevity. They therefore not only marry much younger but outlive their husbands age for age. The ratio of women to men differs notably with the section of the country. In the New England States and New York, the ratio of men to women is low and the proportion of married women comparatively small. In the Pacific coast and Rocky Mountain States, on the contrary, the ratio of men to women is high and the proportion of married women large; while that of the men is relatively small. The largest proportion of married men is found in Mississippi and Arkansas—62.8 per cent—and the smallest in Nevada—45.9 per cent. The largest proportion of married women is in Wyoming with 70.5 per cent and the smallest in Massachusetts with 53.2 although in the District of Columbia the proportion is still lower—47 per cent. In every one of the States and in the District of Columbia the proportion of married men has increased during the decade but in the case of the women five States and the District showed a decrease—Vermont, North Dakota, Oklahoma, New Mexico, and Nevada. However, the decrease is very slight, and in numerous other States the figures are nearly equal.

VOLCANOES, HAWAII. The systematic observations at the Hawaii Volcano Observatory during the past year have shown that the level of the lava in Halemau-man has been higher than the average during preceding years. There were several quiet eruptions in the early part of the year, one of which (that of March 18) caused the molten lava to overflow the rim of the crater and flow a short distance down the flanks of the volcano. This eruption was accompanied by peculiar atmospheric disturbances due to the large amount of gas liberated. The investigations of the quality and temperature of the gases were made. The temperature was about 1200° F., and the gas consisted mainly of water vapor (70 per cent) CO_2 , SO_2 , and S were present in widely varying amounts. Chlorine and nitrogen were found in small amounts. The most interesting feature was the proportion of hydrogen to argon, neon, and helium. It was found that these latter were twice as abundant in proportion to hydrogen in the volcanic emanations than in the atmosphere. This fact is of interest in relation to the origin of the helium bearing natural gas of Kansas, for which a volcanic origin is entertained by some.

Investigation in the Kan Desert southwest of Vulture brought to light some ancient rock carvings and fossil human foot prints, well preserved in the volcanic ash.

VEUVUS. The great Italian volcano has been slightly active during the year. No great eruptions occurred, but during the frequent minor eruptions, investigators have descended into the crater and have observed the processes and

measured temperatures. The exact details have not yet been published. The Helian government has brought out a new and very excellent map of Vesuvius on which the various flows are clearly shown and dated.

OTHER VOLCANIC DISTRICTS. The outlying volcanic districts in the East Indies, Africa, and Iceland have been the fields of important studies during the past year. Mention must be made of the work of Brouwer on the volcanic domes of the Malay Archipelago and the mechanics of their formation. There have also been published descriptions of the dormant volcanoes of east Africa and of Southwest Africa, but no eruptions have been recorded.

In Iceland there has been a renewed activity in the study of volcanoes. A detailed investigation of the Randhola group shows that the volcanoes are arranged dominantly along a series of parallel fractures with larger volcanoes where these rifts are broken by other faults of different systems.

VOLHYNIA. A government of the former empire of Russia, situated in West Russia east of Poland and Galicia; and since the war forming part of the new state of Ukraine. Area, 27,699 square miles; population, Jan. 1, 1915, 4,241,800, the majority of whom are Little Russians. Capital, Zhitomir, with a prewar population estimated at 96,800.

VOLUNTEERS OF AMERICA. This organization is similar to the United States Army, but the spirit is purely democratic. It was founded in 1896 and conducts Christian, social, and philanthropic work throughout the United States. Statistics for 1921 are not yet available, but in 1920 there were 61 homes or institutions where benevolent work is conducted by various philanthropic departments, such as employment bureaus, wood-yards, industrial effort, cooperative stores, boys' clubs and trade classes, supplying of coal, distribution of milk and ice, women's sewing classes, reading-rooms, hospital nursing, summer excursions, fresh-air camps, distribution of clothing, providing of food for poor families and wives and children of prisoners. A large number of lodgings and meals were provided both men and women at the various establishments of the organization in 1921. Numerous indoor and open-air religious services were held with large attendances. The movement maintains The Volunteer Hospital in New York City where treatment was rendered a vast number of patients and much valuable work carried on during the year. The Prison League of the organization was established twenty-one years ago; it carries on reform of the prisoner within the walls and aims to strengthen his moral and social position upon leaving the prison. Very important work has been conducted with the girls of the large cities through Working Girls' Homes and many children were afforded vacations at fresh-air camps in the country.

The executive offices of the organization are at 34 West 28th Street. General Ballington Booth is President and Colonel J. A. Merrill, Secretary.

VORARLBERG. Formerly a crownland of the kingdom of Austria; after the war a province of the new republic of Austria. Area, 1005 square miles; population (1910), 145,408, of whom 132,908 were Austrian subjects and 95.36 per cent German-speaking; population according to the census of 1920, 133,212. Capital, Bregenz.

W

WADE, JAMES FRANKLIN. Army officer, died, August 23. He was born at Jefferson, Ohio, April 14, 1843; educated in the common schools; and entered the Civil War as a first-lieutenant in the Sixth United States Cavalry. He was made lieutenant-colonel of the Colorado Cavalry, May 1, 1864, and breveted brigadier-general, Feb. 13, 1865. He was honorably mustered out of the volunteers in the following year and transferred to the regular army with the rank of captain. He rose through the successive grades to the rank of major-general, April 13, 1903, and retired by operation of law, April 14, 1907. During his military career he was breveted for gallantry at Beverley Ford, Va., at Marion, Tenn., and during the campaign in southwestern Virginia. He was head of the Cuban evacuation commission in 1898, and was in the Philippines from 1901 to 1904, being in command of the division of the Philippines during the last two years of that period. He was in command of the Atlantic division from 1904 to 1907.

WALES. A division of the United Kingdom, lying west of central England, with the Irish sea on the north and the Bristol channel on the south. Area, 7466 square miles; population (1911), 2,025,202; (1921), 2,206,712. See GREAT BRITAIN.

WALLACE, JOHN FINDLEY. Civil engineer, died, July 3. He was born at Fall River, Mass., Sept. 10, 1852; and graduated in civil engineering at the University of Wooster in 1882. He was engineer in a great variety of enterprises in railway construction, bridge building, canal building, etc. From 1871 to 1876 he was engineer on the Upper Mississippi river and improvements of Rock Island Rapids, and successively chief engineer, bridge engineer, and resident engineer on several railways of the Middle West. He was first American chief engineer on the Panama Canal in 1904. From 1906 to 1917 he was president and chairman of the board of directors of Westinghouse, Church, Kerr and Company. He designed and constructed many important terminals, and was the adviser to many large corporations.

WALLACHIA. The central and western division of Roumania, with Transylvania and Moldavia on the north, Serbia on the west, Bulgaria on the south, and the Dobrudja on the east. Area, 29,916 square miles; population, Jan. 1, 1913, 4,716,291. The largest city is Bucharest, the capital of Roumania, with a population in 1917 of 308,987.

WALSH, WILLIAM J. Archbishop of Dublin, died, April 8. He was born Jan. 30, 1841, educated at the Catholic University of Ireland and at St. Patrick's College at Maynooth. He became a professor at Maynooth, 1867, and was vice-president of the college after 1878 and president after 1881. From 1891 to 1917 he was commissioner of education in Ireland and commissioner of intermediate education from 1892 to 1919. He held many other important positions in educational institutions in Ireland. He was Primate

of Ireland after 1885. Among his publications may be mentioned a work on the Irish land act and various treatises on educational questions and grievances; *Bimetalism and Monometalism* (1893-95); and a number of works on the church questions of the day.

WARFIELD, BENJAMIN BRECKINRIDGE. University professor and theologian, died, February 17. He was born at Lexington, Ky., Nov. 5, 1851, graduated at Princeton in 1871 and at the Princeton Theological Seminary in 1876. He afterwards studied at the University of Leipzig. He was ordained to the Presbyterian ministry in 1879 and was an instructor and afterwards a professor in the Western Theological Seminary till 1887, after which he became professor of didactic and polemical theology at Princeton Theological Seminary. He edited the *Presbyterian and Reformed Review* (1890-1902) and wrote: *Divine Origin of the Bible* (1882); *Inspiration* (1882); *Introduction to the Textual Criticism of the New Testament* (1886); *Augustine's Anti-Pelagian Treatises* (1887); *The Idea of Systematic Theology* (1888); *On the Revision of the Confession of Faith* (1890); *The Gospel of the Incarnation* (1893); *Two Studies in the History of Doctrine* (1893); *The Right of Systematic Theology* (1897); *The Significance of the Westminster Standards* (1898); *Acts and Pastoral Epistles* (1902); *The Power of God, Unto Salvation* (sermons, 1903); *The Lord of Glory* (1907); *Calvin as a Theologian, and Calvinism Today* (1909); *Hymns and Religious Verses* (1910); *How Shall we Baptize?* (1911); *The Saviour of the World* (sermons, 1914); *The Plan of Salvation* (1915); *Faith and Life* (1916); *Counterfeit Miracles* (1918).

WAR OF THE NATIONS. The present article covers the principal aspects of international relations during the year. Supplementary to it are the paragraphs pertaining to foreign affairs in the sections on *History* in the articles FRANCE, GERMANY, GREAT BRITAIN, ITALY, JAPAN, RUSSIA, and other countries mentioned below. For the activities of the various peace bodies throughout the world, see the article INTERNATIONAL PEACE AND ARBITRATION.

THE REPARATIONS

PARIS CONFERENCE. Germany replied at the beginning of the year to the French criticism of delay by handing over material with a list of the quantities delivered already, which were considerable. A conference of the Allied Prime Ministers was held in Paris, January 24-29, for further discussion of the reparations question and German disarmament. Difference of opinion between France on the one hand and Great Britain and Italy on the other was again manifested. The French demanded that the total indemnity be placed at 400,000,000,000 gold marks. To this Lloyd George, supported by the Italian representative made a vigorous objection. A debate followed during the next three days and a decision

was reached comprising the following points: The total indemnity was to be 226,000,000,000 marks or its equivalent, to be paid by Germany to the Allies within 42 years on a sliding scale of annual payments ranging from 2,000,000,000 to 6,000,000,000 marks; Germany to pay during this period of 42 years an annual tax of 12 per cent on her total exports, also to revise her financial system, balance her budget, increase taxes, railway fares, postal rates and imposts on alcohol and tobacco, and reduce the issue of paper money; finally, Germany was required to obtain the approval of the Allies before making any foreign loans. If Germany failed to fulfill these conditions the Allies were authorized to seize German customs, levy taxes in the Rhineland, assume financial control of Germany and impose military penalties. The Allied prime ministers at this conference adopted the Reparations Commission's proposal of an increase of German coal deliveries to 2,200,000 tons a month without any further premiums on ordinary coal but with an allowance of two gold marks per ton for coal of a special quality; and Germany was to make up the 500,000 tons which she had not delivered under the Spa agreement. As to disarmament the Germans were required to conform to the Spa agreement by July 1. Finally, the German government was invited to send representatives to a London conference of the Premiers on February 28 to discuss the means of carrying out these terms. In Germany there was practically unanimous condemnation of these decisions of the conference and the government declared that it would persist in refusing them. At the same time the German government consented to send representatives to the London conference.

LONDON CONFERENCE. A conference of the Allied prime ministers was held in London on February 28 and the German government was invited to send delegates. The following proposals were submitted to it on March 1 by the German representative: The German government offered to pay a total indemnity of 50,000,000,000 gold marks from which 20,000,000,000 was to be deducted for payments already made, but this was conditioned upon a result from the Upper Silesian plebiscite which should be favorable to Germany, on German freedom from all commercial restrictions, on permission to Germany to make payments in five-year installments and on the success of Germany in raising the funds necessary for the making of the payments at the specified date. The reply of the Allied prime ministers was an ultimatum requiring Germany's acceptance of the reparation demands within four days or a settlement that nearly conformed to them under penalty of Allied occupation of German territory.

SITUATION IN MARCH AND APRIL. No satisfactory answer having been received French troops on March 8 occupied the Ruhr basin, taking possession of the cities of Düsseldorf, Duisburg, and Ruhrort. On March 16, the Reparations Commission demanded the payment by Germany of 12,000,000,000 gold marks before May 1 of which 1,000,000,000 was to be paid by March 23. Germany replied on March 23 that she did not owe this amount and could not raise the money if she did owe it. The Reparations Commission and the Allied prime ministers now endeavored to find means of enforcing pay-

ment and France threatened the occupation of the entire Ruhr district by May 1, unless the Germans respected unconditionally the terms of the London conference. Lloyd George, supported by the Italians, opposed this radical measure on the part of the French and chiefly at his suggestion a scheme was adopted for the levy of a 50 per cent ad valorem duty on German exports to any of the Allied countries; each country to adopt the necessary tariff measures but the sums collected to be pooled and divided. The business men of the nations involved objected to this arrangement and when it appeared from Lloyd George's admission that Great Britain intended to keep its own receipts until the British share of reparations had been paid, this plan appeared to be unworkable. Meanwhile Germany had appealed to the United States to act as mediator, and on April 24, the German government requested the United States government to give its judgment on a new programme of reparations proposed by Germany, involving the issue of an international loan of 5,000,000,000 gold marks for use in the payment of the Allied debt, and offering German coöperation in restoring the devastated regions of France. The Washington government replied, May 3, that the proposals did not in its opinion afford a basis acceptable to the Allies.

THE ALLIED ULTIMATUM. The Supreme Council met again in London, April 30, at the time when the French were threatening to occupy the entire Ruhr district. The Council again dispatched an ultimatum to Germany, May 6, making a new offer. This required that Germany must accept by May 12 under threat of the occupation of the Ruhr, the following conditions: Disarmament in accordance with the Treaty; immediate trial of war criminals; immediate payment of the sum due, May 1; immediate acceptance of the terms outlined by the Reparations Commission. This proposal fixed the total amount of Germany's reparation debt at 132,000,000,000 gold marks (\$33,000,000,000); of which \$12,500,000,000 must be paid in bonds at 5 per cent,—\$3,000,000,000, by July 1 and \$9,500,000,000 by Sept. 1, 1921; an annual payment of 2,000,000,000 gold marks (\$500,000,000) to be paid by Germany in order to provide for interest and sinking fund on these bonds, the amount to be paid in two installments together with a levy of 25 per cent on all her exports. The balance, amounting to \$20,500,000,000, was to be turned over by Germany to the Reparations Commission and blank bonds were to be issued by that Commission according as returns from the export taxes should warrant. An additional 1 per cent was levied on Germany's foreign trade for the purpose of starting a fund. In this programme no provision was made by the Commission for reimbursing the cost of occupation. The payments, therefore, were to be made out of the fixed and variable annuities payable by Berlin for reparations totaling 132,000,000,000 marks, gold. French critics complained that thus the German debt would be diminished and the French credit cut down by a figure equal to the cost of occupation.

In the first week in May the Fehrenbach government which had refused to meet the Allied demands encountered an adverse vote in the parliament and resigned. It was followed by the ministry of Dr. Joseph Wirth on a programme,

involving immediate acceptance of the reparation terms and of the requirements in respect to disarmament and the trial of war criminals. (See GERMANY.) The parliament had voted for this programme by 221 to 175, the opposition consisting of the People's party and the Socialists. On May 11 Germany accepted unconditionally the Allied terms, fixing the amount due at 132,-000,000,000 gold marks.

The payment of the first billion marks (gold) was made by Germany, August 31. As the result of agreements concluded by the Allied finance ministers who met at Paris, August 13, France received no part of it. This decision was based on the ground that France and Belgium had already received payments in kind in excess of the cost of their contingents in the forces of occupation on the Rhine while Great Britain had received from £25,000,000 to £30,000,000 less than her disbursements. See FRANCE, *History*.

WIESBADEN AGREEMENT. A solution highly satisfactory to France was reached in the draft of an agreement arranged between the French and German representatives, M. Loucheur and Herr Rathenau, at Wiesbaden at a meeting, August 25-27, after a preliminary meeting at which the main lines of the understanding were laid down. The project was submitted to the Reparations Commission and approved by it although from the British side objections were offered. After a discussion of more than a month the agreement was signed at Wiesbaden, October 6, by the two representatives above mentioned. It provided for the creation in Germany of an organization charged with making the deliveries of materials which the war sufferers of the French devastated regions, grouped under the auspices of the French Government, might order from German industries. It was specified that the materials furnished by Germany would be utilized only for the reconstruction of the French devastated regions. The value of the deliveries to be made by Germany to France on this basis were not to exceed 7,000,000,000 gold marks during the period between Oct. 1, 1921, and May 1, 1936. This amount was to be placed to Germany's credit and to France's debit in the accounts of the Reparation Commission. The amounts thus paid in gold marks to France would have to reach a minimum of 35 per cent of the value of the deliveries made by Germany, but should not exceed 1,000,000,000 gold marks per year. The amounts due by France would bear simple interest at 5 per cent. On May 1, 1936, the accounts of the amounts still due to Germany on deliveries in kind since October 1, 1921, would be established, and this balance would be reimbursed to Germany with compound interest at 5 per cent in four biannual payments, on June 30 and Dec. 31, 1936, and 1937, under the condition that the amounts do not exceed the value of France's share of the annuities to be paid by Germany to the Allies under the reparations scheme of April 27, 1921. In addition to the principal agreement referred to above, four annexes, relative to machinery, rolling stock, cattle, and coal, were signed on October 7. The texts of these agreements were sent to the Reparation Commission for approval.

Sir John Bradbury, British member of the Reparations Commission made a report to his government objecting to the Wiesbaden accord and

proposing certain modifications. In this report which was published in the papers and gave rise to a sharp discussion in both countries he expressed the fear that the agreement in assuring France these large payments in kind, might prevent England from securing her share of the reparations; and he proposed certain safeguards. According to a considerable portion of the British press the agreement was contrary to the Treaty of Versailles. French comment on this was to the effect that after the Treaty was signed, the English had recommended that France should conclude a direct agreement with Germany for the payment of the reparations in kind. Now that France had done so, the British were saying that their action was contrary to the Treaty.

SITUATION AT THE CLOSE OF THE YEAR. The principal points in respect to the German reparations during the remainder of the year were as follows: On October 31 the period of fifteen days' grace was allowed to Germany for the payment of the 500,000,000 gold marks, due November 15. On November 6 the Reparation Commission decided to investigate German conditions with a view to seeing whether Germany was able to pay the \$120,000,000 due January 15, 1922. On December 15 the Reparation Commission received a notice from Germany that she would be unable to meet her January and February payments, and could not raise more than 200,000,000 gold marks out of the billion that was due, and at the same time the representative of Germany, Herr Hugo Stinnes, had returned to Berlin, having failed to secure a loan after negotiations in London. On December 17 as a result of a conference between the British and French prime ministers, the French foreign office declared that it would abandon the schedule of German payments under the following conditions: Great Britain to insure France against attack from Germany, thus reducing French military expenditure; France to assist in improving the Anglo-German economic situation, and to grant Germany every facility for the making of deliveries. France, however, did not agree to reduce her claims for reparation. French comment was exceedingly bitter at the close of the year on the repeated scaling down of the reparations, the constant tendency of her Allies to remit the claims of France in favor of Germany, and the bad faith of Germany, who according to the French press deliberately depreciated the value of the mark in order to evade her obligations. Many French writers favored a system of control over German internal finance such as had been employed against Turkey.

GERMANY'S PAYMENTS TO DECEMBER 31. The following statement of Germany's payments on the reparation account down to Dec. 31, 1921, was issued by the Reparations Commission: Total of payments by Germany to the Allies in specie, in kind, and by cession of state property from the day of the armistice to December 31, 6,487,856,000 gold marks, distributed as follows: Gold and foreign securities, (a) Direct payments, 1,041,-419,000; (b) Paid by Denmark on the account of Germany for the Schleswig-Holstein cession, 65,000,000; (c) Product of the restitutions, 36,136,000; (d) Sale of condemned material of war; (e) Sundries, 657,000. Total, 1,184,172,000 gold marks. Deliveries in kind, valued in gold marks, (a) Provisioning of the Allied and associated Powers, 2,760,250,000; Sales to Luxemburg,

the Textile Alliance, etc., 39,092,000. Total, 2,799,341,000 gold marks. Estimated value of state property in the ceded territories, 2,504,342,000.

POSITION OF FRANCE

FRANCE AND ENGLAND. During the year many French publicists, alarmed at the apparent isolation of their country, traversed again and again the points at issue between France and England. It was realized that outside France sympathies generally tended toward the side of England. The Socialists everywhere, of course, were against her and the whole spirit of internationalism attacked her as the chief offender. In the United States, Italy, the Netherlands, Switzerland, and Scandinavian countries, there was a tendency to regard France as either Imperialist in her designs or the victim of imaginary fears with respect to German vengeance. She was thought to be planning a third Punic war against Germany. It was believed that a secret treaty had been formed with Poland whereby the army of Marshal Pilsudsky was ready to march at the first signal in case Germany did not yield to the demands of France, and to this alleged secret compact French championship of Poland in respect to Upper Silesia was attributed. From the point of view of the French apologists France had gone to the limit in conciliation and she could grant no more without sacrificing her own security and the protection which she owed to her natural allies in Central Europe. The policy of Great Britain was attributed to a design of building up a Germany strong enough to hold France in check. The financial interests of Great Britain were behind this policy because they wished to renew trade with Germany as soon as possible. The coal interests of Great Britain were also on this side, fearing that they might cease to control the world market and believing that if the Poles obtained the mines of Upper Silesia and France held the lines of the Saar, those two countries would become independent in respect to coal. The pacifists were on this side of the question, since they believed that the French military power was a menace to the peace of the world. Everywhere in Central Europe, according to the French, there were British agents working against French interests. To be sure these agents acted apparently without authority, but they nevertheless acted in the spirit of the government's policy. Naturally Germany and her friends were doing all they could to stir up trouble, particularly between France and England. French writers warned the English that in spite of the bad economic condition of France, the national sentiment had retained all its force and the menace of Bolshevism did not exist in France. Moreover, France had the best army in the world. There was no reason why France should humiliate herself before any Power. England, embarrassed by the Irish and Egyptian questions, by the disorders in Mesopotamia, Palestine, Persia, and India, and by her industrial crisis and unemployment had certainly as much need of the friendship of France as France had of the friendship of England. The pretense that half the French were simply the victims of nervous fears, was simply ridiculous. England followed the policy of laying on France the whole burden of maintaining the peace on the Rhine without permitting her to gain advantage from it.

France was not seeking any new conquests on the Rhine; she was seeking only a control over the intermediate zones in order that the spirit of hostility might not cause dangers there. Besides checking the efforts of France to insure peace on the Rhine, England was delaying the restoration of French national power. England knew that Germany would not pay her debt. The British government had laid its hands on the greater part of the first billion of the German installment under the pretext that France possessed the mines of the Saar although they did not yield profit at this time but only a deficit. And this was in spite of the terrible financial condition of France. The British complained because France, driven to desperation, wished to secure some payments in kind even at the risk of damaging her own industries. Again, when France had pointed out that a well-equipped German army of 50,000 men was in Upper Silesia, Lloyd George shrugged his shoulders and replied simply: You are nervous but it is excusable. England, they said, was deeply concerned about the appreciation of the mark. This could be brought about only by the improvement of Germany's industrial condition. In Great Britain the sense of the economic interdependence of nations lay at the bottom of all reasoning on this subject. Believing that all the nations hung together and that if one were in a bad economic condition all the others would suffer, the British aimed at the economic reorganization of Germany. But this must be assured by political as well as economic measures since production and exchange could only go on under conditions of peace. Hence, it was necessary to defeat any policy tending toward the exercise of force and toward the revival of conflicts between nations. The pacification of the world must be attained by all possible means. These principles were presented by prominent French publicists as absurd on their face. They asked what account they took of the ten ruined departments of France and of the guaranty of French safety in the future. They condemned this point of view as too restricted, saying that England cared only about pacifying Germany and that Lloyd George judged the question of the Rhine simply from its bearing on this matter of British commercial relations with Germany. Lloyd George in the House of Commons had said, "Germany to-day is in a state of depression; this state of depression will not last. Now to the extent to which she recovers her prosperity, the occupation of her territory will become more and more insupportable to her and this occupation will give rise to more and more unpleasant incidents." Lloyd George in consequence was concerned with the reduction of the occupation to a minimum. This policy which he had expressed in the House of Commons also met with the approval of Mr. Asquith, the leader of the opposition. Former president Raymond Poincaré had published documents to prove that the prevention of the French occupation of the Rhineland or the shortening of their occupation had always been an obsession of Lloyd George. It had been understood in France that the French in case of aggression would be protected by Great Britain and the United States. This guarantee no longer existed. France must have a guarantee on the Rhine. The chief issue and almost the sole issue according to many of the Nationalist writers was this question of the Rhine, France regarding

her attitude toward it as vital to her interests and England insisting that nothing should be done on the Rhine but that the chief aims of foreign policy were to insure economic peace in the world and the interests of democracy in general. Both in England and in France there had been repeated revivals of the project for an alliance of those two countries with the United States. The hope of such an alliance, in spite of its unpopularity, still survived down to the eve of the Conference. Lord Derby expressed the British desire for such an alliance at the beginning of November. This gave the occasion to the American Ambassador, Mr. George Harvey, for a definite warning against entertaining any such hopes. In an address at the Chamber of Commerce of Liverpool, November 2, he referred to the traditional policy of the United States as laid down by Washington in respect to the avoidance of foreign alliances and declared that it was not to be expected that the United States would depart from this policy. From the French point of view, it was a scandalous injustice that the nation which had suffered the most was not to receive a single penny of the first billion paid by the enemy. This arrangement of August 13 had been reached in spite of French opposition. The lining up of the English, Italian, and Belgian governments on this occasion left her absolutely isolated—of great importance in view of the approach of the Disarmament Conference at Washington (November 11). Down to the eve of the Washington Conference every move of British foreign policy was explained as part of a campaign to isolate France. When the British representatives at the League of Nations tried to reserve to the British, American, and Japanese, the consideration of the question of naval disarmament and they proposed to lessen the rigidity of the territorial guarantee formulated in the celebrated Article X, it was suggested that Lord Curzon was stacking his cards for the poker game which was to be played at Washington. In any case England would not be alone at the game. She was sure of Japan and she had succeeded in purchasing at the expense of France the support of Belgium and Italy, and inasmuch as the Americans by expunging from the treaty with Germany the territorial clauses, signed by the American representatives at Versailles, were running counter to the feelings and interests of the French people and thereby making it difficult to bring the two republics into coöperation, the British foreign office saw another guarantee of their own side in the coming conference.

Among the people generally, foreign politics were followed far more closely in France than among the people in other countries. Even the smallest newspaper gave their most important pages to the discussion of foreign affairs, and among the peasantry there were definite opinions as to foreign policy. It was a mistake to assume that the tendencies for which the French government had been so bitterly criticised in other countries, were due to the ambition or misunderstanding of the ruling class. The people at large seem to be animated by more extreme views in respect to foreign policy and especially in respect to a rigid insistence on the reparations than were usual in government circles. Public opinion in France seemed generally to regard the course of the government as weak in these respects. (See FRANCE, *History*.)

FRANCE AND ITALY. A spirit of unfriendliness between France and Italy grew steadily throughout the year and led to certain incidents on the occasion of Marshal Fayolle's mission to Italy in October which gave great offense to the French. The mission had been sent by the French government to take part in the inauguration in the monument at Mount Tomba. General Fayolle and his companions were courteously received at Turin by King Victor Emmanuel but at Milan there was evidence of coldness and even hostility. In the evening the French officers were hooted in the streets and one of them was chased by the mob and had to take refuge in a café. In the region where the battle had taken place and at Mount Tomba itself, the crowd was everywhere cordial and even enthusiastic. At Vincenza the houses were decorated and the people in the streets everywhere applauded their former companions in arms. But at Venice the mission found the situation more uncomfortable than at Milan. Not a French flag was displayed in the streets, and when in the course of the ceremony before the Doge's Palace, the flag of the Chasseurs was displayed, it was greeted with cries of hatred. The barricades separating the celebrants from the mob were broken down and the French officers being deprived for the moment of protection were roughly treated by the crowds. Marshal Fayolle had to take refuge in the Campanile and the bands that played the Marseillaise were dispersed by rioters. Italian authorities that had arranged the affair had evidently not reckoned with public sentiment and had perhaps been careless in this respect for there had been many signs before of a spirit of Franco-phobia among the people at large which was reflected in many of the Italian newspapers. The feeling of the Italians seemed to lie deeper than in mere resentment over certain recent attacks in the French press and over the French comment on the affair of Fiume. It seemed related to a long-standing jealousy of France's superior position in the world as the acknowledged leader of the Latin race. Among the Italians there was much irritation also over the fact that the war had seemed to place France still further in the lead. The incidents while not important in themselves were significant in view of the tendency of events throughout the year to isolate France in European politics and it was that aspect of the affair that gave rise to long and somewhat bitter comments in the French press.

The incident was followed by an expression of regret on the part of the Italian government, to which the French authorities replied that they did not attach any importance to the affair, which they believed expressed in no way the true feelings of the Italians toward France. Nevertheless there was much comment in the French press in connection with the political isolation of France and the tendency of Italy to join Great Britain against her. The French papers reviewed at length instances of Italian unfriendliness dating from long before the war. Some of them attributed the state of Italian opinion to German propaganda, but it was more generally believed that it proceeded from a feeling of jealousy toward France as acknowledged leader of the Latin race.

FRANCE AND GERMANY. In October Prime Minister Briand declared a propos of the coming conference at Washington that he could not deny

that the government of Chancellor Wirth had been loyal to its obligations; the provisions in respect to disarmament in Germany had been met and the payments of the debt to the Allies had been made on time down to date. (See FRANCE, *History*.) At this very time, however, the same tendency to stir up hatred against Germany, keeping the French people in a state of apprehension, was manifest in the writings of French politicians. For example, it was said that no German believed that his country had been defeated in the war. The armies had returned amid the acclaim of the people. Germany had not been defeated at sea, as was evident from the fact that her fleet at the end of the war was intact. The teachers in the schools inculcated the principle that a country is never beaten, unless the conqueror dictates peace on the territory of the conquered nation. The Treaty was attributed by many Germans to treason. They said that a shameful peace was the result of the activity of the Reds. The ruling classes according to French accounts were still as pan-German as ever. The German republic was a sham, the flag of the Republic being hardly ever seen. It was absurd to suppose that the Prussian for example, who was thoroughly feudal in spirit, could become a democrat in three years. The present government was merely a shell concealing underneath it the same spirit that had prevailed before the war. The Chancellor did not have a majority behind him and was not feared, respected or obeyed. Hymns of hate were sung in the streets against him and against Walter Rathenau. The Reichswehr, to be sure, had been reduced to a hundred thousand men, but it differed in equipment only from the Schutzpolizei, which numbered 150,000, and really constituted a reserve of officers trained in the old army. Thus Germany disposed of a force of 250,000 trained troops and officers. Moreover, 7,000,000 of her citizens had had war training, and under various disguises military exercises were continued among a large number of them. Germany had at her disposal through these various social organizations a force of nearly 2,000,000, which might at any time be mobilized. To be sure, the disarmament of these organizations had been partially effected, but it was believed that their military training continued and that they remained under the same authorities as before. In the case of Upper Silesia Germany placed in readiness an army of 40,000 men well drilled and equipped. For many years to come these forces would be under the command of able officers trained in the war. The general staffs continued their activities, and there was a German Officers' League which now numbered more than a hundred thousand and was divided into local groups. There were branches of it in several countries of South America and it was in communication with similar leagues in Austria and Hungary. The chief of it was General von Hutier, former commander of the Eighth German army. It controlled and published an official organ entitled *The Deutscher Offizier Blatt*, which was subsidized by the government. On all occasion the League celebrated the prowess of the former army which it is said was victorious in a thousand battles, and denounced the shameful oppression of a civilized people without defense by their mortal enemy, France. In short, Germany was already a strong military

power in spite of her defeat, and her strength was certain to increase as time went on (see MILITARY PROGRESS).

The danger of national bankruptcy on the part of Germany was in general not taken seriously by French political writers, but like the menace of German revolution or German Bolshevism or, in fact, every other peril that had been threatened to Germany since the armistice, it was regarded as merely a part of Germany's endeavor to escape her obligations. The following arguments represent fairly well the prevailing body of French opinion as represented in the press: The threat of national failure was simply another form of Germany's attempt to cheat her creditors and in line with the trickery she had consistently employed which had already reduced greatly the amount of her debt. On November 17, Herr Hermes, the new Minister of Finance, declared that the German government had not the money to meet the obligations that fell due, Jan. 15, and Feb. 15, 1922, the former amounting to 500,000,000 gold marks on the reparation account, and the latter being the quarterly payment on German exports. He said that Germany had not the money for these payments and that was what explained the fall of the mark. There was no means of escaping from this situation except by the lightening of the burden imposed on Germany. Unless some way of deferring these payments was devised, Germany would be obliged to declare herself insolvent. According to French writers Germany had been for a long time preparing this stroke, which was designed merely to reduce the Germany debt for reparations. After Chancellor Wirth declared that the decision in respect to Upper Silesia (see below) diminished Germany's ability to pay her debt and that the Reparation Commission must interfere in accordance with Article 234 of the Treaty, to extend the period or modify the conditions of payments, M. Poincaré wrote on this subject in the *Revue des Deux-Mondes*: "So it is in vain that the Council of the League of Nations has applied all its patience and intellectual honesty to the study of this formidable question: it is in vain that it should have devised a long period of transition which would leave Germany for years to come all sorts of economic advantages. Let us call these things by their right names: The black-mail begins again." Leading French writers insisted generally that the inability of Germany to pay was a mere pretense and pointed to the activity displayed by her factories and workshops, and by the great concentration of capital that permitted this activity. According to the press German factories were producing artillery, small arms, machine guns, etc., and a great amount of injurious chemicals, more dangerous than in the course of the world's war. It was said that big business and high finance were in control of the situation. As they did not concern themselves with the public financial necessities or exercise any control over the purchase of foreign currency or over the invasion of German capital, they contributed to the depreciation of the mark. It was in their power if they wished to bring about the bankruptcy of Germany, or on the other hand—to make it possible for Germany to pay her debt. In general, it was concluded by French politicians that no arrangement would be satisfactory to Germany except one that would wipe out entirely

the German debt. If France yielded again, it would be of no advantage since it would certainly be followed by a new German campaign supported by writers like the English pro-German Mr. Keynes throughout the world, and under the threat of German bankruptcy demands for still further concessions would be made until nothing was left of the German obligations. Germany had in fact decided that she would not pay if she could get out of it. It was foolish to pretend to adjust the burden of her debt to her capacity for payment, just as it had been foolish in 1913 to pretend to conclude a peace that would satisfy "democratic Germany." Everybody at that time who had favored lighter burdens on Germany was a pro-German. The Treaty of Versailles was not severe enough against Germany. The repressive measures against her should have gone much further in simple justice to France. There was only one peace that could have satisfied Germany, and that was to leave the empire of the Hohenzollerns just as it had been. As all reductions or concessions since the armistice had only made matters worse, and as every argument advanced by Germany on her own behalf was false, and a mere ruse in order to escape her just obligations, much more severe terms should have been imposed by the Treaty and should have been carried out promptly and unsparingly.

FRENCH OCCUPATION OF THE RHINELANDS. As indicated in other paragraphs, the differences between France and her allies were especially acute as regards the Rhine question. In the latter part of the year this became a leading issue in French foreign policy. There was difference of opinion among French statesmen as to whether the occupation of the Rhineland was permissible under the Treaty. The essential points were as follows: France had agreed to the Treaty with the understanding that she was guaranteed against German aggression by the alliance with England and the United States. M. Tardieu interpreted Article 429 of the Treaty as clearly recognizing the right of France in this respect. M. Poincaré on the other hand held that according to the Treaty of Versailles and the triple agreement France was not formally authorized to prolong her occupation. On both sides, however, it was admitted that neither the British prime minister, nor the president of the United States had accepted the demand of the French that there should be an express recognition that the occupation should last until the triple agreement went into force. Aside from this question of documentary authority, French publicists were agreed that France had the right to remain on the Rhine until Germany paid her dues, because both England and the United States had failed to keep the promise in respect to the defensive alliance. France had consented to relinquish her hold on German territory at the end of fifteen years only on condition that her security was guaranteed. This condition had not been fulfilled and, therefore, her agreement was annulled. M. Clemenceau agreed with M. Tardieu that France was authorized by the Treaty to hold the Rhine territory if the guarantee of security were withdrawn. According to many writers in the press, it should be the main effort of the representatives to the Disarmament Conference at Washington to win over the Americans and English to this point of view. The French public were alarmed for the

future of their country. The political isolation of France in the face of a revengeful Germany made it necessary to press this matter. But for these circumstances France would not dream of insisting upon a prolongation of her occupation of the Rhine.

FAR EASTERN QUESTIONS

JAPAN AND CHINA: SHANTUNG. Before the Disarmament Conference Japan had carried on long negotiations with China in respect to the Shantung dispute. Reports in regard to this were made public in October. According to these the Chinese government demanded that the entire Japanese army of occupation should be immediately withdrawn from Shantung. As to the policing of the railway from Kiaochow to Tsinan, China would immediately send forces of her own railway police to take over the duty. As the lease of Kiaochow Bay expired immediately on China's declaration of war with Germany, Japan ought to return it without conditions to China at once. The vested rights of foreigners obtained under the German régime would be respected but those obtained by force during the Japanese military occupation would not be recognized. The Chinese government declared that the whole Chinese people were opposed to joint operation of the railway. In reply to this the Japanese government pointed out that the Chinese declaration of war against Germany was made in August, 1917, when over two years had already passed since the transfer of the former German rights to Japan had been recognized by China in the treaty with Japan concerning Kiaochow and other matters, and that therefore the Chinese contention that the lease expired as a consequence of China's declaration of war against Germany amounted to a complete repudiation of the treaties in existence and all established facts. Notes on the subject were interchanged, October 5, October 19, and at the beginning of November. In place of Japan's proposal of a joint operation of the railroad, China proposed a division of the capital and property into two halves, engaging China to redeem the Japanese half within a fixed period. Apparently Japan contended that the entire capital and property had been awarded to her by the Reparations Commission to offset the German indemnity, but China not having recognized the Treaty declared that she was in no wise bound by this. As the Japanese government did not intend to hold public properties in the territory, they ought to be handed over to China. In spite of the promises of the Japanese to withdraw their troops from the railway, they were still there and the evacuation had not begun.

The Shantung question was discussed early in the Disarmament Conference (see below) and meetings were held down to December 20, when a deadlock between the Japanese and Chinese delegates resulted over the question of the former German railroad. The Japanese delegates held that they could go no further until they had instructions from their own government. The railway in question was the portion of the line that ran from Kiaochow to Tsinan. The delegates were unable to agree as to the terms at which it should be sold to the Chinese and its manner of operation. At the close of the year the Chinese delegates were expressing some impatience at the delay. The negotiations had not at that time

been resumed. It was reported that the Japanese government was reluctant to go any further toward meeting the demands of the Chinese in respect to the railway and that if it did go further it would probably result in the fall of the Japanese ministry. Toward the close of the year it was understood that the Chinese were approaching the heads of the American and British delegations with a view to securing mediation. It was also understood that a boycott had been set up in Shantung and other parts of China against Japanese goods and merchants and there was fear of anti-Japanese outbreaks.

ANGLO-JAPANESE TREATY. The ANGLO-JAPANESE Treaty was definitely superseded by the Four Power Treaty (see below). It had been revised, July 13, for the purpose of consolidating the peace in the Far East and India, and for the maintenance of the common interests of all Powers in China by insuring her independence and integrity and giving equal commercial opportunities to all nations with interests in the Empire. In Great Britain there was much criticism of the course taken by Japan and it was argued that the latter Power had violated the spirit of the Treaty. Instances of this were, her secret military agreement with China, her interference in the internal war between the North and South, her railway policy and many other acts down to the time of the German defeat. Her policy indicated an intention to control Manchuria and Mongolia up to the Amur river and to reduce China to vassalage.

SIBERIA AND JAPAN. The Siberian situation was highly complicated owing to the conflicting aims of three rival elements, the new republic of Chita (friendly to the Soviet régime), the anti-Bolshevik government of Vladivostok, and the Japanese who still persisted in their military occupation. A conference between the Japanese and the representatives of Chita began at Dairen in May and continued throughout the year without definite result. On December 27, Japan formulated the following demands at this conference as published by the press: Japanese subjects to receive equal rights and privileges with citizens of the Far Eastern Republic; abolition of all laws limiting the rights of Japanese subjects; destruction of fortifications in Vladivostok and the Maritime Province; recognition of the right of Japan to maintain military guards in the Far Eastern Republic. The Chita officials declared that acceptance would turn their country into a Japanese colony. At the close of the year the capture of an important strategic point, the city of Khabarovsk, by the forces of the Vladivostok government was reported, the assailants consisting partly of the remnants of the Semenoff and other anti-Bolshevik armies. The Chita delegation at the Washington Conference attributed this to Japanese machinations, which the Japanese delegation promptly denied. Japan's official attitude in respect to Siberia continued as before: She would withdraw as soon as she was assured of a stable Russian rule and the safety of Japanese nationals in the country. The Vladivostok government also sent representatives to Washington where they declared their government the organ of sane, that is, anti-Bolshevik Russians, whereas Chita, according to them was merely a part of the Soviet system.

THE QUESTION OF SAKHALIN. There was some discussion in the press of the situation in the island

of Sakhalin (q. v.), Japanese troops being still in occupation of the town of Nikolaevsk where the so called massacre had taken place at the beginning of 1920. The Japanese garrison in the town was reduced in the latter part of 1919 from one thousand to three hundred. Early in the following year the troops of Kolchak were routed and soon afterwards bodies of wandering marauders appeared in the neighborhood. The Japanese consul there was said to have called upon his government for aid, but reinforcements were not sent. The bandits of stragglers on March 18 overpowered this inadequate force and massacred them along with the Japanese civilians in the town and several thousand Russians. According to the Russian view Japan was responsible for this since her troops were in occupation, while, on the other hand, the Japanese held the Russian government responsible and demanded compensation for the massacre. The question of Japanese withdrawal concerned especially the government of the Far Eastern Republic of Siberia which expressed its willingness to make compensation to Japan if the Japanese troops were withdrawn. This, however, was opposed on the ground that the question could not be settled until there was a recognized government of all Russia which could deal with it. For a further account of Far Eastern questions, see below under DISARMAMENT CONFERENCE.

NEAR EASTERN POLICY

TURKEY AND THE ALLIES. On the date of the signature of the treaty of Sévres, with Turkey, August 10, 1920, a secret agreement had been signed by Great Britain, France, and Italy, which was not made public until the close of 1920. It was much under discussion in the early part of 1921. This laid out certain areas of special interest to France and Italy, the French sphere consisting of the Cilician and Syrian coasts and the hinterland passing across the middle course of the Euphrates through southern Kurdistan, and the Italian sphere lying to the west of this region and between Cilicia and the coast opposite the island of Rhodes. In addition to the Italian interests in this sphere the right of Italy was reserved to exploit the Heraclea coal basin. The British sphere though not defined was understood to be the remainder of the former Turkish empire in Asia. The contracting parties pledged their diplomatic support to one another in maintaining their respective spheres of interest. The portion of the Bagdad railway traversing Turkey, together with the railway from Mersina to Tarsus and Adana were to be operated by capital supplied in equal shares by British, French, and Italian financiers, the French government having the privilege of exchanging its rights in the Bagdad line for the exclusive exploitation of the lines in its sphere of interest. The "open door" policy was to be pursued in the respective spheres subject to the treaty of Sévres. Owing to the complications arising during the year, especially to the war of the Greeks in Asia Minor, this agreement was not ratified.

GREECE AND TURKEY. A meeting of the Supreme Council was held in London, February 21-March 12, for the purpose of discussing the question of revising the treaty of Sévres (see preceding YEAR BOOK) and to it were invited delegates from Greece and Turkey. As a result of

the deliberations the following modifications of the treaty were proposed: Withdrawal of the Allied troops from Constantinople as soon as the Powers were sure of the good faith of the Turks; exclusion of the east shore of the Sea of Marmora from the demilitarized zone; the bestowal on Turkey of two votes instead of one on the Straits Commission and of the right to vote on the financial commission; recognition of the Sultan's sovereignty over Smyrna provided that he respect its rights and bestow self-government on each of the national elements; the granting to Greece of the right to keep a garrison in the town of Smyrna. These proposals with some slight changes were acceptable to both the Constantinople authorities and the Nationalists, but they were rejected absolutely by the Greeks. On March 9 the French government came to a separate understanding with the Nationalists at Angora, providing for an immediate peace, for certain economic concessions to France for which France agreed to withdraw from Cilicia; and for the alteration of the boundary between Turkey and Syria as laid down by the treaty of Sévres. On March 12 Italy also made a separate arrangement with the Nationalists, agreeing to support the Turkish demands for restitution of Thrace and Smyrna and to the withdrawal of all Italian troops from Turkish territory, in return for which Italy received certain concessions and monopolies, including priority rights in the coal basin of Heraclea.

FRANCE AND TURKEY. An accord between France with the Turkish Nationalists was concluded at Angora, October 20, the French negotiator being M. Franklin-Bouillon (see **TURKEY**). It was followed at once by attacks in the British press on the ground that it was an attempt on the part of France to settle a matter that should only be settled in harmony with her Allies and that it had been done without the knowledge or approval of the British government. To this the French reply was that it had not been done without the knowledge of the British government, for it corresponded to the understanding between M. Briand and the Nationalist representative in London in March, and its principal features had been known to the British government since April; also that it did not imply the intention of France to form a treaty with Turkey independently of her Allies, but only to take the preliminary steps toward the restoration of peace. The French papers made light of all the British objections and declared that they rested on entirely false information. Nevertheless, the subject was openly and officially referred to by the British Foreign Minister, Lord Curzon, in an address on November 24 and the policy of France condemned. He gave France the warning that if she pursued an individual policy she would in the long run fail to protect herself. He said that peace between Greece and Turkey was more important than the victory of either party, and that peace would never be achieved if any one Power would try to steal a march on the other and conclude arrangements on its own account.

DISARMAMENT CONFERENCE

ORIGIN AND PROGRAMME. The first step toward the Conference that attracted public attention was the Borah resolution voted in Congress as an amendment to the Navy Appropriation bill

May 25 which requested the President to invite the governments of Great Britain and Japan to send representatives to a Conference for the purpose of coming to an agreement whereby the naval programmes of these governments and of the United States should be substantially reduced annually during the next five years to an extent that should be agreed upon and that this understanding should be reported for approval to the respective governments. This was followed by an announcement from the State Department that it had made informal inquiries of the principal Allied Powers, namely, Great Britain, France, Italy, and Japan as to whether they would accept a proposal for a conference on this subject at Washington. At the same time the State Department announced that inasmuch as the question of reducing armaments bore a close relation to the Pacific and Far Eastern problems, the President had suggested that these problems should be discussed at the conference by the Powers especially interested. China was also to be invited to take part in the discussion of the Far Eastern problems. It was evident at once that the public heartily approved this plan, and it was even feared by the administration that the people generally were inclined to expect too much by way of practical results from the conference. The Japanese government showed signs of a desire to limit in advance the discussion of the Far Eastern question, and the United States government on July 23 sent a memorandum to Japan saying that while the Secretary of State was willing to discuss in advance the subjects that were to come up at the conference, he considered it inadvisable to incur the programme and to delay arrangements for the conference until an agreement could be reached in regard to the precise limits of its discussions. A few days later the Japanese government replied with an unconditional agreement to accept the American invitation to a conference, subject simply to the understanding that its proceedings should be outlined in advance. After informal negotiations had brought the governments of the United States, Great Britain, Japan, France, and Italy to general agreements in respect to the topics and purposes of the meeting, the President issued the formal invitations on August 11, and the date for opening the conference at Washington was fixed on November 11, that is to say, Armistice Day.

The invitations to Great Britain, Japan, France, and Italy were identical in text, and may be briefly summarized as follows: After a reference to the heavy economic burdens under which the world was struggling and to which the enormous expenditures in naval armaments largely contributed, it was said that the time had come for a direct discussion of the subject in a conference; and, that although in such a discussion the question of naval armament might naturally have first place, it was thought best not to exclude questions pertaining to other armaments. But there could be no final assurance of peace in the absence of the desire for peace, and the conference should make an effort to remove causes of misunderstanding. It was hoped that by an interchange of views, it might be possible to find a solution of the Pacific and Far Eastern problems. It was not the purpose of the American government to define the scope of the discussion in

respect to these problems. This must be left to suggestions which should be exchanged before the meeting. The invitations to the Chinese government left out the references to the disarmament part of the programme and invited the Chinese government to participate only in the discussion of the Pacific and Far Eastern problems.

France was the first to accept. The Chinese, British, and Japanese acceptances followed, and last came Italy's. The Japanese government in accepting emphasized three points, namely, the satisfaction of Japan in the fact that the United States had taken the lead in this matter of reducing armaments; Japan's desire to remove causes of international misunderstandings; and, Japan's vital interest in the affairs of the Far East. Various other Powers interested in the Far East sent communications. In the first place the Far Eastern Republic of Siberia (Chita) applied for admission to the conference. The status of this new republic had not been recognized, and its request was refused in a letter which referred to the absence of a single recognized government in Russia, and said that for reasons beyond the control of the participating Powers, the conference was unhappily to be deprived of the advantage of Russian coöperation, but that it was hoped that the conference would establish general principles which would meet the approval of the people of East Siberia and of Russia. The applications of Belgium, Portugal, and Holland were accepted, and they were invited to take part in the discussion of the Pacific problems. In August and September, various press reports appeared in respect to the subjects of discussion that were being agreed upon by the participating governments, and on September 21 the State Department issued as an official version of the programme the following summary:

LIMITATION OF ARMAMENTS:

- I. Limitation of Naval Armament, under which shall be discussed, (a) Basis of limitation; (b) Extent; (c) Fulfillment.
- II. Rules for control of new agencies of warfare.
- III. Limitation of land armament.

PACIFIC AND FAR EASTERN QUESTIONS:

- I. Questions relating to China: (1) Principles to be applied. (2) Application of Subjects: (a) Territorial integrity; (b) Administrative integrity; (c) Open door—equality of commercial and industrial opportunity; (d) Concessions, monopolies or preferential economic privileges; (e) Development of railways, including plans relating to Chinese Eastern Railway; (f) Preferential railroad rates; and (g) Status of existing commitments.

II. Siberia (similar headings).

- III. Mandated Islands (unless questions earlier settled); Electrical Communications in the Pacific.

Under the heading "Status of Existing Commitments" it was expected that opportunity would be afforded to consider and to reach an understanding with respect to unsettled questions involving the nature and scope of commitments under which claims of rights might hereafter be asserted.

PERSONNEL. The United States' delegation consisted of Charles Evans Hughes, Secretary of State; Henry Cabot Lodge, the Republican Senator from Massachusetts; Elihu Root, former Secretary of State, Oscar W. Underwood, Democratic Senator from Alabama. The foreign delegations in their alphabetical order by countries were as follows:

Belgium, Baron E. de Cartier, Belgian Ambassador to the United States. British Empire: Great Britain, A. J. Balfour, President of the Council; (chosen in place of Lloyd George who was detained on account of the Irish crisis), Lord Lee of Farnham, First Lord of the Admiralty, and Sir Auckland Geddes, British Ambassador to the United States; Australia,

G. F. Pearce; Canada, Sir Robert Borden; India, Srinivasa Sastri; New Zealand, Sir John Salmound. China: Sao-Ke Alfred Sae, Envoy Extraordinary and Minister Plenipotentiary to United States; V. K. Wellington Koo, Envoy Extraordinary and Minister Plenipotentiary to the Court of St. James; Chung-Hui Wang, Chief Justice of the Supreme Court of the Republic of China. France: Aristide Briand, President of the Council, Minister for Foreign Affairs; René Viviani, Deputy, Former President of the Council; Albert Sarraut, Senator, Minister of Colonies; Jules Jusserand, Ambassador of France to the United States. Italy: Carlo Schanzer, Senator, President of the Delegation; Vittorio Rolandi-Ricci, Senator, Italian Ambassador to the United States; Luigi Albertini, Senator; Filippo Meda, Representative. Japan: Baron Tomosaburo Kato, Minister of the Navy; Baron Kijuro Shidehara, Ambassador at Washington; Prince Iyeyasu Tokugawa, President of House of Peers; Masanao Hanihara, Vice-Minister for Foreign Affairs. Netherlands: Jonkheer H. A. van Karnebeek, Minister for Foreign Affairs; Jonkheer F. Beelaerts van Blokland, Envoy Extraordinary and Minister Plenipotentiary, Chief of the Political Division of the Ministry for Foreign Affairs; Dr. E. Moreasco, Vice President of the Council of the Netherlands East Indies. Portugal: Viscount d'Alte, Portuguese Minister to the United States.

Aside from the delegations proper there were numerous bodies of secretaries, advisers, technical experts from the respective countries. For the United States there were an advisory Committee of men and women composed of the prominent representatives of diverse interests including General John J. Pershing, Herbert C. Hoover, Samuel Gompers, Rear-Admiral W. L. Rodgers, etc.; a large body of secretaries; a still more numerous technical staff composed of experts in military and naval affairs, chemical warfare, Pacific and Far Eastern questions, economics, law, and communications; and persons charged with matters pertaining to the press, cartography, archives, etc. The Secretary General was Mr. Basil Miles. The British delegation was supplemented by a remarkably elaborate and specialized technical staff, and a highly skilled section on publicity. The superior ability of the British in presenting their views to the American press was manifested throughout the Conference. Their military and naval sections included General, the Earl of Cavan of the Aldershot Command and Earl Beatty, Admiral of the Fleet, First Sea Lord of the Admiralty. The air section was represented by Vice-Marshal J. F. A. Higgins and others; the economic section by Sir H. Dlewellyn Smith; and foreign affairs by eight members of the British diplomatic service. The Secretary-General of the British delegation was Lieutenant-Colonel Sir Maurice Hankey. The French representative also included numerous secretaries and expert advisers. The general technical adviser was Marshal Ferdinand and the army was represented by General Baut and Vice-Admiral Le Bon. The chief Secretary was Philippe Berthelot. The financial and economic experts included MM. Casenave, Cheysson, de Sieres, Rincquesen and Duplan; the political and colonial experts, MM. Kammerer, Léger, Duchêne, Touzet, and Garnier, and the experts on special subjects, MM. Philippe Bunau-Varilla, Fournier-Sarlovèze, Moureu, Mayer, and Girardeau. Italy's military adviser was Lieutenant-General Giuseppe Vaccari, Chief of Staff of the army, and her naval adviser Vice-Admiral Baran Ferdinando Acton, Chief of Staff of the navy. The technical staff included experts from the various ministries. Marquis Givvanni Visconti-Venosta was Secretary-General. Japan's chief advisers were Sennosuke Yokota, Director of the Legislative Bureau, and Masanao Hanihara, and other members of the foreign office.

ADMIRAL KANJI KATO
Japan

FOUR LEADERS AT THE DISARMAMENT CONFERENCE, WASHINGTON, D. C.

The Japanese Secretary-General was Taueo Matsudaira. The Chinese advisers included Admiral Tsai-Ting-Kan and other representatives of the various ministries, together with a very numerous body of special counselors. Secretary-General, Philip K. C. T'au.

As the personnel of the various delegates became known, there was much comment upon them in the papers, and in general it was held that good selections had been made, although a considerable number of American delegates appeared to have been chosen with especial reference to their ability for political reasons to carry through the Senate whatever measures might be adopted at the conference.

SUMMARY. The following review presents in chronological order a brief record of the proceedings of the Conference, the topics treated being further discussed in subsequent paragraphs: The Conference was opened in the Continental Memorial Hall at Washington on November 12 by President Harding and Secretary of State Hughes, the latter becoming chairman. The official title of the body was "Washington Conference on Limitation of Armaments and on Far Eastern and Pacific Questions." Secretary Hughes immediately presented a definite proposal for the cessation of naval construction for ten years ("naval holiday") and the scrapping of 66 capital ships of 1,878,043 tons by the United States, England, and Japan. For the text of the proposal, see the article *NAVAL PROGRESS*. It surprised the press throughout the world by its thoroughness. Great Britain, France, Japan, and Italy expressed their approval in principle of this programme of naval reduction. On November 16 China proposed the ten principles which should determine her future and the policy of other Powers in the Far East. On the same day Admiral Kato proposed a 70 per cent naval ratio for Japan instead of the 60 per cent provided by the Hughes proposal. On November 18 the representatives of the United States and Great Britain declared their adherence to the former 5-5-3 ratio in spite of the Japanese arguments. On November 19 Japan presented her side in the Chinese-Japanese question and outlined her policy toward China, declaring that while Japan must aid China in foreign affairs she would leave her free in all her domestic concerns. On November 21, the delegates, with the exception of the Chinese, accepted the four principles offered by Mr. Root for (noted below) ending special privileges in China and guaranteeing her political and territorial integrity. On the same day the French Premier and leading delegate, M. Aristide Briand, delivered a long address, explaining the attitude of France and the reason why she needed a strong military defense and denying all charges of imperialism (see *FRANCE, History*). Two days later he left Washington, preparatory to his return to France, and M. Viviani succeeded him as head of the French delegation, November 24. On November 25 and 26 the question of the right of foreign Powers to maintain separate post offices in China was discussed, and the representatives agreed on behalf of their respective nations to abolish them at the earliest practicable date. On November 29 a committee was appointed to report on the question of withdrawing the foreign consular courts from China. On the same date China requested the removal of foreign police

and troops, telegraph, and wireless systems. On November 30, China and Japan accepted British and American mediation in the Shantung dispute. On December 4 delegates arrived from the Far Eastern Republic (Chita) for the purpose of soliciting the removal of Japanese troops from Siberia, and of securing recognition and trade relations. The Chinese-Japanese discussions continued, December 5-9. On December 5 Japan agreed to waive special rights in regard to foreign personnel, capital, and material in Shantung, but claimed the right to hold a half interest in the railway. On the following day China agreed to refund the money spent by Japan on property in Shantung; and Japan agreed to return to China all public property in Kiaochow. On December 9 Japan still held to her demand in respect to the Tsingtao-Tainan railway while agreeing to give back to China all of Shantung. China persisted in her assertion that this reservation nullified the cession. On December 10 the so-called Four-Power Treaty (see below) for the mutual protection of island possessions and dominions in the Pacific was announced. On December 11 the agreement with Japan in respect to Yap and other mandate islands of the Pacific whereby the United States was granted equal cable and wireless privileges was announced by Secretary Hughes. On December 13 the Four-Power Treaty was signed at Washington. On December 14 it was reported that Japan accepted the 5-5-3 naval ratio. On December 15 the agreement in respect to naval limitation was announced by Secretary Hughes on nearly the same basis as he had proposed on November 12. This left to Japan 10 ships of 312,700 tons; to Great Britain 20, of 582,540; to the United States 18, of 525,850; military and naval outposts in the Pacific to remain as at present (see *NAVAL PROGRESS*). On December 16, the question of submarines to be allotted to France and Italy was under debate, and this matter was still under discussion at the close of the year. On December 28, Mr. Root offered a set of rules which should govern the use of submarines in war time. A marked difference of opinion, particularly between the French and British delegates on this question of submarines, developed at the close of the year.

THE PROBLEM OF THE PACIFIC. In general the chief question in the Pacific was that of Japanese expansion involving as it did Japan's tendency to encroach on China and not only check the free development of that country but interfere with the interests of other Powers. The Japanese needed markets for her increased population which was denied an entrance into the United States or into Australia. Some understanding first of all must be reached on the part of the United States, Great Britain, and Japan. The bearing of these various questions on disarmament was obvious. At the time of the Conference the interested Powers were in possession of the most powerful navies of the world. The reduction of them was a serious question as appears from the following brief review of recent naval progress in the United States and Japan: The Secretary of the Navy under President Wilson had been an energetic champion of American naval expansion. On August 29, 1916, the United States adopted the most formidable naval programme in its history and this was completed by the Naval Efficiency Act of Oct. 6, 1917, which was supplemented,

in March, 1920, by a proposal to add twenty light cruisers and 14 smaller vessels. In planning this increase the naval authorities had foreseen the important part the United States was destined to take in the Pacific Ocean and as a result of the programme the administration of President Wilson left to its successor a Pacific fleet superior to the whole American fleet before the war. This policy was followed during the first year of the administration of President Harding who, soon after his election, visited the Panama Canal and declared that a great fleet was necessary for the future of the country. The Secretary of the Navy under President Harding stationed in the Pacific a battle squadron consisting of the most recently built vessels, namely: *The Oklahoma* and *Nevada* launched in 1914; the *Arizona* (1915); the *Mississippi*, *New Mexico*, and *Idaho* (1917); the *California* and *Tennessee* (1919); the *Colorado* and *Maryland* (1920); all of which had fuel oil motor power and a tonnage ranging from 27,500 to 32,000 with batteries in each case having pieces of 356 with the exception of the *California* and *Maryland* which were each armed with 8 pieces of 406. The question of bases and stations was not settled. On the Pacific coast the navy had only 5 docks for dreadnaughts including the dock of Hawaii. By 1924 the Pacific fleet would comprise 12 super-dreadnaughts and 4 battle cruisers. In 1921, however, it was evident that the government was not pushing its naval programme with much rapidity. Congress in July made some serious cuts in the naval budget and the naval appropriations were reduced from \$184,000,000 to \$90,000,000. The building of ships was not carried on at a rapid rate and the date for the completion of the super-dreadnaughts on the model of the *California* and *Tennessee* was not fixed. No progress was made on the 5 battle cruisers, and in the autumn of 1921 the United States had only 1 light cruiser, 10 being under construction. As to personnel there was no indication that the large number necessary to man so great a fleet was available. This number was estimated at 170,000 men and over 7000 officers and Congress seemed disposed to cut this down to a total of 100,000.

Japan's programme dates back to the end of the war with Russia when Japan recognized the necessity of equipping two squadrons each with 8 modern vessels. In July, 1920, the Diet voted the programme of 1920-28 and out of her budget of 1,025,757,403 yens, Japan applied nearly 500,000,000 yens to the navy. By March, 1928, it was estimated that Japan would have the 16 ships of the line which had been projected. There were to be laid down 4 super-dreadnaughts, 4 battle cruisers, 12 light cruisers, 32 destroyers and an unknown number of submarines and airships. Of the 8 super-dreadnaughts 2 were already afloat namely, the *Nagato* and the *Mutsu* with a tonnage of 33,800. The projected dreadnaughts, the *Kaga* and the *Tosa*, would have a tonnage of 7000 in excess of this. The principal batteries consisted of pieces of 406 but two of the future battle cruisers, namely, the *Atago* and the *Katano*, were to have pieces of 450. Japan had made provision for suitable naval bases. Not only on her own coast did she have basins for the largest vessels but she had undertaken various fortifications on her islands including the islands of Bonin and Parry and much was said about her activity in 1921 at other points near the island of Guam. In this

respect the United States was far inferior to Japan, having on the Pacific only the base of Pearl Harbor at a distance of 2100 miles from Mare Island and not yet having established bases either at Guam or in the Philippines. This in the opinion of naval critics perhaps offset the numerical advantage of the United States.

As to Great Britain it was not known on which side she would throw her naval force in case of conflict. In 1920 Lord Jellicoe who was regarded as her best organizer had been sent to New Zealand and in the latter part of 1921 he submitted to the Admiralty a plan according to which the naval centre of gravity would be shifted from the North Sea to the Pacific. It involved the establishment in the Far East under the orders of the admiralty and a British staff with headquarters at Singapore, of a squadron of 8 dreadnaughts, 8 battle cruisers, and 10 light cruisers. In the autumn of 1921 the government had not yet accepted this plan or decided to place an important naval contingent in the Pacific, thus far confining itself to a defensive policy, retaining its vessels in their former stations and trusting in case of danger to mines and airships. France possessed only an insignificant naval force in the Pacific. Before the Conference there had been much discussion in the United States and Great Britain of a policy of naval co-operation between the two Powers. In Great Britain there was a feeling that the protection of their outlying territories required the aid of the United States. In the United States it was argued that British policy throughout the Empire was not in conflict with the proper interests of the United States. It was realized that the naval protection required was too expensive for any single government to bear; therefore, there was a disposition in both countries to agree on a harmonious plan and not build up their navies in a spirit of rivalry. It was proposed, for example, that agreements should be entered into between the United States on the one hand, and Great Britain and her dominions on the other. It might be arranged, for example, that the American navy should act as a mandatory for Great Britain and that subsidies might be paid by the latter to that end. In like manner the British navy might act on behalf of the United States, thus enabling this country to reduce its own navy and merely subsidize the British. These, however, were merely theoretical proposals.

INTEGRITY OF CHINA. A statement of China's policy had been made in October by the Chinese Bankers' Association, regarded as the strongest financial group in China. This laid down the lines that ought to be followed at the Washington Conference. In general the aim was to maintain permanent peace in the Far East on the basis of mutual international aid. Specifically, the principle of territorial integrity should receive first consideration. Here the Bankers' Association had in mind the Shantung question. They said the principle of territorial integrity must not be damaged by giving advantages or exceptional rights to foreign individuals. The next point had special reference to the Anglo-Japanese alliance. The principle was laid down that there should be no agreement between two nations affecting a third unless it were accepted by the third. If these principles were accepted by the Conference, China in turn should agree to the open-door policy provided that other nations renounced their

spheres of influence and special interest. Here the bankers' group had in mind the various consortions and the recognition of certain claims of the Japanese in Southern Manchuria and Eastern and Northern Mongolia. The fourth point related also to this matter of consortions and foreign coöperation. The Chinese bankers declared their approval of international financial coöperation so long as it did not interfere with Chinese financial and economic development. The fifth point had reference to the Chino-Japanese loan agreement of 1918. The bankers declared the diplomatic instruments hindering Chinese financial and economic administration should be canceled at the coming conference. Finally, it was pointed out that the division of China into North and South was merely an internal condition and did not exist in respect to international or Chinese industrial and commercial affairs. The banking groups went on to say that they were ready to coöperate in a consortium whenever it was to the interests of China to do so, but urged the government to consult the Chinese people before resorting to this mean. The government was urged also to devise a unified railway system but was warned against internationalization of the railways, and it was insisted that foreign or domestic railway lines should have no right to supervision or control, nor ought foreigners to be employed on the roads, with the exception of technical experts. The government had the right according to the bankers to fix freight tariffs without consulting foreign Powers. Foreign creditors ought not to be allowed to interfere with mines, forests, or other properties along railway lines. This last point had reference to acts said to have been committed by the Japanese along the Shantung railway. Other features of the report were proposals to adopt the gold standard and to abolish the tael. In place of the present system a unified currency with standardized dollars and subsidiary coin on a decimal basis was recommended.

THE CHINESE TEN PRINCIPLES. As noted above, the Chinese delegation early in the sessions proposed a set of ten principles to serve as a basis of the decisions of the Conference in respect to China. They were as follows:

1. (a)—The powers engage to respect and observe the territorial integrity and political and administrative independence of the Chinese Republic. (b) China upon her part is prepared to give an undertaking not to alienate or lease any portion of her territory or littoral to any Power.
2. China, being in full accord with the principle of the so-called open door, or equal opportunity for the commerce and industry of all nations having treaty relations with China, is prepared to accept and apply it in all parts of the Chinese Republic without exception.
3. With a view to strengthening mutual confidence and maintaining peace in the Pacific and the Far East the Powers agree not to conclude between themselves any treaty or agreement directly affecting China or the general peace in these regions without previously notifying China and giving to her an opportunity to participate.
4. All special rights, privileges, immunities or commitments, whatever their character or contractual basis, claimed by any of the Powers in or relating to China, are to be declared, and all such or future claims not so made known are to be deemed null and void. The rights, privileges, immunities and commitments, now known or to be declared, are to be examined with a view to determining their scope and validity and, if valid, to harmonise them with one another and with the principles declared by this conference.
5. Immediately, or as soon as circumstances will permit, existing limitations upon China's political, jurisdictional and administrative freedom of action are to be removed.
6. Reasonable, definite terms of duration are to be attached to China's present commitments which are without time limits.

7. In the interpretation of instruments granting special rights or privileges, the well established principle of construction that such grants shall be strictly construed in favor of the grantors is to be observed.

8. China's rights as a neutral are to be fully respected in future wars to which she is not a party.

9. Provision is to be made for the peaceful settlement of international disputes in the Pacific and the Far East.

10. Provision is to be made for future conferences to be held from time to time for the discussion of international questions relative to the Pacific and the Far East, as a basis for the determination of common policies of the signatory powers in relation thereto.

THE ROOT RESOLUTION. On November 21, the Conference, as noted above, accepted the resolution offered by Mr. Elihu Root embodying four general principles which should guide the policy of nations in respect to China. It was as follows:

It is the firm intention of the powers attending this conference hereinafter mentioned, to wit, the United States of America, Belgium, the British Empire, France, Italy, Japan, the Netherlands and Portugal:

1. To respect the sovereignty, the independence and the territorial and administrative integrity of China.
2. To provide the fullest and most unembarrassed opportunity to China to develop and maintain for herself an effective and stable Government.
3. To use their influence for the purpose of effectually establishing and maintaining the principle of equal opportunity for the commerce and industry of all nations throughout the territory of China.
4. To refrain from taking advantage of the present conditions in order to seek special rights or privileges which would abridge the rights of the subjects or citizens of friendly States and from countenancing action inimical to the security of such States.

FOUR POWER TREATY. The text of the Far Eastern Treaty on the part of the United States, Great Britain, France, and Japan, as given to the press in December was as follows:

I. The high contracting parties agree as between themselves to respect their rights in relation to their insular possessions and insular dominions in the region of the Pacific Ocean.

If there should develop between any of the high contracting parties a controversy arising out of any Pacific question and involving their said rights which is not satisfactorily settled by diplomacy and is likely to affect the harmonious accord now happily subsisting between them, they shall invite the other high contracting parties to a joint conference to which the whole subject will be referred for consideration and adjustment.

II. If the said rights are threatened by the aggressive action of any other Power, the high contracting parties shall communicate with one another fully and frankly in order to arrive at an understanding as to the most efficient measures, to be taken, jointly or separately, to meet the exigencies of the particular situation.

III. This treaty shall remain in force for ten years from the time it shall take effect, and after the expiration of said period it shall continue to be in force, subject to the right of any of the high contracting parties to terminate it upon twelve months' notice.

IV. This treaty shall be ratified as soon as possible in accordance with the constitutional methods of the high contracting parties, and shall take effect on the deposit of ratifications, which shall take place at Washington, and thereupon the agreement between Great Britain and Japan, which was concluded in London on July 13, 1911, shall terminate.

The Government of the United States will transmit to all the signatory powers a certified copy of the process-verbal of the deposit of ratifications.

The present treaty, in French and in English, shall be deposited in the archives of the Government of the United States, and duly certified copies thereof will be transmitted by that Government to each of the signatory Powers.

In faith whereof the above-named plenipotentiaries have signed the present treaty.

Done at the City of Washington, the thirteenth day of December, one thousand nine hundred and twenty-one.

Following is the text of the reservation note, prepared by the American delegates and accepted by the other Powers.

In signing the treaty this day between the United States of America, the British Empire, France, and Japan, it is declared to be the understanding and intent of the signatory powers:

1. That the treaty shall apply to the mandated islands in the Pacific Ocean, provided, however, that the making of the treaty shall not be deemed to be an assent on the part of the United States of America to the mandates and shall not preclude agreements between the United States of America and the mandatory powers, respectively, in relation to the mandated islands.

2. That the controversies to which the second paragraph of Article 1 refers shall not be taken to embrace questions which according to principles of international law lie exclusively within the domestic jurisdiction of the respective Powers.

Washington, D. C., Dec. 13, 1921.

AGREEMENT IN RESPECT TO YAP. A disagreement between the United States and Japan arose at the International Congress of Communications held at Washington from November, 1920, to March, 1921, in regard to the status of the cables which had been taken from Germany. The island of Yap was the terminus of important cable lines between the United States and the Far East, and the American representatives at this congress insisted that the lines should be internationalized by Japan to whom the island had been assigned under a mandate, by the Supreme Council but Japan refused to give up absolute sovereignty. Great Britain and France supported her in this. The United States government would not admit Japan's sovereignty, contending that it had not consented to the inclusion of Yap in the Japanese mandate. The American secretary of state, February 21, addressed a note to the Council of the League of Nations, requesting the reopening of the question in order to settle it properly. The Council of the League, March 2, admitted the claim of the United States, but declared that Yap had been assigned to Japan by the Supreme Council. This attitude of the United States was simply an illustration of the policy laid down in the latter part of the Wilson administration by the secretary of state, Bainbridge Colby, on the subject of the mandates. It was the contention of the administration that the failure of the United States to ratify the Treaty did not deprive it of any rights in the disposal of the former German colonies. The secretary of state on April 6 sent identical notes to Great Britain, France, Italy, and Japan, asserting this principle, and these Powers with the exception of Japan accepted provisionally the American point of view.

The text of the treaty between the United States and Japan in regard to the status of the island of Yap was published, December 12. Among its provisions were the following: Japan not to fortify the island but to have the right to maintain order; in respect to the cable the United States to have free access with an equal footing with Japan and every other nation as regards the use of the present cable between Yap and Guam and of every other cable that may be established on the island by the government or citizens of the United States; American companies to have the right without further authorization to establish a cable or a wireless station; the United States, however, not to exercise their rights in respect to wireless so long as Japan maintains a wireless station with free communication; the United States recognizes the mandate bestowed on Japan by the League of Nations over the German islands to the north of the equator; admission of American missionaries to the territory under mandate; stipulations for the protection of American property, etc.

OTHER EVENTS

LEAGUE OF NATIONS. The second full meeting of the Assembly of the League was held at Geneva, Switzerland, September 5-October 6, the representatives of forty-eight nations being present. There were no representatives from any of the Central American states, and several representatives conspicuous in the previous meeting were absent, including Paderewski of Poland, Titttoni of Italy, Rowell of Canada. Among the following new members may be mentioned Bishop Noli, head of the Albanian delegation, and Prime Minister Stambolisky of Bulgaria. Other well-known members were: Lord Robert Cecil, representing South Africa; Arthur J. Balfour; M.M. Leon Bouguis Viviani, and Hanotaux of France; H. Branting, Prime Minister of Sweden; Dr. Nansen; Baron Hayashi and Viscount Ishii of Japan; Eduard Benés of Czechoslovakia; Paul Hymans of Belgium. The temporary president was Dr. Wellington Koo, Chinese Ambassador to London, and the permanent president was J. van Karnebeek, Foreign Minister of the Netherlands. Opening discussions brought out a sharp criticism of the United States for its policy of ignoring the League and negotiating with separate governments, and for the delay that its action had occasioned the League in settling the question of the mandates. There was also a lively debate on disarmament, in the course of which, some of the speakers held that the League was powerless to make any progress in the matter on account of the attitude of the great nations, while others took a more hopeful view and argued in favor of an early international conference on the subject. The Assembly voted for such a conference, but did not fix the date. There was marked skepticism as to the ability of the approaching Disarmament Conference at Washington to accomplish anything, but a resolution expressing gratification and good wishes was passed, September 28. Another feature of the early session was the election of eleven judges to full membership on the Permanent Court of International Justice, and four deputy judges, September 14. The eleven judges were as follows: Viscount R. B. Finlay of Great Britain; Charles André Weiss of France; Dionisio Anzilotti of Italy; John Bassett Moore of the United States; Rafael Altamira y Cravea of Spain; Senator Ruy Barbosa of Brazil; Antonio de Bustamante of Cuba; Max Huber of Switzerland; B. C. J. Loder of Holland; Didrick Galtrup G. Nyholm of Denmark; Yoruzo Oda of Japan. The four deputy judges were as follows: M. Negulesco of Roumania; Mr. Wang Ch'ung-hui of China; M. Yovanovitch of Jugoslavia; M. Beichmann of Norway.

The Assembly did a piece of useful work in defining the famous Article X which had caused so much discussion. It was held that the article did not involve a pledge on the part of members to go to war in order to protect territory of other members, but involved only a pledge not to violate the territory of neighbors. No nation was bound to send troops under the provisions of this article, the sanction being simply economic pressure; and a paragraph was added to the effect that the Council would notify the members of the League of the date for the application of this economic pressure. There was much discussion of amendments to other articles, but this was the principal result accomplished.

Of the international disputes discussed at the meeting, the chief ones were: The Vilna affair, and the dispute between Albania on the one hand and Jugo-Slavia and Greece on the other. The still more important question of Upper Silesia (see the article UPPER SILESIA and paragraph below) was in the hands of a committee of representatives from Brazil, Spain, China, and Belgium, to which it had been submitted by the Supreme Council, and it was not discussed by the Assembly. As to the Vilna dispute, its settlement had been announced before the meeting as the result of a compromise secured through the efforts of Paul Hymans of Belgium. But at the time of the meeting, Poland and Lithuania were again in dispute owing to the latter's insistence that the forces of General Zeligowski should be immediately withdrawn, and the refusal of the Poles to accept this. The Assembly decided, September 24, to urge Poland and Lithuania to renew negotiations. See paragraph, *Vilna Question*. The quarrel over the Albanian frontier sharply divided the Assembly, and there was an animated discussion. The head of the Albanian delegation, Bishop Noli, testified before the Assembly that Albanian villages were being stormed by the Serbs; but the Jugo-Slav delegates made light of this charge, and pronounced an invective against the Albanians. Representatives from the larger Powers held the view that the government should deal with the subject after proper investigation, and in this they were supported by a considerable portion of the Assembly. Others, however, held that Albania should be at once supported in her demands. This course was naturally urged by the Albanian delegates, but could not be taken because the boundaries had not been definitely settled. Hence the Assembly decided to urge the Council of Ambassadors to settle promptly the question of boundaries. In respect to the Åland Islands dispute discussed in the preceding YEAR BOOK the League Council decided, November 24, to award the islands to Finland, subject to military neutrality and the protection of the Swedish inhabitants. Early in the session (September 7) Bolivia appealed for a decision of the Tacna-Arica dispute between Chile and Peru and the Assembly appointed a committee to decide whether the question could properly come before the League. Dr. Nansen appealed to the Assembly on behalf of Russian sufferers from the famine, but the Assembly refused to authorize a money grant, and decided to refer the subject to the approaching international council at Brussels on Russian relief. The application of Hungary for admission was postponed, and no action was taken in the case of Armenia, but the three Baltic states, Latvia, Lithuania, and Esthonia were admitted to membership.

Other subjects discussed by the League were: The white slave traffic; the distribution of opium; the prevention of disease; the immigration question; and the finances of the League.

UPPER SILESIA. The Upper Silesian question in its earlier aspects is discussed in the preceding YEAR BOOK. As is there noted the territory was to be divided under the Treaty in accordance with a plebiscite to be held in the region. The plebiscite took place, March 20. A description of the region as a whole and of the divisions voting respectively for Poland and Germany is given in detail in the article UPPER SILESIA, but for con-

venience the main points may be here briefly mentioned. The Germans had a majority of about 225,000, but the question of division was difficult on account of the conflicting interests of the two countries. Under the Treaty the Supreme Council of the Allies was authorized to divide the region in accordance with the wishes of the residents of the various communes. But the vote by communes did not agree with the total vote. Thus in the ten counties nearest to Poland, the vote for Poland was 435,236 and for Germany, 408,786, while the vote by communes in this same region was 645 for Poland and 200 for Germany; and in the six districts nearest to Germany, the vote was 307,214 for Germany and 36,170 for Poland, while 582 communes voted for Germany and 60 for Poland. There was a further inconsistency in that in the populous Polish counties the chief important industrial centres went for Germany by a large majority. These included: Königshütte, Tarnowitz, Beuthen, and Kattowitz. France which had been the ally of Poland through thick and thin, and had given support to every sort of propaganda against Germany, including reports of intended violence and fraud, immediately proposed a settlement arranged exclusively in the Polish interest, namely, the assignment to Poland of all these German industrial centres. This decision would have given Poland most of the coal region which contained the richest coal deposits in Europe. Great Britain and Italy, on the other hand, firmly opposed this and favored the assignment to Poland of the counties of Pless and Rybnick and part of Kattowitz where the Poles had an enormous majority. While the question was pending, the danger of war suddenly appeared. Stirred by the rumor that the Allies would decide against Poland, Polish insurgents seized the most valuable parts of the region early in May, and under the leadership of Adalbert Korfanty, the Polish high commissioner of the plebiscite, they established a government with Korfanty at the head. This caused great indignation in Germany and the German government protested to the Allies, May 5, offering to aid the Allies in putting down the revolt. This was refused by France. Soon afterwards there was a conflict between German irregular troops and the army of Korfanty. Disagreements between the French and British governments nearly led to a rupture. On May 13 Lloyd George blamed the Poles for the seizure of the region and suggested the possibility of German assistance. This brought a protest from the French government in which it was said that Poland and France had done their duty in restoring order, and that the French government would not consent to German intervention. At last on June 18 the Allied Powers agreed to restore order by means of Allied troops, and on June 26 a compromise was brought about between the Polish General Korfanty and the German General Henniker in Upper Silesia, and a truce was established until the Allies should decide on the result of the plebiscite. This arrangement was secured through the agency of the British general in the region.

On August 12, the Upper Silesian question was referred by the Supreme Council to the League of Nations and the latter body began its consideration, August 29. The subject was referred to a committee composed of representatives of Powers not affected by the question; namely, Paul Hy-

mans of Belgium, Quinones de Leon of Spain, da Cunha of Brazil, and Dr. Wellington Koo of China. After many sessions in which evidence was presented by both Germans and Poles and the findings of a neutral committee of investigation had been considered, the report was presented by the League Council, October 20. See *UPPER SILESIA*. After the returns of the League of Nations decision on the Upper Silesian question were made known, the German Chancellor, expressing the general sense of the ministry, declared that the effect was most unjust. He said it would separate from the empire and place under foreign domination German towns and the fruits of German labor and intelligence; and that it would be regarded as unjust not only by the whole German nation, but by the majority of the population of Upper Silesia. According to the Germans, the decision of the League of Nations would cost them 86 per cent of the Upper Silesian anthracite coal deposits or 42 per cent of the total anthracite deposits available to Germany, and there would be a loss of about 63 per cent of the iron industries production. They said that in the Pless district Germany lost 44,000,000,000 tons of anthracite and in the Rybnik district 7,000,000,000. The militarist element was making use of the decision to stir up hostility against the government and against the Allies. On October 27, however, the Council of Ambassadors received word from the German government that it had accepted the Allied decision and would name a member of the Delimitation Commission to determine the border. This was accompanied by a protest against the unfairness of the division. The effect of these events was to render insecure the tenure of the Wirth Cabinet. At the close of the year the execution of the League of Nations' arrangement in respect to Upper Silesia was reported to be progressing smoothly. Although there had been great fear on the part of the German manufacturers lest they should be driven out from the districts consigned to Poland, their alarm was not justified, according to the reports. A conciliatory attitude on both sides was indicated. See *FRANCE, History*.

TREATY OF THE UNITED STATES WITH GERMANY. The draft of the treaty with Germany was agreed upon after conferences in Berlin between the American High Commissioner, Mr. Ellis Loring Dresel, and the German Foreign Minister, Dr. Friedrich Rosen, and it was signed at the German Foreign Office, August 25. This brought to an end the technical state of war which had existed between the United States and Germany since the armistice, Nov. 11, 1918. For the domestic political discussion of the subject in the United States see article *UNITED STATES* in the preceding *YEAR BOOK*. In general the treaty confirmed the United States in all its rights as one of the victorious Powers under the Treaty of Versailles while repudiating all obligations of the United States under certain specified sections of that Treaty, especially the one comprising the Covenant of the League of Nations. On November 14, President Harding issued a proclamation declaring that the war between the United States and Germany ended, July 2, 1921, the date at which Congress approved the joint resolution to that effect.

THE QUESTIONS OF THE MANDATES. The assumption of the Allies after 1919 was that the

United States government having failed to ratify the Treaty and to join the League of Nations did not participate in the right to grant mandates for the territories whose sovereignty had shifted as a result of the war and that the Supreme Council of Allied prime ministers was the sole authority in this matter. The United States in 1920 and 1921 took the opposite ground and insisted that as a party to the success of the war it had a right to share in the bestowal of these territories under mandates. Many questions arose involving this principle, and the United States government set forth its position in repeated notes. For the question as applied to the island of Yap, see the paragraph on that subject. The attitude of the United States applied not only to mandates but to rights of any kind in the territories acquired by the Allies. A question of this nature arose with Holland in the spring. On April 29 the lower house of the Dutch parliament passed a law giving to Dutch exploiters exclusive oil rights in the Djambi region of the island of Sumatra for forty years. The United States government demanded equal opportunities for Americans in the island and everywhere else in the Dutch East Indies. Communications took place between the two governments, May 10 and May 27. On June 21 the Dutch government refused to accept the American demand on the ground that the pledges had been given before the American government had protested. A similar question had been raised in 1920 in regard to the oil fields of Mesopotamia, and the British government had rejected the American contention. The Yap situation (see above) gave the Secretary of State, Mr. Hughes, a chance to bring out not only the American point of view in regard to the rights in the island but also the belief of the United States that it ought to be consulted on all mandate assignments of territory formerly belonging to the defeated Powers. The ground of this claim was the fact that the United States had been one of the principal Powers that won the war and therefore had a right to object to the administration of German or Turkish provinces under mandates by any of the victorious Powers in a manner that conflicted with American interests. The United States would not admit the principle that it must join the League of Nations in order to give American citizens equal rights with those of European powers in Turkey, Africa, or the Pacific islands. In subsequent communications Mr. Hughes developed this position in respect to the mandates and paid special attention to the claim of Americans to equal terms in the former possessions of Turkey. The general spirit of the Hughes policy was that mandates must not be used as a cloak for national or imperial expansion.

RUSSIA AND THE POWERS. France, which had persistently sought in every way to isolate and injure Soviet Russia, took the lead in forming a defensive alliance against Soviet Russia along with Roumania, Poland, and Hungary, which was signed, March 2. As noted in the last *YEAR BOOK* the prolonged discussion of resumption of trade with Russia, produced no result except in the case of Great Britain, which country toward the end of the year entered into an agreement for the renewal of trade relations on the condition that the Soviet government abstain from attempts by propaganda or other means to under-

mine British authority in her dominions. The hopes of an extensive commerce as a result of this arrangement were disappointed, and in the autumn of 1921, the British government made public its discontent in this respect and offered criticisms as to the manner in which the Russian government had carried out the agreement. A trade agreement was made by Italy at the close of the year (see ITALY, paragraphs on *History*). In October, there was a movement in the United States on behalf of a similar agreement, and the Russian Commission of Far Eastern Relief recommended to Mr. Hoover, Secretary of Commerce, that an arrangement for the renewal of trade with Russia should be made. This recommendation was made after an elaborate investigation, the Commission having made a tour of the famine areas along the Volga and in Armenia, resulting in a report on measures to be taken for relief.

In the last week of October it was learned that the Soviet government was willing, under certain conditions, to acknowledge Imperial Russia's debt to foreign capitalists. On October 28 the Russian Foreign Minister, George Tchitcherine, sent a note to the governments of Great Britain, United States, France, Italy, and Japan, which, according to the press accounts, declared that the Soviet government would agree to recognize the old debts incurred down to 1914, providing that Russia acquire certain privileges which would make it possible for her to fulfill these obligations, especially the conclusion on the part of the Great Powers of a final peace with the Soviet Republic and their recognition of that republic. Referring to the report that the Brussels conference had stipulated as a condition of granting credits to Russia for famine relief, that Russia acknowledge the debts of previous Russian governments, he said that, the Soviet government had from the beginning aimed at economic coöperation with the other Powers and that in the present chaos real peace was impossible without Russia. The Soviet government had reestablished private trade and private ownership in small undertakings and was guaranteeing the safety of foreign capital and a profit sufficient to attract it to Russia. While no nation was compelled to pay the price of the chains it wore for ages, the Russian government was prepared to make important concessions in the present crisis. It was willing to recognize its obligations to the several states and to their citizens for government loans concluded by the old imperial government, but in order that it might have a chance to carry out these obligations it must be understood that the Great Powers would put an end to any measures threatening the safety of the Soviet Republic and the friendly Far Eastern Republic or their sovereign rights or their frontiers.

According to the United States Treasury officials the debt to this country from Russia amounted to \$187,729,750, having been incurred since July, 1917. On that date the American Government loaned Russia \$35,000,000. The total Russian state debt amounted, at the beginning of 1914, to 9,888,310,000 rubles, or about \$5,092,379,650. Afterwards Russia contracted other debts for the conduct of the war and these together with internal bond issues, brought the state debt up to 32,300,000,000 rubles or about \$16,634,-

500,000, Sept. 1, 1917. But the Soviet offer did not include debts incurred after 1914.

TREATY OF RIGA. The war between Poland and Soviet Russia in 1920 was terminated by the armistice at Riga in October of that year whose terms are outlined in the articles on **POLAND** and **WAR OF THE NATIONS** in the **YEAR BOOK** for 1920. These terms were substantially included in the Treaty of Riga, March, 18, 1921. They amounted to an acceptance of the Polish conditions and involved a boundary cutting off Lithuania from Russia, granting to Poland a corridor of territory, and the relinquishment by Russia of her claims to East Galicia. According to some estimates Russia lost 87,000 square miles of territory with 7,000,000 inhabitants of whom only 6 per cent were Polish. The terms had been pronounced by the United States government a violation of the ethnographic principle laid down in the Treaty of Versailles, and the United States government had officially refused to sanction a territorial aggrandizement of Poland at Russia's expense. The first payment to Poland under the treaty amounting in gold and jewels to 50,000,000 marks was received in the middle of December.

BURGENLAND. The Austrian authorities when they attempted to occupy Burgenland or Western Hungary under the treaty of Trianon encountered the resistance of Hungarian bands. A conference was appointed at Venice of French, British, Italian, Austrian, and Hungarian delegates for the settlement of the dispute, October 7. The result of this conference was that Austria agreed that the city of Oedenburg should decide for one country or the other by plebiscite. For a discussion of the subject, see **HUNGARY**, paragraph on *History*.

THE ALBANIAN FRONTIER. At the beginning of October the Geneva conference decided upon a new Albanian frontier. The decision seemed to have been reached in the spirit of fairness and the independence of Albania was recognized. Nevertheless the Albanians in the meeting of their high council decided that no alteration could be accepted in the boundaries laid down in 1918. It was decided that Albania would pay no attention to what the Powers had recommended. The award was also unsatisfactory in Jugo-Slavia and Serbian troops crossed the Albanian border. This brought a protest from the Albanian government to the League of Nations, and the protest was supported by the British government, November 8. On November 10, the Council of Ambassadors corrected the boundary line of the Albanian, Greek, and Serbian frontier, and the delegates from the countries concerned agreed to observe the decision of the League of Nations when it was rendered. The new line followed closely that which had been laid down at the ambassadors' conference in London in 1913. See **ALBANIA**.

VILNA. The League of Nations decided in March that the plebiscite plan should be abandoned in favor of direct negotiations between the disputing parties, and on April 21 the representatives of Poland and Lithuania held their first conference. On December 2 it was announced by the Polish Foreign Office that General Lucjan Zeligowski whose occupation of Vilna had lasted about a year had resigned as head of the administration, and that a civilian control had been substituted

with a former member of the Russian upper house at the head of it. Elections were to be held in the course of the month to decide whether the territory should be Polish or Lithuanian. The question of Vilna was not settled at the close of the year. The last stage of it at that time was the rejection by Lithuania of a proposal for the division of the city into two cantons, each to be self-governing.

DEBTS OF THE ALLIES TO THE UNITED STATES. The indebtedness of the Allies to the United States amounting to some \$10,000,000,000 continued to be the subject of much discussion and speculation during the year. From time to time the proposal was made that the United States should remit these obligations entirely. Varying arguments on both sides were brought forward in respect to the political consequences of such a course, and national and moral sentiment naturally figured largely in this aspect of the problem. As to the economic aspect the probabilities were much clearer and the situation from the economic point of view seemed comparatively simple. The main points in it were as follows: There was no foundation in fact for the superficial view that, assuming the debtor nations were solvent, the United States would receive the payment of the debts at their face value and that the \$10,000,000,000 might simply be set off against the national debt or the interest applied to the relief of taxation or to the payment of the soldiers' bonus, etc. Such a view assumes that international indebtedness is the same as indebtedness between individuals and can be settled in a simple cash transaction. This of course does not allow for any of the complexities of international trade. As economists have proved again and again for a century or more, debts between nations are in the long run settled in goods, that is to say, by the exportation of goods from the debtor nation over and above duties, etc., and unbalanced by corresponding exports from the creditor nation. The United States had more gold than it needed and the debtor nations had virtually no gold to spare. Therefore the debt had to be paid in goods exported either to the United States or to countries whose credit was accepted in the United States. This credit would necessarily in the long run have to be settled in goods exported to the United States, which would inevitably flood the United States with exports and injure the corresponding classes of American producers. If it amounted to only a small sum the United States market might absorb it without causing derangement, but the pouring in of exports in such a quantity was certain to disorganize the economic condition of any state engaged in private enterprise. Protectionists and Free Traders alike would hardly contemplate such a situation without concern. If Great Britain, for example, were to pay her debt in foodstuffs and raw materials the effect would be disastrous on the agricultural class in the United States. The United States producers could not be expected to abandon wheat growing, wool growing, sugar raising, etc., in favor of the producers in Canada, West Indies, and Australia. Nor could American industry support the flooding of the market with hundreds of millions of dollars worth of imported manufactures. These economic considerations prompted a number of writers to the recommendation that the United States should remit the debts on the ground that in the long run there would be more profit to

the United States from the resulting conditions of the international trade situation.

THE LITTLE ENTENTE. Poland entered the Little Entente, February 23, after the French and Polish governments had made a declaration, agreeing to take common measures of protection against the Bolsheviks. A new treaty pursuant to the policy of the Little Entente was signed by Jugoslavia on June 8 for the holding of Hungary and Bulgaria to the terms of their respective peace treaties.

TRIAL OF GERMAN WAR CRIMINALS. There were various trials at Leipzig of prisoners accused by the Allies of crimes during the war, but there were so many acquittals and the sentences of those convicted were so light that the French judicial committee which presented the cases withdrew, July 8.

WASHINGTON. POPULATION. According to the report of the census of 1920, there were 1,356,621 residents in the State, Jan. 1, 1920, as compared with 1,141,990 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	60,000	2,400,000	\$ 2,064,000
	1920	62,000	2,232,000	2,790,000
Oats.....	1921	210,000	10,500,000	4,410,000
	1920	210,000	9,786,000	7,046,000
Barley.....	1921	76,000	2,797,000	1,454,000
	1920	82,000	2,859,000	2,895,000
Wheat.....	1921	2,480,000	54,662,000	47,009,000
	1920	2,459,000	41,665,000	56,248,000
Hay.....	1921	1,038,000	12,666,000	27,835,000
	1920	1,008,000	11,991,000	36,553,000
Potatoes.....	1921	55,000	7,425,000	7,351,000
	1920	53,000	8,215,000	7,804,000

¹ Tons.

MINERAL PRODUCTION. The value of the gold, silver, copper, lead, and zinc produced from mines in Washington, according to the United States Geological Survey, was about \$356,000, as compared with \$1,200,932 in 1920. The output of metals was less than that for any year in the last decade, as the large producers found it impossible to operate under the peculiar market conditions. The prices of copper, lead, and zinc were unusually low, but freight rates and other expenses remained high. The mine production of gold increased from \$120,860 in 1920 to about \$148,000 in 1921. Most of the gold came from the Republic district, Ferry County, but the shipments of siliceous ore were restricted by high freight rates. The mine output of silver decreased from 199,678 ounces in 1920 to about 132,000 ounces in 1921. Mines at Republic, Nighthawk, Chewelah, and Colville produced most of the silver, but the quantity of silver produced from copper ore was unusually small. The mine output of copper decreased from 1,983,134 pounds in 1920 to about 402,000 pounds in 1921. The mine output of lead decreased from 5,787,247 pounds in 1920 to about 132,000 pounds, valued at \$6072, in 1921.

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Washington was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and

took account only on establishments conducted under the factory system. In this census also, as in that for 1914, statistics were not included for establishments having products for the census year valued at less than \$500, except that reports were taken for establishments idle during a portion of the census year, or which began operation during that year, and whose products for such reason were valued at less than \$500. The summary shows a consistent increase at the census of 1919, as compared with that for 1914. In the order of their importance from a percentage standpoint, the increases for the several items ranked as follows: Wages, 277.5 per cent; value added by manufacture, 237.1 per cent; value of products, 230 per cent; cost of materials, 224.4 per cent; salaries, 165.8 per cent; capital, 99.2 per cent; number of wage earners, 97.8 per cent; number of salaried employees, 65.1 per cent; primary horsepower, 47.1 per cent; proprietors and firm members, 33 per cent; and number of establishments, 28.5 per cent. The capital invested, as reported in 1919, showed a gain of \$275,410,000, or 99.2 per cent over that in 1914. The average capital per establishment was approximately \$112,000 in 1919 and \$73,000 in 1914. The cost of materials used in 1919 shows an increase over that for 1914 of \$306,593,000, or 224.4 per cent. The average cost of materials per establishment in 1919 was approximately \$90,000, and in 1914, \$36,000. The value of products in 1919 showed an increase over that in 1914 of \$564,309,000, or 230 per cent. The average per establishment in 1919 was approximately \$165,000 and in 1914 \$64,000. The value added by manufacture in 1919 shows an increase over that in 1914 of \$257,716,000, or 237.1 per cent. The value added by manufacture in 1919 formed 45.3 per cent of the total value of products and in 1914, 44.3 per cent. In 1919, as compared with 1914, the number of salaried employees showed an increase of 5266, or 65.1 per cent, while the average number of wage earners increased 65,727, or 97.8 per cent. The comparative summary for the State for 1914 and 1919 follows:

Fullerton; John F. Main, John R. Mitchell, Wallace Mount, O. R. Holcomb, Jenneth Mackintosh, Warren W. Tolman, J. B. Bridges.

WASHINGTON, UNIVERSITY OF. A co-educational State institution at Seattle, Wash., founded in 1861. The enrollment for the fall of 1921 was as follows: Liberal Arts, 1221; Science, 540; Business Administration, 1105; Education, 229; Engineering 648; Fine Arts, 343; Fisheries, 21; Forestry, 106; Journalism, 36; Law, 143; Library Science, 16; Mines 76; Pharmacy, 111; total, 4596. The summer quarter is divided into two terms of six weeks and had a total enrollment of 1930. There were 236 full time members in the faculty. The library contained 132,444 volumes. The total income for the year ending June 30, 1921, was \$1,769,449, 73 per cent of which was from State tax appropriation. The following new buildings were completed during the year: Stadium (\$400,000) with seating capacity of 30,000; Hydraulic Laboratory (\$62,526); Forest Products Laboratory (\$87,949); and Mines Laboratory (\$127,553). Education Hall, the fourth building in the new Liberal Arts quadrangle, was to be completed during the year 1921-22. The estimated cost was \$450,000, and it was designed to house the University Administration, the College of Education, the Department of Architecture, and contain draughting rooms for the College of Engineering. The University's standard of admission and of scholarship was raised by requesting high school principals to recommend only graduates who have made average grades of 80 per cent or better and by the passage by the faculty of the rules forbidding readmission for one quarter to the students who failed to secure, during the previous year, two-thirds of their grades above 75 per cent. President, Henry Suzzallo, Ph.D., LL.D.

WASHINGTON AND JEFFERSON COLLEGE. A non-sectarian institution of higher learning at Washington, Pa.; founded in 1802. The enrollment for the fall of 1921 was 455 and for the Summer School, 140. There were 27 members in the faculty with 4 additional members. The productive funds amounted to \$1,007,911 and

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	4,919	3,829	28.5
Persons engaged in manufactures.....	150,482	78,448	91.8
Proprietors and firm members.....	4,196	3,155	33.0
Salaried employees.....	13,354	8,088	65.1
Wage earners (average number).....	132,932	67,205	97.8
Primary horsepower.....	587,702	399,567	47.1
Capital.....	\$553,125,000	\$277,715,000	99.2
Services.....	225,757,000	63,207,000	257.2
Salaries.....	330,574,000	11,504,000	165.8
Wages.....	195,183,000	51,703,000	277.5
Materials.....	443,202,000	136,609,000	224.4
Value of products.....	809,635,000	245,326,000	230.0
Value added by manufacture (value of products less cost of materials).....	366,433,000	108,717,000	237.1

OFFICERS. Governor, Louis F. Hart; Lieutenant-Governor, W. J. Coyle; Secretary of State, J. Grant Hinkle; Auditor, C. W. Clausen; Treasurer, Clifford L. Babcock; Attorney-General, L. L. Thompson; Superintendent of Public Instruction, Josephine Corliss Preston.

JUDICIARY. Supreme Court: Chief Justice, Emmett N. Parker; Associate Justices: Mark A.

the income for 1920-21 to \$141,541. The library contained 32,952. Acting President, S. S. Baker.

WASHINGTON AND LEE UNIVERSITY. A non-sectarian institution of the higher education at Lexington, Va.; founded in 1749. The enrollment for the fall of 1921 was 747. There were 39 members in the faculty. The income funds totaled \$232,387. The library contained 50,000

volumes. The changes during the year included, one year academic work required for entrance to Law School; new Electrical Engineering Laboratory; new Electrical Engineering Department; addition to one dormitory. President, Henry Louis Smith.

WASHINGTON UNIVERSITY. A non-sectarian co-educational institution at St. Louis, Mo., founded in 1853. The enrollment for the fall of 1921 was 2540, and in extension courses, 1416. The faculty numbered 352. The productive funds amounted to \$9,517,380 and the income to \$1,138,552. The library contained 198,110 volumes. Gifts of the year included a swimming pool to be completed by March 1, 1922, and the sum of \$250,000 for a new Fine Arts building. Chancellor, Frederic Aldin Hall.

WATER POWER. See **POWER.**

WATER PURIFICATION. See **WATER-WORKS.**

WATER WHEELS AND TURBINES. The development of water power projects and the increased attention being paid to work in this field (see **POWER**) naturally had its effect on water wheels and turbines which in 1921 were being installed, built, or designed of greater capacities than ever before had been attempted. At Kern River Plant No. 3 of the Southern California Edison Co., two vertical-shaft 22,500 hp. Francis-type turbines, each operating under an effective head of 800 ft. were put into operation. This was the highest head ever attempted with this type of turbine, and it seemed probable that heads of 1000 feet would be employed in the near future with large units. There was also completed during the year two 40,000 hp. Francis single-runner reaction type turbines for the Mount Shasta Power Corporation designed to work under 421 feet head. But this was by no means the limit of capacity, for the Queenston development of the Hydro-Electric Power Commission of Ontario five 55,000 hp. reaction turbines were to be installed to operate under a head of 305 feet. The first of these turbines was about to be put into service at the end of the year. At the Pit River No. 1 plant of the Pacific Gas and Electric Co., of San Francisco, the plans called for 40,000 hp. reaction turbines to operate under 445 feet head. At the Muscle Shoals (q. v.) development the plans called for four 30,000 hp. turbines to operate under 95 ft. head. At the new Caribou station of the Great Western Power Co., at Belden, Calif., two of the largest impulse wheel-driven units ever installed were put in commission during the year. These were rated at 30,000 hp. each, each unit consisting of two independent wheels mounted on each side of the generator. These wheels operate under a head of 1008 feet at 171 revolutions per minute. As a hydro-electric installation depends in large measure upon the reliability and durability of the water wheels, designers and manufacturers were seeking to develop these qualities in connection with securing high efficiency over a considerable range of load; and gradual improvements were being secured.

In large power installations high-speed single-runner vertical machines were believed superior, but impulse turbines also were installed though of larger size, and these more costly and less efficient and on account of their shown speed, but in many respects most durable and reliable.

WATER-WORKS AND WATER PURIFICATION. Work continued on the Schoharie

Creek addition to the Catskill water supply for New York City, by means of which the water of the stream named will be impounded by the Gilboa dam and directed to the Ashokan reservoir for conveyance to the city through the Catskill aqueduct, already built. Work was also continued by the city of San Francisco on its Hetch Hetchy dam and aqueduct to provide a large city-owned supply—the city now being served by a private company. On the Great Lakes, works were under construction by Detroit and projected by Milwaukee, while at Buffalo, in November, the people voted \$4,000,000 to \$4,500,000 for a 160,000,000-gallon-a-day purification plant. Contracts for a 14,000,000-gallon purification works were let by Cambridge, Mass. The filters at all four of the cities last named will be of the mechanical or rapid type. The Cambridge filters will be the first mechanical filters, except for iron removal, built in Massachusetts.

WATSON, HENRY BRERETON MARRIOTT. British author died in London, October 30. He was born at Melbourne, Australia, in 1863. He became a resident of London after 1885 and was there for a long time prominent in journalism, being on the staff of various papers including the *Pall Mall Gazette* and the *National Observer*. His novels, of which there are more than twenty, include among others the *Princess Xenia*; *The Affair on the Island*; and the *King's Highway*.

WATTERSON, HENRY. Journalist, died at Jacksonville, Fla., December 22. For many years he was the best known journalist in the southern States often termed the sole survivor of the "old school" of journalism. He was born at Washington, D. C., Feb. 16, 1840, and educated chiefly by private tutors. His father was active in politics and young Watterson was surrounded from the first by a political atmosphere. He began journalistic experiments in his extreme youth and at the age of eighteen went to New York where he became a music critic for several local papers. Returning to Washington in 1859 he became private secretary to the founder of the *Washington Union* and afterwards its manager. During the war he served on the Confederate side chiefly as the result of family relations and not because he sympathized with slavery. Owing to a defect of vision he was not active in the field. While with the army he edited a paper entitled *The Rebel*, which criticised General Bragg and the latter obliged him to discontinue the paper. After the surrender he went to Cincinnati where he worked for the *Evening Times*. Thence in the autumn of 1865 he went to Nashville, and established there with others the *Republican Banner*, which soon became the leading journal of the city. In 1868 he became part owner of the *Louisville Journal* and under his direction it promptly acquired a great success. Soon afterwards it was consolidated with the *Courier*, taking the name of the *Courier-Journal* and became one of the leading papers of the South. Early in his editorial career as a spokesman for the southern democracy he urged the acceptance by the South of the political situation. He was always a great admirer of Lincoln whom he characterized as one of the best friends of the South; and he encouraged the education of the negro. He was a leader in the movement which led to the nomination of Horace Greeley and he was also prominent in the nomination of Samuel J. Tilden. He sat at all

the National Conventions of the Democratic party from 1872 to 1892 as delegate at large from Kentucky. At first he was a sharp critic of Colonel Roosevelt and he predicted the split in the Republican party as a result of the Roosevelt movement, but when the war began he strongly supported the latter's attempt to secure a command in the army. He was also a vigorous critic of Woodrow Wilson from the time of the latter's governorship of New Jersey and he blamed him for delaying the entrance of the United States into the war. Among his special aversions in latter years was woman suffrage and prohibition which he attacked in many censorious articles. His manner of writing was marked by the high colors and rhetorical embellishments which characterized the political eloquence of fifty years ago.

WATTS, ETHELBERT. Former consul-general died in 1921. He was born at Philadelphia, Pa., Feb. 25, 1845. He was consul-general in Brussels, Belgium, from 1907 to 1917. After an education in the private schools in Philadelphia, he studied in Paris, at the University of Pennsylvania, and at Freiberg, Saxony. Meanwhile he had served in the Civil War, enlisting as a private in the Pennsylvania volunteers at the age of seventeen during the time when Lee made his raid into Pennsylvania. He was in the consular service of the United States after 1896, holding positions at Horgan, Switzerland; Cairo, Egypt; Kingston, Jamaica (1899-1901); and Prague, Bohemia (1901-03). He was consul-general at St. Petersburg from 1903 to 1907. When the Spanish fleet entered the harbor of Port Said in an attempt to get coal, Mr. Watts who was then vice-consul-general at Cairo succeeded in preventing it, with the result that the fleet was ordered back to Spain. He received honors from the Japanese government for services to Japanese subjects during the Russo-Japanese war. In politics he was a Republican.

WEATHER BUREAU. See METEOROLOGY.

WEBSTER, HARRIE. Naval officer, died, April 23. He was born at Framington, Maine, Feb. 12, 1843; and entered the volunteer service of the navy, Feb. 18, 1862. He served under Farragut on the Mississippi river and was made third assistant engineer, May 20, 1864. He was wrecked on the *Vandalia* in the Samoan Islands, March 15-16, 1889. He was made chief engineer in 1892 and served on several vessels in that capacity. He was inspector of machinery and ordnance and was promoted captain, Jan. 4, 1903, and retired with the rank of rear admiral, Feb. 9, 1903.

WEDMORE, Sir FREDERICK. British author and critic, died, February 25. He was born at Richmond Hill, England, July 9, 1844, and educated in France and Switzerland; was a lecturer in the principal cities of England and at Harvard University and Baltimore, Md., in the United States. In England he devoted much of his time to the exposition of French art. He wrote a number of works of fiction, but his most important writings were critical and included a life of Balzac, various works on Whistler, a volume on the subject of etchings (1911) and a book of reminiscences (1912). For thirty years he held the position of chief art critic on the *Standard*.

WEED, SAMUEL RICHARDS. Insurance official, died in 1921. He was born in New York City,

Feb. 9, 1837; and after serving as agent of various fire insurance companies became vice-president of the Liberty Insurance Company, New York City. He was the author of the following volumes: *Handbook of Fire Insurance* (1894); *Norwalk to Norway* (1905); *Personal Recollections of Early San Francisco* (1908); *New and Improved Book on Forms for Fire Insurance Companies* (1909).

WEKERLE, ALEXANDER. See NECROLOGY.

WELLESLEY COLLEGE. An institution of the higher learning for women at Wellesley, Mass.; founded in 1875. The enrollment in 1921 was 1551 and the faculty numbered 134. President, (Miss) Ellen Fitz Pendleton, Litt.D., LL.D.

WELSH LANGUAGE. See PHILOLOGY.

WENDELL, BARRETT. University professor and literary critic and historian, died at Boston, Mass., February 8. For many years he held the chair of literature at Harvard. He was born at Boston, Mass., August 23, 1855, graduated at Harvard in 1877 and became an instructor in English at Harvard in 1880, rising to a professorship in 1898. He retired in 1917. He lectured at French universities and in England and was among the best known teachers of English literature of his day. The most discussed of his writings is *The Literary History of America* (1900) which aroused criticism on the ground that it tended to lower the rating of the principal American authors. Among his other writings may be mentioned, *William Shakespeare, A Study in Elizabethan Literature* (1894); *History of Literature in America* (1904); *The Temper of the Seventh Century in English Literature* (1904); *The France of Today* (1907); *The Privileged Classes* (1908); *The Mystery of Education* (1909).

WESLEYAN METHODIST CONNECTION IN AMERICA. An outgrowth of the Wesleyan Methodist denomination which was founded at Utica, N. Y., in 1843 and debarred from its membership all persons connected with slavery, with the manufacture or sale of intoxicants, or members of secret societies. Incomplete statistics for 1921 show there were 20,778 communicants, and 529 churches, with a property valuation of \$787,731. Sunday school statistics are for 1919 and show 521 schools with an enrollment of 30,193 pupils and 2174 officers and teachers. Foreign missionary work of the denomination is conducted in Sierra Leone and India; work in Japan was started in 1919 and considerable progress was reported during the past year. Home missions are maintained in Alabama and among the Blue Ridge Mountains. Colleges are maintained at Houghton, N. Y., Central, S. C., and Miltonvale, Kan. There is a Theological School of the denomination at Fairmount, Ind.

WESLEYAN REFORM UNION. See METHODISTS, WESLEYAN.

WESLEYAN UNIVERSITY. A non-sectarian institution for the higher education of men at Middletown, Conn.; founded in 1921. The enrollment in the fall of 1921 was 536 (the number being limited by the trustees and a gradual reduction effected). The faculty numbered 59, assistant professors in English and physics being added in the course of the year. The library contained 127,000 volumes. The productive funds were \$2,840,659, and the income was \$141,884. In December the campaign for a \$3,000,000 increase of endowment was nearly completed,

only \$250,000 remaining to be raised. President, William Arnold Shanklin, L.H.D., LL.D.

WEST POINT. See UNITED STATES, MILITARY ACADEMY.

WEST VIRGINIA. POPULATION. According to the report of the census of 1920, there were 1,463,701 residents in the State, Jan. 1, 1920, as compared with 1,221,119 in 1910.

AGRICULTURE. The following table is compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	592,000	20,128,000	\$15,096,000
	1920	600,000	20,400,000	23,664,000
Buckwheat.....	1921	31,000	682,000	559,000
	1920	32,000	624,000	874,000
Oats.....	1921	210,000	4,620,000	2,402,000

OFFICERS. Governor, E. F. Morgan; Secretary of State, Houston G. Young; State Treasurer, Wm. S. Johnson; State Auditor, John C. Bond; Attorney-General, E. T. England. See UNITED STATES.

WEST VIRGINIA, UNIVERSITY OF. An institution of the higher education at Morgantown, W. Va.; founded in 1867. The enrollment for the fall of 1921 was 1744, and for the summer session, 1050. The faculty numbered 154 and the library contained 71,000 volumes. President, Frank Butler Trotter, LL.D.

WESTERN AUSTRALIA. One of the states of the Commonwealth of Australia, extending from the Indian ocean to the Northern Territory and South Australia; the largest of the states, with an area of 975,920 square miles. The population was estimated, Dec. 30, 1920, at 336,058, as compared with 329,920, Sept. 30, 1919; the males numbered 179,393 and the females, 156,665. Capital, Perth, with a population (including suburbs) estimated, Dec. 31, 1919, at 142,000. Executive power is vested in a governor who acts through a responsible ministry; and legislative power, in a parliament of two houses. The legislative council of 30 members, elected for six years; and the legislative assembly of 50 members, elected for three years. Governor at the beginning of 1921, Sir F. A. N. Newdegate; Prime Minister, James Mitchell. See AUSTRALIA.

WESTERN RESERVE UNIVERSITY. A non-sectarian institution of the higher learning at Cleveland, Ohio; founded in 1825. The enrollment for the fall of 1921 was 2201, and for the summer session, given in connection with the Cleveland School of Education, 1373. The faculty numbered 298. The library contained 105,170 bound volumes. The productive funds amounted to \$4,119,798 and the income to \$178,235. During the year the College for Women started a new course in nursing by which young women were to be trained for the higher positions in the nursing profession. The course was offered in connection

with the various hospitals of Cleveland. The Household Administration Department of the College for Women was established in a building of its own. In June the gift of Mr. Samuel Mather, of Cleveland, of \$500,000 assured the removal of the Medical School of Western Reserve University to land adjoining the other college buildings at University circle. The group of medical buildings as planned, were to include Lakeside Hospital, the Maternity Hospital, and the Babies' Dispensary and Hospital. The president, Dr. Charles F. Thwing, after thirty-one years of service resigned, November 11, and the election of his successor was pending at the close of the year. Acting president at that time, Dr. James D. W. Williamson.

WETMORE, GEORGE PEABODY. Former governor of Rhode Island and United States Senator, died, September 11. He was born at London, Eng., August 2, 1846; graduated at Yale in 1867, and at the Columbia Law School in 1869. He was governor of Rhode Island from 1885 to 1886 and from 1886 to 1887, and United States Senator from 1895 to 1913. In politics he was a Republican.

WHEAT. In 1921 the world, with the exclusion of Russia, regained its normal status in the distribution and transportation of wheat, but production still remained below the prewar basis although some recovery over the preceding year and the 5-year period 1915-19 was made. The International Institute of Agriculture, Rome, published provisional estimates placing the yields of some of the more important wheat-producing countries as follows: Canada, 329,435,000 bu., France, including Alsace-Lorraine, 322,771,000 bu., British India, 250,469,000 bu., Italy, 192,839,000 bu., Spain, 143,205,000 bu., Germany, 97,866,000 bu., Roumania, 96,779,000 bu., and England and Wales, 69,784,000 bu. It was estimated that the yields of thirty reporting countries aggregated 2,754,905,000 bu., or 7 per cent above the production of the same countries in 1920.

Argentina in 1920-21 produced 169,757,000 bu., and the harvest of Australia in 1921-22 was estimated at 146,614,000 bu. The wheat crop of British India, which is harvested in April, was about one-third less in 1921 than in 1920, due to a severe drought accompanied by hot winds and also to a decrease in acreage by about 17 per cent. With Russia, which formerly produced about 800,000,000 bu. yearly, down to famine conditions and with British India a possible importer instead of exporter, the probability of over-production stands far removed, although European consumption will be under the prewar average for some time. Germany's imports for ten months of the past fiscal year were about 75 per cent of her prewar purchases. The Government of India prohibited the export of wheat flour until the end of March, 1922, and also took other protective regulations to tide over the period of a short wheat supply.

As estimated by the Department of Agriculture, the United States, in 1921, produced 794,893,000 bu. on 62,408,000 acres or at the rate of 12.7 bu. per acre, while in 1920, 833,027,000 bu. were produced on 61,143,000 acres, the average rate per acre being 13.6 bu. The average farm value on Dec. 1, 1921, was only 92.7 cts. per bu., as compared with 143.7 cts. the corresponding value

in 1920, and with 214.9 cts. in 1919. Based on these prices the total value of the 1921 crop was \$737,068,000, the 1920 crop \$1,197,263,000, and the 1919 crop \$2,080,686,000. The total value in 1921 was \$460,195,000 below the average value in 1920 and \$1,343,018,000 below that in 1919. These figures forcibly illustrate the crisis through which American agriculture is passing.

Of the area in wheat in 1921, 42,702,000 acres were winter wheat and 19,706,000 acres were spring wheat. The yield of winter wheat was 587,032,000 bu. and of spring wheat 207,861,000 bu. The average yield of winter wheat was 13.7 bu. and of spring wheat 10.5 bu. per acre. The area sown to winter wheat in the fall of 1921 according to a preliminary estimate was 44,293,000 acres, or 98.8 per cent of the acreage sown the preceding year. Kansas reported an area of 11,569,000 acres, followed by Nebraska with 3,954,000 acres, Oklahoma with 3,550,000 acres, and Missouri with 3,058,000 acres.

The wheat requirements of the United States at this time are placed at 635,000,000 bu., so that the production of 1921 left about 160,000,000 bu. as exportable surplus. During the first half of 1921 the United States exported 123,223,821 bu. of wheat and 8,074,884 bbl. of flour. Argentina during the same period exported 48,195,091 bu. as compared with 154,273,683 bu. during the corresponding period of 1920. Canadian exports for the six months ending February, 1921, amounted to 101,967,991 bu. and 3,558,518 bbl. of flour, of which the United States took nearly 40,000,000 bu. and over 900,000 bbl. of flour. A new development in Canadian exports in 1921 was the commercial shipment of a cargo of wheat from British Columbia to London by way of the Panama Canal, which reached its destination in excellent condition. Another feature was the unusually heavy movement of wheat over the Great Lakes and through the Welland Canal. By the middle of July 20,000,000 bu. of wheat had passed that way on their way to Europe. This was considered due to the high freight rates for rail shipments. Ocean rates on wheat from New York to Liverpool in November, 1921, were quoted at 16 cts. per 100 lbs. as compared with 31 cts. in November, 1920, and 8 cts. in November, 1913.

The United States Department of Agriculture estimated that the average loss due to Hessian fly in this country amounts to about 1,300,000 bu. and the loss due to the green bug to about 750,000 bu. Experiments conducted by the Department indicated that 1 per cent of sweet clover seed in the wheat may flavor the flour and the bread. The following publications relating to wheat culture were issued during the year: Dockage Under the Federal Wheat Grades,—Farmers' Bulletin 1118; Varieties of Winter Wheat Adapted to the Eastern United States,—Farmers' Bulletin 1168; The Green Bug or Spring Grain Aphis,—Farmers' Bulletin 1217; Wheat scab and its Control,—Farmers' Bulletin 1224; Take-all of Wheat and Its Control,—Farmers' Bulletin 1226.

WHEAT DISEASES. See BOTANY.

WHITE, ALFRED TREADWAY. Philanthropist, died at Brooklyn, N. Y., January 30. He was widely known for his work in promoting and directing tenement-house improvement. He was born at Brooklyn, N. Y., May 28, 1846, and graduated at the Brooklyn Polytechnic Institute in 1862. After 1866 he was a merchant in New

York. He began to study the homes of the working classes in 1872 and in 1876 he caused the building of the first successful group of improved tenement houses. This was followed by the erection of similar buildings and also by work for the relief of poor children in summer. He was prominent in various associations pertaining to charity and improving the condition of the poorer classes.

WHITE, EDWARD DOUGLASS. Chief Justice of the United States, died at Washington, D. C., May 19. He had been Chief Justice for eleven years preceding his death. He was born at Lafourche, La., Nov. 3, 1845, the son of a former governor of that State, and was educated at Catholic colleges in Maryland and Louisiana and at Georgetown University, Washington, D. C. During the Civil War he served in the Confederate army and at its close was admitted to the bar in Louisiana, where he practiced law from 1868 to 1874 when he was elected to the Louisiana legislature. After 1878 he was justice of the supreme court of Louisiana until 1891 when he was chosen United States Senator. From the Senate in 1894 he was appointed Associate Justice of the Supreme Court and was made Chief Justice, December 12, 1910. He was distinguished for his thorough training and wide knowledge of the law. His general attitude was conservative and based on profound reverence for the views of the founders of the republic.

WHITNEY, MARY WATSON. Former professor of astronomy at Vassar College, died at Waltham, Mass., January 20. She was born at Waltham, Mass., Sept. 11, 1847, graduated at Vassar in 1868 and studied at the University of Zürich. She was professor of astronomy and director of the observatory from 1889 to 1910, and after that emeritus professor and she wrote extensively for the astronomical periodicals.

WHITNEY, WILLIAM FISKE. See NECROLOGY.

WHITTLESEY, CHARLES W. American officer in the late war, known as the leader of the "Lost Battalion," disappeared from the steamship *Tolosa* bound for Havana, November 26 and believed to have been drowned. He was born in 1885, studied at Williams College and prepared himself for the practice of the law. During the war he was with the American troops in the Argonne and his battalion having lost its way and suffered heavy casualties, he was left the sole in command and displayed extraordinary courage and endurance in extricating the remnant of the forces from their danger. It was known as one of the most heroic actions of the American Expeditionary Forces. After the war he practiced law in New York City. The suffering that he had seen in France preyed on his mind and he was reticent on the subject of his experience. It was reported that his mental depression had been deepened by the ceremonies of the burial of the Unknown Soldier on Armistice Day. There were evidences that he had carefully planned suicide, letters being left by him indicating the exact condition in which he had left his office affairs and he had made his will. He engaged a stateroom on board the vessel above mentioned without informing any of his relatives or friends of his intention.

WHOOPIING COUGH. This contagious disease continues to be one of the great sources of mortality throughout the world by reason of the fatal

pneumonia which it sets up. The contagium is too volatile to prevent the diffusion of the disease and all the efforts of the profession are centred on the discovery of a cure or at least a remedy which will shorten the course, diminish the severity of the disease, and prevent complications. Passive immunization against catching the disease has proved impracticable and active immunization by means of a vaccine has been tested with discordant results. In addition to preventive vaccines curative preparations, both specific and nonspecific, have been extensively tested. In the Children's Clinic of the University of Naples an extensive test has recently been undertaken with a specific vaccine prepared from the Bordet-Gengou bacillus, the accepted cause of the disease. Of the 196 cases treated 133 recovered completely within a specified time, 41 were improved during the same period, and 14 only have remained stationary. A few children developed bronchopneumonia with no fatal terminations. Many children withdrew from treatment, which fact explains the large number marked "improved." The period during which vaccination was practiced varied from a few days to 30 days and the average duration of treatment seems to have been about 10 days. The author's table does not give the stage or day of the disease when treatment began, but states that the earlier the disease the more marked the benefit, although old cases as well as recent profit. It would not be wise to rely on vaccination alone, and the author among other resources mentions the effects of ether injections, which have been extensively tested in different countries. He tested it in 24 cases without seeing any evidence of curative properties. *La Pediatria*, Nov. 15, 1921.

WHYTE, ALEXANDER. Scotch minister and educator, died at Hampstead, London, January 6. He was Principal of New College, Edinburgh, from 1909 to 1918. He was born near Strathmore, Scotland, Jan. 13, 1837, the son of a shoemaker, and served in his boyhood as an apprentice shoemaker. Having studied in his spare hours, he fitted himself as a teacher in a village school. Through the financial aid of friends in the parish, he was enabled to enter the University of Aberdeen where he graduated. He then studied theology at New College and upon graduation rose rapidly in the ministry. In 1873 he became minister of the largest congregation in the Free Church, retaining that office for twenty-two years, and in 1898 he was made Moderator. While serving as the Principal of New College, 1909-18, he made many addresses on behalf of the British cause during the war. Among his writings are *The Four Documents; Bible Characters; The Spiritual Life; The Apostle Paul; Thirteen Appreciations*.

WILCOX, SIDNEY FREEMAN. Surgeon, died in 1921. He was born at Fort Atkinson, Wis., August 13, 1855; and was professor of clinical surgery at the New York Medical College and the Hospital for Women from 1895 to 1915. He was consulting surgeon also for various other hospitals in New York City and elsewhere.

WILLIAM AND MARY, COLLEGE OF. A co-educational State institution at Williamsburg, Va.; founded in 1693. The enrollment for the fall of 1921 was 620, and for the summer session, 583. The faculty numbered 36 of whom 6 were added during the year. The library

contained 20,000 volumes. The State appropriation was \$66,000. During the year a new dormitory for women was completed at a cost of \$200,000. President, J. A. C. Chandler, LL.D.

WILLIAMS, WILLIAM ELZA. See NECROLOGY.
WILLIAMS COLLEGE. A non-sectarian institution for the higher education of men at Williamstown, Mass.; founded in 1793. The enrollment for the fall of 1921 was 583, and the faculty numbered 53. The productive funds amounted to \$3,484,276 and the income to \$376,937. The library contained 94,885 bound volumes. A new library building, Stetson Hall, was approaching completion. An important session of the Institute of Politics was held there in the summer months, attended by leading representatives of the United States and foreign countries. (See *POLITICS, INSTITUTE OF*.) President, Harry Augustus Garfield, LL.D.

WILSON, SIR ARTHUR KNYVET. British admiral, died at Norfolk toward the end of May. He was born at Norfolk, March 4, 1842, entered the navy in 1855 and served during the Crimean War. He took part in the operations off the coast of China in 1857 and 1858. He served in Far Eastern waters again in the 60's and in 1881, having reached the rank of captain, was attached to the Mediterranean fleet. He participated in the bombardment of Alexandria. In 1884 he won the Victoria Cross for gallantry at El Teb. In 1895 he was promoted to the rank of admiral, commanded the first torpedo manœuver in which destroyers were largely employed. He was appointed Third Sea Lord on the Board of Admiralty in 1897. Besides ability as an administrator, he showed a high degree of mechanical skill, inventing improvements in ordnance, etc. After 1901 he was employed in the highest commands and finally was made commander-in-chief of the home fleet. He was highly regarded as a tactician and as a strategist. In 1907 when he had reached the age of retirement, a special Order in Council gave him the rank of admiral of the fleet which carried with it five more years of service on the active list. He succeeded Lord Fisher as First Sea Lord of the Admiralty. The reforms demanded by Lord Beresford were not carried out during Admiral Wilson's tenure of office, but in 1911 the government planned to put these reforms into effect and Mr. Churchill was appointed First Lord for that purpose. Thereupon Sir Arthur Wilson retired from office.

WINDWARD ISLANDS. The group of West Indian islands consisting of Grenada, St. Vincent, and St. Lucia together with Grenadines (which are one-half under St. Vincent and one-half under Grenada), forming the eastern limit of the Caribbean sea, belonging to Great Britain. Governor and commander-in-chief at the beginning of 1921, Sir G. B. Hoddon-Smith.

WIRELESS TELEGRAPHY. See RADIO-TELEGRAPHY AND TELEPHONY.

WISCONSIN. POPULATION. According to the report of the census of 1920, there were 2,632,067 residents in the State, Jan. 1, 1920, as compared with 2,333,860 in 1910.

AGRICULTURE. The following table was compiled from the estimates of the United States Department of Agriculture for the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn.....	1921	2,110,000	97,482,000	\$44,842,000
	1920	2,067,000	89,294,000	68,758,000
Oats.....	1921	2,632,000	63,958,000	21,106,000
	1920	2,408,000	107,878,000	52,880,000
Barley.....	1921	473,000	10,642,000	5,427,000
	1920	502,000	15,913,000	13,367,000
Wheat.....	1921	214,000	2,812,000	2,727,000
	1920	341,000	5,152,000	7,934,000
Clover seed.....	1921	124,000	211,000	2,089,000
	1920	172,000	327,000	3,760,000
Rye.....	1921	328,000	4,756,000	3,377,000
	1920	385,000	6,160,000	8,008,000
Tobacco.....	1921	48,000	61,488,000	7,686,000
	1920	50,000	62,400,000	16,162,000
Hay.....	1921	3,428,000	4,573,000	67,627,000
	1920	3,422,000	5,667,000	111,531,000
Potatoes.....	1921	315,000	21,420,000	20,349,000
	1920	308,000	33,264,000	28,607,000
Sor. syrup.....	1921	2,000	140,000	196,000
	1920	6,000	450,000	810,000

1 Pounds.

1 Tons.

1 Gallons.

DRAINAGE. The accompanying table gives a summary of the drainage conditions of the State at the census of 1920:

	Amount	Per cen of total
DRAINAGE ON FARMS		
Number of all farms in the state.....	189,295	100.0
Farms reporting land having drainage.....	21,838	11.5
Farms reporting land needing drainage.....	52,228	27.6
All land in farms.....	acres.. 22,148,223	100.0
Improved land in farms.....	acres.. 12,452,216	56.2
Farm land reported as provided with drainage.....	acres.. 658,411	3.0
Farm land reported as needing drainage.....	acres.. 1,839,273	8.3
DRAINAGE ENTERPRISES		
Approximate land area of the state.....	acres.. 35,363,840	100.0
All land in operating drainage enterprises.....	acres.. 794,569	2.2
Improved land.....	acres.. 254,504	0.7
Timber and cut-over land.....	acres.. 177,744	0.5
Other unimproved land.....	acres.. 362,321	1.0
Capital invested in and required for completion of operating enterprises.....	\$4,564,625	100.0
Capital invested in these enterprises to Dec. 31, 1919.....	4,163,055	91.2
Additional capital required to complete these enterprises.....	401,570	8.8

MANUFACTURES. A preliminary statement of the general results of the 1920 census of manufactures, covering the year 1919, for the State of Wisconsin was issued by the Bureau of the Census. The census of manufactures, 1919, like that of 1914, excluded the hand trades, the building trades, and the neighborhood industries, and took account only of establishments conducted under the so-called factory system. The table at bottom of page summarizes the census of manufactures in 1919 with corresponding figures for 1914.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Modifications increasing stringency of child

labor laws; provision for a juvenile department for care of dependent, defective, and delinquent children; requiring "citizenship" to be taught in public schools; increasing the duration of compulsory part-time education; provision for equal guardianship of minor children; increasing the rate of the inheritance tax; provision for the submission of a constitutional amendment providing for five-sixths jury verdicts in civil cases; establishment of free county libraries; provision for State retirement system for teachers in public and normal schools and universities; authorizing cities of the second and third class to provide for police women; according women the same rights and privileges as men in respect to suffrage; freedom of contract; jury service, holding office, and the care and custody of children.

OFFICERS. Governor, John J. Blaine; Lieutenant-Governor, Geo. H. Comings; Secretary of State and State Auditor, Elmer S. Hall; State Treasurer, Henry Johnson; Attorney-General, Wm. J. Morgan.

WISCONSIN, UNIVERSITY OF. A co-education State institution of the higher education at Madison, Wis.; founded in 1848. The enrollment for the fall of 1921 was 7344, the most numerous attended courses being: Letters and Science, 4942; Engineering, 1249; and agriculture, 835. The enrollment for the summer school was 4558 of whom 3505 were in Letters and Science. The faculty numbered 1005 as compared with 927 in the fall of 1920. The library contained 335,500 volumes. The income for the year was \$4,682,115. Work on the new medical school was begun, the sum of \$10,000,000 having been appropriated for this purpose. President, Edward A. Biagg, Ph.D., Sc.D.

	Census—		Per cent of increase, 1914-19
	1919	1914	
Number of establishments.....	10,394	9,104	14.2
Persons engaged in manufactures.....	319,331	230,273	38.7
Proprietors and firm members.....	7,951	7,425	7.1
Salaried employees.....	46,160	28,538	61.7
Wage earners (average number).....	265,220	194,310	36.5
Primary horsepower.....	880,904	682,339	29.1
Capital.....	\$1,372,723,000	\$754,287,000	82.0
Services.....	378,220,000	149,762,000	152.5
Salaries.....	87,849,000	37,569,000	133.8
Wages.....	290,371,000	112,193,000	158.8
Materials.....	1,130,752,000	417,415,000	170.9
Value of products.....	1,883,608,000	695,172,000	171.0
Value added by manufacture (value of products less cost of materials).....	752,856,000	277,757,000	171.0

WOLLISTON, Sir HARRY. Australian official, died at Melbourne, Australia, in February. He was the first Comptroller-General of the department of Trade and Customs of the Commonwealth. He was born in Western Australia Jan. 17, 1846, and was in the civil service of Victoria from 1863 to the time of federation. His career was identified with the establishment of the customs machinery of the Commonwealth and with the administration of the tariff acts. In 1907 he was the Australian representative at the Imperial Shipping Conference in London.

WOMAN'S CHRISTIAN TEMPERANCE UNION. The annual convention of the National Woman's Christian Temperance Union was held at San Francisco, Calif., August 18-23. In 1919 the Union commissioned its president, Miss Anna A. Gordon and Miss Julia F. Deane, the editor of the *Union Signal*, which is the official organ of the society, to make a world-wide trip and survey of W. C. T. U. activities in European and South American lands. The result of this investigation was reported to the 1921 convention. In 1919 the organization entered upon a Jubilee Campaign for \$1,000,000 and 1,000,000 members. There were 34,116 new members reported in 1921. The lines of endeavor of the Union are of six kinds: Organization, preventive, educational, evangelistic, social, and legal. The work is carried on through numerous branches. The Young People's Branch aims to train and establish young people in total abstinence and prohibition. It maintains a staff of field secretaries and in 1921 requested the national organization to establish a scholarship in the Danforth Memorial Hospital at Kiukiang, China. Considerable progress was reported by the Loyal Temperance Legion; 500 legions were organized during the year and an intensive campaign was carried on against tobacco. The department of Americanization conducts a six weeks' course of study during April and May in the Training School at Chicago. In addition the department has a corps of superintendents and workers in the field. Splendid work was conducted in mining camps and much literature distributed among the various foreign-born settlements of the country. Aggressive work along the lines of the use of drugs and tobacco was reported by the Anti-Narcotics department for 1921. The programme of the department of Child Welfare was carried out successfully and its scope greatly broadened. It gave its indorsement to the support of the Sheppard-Towner Bill pending in Congress and providing for federal aid in the care of maternity and infancy by the States. The various unions reported 1524 as working the evangelistic department; many meetings were held, Bible classes organized, and literature distributed. Reports of the department of Prison Reform showed a constantly increasing interest in the work: more than 3600 men and families were aided, many evangelistic services held and total abstinence pledges taken. The Publicity department of the Union publishes each month a *Bulletin* of W. C. T. U. news and items of general interest. The department of Social Morality reported having reached 40,000 persons through lecturers, films, and exhibits. The department of Women in Industry was organized in 1920. Its work is centred among employed women where meetings are carried on with the aid of maps, posters, and motion pictures. Officers

for 1921-22 are: Miss Anna A. Gordon, president; Mrs. Ella A. Boole, vice-president-at-large; Mrs. Francis P. Parks, corresponding secretary; Mrs. Elizabeth Preston Anderson, recording secretary; Mrs. Sara H. Hoge, assistant recording secretary, and Mrs. Margaret C. Munns, treasurer. Headquarters are maintained at Evanston, Ill.

WOMAN'S RELIEF CORPS. Local societies of this organization were established in 1872, which had for its purpose war relief work among members of the Grand Army of the Republic and their families. The national organization was founded in 1883 and had for its object, "to assist the G. A. R. in caring for their comrades and dependent ones; to perpetuate the memory of their heroic dead; to cherish and emulate the deeds of the army nurses and all loyal women who rendered service to our country in her hour of peril; to maintain true allegiance to the United States of America; to inculcate lessons of patriotism; and to encourage the spread of universal liberty and equal rights to all." It distributes patriotic literature and presents many flags to communities and organizations throughout the country.

A national convention is held each year. In 1920 the convention was held in Indianapolis, when the membership was reported to be 194,211. The organization conducts the ceremony at naturalization proceeding of pinning on the lapel of the coat of the new citizens small American flags and presenting them with larger flags for the home. Officers in 1921 were: Inez J. Bender, president; Flo J. Miller, secretary; Estella E. Plopper, treasurer. Headquarters are maintained at 218 Citizen's Bank Bldg., Decatur, Ill.

WOMEN IN INDUSTRY. Owing to the cessation of war manufacture and depressed business conditions which obtained during the year the number of women engaged in the industries of the United States was no longer over 11,000,000 as it was in 1919, but more nearly resembled the 1910 figures of 8,000,000. Nevertheless women in industry were holding a position of recognized importance; the Women's Bureau of the Department of Labor which was created as a war service was made permanent on June 5, 1920. The Bureau described its duties as follows: "The Women's Bureau is charged with the responsibility of developing policies and standards and conducting investigations in the industries of the country which shall safeguard the interests of women workers and thus make their service effective for the national good. It represents and advises the Secretary of Labor in all matters concerning women in industry and is charged with maintaining close contact with other agencies which deal with special phases of the problem, including other divisions of the Department of Labor. It works with and through State departments of labor." It explains the greater necessity for control of the standards of women by the fact that women have been in a weaker position economically than have men.

In a bulletin published by the Bureau in 1920 (*The New Position of Women in American Industry*) appear facts which should answer the question: "Has the war permanently enlarged the orbit of woman's industrial power in the United States?" Before the war there were five principal industries employing women—textile, personal apparel, food products, tobacco-manufacture, and hand and foot wear—during the war

women were employed in other crafts from which they had practically been debarred up to that time; they were particularly successful in the rubber, electrical, leather, and metal-working trades, and in the opinion of the Bureau: "The success attending the emergency employment of women in occupations requiring a high degree of skill and the expansion of commercial trade has resulted in the retention of women in most of these crafts and industries since the close of the war, and bids fair to encourage a larger use of woman labor in the future."

It is interesting to note that in general it was found that where the work was very rough or dirty, women did not succeed so well. Lumbering, for instance, and saw mill work and crane operating were cited as kinds of work for which women usually were unfitted. In regard to this last mentioned occupation, it was a curious fact that while women ordinarily disliked the conditions of the work, when one was found who did not share this objection, she was apt to prove singularly successful. "When an efficient woman was secured who could do the work and liked it, she seems to have made an exceptionally fine crane operator. She is reported to be a better judge of distance, to be quicker, to be more careful of the lives of the workers beneath her, and to meet with fewer accidents. At the Watertown arsenal the men in the forge shop requested that the women crane operators be retained. Two of the seven firms covered which reported on their 1919 labor force retained their crane women. As a whole, however, this did not prove to be an occupation especially well adapted to women."

In the matter of protective legislation for women there seem to be two opinions: the one desiring to surround women with all possible legislative protection; the other holding that good working conditions should be secured for all workers, but that women should not be handicapped by restrictions not imposed on men unless, as in the case of exposure to lead poisoning, it can be shown that such restrictions are necessary in the interest of their special function in the race. At the present time it would seem that the latter opinion was held in greater favor. For California in 1921 enacted a law which placed the maximum weight which female employees may be permitted to lift without mechanical aid at 74 pounds, while similar laws, previously passed, establish the following limits: Ohio and Pennsylvania, 15 pounds; New York, 25 pounds; and Massachusetts, 40 pounds. New York authorized the recodification committee to investigate the advisability of empowering the industrial board to fix the hours of women and minors within statutory limitations; it no longer prohibits women proof readers from doing night work; and permits women to operate wet grinding wheels under conditions specified by the industrial board. Massachusetts, New Jersey, and New Mexico passed laws during the year concerning the hours of labor. Massachusetts extended the law limiting women's hours to nine a day and forty-eight a week, to laundries, hotels, manicuring, and hair dressing establishments, motion picture theatres, elevator operators, and switch-board operators in private exchanges.

New Jersey reduced the maximum number of weekly working hours for women to manufacturing or mercantile establishments, bakeries, laundries,

or restaurants from sixty to fifty-four. Under certain conditions hotels and canneries of perishable products are exempt, but mercantile establishments are no longer exempt for one week before Christmas. New Mexico regulated women's hours for the first time. It establishes an eight-hour day for women in mechanical establishments, factories, laundries, hotels, restaurants, eating houses, and places of amusement; but excepts clerical workers, women in canneries, mercantile establishments, drug stores, and those engaged in transportation or public utility business. For a summary of recent studies on the extent of the eight-hour day as well as a summary of industrial opportunities and training for women and girls, see the 1920 YEAR BOOK.

FOREIGN. Argentina. The recently organized Social Federation of Women (*Confederación Social Feminina*) in Argentina has for one of its chief objects the establishment of trade schools for women and girls in order to teach the elements of the manual trades, thus making more women economically independent and enlarging the sphere of their activities. Thus far it has organized two such schools, one of which has an attendance of 40 girls, who are learning to make men's and women's clothing, baskets, etc.

Germany. A report of the German Ministry of Labor indicates that Germany has to deal with the same problems of women's labor as do other countries. An attempt is being made to train women for peace work. The Germans instituted in 1919 courses for general housework, children's nurses, dressmakers, waitresses, typists, and secretaries. All women up to 35 years of age who are in receipt of the unemployment allowance must attend one of these courses, otherwise the allowance is forfeited. There is a special woman's division in the ministry of labor which is responsible for these matters, the aim being to fit women to earn their living independently and not to allow them to subside into a condition of "being spoon-fed at the expense of the community."

A survey of the demand for woman labor in 1920 brings out three characteristic facts. First, although the demand varies greatly in the individual occupational groups, there is a uniform undersupply of skilled and semiskilled workers, which cannot be lessened by training unskilled workers in short-term courses during periods of unemployment, but only through systematic vocational training of the female youth. A second characteristic is the lack of sufficient workers in all occupations which require that the worker live in the household of the employer. This aversion will cease if both contracting parties coöperate and if the new domestic service law be so formulated that its provisions combine domestic discipline with a certain degree of personal liberty. The third problem is the great number of women forced to earn their living who have dependents of whom they must take care. This problem can be solved only individually through the social energy and circumspection of the employment office.

Great Britain. In May it was reported that the Central Committee on Women's Training and Employment, a standing committee appointed by the Minister of Labor, would soon put into operation a scheme for giving intensive training in the domestic arts to unemployed

women between the ages of 18 and 35. Recent legislation restricts the employment of women and young persons in plants in which lead and zinc and other poisonous materials are produced or manipulated, and institutes the two-shift, 8-hour system for women. This second provision was strongly opposed because it extended the hours during which women might be employed from 8 p. m. to 10 p. m. When this bill first came before the House of Commons in May, 1920, the workers conducted so strong a fight against the extension of the hours that the clause permitting it was dropped. The Government thereupon postponed action upon the bill until a departmental committee appointed to inquire into the proposed change could make its investigation and report. In November this committee presented its report, which was favorable to the change in hours, and the passage of the bill followed.

WOMEN'S CLUBS, GENERAL FEDERATION OF. There has been no appreciable change in the membership numbers of this organization since 1920 when there were approximately 2,600,000 members. The Federation has clubs in every city, town, and most of the villages, composed of "thinking, serious-minded women meeting together regularly with a definite programme which undertakes to reach the full community problem." It has fourteen national organizations affiliated with it and seventeen clubs in foreign countries. The advent of woman suffrage has made the clubs feel a greater responsibility and interest in their work.

The Federation holds a Biennial Convention; it was held in Des Moines, Iowa, in 1920 and will be held at Chautauqua, N. Y., June 21-30, 1922, the Institution there being given over to the General Federation ten days before opening for the season. A meeting of the Council of the Federation was held in Salt Lake City, June 13-18, 1921. Important events of the year were the establishment of a new committee on International Relations, with Mrs. Charles Evans Hughes as Honorary Chairman, and Mrs. Horace Mann Towner, Acting Chairman; and the appointment by Pres. Harding of the President of the General Federation, Mrs. Thomas G. Winter, as one of the four women on the Advisory Committee at the Washington Conference for the Limitation of Armament. A course of study is being prepared by the International Relations Committee on the subjects growing out of the conference, and its endeavor will be to bring women of the world together in "friendly relations" and in consultation on problems looking toward universal peace. A committee on Friendly Relation with the ex-Soldier, of which Mrs. George W. Plummer is chairman, was reported to have done excellent work during 1921. The Federation has purchased in Washington the home of Gen. Nelson A. Miles, 1734 N. Street, for permanent headquarters. After April 1, 1922, it is to become the executive, social, distributing and legislative headquarters. No assessment is made on either state federations or clubs, they being asked to contribute voluntarily. A campaign for funds was under way late in 1921.

The officers for 1920-22 are: President, Mrs. Thomas G. Winter, Minneapolis; first vice-president, Mrs. W. S. Jennings, Jacksonville, Fla.; second vice-president, Mrs. J. R. Scher-

merhorn, East Orange, N. J.; recording secretary, Mrs. Adam Weiss, Del Norte, Colo.; corresponding secretary, Mrs. George W. Plummer, Chicago; treasurer, Mrs. Benjamin B. Clark, Red Oak, Iowa; auditor, Mrs. H. A. Guild, Phoenix, Ariz. The official organ of the Federation is *The General Federation Magazine*. Headquarters are maintained in the Maryland Bldg., Washington, D. C. Miss Ida Hafford is director.

WOODHULL, MAXWELL VAN ZANT. Author, soldier, and diplomat, died, at Watkins, N. Y., July 28. He was born at Washington, D. C., Sept. 17, 1843, and studied at Miami University and at the Law School of Columbia University, Washington; he served in the Civil War, rising through the successive grades to the rank of lieutenant-colonel in 1864. He was breveted brigadier-general of volunteers, March 18, 1865, for faithful service. He was in the army of Virginia and Tennessee and on the march to the sea and was adjutant-general of the Fifteen Army Corps during the South Carolina campaign. After the war he held an office in the Department of State and later became the director of various industrial companies. He wrote *The Campaigns of Sherman Fifty Years Ago* (1914); *West Point in our Next War* (1915).

WORCESTER MUSIC FESTIVAL. See Music, Festivals.

WORCESTER POLYTECHNIC INSTITUTE. A non-sectarian institution for the higher technical education of men at Worcester, Mass.; founded in 1865. The enrollment for the fall of 1921 was 498 of whom 124 were in electrical engineering, 104 in mechanical engineering, 47 in civil engineering, and 46 in chemistry. The faculty numbered 60, and the library contained 18,200 volumes. President, Ira Nelson Hollis.

WORKMEN'S COMPENSATION. The year 1921 marked ten years of workmen's compensation in the United States, for on July 4, 1911, the first operative compensation law became effective, in the State of New Jersey. From that date till successive States adopted this policy, Dec. 1, 1921, forty-three States had compensation laws on their statute books, the States of North Carolina, South Carolina, Florida, Arkansas, and Mississippi being the exceptions. From the very beginning revisions and amendments were made in these various laws; owing to the fact that while all these laws were alike in principle there was considerable difference in details. An interesting review that appeared in the *Insurance Annual of the Journal of Commerce* (New York) contains the following: "They differ as regards the maximum and minimum compensation benefits to be paid. They differ as regards waiting period during which no compensation payments are made; they differ as to the occupations covered; they differ as respects the period over which medical aid shall be given and as to the cost of such medical aid. Some laws apply only to accidents suffered in the State in which the laws are effective, while others provide for the payment of the compensation irrespective of where the injury may have been sustained. Some provide for occupational diseases contracted during the course of employment, others do not.

"There are countless other points of differences, but through it all there runs the thought that the workingman should be compensated for at least part of the economic loss resulting from industrial accident."

The field of workmen's compensation naturally has extended and grown and the compensation business as reported by insurance companies jumped from \$14,268,876 in 1913 to \$141,552,665 for 1920, while all casualty insurance business showed written premiums of \$122,430,768 for 1913 as against \$445,336,789 for 1920. In other words, in 1913 compensation insurance increased eight-fold, while all premiums for all casualty insurance lines, including compensation, increased three and one-half times.

The following summary of the laws of 1921 is condensed from that appearing in the *American Labor Legislation Review* for December.

FEDERAL LEGISLATION. Additional hospital and dispensary facilities for treatment of war cases were authorized, an appropriation of \$18,600,000 was made for this purpose. In effect, March 4. The only new workmen's compensation act of the year was that of Missouri, which was passed to replace the one repealed by referendum. It is compulsory as to the State and its subdivisions and elective as to private employments. This act has been suspended from operation by referendum petition, and will not be voted upon until Nov. 7, 1922. Acts supplementary to existing laws were passed by 30 States and Porto Rico. The more important changes are as follows:

Colorado. Public institutions, boards, etc., are not subject to the workmen's compensation act unless they employ four or more persons. Penalties are revised. In effect, April 4.

Connecticut. Law extended to cover all salaried officers or paid members of municipal police and fire departments. Maximum payment in cases of total disability raised. In effect, July 1.

Delaware. The schedule of specific injuries is extended. Surgical, medical, and hospital care is to be furnished for one month instead of two weeks. In effect, April 1.

Idaho. Caretaking and handling of live stock on inclosed lands and public ranges are included under "agricultural pursuits" and consequently employees so engaged are not covered by the workmen's compensation act. Total disability benefits raised 5 per cent of wages. Payments for specific injuries are made additional to other compensation payments. Deafness is added to the schedule. The definition of "workman or employee" no longer excludes persons earning \$2400 a year. In effect, May 4.

Illinois. Law revised. Maximum death benefit increased. Employees engaged in work in which sugar of lead, white lead, lead chromate, lethane, red lead, arsenate of lead, or paris green is used or made, or in the manufacture of brass or the smelting of lead or zinc, who are disabled by occupational diseases resulting from such work, come within the provisions of the workman's compensation act. In effect, July 1.

Michigan. Municipal employees entitled to accident benefits under special funds as well as under the compensation act may not benefit under both. Resident employees injured outside the State may benefit under this act if their contracts of hire were made in the State. In effect, August 17.

Minnesota. Employers of farm labor may elect to come under the workmen's compensation act, but employees may elect not to accept its provisions. Twenty-three occupational diseases have been included under the compensation act. The maximum for total disability is increased from \$15 to \$18. Compensation for serious disfigurement is provided. The list of injuries constituting total disability is extended. In effect, June 1.

Montana. The allowance for medical and hospital services and medicines is doubled. Compensation of 120 weeks is to be paid for total loss of hearing in both ears. In effect, July 1.

Nebraska. Employees working in employments not conducted for gain or profit are no longer excluded from the compensation act. Maximum disability benefit is raised. The specific injury schedule is revised. In effect, July 28.

Nevada. Volunteer firemen belonging to a recognized fire department are to be entitled to compensation on the basis of a \$150 monthly wage. In effect, March 22.

New Jersey. Non-resident alien dependents are no longer deprived of death benefits under the compensation act. In effect, July 1.

New Mexico. Medical benefits are raised from \$50 to \$150. In effect, June 10.

New York. All powers and duties under the workmen's compensation law are conferred upon the industrial board. In effect, March 9. The recodification committee is authorized further to revise the workmen's compensation law. In effect, April 16.

North Dakota. Executive officers who receive salaries of more than \$2400 a year are not considered employees. In effect, July 1.

Ohio. The workmen's compensation law is extended to cover 15 occupational diseases. In effect, August 4.

Oregon. Railroad companies may elect to be subject to workmen's compensation for all hazardous work carried on by them except actual operation of railroads. The benefit scale for temporary total disability is revised. Minors employed at an unlawful age are subject to this act. In effect as to benefits, July 1, as to remainder, May 25.

South Dakota. Death benefits are not payable to dependents who were non-resident aliens at the time of the death of the deceased. Maximum weekly benefit is raised from \$12 to \$15. The right to operate under some substitute insurance plan is extended to cover operators of threshing machines. In effect, June 2.

Texas. Act amended to exclude specifically ranch laborers, who were included by court decision. In effect, March 12.

Utah. If an accident is due to willful failure of the employer to comply with safety laws and orders, 15 per cent is added to the usual compensation except in case of death benefits. Similarly, except in case of death benefits, compensation is reduced 15 per cent if the accident was due to failure of employee to use safety devices provided or to obey safety rules and orders, or to his intoxication. Only half benefits shall be paid to non-resident alien dependents. In effect, July 1.

Washington. General warehouse and storage, transfer, drayage, hauling, fruit warehouse, and packing house work are included under the workmen's compensation act. Only one-half death benefits are payable to non-resident alien

dependents, and if the compensation law of the native country of such dependents discriminates to a greater extent against citizens of the United States then no compensation is payable. In effect June 8.

Wisconsin. Employers may include under the compensation act domestic and other employees not covered. In effect, July 2.

Wyoming. The workmen's compensation law is extended to city and town firemen and policemen. It is no longer inoperative until an employee has worked one month for a given employer. All actual dependents are now eligible for benefits. The benefits are revised and increased. County attorneys are directed to give necessary legal advice to injured workmen or their dependents who seek aid in making compensation claims. The State treasurer is directed to print instructions to assist workmen in making claims. In effect, April 1.

Porto Rico. The compensation act is extended to cover municipal firemen and the exemption for employers of less than three laborers is canceled. Occupational disease is included under the act. The benefits are revised. In effect as to section 4, July 14, as to remainder of act, October 12.

WORLD'S CROPS. See AGRICULTURE.

WOTHERSPOON, WILLIAM WALLACE, United States army officer, died at Washington, D. C., October 21. From 1907 to 1909 he was president of the Army War College and in April, 1914, he succeeded General Leonard Wood as Chief of Staff. He was born at Washington, D. C., Nov. 16, 1850, and entered the army from civil life in 1873, serving many years in Indian fighting. He went to the Philippines in 1899 with the Twelfth Infantry and passed three and one-half years there. On his return to the United States he was engaged on staff duty and was made brigadier-general under President Roosevelt. During the administration of Governor Whitman of New York, he was Commissioner of Public Works, having been chosen especially for supervision of the State's canal system.

WOUNDS, TREATMENT OF. Professor Albrecht of Vienna, recently summed up the present status of wound treatment as founded on recent military experience (*Medical Record*, Jan. 7, 1922). Mere cleanliness or simple asepsis was found to be quite inadequate to control wounds already badly infected and this resource has therefore lost ground in comparison with antiseptics. While, as heretofore, it was found that treatment could not sterilize tissues already contaminated—save when it is permissible to cut them away—it also became apparent that the class of remedies called antiseptic may produce the desired results indirectly by stimulating the defensive forces of the tissues. By which is meant that the so-called phagocytosis and lymphorrhea provoked by these substances are equal to the task of purifying the tissues by a gradual process. The more superficially placed bacteria are antagonized by proper drainage and irrigation, along with the use of ultraviolet light. Tincture of iodine is now the standard drug used for this purpose. Gause dressings exert a suction on the wound, which gives the same general result as irrigation; and more surgeons use moist than dry dressings. Hot air, and dry heat in general, while exerting a salutary influence on inflammation tend to dry and cool the wound surface and hence should be carefully watched and these effects antagonized.

Sunlight is of value for its ultraviolet rays. Of chemical substances all of the remedies in active use belong under iodine and its compounds, chlorine and compounds, quinine derivatives, and aniline derivatives. Wounds are called recent when inflicted within 6 or 8 hours. When older they are spoken of (in military practice) as infected and when they have failed to unite, are called granulating wounds. The latter alone benefit by ointment dressings. The modern treatment of wounds as based on combined civil and military experience may be summed up neither as asepsis or ordinary antiseptics but as autoantiseptics—that is, the tissues are stimulated to make their own defense against bacteria.

WRECKS. See SAFETY AT SEA.

WRESTLING. Stanislaus Zbyszko of Poland won the world's wrestling championship in 1921 through his defeat of Ed "Strangler" Lewis in a match held in New York City. The victory of the Pole came as a big surprise as he is 46 years old, several years older than the rival he overthrew.

The annual tournament of the Amateur Athletic Union was held at Los Angeles, Calif., in April, the winners of the final bouts being: 108 pounds, Carl Benson, Swedish-American A. C., New York; 115 pounds, Joseph Troyer, Redlands University; 125 pounds, Robin Reed, Multnomah A. C., Portland, Ore.; 135 pounds, J. J. Humerich, Los Angeles A. C.; 145 pounds, R. J. Vis, Los Angeles A. C.; 158 pounds, Charles Johnson, Swedish Gymnasium, Boston; 175 pounds and heavyweight, Fred Meyer, Chicago Hebrew Institute.

Penn State College won the intercollegiate championships held at Princeton, N. J., in March with a total of 24 points. Cornell was second with 13 and Princeton third with 10. The individual winners were: 115 pounds, Watson, Penn State; 125 pounds, Garber, Penn State; 135 pounds, Hart, Columbia; 145 pounds, Morrison, Princeton; 158 pounds, McBride, Cornell; 175 pounds, Spangler, Penn State; unlimited class, Carpenter, Princeton.

WRIGHT, GEORGE FREDERICK. Educator, died, April 20. He was born at Whitehall, N. Y., Jan. 22, 1838; graduated at Oberlin College in 1859 and at Oberlin Theological Seminary in 1862. He served five months in the Civil War in 1861, and was pastor of churches in Vermont and Massachusetts until 1881 when he became a professor in the faculty of the Oberlin Theological Seminary. From 1892 to 1907 he was professor of the harmony of science and religion. He was also an expert in geology, and from 1884 to 1892 was assistant geologist on the United States Geological Survey. He wrote a variety of works on Christian evidence and the authority of the Bible, including: *Scientific Aspects of Christian Evidence* (1898); *Scientific Confirmation of Old Testament History* (1906); and several geological works, including: *Man and the Glacial Period* (1892); *Origin and Antiquity of Man* (1912); also, *History of My Life and Work* (1916). He was editor of *Bibliotheca Sacra* after 1884.

WRIGHTSON, Sir THOMAS. British industrial magnate and physicist, died, June 18. His name as a physicist is due to his theory of hearing propounded in a book entitled *The Analytical Mechanism of the Internal Ear*. He was born at Darlington, England, March 31, 1839, and educated at Kings College, London. After serving as a civil engineer he joined the firm afterwards known as Head, Wrightson and Company, which

was one of the largest iron-manufacturing establishments in the country. He was also a director in other industrial enterprises. He became the Conservative candidate for his borough and after a persistent struggle succeeded in winning the election in 1892 when he was returned to Parliament as a Unionist. He lost his seat in 1895 but was again in Parliament from 1899 to 1907. His work on hearing above mentioned was published in 1918 and grew out of a presidential address before a body of engineers delivered forty-two years before. His theory was accepted by a number of specialists and in 1921 was under consideration by many experts.

Crop	Year	Acreage	Prod., bu.	Value
Oats	1921	150,000	4,500,000	1,710,000
	1920	115,000	4,370,000	2,709,000
Wheat	1921	199,000	3,424,000	2,705,000
	1920	198,000	3,920,000	5,292,000
Hay	1921	928,000	1,423,000	10,478,000
	1920	942,000	1,624,000	20,086,000
Potatoes	1921	19,000	2,052,000	2,421,000
	1920	15,000	1,875,000	2,250,000

IRRIGATION. The accompanying table issued by the United States Bureau of the Census summarizes irrigation conditions at the census of 1920 with corresponding figures for 1910:

	1920	1910
Number of all farms	15,748	10,987
Approximate land area of the state	acres.. 62,430,720	62,460,160
All land in farms	acres.. 11,809,351	8,543,010
Improved land in farms	acres.. 2,102,005	1,256,160
Number of farms irrigated	6,449	6,297
Area irrigated	acres.. 1,207,982	1,133,302
Area enterprises were capable of irrigating	acres.. 1,831,039	1,639,510
Area included in enterprises	acres.. 2,564,668	2,224,298
Per cent irrigated:		
Number of all farms	41.0	57.3
Approximate land area of state	1.9	1.8
Land in farms	acres.. 10.2	13.3
Improved land in farms	acres.. 57.5	90.2
Excess of area enterprises were capable of irrigating over area irrigated	acres.. 623,057	506,208
Excess of area included in enterprises over area irrigated	acres.. 1,356,686	1,090,996
Area of irrigated land reported as available for settlement	acres.. 197,326	
Capital invested	\$34,326,328	\$17,700,980
Average per acre enterprises were capable of irrigating	18.75	10.80
Estimated final cost of existing enterprises	51,500,288	20,425,890
Average per acre included in enterprises	20.08	9.18
Average cost of operation and maintenance per acre	1.04	0.86

WURLITZER SYMPHONY ORCHESTRA.

See MUSIC, *Orchestras*.

WURTEMBERG. One of the constituent states of the former German empire; proclaimed a republic in November, 1918; and forming part of the new German state; situated between Bavaria on the east and Baden on the west. Area, 7534 square miles; population (1910) 2,437,574; (1920), 2,526,171. Largest city, Stuttgart, with a population in 1919 of 309,197. The interests are chiefly agricultural, and 64 per cent of the area is under cultivation. The yield in metric tons of the principal crops in 1920 was as follows: Oats, 129,755; wheat, 96,577; barley, 113,440; spelt, 83,093; rye, 33,874; potatoes, 753,170. The wine production in 1902 was 3,476,318 gallons, and the beer production, 29,148,746 gallons. The Diet at the last election preceding 1921 was distributed among the political groups as follows: German National Party, 28; Centre, 23; Social Democrats, 17; German Democratic Party, 15; Independent Socialists, 8; Communists, 6; German Popular Party, 4. President in 1921, Dr. Johannes Hiebert (elected, June 23, 1920).

WYOMING. POPULATION. According to the report of the census of 1920, there were 194,402 residents in the State, Jan. 1, 1920, as compared with 145,965 in 1910.

AGRICULTURE. The following table was compiled from the estimates of the United States Department of Agriculture covering the years 1920 and 1921:

Crop	Year	Acreage	Prod., bu.	Value
Corn	1921	56,000	1,232,000	\$616,000
	1920	50,000	1,200,000	672,000

MINERAL PRODUCTION. Owing to the low price of copper the Sunrise iron (copper) mine at Hartville was idle for a part of 1921 and shipped no copper ore during the year, according to the United States Geological Survey. The Electrolytic (old Rambler) mine at Holmes shipped one car and stored several cars of copper-gold-silver ore.

LEGISLATION. Among the measures passed at the legislative session of 1921 may be mentioned: Creation of a State farm loan board and provision for loans on farm mortgages out of certain State funds; coöperation with United States Bureau of Biological Survey for extirpation of noxious animals; provision for organization and sanitation of dairy product business; declaiming places used for prostitution, gambling, or the sale of intoxicating liquors to be a nuisance; creation of a State game and fish commission and provisions for the preservation of game and fish; authorizing State board of education to promote Americanization as defined by law; creation of the office of inheritance tax commissioner.

OFFICERS. Governor, Robert D. Carey; Secretary of State, W. E. Chaplin; Treasurer, A. D. Hoskins; Auditor, I. C. Jeffers; Superintendent of Public Instruction, Katherine A. Morton; Attorney-General, William L. Walls; Adjutant-General, R. L. Esmay.

JUDICIARY. Supreme Court: Chief Justice, Charles N. Potter; Justices, Charles C. Blydenburgh, Ralph Kimball.

WYOMING, UNIVERSITY OF. A State institution of the higher education at Laramie, Wyo.; founded in 1886. The enrollment in 1921 was 525 and the faculty numbered 90. President, Aven Nelson, Ph.D.

Y

YACHTING. Great Britain and Canada carried off the honors in international yacht racing during 1921, but there were no contests held for the America's Cup. The first international clash came in July off Cowes, England, where the United States made a vain effort to capture the trophy offered for six-metre boats by the Royal Yacht Squadron. The Americans suffered an overwhelming defeat, their only entry to make a respectable showing being the *Glebe*, owned by William Gardner. The second international competition was that between the United States and Canada with the fishermen's trophy as the prize. The races were held off Halifax, the contestants being the *Bluenose* commanded by Captain Angus Walters of Canada and the *Elsie*, commanded by Captain Marty Welch of the United States. The *Bluenose* won two straight victories.

The customary racing on Long Island Sound furnished the keenest of sport during the summer, the greatest attraction being the contests held by the New York Yacht Club. George M. Pynchon's *Istalea* proved the best fifty-footer, taking part in nineteen races. The *Acushla*, owned by L. G. Hamersley ranked second, and the *Spartan* owned by H. B. Plant received third rating. Among the forty-footers the best record was made by F. D. M. Strachan's *Monsoon*. The competition for the Gherardi Davis prize restricted to thirty-footers was won by Ogden Reid's *Lena*.

The United States successfully defended the Harmsworth Trophy, emblematic of the world's motor boat speed championship, but it was a hollow victory for the American boat, the *Miss America II*. The *Maple Leaf VII* entered by Sir Mackey Edgar of the Royal Motor Yacht Club of Great Britain sprang a leak during the first race and later sank. The *Miss America II* also had the satisfaction of setting a world's record averaging 71.04 miles an hour.

YALE UNIVERSITY. A non-sectarian institution of the higher learning at New Haven, Conn.; founded in 1701. The enrollment for the fall of 1921 was 3460, including 355 students who were not candidates for degrees. Of those studying for degrees 1042 were in Yale College; 515 in the Sheffield Scientific School; 373 in the Graduate School; 213 in the School of Law; and 163 in the School of Medicine. The officers of the university numbered 747 of whom 172 were administrative. The library contained 1,200,000 volumes and pamphlets. The total endowment, June 30, was \$25,677,010, and the income for the year 1920-21, \$2,899,184. The creation of a common undergraduate year in Yale College and the Sheffield Scientific which was begun in 1920 proved a marked success in offering better teaching and attention to the individual through the Faculty Counselor system. Incidentally there was a very large increase in the enrollment of the Freshman Class which in 1921 numbered 862. The building programme was steadily carried on. The Memorial Quadrangle, described as the most

beautiful group of college buildings in this country, was completed and was being occupied by the Junior and Senior Yale College classes, during the year. The Sterling Chemical Laboratory, made possible by the Sterling bequest, was in course of construction. Another Sterling memorial building which is to be started in the near future was the Sterling Memorial Library. James Rowland Angell began his administration as successor to President Arthur Twining Hadley at the beginning of the university year. President, James Rowland Angell, Litt.D., LL.D.

YAP. One of the Caroline Islands in the Pacific; the administrative centre of the western group; the seat of an important wireless station; and subject of disputed claims on the part of the United States and Japan in 1920 and 1921, in regard to which an agreement was reached at the close of the latter year. Its importance arises from the fact that it is the meeting point of the oceanic cable lines to Manila, Shanghai, and the island of Celebes. The main points in the dispute are given in the preceding YEAR BOOK. For terms of the agreement, see article, WAR OF THE NATIONS.

YARGER, HENRY LEE. Clergyman, died, January 13. He was born at Harleton, Pa., Feb. 22, 1862; and graduated at the Pennsylvania College at Gettysburg in 1883 and at Gettysburg Theological Seminary in 1886, in which year he was ordained to the Lutheran ministry. He was pastor of several parishes successively in Kansas and Pennsylvania; president of the Kansas synod from 1901 to 1903 and of the synod of the Evangelical Lutheran Church in the United States from 1913 to 1914. From 1895 to 1914 he was field secretary of the board of church extension of the Lutheran church at Atchison, Kansas, and after that was general superintendent of home missions and church extension at Chicago, Ill.

YELLOW FEVER. The discovery by Noguchi of a spirillum which is the specific cause of this affection has not been set aside by anything which has since come to light. At Havana cultures of the so-called "Merida strain" of this germ supplied by its discoverer to the Health Office produced when injected into the tissues of dogs a febrile affection which agreed in essential features with human yellow fever. When the virus was pricked into the skin in imitation of mosquito bites a severe form of the disease was set up. In regard to the incidence of the disease in Mexico and Central America it is evident that a clean bill of health at any given period is no guarantee that new cases will not appear sooner or later. This has recently been distressingly shown by the death from the disease of Dr. Howard B. Cross of the Rockefeller Institute of New York, who sailed for Vera Cruz in November to take charge of the Institute's laboratories in that city. The Mexican Government officially recognized the martyrdom of the scientist in the pursuit of the common good of man. Particulars of the case at the present writing are lacking. The mode in which

the diseases was contracted and the attempts to save the victim have not thus far been made public. It is not known, for example, whether any prophylactic or curative serum was employed.

YOUNG, JOHN PHILIP. Editor, died at San Francisco, Calif., April 23. He was born at Philadelphia, Pa., August 9, 1849; and after 1878 was the editor of the *San Francisco Chronicle*. He wrote: *A History of San Francisco; Protection and Progress; Journalism in California*; and various economic works, including: *The Growth of Modern Trusts*.

YOUNG, ODUS GRAHAM. Lawyer, died in 1921. He was born in Ray County, Mo., Jan. 20, 1858; and after a normal school education, studied law, and was admitted to the bar in 1882, and practiced in Kansas City. He was president of a large cattle company after 1900 and of the Drovers' Packing Company at Kansas City after Nov. 7, 1919. He was a member of the Missouri senate from 1896 to 1900. In politics he was a Democrat.

YOUNG MEN'S CHRISTIAN ASSOCIATION. An organization for the promotion of social, physical, educational, and spiritual development of men and boys throughout the world. The various groups of local associations are closely related to the 47 State and Canadian committees who give counsel, help, and encouragement to the local work. The International Committee is the agent of these local and State organizations, created by convention action, to help unify, correlate, and promote the movement as a whole in North America. The headquarters of this committee is at 347 Madison Avenue, New York City. Its chairman is Alfred E. Marling and its general secretary, John R. Mott. The 2120 local organizations in the United States and Canada had a total membership of 935,581. The net property valuation was \$140,822,000 and expenditures in 1921, \$47,814,000. The International Committee was busy during the year striving to carry out the directions of the triennial international Convention of 1919. The five regional organizations in the United States, each combining both the State and international representatives of the territory involved, have been developed and improved with helpful results to the local associations within their borders. The commission on work among colored men and interracial questions made progress in meeting some of its difficult problems. The commission on the approach and relation to the churches made most encouraging progress in its conferences with the officials of the various church bodies and with beneficial results for all. In all important aspects of the Association's work there was a gain over the preceding year. The volume of work in the United States and Canada has doubled since 1912, and some features have doubled since 1917. The \$140,821,300 of net property and funds reported was an increase of 10 per cent over the year before. Of this total amount \$12,200,800 is in endowment funds. The \$47,814,451 of operating expenditures for the movement in North America is at the rate of nearly \$1,000,000 per week, or 24 per cent more than a year ago, and more than double the similar amount of only four years ago. During the year the Associations continued their readjustment of meeting the changed conditions following the war. The great majority not only reached but passed the figures measuring the volume and quality of their service rendered in the fruitful years 1915-17, preceding the war. In the face of adverse business conditions some important results were

achieved in building campaigns, or clearing off indebtedness. It is noteworthy that in the recent severe financial depression none of the railroad and very few of the industrial corporations reduced their regular contributions to Association operation. Very substantial progress was made toward raising the \$4,000,000 accrued liability fund necessary to enable the Retirement Fund for Employed Officers to become operative. Over one-half of this fund is now secured, and the present hope is that it will be completed and become operative in 1922.

ASSOCIATION WAR WORK. The National War Work Council having accomplished one of the greatest patriotic services in the history of the world was formally dissolved in March, 1921. It appointed a group of trustees closely related to the International Committee to take care of and administer in clearly designated lines any unexpended balances carried forward largely from the second Association War Work campaign. The educational service among ex-service men made possible by the \$5,000,000 awarded by the National Council, has been exceedingly large in volume, widely scattered geographically, of practical quality, and greatly beneficial to all concerned. Over 81,000 men were thus enrolled, 13,000 of whom took collegiate courses. This service was supplemented by a large Americanization work among other thousands, and also by the most practical vocational guidance service in connection with the employment of ex-service men which has yet been conducted. Very few realize the great extent of Association work still in operation among the allied armies and their ex-service men through Europe and adjacent countries. Although this service is being demobilized as fast as possible, yet American secretaries are still directing, and American Association funds are still financing a service of Christian welfare work on behalf of at least two million men. For such purpose overseas, the past year, more than seven million dollars of American funds were thus necessary.

INTERNATIONAL FOREIGN ASSOCIATION WORK. In each of the twenty-one foreign countries in which Association work has been organized and promoted by American friends through the Foreign Department of the International Committee, encouraging progress is noted. The growth of the local and national foreign organizations, of their membership, officers, property, and especially of their activities—educational and religious—is relatively more rapid than in America and costs only a fraction as much per member for local operation. The adaptation of this foreign service to local conditions, its indigenous character, its ability to mark out new paths, and its sacrificial spirit, all make for vitality and permanence.

YUKON. A territory of Canada, bounded by Alaska on the west, and the Northwest Territories on the east, and extending from British Columbia at the 60th parallel to the Arctic ocean. Area, 207,076 square miles. Population in 1911, 8512. Capital, Dawson, with a population in 1911 of 3013. Mining is the chief occupation, and the chief minerals are: Gold, coal, copper, and silver. The gold mined from 1885 to 1918 amounted to \$198,000,000, and the output for the year ending March 31, 1921, was \$1,660,048. It is under the administration of a gold commissioner and a legislative council of three members. Gold commissioner at the beginning of 1921, George P. MacKenzie. See CANADA.

Z

ZACH, MAX WILHELM. Musician, died at St. Louis, Mo., February 3. He was born at Lemburg, Poland, August 31, 1864; and studied at the Conservatory of Music in Vienna. He came to the United States in 1886, and from that time until 1907, was a member of the Boston Symphony Orchestra. After 1907 he was conductor of the St. Louis Symphony Orchestra. While in Boston he was a conductor of many popular concerts.

ZAHM, JOHN AUGUSTINE. Scientist and author, died at Munich, Bavaria, November 11. In the United States he was well known as an authority on South America and was a friend of Theodore Roosevelt, whom he accompanied on his South American expedition. He was born at New Lexington, Ohio, June 14, 1851; graduated at Notre Dame University, Ind., in 1871, and was for many years curator of the museum of the university and head of its scientific department. He delivered many lectures in the United States on the subject of evolution and wrote largely on that topic. Among his writings may be mentioned besides various works representing an advanced point of view in respect to evolution, *Catholic Science and Catholic Scientists*; *Scientific Theory and Catholic Doctrine*; *Science and the Church*; works on geography and travel including volumes on Alaska, and Hawaii; special historical and descriptive writings on the countries of South America; and finally in 1917 *The Great Inspirers*.

ZANZIBAR. A British protectorate of East Africa, comprising the island of Zanzibar (640 square miles), the island of Pemba (380 square miles), and several islets; situated off the coast of the colony of Tanganyika (formerly German East Africa). Population of the island of Zanzibar (1910), 113,624; of Pemba, 83,109. The Europeans numbered about 200, mostly English. The chief town is Zanzibar, one of the best African ports, with a population of about 35,000. Most of the natives are Sunnite Mohammedans. School attendance in 1919 was 1920. The main industry is the production of cloves of which the output in 1919-20 was about 29,000,000 lbs., larger than ever before. Imports (1919, £1,934,169; exports, £2,444,011. Revenue (1919), £407,505; expenditure, £323,418. Sultan in 1921, Seyyid Khalifa bin Harub; High Commissioner, Major-general Sir Edward Northey.

ZELENSKI, LADISLAS. Polish composer, died in Cracow, January 26. He was born at Grotkowice, Galicia, July 6, 1837. For many years he was professor of composition at the Warsaw Conservatory. Next to Moniuszko he ranks as the foremost dramatic composer of Poland. His works include five operas on national subjects, orchestral and chamber-music and songs; also several valuable theoretical treatises.

ZEPPELINS. See **AERONAUTICS**.

ZIEL, ERNST. See **NECROLOGY**.

ZINC. The following information was supplied by the United States Geological Survey: The mine and smelter output of zinc each declined

nearly 60 per cent in 1921. The recoverable zinc content of ore mined in 1920 was about 250,000 tons, as compared with 584,772 tons in 1920 and 549,242 tons in 1919. The output of the Eastern States was about 68,000 tons, that of the Central States about 168,000 tons, and that of the Western States about 14,000 tons, as compared with 102,242, 337,652, and 144,878 tons respectively in 1920. The loss in output of the Eastern States was one-third, that of the Central States one-half, and that of the Western States over nine-tenths. The Upper Mississippi Valley region is credited with an output of about 4000 tons and the Joplin district with an output of about 164,000 tons. Oklahoma made the largest output, about 116,000 tons, twice as large as that of any other State. In 1921 Montana (the Butte district almost wholly) apparently produced about 11,000 tons, as compared with 91,906 tons in that district in 1920.

The imports of zinc in ore decreased from 22,487 tons in 1920 to about 2700 tons in 1921, most of which was imported from Mexico. The zinc content of zinc ore in bonded warehouses on November 30 was 14,292 tons, as compared with 25,650 tons at the end of 1920. Some of this ore may have been smelted but not shipped and thus may be included in smelter stocks.

Early in January zinc concentrates containing 60 per cent of zinc were selling in the Joplin district at \$28 a ton, having dropped from \$60 a ton at the beginning of 1920. The price dropped to \$21 by the beginning of March, rose to \$26 by the beginning of May, dropped to \$21 by the middle of June and remained at that point until late in August, when it reached bottom at \$20 a ton. Through the last quarter of the year there was a considerable improvement in price and at the end of the year concentrates were selling at \$28 to \$30 a ton. The lack of demand led to a considerable storage of concentrates at mines, and the stocks of concentrates in the Joplin district were estimated at about 70,000 tons and those in the Upper Mississippi Valley region at about 25,000 tons, figured as 60 per cent concentrates. Stocks in other districts probably brought up the grand total for the country to 150,000 tons. Even so, this quantity was small in comparison with the stocks of Australian zinc concentrates, which were reported as 700,000 tons, containing about 47 per cent zinc. The Rhodesia Broken Hill district of Africa was credited with stocks of zinc ore amounting to nearly 50,000 tons.

The output of primary metallic zinc from domestic ores in 1921 was about 194,000 tons and from foreign ores about 2500 tons, a total of 196,500 tons, as compared with 450,045 tons from domestic ores and 13,332 tons from foreign ores, a total of 463,377 tons in 1920. In addition to primary zinc there was an output of about 17,000 tons of redistilled secondary zinc, as compared with 21,371 tons in 1920, making a total supply of distilled zinc and electrolytic zinc in 1921 of 213,500 tons, of which 31,500 tons was high grade

and intermediate, 32,000 tons select and brass special, and 150,000 tons prime western. The output of the corresponding grades in 1920 was 114,806, 59,811, and 310,331 tons, respectively, a total of 484,748 tons. Of the total output of primary zinc in 1921, about 48,000 tons was made in Illinois, as against 109,056 tons in 1920; 40,000 tons in Oklahoma, as against 110,500 tons; and 36,000 tons in Pennsylvania, as against 74,234 tons.

The imports of foreign slab zinc amounted to 6674 tons, as compared with 15 tons in 1920. Of these imports England furnished 4200 tons, Germany 1456 tons, Netherlands 560 tons, and Belgium 452 tons. The condition of the world market in the last 4 months of 1920, which permitted the sale in the United States of domestic zinc that had been previously exported, continued through the first quarter of 1921, during which period 731 tons of zinc were returned as against 8162 tons in 1920. Not included in the imports given above are 6529 tons of sheet zinc imported and entered for consumption in the first 9 months of 1921. But a few hundred tons of sheet zinc has been imported annually heretofore, and but a few tons since 1915.

The exports of zinc made from foreign ores were about 1260 tons and those of zinc made from domestic ores were about 3200 tons, as compared with exports of 28,368 and 85,898 tons, respectively, in 1920. The exports of domestic zinc included about 1800 tons of sheet zinc, as against 11,852 tons in 1920. The stocks of zinc at smelters and in warehouses at the end of November was about 74,000 tons, as against 94,747 tons on June 30, 1921, and 71,037 tons at the end of 1920. The apparent consumption of primary zinc during 1921 was about 196,000 tons, as compared with 323,044 tons in 1920.

At the end of November 38,700 retorts were reported in operation out of a total of 150,462 retorts, as compared with 36,000 out of 123,528 on June 30, 1921, and with 56,197 out of 158,625 at the end of 1920. Advances late in December put the number of retorts expected to be in operation at the end of the year at about 41,500, or a little more than one-fourth of the total.

The average quoted price for prime western zinc for immediate delivery at St. Louis in 1921 was nearly 4.7 cents a pound, as compared with an average selling price for all grades of 8.1 cents in 1920. The price of prime western zinc began the year at 5.6 cents in the St. Louis market but had declined nearly to 4.6 cents by the middle of April. After a slight recovery the price continued to decline until 4.25 cents was reached at the midyear. After remaining practically stationary for three months, the price rose through the last quarter of the year and closed at about 4.7 cents. From the middle of May until the last of October the average weekly quotation for prime western zinc was lower than that for lead.

FOREIGN ZINC INDUSTRY. The output of electrolytic zinc in British Columbia in 1921 is given as 26,500 short tons, as compared to 16,798 tons in 1920. The zinc smelter output of Belgium, in 1921, as estimated from the output for 10 months was about 70,000 short tons, as against 92,880 short tons in 1920. The world's smelter output of zinc in 1921 is estimated at about 400,000 metric tons, of which the United States smelted 45 per cent, as against a little over 700,000 metric tons in 1920, of which the United

States smelted 60 per cent. See also article LEAD at end.

ZIONISM. See JEWS.

ZONING. See CITY PLANNING.

ZOOLOGY. No publication of outstanding importance in the field of Zoology appeared in 1921, but there was the usual output of morphological and experimental research-papers in the journals. The German journals seemed to have returned to their prewar activities, but what impressed the reviewer most was the large number of articles which were themselves reviews rather than records of original research. If the following summary seems too much limited to the English and American publications, it is because to the reviewer these seemed to contain the larger number of articles of general interest.

GENERAL. Pearl gave the Lowell lectures on "The Biology of Death." Since Protozoa are potentially immortal Pearl thought that it is incorrect to speak of death as inevitably bound up in protoplasm. This conclusion is strengthened by the fact that in some cases it has been found possible to keep differentiated tissue cells alive in an appropriate medium outside the body for a longer period than they would naturally have lived in it. Death is the penalty we pay for the differentiation of cells which makes possible the complex differentiation of function in the different tissues of the higher organisms. Death is really the result of an organic disharmony among the cells and follows physico-chemical changes in accordance with ordinary physico-chemical laws. For each organism there is a specific longevity determined by its inherited physico-chemical constitution. The visible cytological changes in protoplasm and nucleus which have been described as causes of senescence are really effects and not causes. Comparison of mortality studies of the present time and that of the time of the Roman Empire show that the expectation of life is much greater now than it was then, a result due either to improved living conditions or to a change in the inherited constitution of the race. Pearl grouped mortality statistics from different countries so as to show what he thought was their biological basis and found that there is very great similarity between them, which would indicate that they are not due to environmental conditions. A study of *Drosophila* and of man have shown that longevity is inherited in a mendelian fashion, and Pearl thought this inherited factor is of much more importance than any other in determining longevity.

ZOOLOGICAL SOCIETIES. The American Society of Zoologists met with the American Society of Naturalists and a number of other scientific societies affiliated with the American Association for the Advancement of Science at Toronto, from December 27 to December 30. The President of the Zoologists was Professor C. A. Kofoid. Professor E. S. Goodrich was President of the Zoology section of the British Association for the Advancement of Science which met at Edinburgh.

BIOLOGICAL LABORATORIES. In connection with the Miami aquarium at Miami, Fla., there was opened in 1921 a research laboratory for the study of marine life, having accommodations for ten investigators. The Harpswell Laboratory was founded in 1898 by J. S. Kingsley at South Harpswell, Maine, and in 1913 was incorporated. In the spring of 1921 this institution

became a member of the "Wild Gardens of Acadia" corporation and was allotted land on Mt. Desert Island where it had established the Weir Mitchell Station. In the summer of 1921 this was run as a teaching laboratory with Professor Ulric Dahlgren as Director. The "Concilium Bibliographicum" founded and administered by H. H. Field with headquarters at Zürich, has been seriously hampered by war conditions, and with the death of Field, early in 1921, its affairs came to be in a very bad condition. It was later announced that a temporary reorganization had been effected with Professor J. Strohl of Zürich as Acting Director, and that financial assistance had been given by the Swiss government, the city of Zürich, and the Rockefeller Foundation.

GENETICS AND EVOLUTION. Results of cytological research for the year strengthened the theory that the chromosomes are the carriers of the genes which determine the characteristics of the offspring. Bateson, in the Croonian Lecture (*Am. Nat.*), reiterated his earlier statements that genetic speculation has outrun cytological evidence. He called attention to the fact that the results which seem to demonstrate the importance of the chromosomes have been obtained on only one animal (*Drosophila*) and while segregation may occur in animals at the time of maturation it does not do so in plants. Later, after having studied Bridges' preparations of chromosomes, Bateson, in a lecture given before the American Society of Zoologists on December 28, announced his complete conversion to the chromosome theory. As Bateson was the last of the opponents of the theory it would now appear to stand on a firm foundation. Schmidt (*Travaux Lab. Carlsberg*) stated that in *Lebistes reticulatus*, a small Trinidad fish, the males of certain races have a black spot on one fin which does not appear in the female and is not transmitted through the female as are certain other sex-linked characters. Castle (*Science*) showed that these facts could be explained on the assumption that the gene for this character is carried in the "Y" chromosome, which is generally regarded as "empty." Castle suggested that the X chromosome originally came from the cytoplasm into the nucleus and was at first a determiner of femaleness. Later this became duplicated and is found in both sexes, transmitting the sex-linked characters as now occurs in *Drosophila* and man. The Y appeared later and the form of sex-linked inheritance which characterizes some birds and moths could be explained by assuming that their genes are carried by the Y chromosome.

Two years ago Guyer published results on experiments with rabbits. He found that if he injected crushed eye lenses of a rabbit into a fowl, an "anti-body" for the lens would appear in the fowl's blood. If this anti-body be injected into the blood of a pregnant rabbit at about the tenth day of pregnancy when the lenses are being formed in the embryo, some embryos will die, but those that live have defective lenses or other eye defects attributable to defective lenses. Later study showed that this defective condition of the lens is inherited by later generations, and this inheritance has in general the character of a mendelian one. Breeding of a defective male to a normal female gives normal offspring, but if the female of this generation is mated with a defective male, defective young appear. Apparently the

specific anti-bodies can produce specific changes in the germ cells. Further study showed that specific anti-bodies may be produced in the body by an injection of its own tissues, and thus it is assumed that any alterations in the body that can give rise to anti-bodies or other active agents might induce changes in the germ. Guyer pointed out the possible interpretation to be put on these results in connection with the much disputed question of the inheritance of acquired characters. May it not be possible that the use of an organ will set up changes in the composition of the blood serum producing specific effects on the germ plasma and repeating in the next generation the modification produced by use or disuse in the preceding generation? Guyer thought that a serological change might be sufficient mechanism for the production of changes in subsequent generations.

In his address as President of the Zoology section of the British Association for the Advancement of Science, Goodrich (*Nature; Science*), spoke on "Some Problems in Evolution." Goodrich emphasized the evident fact that if a character is to appear in any generation, there must be not only the hereditary element to call forth that character but favorable environmental conditions as well. (Green plants inherit the ability to form chlorophyll, but this will not appear if the plant is kept in the dark.) What is really transmitted is the complex of germinal factors, not the characters themselves. These environmental stimulants may be either external or internal, illustrations of the latter being the hormones secreted by the body itself which modify its characters. The real difficulty of the evolutionist is to solve the problem of the nature of the germinal factors and of the origin of the differences between them. The question of how an organism acquired new factors Goodrich thought is still unsolved and little progress has been made in solving this problem since Darwin's time. He discussed the results of Guyer (see above) and while he concedes their importance, thinks that they do not argue for an inheritance of an acquired character. These results show that a destructive effect may be produced, but do not, in his opinion, demonstrate the possibility of a constructive one.

Gerould (*Jour. Exp. Zool.*) reported on the appearance of a mutation in the caterpillar of *Colias philodice* which is usually grass-green, but the mutated animals were a bright blue-green. Breeding experiments showed that the blue-greens are recessive and thus appear only when homozygous. According to Gerould two non-inherited pigments form the basis of the color of this caterpillar, the "xanthophyll," a yellow pigment, and the "chlorophyll," a blue-green one. Both are derived from the chlorophyll of the food plant. The mutant evidently carries an enzyme which acts as a decolorizer (inhibitor) of xanthophyll which probably acts through the nuclei of the cells of the intestinal wall upon the digesting chlorophyll and thus on the blood itself. It affects every stage in the life history of the insect.

INTERNAL SECRETIONS. The study of internal secretions and their effects on the development of the body and its parts, received much attention during the year. In the YEAR BOOK for 1917 was reviewed the work of Lillie on free martins, which showed that when a male and female twin calf were developing, hormones from the male acted on the female so as to produce sterility as well as

to prevent the development of secondary sex characters. In the *Journal of Experimental Zoology*, Minoura, Willier, and Moore writing from Lillie's laboratory at the University of Chicago, reported confirmation of his results. Minoura grafted portions of the ovaries or testes of chickens of various ages on to the allantoic membrane of a developing chick. In successful experiments the results indicated that the secretion of the gonad of the same sex increased and that of the opposite sex decreased the sex development and differentiation of the individual upon which the graft was made. Indications of this condition were found in the existence of a gonad of the male type and differentiated müllerian ducts of the female type in the same individual; in an alteration of the size ratio of the two testes; and by the persistence of the right gonad in the female type embryo, the normal condition being that this is lost in the adult. As in the free martin, these experiments show that sexual differentiation may be reversed. In a histological study of the free martin gonads, Willier found that a transformation from an ovary might proceed to a morphologically complete condition, though this was never functionally mature. Moore transplanted gonads from one set into the other in rats and guinea pigs. In the rats he found no interference with the development of the proper sex organs due to the grafting of the one of the opposite sex and he thought there is no reason to assume an antagonistic effect of the one sex on the other. In guinea pigs, he found that while grafting an ovary into the male was followed by changes in the external sex characters such as an increase in the size of nipples, there was no evidence of any psychical change. Grafting of testes into the female was followed by both structural and psychical changes, the animals behaving like a male both to other females and to males.

Uhlenhuth (*Am. Nat.*) discussed the condition of the Texas cave salamander, *Typhlomolge rathbuni* which is blind, colorless, and never metamorphoses. It has been shown to be without a thyroid, which earlier work (see YEAR BOOK for 1918) indicates may be responsible for the absence of metamorphosis. Uhlenhuth thinks that this thyroidless condition may also be responsible for the blindness and the lack of color.

Atwell (*Endocrinology*) reported that distinct pigmentary changes follow removal of the pineal body and the epithelial hypophysis in the frog tadpole, and described the condition of the chromatophores of various kinds which lead to the formation of the "silvery" color under these conditions. Removal of the pineal gland alone, did not set up any of these changes. Rasmussen (*Endocrinology*) described in detail the structure of the hypophysis of the woodchuck during hibernation. He found that it undergoes no change during this time, but that at the rutting season it becomes much larger. Swingle (*Jour. Exp. Zool.*) stated that frog larvae, grafted interperitoneally with the pars intermedia of the hypophysis became much darker, control specimens grafted with other tissue showing no change. The changes last for 40 days at the longest, and dissection showed that the grafted tissue has been absorbed at this time. Swingle also found that grafting the pineal gland of a reptile into the darkly pigmented larva of a frog would be followed by a temporary change to a lighter color.

Courrier (*Comptes Rendus*) in an attempt to

verify previous work on parasitic castration (see YEAR BOOK for 1914) of crabs, studied 66 male *Carcinus* and found no constant relation between the parasitized condition and the assumption of female characters. His general conclusion was that the sex cells do not condition secondary sexual characters and that where a change occurs it is due to the secretion from some other organ. Courrier also (*Comptes Rendus*) found that in the fish the secondary sexual characters are due to the secretion of a gland which develops after spermatogenesis is completed.

ANIMAL REACTIONS. Crozier and Arey (*Jour. Exp. Zool.*) reported on observations made at Bermuda on the small nudibranch mollusk *Onchidium*. The animals live in holes in the rocks from which they wander out as the tide goes down, returning after a while to the nest. This return is always made to the same nest, showing a definite homing ability, and they all move at the same time. They possess definite repugnatorial glands on the edge of the mantle, which give off a secretion that may be thrown to a distance of 10 times the length of the animal and which experiments showed has on the human tongue an effect like that of wild mustard. Meat smeared with this secretion was refused by fish. The authors thought it was not so much to protect the animals against being eaten as to prevent larger animals from hitting against the *Onchidium* and knocking it into the water from which it could not return to its nest. The normal animal orients itself with the head against the wind, but this orientation is lost if the tentacles are cut off. As bearing on the value of experimental results obtained in the laboratory, the authors found that the "trophic" responses of the *Onchidium* occur under laboratory conditions, but do not appear in their ordinary habitats. Individuals picked up from one side of the nest and placed on the opposite side will go directly to the nest, showing a definite homing sense. The authors thought that a sense of smell is employed in this homing.

In opposition to Loeb and others who believe that phototropism in animals is an orientation due to a constantly acting stimulus, Mast believes that what he calls a series of "shock reactions" is really what occurs and that in orientation in insects which Loeb and his school have used as examples, the light does not really act continuously. Mast (*Jour. Exp. Zool.*) reported on the reactions to light of the tadpoles of the Ascidians. In these tadpoles a decrease of illumination will stimulate a resting individual to action, but an increase has no effect. If the tadpole is active it is stimulated by both increase and decrease. The animals may be either photonegative or photopositive, the reactions being due to the illumination of the nerve endings on the inner surface of the pigment cup of the eye. Orientation is the result of shock reactions caused by alternate shading and illuminating of these nerve endings. The animals remain oriented not because of a constant stimulation, but because once oriented they go in a straight line.

Wheeler (*Jour. of Comp. Psychol.*) reported experiments on the phototropism of the land snail *Helix aspersa*. In *Helix pomatia* there is according to previous investigators, some doubt whether the animals can see, in spite of the fact that they possess well developed eyes. Wheeler found that *Helix aspersa* is normally negatively phototropic,

but becomes indifferent to light if the eyes are cut off. There is no evidence that the skin is sensitive to light rays, and the eyes are the light perceiving organs. In a series of notes on some problems of adaptation, Crosier (*Biol. Bull.*) reported that in the Bermuda fish *Ogilbia*, there is a true skin sensitiveness to light stimulation, a condition previously recognized in only one other fish; in the mollusk *Lima* there is a negative phototropism, the animal orienting itself easily by the long foot, which may itself be photosensitive, and is thrust out and bends the shell so as definitely to orient the animal; in *Actinia bermudensis* there is no evidence for a tidal rhythm such as has been described in other Actinians. It seems probable that the habit of closing when uncovered is beneficial, but there is no evidence for a closing and opening dependent on stages of the tide. Young specimens who have never experienced the tidal rhythm, act in the same fashion as adults.

TWINNING. Newman (*Jour. Exp. Zool.*) experimentally produced twins in echinoderms, defining as twinning any duplication of parts in an individual as well as complete separation. In all methods of producing these twins the common factors were the retardation of development and loss of precise axiate organization at some critical time and a redifferentiation but because the unity of organization has been lost, the new differentiation proceeds along two or more axes or gradients; as a result duplication of parts occurs. Referring to recently published work of Davenport indicating that this type of twinning is inherited in the male line, Newman shows how relative incompatibility between the egg and sperm might set up the retardations here mentioned, various degrees of incompatibility leading to various degrees of separation in the twins. Zeleny (*Science*) showed from statistics that a simple ratio exists between the number of twins and of triplets in a large number of births, such that if the ratio of twins to the total number is $1/n$ that of triplets will be $1/n^2$. In multiple ovulation it appears that only one ovum is discharged at the same time, and it seems as if some secretion from this ovum may inhibit the discharge of another. Once in n times this inhibitor fails to appear. The chance that two supernumerary ova would be discharged at the same time would be as 1 to n^2 . Zeleny supposed that in monozygotic twins two embryonic areas appear at the same time, an inhibiting influence which is normally produced by the one which first starts and which normally prevents the formation of a second area having failed to appear. A similar conclusion was reached by Stockard (*Am. Jour. Anat.*) who concluded from a study of a large number of artificially produced monstrosities that development normally consists of a series of processes more or less frequently interrupted by periods of quiescence, and that if anything happens to interfere with the normal arrangement of these processes there is an interference with the rhythm which leads to two or more centres of development, and thus double monsters occur.

Cytology. Painter (*Science*) found in testes of both white and colored men, using material that was preserved under most favorable conditions, evidence for the presence of both X and Y chromosomes, this being in opposition to earlier work which indicated that only the X

is present. Painter thought that 46 is the total number of chromosomes in man. In a number of lizards Painter found (*Jour. Exp. Zool.*) evidence of the presence of an X chromosome, and also a condition which seems to be limited to the lizards, in which there are two sets of chromosomes, macrosomes, and microsomes. Painter found further, that the chromosomal characters are as indicative of relationship as are external features, confirming results previously obtained by McClung in the Orthoptera.

PROTOZOA. Woodruff (*Jour. Exp. Zool.*) described races of *Paramacium* and of *Oxytricha* in which no micronucleus appeared. He concluded that this is an abnormal condition resulting from a failure to form a micronucleus at a conjugation stage. These amiconucleate forms are able to carry on ordinary vegetative processes but apparently cannot conjugate. Students of *Paramacium* have reached divergent conclusions as to the necessity for conjugation, some maintaining that conjugation is an essential process and others holding that under proper nutritive conditions it does not occur. Hopkins (*Jour. Exp. Zool.*) found that different strains of the same species vary decidedly in this respect both when reared under similar environmental conditions that are normal to the species, and when subjected to similar experimental conditions such as treatment with salts, etc. Some races do not conjugate during long intervals of time, and the process might possibly be indefinitely postponed, but many of these can be induced to conjugate by subjecting them to an interval of reduced nutrition.

Hegner (*Am. Nat.*) found a high degree of correlation between the amount of nuclear material and the cytoplasm in *Opalina*. An increase in cytoplasmic mass acts as a stimulus for the division of the nucleus. Kepner and Whitlock (*Jour. Exp. Zool.*) found that the feeding reactions of amoeba are too qualitative and too easily adapted temporarily to new conditions to be capable of explanation on physical and chemical grounds.

Schaeffer published in book form under the title of *Amoeboid Movement* a summary of his researches on amoeba of various species. Structurally Schaeffer distinguishes between an outer ectoplasm, an inner entoplasm, and a hyaloplasm, but in his discussion he confused the ectoplasm, and hyaloplasm, so that his distinction between the two is not clear. Whenever a pseudopodium is being formed there is a transformation from entoplasm to ectoplasm at the pseudopodium. This transformation is really a change from a "sol" to a "gel" condition, and in this transformation the energy required for the movement is set free. At the same time, ectoplasm is being transformed into entoplasm at the posterior end of the amoeba. There is an outer surface film on the amoeba which is constantly moving forward from the posterior end of the animal, being constantly destroyed anteriorly and renewed posteriorly. This is evidently a surface tension phenomenon. While Schaeffer's meaning is not very clear on this point, he apparently thinks that this surface tension has some part to play in the amoeboid movement. In the matter of the taxonomy of amoeba, Schaeffer took issue with other writers who regard this organism as very variable, and says that in respect not only of structure but

in reactions to stimuli the species of amoeba are as sharply separated from one another as in any other group of animals. If not interfered with by outside stimuli the path of an amoeba is zigzag, which Schaeffer interpreted as an attempt to move in the spiral fashion of ciliated protozoa, the zig-zag movement being the projection on a plane surface of the spiral. Schaeffer regarded the tendency of a blindfolded man to walk in circles as a similar projection and thought he had demonstrated the fundamental similarity between the spiral movement of the amoeba and that of the man.

ANNELIDS. Gross (*Jour. Exp. Zool.*) stated that contrary to the usual belief, the common *Nereis virens* of the eastern coast of the United States is a vegetable feeder and while it is responsive to chemical stimulations, the chemical sense plays very little part in procuring food. Systematic papers on the Polychaetes were published by Benham on the annelids of the Australian Antarctic Expedition, Series C, Vol. VI, part 3, and by Treadwell on the West Indian Leodidae, Publication No. 293 of the Carnegie Institution of Washington.

MOLLUSKS. Allen (*Bio. Bull.*) reported results of a study of the food relations of some fresh water mussels. Feeding is nearly a continuous process and the flow caused by the ciliary movement is not affected by any change in the position of the animal. Feeding is the taking in of microscopic animals by means of a current caused by ciliary action. This ciliary action is not in any way affected by changes in the position of the animal and is nearly a continuous process. The control of the amount of food which shall be digested and absorbed into the blood is through a regulation of the amount of digestive ferment secreted rather than through any variation in the amount of food taken in. The gills are of considerable importance in sorting food materials. The condition of the crystalline style is an indication of the digestive activity of the animal. This style has a number of functions in the Unionidae. Allen thought that it is in part a reserve of nutriment, in part a source of enzymes for starch digestion and that it rotates so that its inner free end acts like a brush in sweeping food into the proper channels and as a substitute for peristalsis in mingling the food with liver secretions. Arey (*Jour. Exp. Zool.*), reported on the glochidia of fresh water mussels and their mode of attachment to fishes. Attachment is in response to tactile stimulation through the hair cells of the mantle. The overgrowth of cells of the gill which covers the glochidium and forms the cyst is a reparation process on the part of the cells and not due to any vital influence of the glochidium since it will occur if metal clips are fastened to the gill.

INSECTS. Lichtenstein (*Comptes Rendus*) reported on the biology of a new species of a Chalcid *Habroclytus*. The parasite punctures the host through its larval case and through the opening thus made the body fluids of the host flow out and are eaten by the parasite. Later another opening is made and the egg laid in the host. The author thinks that the primitive function of the ovipositor is to procure food, the egg laying having been developed later.

Jacques (*Science*) reported the discovery of the larva of the honey-locust borer, *Eburia quadrigeminate* in the wood of a book-case where it

must have been for at least 40 years. This seems to establish a record for longevity of insects.

It was announced in 1921 that the gypsy moth had appeared in New Jersey in 1920 and that \$112,000 was appropriated by the legislature for the expense of fighting it. Brues (*Am. Nat.*) stated that grouping of insects according to their supposed food habits is not always accurate, for certain ones which seem, respectively, to be saprophagus, coprophagus, etc., really are not feeding upon these substances at all but on bacteria and yeasts which are growing on the supposed food. Adaptation between a parasitic insect and its host, is, according to Brues a matter of evolution, possibly through natural selection, for the parasitic insect is immune only to the body fluids of its host and not to those of other insects. Adaptation of this sort might have been more easily acquired between near relatives than between animals farther apart in the scale. Patterson (*Am. Nat.*) found that in the polyembryonic hymenopteron, *Platygaster* the broods have an average size of 13.5 all of which have come from a single fertilized egg. In some cases the brood is purely female, in others there are some males, but never as many males as females. He considers that some abnormal behavior of the chromosomes is responsible for this condition. Bodine (*Jour. Exp. Zool.*) reported experiments whose results indicated that the metabolism of an insect has a much greater resemblance to that of mammals than has previously been supposed. The percentage of water in animals varies with the species, and exposure to low temperature causes a decrease in water content, thus preventing freezing. Starvation has its greatest effect in causing a loss of water. He also found that younger animals have a higher rate of respiratory exchange than do the older ones. Burge and Burge (*Jour. Exp. Zool.*) from a study of the potato beetle, concluded that a catalase is responsible for the elimination of oxygen, that this increases from youth to the adult condition and decreases again in old age.

Whiting (*Biol. Bull.*) reported on experiments on the wasp *Hadrobracon brevicornis*. In a black-eyed stock he found that generally male or female offspring were produced from mated and unmated females in proportions which were in accord with the theory of Dzieron, that females arise only from fertilized eggs, males from unfertilized. Whiting found, however, that results of breeding the original black-eyed female with a male mutant having "orange" eyes indicated in a certain number of their descendants that a male might develop from a fertilized egg. In these the sperm apparently operated on only a small part of the individual, so that it was really a mosaic, due to an imperfect fertilization.

Minnich (*Jour. Exp. Zool.*) reported that the butterflies *Vanessa antiopa* and *Pyrameis atalanta* discriminate between chemical stimulations by chemoreceptors located on the tarsi. In *Pyrameis* and probably in *Vanessa* also, these receptors are located on all four tarsi. An important and possibly the only rôle of these organs is in connection with food substances and water. They are able to function in the absence of antennae, labial, palpi, and the rudimentary fore legs of *Pyrameis* and appear to be the organs of taste.

SPIDERS. In *Science*, Reese reviewed the evidence bearing on the question of the poisonous

nature of the bite of spiders and gave very definite evidence that the small spider *Latrodectus* is capable of giving a fatal bite to man. While not all of the bitten individuals died, there was very severe poisoning accompanied by much pain. The spider in question is a small one, and frequents outhouses in the country.

ECHINODERMS. An important publication was an elaborately illustrated paper on the Echinoderms of Torres Strait by H. L. Clark. This paper is mainly systematic, but Clark drew the general conclusion that in Mesozoic times the eastern coast of Queensland had no echinoderm fauna but that a later depression of the land east of New Guinea established a connection with the Pacific through which the echinoderms passed.

FISHES. Everman (*Sci. Month.*), stated that unless some remedy is soon found for the present conditions, the Alaska salmon fisheries are doomed to disappear. His remedy was to determine the maximum capacity of the spawning area and then, by means of easily applied methods of counting, to allow enough fish each year to pass to the ground to use this spawning area, letting the fishermen catch what are left. Owing to lack of funds the laboratory of the United States Bureau of Fisheries at Woods Hole was closed during the season of 1921. For the same reason the Bureau of Fisheries steamer *Albatross* was taken to Woods Hole in October, and put out of commission. The first meeting of the International Committee on Marine Fishing Investigation was held at Montreal on June 23 to discuss questions of interest to the Canadian and United States and Newfoundland fisheries industries.

Hubbs (*Biol. Bull.*) described the life history of *Amphigonopterus aurora*, a Californian viviparous fish. In this fish copulation occurs in the summer and the sperm are retained by the female until late autumn or even the spring, so that a full year may elapse between copulation and the birth of the young. The embryos are nourished by nutritive ovarian fluids which are carried through the alimentary canal. Respiration is over the surface of the body and the fins. The smaller and younger females give birth to young later in the season than do the older and larger ones. Hubbs found that the "annulus" or place where the concentric lines on the scales are nearest together, is formed during the winter. This gives an accurate method of estimating the age of young fishes. A deep sea fisheries expedition was fitted out by Denmark in 1921, one of its objects being to discover the breeding place of the eel. This is supposed to be at 500 fathoms, near the Azores, but no accurate information is at hand concerning it.

MAN. An important discovery of the year was that of a fossil human skull found in northern Rhodesia. The cranium is practically complete, and is apparently of a lower type than any Neanderthal skull yet discovered. The specimen is at the British Museum, where it will be studied by Woodard, Keith and Smith, all recognized authorities on this subject.

ZR-2 DISASTER. See AERONAUTICS.

ZULULAND. A portion of the province of Natal in the Union of South Africa; annexed to Natal, Dec. 30, 1897. Area, 10,424 square miles; population (1911), 219,606.
